The ion angular distributions resulting from electron stimulated desorption (ESD) of oxygen and carbon monoxide chemisorbed on a tungsten (111) crystal have been determined. The O^+ ions released during ESD of adsorbed oxygen exhibit three-fold symmetric angular distributions in orientational registry with the W(111) substrate. The CO^+ and O^+ ions released during ESD of a monolayer of CO are desorbed normal to the (111) surface. Models for both oxygen and CO adsorption are discussed. The data for CO are consistent with adsorption of CO in "standing up" carbonyl structures in the virgin and α-CO binding states.

16399. Layer, H. P., **High-resolution stepping motor drive,** *Rev. Sci. Instrum.* **47,** No. 4, 480-483 (Apr. 1976).

Key words: digital; drive; electronic; generator; motor; stepping.

A digital sine-cosine stepping motor drive has been constructed which decreases the rotational step size by a factor of 31. This system improves the smoothness and resettability of the motor and retains the conventional slew speed and accuracy.

16400. Johnson, D. R., Pearson, R., Jr., **Microwave region,** Chapter 4.3 in *Methods of Experimental Physics* **13, Spectroscopy,** Part B, D. Williams, Ed., pp. 102-133 (Academic Press, Inc., New York, NY, 1976).

Key words: chemical monitoring and analysis; double resonance; microwave instrumentation; microwave spectroscopy; radio astronomy; short-lived molecules.

The instrumentation and experimental techniques developed for the study of the microwave spectra of gases are critically reviewed, with emphasis on methods capable of wide applicability in the frequency range from 4 to 220 GHz where oscillators producing fundamental power are commercially available. A general purpose spectrometer, incorporating techniques widely used in spectroscopic laboratories, is described as a point of reference for defining the essential characteristics of the basic spectrometer components: a source of MW power, a modulator, an absorption cell, a detector, and a method for measuring frequency. As each is discussed the most widely used instrumentation is compared to selected alternative including new developments which show promise for future applications. Original designs for detector and frequency multiplier-mixer mounts and parallel plate absorption cells are given which, when appropriately scaled to the MW frequency, have been successfully used from 4 to 130 GHz. Spectrometers with special characteristics such as broad-banded scanning, high temperature applications, resonant cavity absorption cells, or submillimeter frequency capabilities are discussed. New developments in the submillimeter region have extended scanning microwave spectroscopy to 1.06 THz. The characteristics which make microwave spectroscopy unique—high sensitivity, specificity, and great versatility—are demonstrated by describing new applications to the study of short-lived molecules, chemical monitoring and radio astronomy.

16401. Fiori, C. E., Myklebust, R. L., Heinrich, K. F. J., Yakowitz, H., **FRAME B: An on-line correction procedure for quantitative electron probe microanalysis with a Si(Li) detector, (Extended Abstract),** *Proc. 10th Annual Conf. of the Microbeam Analysis Society, Las Vegas, NV, Aug. 11-15, 1975,* 8 pages (1975).

Key words: background correction; continuous radiation; electron microprobe correction procedure; energy-dispersive x-ray spectrometry; lithium-drifted silicon detector.

16402. Pella, P. A., **Generator for producing trace vapor concentrations of 2,4,6-trinitrotoluene, 2,4-dinitrotoluene, and ethylene glycol dinitrate for calibrating explosives vapor detectors,** *Anal. Chem.* **48,** No. 11, 1632-1637 (Sept. 1976).

Key words: calibration device; dinitrotoluene; ethylene glycol dinitrate; explosives; generator; trinitrotoluene; vapors.

A vapor generator was constructed to produce known vapor concentrations of explosives such as 2,4,6-trinitrotoluene, 2,4-dinitrotoluene, 2,6-dinitrotoluene, and ethylene glycol dinitrate below 1 ppb by volume for calibrating trace explosives vapor detectors. The system is temperature controlled which permits a wide range of equilibrium vapor concentrations to be generated. These vapor concentrations are diluted by single-stage, dynamic, gas blending to obtain concentrations as low as 0.05 ppb. A quantitative gas chromatographic procedure was developed to evaluate this system by measuring the output vapor concentrations. The systematic error was usually within 15 to 20 percent of the values expected for TNT, and within 30 percent for EGDN. The applicability of the system for calibration purposes is demonstrated by performance data obtained with three commercial trace explosives vapor detectors.

16403. Forester, D. W., Abbundi, R., Segnan, R., Sweger, D., **Magnetic hyperfine structure in amorphous $DyFe_2$,** (Proc. 20th Annual AIP Conf. on Magnetism and Magnetic Materials, San Francisco, CA, Dec. 3-6, 1974), Paper in *Magnetism and Magnetic Materials-1974,* C. D. Graham, Jr., G. H. Lander, and J. J. Rhyne, Eds., No. 24, 115-116 (American Institute of Physics, New York, NY, 1975).

Key words: amorphous; magnetization; metal; Mössbauer; ^{57}Fe; ^{161}Dy.

In this paper we summarize the results of a Mössbauer study of the amorphous rare earth-transition metal (RE-TM) alloy $DyFe_2$ in the magnetically ordered state. Both the ^{57}Fe and ^{161}Dy spectra were investigated as a function of temperature and reveal a broad, though measurable, distribution of Fe hyperfine fields (H_{eff}) and quadrupole splittings (QS). There is a distribution similar in magnitude for the Dy hyperfine fields but the observed quadrupole splittings are narrowly distributed. The temperature variation of the ^{161}Dy spectra indicates a large variation of local exchange splittings at the Dy sites. These results are discussed in terms of a model in which the Dy spins are more strongly coupled to their random-direction anisotropy axes than to the neighboring Fe spins (which also experience a weaker random-direction anisotropy).

16404. Hill, J. J., **A low frequency inductive ratio bridge for platinum resistance thermometry,** (Proc. 5th Symp. on Temperature, Its Measurement and Control in Science and Industry, Washington, DC, June 21-24, 1971), Paper in *Temperature, Its Measurement and Control in Science and Industry,* L. G. Rubin, A. C. Anderson, J. E. Janssen, and R. D. Cutkosky, Eds., **4,** Part 2, 1495-1499 (Instrument Society of America, Pittsburgh, PA, 1972).

Key words: ac bridges; bridges; platinum thermometers; resistance measurements; thermometry; two-stage transformers.

Most of the recently developed ac ratio transformer bridges for platinum resistance thermometry have operated at frequencies of the order of 400 Hz. Due to the fact that the resistance values of the thermometer and the comparison standard resistor at these frequencies may differ substantially from their dc values, doubt has been expressed regarding the correlation of such temperature measurements with those made using traditional dc methods. However, using two-stage transformer techniques, it is now possible to construct ratio transformers to operate at 20 or even 10 Hz with an accuracy of a few parts in 10^8 (equivalent to temperature intervals of few tens of micro degrees) and thus virtually eliminate this objection while still preserving all the advantages of ac methods. Nine-decade adjustable-ratio transformers have been built which are connected in a modified Kelvin Double Bridge circuit. The effective input impedance of the ratio arms is several megohms thus reducing the effect of the connecting leads to extremely small proportions. The paper also considers and discusses the relative advantages of most existing methods for platinum resistance thermometry, the limitations of comparison resistors and the philosophy behind possible future trends and developments.

16405. Alperin, H. A., Cullen, J. R., Clark, A. E., **Magnetic properties of bulk amorphous Tb_xFe_{1-x},** (Proc. 21st Annual AIP Conf. on Magnetism and Magnetic Materials, Philadelphia, PA, Dec. 9-12, 1975), Paper in *Magnetism and Magnetic Materials-1975*, J. J. Becker, G. H. Lander, and J. J. Rhyne, Eds., No. 29, pp. 186-187 (American Institute of Physics, New York, NY, 1976).

Key words: amorphous Tb_xFe_{1-x}; Curie temperatures; magnetization measurement; neutron diffraction.

Magnetization measurements have been made on four bulk samples (compositions $x=0.018$, 0.118, 0.167 and 0.25) prepared by direct current rapid sputtering. Neutron diffraction measurements show these samples to be amorphous. All four samples are ferrimagnetic; however, the 17 percent sample is almost completely compensated at temperatures below 100K. With decreasing Tb-content, the Curie temperatures fall from a maximum of 405K for $x=0.25$ to the value of 245K for $x=0.018$. Anomalously large coercive fields and time dependent magnetizations are present at low temperatures.

16406. Helbig, V., Kelleher, D. E., Wiese, W. L., **Stark-broadening study of neutral nitrogen lines,** *Phys. Rev. A* **14,** No. 3, 1082-1093 (Sept. 1976).

Key words: nitrogen; plasma line boardening; spectral lines; Stark broadening; Stark shifts; Stark widths.

Extensive photoelectric measurements of the plasma-broadened line shapes of 42 neutral nitrogen lines have been carried out with a wall-stabilized arc. The arc current was varied from 20 to 100 A to achieve a variation in the axial electron density from about 5×10^{16} to 1.5×10^{17} cm^{-3}. Most observations were made end-on, and the arc was operated in pure nitrogen as well as argon with a small admixture of nitrogen to avoid self-absorption problems, which mainly arose with the red and near-infrared lines. The electron density was determined from the well-known Stark half-width of the hydrogen H_β line, for which purpose a trace of hydrogen was added to the plasma. Our principal results are as follows: (a) Good agreement with the recent theoretical work by Griem and coworkers has been obtained; (b) consistent with theoretical predictions, ion-broadening effects are not noticeable; (c) the Stark widths and shifts for different lines in a multiplet are identical within the experimental precision ($\approx3\%$) as predicted by the theory; and (d) measurements performed over a range of transitions involving different quantum states agree equally well with the theoretical data, indicating that the atomic-structure part of theory is very adequate.

16407. Hall, J. L., Magyar, J. A., **High resolution saturated absorption studies of methane and some methyl-halides,** Chapter 5 in *Topics in Applied Physics* **13,** High-Resolution Laser Spectroscopy, K. Shimoda, Ed., pp. 77–86, 86B (Springer-Verlag, New York, NY, 1976).

Key words: high resolution spectroscopy; methyl halides; optical heterodyne spectroscopy; quadrupole hyperfine interactions; saturated absorption spectroscopy.

We apply the techniques of high resolution saturated absorption spectroscopy to a number of methyl halide transitions near 3.39 μm. Wavenumbers and assignments are given for most lines. A "ladder" of frequency intervals was established with optical heterodyne techniques. Hyperfine structures due to electric quadrupole interactions was carefully studied for one transition in each of the three heavier methyl halides. This analysis gave the shift in the value eqQ due to vibrational excitation as well as information about the magnetic coupling energy. Finally a spectrum of CH_4 is presented which displays a resolving power of 5×10^{10}. This value is believed to be the highest yet employed in coherent spectroscopy.

16408. Brown, P. W., Clifton, J. R., Frohnsdorff, G., Berger, R. L., **The utilization of industrial by-products in blended cements,** (Proc. 5th Mineral Waste Utilization Symposium, Chicago, IL, Apr. 13-14, 1976), Paper in *Proceedings of the Fifth Mineral Waste Utilization Symp.*, pp. 278-284 (ITT Research Institute, Chicago, IL, 1976).

Key words: blast furnace slag; blended cement; fly ash; materials and energy conservation.

Approximately 85 million tons of portland cement are produced annually in the United States. However, less than one million tons of blended cement containing suitable waste or by-product materials, such as fly ash or blast furnace slag, are produced. In view of the potential for by-product utilization and raw materials and energy conservation, the advantages of increased use of blended cement should be considered. The potential for blended cement production and utilization and the advantages and limitations of utilization are discussed. The limitations imposed on the use of blended cements by standards and other factors are discussed. The technical benefits from the use of blended cements are considered.

16409. Brinckman, F. E., Iverson, W. P., Blair, W., **Approaches to the study of microbial transformations of metals,** *Proc. 3d Int. Biodegradation Symp., Kingston, RI, Aug. 17-23, 1975*, pp. 919–936 (Applied Science Publ. Ltd., London, England, 1976).

Key words: detection; flameless atomic spectrophotometry; gas chromatography; graphite furnace; methylation of metals; microbial transformation; speciation; volatile metal compounds.

An approach to the study of microbial transformations of metals existing in trace amounts in the environment is based primarily on the detection and speciation of volatile forms of these metals. Simple qualitative means for surveying the potential of microorganisms for volatilizing metals are described. Identification of transport agents has been accomplished primarily through the use of flameless atomic spectrophotometry coupled with gas chromatography. This technique permits chracterization of volatile metals and organometallic compounds in the nanogram range so that microbial transformations of metals at environmental levels may by monitored. The abiotic transfer of methyl groups from biologically methylated metals to Hg(II) provides a useful tool for the speciation of volatile metal forms suspected of being methylated.

16410. Yakowitz, H., **Present status of quantitative electron probe microanalysis,** *Proc. 6th European Congress on Electron Microscopy, Jerusalem, Israel, Sept. 1976*, pp. 37-40 (Tal International Publishing Co., Jerusalem, Israel, 1976).

Key words: electron probe microanalysis; Monte Carlo calculations; particulates; quantitative analysis; thin films; x rays.

All procedures for performing quantitative x-ray microanalysis require use of a standard of known composition. The analyst measures the relative x-ray intensity ratio between the elements of interest in the specimen and the same element in the standard. Both specimen and standard are measured under identical experimental conditions. The measured relative intensity ratio, often called k, must be accurately determined or else any quantitative analysis scheme will result in the same inaccuracy. Factors which can contribute to inaccuracies in k include the Poisson statistics of the x-ray emission process, x-ray detector coincidence loss (dead time) effects, and background noise arising from continuum radiation. Once the k values have been obtained, they must be corrected for several effects including: the differences in electron scattering and retardation in the specimen

and standard, i.e., the so-called atomic number effect, absorption of x-rays generated within the specimen along the direction of the x-ray detector, fluorescence effects and continuum fluorescence effects.

Key words: dislocation theory; imperfect continua; internal stress; nondestructive evaluation; residual stress.

This lecture on Microscopic Aspects of Residual Stresses was given to the Air Force Materials Laboratory Workshop on Nondestructive Evaluation of Residual Stress. Residual stress and the more general concept of internal stress are defined and their theory developed using the modern methods of elasticity in imperfect continua.

16412. MacGregor, J. G., Breen, J. E., Pfrang, E. O., **Design of slender concrete columns,** *ACI J.*, pp. 6-28 (Jan. 1970).

Key words: bending moments; building codes; column (supports); frames; long columns; reinforced concrete; slenderness ratio; strength; structural analysis; structural design; ultimate strength.

Offers a proposal for revising the slender column design procedures of the 1963 ACI Code. Proposes the use of a rational second-order structural analysis wherever possible or practical. In place of such an analysis, an approximate design method based on a moment magnifier principle and similar to the procedure used under the AISC Specifications is proposed. An outline of the normal range of variables in column design and a lower limit of applicability is proposed which will eliminate over 90 percent of columns in braced frames and almost half of columns in unbraced frames from consideration as slender columns. Through a series of comparisons with analytical and test results, the accuracy of the approximate design procedure is established.

16413. Lind, M. A., Zalewski, E. F., **Silicon photodetector instabilities in the uv,** *Appl. Opt.* **15,** No. 6, 1377-1378 (June 1976).

Key words: detector; photodiode; silicon; ultraviolet; uniformity of response.

Recent measurements of a group of photovoltaic silicon detectors has revealed instabilities that occur in some silicon photodiodes. We discuss two such instabilities which manifest themselves as an increase in the spatial nonuniformity in the uv and an increase in the spectral responsivity after high level uv irradiation. Typical measurements of two types of silicon detectors are presented.

16414.. Bingham, C. D., Yolken, H. T., Reed, W. P., **Nondestructive assay measurements can be traceable,** *Nucl. Mater. Manage.* **V,** No. II, 32-35 (Summer 1976).

Key words: calibration; measurement; nondestructive assay; nuclear; safeguards; traceability.

The use of nondestructive assay (NDA) techniques for the analysis of Special Nuclear Materials is one of the keystones in the development of safeguards technology. Currently this effort to use NDA is being frustrated because of a lack of "demonstratable traceability." Presented here is a discussion of what traceability means and how it can be achieved. Specifically, traceability means far more than having a series of calibration standards for each individual NDA technique. It means defining the limits of uncertainty for both random and systematic error components of a set of measurements (i.e., precision and accuracy). Realizing this, an approach to these evaluations is suggested. In addition, the authors emphasize that the availability of standards is not holding back the use of NDA.

The use of NDA is actually limited by the poor accuracy (possible systematic error) of many methods and the availability of real calibration standards would only tend to accentuate this point.

Finally, the suggestion is made that calibration standards will only be available when the demonstrated need is limited to a finite number of sets.

16415. Lucatorto, T. B., McIlrath, T. J., **Efficient laser production of a Na^+ ground-state plasma column: Absorption spectroscopy and photoionization measurement of Na^+,** *Phys. Rev. Lett.* **37,** No. 7, 428-431 (Aug. 16, 1976).

Key words: far ultraviolet spectroscopy; ion absorption spectrum; ion photoionization; laser ionization; photoionization resonances; sodium.

We report the first observation of ionization of dense Na vapor by laser radiation. A 1-MW pulsed laser at 589.6 nm produced almost complete ionization of a 10-torr-cm column of Na. Measurements of the Na^+ photoionization cross section, the neonlike series $2s^22p^6 \rightarrow 2s^22p^5ns$ and nd, and several autoionizing resonances of the type $2s^22p^6 \rightarrow 2s2p^6np$ were obtained using a spark source to provide the continuum background for absorption spectroscopy of the ion.

16416. Post, M. A., Iverson, W. P., Campbell, P. G., **Evaluating non-mercurial fungicides,** *Mod. Paint Coat.* **66,** No. 9, 31-38 (Sept. 1976).

Key words: accelerated testing; alkyd paints; environmental chamber; exterior exposure; latex paints; nonmercurial fungicides.

Nonmercurial fungicides were evaluated for effectiveness in an exterior acrylic latex and in an exterior long oil alkyd paint. Exterior exposure tests were of six months, one year and two years duration at the National Bureau of Standards exposure site. Exterior exposure tests were also carried out at the U.S. Naval Station, Roosevelt Roads, Puerto Rico. Accelerated fungus exposure testing was performed for four and eight weeks in an environmental chamber (a) without prior exterior exposure, (b) after six months, one year and two years exterior exposure, and (c) after exposure in a xenon arc accelerated weathering apparatus. Of the eight nonmercurial fungicides tested for latex paint protection, only one afforded complete fungicidal protection after two years exterior exposure. Two of the six nonmercurial fungicides tested for alkyd paint protection were excellent. One was superior and the other equal to the mercurial fungicide. The mercurial fungicide afforded much better protection for alkyd than latex paints.

16417. Grabec, I., Peterlin, A., **Acoustic emission of a crazing polymer,** *J. Polym. Sci.: Polym. Phys. Edition* **14,** 651-661 (1976).

Key words: acoustic emission; amorphous polymer; crazing; fatigue; Kaiser's effect.

The acoustic emission from a crazing polyvinyltoluene in a tensile and bending experiment is described. Acoustic emission appears as a series of bursts which most likely correspond to the initiation and growth of crazes. The emission intensity is characterized by acoustic activity (pulse rate) measured by the ringdown technique. The average activity increases with strain. During repeated loading the acoustic activity shows a measurable intensity and significant rise only beyond the maximum strain of

the former runs. This is equivalent to Kaiser's effect in metals. Acoustic emission during the creep experiment occurs in three characteristic periods. They are characterized as the relaxation, fatigue, and breakdown periods. Visual observations indicate that the relaxation period corresponds to the initiation, and the fatigue period to the growth of crazes. In the breakdown period a macroscopic crack develops and the sample fails.

16418. Penn, D. R., **Comment on "Field emission as a probe of the surface density of states",** *Phys. Rev. B* **14,** No. 2, 849-853 (July 15, 1976).

Key words: field emission; surface density of states; transfer Hamiltonian.

It is shown that the primary contribution to the field-emission current comes from electrons with *total* momentum equal to zero in a direction parallel to the metal surface and that the field-emission current measures the density of states at a point several angstroms from the metal surface. An explicit expression is derived for the error made in using the transfer-Hamiltonian technique to calculate the tunneling probability of an electron through a one-dimensional barrier, and it is pointed out that the error is small in the case of field emission.

16419. Plummer, E. W., Waclawski, B. J., Vorburger, T. V., Kuyatt, C. E., **Photoelectron spectra of adsorbed species on tungsten,** *Prog. Surf. Sci.* **7,** 149-182 (1976).

Key words: adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states.

Photoelectron spectra from W(100) and W(110) for $h\omega = 21.22$ and 16.85 eV were studied as a function of controlled exposure to H_2, N_2, and CO at room temperature, and with subsequent heating. The spectra revealed density-dependent conversions of the β-states of adsorbed hydrogen and carbon monoxide. The α and virgin states of CO appear to be molecular with the α state sequentially filling on top of the β-state. The ordered β-state of CO on W(100) is shown to be dissociatively adsorbed. For W(100) photoelectron spectra for initial states overlapping the tungsten band are very similar for nitrogen and carbon adsorbed in the geometrical configuration indicated by a c(2 $\times$ 2) LEED pattern. In contrast, hydrogen and oxygen adsorbed on W(100) in a c(2 $\times$ 2) configuration produce different spectra, leading to the speculation that nitrogen and carbon may adsorb in the same site.

16420. Kaufman, V., Sugar, J., **Wavelengths, classifications, and ionization energies in the isoelectronic sequences from Yb II and Yb III through Bi XV and Bi XVI,** *J. Opt. Soc. Am.* **66,** No. 10, 1019-1025 (Oct. 1976).

Key words: bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium.

Spectral observations are reported for transitions to the ground term and first excited term of the one-electron configurations in the $4f^{14}5p^6nl$ isoelectronic sequence from Yb II through Bi XV. Resonance lines are reported for the isoelectronic sequence Yb III through Bi XVI in which the ground state is $4f^{14}5p^6\ {}^1S_0$ and the upper levels are the $J=1$ levels of the $4f^{13}5p^6nd$, $4f^{14}5p^5nd$, and $4f^{14}5p^5ns$ configurations. The wavelengths fall in the range 70-3700 Å. The spectra were produced by means of sliding and triggered spark discharges and photographed with 10.7 m normal and grazing incidence spectrographs. The data in the Yb III sequence demonstrate the crossing of binding energies of the $4f$ and $5p$ shells at W VII. Rydberg series terms were found in a sufficient number of cases to provide extrapolation curves through Bi XV and Bi XVI. These data enabled us to calculate ionization energies for each of these ions with an uncertainty of ~1 percent or better.

16421. Gadzuk, J. W., **Screening energies in photoelectron spectroscopy of localized electron levels,** *Phys. Rev. B* **14,** No. 6, 2267-2280 (Sept. 15, 1976).

Key words: adsorption; electron gas; photoemission; relaxation energy.

Screening or polarization energies (often called "extra-atomic relaxation energies") associated with localized-hole creation in photoelectron spectroscopy in or on metals have been calculated. Following the procedure of Hedin and Lundqvist, the screening energy is written in terms of an effective matrix element of a nonlocal random-phase-approximation self-energy between wave functions of the localized-hole state. The relevance of spatial extent of the hole, electron-gas dielectric properties, chemical-bonding effects, and surface effects are examined. Calculations for 1 s core and bonding H_2 orbital holes in atoms or molecules which are embedded in and adsorbed on electron-gas surfaces are presented. The interplay between orbital size and host interelectron spacing (as manifested in screening lengths) is emphasized. The relationship between screening energies and classical image potentials in photoelectron spectroscopy of adsorbed atoms and molecules is established. Finally, interpretations of observed photoelectron spectra are discussed in terms of binding energies and relaxation, chemical, and "dipole" potential shifts, and the problem of "proper" referencing is addressed.

16422. Siedle, A. R., Hertz, H. S., **Vaporization of (SN)x and TTF-TCNQ,** *Mater. Res. Bull.* **11,** No. 9, 1185-1189 (1976).

Key words: chemical ionization mass spectrometry; mass spectrometry; sulfur nitride; tetracyanoquinodimethane; tetrasulfur tetranitride; tetrathiafulvalene; vaporization.

The vaporization of (SN)x was studied by electron impact and chemical ionization mass spectrometry. Comparison of the spectra with those of S_4N_4 suggests that vaporization generates an unstable, acyclic S_4N_4 which subsequently fragments to a cyclic $S_3N_3^+$ and SN^+ ion in the mass spectrometer. Mass spectrometry may be used to analyze (SN)x for S_8 and cage S_4N_4. Vaporization of TTF-TCNQ produced the component donor and acceptor molecules.

16423. Hertz, H. S., May, W. E., Chesler, S. N., Gump, B. H., **Petroleum analysis: Methodology for quantitative and qualitative assessment of oil spill,** *Environ. Sci. Technol.* **10,** No. 9, 900-903 (Sept. 1976).

Key words: gas chromatography; liquid chromatography; oil spill; petroleum; quantitation.

An integrated chromatographic technique for petroleum analysis compatible with long-term studies of oil spills is presented. Dynamic headspace sampling and the complementary analytical techniques of gas chromatography and coupled-column liquid chromatography are utilized for quantitation of petroleum containing samples. Gas chromatography-mass spectrometry is employed for identification of individual components in these samples. Analytical data obtained from a major oil spill are presented and discussed.

16424. Buehler, M. G., Thurber, W. R., **A planar four-probe test structure for measuring bulk resistivity,** *IEEE Trans. Electron Devices ED-23,* No. 8, 968-974 (Aug. 1976).

Key words: bulk resistivity; collector resistivity; four-probe; planar test structure; resistivity; semiconductor characterization; semiconductor device; silicon; square array.

A small planar four-probe test structure for measuring the bulk or collector resistivity of silicon wafers was designed and fabricated with a bipolar transistor process. Analogous to a mechanical square array four-point probe, the planar four-probe structure consists of a large-area base diffusion which is broken at four points through which contact is made to the undiffused collector material. A probe spacing of 2.25 mil (57.2 μm) allows the resistivity of the silicon wafer to be measured with good spatial resolution. A correction factor was derived to obtain the true resistivity from measurements on a wafer with finite thickness and a conducting backside, and it is presented along with the correction factors for other cases. The test device was fabricated in silicon wafers whose resistivities ranged from 0.013 Ω·cm to 12 Ω·cm in *n*-type material and from 0.7 Ω·cm to 30 Ω·cm in *p*-type material. Planar four-probe resistivity values are compared with mechanical four-probe values taken on the same wafers before fabrication, and the results are generally in agreement within ±3 percent.

16425. Reader, J., Acquista, N., **$4s^24p^4$-$4s4p^5$ transitions in Zr VII, Nb VIII, and Mo IX,** *J. Opt. Soc. Am.* **66,** No. 9, 896-899 (Sept. 1976).

Key words: molybdenum; niobium; spectra; ultraviolet; wavelength; zirconium.

Spectra of ionized Zr, Nb, and Mo have been observed in sliding spark discharges at peak currents up to 4000 A on the 10.7 m normal and grazing incidence spectrographs at NBS. From these observations the group of $4s^24p^4$-$4s4p^5$ transitions in Zr VII, Nb VIII, and Mo IX have been identified and measured. The energy parameters obtained from least-squares fits to the resultant energy levels are compared with Hartree-Fock calculations.

16426. Cezairliyan, A., McClure, J. L., Coslovi, L., Righini, F., Rosso, A., **Radiance temperature of tantalum at its melting point,** *High Temp.—High Pressures* **8,** 103-111 (1976).

Key words: emittance; high-speed measurements; high temperature; melting point; pyrometry; radiance temperature; tantalum.

Radiance temperature (at two wavelengths, 653 and 995 nm) of tantalum at its melting point was measured with the use of a subsecond-duration pulse heating technique. Specimens in the form of strips with initially different surface roughnesses were used. The results do not indicate any dependence of radiance temperature (at the melting point) on initial surface or system operational conditions. The average radiance temperature at the melting point of tantalum is 2846 K at 653 nm and 2620 K at 995 nm, with a standard deviation of 1 K at 653 nm and 0.4 K at 995 nm. The total inaccuracy in radiance temperature is estimated to be not more than ±8 K.

16427. Morrissey, B. W., Fenstermaker, C. A., **Conformation of adsorbed γ-globulin and β-lactoglobulin. Effect of surface concentration,** *Trans. Am. Soc. Artif. Intern. Organs* **XXII,** 278-283 (1976).

Key words: conformation adsorbed proteins; ellipsometry; infrared bound fraction; protein adsorption.

The adsorption of clotting factors and proteins on the surface of a synthetic implant can modify both their biological activity and the subsequent interaction of formed cellular elements with the surface. In particular, γ-globulin has been implicated in specific biochemical reactions resulting in platelet adhesion. Infrared bound fraction and ellipsometric measurements have been carried out *in situ* to determine the conformation of adsorbed γ-globulin and β-lactoglobulin as a function of surface concentration.

The fraction of adsorbed carbonyl groups of γ-globulin and β-lactoglobulin decreases significantly as the amount adsorbed increases. Ellipsometric measurements of the extension of adsorbed γ-globulin show that as the number of surface attachments decreases, the thickness of the adsorbed protein film increases. Studies with a cross-linked γ-globulin preparation indicate that the native conformation in solution corresponds to an adsorbed conformaton intermediate between those found at the extremes of high and low surface concentration.

These results indicate that adsorbed γ-globulin is rather pliant and that the adsorbed conformation of proteins which are present should be taken into account when describing platelet-surface interactions.

16428. Goldberg, R. N., **Microcalorimetric determination of glucose in reference samples of serum,** *Clin. Chem.* **22,** No. 10, 1685-1691 (1976).

Key words: hexokinase; intermethod comparison.

I report a detailed series of microcalorimetric measurement of glucose concentrations in five reference samples of serum. The method utilized (a) calibration in the actual medium of analysis and (b) a correction for interferences owing to the nonspecificity of the enzyme hexokinase. The microcalorimetric results are compared with the tentative results of analyses obtained by the spectrophotometric hexokinase/glucose-6-phosphate dehydrogenase method and by isotope-dilution mass spectrometry. In most cases, the microcalorimetric results appear to be in agreement with the results obtained by these latter two methods. A discussion of the basis of the microcalorimetric measurements is presented.

16429. Johnson, D. R., Suenram, R. D., Lafferty, W. J., **Laboratory microwave spectrum of cyanamide,** *Astrophys. J.* **208,** No. 1, 245-252 (Aug. 15, 1976).

Key words: interstellar molecules; interstellar laboratory spectra; interstellar line identifications; interstellar molecular processes; interstellar transition probabilities.

Laboratory test frequencies have been obtained for rotational transitions of the cyanamide molecule (NH_2CN) in the ground state and the lowest vibrational (NH_2 inversion) state, extending the measured spectrum of the molecule to 120 GHz. Perturbations resulting from Coriolis-type interactions between the ground and the lowest vibrational state cause many of the observed transitions to deviate significantly from the predictions of a conventional centrifugal distortion-corrected rigid rotor model. Absolute energies and Einstein *A* coefficients are presented for all measured transitions up to $J = 8$ for both states considered.

16430. Cehelnik, E. D., Mielenz, K. D., **Quantum counter photodetectors: A new design,** *Appl. Opt.* **15,** No. 9, 2259-2263 (Sept. 1976).

Key words: emission anisotropy; fluorescence; photodetectors; polarization; quantum counters; rhodamine B chloride; spectrofluorimetry; total internal reflection.

A new design for quantum counter cells is described that uses total internal reflection to minimize depth-of-penetration and polarization effects. This new cell is compared to a standard 1-cm thick quantum counter cylindrical cell. Solutions of 5 g/liter of rhodamine B chloride in ethylene glycol were used in both cells. The fluorescence emission from the cell was found to be

significantly less polarized and also less dependent on excitation wavelength.

16431. Seltzer, S. M., **The response of scintillation detectors to internally induced radioactivity,** *Nucl. Instrum. Methods* **127,** 293-304 (1975).

Key words: background; gamma-ray astronomy; induced radioactivity; Monte Carlo calculation; response; scintillation detector.

Pulse-height distributions produced in NaI and CsI detectors by the decay of certain internally distributed radionuclides have been calculated using a Monte Carlo method. The method traces the possible decays of a radioactive atom, taking into account $\beta^{\pm}$-emission, electron capture, gamma-ray emission, internal-conversion-electron emission, and x-ray or Auger-electron emission following the creation of atomic K-shell vacancies. The scattering, absorption, and escape of gamma-rays, annihilation quanta, and x rays are included. Results are presented for the radioisotopes ^{22}Na, ^{124}I, ^{124}Sb, ^{125}Sb, ^{123m}Te, and ^{125m}Te to indicate the characteristic features of the pulse-height distributions.

16432. Sharp, K. G., Li, S., Johannesen, R. B., **Perfluoro(alkylsilanes). 3. Fluorine-fluorine coupling constants in perfluoro(alkylsilanes) and related molecules,** *Inorg. Chem. Notes* **15,** No. 9, 2295-2297 (1976).

Key words: coupling constants; fluorine; fluoroalkylsilanes; NMR; relative signs; silicon.

^{19}F NMR spectrometric analyses—including relative signs for most F-F coupling constants have been carried out for the perfluoro(alkylsilanes) $CF_3CF_2SiF_3$, $CF_3SiF_2SiF_3$, $CF_3CF_2CF_2SiF_3$, and $SiF_3CF_2SiF_3$. The latter three compounds have not been previously reported. The signs of J_{FF} values can be put on an absolute basis via self-consistent correlations between the above molecules and related polyfluoroalkanes or alkylsilanes, including the series CF_3CF_2X, CF_2SiF_2X, and SiF_3SiF_3X where X = halogen. An effect not previously recognized is that on substitution of Si for C in molecular fragments of the type FCCF or FCSiF the three bond F-F coupling invariably increases by ca. +6 to +10 Hz in an algebraic sense. Theoretical implications of this effect are discussed.

16433. Pallett, D. S., Pierce, E. T., Toth, D. D., **A small-scale multi-purpose reverberation room,** *Appl. Acoust.* **9,** 287-302 (1976).

Key words: acoustic modelling; acoustics; impact noise; noise; reverberation rooms; room acoustics; sound power.

A one-fourth scale model of the large (425 m^3) National Bureau of Standards reverberation room is described. This facility was constructed to carry out acoustical research at relatively low cost in a frequency range two octaves higher than that used in the larger facility. Initial experimental measurements carried out in this facility concern sound power emitted by small sources. The pure tone qualification procedure specified in American National Standard S1.21-1972 "Methods for the Determination of Sound Power Levels of Small Sources in Reverberation Rooms" was carried out using computer control of the experiment. This standard is of particular interest to the international acoustical community since it is technically equivalent to ISO Documents DIS 3741 and DIS 3742. The effect of increased low frequency absorption upon room qualification was tested in the model room. Future research plans to make use of the small-scale reverberation rooms are described.

16434. Snyder, L. E., Hollis, J. M., Ulich, B. L., Lovas, F. J., Johnson, D. R., Buhl, D., **Radio detection of interstellar sulfur dioxide,** *Astrophys. J.* **198,** No. 2, L81-L84 (June 1, 1975).

Key words: interstellar; microwave spectra; molecules; Orion; radio astronomy; sulfur dioxide.

Interstellar sulfur dioxide (SO_2) has been detected in emission from the direction of the Orion Nebula molecular cloud and from Sgr B2. SO_2 is the heaviest interstellar molecule detected to date, and the only nonlinear triatomic molecule which does not contain hydrogen. The remarkable Orion emission profiles suggest that two components are supporting the SO_2 emission: a dense circumstellar-type envelope, which may be in maser emission, and a warm galactic cloud component.

16435. Petree, B., Humphreys, J. C., Lamperti, P. J., Loftus, T. P., Weaver, J. T., **Comparison of cobalt-60 exposure determinations by calorimetry and by ionization chamber techniques,** *Metrologia* **11,** 11-15 (1975).

Key words: calorimetry; cobalt-60; ionization chamber.

The exposure rate computed from calorimeter power measurements is compared to the exposure rate of the same source (1-Ci cobalt-60) determined by means of a graphite cavity ionization chamber. A difference of 0.38 percent was found and is not considered significant compared to the estimated systematic uncertainty (1.3%).

16436. Mangum, B. W., Utton, D. B., **Antiferromagnetic ordering in $ErPO_4$,** (Proc. 20th AIP Conf. on Magnetism and Magnetic Materials, San Francisco, CA, Dec. 3-6, 1974), Paper in *Magnetism and Magnetic Materials*, C. D. Graham, Jr., G. H. Lander, and J. J. Rhyne, Eds., No. 24, pp. 65-66 (American Institute of Physics, New York, NY, 1975).

Key words: antiferromagnetic transition; antiferromagnetism; dipolar interactions; $ErPO_4$; magnetic phase diagram; Néel temperature; spin-flop.

The magnetic susceptibility and dM/dB as a function of field have been measured for $ErPO_4$ from 25 mK to 4.2 K. They show that $ErPO_4$ orders antiferromagnetically with $T_N = 100 \pm 2$ mK with the spins along the tetragonal a-axes. The magnetic phase diagram is presented which includes a spin-flop phase in the basal plane. It is proposed that dipolar interactions may be responsible for the magnetic ordering.

16437. Shumaker, J. B., **Light emitting diode calibrations at NBS,** *Proc. 8th Session Comité Consultatif de Photométrie et Radiométrie, Sèvres, France, Sept. 3-5, 1975*, pp. 95-99 (Bureau International des Poids et Mesures, Pavillon de Breteuil, Sèvres, France, 1976).

Key words: calibration; light emitting diode; spectral irradiance.

A very brief report is given of some aspects of spectral irradiance calibrations of red LEDs at NBS. A typical spectral distribution is given and the treatment of temperature effects is discussed.

16438. Marlowe, D. E., **National measurement study—Microstudy force,** *NCSL Newslett.* **14,** No. 1, 44-45 (Mar. 1974).

Key words: force; NMS.

A brief summary of the National Measurement System Micro-Study of Force is presented.

16439. Davis, R. M., **Implications of privacy legislation on the use of computer technology in business,** *Jurimetrics J.* **17,** No. 1, 95-110 (Fall 1976).

Key words: computer security; information handling; privacy; safeguards for security and privacy; technology for security and privacy.

The National Bureau of Standards has been charged with responsibility for developing guidelines and standards for government compliance with legislation to protect individual privacy. NBS has identified emerging problems in security and privacy and the need for technological developments to provide solutions. Safeguards for security and privacy are not identical. The large number of record systems processing personal records in both the public and private sectors points up the magnitude of the problem of retrofitting these systems for security and privacy safeguards. In many cases, sophisticated systems are not required, and good information practices will be sufficient to meet the requirements. The safeguards differ for each system. There is also a need for auditing techniques to check on the effectiveness of the safeguards put into place. The techniques developed will be useful in preventing computer fraud, assuring functional fidelity and maintaining data integrity during input and processing.

16440. Negas, T., Roth, R. S., Parker, H. S., McDaniel, C. L., Olson, C. D., **Chemical aspects of materials containing cerium oxide,** *Proc. 5th European Conf. on Thermophysical Properties of Solids at High Temperatures, Moscow, Russia, May 18-21, 1976*, pp. 1-13 (1976).

Key words: cerium oxide; magnetohydrodynamics; system K_2O-ZrO_2-cerium oxide; thermal microbalance; x-ray diffraction.

The phase relations in the cerium oxide-ZrO_2 system reinvestigated under oxidizing conditions, in air, and up to 1600 °C using thermal microbalance, conventional ceramic heating and quenching, and x-ray diffraction methods. Additionally, reactions of materials of this system with K_2O (the K_2O-ZrO_2-cerium oxide system) are reported. These data are correlated with analyses of electrode materials tested in the U-O2 MHD facility.

16441. Cetas, T. C., **Temperature measurement in microwave diathermy fields: Principles and probes,** *Proc. Int. Conf. on Cancer Therapy by Hyperthermia and Radiation, Washington, DC, Apr. 28-30, 1975*, pp. 193-203 (American College of Radiology, Chevy Chase, MD, 1976).

Key words: measurement temperature; medicine temperature; microwave diathermy fields; temperature measurement.

Thermometry and medicine have been associated closely for a long time. Physicians contributed to the development of various thermometers, and physiological applications were among the first uses of temperature measurement. For example, body temperature or "blood heat" was used as a reference point for some of the early temperature scales. Even today, when the word "thermometer" is used, the clinical thermometer comes to mind most often.

16442. Krauss, M., Neumann, D. B., **The $^5\Sigma_g^+$ states of N_2,** *Mol. Phys.* **32,** No. 1, 101-112 (1976).

Key words: electronic structure; energy curve; N_2; predissociation; radiative recombination; $^5\Sigma_g^+$.

The electronic structure and energy curves of the $1^5\Sigma_g^+$ and $2^5\Sigma_g^+$ states of N_2 have been analyzed using the multiconfiguration self-consistent-field (MC-SCF) method for calculating the wavefunctions and energies. The *ab initio* model curve for the $1^5\Sigma_g^+$ state obtains an r_e of 1.69 Å and a D_e of 825 cm^{-1}. There is also a barrier with a maximum at 2.21 Å with a height of about 800 cm^{-1} which is a novel feature of this calculation. The potential supports two bound vibrational levels and two shape resonances for $j=0$. The calculated curve differs most from the semiempirical curve of Carroll in having a larger r_e by about 0.14 Å and a well depth smaller by 250 cm^{-1}.

The $^5\Sigma_g^+$ curve is known experimentally to predissociate both the $B^3\Pi_g$ and $a^1\Pi_g$ vibration-rotation levels above the dissociation limit. Conversely, two-body radiative association of two $N(^4S)$ atoms is known to occur through the interaction of the $1^5\Sigma_g^+$ and B and a states. The two-body radiative rates are analyzed in terms of the likely spin-orbit interaction between the $1^5\Sigma_g^+$ and B and a states and the ratio of these rates is calculated under the assumption that the predissociation rate exceeds the radiative in both cases. The ratio of the two-body associative rates k^B/k^a is calculated to be roughly 20 which is to be compared to an experimental ratio of 32.

16443. Ditmars, D. A., **Measurement of the average total decay power of two plutonium heat sources in a Bunsen ice calorimeter,** *Int. J. Appl. Radiat. Isot.* **27,** 469-490 (1976).

Key words: Bunsen ice calorimeter; calorimetric standards; calorimetry; heat standards; phase-change calorimeter; plutonium dioxide; plutonium isotopes; radionuclide calorimetry; radionuclide decay power; standards.

A Bunsen ice calorimeter has been specially adapted for high-precision power measurements on radioactive heat sources. The construction of the apparatus, the principles underlying its operation and the interpretation of the heat data obtained in both static and dynamic experiments are thoroughly described. Dynamic electrical calibration experiments yielded a calibration constant for this calorimeter of 270.56 J/g mercury, with an estimated overall inaccuracy of 0.04 percent. This agreed with the present static calibration constant of 270.59 J/g mercury, with an estimated overall inaccuracy of 0.01 percent, well within the combined estimated limits of overall inaccuracy. The average total decay powers of the radioactive heat sources "1.5 WB" and "0.23 WB," supplied by the Mound Laboratory, have been measured. These powers, referred to 27 November 1974, are, respectively, 1.44936 W with an estimated overall inaccuracy of 0.050 percent and 0.22517 W with an estimated overall inaccuracy of 0.144 percent. These limits represent a linear sum of random error calculated at a 99 percent confidence level and estimated maximum systematic error. The decay powers predicted on the basis of heat-flow calorimetry carried out at the Mound Laboratory both before and after the present investigation are 0.004 percent and 0.12 percent above the present results for the sources "1.5 WB" and "0.23 WB," respectively.

16444. Okabe, H., **Fluorescence quenching of sulfur dioxide by source emission gases,** *Anal. Chem.* **48,** No. 11, 1487-1489 (Sept. 1976).

Key words: emission gas; exhaust; fluorescence; nitric oxide; quenching; sulfur dioxide.

The quenching constants of SO_2 fluorescence excited by a 216-nm deuterium source have been obtained for N_2, O_2, air, and CO_2. They are 0.75 ± 0.09, 2.68 ± 0.09, 1.16 ± 0.01, and 0.74 ± 0.07, respectively, all in units 10^{-3} $torr^{-1}$. The fluorescence signal of SO_2 in simulated stack emission is several percent lower than that in pure N_2. The presence of NO does not interfere with the SO_2 measurement by a fluorescence method.

16445. Evans, A. G., Linzer, M., **High frequency cyclic crack propagation in ceramic materials,** *Int. J. Fract.* **12,** No. 2, 217-222 (Apr. 1976).

Key words: ceramic materials; cyclic crack propagation; high frequency; plasticity.

Techniques and instrumentation for studying high frequency cyclic crack propagation in ceramic materials are described. Tests performed on a silicate glass show that the cyclic slow crack growth mechanism up to 600 Hz is identical to the quasi-static mechanism. Conversely, a strong cyclic effect on the crack growth rate is observed in a tungsten carbide-cobalt material.

16446. Powell, F. J., **A fresh look at fundamental design parameters,** *Proc. Energy Crisis Regional Conf., Chicago, IL, Sept. 19-21, 1973,* pp. 24-1–24-8 (Capital Development Board, Springfield, IL, 1973).

Key words: buildings; energy conservation; heat transfer.

Two fundamental equations of heat energy transfer in buildings are examined and related to practical design decisions that are made by architects and engineers. Available modern technology that represents an improvement over the simplified fundamental approach is described. An example of the use of modern technology is given together with suggested ways to save energy in heating and cooling applications. Some of the problems of implementation of energy conservation measures in buildings are discussed.

16447. Branstad, M. A., Branstad, D. K., **Computer security applications utilizing minis,** (Proc. 9th Annual IEEE Computer Society International Conf., COMPCON 74, Fall, Washington, DC, Sept. 10-12, 1974), Paper in *Digest of Papers Micros and Minis, Application and Design,* pp. 91-94 (IEEE Computer Society, Washington, DC, 1976).

Key words: computer security; minicomputers.

Protection of data which is stored and processed in computers is evolving as the highest priority requirement on ADP systems today. Minicomputers are playing a large role in the effort to achieve secure computing environments. They are being used as testbeds to determine the efficacy of various theories on how to design a secure system. Minis are being analyzed for their ability to provide external security control for existing large machines. As computers are being connected in networks, the mini may be instrumental in providing security for the network. These computer security applications utilizing minicomputers are outlined in this paper.

16448. Stolz, A., Bender, P. L., Faller, J. E., Silverberg, E. C., Mulholland, J. D., Shelus, P. J., Williams, J. G., Carter, W. E., Currie, D. G., Kaula, W. M., **Earth rotation measured by lunar laser ranging,** *Science* **193,** 997-999 (Sept. 10, 1976).

Key words: earth rotation; geodesy; geodynamics; geophysics; laser distance measurements; moon.

The estimated median accuracy of 194 single-day determinations of the earth's angular position in space is 0.7 millisecond (0.01 arc second). Comparison with classical astronomical results gives agreement to about the expected 2-millisecond uncertainty of the 5-day averages obtained by the Bureau International de L'Heure. Little evidence for very rapid variations in the earth's rotation is present in the data.

16449. Galloway, K. F., Leedy, K. O., Keery, W. J., **Electron-beam-induced currents in simple device structures,** *IEEE Trans. Parts, Hybrids, Packag.* **PHP-12,** No. 3, 231-236 (Sept. 1976).

Key words: device inspection; electron-beam-induced current; microelectronics; *p-n* junctions; scanning electron microscopy; semiconductor devices.

Electron-beam-induced current (EBIC) in semiconductor devices produced by the electron beam of a scanning electron microscope (SEM) can be used to image subsurface device features and to measure certain material parameters. This paper presents a simple method of calculation for estimating the magnitude of EBIC signals. EBIC signals from silicon *p-n* junction diodes are compared with the results of the calculation. The application of EBIC to more complicated device structures is discussed.

16450. Koonce, C. S., **Superconducting transition widths in applied magnetic fields,** *J. Low Temp. Phys.* **24,** Nos. 5/6, 597-610 (Sept. 1976).

Key words: cadmium; condensation energy; demagnetization coefficient; fluctuations; inhomogeneous superconductor; intermediate state; superconducting-normal transition; superconductor; surface energy type I superconductors.

The width of superconducting-normal transitions for inhomogeneous ellipsoidal superconductors in an applied magnetic field is calculated. A simple model is used for the variation in transition temperature with position and the range of this variation is assumed to be larger than the Landau-Ginzburg coherence length. It is found that the decrease in transition width with increasing applied magnetic fields at low fields occurs because the boundaries between superconducting and normal regions begin to be determinded less by the inhomogeneities and more by the loss of condensation energy between domains, and by sample surface effects. At higher fields, the transition width increases with applied field because of the finite demagnetization coefficient.

16451. Hower, P. L., Blackburn, D. L., Oettinger, F. F., Rubin, S., **Stable hot spots and second breakdown in power transistors,** (Proc. 1976 IEEE Power Electronics Specialists Conf., Cleveland, OH, June 8-10, 1976), *PESC 76 Record, 76-CH, 1084-3 AES,* 234-246 (McGregor and Warner, Washington, DC, Oct. 1976).

Key words: base widening; current crowding; hot spots; power transistors; safe operating area; second breakdown; thermal instability.

The mechanism of hot spot formation in transistors is examined from both experimental and theoretical viewpoints. It is shown that after the device becomes thermally unstable the device may restabilize in a hot spot mode of operation. The I_C, V_{CE} thermal instability locus can accurately be predicted assuming the current density is uniform prior to hot spot formation. A new model is proposed which explains why the device may restabilize in a hot spot mode and why devices exhibit "thermal hysteresis." It is also shown using thermal mapping techniques that emitter current crowding exists in the stable hot spot mode. Finally, the experiments support the idea that second breakdown occurs when the current density within the hot spot reaches a critical value.

16452. McCoubrey, A. O., **The national measurement system and specific industrial needs,** *Proc. Fluid Power Testing Symp., Milwaukee, WI, Aug. 11-14, 1975,* pp. 1.1.1.1-1.1.1.8 (Fluid Power Society, Milwaukee, WI, 1975).

Key words: engineering, instrumentation and techniques; fluids; force; hydraulic equipment; mechanical power; noise; pressure; quality control; safety; testing.

When consideration is given to interrelated needs for measurement methods, units, instruments, reference standards, reference data, and traceability, along with the numerous and diverse public and private agencies involved in measurements activity, it becomes important to think in terms of a *unified measurement system,* and to strive toward the rational design of such a system. An effective system will meet the needs of the users in terms of acceptable and accessible central standards, reliable transfer standards, practical levels of accuracy, cost, and unambiguous language for communication.

The Proceedings of the 1974 Fluid Power Testing Symposium suggest that the need for a unified measurement system for the fluid power industry has been well established. There may now be an opportunity to effectively coordinate the resources of in-

dustry associations, universities, and user government agencies with those of the National Bureau of Standards.

16453. Manning, R. G., Braun, W., Kurylo, M. J., **The effect of infrared laser excitation on reaction dynamics: $O + C_2H_4^\dagger$ and $O + OCS^\dagger$,** *J. Chem. Phys.* **65,** No. 7,2609-2615 (Oct. 1, 1976).

Key words: carbonyl sulfide; chemical kinetics; ethylene; flash photolysis resonance fluorescence; infrared laser; oxygen atoms; vibrationally excited reactant molecules.

A technique involving flash photolytic production and resonance fluorescence detection of O atoms coupled with cw production of vibrationally excited reactant molecules using a CO_2 laser is described. The method relies on the high sensitivity and precision of the flash photolysis resonance fluorescence technique to compare reaction rates measured with the laser off with those measured with the laser on, thereby assessing any effect of reactant vibrational energy on the dynamics of the chemical reaction. The limiting value of the laser enhancement that can be discerned depends ultimately on two factors: (1) the equilibrium concentration of vibrationally excited reactant that can be experimentally realized (i.e., absorption of laser flux vs deactivation losses), and (2) the magnitude of the activation energy for the thermal reaction. This determines the extent of a purely thermal (heating) effect. We observed little or no effect of vibrational energy in C_2H_4 on the rate of reaction with O atoms. Because of a somewhat higher activation energy, it was considerably more difficult to measure an effect in the O + OCS reaction. Within the limits of detectability, all observations in this system could be attributed to heating effects. A factor of 1.5 increase in the rate constant for $O + C_2H_4^\dagger$ over that for $O + C_2H_4$ and a factor of 3 for $O \pm OCS^\dagger$ over O + OCS would have been detectable in these experiments. The results seem to indicate that there is little or no coupling of vibrational energy to the reaction coordinate leading to activated complexes in these two reaction systems.

16454. Gadzuk, J. W., **Electron spectroscopy of surfaces via field and photoemission,** Paper in *Electronic Structure and Reactivity of Metal Surfaces*, E. G. Derouane and A. A. Lucas, Eds., pp. 341-387 (Plenum Publishing Corp., New York, NY, 1976).

Key words: chemisorption; ESCA; field emission; photoemission; surfaces; x-ray photoemission.

A review and survey of some of the basic physics involved in field and photoemission spectroscopy of surfaces is presented. Special emphasis is placed on the role of spatial coherence in determining the noninteracting electron photoemission characteristics of surfaces. Many-body effects, in particular the static response leading to relaxation energies and the dynamic response resulting in satellite structures are treated and the connection between them is demonstrated.

16455. Klein, M., Haar, L., **Equilibrium compositions and compressibility factors for air in the temperature range 1500 to 13000 kelvin and for densities from 10^{-6} to 10^3 times standard density,** *AEDC-TR-76-85*, 77 pages (Available from the National Technical Information Service, Springfield, VA 22161, June 1976).

Key words: air; gases; high density; mixtures; thermodynamic properties.

A formalism for computing thermodynamic properties and equilibrium compositions of reacting gas mixtures at high densities is developed. This formalism makes use of the Haar-Shenker version of the augmented hard sphere equation of state. The formalism is used for computing compressibility factors and equilibrium compositions of air in the temperature range 2,000 K-13,000 K for densities from that appropriate to air at standard conditions (0 °C, 1 atmosphere) to densities 1000 times as great. These tables are consistent with the earlier NBS tables which covered the range up to 100 times that density. Some interesting features of the dependence of composition on density are discussed.

16456. Kaldor, A., Woodward, B. W., **Infrared laser monitoring techniques for NO and NO_2,** *AIChE Symp. Ser.* **71,** No. 148, 183-189 (1974).

Key words: apparatus and methods; infrared lasers; magnetic resonance; molecular spectroscopy; NO, NO_2, pollutant detection.

The concentration of NO and NO_2 can be monitored by several different infrared laser devices and techniques. These include laser sources such as a CO laser, tunable diode lasers, tunable spin-flip Raman laser, etc. and detection techniques such as Zeeman magnetic resonance, intracavity absorption, and optoacoustic devices. Sensitivities to the ppb range have been demonstrated. These different methods are discussed and evaluated.

16457. Cook, L. P., Plante, E. R., Negas, T., Roth, R. S., Olson, C. D., **Crystallization and vaporization studies on synthetic coal slag compositions,** *Proc. 15th Symp. on Engineering Aspects of Magnetohydrodynamics, Philadelphia, PA, May 24-25, 1976*, pp. II.4.1-II.4.6 (1976).

Key words: crystallization; magnetohydrodynamics; potassium activity; synthetic coal slags; system K_2O-CaO-Al_2O_3-SiO_2; vaporization.

Insight as to the chemical behavior of coal slags accumulating on the walls of MHD systems can be gained by examining the results of high temperature experiments on K_2O-CaO-Al_2O_3-SiO_2 mixtures. An increase in CaO content may increase a_{K_2O} appreciably for certain compositions. Potassium aluminate–silica solid solutions, some of which are relatively water soluble, occur over a significant range of silica-poor and Ca-rich compositions at 1400 °C.

Two synthetic slags, with compositions falling close to an observed distribution of coal ash analyses, have been studied with the mass spectrometer using the Knudsen effusion technique. One slag having initially 15 wt% CaO yielded a higher K pressure at 10 wt% K_2O than a K_2O-SiO_2 solution containing 30 wt% K_2O. A second slag with relatively high SiO_2 and Al_2O_3 and 13 wt% K_2O gave a K pressure above that of a K_2O-SiO_2 solution with 20 wt% K_2O.

16458. McDonald, D. G., **Josephson junctions as radiation detectors from millihertz to terahertz,** *IEEE J. Quantum Electron.* **QE-10,** No. 9, 776-777 (Sept. 1974).

Key words: cryogenics; infrared; Josephson junctions; lasers; radiation detectors; superconductors.

The early experiments using Josephson junctions as mixers or detectors were at frequencies below a few hundred GHz. Recently we have shown that Josephson junctions can be used as mixers at much higher frequencies, particularly at CO_2 laser frequencies.

16459. Olver, F. W. J., **Uniform asymptotic expansions and singular perturbations,** *SIAM-AMS Proc.* **10,** 105-117 (American Mathematical Society, Providence, RI, 1976).

Key words: boundary-value problem; eigenvalues; parabolic cylinder functions; resonance; rotating disks; singular perturbations; turning-point; viscous flow; Weber's equation.

A brief account is given of an investigation into the asymptotic nature of the solution of the boundary-value problem

$$\epsilon y'' + 2xA(\epsilon,x)y' - A(\epsilon,x)B(\epsilon,x)y = 0,\ y(a) = l,\ y(b) = m,$$

as $\epsilon \to 0$, where $A(\epsilon,x)$ and $B(\epsilon,x)$ are continuous real functions of ϵ and x, $a < 0$, $b > 0$, and $A(\epsilon,x)$ is nonzero in $[a,b]$. Particular attention is paid to the problem of resonance, which arises when the limiting form of the solution exhibits an unusual lack of decay (in the case $A(\epsilon,x) < 0$), or an unusual rate of growth (in the case $A(\epsilon,x) > 0$). By application of a recent theory of differential equations with coalescing turning points sufficient conditions for resonance are established, both with and without the assumption that $A(\epsilon,x)$ and $B(\epsilon,x)$ are analytic functions of ϵ and x.

Fuller details will be published elsewhere.

16460. Yates, J. T., Jr., Klein, R., Madey, T. E., **Adsorption of molecular nitrogen by the W(110) plane,** *Surface Sci.* **58,** 469-478 (1976).

Key words: adsorption; nitrogen; physical adsorption; tungsten; work function.

Characteristics of the adsorption of nitrogen on the (110) plane of tungsten were determined by thermal desorption and work function measurements. The low temperatue γ-N_2 state desorbs with first order kinetics and an activation energy of 6 kcal mole^{-1}. The absence of isotope mixing between $^{14}N_2$ and $^{15}N_2$ demonstrates γ-N_2 is adsorbed molecularly. Monolayer coverage shows a decrease of 0.19 eV in work function. A Topping model plot indicates the layer is immobile at 123 K.

16461. Wyatt, W. T., Jr., Lozier, D. W., Orser, D. J., **A portable extended precision arithmetic package and library with Fortran precompiler,** *ACM Trans. Math. Software* **2,** No. 3, 209-231 (Sept. 1976).

Key words: elementary function evaluation; extended precision arithmetic; floating point arithmetic; Fortran extended data types; Fortran precompiler.

A set of ANS Fortran subroutines, developed by W. T. Wyatt, which incorporates computer-independent algorithms for performing arithmetic on arbitrary length, extended precision, floating point, real, or complex numbers in any user-designated computation base from 2 to 16 is described. Also included is a library of the Fortran intrinsic and external (mathematical) functions, as well as routines for type conversion, base conversion, input/output, and other operations. Analysis and testing, by D. W. Lozier, of the arithmetic and library software to locate and eliminate errors and to determine approximate accuracy limits is described. Finally, a precompiler, written in Fortran by D. J. Orser, which translates a Fortran program containing two extended precision data types (SUPER PRECISION and SUPER COMPLEX) into an ordinary Fortran program that uses subroutine calls to the software to carry out the extended precision operations is described. The software is intended to furnish working scientists who are not specialists in computer science a ready means of computing in extended precision.

16462. Weber, L. A., **Dielectric constant data and the derived Clausius-Mossotti function for compressed gaseous and liquid ethane,** *J. Chem. Phys.* **65,** No. 1, 446-449 (July 1, 1976).

Key words: Clausius-Mossotti function; dielectric constant; equation of state (PVT); ethane.

Measurements are presented for the dielectric constant of ethane in the saturated liquid and compressed fluid states at temperatures between 95 and 323 K. Pressures ranged up to 390 bar. The data, which have an estimated uncertainty of 0.01 percent, are combined with accurate density data from several sources to produce the Clausius-Mossotti function over a wide range of temperature and density. An analytical expression of the Clausius-Mossotti function is given, and the consistency of the available density data is discussed.

16463. Andrews, J. R., **Impulse generator spectrum amplitude measurement techniques,** *CPEM Digest,* pp. 23-24 (1976).

Key words: calibration; Fourier transform; impulse generator; pulse measurement; spectrum; spectrum amplitude.

This paper discusses the various techniques that have been used to calibrate impulse generators and to measure spectrum amplitude. The techniques included are (1) standard transmission line, (2) harmonic measurement, (3) energy measurement, (4) sum and difference correlation radiometer, (5) Dicke type radiometer, (6) video pulse, MIL. Std. 462, (7) spectrum analyzer, (8) standard pulse comparison, and (9) time domain measurement with Fourier transformation computation. Advantages and disadvantages of each technique are discussed. A summary of experiments comparing the various techniques is included. The NBS measurement service for calibrating impulse generators is described.

16464. Baird, R. C., **Methods of calibrating microwave hazard meters,** *Proc. Int. Symp. on Biologic Effects and Health Hazards of Microwave Radiation, Warsaw, Poland, Oct. 15-18, 1973,* pp. 228-236 (Polish Medical Publ., Warsaw, Poland, 1974).

Key words: microwave hazard meters; microwave radiation.

Accurate and reliable measurements of microwave radiation are required for hazard surveys, leakage detection, testing of products for compliance with regulations, and for determining exposure levels in experiments designed to investigate the biologic effects of microwave radiation. Accurate calibration of the instruments used for these measurements is essential for safety reasons and to provide a basis for comparison of the experimental results of various laboratories.

16465. Birmingham, B. W., Smith, C. N., **A survey of large scale applications of superconductivity in the U.S.,** *Cryogenics* **16,** No. 2, 59-71 (Feb. 1976).

Key words: cryogenics; CTR; electric power; energy storage; generators; instrumentation; MHD; superconductivity.

This survey provides a general overview of the kind and amount of research being done in the U.S. on large-scale applications of superconductivity. It covers about $30 million worth of research and development on systems and devices, and excludes programs on superconducting phenomena or basic studies of properties of materials unless they are part of an applications program. It covers the categories of electric power systems (generation, transmission, and storage); high energy physics; and instrumental-industrial-medical applications. Data were gathered through personal contact and letters to the researchers involved, and include funding and manpower levels where possible.

16466. Carroll, J. J., Melmed, A. J., **Field ion microscopy of zirconium,** *Surface Sci.* **58,** No. 2, 601-604 (Aug. 1976).

Key words: field-ion microscopy; zirconium.

Zirconium was successfully imaged in the field ion microscope using neon ions and mixtures of helium and neon ions at specimen temperatures of about 30K. Micrographs obtained after zirconium was exposed to hydrogen imaging conditions showed features that may indicate the early stage development of cracks, mostly along the $\{11\bar{2}0\} - \{11\bar{2}2\}$ zone. Crack defects were confined to at least the topmost 2-5 layers.

16467. Carroll, J. J., Melmed, A. J., **Optical constants of (1120) ruthenium in the visible region,** *J. Opt. Soc. Am.* **66,** No. 10, 1050-1051 (Oct. 1976).

Key words: ellipsometry; optical constants; ruthenium.

Optical constants are reported for $(11\bar{2}0)$ ruthenium measured ellipsometrically in the visible spectrum under ultrahigh vacuum conditions. The results are compared to literature values.

16468. Clough, R. B., **Rational basis and new methods for proportional limit, machine stiffness, critical stress intensity, and crack velocity measurements,** (Proc. 78th Annual Meeting American Society for Testing and Materials, Montreal, Canada, June 22-27, 1975), *Am. Soc. Testing Mater. Spec. Tech. Publ. 608, Recent Developments in Mechanical Testing,* pp. 20-44 (1976).

Key words: crack propagation; determination of stress; measurement; mechanical tests; plastic deformation; proportional limit.

This paper is a summary of some new measurement techniques that have been developed recently at the National Bureau of Standards for measurement of proportional limit of elasticity, machine stiffness, critical stress intensity, and crack velocity. These seemingly unrelated measurements all result from the rational basis of a single type of equation relating specimen and machine kinetics. In a regime of linear elasticity, the concept of a limit beyond which the specimen elastic gage length displacement is no longer proportional to load is referred to as proportional limit if the gage length begins to exhibit plastic deformation, and is referred to in a precracked specimen as critical stress intensity if the crack begins to extend in length. Multiaxial plastic yielding is also discussed. Machine stiffness and crack velocity are other measurements which can be obtained through the specimen-machine equation. The relationship of the new stiffness measurement to the International Standards Organization (ISO) proposed method and advantages of the new method are discussed. Methods of measuring stiffness in constant load rate and constant strain rate tests are outlined. A method of measuring the proportional limit or critical stress intensity which does not use a displacement gage of any type is also given; this should prove useful in hostile environments. Other related topics discussed include loading transients and rate sensitivity.

16469. Crawford, M. L., **Experimental evaluation of the radiation characteristics of dipole sources enclosed in a TEM transmission cell,** *CPEM Digest,* pp. 57-59 (1976).

Key words: measurements; radiated emission; radiation resistance; TEM cells.

This paper describes measurements to verify theoretical formulation of the changes in the radiation resistance of electronic equipment enclosed inside a special type shielded enclosure, a rectangular TEM cell. The measurements were made, assuming the device under test (DUT) could be modeled by dipole sources, using a monopole antenna mounted at various locations inside a typical cell. The predicted radiated power from the monopole antenna mounted inside the cell was within ± 2 dB of the energy coupled to the cell's output ports. These results are contained in the paper and give credibility to the ability to relate such measurements to free space radiation conditions.

16470. Crawford, M. L., **Calibration of broadbeam antennas using planar near-field measurements,** *CPEM Digest,* pp. 53-56 (1976).

Key words: broadbeam antennas; planar near field measurements.

This paper describes techniques for improving and extending planar near field (PNF) measurements for use in calibrating broadbeam antennas (gain ≥ 3 dB). This application requires minimizing errors associated with the PFN formulations: specifically, the assumptions that 1) all significant near fields associated with the test antenna fall within the measurement scan area and 2) that multiple reflections between test antenna, probe, and their surroundings are negligible. The techniques discussed include: 1) optimizing the scan parameters (e.g., size of scan area, data point spacing, and separation distance between the test antenna and measure plane); 2) simulating measurements taken over an extended, enlarged, scan area; 3) minimizing multipath error; and 4) use of data deletion and extrapolation to obtain the test antenna's on-axis gain calibration. The paper also contains results of measurements made using a typical broadbeam antenna. These results include comparisons made between a far field pattern obtained using PNF scanning and using a conventional far field range.

16471. Day, G. W., Hamilton, C. A., Gruzensky, P. M., Phelan, R. J., Jr., **Performance and characteristics of polyvinylidene fluoride pyroelectric detectors,** (Proc. IEEE Symp. on Application of Ferroelectrics, Albuquerque, NM, June 9-11, 1975), *Ferroelectrics* **11,** 99-102 (1976).

Key words: infrared detectors; polymers; pyroelectrics; radiometry.

Pyroelectric detectors based on the polymer film polyvinylidene fluoride should be recognized as attractive choices for applications where a high detectivity coupled with a broad spectral response and a large area are required. Devices with a 1 cm^2 area typically have a detectivity of $10^9 f^{1/2}$ cm $Hz^{1/2}/W$ where f is the frequency in Hz. Fabrication may be directly from commercially available film or with some additional processing. Several instruments incorporating these detectors have been developed to solve certain radiometric measurement problems.

16472. Day, G. W., Hamilton, C. A., Pyatt, K. W., **Spectral reference detector for the visible to 12-μm region; convenient, spectrally flat,** *Appl. Opt.* **15,** No. 7, 1865-1868 (July 1976).

Key words: detector; infrared; pyroelectric; spectral response.

A convenient spectral reference detector for the visible to 12-μm region has been developed. The device consists of a large area PVF_2 pyroelectric detector enclosed in a hemispherical light trap. Based on theoretical and experimental evaluations, the detector response is independent of wavelength to ± 1 percent over this spectral range.

16473. Domen, S. R., Lamperti, P. J., **Comparisons of calorimetric and ionometric measurements in graphite irradiated with electrons from 15 to 50 MeV,** *Med. Phys.* **3,** No. 5, 294-301 (Sept.-Oct. 1976).

Key words: absorbed dose; calorimeter; electrons; heat defect in graphite.

Extensive experimental comparisons of calorimetric and ionometric measurements have been made that cover a broader range of electron energies and depths in graphite than previously reported. Electron beams of 15, 20, 25, 30, 40, and 50 MeV were used. Calorimetric absorbed-dose measurements and ionometric specific-charge measurements in air were compared in graphite at depths from 1 to 51 g/cm^2. The medium was irradiated with uncollimated electron beams produced by scattering after passing through a 0.1-g/cm^2 aluminum vacuum window, various thicknesses of lead foils, and air. The variation in the quotient of the two measurements was studied as a function of lead-foil thickness, depth in the medium, beam energy, foil-to-detector

distance, and off-axis distance. These studies permitted the measurements to be corrected and compared with theoretical calculations that assume a broad medium irradiated with broad, parallel, monoenergetic electron beams. The overall experimental uncertainty is estimated to be 1 percent. The results are generally in good agreement with theoretical and experimental results of other investigators. The calorimeter received close to 1 Mrad during preliminary measurements and from 1 to 2 Mrad during the measurements reported. The results showed no detectable heat defect in graphite after prolonged periods of exposing the calorimeter to air at atmospheric pressure.

16474. Ekin, J. W., **Effect of stress on the critical current of Nb_3Sn multifilamentary composite wire,** *Appl. Phys. Lett.* **29,** No. 3, 216-219 (Aug. 1, 1976).

Key words: critical currents; magnets; magnet wire; Nb_3Sn; Nb_3Sn magnets; Nb_3Sn multifilamentary wires; strain; stress; superconducting magnets.

A critical-current study of flexible Nb_3Sn multifilamentary composite wires has been conducted at 4 K in magnetic fields to 90 kOe (7.2×10^6 A/m) while the wire is subjected to high mechanical stresses. The results show that at stresses above 1-2 $\times 10^8$ Pa (strains of 0.1-0.2%) the critical current is significantly degraded, with the magnitude of the reduction dependent on reinforcement techniques used in the wire's construction. The effect increases with magnetic field and results in the introduction of significant resistance at current levels well below the zero-stress critical current. Design considerations for the use of Nb_3Sn wires in the high-stress environments of large-scale superconducting magnets are discussed.

16475. Engen, G. F., **Measurement of complex microwave circuit parameters using only power detectors,** *CPEM Digest,* p. 171 (1976).

Key words: automatic network analyzer; microwave; microwave measurement; six-port.

Although straightforward in principle, the extension of existing designs for automatic network analyzers to the higher microwave frequencies is difficult in the current state-of-the-art. What appears to be needed is a basically different approach to the microwave detection problem. This is provided by the so-called "six-port" techniques, which eliminate the need for frequency conversion, local oscillators, phase detectors, etc. Recent theoretical studies have provided new insights into the basic concept and lead to "five-port" configurations which require three instead of four amplitude detectors. Of particular interest is the useful measurement dynamic range of 50-60 dB corresponding to an intrinsic dynamic range required in the amplitude detectors of a nominal 20 dB or less.

16476. Estin, A. J., **Scattering parameters of SMA coaxial connector pairs,** *CPEM Digest,* pp. 110-111 (1976).

Key words: coaxial connectors; connectors; RF connectors; SMA connectors.

A technique is described for making insertion loss and reflection measurements on SMA connectors mounted on solid-dielectric coaxial line. Results are given for measurements of $|S_{11}|$ and $|S_{21}|$ of eight test pairs over the frequency range of 4 to 12 GHz.

16477. Gans, W. L., **Present capabilities of the NBS automatic pulse measurement system,** *CPEM Digest,* pp. 25-26 (1976).

Key words: automated measurement; pulse; rise time; sampling oscilloscope; spectrum amplitude; time domain; transient.

In 1972, NBS began development of an Automatic Pulse Measurement System (APMS) consisting essentially of a minicomputer-controlled wideband sampling oscilloscope. The objective of the work was to produce a fast, general purpose transient waveform acquisition and processing instrument covering the frequency range dc-18 GHz. The purpose of this paper is to report the highlights of work done on the APMS from early 1975 to present.

The measurement applications of the APMS now consist of both publicly offered calibration services and inhouse experimental measurements. In the first category, calibration services are available for the following physical parameters: a. Impulse generator spectrum amplitude; b. Wideband coaxial attenuation/gain; c. Low pass filter risetime; d. Pulse generator risetime.

Still in the experimental stage are measurements involving reflection coefficient and impedance, group delay, pulse distortion, and wideband antenna characteristics. In addition, the APMS is quite often used for theoretical modeling and model/experiment comparison and verification.

16478. Ginsberg, D. M., Harris, R. E., Dynes, R. C., **Strong-coupling correction to the low-frequency electrical conductivity of superconductors and Josephson junctions,** *Phys. Rev. B* **14,** No. 3, 990-992 (Aug. 1, 1976).

Key words: electron tunneling; electronic devices; far infrared; Josephson effect; strong electron-phonon coupling; superconductivity.

Values of the strong-coupling correction to the low-frequency local-limit conductivity of a number of superconductors are given. These values also describe the strong-coupling correction to the critical current of a Josephson tunnel junction. The correction is given for indium, amorphous gallium, β-phase gallium, amorphous bismuth, $Pb_{0.8}Bi_{0.2}$, $Pb_{0.7}Bi_{0.3}$, amorphous $Pb_{0.45}Bi_{0.55}$, $Tl_{0.9}Bi_{0.1}$, $Pb_{0.8}Tl_{0.2}$, and previously published values are listed for tin, lead, mercury thallium, and indium-thallium alloys. It is shown that there is a simple empirical relation between these values and the effective electron-electron coupling parameter ($\lambda - \mu^*$).

16479. Unassigned.

16480. Greer, S. C., **Coexistence curves at liquid-liquid critical points: Ising exponents and extended scaling,** *Phys. Rev. A* **14,** No. 5, 1770-1780 (Nov. 1976).

Key words: binary mixture; coexistence curve; critical phenomena; density; isobutyric acid; magnetic densimeter; phase equilibria, carbon disulfide, nitromethane; water.

New measurements have been made of coexisting mass densities of isobutyric acid and water with a precision of 20 ppm and within 3.5 °C of the critical temperature. The measurements were made using a single sample of composition very close to critical. It is found that the coexistence curve is more symmetric in terms of the difference in volume fraction ($\Delta\phi$) of coexisting phases than in terms of the difference in mass density. The difference $\Delta\phi$ is well fitted for $\epsilon = (T_c - T)/T_c < 0.006$ by the expression $\Delta\phi = B\epsilon^\beta$, where $B = 1.071 \pm 0.023$ and $\beta = 0.328 \pm 0.004$. (Uncertainties are given as 3 times the standard deviation.) A new analysis has been made of the recent data of Gopal *et al.* on the difference in volume fraction of coexisting densities of carbon disulfide and nitromethane. For this system, $\Delta\phi$ can be fitted for $\epsilon < 0.2$ by an extended scaling expression suggested by Wegner's work, $\Delta\phi = B\epsilon^\beta + B_1\epsilon^{\beta+\Delta} + B_2\epsilon^{\beta+2\Delta}$. The exponent Δ_2 is fixed at 0.5; the fit gives $\beta = 0.316 \pm 0.008$, $B = 1.63 \pm 0.09$, $B_1 = 0.77 \pm 0.31$, and $B_2 = -2.43 \pm 0.40$. This work suggests that liquid-liquid critical phenomena are consistent with the functional forms obtained from renormalization-group calculations

and with asymptotic exponents which are like those presently calculated for the Ising model. The range of asymptotic behavior seems to be larger for a liquid-liquid critical point than for a liquid-gas critical point.

16481. Hammond, G. A., Brown, W. B., Yolken, H. T., **National program of measurements and standards for safeguarding nuclear materials,** (Proc. 17th Annual Meeting Institute of Nuclear Materials Management, Inc., Seattle, WA, June 22-24, 1976), Paper in *Nuclear Materials Management* **V,** No. III, 351-360 (1976).

Key words: fuel; materials accountability; measurements; nuclear; safeguards; standards.

A national measurement and standards program is described which is coordinated essentially by the Nuclear Regulatory Commission, the National Bureau of Standards and the Energy Research and Development Administration. Efforts and progress are outlined as related to assuring that timely, accurate measurements at reasonable cost are available to the nuclear community. The results of this combined effort show that programs are underway to keep abreast of the present measurement needs for nuclear materials safeguards, and that projected work is consistent with a growing U.S. nuclear industry.

16482. Hanley, H. J. M., **Comment on "Citation analysis: A new tool for science administrators",** *Science News and Comment* **188,** No. 4193, 1064 (June 1975).

Key words: citation index.

Comment on "News and Comment" item, entitled "Citation Analysis: A New Tool for Science Administrators," appearing in *Science*, **188,** 4187, p. 429, May 2, 1975.

16483. Hanley, H. J. M., Cohen, E. G. D., **Analysis of the transport coefficients for simple dense fluids: The diffusion and bulk viscosity coefficients,** *Physica* **83A,** 215-232 (1976).

Key words: argon; bulk viscosity; density expansion; methane; modified Enskog theory; molecular correlations; nitrogen; sound absorption.

The analysis of transport coefficients based on the modified Enskog theory (MET), discussed in a previous publication, has been extended to include the self-diffusion coefficient *(D)* and the bulk viscosity coefficient (η_v). Specifically, calculated values according to the MET are compared with experiment over the range for which data are available. Fluids considered are argon, nitrogen and methane. Agreement between theory and experiment for densities less than about twice the critical density (ρ_c) is generally within about 10 percent. However, much of the data was taken at densities well in excess of $2\rho_c$ in which case agreement is still not unsatisfactory. Deviations exceeding 10 percent between theoretical and experimental self-diffusion coefficients were observed for densities in the approximate range $0.9 \lesssim \rho/\rho_c \lesssim 2.0$. It is possible that these deviations are due to long range correlated molecular motions which are not present in the MET. The sound absorption is also briefly considered. Finally, the behavior of η_v and D at low densities is discussed.

16484. Hanley, H. J. M., Sengers, J. V., Ely, J. F., **On estimating thermal conductivity coefficients in the critical region of gases,** *Proc. 14th Int. Conf. Thermal Conductivity, Storrs, CT, June 2-4, 1975,* Paper R-960, pp. 383-407 (Plenum Publ. Corp., New York, NY, 1976).

Key words: correlation length; critical point; gas-liquid; nonspherical molecules; Ornstein-Zernike theory; thermal conductivity.

The thermal conductivity of a fluid exhibits a pronounced anomalous increase in a large range of densities and temperatures around the gas-liquid critical point. In this paper we discuss an attempt to estimate the thermal conductivity in the critical region of fluids from a knowledge of the equilibrium properties and the regular behavior of the transport properties outside the critical region.

16485. Harris, R. E., **Intrinsic response time of a Josephson tunnel junction,** *Phys. Rev. B* **13,** No. 9, 3818-3821 (May 1, 1976).

Key words: electronics devices; high speed devices; Josephson effect; superconducting devices; superconductivity; tunneling.

The microscopic theory of the Josephson effect is reformulated in the time domain. The four terms in the usual theory are seen to be necessary consequences of intrinsic junction delays. The tunneling current flowing in response to a voltage pulse is shown to rise in a time $\hbar/2\Delta$ and undergo damped energy-gap oscillations, before approaching the expected supercurrent. The theory provides a technique for calculating junction behavior when connected to an arbitrary circuit.

16486. Harris, R. E., Dynes, R. C., Ginsberg, D. M., **Strong-coupling correction to the jump in the quasiparticle current of a superconducting tunnel junction,** *Phys. Rev. B* **14,** No. 3, 993-995 (Aug. 1, 1976).

Key words: electronic devices; electron tunneling; Josephson effect; strong electron-phonon coupling; superconductivity.

Calculated values of the strong-coupling correction to the jump in the quasiparticle current of superconductor-insulator-superconductor tunnel junctions are given for a number of elements, amorphous materials, and alloys. It is shown that there is a simple empirical relation between the size of jump in the quasiparticle current and the effective electron-electron coupling parameter $(\lambda - \mu^*)$.

16487. Hellwig, H., Allan, D. W., Jarvis, S., Jr., Glaze, D. J., **The realization of the second,** (Proc. Fifth Int. Conf. on Atomic Masses and Fundamental Constants (AMCO-5), Paris, France, June 2-6, 1975), Paper in *Atomic Masses and Fundamental Constants*, J. H. Sanders and A. H. Wapstra, Eds., pp. 330-336 (Plenum Publ. Corp., New York, NY, 1975).

Key words: atomic beams; atomic clock; atomic time; cesium beam tube; definition of the second; frequency accuracy; international atomic time; primary frequency standard.

We report realizations of the unit of time with an accuracy approaching 1×10^{-13} using our two primary cesium beam standards. Quantitative values are given for the requirements on operating parameters of such devices in order to assure high frequency stability. Principal design limitations and fundamental approaches to overcome them are discussed. The concept of a servo which maintains accuracy is advanced which would allow primary standards to operate continuously as clocks without loss in their evaluated accuracy.

16488. Hellwig, H., Allan, D. W., Walls, F. L., **Time and frequency,** (Proc. Fifth Int. Conf. on Atomic Masses and Fundamental Constants (AMCO-5), Paris, France, June 2-6, 1975), Paper in *Atomic Masses and Fundamental Constants*, J. H. Sanders and A. H. Wapstra, Eds., pp. 305-311 (Plenum Publ. Corp., New York, NY, 1975).

Key words: clocks; frequency accuracy; frequency stability; frequency standards; infrared frequency multiplication; noise; time scale; time standards.

A comparison of the accuracy and stability performance of precise frequency standards is given. It is shown that measure-

ment systems exist which comfortably allow the full characterization of these standards. The importance of spectrally pure oscillators for frequency synthesis into the infrared region is discussed quantitatively. The problem of absolute accuracy in timekeeping is reviewed.

16489. Hellwig, H., Wainwright, A. E., **A portable rubidium clock for precision time transport,** *Proc. 7th Annual Precise Time and Time Interval (PTTI) Planning Meeting, Washington, DC, Dec. 2-4, 1975,* pp. 143-159 (Goddard Space Flight Center, Greenbelt, MD, 1976).

Key words: atomic clocks; frequency stability; portable clocks; rubidium frequency standard; time comparison.

Based on a commercially available rubidium standard the National Bureau of Standards (NBS) developed a portable rubidium clock. Technical modifications which reduce the sensitivity against temperature, magnetic environment, and barometric changes allow stabilities in the 10^{-12} range under typical clock transport conditions. Under laboratory conditions the clock shows a best stability of 3 parts in 10^{14}. Clock packages based on sealed lead-acid batteries featuring a total weight of 21 kg and 18 hours battery operation were tested; an improved clock package was realized using silver-zinc batteries with 11 kg weight and 28 hours battery operation. Report of several clock trips to the U.S. Naval Observatory and of one clock trip each to the Bureau International de l'Heure in Paris and to the Hewlett-Packard Company in Santa Clara, California are reported. Time transport precisions of .02 μs have been obtained. Special aspects of the clock modifications and the operating characteristics are discussed, as well as an optimal use of the data of a clock round-trip.

16490. Hoer, C. A., Roe, K. C., Allred, C. M., **Measuring and minimizing diode detector nonlinearity,** *CPEM Digest,* pp. 108-109 (1976).

Key words: detectors; diodes; linearity; square-law.

This paper describes a technique for measuring the linearity of amplitude detectors in general, and for measuring the deviation from square-law, E, of point-contact diode detectors in particular. A general mathematical model is given for determining the rf input power as a function of the detector output voltage. For point-contact diodes it is shown how to choose the video load resistance to minimize E, as well as how to calculate and correct for E.

16491. Holste, J. C., Lawless, W. N., Samara, G. A., **Dielectric properties of KH_2PO_4, $BaTiO_3$, $PbZr_{0.65}Ti_{0.35}O_3$ and TlCl between 0.015 and 10 K,** (Proc. IEEE Symp. on Application of Ferroelectrics, Albuquerque, NM, June 9-11, 1975), *Ferroelectrics* **11,** 337-340 (1976).

Key words: barium titanate; dielectric properties; ferroelectrics; KDP; PZT 65/35; thallium chloride; very low temperatures.

The small-signal ac permittivities (ϵ) of single crystal samples of KDP, $BaTiO_3$, and TlCl, and of a ceramic sample of PZT 65/35 have been measured as a function of temperature between 0.015 and 10 K. For KDP and PZT 65/35, ϵ increases essentially linearly with temperature in this range, with $d \ln \epsilon/dT = 0.95 \pm 0.15 \times 10^{-3}$ K^{-1} and $1.81 \pm 0.02 \times 10^{-3}$ K^{-1}, respectively. For $BaTiO_3$ linear behavior is observed only between 1.5 and 4.5 K, with $d \ln \epsilon/dT = 9.4 \times 10^{-4}$ K^{-1}. PZT 65/35 exhibits positive deviation from this apparent linear behavior between 0.1 and 1.5 K, while $BaTiO_3$ shows a negative deviation in this range. Both PZT 65/35 and $BaTiO_3$ have a minimum in ϵ below 0.1 K and an associated change in the dielectric loss factor that depends on the frequency and amplitude of the ac signal. No temperature dependence of ϵ was observed below 3 K for TlCl. Potential applications of these materials at low temperatures are discussed.

16492. Howe, D. A., **Precise frequency dissemination using the 19-kHz pilot tone on stereo FM radio stations,** *IEEE Trans. Broadcast.* **BC-20,** No. 1, 17-20 (Mar. 1974).

Key words: frequency modulation; modulation index; multipath; path delay; phase vs. time; σ vs. τ, 19 kHz pilot.

A continuous 19-kHz pilot tone is included as part of the modulation format of stereo FM broadcast radio stations. An experiment was performed which measures the stability of the received pilot in urban rural environments. A mathematical analysis is presented of the phase stability of the received pilot as a function of multipath. It shows that phase changes will exist dependent upon a reflected radio signal's phase lag, relative amplitude, and the modulation index. Data are presented which indicate: 1) phase versus time of the pilot at the National Bureau of Standards (NBS) laboratory using a directional yagi and a vertical whip; 2) Allan variance measurements of σ versus τ using a directional yagi; and 3) the day-to-day phase delay of the pilot at five urban locations and three rural locations using a vertical whip. With 5 min of averaging time, the delay of the pilot at five urban sites was reproducible to within 2 μs each day over a five-day period. Delay was reproducible to within 0.8 μs at three urban sites.

16493. Howell, B. F., Margolis, S., Schaffer, R., **Detection of inhibitors in reduced nicotinamide adenine dinucleotide by kinetic methods,** *Clin. Chem.* **22,** No. 10, 1648-1654 (1976).

Key words: Michaelis constants for NADH and LDH-5; LDH-1.

Methods are described for detection of lactate dehydrogenase (LDH) inhibitors in preparations of reduced nicotinamide adenine dinucleotide. They are (a) comparison of values by kinetic methods with those measured for highly purified NADH and (b) examination of Lineweaver-Burk plots. Chromatographic inhomogeneities are correlated with deviant values for the kinetic constants of NADH preparations. Lineweaver-Burk plots that curve upward at the high concentrations or have a larger or smaller than normal slope may indicate the presence of inhibitor. As determined in bicarbonate buffer (0.11 mol/liter, pH 7.9) by use of 0.600 mmol/liter pyruvate and NADH freshly separated from impurities by chromatography on diethylaminoethyl-cellulose, the K_m (apparent) of NADH at 25 °C has the value 8.11 ± 0.71 μmol/liter (SD, n = 28) with LDH-1 (pig heart, 2.48 ± 0.05 U per milliliter of reaction mixture, or 41.3 ± 0.8 nmol/liter per second). Under similar conditions, the K_m (apparent) of NADH has the value of 8.57 ± 1.58 mol/liter (SD, n = 21) with LDH-5 (pig muscle, 1.77 ± 0.03 U/ml of reaction mixture), or 29.4 ± 0.6 nmol/liter per second). At infinite substrate concentrations with the same pH, buffer, and temperature, the K_m (apparent) for NADH was 26.0 ± 0.63 μmol/liter with LDH-1 and 23.2 ± 4.6 μmol/liter with LDH-5.

16494. Hust, J. G., **Standard reference materials for thermal conductivity and electrical resistivity,** *Proc. 14th Int. Conf. Thermal Conductivity, Storrs, CT, June 2-4, 1975, Paper R-958,* pp. 221-231 (Plenum Publ. Corp., New York, NY, 1976).

Key words: austenitic stainless steel; electrical resistivity; high temperature; low temperature; standard reference materials; thermal conductivity.

A brief historical review is presented of thermal conductivity reference material research. Recent reference material research by the National Bureau of Standards is described. Critically evaluated thermal conductivity and electrical resistivity data are summarized for the following three Standard Reference Materi-

als now available from the Office of Standard Reference Materials, National Bureau of Standards, Washington, D.C.: electrolytic iron (4 to 1000 K), austenitic stainless steel (4 to 1200 K), and tungsten (4 to 3000 K).

16495. Jesch, R. L., **Repeatability of SMA coaxial connectors,** *CPEM Digest*, pp. 103-104 (1976).

Key words: coaxial connectors; insertion loss; microwave; reflection coefficient magnitude; repeatability.

SMA connectors in three different configurations were investigated for variation of reflection coefficient magnitude and insertion loss for a given SMA connector connect-disconnect sequence. Repeatability measurements were taken over the frequency range of 2 to 18 GHz for reflection coefficient and over the frequency range of 2 to 12.4 GHz for insertion loss on the National Bureau of Standards' Automatic Network Analyzer. A sample of variation of reflection coefficient magnitude is given for one SMA connector configuration. This variation was much smaller than was expected for SMA connectors.

16496. Jespersen, J. L., **A survey of time and frequency dissemination techniques,** *Proc. 24th Annual Frequency Control Symp., Atlantic City, NJ, Apr. 27-29, 1970*, pp. 322-324 (U.S. Army Electronics Command, Ft. Monmouth, NJ, 1970).

Key words: broadcast; communication; frequency; ratio; synchronization; time.

There are a number of common elements which characterize most time dissemination systems. Among the more important are: accuracy, repeatability, coverage, possibilities for improvement, cost to establish and maintain, ambiguity, time required to obtain answer, ease of use, and cost to the user. At the present time, there does not appear to be any single system which incorporates all of the desired characteristics. The relative importance of these characteristics varies from one user to the next and the kind of tradeoff that one user is willing to make is not a suitable tradeoff for another. Some of the systems such as WWV, were built specifically for the purpose of time and frequency dissemination while others such as TV have considerable potential. These systems and others will be discussed and compared with reference to the characterizing elements enumerated earlier, and some unresolved problems for the future will be considered.

16497. Johnson, W. L., McNeil, J. R., Collins, G. J., Persson, K. B., **CW laser action in the blue-green spectral region from Ag II,** *Appl. Phys. Lett.* **29,** No. 2, 101-102 (July 15, 1976).

Key words: charge transfer; lasers; sputtering; visible.

We have observed 18 cw laser transitions in Ne-Ag mixtures spanning the wavelength region from 408.6 to 585.2 nm. The upper laser levels of Ag II are judged to be pumped by a charge-transfer reaction between a ground-state neon ion and a ground-state Ag I atom resulting in simultaneous ionization and excitation of the silver atom. Output characteristics of the Ag II laser transitions as a function of neon pressure and discharge current are presented. The two strongest transitions are 478.8 and 502.7 nm in the blue and green, respectively.

16498. Kamper, R. A., **RF applications of the Josephson effect,** *Microwave J.* **19,** No. 4, 39-41, 52 (Apr. 1976).

Key words: high frequency; infrared; Josephson effect; measurements; superconductivity.

This paper reviews progress to date in applying the Josephson effect to microwave detectors, mixers, parametric amplifiers, and measuring systems.

16499. Kanda, M., **An error analysis for absolute flux density measurements of Cassiopeia A,** *IEEE Trans. Instrum. Meas.* **IM-25,** No. 3, 173-182 (Sept. 1976).

Key words: accuracy; antenna; calibration; Cassiopeia A; error analysis; flux density; G/T (system gain/system noise temperature); ground station; radio star.

An error analysis for absolute flux density measurements of Cas A is discussed. The lower-bound quadrature-accumulation error for state-of-the-art measurements of the absolute flux density of Cas A around 7 GHz is estimated to be 1.71 percent for 3σ limits. The corresponding practicable error for the careful but not state-of-the-art measurements is estimated to be 4.46 percent for 3σ limits.

16500. Kanda, M., Larson, T. R., **Stability of silicon avalanche noise diodes at K and K_a bands,** *CPEM Digest*, pp. 215-217 (1976).

Key words: silicon avalanche diode; solid state noise source; stability.

A statistical analysis is given for the stability of silicon avalanche noise diodes at K and K_a bands. A brief discussion of a statistical measure for stability and the measurement techniques are given. Cross-correlation coefficients of output noise from the noise diodes and their environmental factors are evaluated in order to examine the causes of the observed instabilities of noise diodes.

16501. Komarek, E. L., **An automated broadband system for measurement of one-port microwave parameters,** *CPEM Digest*, pp. 167-170 (1976).

Key words: application of six-port junction concept; automated measurements; broadband measurements; microwave measurements; microwave power measurements; one-port parameters; six-port junction.

A broadband measurement system has been implemented for determining microwave parameters of one-port devices in the 1-18 GHz frequency range using the six-port junction concept and automation techniques. Although not complete, performance evaluation results show that the system compares favorably with other automated and manually operated measurement methods.

16502. Krauss, M., **Analysis of NH spectrum,** (Proc. IAU Colloq. No. 25, Greenbelt, MD, Oct. 28-Nov. 1, 1974), Paper in *NASA SP-393, The Study of Comets*, B. Donn, M. Mumma, W. Jackson, M. A. Hearn, and R. Harrington, Eds., Part 2, pp. 848-852 (Scientific and Technical Information Office, National Aeronautics and Space Administration, Washington, DC, 1976).

Key words: comet; electric-dipole transition; excited states; NH; spin-orbit coupling; transition probability.

The NH cometary spectra is examined within the context of the radiation equilibrium model. The total fluorescent rate for the $A^3\Pi$-$X^3\Sigma^-$ transition is found to be less than 10 $^2S^1$ and the rate for the $c^1\pi$ $^1\Delta$ transition is estimated to be comparable. A semiempirical calculation of the spin-orbit induced $a^1\Delta$-$X^1\Sigma^-$ transition finds the rate to be about 5 S^1. Any $^1\Delta$ NH formed in an initial photodissociation would radiate to the ground state before it can be excited. The photochemical origin of the NH radical cannot be deduced from the fluorescence spectra.

16503. Kuriyama, M., Boettinger, W. J., Burdette, H. E., **X-ray topographic observations of magnetic domains in Czochralski-grown nickel single crystals in anomalous transmission geometry,** *J. Appl. Phys.* **47,** No. 11, 5064-5068 (Nov. 1976).

Key words: crystal perfection; Czochralski growth; domain walls; magnetic domains; nickel single crystals; surface reflection topography; transmission topography; x-ray diffraction topography.

Ferromagnetic domain walls are observed in large Czochralski-grown nickel single crystals by x-ray double crystal diffraction topography in the surface reflection geometry as well as in the transmission geometry. The images of magnetic domain walls in surface reflection topographs possess almost as good contrast as those in the transmission topographs, and even reveal fine detailed structures distinctly. Based on preliminary arguments, the images observed in the surface reflection topographs are attributed to 180° walls intersecting with the crystal surface obliquely, while the transmission topographs easily image 71° and 109° walls in the interior of the crystals.

16504. Larsen, N. T., **A new self-balancing DC-substitution RF power meter,** *CPEM Digest*, pp. 203-205 (1976).

Key words: bolometer; microwave; power measurement.

Problems intrinsic in self-balancing Wheatstone bridges have led to the development of a new dc substitution microwave power meter. The new instrument allows four-terminal measurement of bolometer resistance and affords improved accuracy and lower noise at a lower cost than earlier instruments. Measurement errors due to imperfect behavior of the servo system are typically less than 0.01 percent.

16505. Ledbetter, H. M., Weston, W. F., **Low-temperature elastic properties of some copper-nickel alloys,** *Proc. IEEE Symp. on Ultrasonics, Los Angeles, CA, Sept. 22-24, 1975*, pp. 623-627 (IEEE, New York, NY, 1976).

Key words: bulk modulus; compressibility; copper; copper alloys; elastic constants; Poisson ratio; pulse-echo method; resonance method; shear modulus; sound velocity; Young's modulus.

The polycrystalline elastic properties of Cu, Cu-10 Ni, and Cu-30 Ni were determined between room temperature and liquid-helium temperature using both pulse-echo (10 MHz) and resonance (60 kHz) methods. The temperature dependence of all three materials is regular. The composition dependence of the elastic constants is reviewed and new composition dependences are proposed.

16506. Lias, S. G., Ausloos, P., Horvath, Z., **Charge transfer reactions in alkane and cycloalkane systems. Estimated ionization potentials,** *Int. J. Chem. Kinet.* **VIII,** 725-739 (1976).

Key words: alkane ions; alkanes; charge transfer; ion-cyclotron resonance; ion-molecule reactions; ionization potentials; rate constants.

Rate constants of charge transfer reactions k_{CT}, involving C_3-C_9 alkanes and cycloalkanes, have been determined in an ion cyclotron resonance mass spectrometer. The rate constants are significantly lower than the corresponding rate constants for collision when the reaction is less than about 0.5 eV exothermic for linear alkane ions, or less than about 0.2 eV exothermic for cycloalkane ions. In this region of low reaction efficiency, the efficiency of reaction with linear or branched alkanes seems to depend primarily on reaction exothermicity. (The efficiencies of reaction of a given ion with cyclic alkanes also depend on ΔH_{rn}, but are higher than for reactions with other compounds.) Although the lowered reaction efficiencies probably result, at least in part, from unfavorable Franck-Condon factors in the energy range near the ionization onset, quantitative correlations between reaction efficiency and estimated relative Fránck-Condon factors were not observed. When the enthalpy of reaction is small (less than about -0.15 eV), it is seen that the reverse charge transfer can also occur, and equilibrium is established under the condition of these experiments. From the observed equilibrium constants, values for the standard free energy change are derived, and assuming that ΔS is small for electron transfer equilibria, values of ΔH_{rn} are estimated. In the case of the equilibria involving cyclohexane ion, these values of ΔH_{rn} lead to estimates of the ionization potentials of methylcyclopentane, 3-methylpentane, *n*-octane, 2,2-dimethylbutane, and 2,3-dimethylbutane, which are lower than the ionization potentials of cyclohexane, that is, < 9.88 eV, although all these compounds had previously been reported to have ionization potentials above 10.03 eV. That the ionization potentials are indeed lower than 10.03 eV is confirmed by determining the quantum yields of ionization with 10.03-eV photons.

It is pointed out that the conclusions reached here apparently also apply to the charge transfer reactions of alkane ions in the liquid phase.

16507. Lightbody, J. W., Jr., Penner, S., Fivozinsky, S. P., Hallowell, P. L., Crannell, H., **Electron scattering from vibrational nuclei,** *Phys. Rev. C* **14,** No. 3, 952-964 (Sept. 1976).

Key words: anharmonicities; branching ratio; charge distribution; electron scattering; quadrupole phonons; vibrational nuclei.

We present electron scattering form factors for the ground states and several low energy quadrupole excitations of the nuclei ^{52}Cr, ^{110}Pd, ^{114}Cd, and ^{116}Sn. For ^{116}Sn we also present the form factor for the lowest octupole excitation. From these data we derive ground state charge distribution parameters as well as $B(EL)$ values. We attempt to interpret the observed 2^+ states as the one- and two-phonon states of an anharmonic vibrational model. Predictions are made for the electromagnetic decay branching ratios and excited state electric quadrupole moments.

16508. Lightbody, J. W., Jr., **Electron scattering from one- and two-phonon vibrational states,** *Physics Lett.* **38B,** No. 7, 475-479 (Apr. 3, 1972).

Key words: admixture; anharmonicities; branching ratios; electron scattering; phonons; reorientation effect.

Admixtures of one- and two-phonon states are required to fit (e, e′) form factors for the lowest two 2^+ states in several even-even vibrational nuclei. These anharmonic wave functions correctly reproduce radiative branching ratios and excited state quadrupole moments.

16509. Little, W., Wakefield, J., Heim, L., Alfred, C., Zapf, T., Manney, C., **An NBS developed automatic network analyzer,** *CPEM Digest*, pp. 130-133 (1976).

Key words: attenuation; automated; bolometer mount efficiency; measurements; network analyzer; phase; reflection coefficient.

This paper describes a precision automated measurement system that has been under development at NBS since 1971 for the frequency range of 0.1 to 12.4 GHz. The system has been designed to measure attenuation, phase shift, reflection coefficient, and bolometer mount efficiency with accuracy as good as or better than can be achieved with present state-of-the-art manual measurement techniques (approximately an order of magnitude better than commercially available ANA's). The paper also presents recent measurement results that have been achieved with the system.

16510. Little, W. E., Yates, B. C., **Reflection coefficient standards for automated network analyzers,** *CPEM Digest*, pp. 128-129 (1976).

Key words: automatic; broad frequency; equations; network analyzers; open circuit reflection coefficient; short circuit; standards.

This paper describes the development and use of broad frequency band reflection coefficient standards for rectangular and coaxial waveguide. Equations for both the magnitude and phase angle of the reflection coefficient of "off-set" short circuits are presented so that these values can be calculated as a function of frequency. An equation for the phase angle of the coaxial "open circuit" reflection coefficient is given in terms of the open circuit capacitance and frequency. Also, an empirical equation is given that allows an estimate of the "open circuit" reflection coefficient magnitude.

16511. McNeil, J. R., Johnson, W. L., Collins, G. G., Persson, K. B., **Ultraviolet laser action in He-Ag and Ne-Ag mixtures,** *Appl. Phys. Lett.* **29,** No. 3, 172-174 (Aug. 1, 1976).

Key words: He-Ag and Ne-Ag mixtures; laser action; ultraviolet laser action.

We report eight new laser transitions which span the wavelength region from 220 to 400 nm. Six of the ultraviolet transitions are observed in Ne-Ag mixtures and two are observed in He-Ag mixtures. The 227.8- and 224.3-nm laser transitions of Ag II, $5d^3D_2$-$5p^3P_1^0$ and $5d^1S_0$-$5p^1P_1^0$ respectively, are the shortest-wavelength cw laser transitions reported in the literature to date. Output characteristics of the ultraviolet laser transitions as a function of buffer gas pressure and discharge current are presented. The strongest laser transition $4d^85s^2\ ^1G_4 \rightarrow 4d^95p^3F_3^0$, at 318.1 nm, provides single-line peak output power of 350 mW. The output power does not appear to saturate at the limit of our input current, 50 A.

16512. Meijer, P. H. E., Lockhart, R. G., Niemeijer, T., **Influence of crystallographic displacement and *g*-factors on the ground state of cerous magnesium nitrate,** *Solid State Commun.* **18,** No. 4, 473-474 (1976).

Key words: cerous magnesium nitrate; crystal structure; *g*-factors; ground state energy; Luttinger-Tisza method; translation vectors.

Since the thermodynamic properties of cerous magnesium nitrate play such an important role in low temperature physics we computed the influence of all variations still possible under the given set of known data: Small variation in the lattice structure, in particular the displacement of the center plane, small variations of the *g*-factor and the combination thereof.

16513. Mies, F. H., **Polarization of OH radiation,** (Proc. IAU Colloq. No. 25, Greenbelt, MD, Oct. 28-Nov. 1, 1974), Paper in *NASA SP-393, The Study of Comets*, B. Donn, M. Mumma, W. Jackson, M. A. Hearn, and R. Harrington, Eds., Part 2, pp. 843-847 (Scientific and Technical Information Office, National Aeronautics and Space Administration, Washington, DC, 1976).

Key words: comets; fluorescence; OH-18-cm radiation; optical pumping; polarization.

In the absence of collisions, optical pumping of cometary OH by solar ultraviolet radiation determines the relative population of OH molecules in the Λ-doubled levels of the $^2\Pi_{3/2}$ ground state, and also produces an alignment of the magnetic sublevels along the axis of the incident solar radiation. This results in a linear polarization of both the u.v. fluorescent spectrum and the 18-cm OH radiowave spectrum.

16514. Murphey, W. M., Sherr, T. S., Bennett, C. A., **Societal risk approach to safeguards design and evaluation,** (Proc. 16th Annual Meeting Institute of Nuclear Materials Management, Inc., New Orleans, LA, June 18-20, 1975), Paper in *Nuclear Materials Management* **IV,** No. III, 588-606 (1975).

Key words: nuclear materials safeguards; safeguards evaluation; safeguards system design; societal risk.

A comprehensive rationale for safeguards design and evaluation, and a framework for continuing systematic assessment of the system's effectiveness and efficient allocation of available safeguards resources so as to provide a balanced protection has been developed. The general objective of safeguards has been stated as: "to achieve a level of protection against ... [willful actions involving the possession of nuclear materials or the sabotage of nuclear facilities] that insures against a significant increase in the overall risk of death, injury, or property damage to the public from other causes beyond the control of the individual." Consistent with this objective, the societal risk approach was chosen as the basis for designing and evaluating the safeguards system. The approach considers the frequency (or likelihood) of occurrence of an antisocial act involving nuclear materials or facilities and the magnitude of the effects on society should such an act be successfully perpetrated. The analysis starts with the identification of the set of illegitimate final acts, or "events," which involve nuclear materials or nuclear facilities. These events are used as a basis for identifying the adversary action sequences that could produce the final events, and as a basis for considering the consequences to the public. The paper presents a summary of the societal risk approach, considerations relating to frequency of attempt, an adversary action tree approach to analysis of adversary activities, the structure of the safeguards system implied by the adversary actions, and implications relating to safeguards system design and evaluation arising from the societal risk approach.

16515. Okabe, H., **Photochemistry,** Paper in *Encyclopedia of Chemistry Uses (Utet Sansoni Edizioni Scientifiche)*, **V,** 610-615 (Firenze, Italy, 1976).

Key words: bond energy; chain reaction; determination of photochemical mechanism; flash photolysis; intermittent illumination; photochemical principles; photochemical reaction of atoms and molecules; photochemistry in the atmosphere; photochemistry of air pollution; primary and secondary photochemical processes.

The principles and processes of photochemistry are described at an elementary level. The importance of quantum yield measurement is emphasized. Main topics covered in this article are chain reaction, flash photolysis, effect of intermittent illumination, examples of photochemical reaction in atoms and molecules, application of photochemistry for the measurement of bond energy, photochemistry in the atmosphere and photochemistry of air pollution.

16516. Reeve, G. R., Arthur, M. G., **A standard percent modulation measurement system,** *CPEM Digest*, pp. 165-166 (1976).

Key words: amplitude modulation; instrument landing system; modulation measurements; modulation meter; percent modulation.

This paper describes a precision percent modulation measurement system constructed by the Electromagnetics Division, National Bureau of Standards, for calibration of secondary standards for instrument landing system (ILS) generators and meters. A description of the electronics is presented along with the estimated measurement uncertainty.

16517. Reite, M., Zimmerman, J. E., Edrich, J., Zimmerman, J., **The human magnetoencephalogram: Some EEG and related correlations,** *Electroencephalogr. Clin. Neurophysiol.* **40,** 59-66 (1976).

229-317 O - 77 - 22

Key words: magnetic evoked response; magnetoencephalography.

Simultaneous magnetoencephalographic (MEG) and electroencephalographic (EEG) data were recorded from four normal adults. Spectral analysis suggested that the MEG and EEG data were produced by similar but nonidentical generator systems; the MEG recorded here may be generated by intrasulcal cortex. A magnetic averaged evoked response to flash was recorded in one subject, consisting of a waveform similar to and phase-coherent with the simultaneous EEG averaged evoked response, such that cortical negativity was correlated with a magnetic field directed into the scalp.

16518. Riad, S. M., Nahman, N. S., **Application of the homomorphic deconvolution for the separation of TDR signals occurring in overlapping time windows,** *CPEM Digest*, pp. 27-29 (1976).

Key words: homomorphic deconvolution; time domain measurements; time domain reflectometry.

The homomorphic transformation is used to separate a time domain reflectometry (TDR) signal into its rapidly and slowly varying components, respectively. The separation (deconvolution) technique is successful in the case where the multiple reflections cannot be viewed in nonoverlapping time windows as is required by the conventional TDR method.

16519. Ries, F. X., **An international intercomparison of voltage standards at 1 GHz in coaxial transmission line,** *IEEE Trans. Instrum. Meas.* **IM-25,** No. 3, 254-255 (Sept. 1976).

Key words: electrical measurements; radio frequency; voltage measurements.

The results of an International Intercomparison of RF voltage at 1 GHz is described. This comparison was sponsored by the High Frequency Working Group of the Comité Consultatif d'Eléctricité (CCE) at the Bureau International des Poids et Mesures (BIPM). Differences between values reported by the five participating laboratories fell within the total uncertainties given by these laboratories. The estimated limits of uncertainty given by the laboratories varied from a few tenths to several percent.

16520. Risley, A. S., Shoaf, J. H., Ashley, J. R., **Frequency stabilization of *X*-band sources for use in frequency synthesis into the infrared,** *IEEE Trans. Instrum. Meas.* **IM-23,** No. 3, 187-195 (Sept. 1974).

Key words: cavity stabilization; frequency multiplication; frequency stability; frequency synthesis; Gunn oscillator; infrared; injection stabilization; klystron; *X band.*

An *X*-band source of excellent frequency stability is needed in infrared frequency multiplication of high order. Such a source has been used in frequency multiplication by a factor of 401 using a point-contact Josephson junction as a frequency multiplier and mixer. Noise data on three *X*-band systems are reported. Two of these systems use klystrons as the source of *X*-band power; the other uses a Gunn oscillator. Each of these three systems employs both cavity and injection stabilization. Injection stabilization, using a quartz-oscillator-driven multiplier chain, provides the second-to-second and minute-to-minute stability needed for the Josephson junction experiment. To our knowledge, this is the first published noise data where cavity and injection stabilization are simultaneously employed. The quality of the best system reported here is much better—both around 1 Hz from the carrier and around 50 kHz from the carrier—than the source used to multiply by a factor of 401 to 3.8 THz.

16521. Rockar, E. M., Forman, R. A., **Polarized luminescence from MgO:Cr^{3+},** *Phys. Rev. B* **14,** No. 8, 3621-3629 (Oct. 15, 1976).

Key words: chromium 3+; crystal vacancies; cubic crystals; depolarization; impurity compensation; luminescence; magnesium oxide; MgO; optical properties; polarized luminescence; symmetry; transition metal ions.

MgO:Cr^{3+} has been used as a model system to study the general case of polarized luminescence from transition-metal impurities in cubic materials. Using polarized exciting light, information can be obtained about the site symmetries of the impurities as well as the dipole character of the absorbing and emitting levels. The data presented are in substantial agreement with previous studies on the line emission spectra of MgO:Cr^{3+} obtained by other techniques. Careful experimental procedures to avoid artifacts are detailed. Experimental values for the polarizations are always significantly smaller than those predicted by theory. A dependence of polarization with chromium concentration was also noted. Probable causes for these effects are discussed.

16522. Roder, H. M., **The heats of transition of solid ethane,** *J. Chem. Phys.* **65,** No. 4, 1371-1373 (Aug. 15, 1976).

Key words: ethane; heat capacity; heat of fusion; heat of transition; transition temperature; triple point.

The existence of a solid-solid transition in ethane is now generally accepted. A value for the heat of transition, 2437 ± 35 J/mol at 89.774 K, together with a new value for the heat of fusion, 279 ± 6 J/mol at 90.337 K, is reported in this work. The sum of the new values is in excellent agreement with the earlier measurements, provided that the heat required to raise the temperature of the solid between transitions is included. The transition temperatures are in agreement with the most recent determinations of other authors.

16523. Ruff, A. W., **Deformation studies at sliding wear tracks in iron,** *Wear* **40,** 59-74 (1976).

Key words: electron channeling; iron; metals; plastic deformation; surfaces; wear.

Determinations have been made of strains on the surface and subsurface of specimens of high purity iron after different distances of sliding wear. The method involved the measurement of loss of intensity (contrast) of particular electron channeling lines obtained from small selected areas near the wear track. A calibration specimen, deformed plastically to a range of strain values, was used to relate the channeling line contrast loss to plastic strain. Strain maps lateral to the wear track and below the original surface were obtained after removing controlled thicknesses of iron by electropolishing. In all cases the maximum strain was found at the track center location at the surface and the strains decreased steadily with depth below the track. With a 50 g load the strains vanished at about 40 μm depth. Significant strains were found to exist outside the wear track boundaries. There was no indication of a soft or less-hardened surface layer in any of the specimens studied.

16524. Sanders, D. M., Blackburn, D. H., Haller, W. K., **A high-temperature transpiration apparatus for study of viscous, incongruently vaporizing glass melts,** *J. Am. Ceramic Soc.* **59,** No. 7-8, 366-368 (Aug. 1976).

Key words: glass; incongruent vaporization; transpiration; vapor density.

The vapor density of sodium over a well-stirred soda-lime-silica glass melt was measured using a newly developed transpiration apparatus. This apparatus uses intense stirring action to

produce fresh surfaces throughout the measurement. This feature is necessary to prevent the formation of depleted layers formed by preferential vaporization of one of the glass components. The apparatus design and operating characteristics are discussed.

16525. Schleter, J. C., **A decision structure for a State safeguards system,** (Proc. Symp. Safeguarding Nuclear Materials, Vienna, Austria, Oct. 20-24, 1975), Paper in *Safeguarding Nuclear Materials*, **I,** 199-213 (International Atomic Energy Agency, Vienna, Austria, 1976).

Key words: decision structure; information system; nuclear material diversion; nuclear materials; safeguards; safeguards information system.

An effective structure to direct safeguards decisions within a State's safeguards system is vital in order to minimize the possibility of illicit diversion of nuclear material. In a State each plant usually has some form of information system in operation but it is generally plant specific and often is directed only to management functions. The systematic study, discussed in this paper, is aimed at developing a more comprehensive Safeguards Information System (SIS). The concepts used are applicable to any State's safeguards system. Decision makers are identified and classified. General safeguards and operational tasks are defined for each and, based on these, information sources are identified. The flow structure for information is specified to enable safeguards decision makers to function properly. Concepts used to characterize the SIS and the associated decision structure are discussed.

16526. Schleter, J. C., A **decision structure for plant safeguards,** (Proc. 16th Annual Meeting Institute of Nuclear Materials Management, Inc., New Orleans, LA, June 18-20, 1975), Paper in *Nuclear Materials Management* **IV,** No. III, 406-430 (1975).

Key words: decision makers; decision structure; information flows; nuclear material information systems; nuclear materials safeguards; safeguards.

A systematic study has been performed to determine the information necessary for meaningful safeguards decisions. The resulting Safeguards Information System (SIS) encompasses all decision makers, in general terms, from those at ERDA Headquarters to the operator on the process line. Only decision makers within the plant are considered in this paper. The basic premises and steps employed in developing SIS are described. These include rapid two-level reporting of abnormal situations, identification of the safeguards decision makers, deduction of safeguards information generated and abnormal situations observed by each as a result of operational tasks, and to whom the information is transmitted. The content of information flowing to and from each decision maker from all sources is established and assurance is given that each decision maker receives the necessary information and that extraneous information is held to a minimum. By means of the analysis, a decision structure for safeguards becomes apparent, the decision capability of each decision maker can be specified, and the sources and flows of information necessary for meaningful safeguards decisions can be identified. The application of the general SIS, to serve as the basis of a plant-specific SIS, is also considered.

16527. Siegwarth, J. D., Lawless, W. N., Morrow, A. J., **Dielectric and thermal properties of $Pb_2Nb_2O_7$ at low temperature,** *J. Appl. Phys.* **47,** No. 9, 3789-3791 (Sept. 1976).

Key words: antiferroelectric; dielectric constant; heat capacity; lead pyroniobate; low temperature; polarization.

Measurements of the dielectric constant, polarization, zero-field specific heat, and field-dependent specific heat of polycrystalline $Pb_2Nb_2O_7$ at low temperatures are reported. No evidence for a phase transition at 15 K was found, contrary to previous suggestions of an antiferroelectric transition at 15 K based on dielectric data. The peak in the dielectric constant appears to be due to relaxation phenomena.

16528. Smith, E. W., Giraud, M., Cooper, J., **A semiclassical theory for spectral line broadening in molecules,** *J. Chem. Phys.* **65,** No. 4, 1256-1267 (Aug. 15, 1976).

Key words: *ab initio* potentials; atom-molecule interactions; curved classical trajectories; HCl, CO, CO_2 with He, Ar; rotation-vibration spectra; semiclassical *S*-matrix; spectral line broadening.

A semiclassical *S*-matrix theory is developed and applied to spectral line broadening in linear molecules perturbed by atoms. This theory uses curved classical trajectories determined by the isotropic part of the atom-molecule interaction and the *S*-matrix is treated to all orders in the interaction. Numerical calculations can be made rather easily even for high quantum numbers. The theory is least accurate for very low quantum numbers, but even then calculations agree to within 10 percent with close coupling results where comparisons could be made. Comparisons were also made with other theoretical approaches using model potentials and with experiments using *ab initio* potential surfaces.

16529. Sorensen, C. M., Fickett, F. R., Mockler, R. C., O'Sullivan, W. J., Scott, J. F., **On lysozyme as a possible high-temperature superconductor,** *J. Phys. C: Solid State Phys. Letter to Ed.* **9,** L251-L254 (1976).

Key words: diamagnetism; light scattering; molecular diffusion; organic molecule; superconductor; susceptibility.

Intensity autocorrelation measurements of the diffusion constant of lysozyme molecules in aqueous solutions as a function of applied magnetic field reveal no evidence of the cooperative behavior proposed by Ahmed, Calderwood, Fröhlich and Smith to explain their observation of a large peak in the diamagnetic susceptibility of lysozyme at an applied field of 600 Oe. Careful susceptibility measurements using a SQUID system show that the diamagnetic susceptibility of lysozyme and lysozyme solutions is constant up to our maximum field of 720 Oe.

16530. Sugar, J. R., **A VOR audiofrequency standard signal source based on digital waveform synthesis,** *CPEM Digest*, pp. 72-73 (1976).

Key words: aircraft navigation systems; digital frequency synthesis; national standards; precision audiofrequency signal generation; precision FM signal generation; precision phase angle generation; radio navigation; VOR.

This unit generates three highly accurate audio signals for use in calibrating the working standards for the calibration of VHF omnirange (VOR) aircraft navigation systems. The three signals are two 30 Hz sine waves and a 9960 Hz carrier, frequency modulated by a 30 Hz sine wave. The phase of one of the 30 Hz signals is adjustable in .01° steps relative to the other two signals. The zero-crossing points of all three signals are accurate to approximately .01° relative to 30 Hz. In order to achieve this level of accuracy the signals are generated digitally and then converted to analog form. A substantial reduction in the required size of read-only-memory for storing the required digital functions is achieved by storing the differences rather than the functions themselves. Error-checking circuits and built-in-test circuits are incorporated to provide an immediate indication of malfunction of the digital circuits.

16531. Tobler, R. L., **Fatigue crack growth and J-integral fracture parameters of Ti-6A1-4V at ambient and cryogenic temperatures,** *Am. Soc. Test. Mater. Spec. Tech. Publ. 601*, 346-370 (1976).

Key words: fatigue crack propagation; fracture toughness; J-integral; low temperature tests; titanium alloys.

Fatigue crack propagation and fracture parameters for 2.03-cm-thick compact specimens of an extra-low-interstitial Ti-6A1-4V alloy were measured at temperatures between 296 K (70 °F) and 4 K (− 453 °F). Plane-strain linear-elastic and J-integral fracture toughness test results were in good agreement: the K_{1c} values for this alloy decreased from 105 MN/m$^{3/2}$ at room temperature to 54 MN/m$^{3/2}$ at 4 K, and a ductile-to-brittle fracture transition occurred in the range 125 to 76 K (− 235 to − 323 °F). Despite this transition, the fatigue crack growth rates *(da/dN)* of this alloy remained temperature insensitive over the entire ambient-to-cryogenic range. These fatigue and fracture results are compared with data previously reported for a normal-interstitial Ti-6A1-4V alloy.

16532. Truhlar, D. G., Brandt, M. A., **Close-coupling calculations of differential cross sections for elastic scattering and rotational excitation of hydrogen molecules by electrons at 10 and 40 eV,** *J. Chem. Phys.* **65,** No. 8, 3092-3101 (Oct. 15, 1976).

Key words: close-coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory.

We have performed close-coupling calculations including two rotational states for electron scattering by hydrogen molecules at 10 and 40 eV impact energies. The effective interaction potential was taken as a sum of the static, exchange, and polarization interactions. With no empirical parameters, good agreement with experiments was obtained for the angle dependences and magnitudes of the differential cross sections for both pure elastic scattering and rotational excitation except that there are discrepancies in the elastic scattering at small scattering angles where the experiments are least reliable. Variations of the forms of the exchange and polarization potentials were examined and the effect on the cross sections was small.

16533. Truhlar, D. G., Brandt, M. A., Chutjian, A., Srivastava, S. K., Trajmar, S., **Electron scattering by N_2 at 5 and 10 eV: Rotational-vibrational close-coupling calculations and crossed beam studies of vibrational excitation,** *J. Chem. Phys.* **65,** No. 8, 2962-2969 (Oct. 15, 1976).

Key words: close-coupling calculations; crossed beams; cross sections; differential cross sections; electron scattering; inelastic scattering; nitrogen molecules; polarization potential; scattering; static potential; vibrational excitation.

The ratios of differential cross sections for excitation of the first excited vibrational state to differential cross sections for elastic scattering of N_2 have been measured at scattering angles ranging from 20° to 135° at 5 and 10 eV impact energies. Using previously measured and normalized elastic differential cross sections for N_2, the ratios have been converted to inelastic cross sections. Laboratory-frame close-coupling calculations using a four-state vibrational-rotational basis set and an effective interaction potential developed previously are reported at both energies. It is shown that the four-state treatment of this potential scattering model can account for the approximate magnitude and the qualitative behavior of the cross sections, but there are some significant quantitative differences between theory and experiment.

16534. Wacker, P. F., Bowman, R. R., **Quantifying hazardous electromagnetic fields: Scientific basis and practical considerations,** *IEEE Trans. Microwave Theory Tech.* **MTT-19,** No. 2, 178-187 (Feb. 1971).

Key words: nonionizing fields; probes; radiation.

As commonly recognized, the problem of quantifying hazardous electromagnetic (EM) fields is difficult and has not yet been satisfactorily solved. Essentially, this is because people are often exposed to emanations from powerful sources of EM fields at points close to the sources and at points where arbitrary polarization and multipath interference exist. However, the accepted concepts, standards, and most measuring instrumentation are based on simple plane-wave field propagation and so are inadequate for complicated fields.

The complications and problems of quantifying hazardous EM fields involving source-subject coupling, reactive near-field components, multipath components, and arbitrary polarization are examined in some detail. General discussion of dosimetric measurements and hazard survey measurements is given, and also some basic considerations for the design of field probes for these measurements. Recommendations are given for suitable parameters for quantifying complicated EM fields, and essential and desirable characteristics for hazard survey meters are stated. Several recently designed hazard survey probes are capable of measuring these recommended parameters in many complicated fields of interest, and improved instruments are anticipated.

16535. Yokel, F. Y., **A performance standard for foundations and excavations,** *Civil Eng.* **47,** No. 10, 80-81 (Oct. 1976).

Key words: buildings (codes); excavation; foundations; geotechnical engineering; standards.

Work is now in progress on the preparation of a national standard for foundations and excavations under the ASCE-COS "Committee for Foundation and Excavation Standards," (CFES).

16536. Goodwin, K. E., Maltese, M. D. K., Schleter, J. C., **Diversion path analysis handbook. Volume II. Example,** 225 pages (Division of Safeguards and Security, U.S. Energy Research and Development Administration, Washington, DC, Oct. 1976).

Key words: analysis; diversion of nuclear materials; diversion path analysis; internal control system characterization; nuclear material safeguards; safeguards.

A hypothetical example illustrating the methodology given in Volume I of "The Diversion Path Analysis Handbook" is presented. The process, derived for the example, might be typical of the end of a fabricating process line where plutonium metal bars, originating in an earlier unspecified process step, are cut up and recast into buttons for long term storage. The process is intended to reflect typical actual practice, but in some cases, the parameters have been specially tailored so that as many features of DPA could be illustrated. The example is presented in the format recommended for use when documenting a DPA. It contains all of the basic components necessary for complete documentation and its use assures a common basis for intercomparisons of DPA's, both intra- and inter-plant. Volume II is divided into two parts—the workpaper documentation and the summary report. The former sets forth the bounds of the analysis, the information gathered, the characterization of the process, the specific diversion paths related to the process, and, finally, the results and findings, of the DPA. The summary report, made up of portions of sections already prepared for the workpapers is a concise statement of results and recommendations for management use.

16537. Evans, B. J., Swartzendruber, L. J., **Magnetic hyperfine field structure of iron Urushibara type catalysts,** (Proc. Annual 20th AIP Conf. on Magnetism and Magnetic Materials, San Francisco, CA, Dec. 3-6, 1974), Paper in *Magnetism and Magnetic Materials—1974*, C. D. Graham, Jr., G. H. Lander, and J. J. Rhyne, Eds., No. 24,391-393 (American Institute of Physics, New York, NY, 1975).

Key words: alloys; aluminum; catalysis; hydrogenation; iron; Mössbauer spectra; zinc.

We have utilized the Mössbauer effect to study the hyperfine field structure of iron Urushibara catalysts. The Mössbauer spectra of those catalysts prepared using zinc show that they consist of a mixture of magnetic and nonmagnetic Fe-Zn alloys. Both the magnetic field distribution in the magnetic phase and the relative amounts of magnetic and nonmagnetic phases depend on the Fe-Zn ratio used in the preparation of the catalyst. This dependence on Fe-Zn ratio is in contrast to iron Urushibara catalysts prepared using aluminum (and Raney iron type catalysts) in which the active phase is almost pure α-Fe, irrespective of the Fe-Al ratio. The activity of zinc prepared iron Urushibara catalysts for certain hydrogenation reactions is known to be greater than that of aluminum prepared iron Urushibara catalysts and the above results suggest a relationship between activity and the modification of the iron catalyst by alloyed zinc. The alloying behavior of the Fe-Zn particles may be analogous to that of the so-called bimetallic clusters observed in other alloy systems.

16538. Deslattes, R. D., Lamotte, M., Dewey, H. J., Keller, R. A., Freund, S. M., Ritter, J. J., Braun, W., Kurylo, M. J., **Isotopic enrichment in laser photochemistry,** (Proc. Second Int. Conf. Laser Spectroscopy, Megève, France, June 23-27, 1975), Lecture Notes in *Physics* **43,** pp. 296-303 (Springer-Verlag, New York, NY, 1975).

Key words: isotope separation; kinetics; lasers; photochemistry.

Laser technology has permitted more efficient study of the chemistry of molecules in excited states. The extent to which isotopic specificity is preserved in going from initial excitation to final product is a valuable diagnostic for excited state chemistry. This report summarizes initial results from several areas of investigation, each of which suggests that laser stimulation may offer more than simple rate enhancement.

16539. McCulloh, K. E., **Energetics and mechanisms of fragment ion formation in the photoionization of normal and deuterated water and ammonia,** *Int. J. Mass Spectrom. Ion Physics* **21,** 333-342 (1976).

Key words: ammonia; appearance potential; autoionization; deuterated species; enthalpy of formation; ionization potential; NH_2^+; OH^+; photoionization; predissociation; Rydberg states.

Fragment photoion yield curves have been obtained for OH^+ from H_2O at 215 and 298 K and for NH_2^+ from NH_3 at 160 and 298 K. The results indicate that for both molecules the initial rotational energy is completely available for fragmentation. Appearance potentials, corrected to 0 K, are 18.115 ± 0.008 eV for OH^+ from H_2O and 15.768 ± 0.004 eV for NH_2^+ from NH_3. Assuming zero excess energy at threshold, the values 309.0 ± 0.2 and 302.7 ± 0.1 kcal mol^{-1} are obtained for the standard enthalpies of formation of OH^+ and NH_2^+, respectively, leading to the derived ionization potentials $I(OH) = 12.995 \pm 0.009$ eV and $I(NH_2) = 11.17 \pm 0.05$ eV. The observed yield of OH^+ from H_2O deviates markedly from values calculated on the assumption that fragmentation occurs exclusively by predissociation from excited vibrational levels of H_2O^+ ($\tilde{B}\ ^2B_2$), suggesting that Rydberg series converging to these levels play an important role in OH^+ production. Appearance potentials for OD^+, NHD^+ and ND_2^+ are reported.

16540. Paule, R. C., **Mass spectrometric studies of Al_2O_3 vaporization processes,** *High Temp. Sci.* **8,** 257-266 (1976).

Key words: AlO_2; Al_2O_3; emissivity; evaporation coefficient; Langmuir vaporization; optical pyrometry; radiation heating; vapor pressures.

An investigation of the radiative and evaporative properties of Al_2O_3 samples has been made. These observed properties interact in a manner such that, upon melting, the rate of evaporation is observed to increase discontinuously. This phenomenon had previously been attributed to a change in the evaporation coefficient. The current investigation has shown that the evaporation coefficient for Al_2O_3 is constant and that the observed increase in vaporization is due to an increase in the temperature which, in turn, is due to a discontinuous increase in the emissivity. Relative vapor pressure measurements were also made in this study, and the reported existence of the vapor species AlO_2 was not confirmed. All other reported vapor species were confirmed.

16541. Ederer, D. L., **Erratum: Cross section profiles of resonances in the photoionization continuum of krypton and xenon (600-400 Å),** *Phys. Rev. A ERRATA* **14,** No. 5, 1936-1937 (1976).

Key words: cross section; inner-shell excitation; krypton; photoionization; vacuum ultraviolet; xenon.

Equation (4) in this paper is incorrect. It should read:

$$\sigma(E) = C(E) + (2\sigma_a q(\Gamma/2)(E - E_r) + \sigma_a(q^2 - 1)(\Gamma/2)^2)/(E - E_r)^2 + (\Gamma/2)^2$$

Unfortunately the incorrect form of the cross section was inadvertently used to transform the parameters from the Fano representation to the Shore representation, consequently, some of the parameter values listed in Tables I and II are incorrect. The corrected tables are shown. The change in some of the a_i's will slightly effect the cross-section profiles of the resonance shown in figs. 1 and 2.

16542. Hocken, R., Horowitz, M. A., Greer, S. C., **Critical anomaly in the dielectric constant of a nonpolar pure fluid,** *Phys. Rev. Lett.* **37,** No. 15, 964-967 (Oct. 11, 1976).

Key words: Clausius-Mossotti equation; critical phenomena; dielectric constant; sulfur hexafluoride.

We report measurements of changes in the dielectric constant ϵ of SF_6 along a near critical isochore. We find an anomalous increase in ϵ. The amplitude of the anomaly is about 10 times larger than the one predicted by current theories, which assume a constant polarizability.

16543. Plummer, E. W., **Interaction of single atoms with atomically defined surfaces,** (Proc. Conf. Applications of Field-Ion Microscopy to Physical Metallurgy and Corrosion, Georgia Institute of Technology, Atlanta, GA, May 15-17, 1968), Paper in *Physical Metallurgy and Corrosion*, R. F. Hochman, E. W. Müller and B. Ralph, Eds., pp. 371-389 (1968).

Key words: adatom; binding energy; field ion microscope; surface.

The role of the field ion microscope in surface studies is illustrated by reviewing briefly several unique experiments which have been conducted. These include experiments on work func-

tion, condensation, surface rearrangement and self diffusion, and atomic binding at the surface. The details of the experiment on atomic bonding of individual atoms on single crystal planes is considered in more detail to illustrate the capabilities of this technique for investigating the fundamental properties of the surface-adatom interaction on an atomically defined surface.

16544. Simiu, E., **Wind climate and failure risks,** *J. Struct. Div. Proc. Am. Soc. Civil Eng.* **102,** No. ST9, 1703-1707 (Sept. 1976).

Key words: buildings (codes); failure; probability distribution functions; reliability; structural engineering; wind (meteorology); wind pressure.

The relation is examined between risk of failure, degree of wind sensitivity, type of wind climate, and mean recurrence interval used in design. The results presented are based on the assumption, used in the ANSI A58.1 Standard, that the probabilistic behavior of extreme wind speeds is adequately modeled by distribution functions of the largest values, the parameters of which are estimated from the data consisting of the largest yearly wind speed for every year of record. These results show that a strong correlation exists between probability of failure and type of wind climate, as defined quantitatively by the parameters of the extreme wind distribution. All other relevant factors being equal, including the degree of sensitivity to wind, it was found that the probability of failure of a member may increase considerably as a function of type of wind climate. It is suggested that the effect of the type of climate, as defined in the paper, be taken into account in design.

16545. Simiu, E., Filliben, J. J., **Probability distributions of extreme wind speeds,** *J. Struct. Div. Proc. Am. Soc. Civil Eng.* **102,** No. ST9, 1861-1877 (Sept. 1976).

Key words: buildings (codes); hurricanes; probability distribution functions; reliability; risk; statistical analysis; storms; structural engineering; wind pressure; wind speed.

An automated technique is presented for determining an appropriate distributional model for the largest yearly wind speeds. With a view to assessing the validity of current probabilistic approaches to the definition of design wind speeds, this technique was used in a study of extreme wind speeds based on records taken at 20 U.S. weather stations. The following results were obtained: (1) At 83 percent of the stations not susceptible to experiencing hurricane-force winds, the series of the largest annual wind speeds were well fit by Type I probability distributions of the largest values; (2) the assumption that Type II distributions with $\gamma = 9$ are generally representative of such stations was not confirmed; (3) type I probability distributions do not appear to describe correctly the behavior of extreme winds in regions subjected to special winds, e.g., hurricanes; and (4) in such regions, 20-yr data samples may provide a misleading picture of extreme wind behavior.

16546. Page, C. H., **Torque on a bar magnet,** *Am. J. Phys.* **44,** No. 11, 1104-1105 (Nov. 1976).

Key words: magnet; magnetization; torque.

If all magnetic quantities are defined via fields, with no use of poles and with magnetic moment defined as the volume integral of magnetization, energy considerations yield the torque on a magnet immersed in a permeable fluid in an external field. Although the torque on a disk magnet is proportional to **B**, the torque on a needle magnet is proportional to $\mu_0\mathbf{H}$, as reported experimentally by Whitworth and Stopes-Roe. The experiment does not prove either A. E. Kennelly [J. Eng. Educ. **27,** 290 (1935)] or Sommerfeld to be right or wrong, but demonstrates that magnetic theory based on *poles* cannot be applied to *magnets,* and thereby strengthens the philosophy that electromagnetic theory should be based on fields.

16547. Snell, J. E., Kusuda, T., Didion, D. A., **Energy conservation in office buildings: Some United States examples,** *Proc. International CIB Symp. on Energy Conservation in the Built Environment, Watford, England, Apr. 6-8, 1976,* pp. 1-34 (International Council for Building Research, Studies and Documentation, Rotterdam, The Netherlands, 1976).

Key words: commercial buildings; energy conservation; energy consumption; Manchester office building; National Bureau of Standards; New York State offices; office buildings.

The purpose of this paper is to describe recent experience in the United States and, in particular, the National Bureau of Standards (NBS) with energy conservation in office buildings. The NBS, working in cooperation with the Energy Research and Development Administration (ERDA) and the General Services Administration (GSA), is evaluating the energy efficiency of a demonstration office building in Manchester, New Hampshire. NBS utilized its thermal performance computer program (NBSLD) to evaluate a variety of energy conservation design alternatives for this building. These results are described and the current status of the project is reported. The NBS has conducted studies of energy conservation potentials in its own buildings at the Gaithersburg, Maryland, site. These measures include operational as well as retrofit actions. The results of actual tests and computer evaluations of predicted performance are discussed. Overall savings in energy use (fuel oil, fuel gas, and purchased electricity) of 20 percent have been achieved. An additional 20 percent reduction in energy use is expected from planned retrofit, including use of computerized HVAC controls. The NBS also has been working with an ad hoc industry group, representing owners and managers of commercial buildings, toward the development of self-help guidelines these managers can use in achieving energy conservation retrofit cost-effectively in their own buildings. Data collected to date and current status of these activities are reported. Many post-war office buildings were designed and constructed which are inimical to present energy conserving criteria. The excessive use of glass and illumination prevailed, as well as inefficient, although first-cost inexpensive, HVAC systems. Controls for building illumination and space conditioning were often inadequate for energy conservation operations. Therefore, these areas represent major opportunities for energy conservation in existing, as well as new, office buildings in the U.S., and are the target of a major effort by NBS and the Federal Government in general.

16548. Marron, B., Fife, D., **Online systems—Techniques and services,** Chapter 5 in *Annual Review of Information Science and Technology,* M. E. Williams, Ed., **11,** 163-210 (American Society for Information Science, Washington, DC, 1976).

Key words: bibliographic information systems; computer technology; information storage and retrieval; interactive systems; online services; online systems.

The Annual Review of Information Science and Technology, published by the American Society for Information Science, reviews the contemporary trends, progress, and problems in the major areas of information science. This chapter on "Online Systems—Techniques and Services" is intended for Volume 11 to be published in September 1976, and reviews the literature of 1974 and 1975.

The first section treats computer technology, networks and communications, and software, with particular emphasis on the significance of these techniques for future online systems design. Next there is coverage of online services with detail on promo-

tion and pricing of services, use of multiple services, online services in libraries, retrieval of nonbibliographic information, and document delivery. The third section treats the user interface in online systems, especially the role of the intermediary, design criteria for user-oriented systems, user training, and interface standardization. Finally some issues and problems of online systems are discussed.

16549. Cali, J. P., **The NBS Standard Reference Materials program: An update,** *Anal. Chem.* **48,** No. 11, 802A-818A (Sept. 1976).

Key words: accuracy; measurement; measurement compatibility; National Bureau of Standards; reference materials; standard reference materials; Standard Reference Materials program.

Ten years ago, almost to the day, the National Bureau of Standards reported in *Analytical Chemistry* the status of its Standard Reference Materials program. In view of the NBS 75th anniversary of its founding coinciding, as it does, with our Nation's 200th Anniversary, it seems especially fitting that an update of that report be made. In this short 10-year period, more substantive changes have taken place than occurred over the first 60 years of the program's existence. It is the purpose of this report to recapitulate these events and to attempt to predict what the future holds in store.

16550. Kusuda, T., **Control of ventilation to conserve energy while maintaining acceptable indoor air quality,** (Proc. ASHRAE Symp. on Ventilation Control, Semiannual Meeting, Dallas, TX, Feb. 1-5, 1976), *ASHRAE Trans.* **82,** Part 1, 1169-1182 (American Society of Heating, Refrigerating and Air Conditioning Engineers, New York, NY, 1976).

Key words: air quality; intermittent operation; maximum allowable concentration of CO_2; New York City schools; ventilation.

Basic requirements of ventilation with respect to the undesirable increase of building air contaminants are discussed. A mathematical model for determining the increase of contaminants concentration with time was developed and verified by applying it to the observed CO_2 increases in the New York City School experiment. Equations, tables and graphs were developed for estimating the CO_2 buildup and possible energy saving obtainable by using intermittent operation of ventilation systems. It is concluded that, if properly implemented, intermittent operation of ventilation systems could reduce the energy requirement for heating the ventilating air by as much as 40 percent under typical design conditions.

16551. Cotton, I. W., Grubb, D. S., **Criteria for the evaluation of data communications services,** *Proc. Symp. IEEE Trends and Applications 1976: Computer Networks, Gaithersburg, MD, Nov. 17, 1976,* pp. 71-78 (Institute of Electrical and Electronics Engineers, New York, NY, 1976).

Key words: computer communications; computer networking; data communications; networks; performance requirements; telecommunications.

The quality of telecommunications services that are used as a means of interchanging information between information processing systems or between terminals and systems is determined by a number of parameters. This paper examines the following characteristics of telecommunications services: 1. Transfer Rate; 2. Availability; 3. Reliability; 4. Accuracy; 5. Channel Establishment Time; 6. Network Delay; 7. Line Turnaround Delay; 8. Transparency; 9. Security.

These parameters are all defined and their significance discussed.

16552. Engen, G. F., **Comments on "Practical analysis of reflectometers and power equation concepts",** *IEEE Trans. Instrum. Meas.* **IM-23,** No. 1, 104-105 (Mar. 1974).

Key words: power equation concepts; reflectometers.

Although an apparent objective of the cited paper is to yield additional insight into the power-equation concept, the reader is cautioned that the accompanying analysis is based more on intuitive concepts than mathematical rigor.

Some of the conclusions are, at most, only approximately true. These need to be identified and their associated errors evaluated if the requirements of careful metrology are to be satisfied.

In addition to the consideration of these questions, this correspondence also includes a more careful statement concerning the insensitivity of the power-equation methods to connector problems.

16553. Davis, R. M., **Systems of the 1980s—The U.S. perspective,** (Proc. Conf. Meeting XXXV on A Preview of the 1980s and Distributed Processing, Amsterdam, Holland, Nov. 18-20, 1975), *Document No. EC35, Session C,* pp. 27-43 (Diebold Europe S.A., Frankfurt, Germany, 1976).

Key words: automated reading technology; circuitry; computer applications; computer engineering; distributed systems; interface standards; memory technology; protocols.

Computer systems of the 1980s will be used in applications such as data acquisition and validation, recordkeeping, management information systems, real-time control, real-time monitoring, modeling, simulation, individualized services, scheduling, allocation, dispatching, and scientific and research investigations. These systems will serve primarily two sets of customers. One set is composed of large single organizations using computer systems to manage diversified activities and economic communities using computer systems to link members together. The second set will be individual users needing autonomous dedicated computer systems which can be interconnected to larger computer service networks or other individuals. The 1980s will see computer networks containing computers and computer modules of all sizes, independent memories and large variety of access terminal and automated input devices. However, the present lack of information controls, privacy safeguards, audit procedures, performance measures for real-time control systems, interface standards, software validation and documentation standards will have to be overcome to assure acceptability of the envisioned systems.

16554. Engen, G. F., Hudson, P. A., **International intercomparison of power standards at 3 GHz,** *IEEE Trans. Microwave Theory Tech.* **MTT-19,** No. 4, 411-413 (Apr. 1971).

Key words: bolometer mount; connector compatibility; directional coupler; interlaboratory standards.

An international intercomparison of microwave power at 3 GHz has recently been completed. This comparison was initiated at a meeting of the High Frequency Working Group of the Comite Consultatif d'Electricite (CCE) which met at the Bureau International des Poids et Mesures (BIPM) in May, 1965. At that time, the U.S. National Bureau of Standards (NBS) was designated as the pilot laboratory. The other laboratories, in order of their participation, are the following: for Canada, National Research Council (NRC); for the U.S.S.R., All-Union Research Institute of Metrology imeni D. I. Mendeleyev (V-NIIM); for the German Democratic Republic, Deutsches Amt für Messwesen und Warenprüfung (DAMW); and for Japan, the Electrotechnical Laboratory (ETL).

16555. Alperin, H. A., Rhyne, J. J., Pickart, S. J., **Neutron scattering from an amorphous ferrimagnet,** *Proc. Int. Conf. of Magnetism, Moscow, USSR, Aug. 22-28, 1973*, **IV,** 358-366 (International Union of Pure and Applied Physics, The Academy of Sciences of the USSR, Moscow, Russia, 1974).

Key words: amorphous magnetism; direct current sputtering; inelastic neutron scattering; magnetic structures; magnetism; neutron diffraction; rare earth alloys.

Neutron diffraction measurements have been taken on a 2-axis spectrometer as a function of temperature for sputtered $TbFe_2$. Difference patterns between the measurements as a given temperature and the measurement at $T > T_c$ show that the spin and atomic distribution is amorphous. The elastic and inelastic components of the scattering have also been measured separately by using a 3-axis spectrometer. These results show that for $T > T_c$, no coherent magnetic structure remains; the magnetic scattering is all inelastic. An anomalous low-angle tail present in the data is assumed to arise from magnetic inhomogeneities 20-30 Å in size. Application of a magnetic field of ~ 3 kOe at 77 K can cause these inhomogeneities to grow in size as well as to cause a small rearrangement of the spin distribution. Inelastic scattering experiments using time of flight analysis were made to obtain the differential cross section $S(Q,\omega)$ at room temperature and at $T > T_c$. At $T > T_c$ the spectrum is seen to be paramagnetic-like, as expected. At room temperature, comparison with the spectrum for a polycrystalline sample shows the amorphous sample to have a spectrum which is more spread out and shifted to lower energies. This result is in accord with recent calculations.

16556. Mahaffey, C. T., **Metrication problems in the construction codes and standards sector,** *Constr. Specifier*, pp. 25-28, 30-32, 34-37 (June 1976).

Key words: building regulations; dimensional coordination; metric conversion; planning and scheduling.

This report is a response to a request for an outline of the problems to be faced by the building standards development and building regulatory sectors of the American building industry. It includes a discussion of the SI metric units themselves, giving examples of the conventions regarding their use adopted in other countries to illustrate the nature of the decisions that must be made by the U.S. building industry. It discusses the relationship of dimensional coordination to the metric conversion effort, its impact on the U.S. building regulatory system and illustrates some of the decisions these sectors need to make. It also discusses some of the organizational problems required to involve all segments of the industry in this decision-making process, and for implementing these decisions in a coordinated way on a national scale.

16557. Robertson, A. F., **Estimating smoke production from rooms and furnishings,** *Proc. Int. du Batiment (CIB) Symp. on the Control of Smoke Movement in Building Fires, Garston, U.K., Nov. 4-5, 1975*, pp. 21-32 (Conseil International du Batiment (CIB), Garston, U.K., 1975).

Key words: building materials; fires; optical density; room furnishings; smoke production; smoke tests.

In the absence of specific analytical methods for measuring the hazards of fire gases, there is a trend towards the use of smoke production as a partial measure of this hazard. It is suggested that present smoke test methods may be best used to provide indications of the possible smoke production, i.e., product of specific optical density and fire exposed area, characteristic of fully involved furnishing and interior finish products. It is demonstrated that very large quantities of smoke will result from combustion of only small quantities of most combustibles. Because of this there is little opportunity for elimination of the smoke hazard during fires through establishment of any but the most drastic limitations on the smoke development characteristics of materials considered acceptable. Measures for limiting ignition and development of fires, together with containment and disposal of smoke when fires occur, appear the most promising methods for reducing hazards due to smoke.

16558. Bennett, H. S., Forman, R. A., **Photoacoustic methods for measuring surface and bulk absorption coefficients in highly transparent materials: Theory of a gas cell,** *Appl. Opt.* **15,** No. 10, 2405-2413 (Oct. 1976).

Key words: bulk absorption coefficients; Fourier amplitudes; gas pressure; heat transfer; phase shifts; photoacoustic; surface absorption coefficients; transparent materials.

Researchers seek improved ways to measure the surface absorption and the bulk absorption coefficients of highly transparent materials. Procedures are presented here by which one may determine separately the surface absorption and the bulk absorption coefficients. For the case in which a laser beam modulated at angular frequency ω passes through the weakly absorbing windows of a gas cell containing a nonabsorbing gas, the temperature profiles in the cell windows and the temperature and acoustic pressure or stress profiles in the gas have been calculated. These calculations indicate that for sufficiently low frequencies and high ambient gas pressure, enough heat transfers from the cell windows to the gas to produce a detectable acoustic pressure signal at angular frequency ω in the gas. These calculations also enable us to state the necessary measurements for determining the surface and bulk absorption coefficients. Measuring the acoustic stress amplitude at the fundamental and higher harmonic frequencies and measuring the phase shifts of the frequency components of the acoustic stress with respect to the modulated laser beam give sufficient data by which one can determine the surface and bulk absorption coefficients. Numerical examples for a representative laser glass and air (nitrogen) are given.

16559. Holt, H. K., **Laser intracavity absorption,** *Phys. Rev. A* **14,** No. 5, 1901-1902 (Nov. 1976).

Key words: absorption; intracavity; laser; low density.

The fractional absorption which can be obtained using a single-mode laser with an internal absorption cell is compared to the fractional absorption obtainable with the more conventional system of a laser with an external absorption cell.

16560. Snyder, L. E., Hollis, J. M., Lovas, F. J., Ulich, B. L., **Detection, identification, and observations of interstellar $H^{13}CO^+$,** *Astrophys. J.* **209,** No. 1, 67-74 (Oct. 1, 1976).

Key words: formyl ion; interstellar molecules; microwave emission; molecular structure; radio astronomy; rotational spectrum.

Observations of interstellar $H^{13}CO^+$ are presented, and results of the molecular-structure computations supporting this particular molecular identification are given. Preliminary values of integrated intensity ratios of $H^{12}CO^+/H^{13}CO^+$ have been found for the main HCO^+ clouds. Searches for $H^{12}C^{18}O^+$ were unsuccessful, and upper limits are given. U86.76, a new unidentified interstellar molecule which may be methylcyanoacetylene, was detected in Sgr B2.

16561. Boyne, H. S., **Laser power and energy measurements,** (Proc. Conf. Optical Design Problems in Laser Systems, San Diego, CA, Aug. 21-22, 1975), *SPIE* **69,** 90-94 (1975).

Key words: laser power and energy measurements; spatial response; temporal development.

Laser source and detector characterization necessary for laser systems design is reviewed. Power, energy and temporal development of sources are discussed. Also, the spatial response of detectors is addressed.

16562. Yaghjian, A. D., **A direct approach to the derivation of electric dyadic Green's functions,** *Proc. AP-S Int. Symp., University of Massachusetts, Amherst, MA, Oct. 11-15, 1976,* pp. 71-73 (Institute of Electrical and Electronics Engineers, New York, NY, Oct. 1976).

Key words: electromagnetic theory; Green's dyadic theory.

A straightforward yet rigorous approach that does not require distribution theory is used to derive a general electric dyadic Green's function which remains valid within the source region. Although the electric field expressed by the dyadic Green's function proves to be unique, the exact form of the dyadic itself depends upon the shape of its "principle volume." The dependence on principle volume is determined explicitly, and the different Green's dyadics derived by previous authors are shown to emerge merely through the appropriate choice for the principle volumes.

16563. Belsher, D. R., **Development of near-field electric energy density meter model EDM-2,** *HEW Publ. No. (NIOSH) 75-140,* 26 pages (U.S. Department of Health, Education, and Welfare, Cincinnati, OH, Mar. 1975).

Key words: electric energy density; energy density; near-field energy density.

The Occupational Safety and Health Administration (OSHA) Nonionizing Radiation Exposure Standard (29 CFE 1910.97, June 2, 1974) includes electromagnetic (E-M) radiation from 10 MHz to 100 GHz. However, no survey monitors presently are manufactured for making electric-field measurements of radiofrequency (rf) radiation from 10 to 300 MHz. Consequently, rf electric-field occupational exposure data cannot be collected until suitable monitoring instrumentation is available.

The relationship between the electric and magnetic fields is completely ambiguous for near-field surveys (within one wavelength of the source) of rf radiation sources. The electric and magnetic fields must be measured separately to obtain total occupational exposure. An electric-field survey monitor (EDM-2) was developed for the Physical Agents Branch, Division of Laboratories and Criteria Development, NIOSH, by the E-M Division, NBS to be used in assessing occupational exposure from industrial rf power sources.

The monitor employs a set of three orthogonal dipoles to obtain an essentially isotropic response. The dipoles are connected to the meter electronics by special high resistance conductors which have minimal interaction with the rf field. The meter displays electric energy density from 0.003 to 30 $\mu J/m^3$ which corresponds to plane-wave equivalent power density from 0.18 to 1800 mW/cm^2.

16564. Marshall, H. E., Ruegg, R. T., **Efficiency problems from user fees in municipal wastewater treatment,** *Water Resour. Bull.* **12,** No. 5, 903-917 (Oct. 1976).

Key words: cost sharing; economic efficiency; environment; equity; financing; grants; pollution abatement; user fees; wastewater; water pollution; water resources.

The Environmental Protection Agency administers a construction grant program to encourage abatement of wastewater pollution by sharing with municipalities the costs of wastewater treatment facilities. The enabling legislation (P.L. 92-500) specifies that EPA's cost share will be 75 percent of construction costs. It further requires municipalities to collect user fees from industrial users of the facilities to repay that part of the federal grant allocable to the treatment of industrial wastewater. The municipality must return half of the user fees collected to the U.S. Treasury; the municipality is allowed to retain the remaining half. Retention by municipalities of these user fees lowers their effective cost shares and results in the following consequences: (1) a bias for municipalities to select certain kinds of abatement techniques regardless of whether or not they are the least-cost techniques from the national perspective; (2) a bias for municipalities to select larger-than-optimal scales of abatement facilities; (3) a hidden federal subsidy to industry; and (4) grants that favor industrial communities. This article examines the legislative and regulatory requirements for user charges, derives the algebraic expressions for calculating the real federal, municipal, and industrial cost shares with user fees; computes municipal cost shares for selected values of the determinant factors; evaluates efficiency and other consequences of current user fee arrangements; and concludes that the efficiency distortions brought about by the impacts of user fees on cost sharing could be eliminated by requiring that all user fees collected from industry against the federal cost share be returned to the U.S. Treasury.

16565. Hubbard, C. R., Mighell, A. D., Staffa, J. A., Zervos, C., Konopelski, J. P., ***S*-carboxymethyl-L-cysteine sulfone,** *Acta Crystallogr.* **B32,** Part 9, 2723-2725 (Sept. 1976).

Key words: hydrogen bonding; single crystal; structure determination; *S*-carboxymethyl-L-cysteine sulfone; x-ray, zwitterion.

$C_5H_9SO_6N$, orthorhombic, $P2_12_12_1$; $a=9.205$ (4), $b=5.223$ (2), $c=15.891$ (7) Å; $Z=4$, $D_x=1.836$, $D_m=1.86$ (2) g cm^{-3} (flotation, 21 °C). The structure has been determined by direct methods and refined to an $R=0.045$ for 944 independent reflections. The title compound exists as a zwitterion. Two carboxyl groups in adjacent molecules [O...O, 2.504 (5) Å] are involved in a strong hydrogen bond. The hydrogen atom was found to be covalently bonded to the carboxyl group in the carboxymethyl moiety.

16566. Siedle, A. R., Todd, L. J., **Chemistry of metalloborane derivatives containing the $B_{10}H_{12}$ ligand,** *Inorg. Chem.* **15,** No. 11, 2838-2842 (1976).

Key words: boron hydrides; deuterium; iridium; maleonitriledithiolate; metalloboranes; nuclear magnetic resonance; oxidative addition; palladium.

Ligand displacement reactions of $(B_{10}H_{12})Pd(PPh_3)_2$ were used to prepare $[(B_{10}H_{12})Pd(CN)_2]^{2-}$, $\{(B_{10}H_{12})Pd[C_2S_2(CN)_2]\}^{2-}$, and $(B_{10}H_{12})Pd(1,10\text{-}C_{10}H_8N_2)$. The reaction of the latter phenanthroline complex with butyllithium produced $\{[(B_{10}H_{11})Pd]_2C_{10}H_8N_2\}^{2-}$. The reaction of $C_2S_2(CN)_2^{2-}$ with $[(B_{10}H_{12})Ir(CO)(PPh_3)_2]$ led to $\{(B_{10}H_{12})Ir(CO)[C_2S_2(CN)_2](PPh_3)_2\}^-$ and $\{(B_{10}H_{12})Ir[C_2S_2(CN)_2](PPh_3)_2\}^-$. The reaction of $[(C_2H_5)_4N][(B_{10}H_{12})Ir(CO)(PPh_3)_2]$ in 1,2-$C_2H_4Cl_2$ with D_2 led to a regiospecific H-D exchange at the B(5,10) positions and the isolation of a $(B_{10}D_2H_{10})$ analogue. In CH_3CN solvent, exchange also took place at the bridge hydrogen positions. A mechanism for this reaction was proposed. Exchange of the carbonyl group in the iridaborane with ^{13}CO was observed.

16567. Engen, G. F., Hoer, C. A., **Application of an "arbitrary" 6-port junction to power measurement problems,** *Proc. 1972 CPEM Conf. on Precision Electromagnetic Measurements, Boulder, CO, June 26-29, 1972,* pp. 100-101 (Institute of Electrical and Electronics Engineers, New York, NY, 1972).

Key words: directional coupler; power detectors; sidearm power detector.

A directional coupler with a sidearm power detector is a well known form of power monitor. With the addition of a second coupler and detector as shown in figure 1 the "reflected" as well as the "incident" power may be measured.

16568. Engen, G. F., Hoer, C. A., **Application of an arbitrary 6-port junction to power-measurement problems,** *IEEE Trans. Instrum. Meas.* **IM-21,** No. 4, 470-474 (Nov. 1972).

Key words: power meter; 6-port junction.

An analysis of an arbitrary 6-port junction, four ports of which are terminated by power meters, shows that the net power input (or output) at either of the remaining ports is a linear function of the four power meter indications. The validity of this result has been experimentally demonstrated at 10 GHz. This device promises to be a useful tool in a wide variety of power measurement and calibration problems.

16569. Hellwig, H., **Clocks and measurements of time and frequency,** *Proc. 1976 WESCON, Session 32*, pp. 1-4 (Institute of Electrical and Electronics Engineers, New York, NY, Sept. 1976).

Key words: clocks; frequency and time; measurement of time and frequency; time and frequency.

After a brief historical review, the present state-of-the-art in frequency and time standards of high performance will be reviewed.

Precision oscillators used in precision time and time interval applications include quartz crystal, rubidium gas cell, cesium beam, and hydrogen maser oscillators. A general characterization and comparisons of these devices is given including accuracy, stability, availability, cost, etc. Areas of special concern in practical applications are identified and a projection of future performance is given. An attempt is made to predict physical and performance characteristics of new designs potentially available in the near future such as novel crystal standards, superconducting cavity devices, etc.

Methods for measuring frequency stability are discussed.

The methods employed for measuring frequency are designed to include state-of-the-art oscillators: they are fairly simple, and commonly available components can be used in the measurement systems.

Physical interpretations of common noise processes are discussed and it is shown how frequency domain stability characteristics may be translated to time domain stability characteristics.

A brief survey of the capabilities of available and potentially available time and frequency transfer techniques is given, including portable clocks, satellite methods, and radio broadcasts.

16570. Kimbleton, S. R., Wood, H. M., **A load leveling support methodology for networking,** *Proc. Winter Simulation Conf., National Bureau of Standards, Gaithersburg, MD, Dec. 6-8, 1976*, pp. 247-253 (Association for Computing Machinery, New York, NY, 1976).

Key words: computer networking; load leveling; resource sharing; scheduling.

Networking provides an effective means for resource sharing; however, its utility for load leveling requires further demonstration. This paper examines obstacles to load leveling and concludes that the key issues relate to the possible loss of control over remotely processed jobs and data. Although an organizational framework necessary to provide appropriate control exists, the technological support mechanism necessary for control in the form of processing guarantees has not yet been developed. Such development requires an essentially real time control capability for determining both the feasibility of accepting remote jobs as well as the guarantees which can be stipulated when such jobs are offered for processing. The key component of this capability is shown to be a very fast analytically driven simulation technique which can be invoked at a given site each time a job is offered for processing. We note in passing that this control capability can be viewed as the "other" side of control limits. That is, while control limits are concerned with determining when system performance has strayed out of bounds, a control capability is concerned with dynamic control of system workload to keep system performance within bounds.

16571. Sawyer, D. E., Berning, D. W., **Mapping nonlinearities over the active regions of semiconductor devices,** *Proc. IEEE Letters* **64,** No. 11, 1635-1637 (Nov. 1976).

Key words: device nonlinearity measurements; hot spots, transistor; laser scanning; nondestructive tests; semiconductor devices; UHF transistor measurements.

A laser scanner employing a modulated low-power 0.633-μm He-Ne laser has been used in a nondamaging manner to locate portions of a silicon bipolar UHF transistor which electrically behave in a nonlinear manner at a signal frequency of 470 MHz. In effect, the method uses the device scanned as a frequency converter to produce an IF output for a display screen whenever the laser spot is incident on nonlinear regions.

16572. Hogan, P. B., Carlsten, J. L., Pichanick, F. M. J., Smith, S. J., Smith, W. W., **Spontaneous Raman processes in multiphoton excitation of sodium,** *Phys. Rev. Lett.* **37,** No. 15, 990-993 (Oct. 11, 1976).

Key words: atomic beams; multiphoton ionization; sodium; spontaneous Raman scattering in free atoms.

We have observed spontaneous Raman processes in a sodium atomic beam. When one sodium $3p\ ^2P$ fine-structure level is strongly excited by a dye laser, the other level is weakly populated by spontaneous Raman emission and the absorption of another laser photon. This effect is detected by further stepwise excitation plus photoionization. The observed magnitude agrees well with theory. This technique is much more sensitive than methods involving direct observation of the Raman emission.

16573. Corliss, E. L. R., Jones, F. E., **Method for estimating the audibility and effective loudness of sirens and speech in automobiles,** *J. Acoust. Soc. Am.* **60,** No. 5, 1126-1131 (Nov. 1976).

Key words: alarm signals; hearing; loudness functions; masking; sirens; speech recognition; traffic noise.

By using the parameters for the ear and the equations for a "communication theory" model of the behavior of the ear, a family of masking curves can be drawn up which one can apply to the conditions prevalent in automotive vehicles. From the behavior of the ear and its ability to resolve sounds in noise, estimates can be made of the conditions under which sirens and speech communications will be audible within motor vehicles moving in traffic, and some estimate can also be made as to their potential for attracting notice. These quantities can be read off by graphic techniques. Examples of their use are given.

16574. Mayo, S., Keller, R. A., Travis, J. C., Green, R. B., **Detection of sodium trace contamination in furnace atmospheres at 1000 °C,** *J. Appl. Phys.* **47,** No. 9, 4012-4016 (Sept. 1976).

Key words: dye laser use for resonance fluorescence; furnace atmosphere sodium contamination; furnace qualification; resonance fluorescence; sodium trace detection.

Free sodium atoms were detected by resonance fluorescence in an open contaminated quartz tube heated to 1000 °C. The

quartz tube and furnace were similar to those used in semiconductor device processing. Fluorescence was excited by a cw dye laser tuned to the sodium D_1 or D_2 transition and directed along the axis of the furnace. Fluorescence from the sodium D_2 line emitted in the axial direction was collected by a telescopic system and focused onto a photomultiplier tube. The estimated minimum detectable sodium density in the furnace is 5×10^5 atoms/cm^3. No free sodium was detectable on a processing tube that had not been intentionally contaminated.

16575. Engen, G. F., **Calibration of an arbitrary six-port junction for measurement of active and passive circuit parameters,** *IEEE Trans. Instrum. Meas.* **IM-22,** No. 4, 295-299 (Dec. 1973).

Key words: circuit parameters; networks; six-port.

It has been recently recognized that an arbitrary six-port junction, four arms of which are terminated in power meters, can be calibrated to measure the circuit parameters, v, i, z, a, b, Γ, etc., in addition to power. Because this scheme eliminates the need for frequency conversion, it provides a substantially simplified approach to the design of an automatic network analyzer. This paper outlines a calibration procedure for the six-port which is only slightly more complicated than that in use for existing automated measurement systems.

16576. Cotton, I. W., **New family of standards being developed,** *Computerworld*, pp. S/2-S/22 (Nov. 29, 1976).

Key words: computer networks; data communications; data networks; networks; packet switching; protocol; standards.

Recent developments in data network standards are briefly surveyed, including developments in call establishment, data link control, and packet switching.

16577. Sawyer, D. E., Berning, D. W., **Thermal mapping of transistors with a laser scanner,** *Proc. IEEE Letters* **64,** No. 11, 1634-1635 (Nov. 1976).

Key words: active devices; hot-spot behavior; laser scanning; nondestructive testing; silicon optical absorption coefficient; temperature mapping.

An active near-infrared laser scanner has been used to electronically map the temperature variations over the active regions of silicon interdigitated UHF transistors operating in the hot-spot regime. The principle makes use of the increase in electron-hole pair generation by the absorbed laser light with increasing temperature. The regions of enhanced photoresponse are displayed on a cathode-ray-tube display screen. Extensions to other devices and operating conditions, other than those which result in hot-spot operation, are suggested.

16578. Kuyatt, C. E., Mielczarek, S. R., Weiss, M. J., **Intensities of infrared transitions in N_2O and H_2CO by electron impact spectroscopy,** *J. Chem. Phys.* **65,** No. 9, 3481-3485 (Nov. 1, 1976).

Key words: H_2CO; inelastic electron scattering; infrared transitions; N_2O; relative intensities.

Measurements of relative intensities of infrared transitions in N_2O and H_2CO have been made using forward inelastic scattering of 100 eV electrons. Agreement with previous infrared and electron impact measurements is satisfactory, showing that infrared intensities can be obtained from electron scattering measurements without the need for pressure broadening or corrections for the spectrometer slitwidth.

16579. Browne, J. C., Lamaze, G. P., Schröder, I. G., **Ratio of neutron capture cross sections for ^{186}Os and ^{187}Os at 25-keV neutron energy,** *Phys. Rev. C* **14,** No. 3, 1287-1288 (Sept. 1976).

Key words: $E_n = 25$ keV; measured cross-section ratio; nuclear reactions; ^{186,187}Os(n,γ).

The ratio of the neutron capture cross sections for ^{186}Os and ^{187}Os was measured at the 25-keV iron-filtered neutron beam facility of a 10-MW reactor. A value of 0.41 ± 0.04 was obtained. Using this ratio, the age of the universe was determined via the Re-Os β-decay clock to be approximately 19×10^9 years.

16580. Baldwin, E. E., **Voltage-controlled attenuator has minimum phase shift,** *EDN/EEE*, p. 40 (Nov. 5, 1971).

Key words: FET; pi network; tank circuit.

A FET in a pi network makes a good attenuator at a specific radio frequency, but gives variable phase shift with changing attenuation. A tank circuit across source-drain leads solves the problem.

16581. Herbst, J. F., Watson, R. E., Lindgren, I., **Coulomb term U and $5f$ electron excitation energies for the metals actinium to berkelium,** *Phys. Rev. B* **14,** No. 8, 3265-3272 (Oct. 15, 1976).

Key words: actinium; excitation energy; U; $5f$ electron.

Relativistic Hartree-Fock-Wigner-Seitz band calculations have been performed for the actinide metals Ac through Bk in order to estimate the Coulomb term U and $5f$ electron excitation energies. Our calculations predict that the tetravalent state (four $6d$-$7s$ conduction electrons) is stable relative to the trivalent state for the lighter elements and that near uranium relative stabilization of the trivalent state occurs. We find that U increases from 2-3 eV for Th to 4-5 eV for the heavier elements considered. $5f$ level widths W are estimated and found to decrease from 2 to 1/2 eV; together with the results for U this points to progressive localization of the $5f$ states. The ratio U/W, which is most indicative of localization, takes on values intermediate between those for $3d$ and $4f$ electrons.

16582. Altschuler, H. M., **1. Commission I and the General Assembly. 2. The General Assembly as an open symposium,** *URSI Inf. Bull. No. 190*, 10-15 (Mar. 1974).

Key words: general assembly; open symposium.

The place of Commission 1 in the world of standards of physical measurements and whether or not the scientific programme at the General Assembly of Commission 1, as well as all other Commissions should be converted into an open Symposium are discussed in the paper.

16583. Kostkowski, H. J., **Uncertainties in the measurement of incoherent optical radiation,** *Proc. Symp. on Biological Effects and Measurement of Light Sources, Rockville, MD, Mar. 25-26, 1976*, pp. 107-114 (HEW, PHS, Food and Drug Administration, Bureau of Radiological Health, Rockville, MD, Oct. 1976).

Key words: accuracy; optical radiation measurement; radiometry; systematic errors; uncertainties.

Uncertainties for state-of-the-art measurements of incoherent optical radiation are about 1 percent. Uncertainties for measurements made under less than ideal conditions are considerably larger. The major reasons for these uncertainties and what is being done and can be done to reduce them are presented.

16584. Suenram, R. D., Johnson, D. R., Glasgow, L. C., Meakin, P. Z., **Laboratory microwave spectrum of $ClONO_2$,** *Geophys. Res. Lett.* **3,** No. 10, 611-614 (Oct. 1976).

Key words: atmospheric pollution; chlorine nitrate; dipole moment; microwave spectrum; ozone depletion; rotational constants; stratospheric chemistry.

The microwave spectrum of $ClONO_2$ has been analyzed in the laboratory under high resolution. Rotational constants are reported for the ground and lowest vibrational states of the ^{35}Cl and ^{37}Cl isotopic forms. From Stark effect measurements the electric dipole moment was found to have components along two principal axes, $\mu_a = 0.72 \pm 0.10$ Debye and $\mu_b = 0.28 \pm 0.04$ Debye. Difficulties encountered in handling gas phase samples of $ClONO_2$ are discussed in some detail.

16585. Siedle, A. R., **Organometallic derivatives of trithiones,** *J. Organomet. Chem.* **120,** 369-374 (Apr. 1976).

Key words: carbon-13 NMR; coordination compounds; metal carbonyl; thiocarbonyl; 1,3-dithiolane-2-thione; 1,3-dithiolene-2-thione.

Complexes of the type $LM(CO)_5$ (M = Cr, Mo) were prepared from (diolefin)$M(CO)_4$ and the 1,3-dithiolene-2-thione ligands, L = $C_3H_2S_3$, $C_3H_4S_3$ and $C_8H_6S_3$. Infrared, ^1H and ^{13}C NMR data indicated C_{4v} symmetry about the metal centre. The reaction of 3-methylbenzo-1,3-dithiolene-2-thione with $(C_5H_5)Co(C_8H_{12})$ produced a cobalt(III) methylbenzothiete derivative $(C_7H_6S_2)$-$Co(C_5H_5)$.

16586. Bowen, R. R., Reed, L. E., **Semiporous reinforcing fillers for composite resins: II. Heat treatments and etching characteristics,** *J. Dent. Res.* **55,** No. 5, 748-756 (Sept.-Oct. 1976).

Key words: composite resins; composites; dental materials; fillers; porous glass; radiopacity; reinforcements; wear.

Candidate experimental semiporous reinforcing filler particles were prepared by heat treatment of certain glass compositions, followed by crushing and etching. Optical microscopic techniques were aided by the use of certain dyes and staining procedures to manifest submicroscopic interconnected porosity in the surface of the particles. The goal of this endeavor was to develop semiporous glass reinforcing fillers for the improvement of dental composite materials.

16587. Bowen, R. L., Reed, L. E., **Semiporous reinforcing fillers for composite resins: I. Preparation of provisional glass formulations,** *J. Dent. Res.* **55,** No. 5, 738-747 (Sept.-Oct. 1976).

Key words: composite resins; composites; dental materials; fillers; porous glass; radiopacity; reinforcements; wear.

A conceptual means of obtaining improved bonding between filler particles and the polymeric binders of composites is presented. It involves preparing glass particles that separate into two interconnected vitreous phases when heated to an appropriate temperature, and then etching these to produce a porous surface layer. Candidate glass compositions were prepared and subjected to heat treatment in a gradient furnace. Compositions susceptible to phase separations were delineated.

16588. Phaneuf, R. A., Taylor, P. O., Dunn, G. H., **Absolute cross sections for emission of 284.7-nm (Hg II) and 479.7-nm (Hg III) radiation in electron-mercury-ion collisions,** *Phys. Rev. A* **14,** No. 6, 2021-2025 (Dec. 1976).

Key words: absolute cross sections; electron impact; mercury ions; 285-nm radiation; 480-nm radiation.

Crossed beams of electrons and Hg^+ ions have been used to measure absolute cross sections for emission of 284.7-nm radiation, resulting from excitation of a predominantly ground-state Hg^+ target to the $7s^2S_{1/2}$ state. Values range from 3×10^{-17} cm^2 near threshold, where the cross section is strongly peaked, to 1.3×10^{-18} cm^2 at 280 eV. Also reported are some measurements of emission of 479.7-nm (Hg III) radiation, resulting from electron impact on both Hg^+ and Hg^{++} targets. Cross sections range from approximately 5×10^{-19} to 5×10^{-20} cm^2, and in the case of electron-Hg^{++} collisions, are more than an order of magnitude smaller than predicted by an available semiclassical binary-encounter calculation.

16589. Tsai, D. H., MacDonald, R. A., **Molecular-dynamical study of second sound in a solid excited by a strong heat pulse,** *Phys. Rev. B* **14,** No. 10, 4714-4723 (Nov. 15, 1976).

Key words: anharmonic crystal; computer simulation; energy transport; heat pulse; molecular dynamics; second sound; stress pulse; temperature wave; thermal diffusivity; thermal equilibrium; thermal relaxation.

We use the method of molecular dynamics to study the problem of heat transfer in a perfect semi-infinite bcc lattice when a strong heat pulse is applied at the boundary. We find that the disturbance propagates into the lattice as a combination of first sound and second sound superimposed on a diffusive background. The second-sound wave is a composite of several waves. We are able to show that the longitudinal and transverse sound waves, traveling with velocity C_l and C_s, respectively, are generated by the disturbance when the boundary of the lattice is rapidly heated or cooled. These stress-induced pulses are not in thermal equilibrium but they generate their own temperature waves, which travel with velocities $C_l/\sqrt{3}$ and $C_s/\sqrt{3}$, and which contribute to the observed second-sound wave. The disturbance in kinetic energy produced during the period of steady heating in the pulse propagates as a temperature wave with the theoretically expected second-sound velocity, $C_{av}/\sqrt{3}$. We relate these results to theoretical and experimental work on second sound excited by a weak pulse and also to our earlier calculations where the temperature wave is excited by shock compression.

16590. Stockbauer, R., Inghram, M. G., **The fragmentation of propane and deuteropropane molecular ions,** *J. Chem. Phys.* **65,** No. 10, 4081-4092 (Nov. 15, 1976).

Key words: coincidence; mass spectrometry; photoionization; propane; propane-d_2; propane-d_6; propane-d_8; threshold photoelectron spectroscopy.

Fragmentation of molecular ions as a function of internal energy has been studied for the propane molecules, C_3H_8, $CH_3CD_2CH_3$, $CD_3CH_2CD_3$, and C_3D_8 using threshold photoelectron-photoion coincidence mass spectrometry. Within the energy range covered (0-6 eV internal energy) the experimental fragmentation curves are compared with those calculated using the quasiequilibrium theory. The general features of the experimental curves are reproduced by the calculations but significant deviations from exact calculations are apparent. The experimental curves for the d_2 and d_6 propanes show that hydrogen scrambling processes occur and are of sufficient importance that they must be included in future calculations.

16591. Truhlar, D. G., Wyatt, R. E., **History of H_3 kinetics,** *Ann. Rev. Phys. Chem.* **27,** 1-43 (1976).

Key words: chemical reactions; collision theory; cross sections; dissociation; hot atoms; isotope effects; kinetics; molecular beams; quantum mechanics; rate coefficients; recombinations; scattering theory.

The gas-phase reaction of H with H_2 has been of fundamental interest since London (1929) pointed out that it can be understood in terms of a potential energy surface calculated from quantum mechanics. It has also been the only gas-phase bimolecular reaction for which curvature of the Arrhenius plot could be observed at low temperature (Marshall and Purnell 1968). Thus it served as a model for theories of tunneling. Because every atom involved can be substituted by D or T, it has been an important prototype system for isotope effect considerations. Because good photochemical and nuclear recoil sources of

hot (i.e., fast) H, D, or T atoms are available, it has also been studied under nonthermal high-energy conditions (Rowland 1970). In addition it has been extensively studied by classical and quantum mechanical collision theory.

16592. Bowman, R. R., **Quantifying hazardous electromagnetic microwave fields: Practical considerations,** *Proc. Biological Effects and Health Implications of Microwave Radiation, Richmond, VA, Sept. 17-19, 1969, BRH/DBE 70-2,* 204-209 (U.S. Dept. of Health, Education, and Welfare, Rockville, MD, June 1970).

Key words: electromagnetic microwave fields.

This paper is concerned mainly with the problem of making easy, reasonably accurate survey measurements of hazardous EM fields. For general survey use, instruments should be rugged, easy-to-use, and should be capable of fast response as well as having long-term averaging capabilities. These, and other considerations to be discussed, place restrictions on practical instrument designs for general survey use.

16593. Duff, J. W., Truhlar, D. G., **Classical S matrix: Application to classically forbidden vibrational excitation for He + HBr and H + Br_2,** *Chem. Phys.* **17,** 249-254 (Oct. 1976).

Key words: classical scattering matrix theory; collision theory; scattering theory; trajectories.

The integral expressions of classical S matrix theory are tested against quantum mechanical results and classical path-forced quantum oscillator results for vibrational transition probabilities in collinear collisions of atoms with harmonic and Morse vibrators for the H + Br_2 and He + HBr mass combinations. The interaction potential is assumed to be a repulsive exponential function. The energy range studied (in units of $\hbar\omega_e$) is 2-10 for H + Br_2 and 2-6 for He + HBr. The integral expressions are found to be accurate within a factor of two for almost all transition probabilities greater than 7×10^{-3} but to be very inaccurate for very small transition probabilities. Quasiclassical trajectory histogram methods are found to be accurate within a factor of two only for transition probabilities greater than 0.15. Neither the integral expressions of classical S matrix theory nor the quasiclassical trajectory histogram method are found to be as generally accurate as the classical path-forced quantum oscillator results.

16594. Green, R. B., Travis, J. C., Keller, R. A., **Resonance flame atomic fluorescence spectrometry with continuous wave dye laser excitation,** *Anal. Chem.* **48,** No. 13, 1954-1959 (Nov. 1976).

Key words: atomic flame fluorescence; barium fluorescence; cw dye laser; sodium fluorescence.

The potential contribution of continuous wave (CW) dye laser excitation of resonance atomic fluorescence for analytical flame spectrometry was evaluated. Noise sources which were related to fluctuations in the flame and in the laser scatter were responsible for the observed detection limits which were an improvement over those achieved with previously used excitation sources for flame atomic fluorescence and comparable to results for flame emission spectrometry. Based on experimental data, it was estimated that continuous wave excitation powers of 1-10 watts would be sufficient to bring the signal-to-noise ratio into a constant range. With the exception of nonresonant detection and saturation contributions to reduced quenching, higher laser powers common to pulsed sources are of no advantage and, in fact, are detrimental to sensitivity. Other aspects of CW dye laser excitation are presented and discussed.

16595. Haus, J. W., Meijer, P. H. E., **Static aspects of a model for metastable fluid states,** *Physica Letter to the Editor* **80A,** No. 3, 313-317 (1975).

Key words: limit of stability; mean field theory; metastability; perturbation scheme; reference system; structure factor.

A mean field-theory originally presented by Brout is used to obtain the limit of (meta-) stability for a Lennard-Jones system. Certain aspects of the theory are discussed in relation to recent results for liquid-solid phase transitions.

16596. Julienne, P. S., **$^3\Sigma_u^-$-$^3\Sigma_u^+$ coupling in the O_2 $B^3\Sigma_u^-$ predissociation,** *J. Mol. Spectrosc.* **63,** 60-79 (1976).

Key words: molecular oxygen; predissociation; Schumann-Runge bands; spin-orbit mixing.

The role of $B^3\Sigma_u^-$-$2^3\Sigma_u^+$ spin-orbit mixing in the O_2 Schumann-Runge predissociation is investigated. The $2^3\Sigma_u^+$ state is found to cross the $B^3\Sigma_u^-$ state near 2.0 Å with an interaction matrix element of approximately 55 cm^{-1}. This state contributes to the widths of the B $v \geq 6$ levels, but introduces only small level shift perturbations. When the partial widths due to the $^3\Sigma_u^-$-$^3\Sigma_u^+$ interaction are added to the previously calculated widths due to the $^5\Pi_u$, $^3\Pi_u$, and $^1\Pi_u$ states, reasonable agreement is obtained with experimental measurements on $O^{16}O^{16}$ and $O^{18}O^{18}$. The possibility of non-Lorentzian line profiles and the dependence of the width on rotational quantum number is investigated. The approximation of the spin-orbit matrix element by its value at the crossing point is shown to be a good approximation for calculating the second difference perturbations.

16597. Swartzendruber, L. J., Bennett, L. H., Watson, R. E., **Mössbauer studies of hydrided TiFe,** *J. Phys. F: Metal Phys. Letter to the Editor* **6,** No. 12, L331-L334 (1976).

Key words: charge flow; isomer; Mössbauer; phase diagram; $TiFeH_x$ alloys; volume effects.

The metallurgical and electronic structure of $TiFeH_x$ alloys are probed by ^{57}Fe Mössbauer effect studies. Our results are qualitatively consistent with and support Reilly and Wiswall's conclusions on the phase diagram. Volume effects and charge flow are both important in the isomer shift.

16598. Lias, S. G., Ausloos, P., **Reactions of CCl_2H^+ and CF_2H^+ with organic and inorganic compounds: proton affinities and heats of formation of CCl_2 and CF_2,** *Int. J. Mass Spectrom. Ion Phys.* **22,** 135-145 (1976).

Key words: CCl_2, CF_2; CCl_2H^+, CF_2H^+; displacement reactions; four-center reactions; ion molecule reactions; proton affinity; proton transfer; rate coefficients.

The reactions of CCl_2H^+ (or CCl_2D^+) and CF_2H^+ with a number of aldehydes, ketones, esters, organic acids, alcohols, amines and inorganic compounds have been observed. Since the proton affinities of most of these compounds are known, it was possible on the basis of the observation or nonobservation of proton transfer reactions to obtain proton affinities for CF_2 and CCl_2 of 7.74 ± 0.04 eV (178.6 ± 1 kcal $mole^{-1}$) and 8.69 ± 0.06 eV (200.4 ± 1.5 kcal $mole^{-1}$), respectively. In addition to proton transfer, CCl_2H^+ and CF_2H^+ undergo reactions with carbonyl-containing compounds entirely analogous to those which have been observed for other halomethyl ions. That is, with aldehyde and ketone reactants, four-center reactions resulting in the formation of a mono-halogenated carbonium ion are the major competing processes, and with esters and acids elimination reactions and four-center reactions resulting from attack by the ion at the acyl oxygen are important. These ions also displace carbonium ions from alcohols, and abstract hydride ions from esters and amines. Charge transfer is an important competing channel in reactions with amines.

16599. Richmond, J. C., **Image quality of photoelectronic imaging systems and its evaluation,** (Proc. 6th Symp. on Photo-Elec-

tronic Image Devices, London, England, Sept. 9-13, 1974), Paper in *Advances in Electronics and Electron Physics*, L. Marton, Ed., **40B,** 519-538 (Academic Press, New York, NY, 1976).

Key words: blooming; contrast transfer function; distortion; flare; image quality; light induced background; limiting resolution; night vision devices; optical transfer function; resolution charts; veiling glare.

Image quality is probably the single most important parameter in determining the usefulness of any optical device. For night vision systems in particular, image quality is of paramount importance. Subjective evaluation of image quality is surprisingly good. An observer will have no difficulty in ranking a number of photographs in order of overall image quality. The general agreement between different observers on the order of ranking of the same series of photographs will also be good. However, objective evaluation of image quality in quantitative terms is not easy. Many variables contribute to image quality, not all of which have been identified, or can be quantitatively evaluated. This paper is primarily a literature survey of criteria and techniques that have been used to evaluate the quality of imaging systems, with some discussion of their application to image intensifier night vision devices.

16600. Wiederhorn, S. M., Roberts, D. E., **A technique to investigate high temperature erosion of refractories,** *Bull. Am. Ceram. Soc.* **55,** No. 2, 185-189 (1976).

Key words: castable refractories; coal gasification; deformation; erosion; fracture; wear.

A description is given of equipment used to study erosion of refractories under controlled environments at temperatures as high as 1500 °C. Erosive wear of a high alumina castable refractory currently used in coal gasification pilot plants is investigated. Erosion occurs preferentially in the cement matrix of the refractory. At 25 °C erosion occurs by brittle fracture of the matrix, while at 1000 °C, erosion occurs by fracture and shear deformation of the matrix phase. Data are discussed with reference to current theories of erosion.

16601. Haus, J. W., Meijer, P. H. E., **Dynamics of metastable fluid states in the liquid-solid transition,** *Phys. Rev. A* **14,** No. 6, 2285-2294 (Dec. 1976).

Key words: hydrodynamic regime; ideal gas memory function; limit of stability; metastable fluid states; nonhydrodynamic regime; relaxation time; transport coefficients; Zwanzig-Mori formalism.

A fluctuation theory for the dynamics of metastable fluid states is presented which relies on a limiting form for the static structure factor $S(k)$ previously presented by the authors. The transport coefficients are found to show a divergence in the hydrodynamic regime. In the nonhydrodynamic regime a model is presented which uses an approximate single-particle memory function and a diffusive mode is found; this is compared with fluctuation theory results of other workers. A recent computer experiment has shown numerical agreement with the static model.

16602. Simmons, J. A., Clough, R. B., **Theoretical aspects of acoustic emission spectral measurements,** *Proc. Eighth World Conf. on Nondestructive Testing, Cannes, France, Sept. 6-10, 1976*, pp. 1-8 (Imprimplans, Paris, France, 1976).

Key words: acoustic emission; dislocations; nondestructive evaluation; spectral analysis.

Frequency spectrum analysis of acoustic emission signals shows great promise as a nondestructive test method. It has potential for discriminating between harmful moving defects and system noise as well as for revealing more of defect characteristics than are currently revealed with threshold counting techniques. However, such an analysis required a systematic examination of the entire emission process.

In this paper, we describe progress in developing the theory of acoustic emission. More specifically, we examine acoustic emission from planar, straight line dislocation segments moving in bursts. For simplicity, we will for the present treat the ideal case of an infinite isotropic body. This case should, however, provide an illustration of the general nature of the acoustic emission spectrum and how it is produced.

16603. Hall, J. L., Bordé, C. J., Uehara, K., **Direct optical resolution of the recoil effect using saturated absorption spectroscopy,** *Phys. Rev. Lett.* **37,** No. 20, 1339-1342 (Nov. 15, 1976).

Key words: CH_4 hyperfine structure; high resolution spectroscopy; laser spectroscopy; line shape; optical frequency standards; recoil effect; relativity.

The recoil-induced spectral doubling of the CH_4 saturated absorption peaks at 3.39 μm has been clearly resolved. A working resolving power of 8×10^{10} (1 kHz half width at half-maximum), achieved with aberration-compensated parabolic optics of 32 cm diam, was available to study the height ratio and splitting of the recoil peaks. The resolved Doppler-generated level crossings are not recoil doubled and give improved hfs information. We derive new, exact equations relating the atomic natural frequency to laboratory resonance frequencies.

16604. Green, R. B., Keller, R. A., Luther, G. G., Schenck, P. K., Travis, J. C., **Galvanic detection of optical absorptions in a gas discharge,** *Appl. Phys. Lett.* **29,** No. 11, 727-729 (Dec. 1, 1976).

Key words: discharge; discharge tubes; hollow cathode; spectroscopy; trace detection; tunable lasers.

An electrical signal, resulting from discrete optical absorptions, has been observed for a variety of elements, including several for which such an effect had not been previously reported. In the present case, the effect is observed as a change in the voltage across a gas discharge tube produced by irradiation with a laser tuned to the wavelength of a transition of a species in the discharge. This signal may be used—without optical detection apparatus—for spectroscopic investigations or analytical determinations of materials in the discharge. Signals were obtained for transitions of lithium, sodium, calcium, barium, uranium, neon, and helium, in commercial hollow cathode lamps, and neon and helium in conventional discharge tubes.

16605. Latour, J., Spiegel, E. A., Toomre, J., Zahn, J. P., **Stellar convection theory. I. The anelastic modal equations,** *Astrophys. J.* **207,** No. 1, 233-243 (July 1, 1976).

Key words: convection theory; convection zones; stellar structures.

We present here a system of equations for stellar convection theory. These equations follow from the full equations of compressible fluid dynamics with the introduction of two important approximations. The first of these is the anelastic approximation, commonly used in meteorology. Its aim is to filter out acoustic waves so that the task of numerical solution will not be complicated by the need to resolve very rapid time variations. The anelastic approximation is justified when the frequencies and Mach numbers of the convection are not too high. Its basic effect is to suppress terms which are nonlinear in the horizontal fluctuations of the thermodynamic variables, but it allows large vertical variation in the mean density and preserves the dynamical nonlinearities. The second approximation is a drastic simplifica-

tion of the horizontal structure of the convection. It consists of expanding the fluctuating quantities in a set of modes which are periodic in the horizontal coordinates, and then truncating after a few terms.

The resulting system of nonlinear partial differential equations (in vertical coordinate and time) is still formidable, and its numerical resolution has so far been achieved only for relatively simple cases of stellar convection, to be presented in subsequent papers. These anelastic modal equations can also be used to treat more complicated problems such as semiconvection and the coupling of convection to radial pulsation or rotation.

16606. Toomre, J., Zahn, J. P., Latour, J., Spiegel, E. A., **Stellar convection theory. II. Single-mode study of the second convection zone in an A-type star,** *Astrophys. J.* **207,** No. 2, 545-563 (July 15, 1976).

Key words: A-type stars; convection theory; convection zones; metallic-line stars; stellar structure.

The anelastic modal equations presented in Paper I are considered in their simplest version: only one mode is retained in the representation of the fluctuating dynamic and thermodynamic variables of convection theory. These single-mode equations are used to examine the structure of the second convection zone of an A-type star. Two- and three-dimensional numerical solutions are obtained for a range of parameters in the theory, and a simple analysis is provided for their interpretation.

The principal results are for three-dimensional motions, since these are most likely to be relevant to stellar convection. Such motions produce a convective heat flux several orders of magnitude greater than predicted by standard mixing-length theory for the same situation; we find that convection carries up to 6 percent of the total flux. The most significant astrophysical implication of our results is that they suggest strong overshooting into the adjacent radiative zones. We anticipate that mixing will extend to the overlying hydrogen convection zone. This would rule out some interpretations of metallic-line stars which invoke diffusive element separation between the two convection zones.

16607. Truhlar, D. G., **Quasiclassical predictions of final vibrational state distributions in reactive and nonreactive collisions,** *Int. J. Quant. Chem. Symp.* **10,** 239-250 (1976).

Key words: chemical reactions; classical probability matrix theory; classical scattering matrix theory; collision theory; energy transfer in collisions; hydrogen molecules; information theory; scattering theory; trajectories; vibrational energy.

The validity of quasiclassical and semiclassical trajectory methods for predicting state-to-state vibrational transition probabilities in collisions of atoms with diatomic molecules is discussed with special emphasis on tests against accurate quantum calculations for $He + H_2$, $H + Cl_2$, and $I + H_2$ collisions.

16608. Norcross, D. W., Seaton, M. J., **Energy levels for Be I calculated using a model potential and cores approximation,** *J. Phys. B* **9,** No. 17, 2983-3000 (Dec. 1976).

Key words: Be energy levels; model potential theory.

A two electron model Hamiltonian, used for Be I, includes a core polarization potential $V_{POL}(1,2)$ which has asymptotic form $V_{POL} \sim -\alpha\{(\hat{r}_1/r_1^2)+(\hat{r}_2/r_2^2)\}^2$ where α is the polarizability of Be III $1s^2$. Solutions are obtained using a frozen cores method. Two approximations are considered: (a) uses an expansion with core states Be II 2s and 2p; (b) includes in addition a 3d core orbital with a parameter determined variationally. For the series ^1S, ^3S, $^1P^\circ$, $^3P^\circ$, ^1D, ^3D, $^1F^\circ$ and $^3F^\circ$ results are obtained for all bound states ($\epsilon < 0$) with $n_s \leq 10$, for $n = \infty$ ($\epsilon = 0$), and for the first resonances states in the region $\epsilon > 0$. For the series ^1P, ^3P, $^1D^\circ$, $^3D^\circ$ converging to Be II 2p, results are obtained for $n \leq 10$ and for $n = \infty$. The calculated ionization energies are more accurate than those obtained in previous theoretical work.

16609. Avrett, E. H., Vernazza, J. E., Linsky, J. L., **Excitation and ionization of helium in the solar atmosphere,** *Astrophys. J.* **207,** No. 3, L199-L204 (Aug. 1, 1976).

Key words: helium; radiative transfer; solar chromosphere; spectral line formation.

We investigate the excitation and ionization of He I and He II for the case of a realistic solar model. The calculations are based on a simplified numerical treatment of the He I and He II continua and the He II λ304 line. We discuss the extent to which various proposed mechanisms can account for the observed line and continuum intensities.

16610. Hall, J. L., Bordé, C. J., **Shift and broadening of saturated absorption resonances due to curvature of the laser wave fronts,** *Appl. Phys. Lett.* **29,** No. 12, 788-790 (Dec. 15, 1976).

Key words: lineshape theory; optical frequency standards; saturated absorption spectroscopy.

Using frequency offset-locked spectroscopy of methane at 3.39 μm we show that the saturated absorption peaks can be significantly blue or red shifted if the wave fronts of the laser beam are spherical in the gas cell. Good agreement with theoretical prediction is found. We discuss suitable conditions to avoid this geometry-induced shift in optical frequency standards.

16611. Kahn, L. R., Baybutt, P., Truhlar, D. G., *Ab initio* **effective core potentials: Reduction of all-electron molecular structure calculations to calculations involving only valence electrons,** *J. Chem. Phys.* **65,** No. 10, 3826-3853 (Nov. 15, 1976).

Key words: basis functions; configuration mixing; dipole moments; electronic structure of molecules; Hartree-Fock; integrals, evaluation of; molecular structure; orbitals; potential energy curves; pseudopotentials; self-consistent field; valence electrons.

A formalism is developed for obtaining *ab initio* effective core potentials from numerical Hartree-Fock wavefunctions and such potentials are presented for C, N, O, F, Cl, Fe, Br, and I. The effective core potentials enable one to eliminate the core electrons and the associated orthogonality constraints from electronic structure calculations on atoms and molecules. The effective core potentials are angular momentum dependent, basis set independent, and stable against variational collapse of their eigenfunctions to core functions. They are derived from neutral atom wavefunctions using a pseudo-orbital transformation which is motivated by considerations of the expected accuracy of their use and of basis set economy in molecular calculations. Then the accuracy is demonstrated by multiconfiguration Hartree-Fock calculations of potential energy curves for HF, HCl, HBr, HI, F_2, Cl_2, Br_2, and I_2 and one-electron properties for HF and HBr. The differences between valence-electron calculations employing the present effective core potentials and all-electron calculations are smaller than differences due to basis set choices, even though the basis sets are extended ones. Thus the effective core potentials are quite successful. In addition larger configuration mixing calculations are performed for HBr and Br_2 (1637 and 3396 configurations, respectively) and again the effective core potentials are judged to perform well.

16612. Richards, J. L., Johnson, P. M., **The visible emissions of molecular oxygen in rare gas solids,** *J. Chem. Phys.* **65,** No. 10, 3948-3951 (Nov. 15, 1976).

Key words: emission spectra; intersystem crossing; molecular oxygen in rare gas solids; O_2 excited states.

The vacuum ultraviolet-excited emission spectra of molecular oxygen in low temperature rare gas solids have been recorded and analyzed. The observed transitions have been reassigned using isotopic substitution and are found to be $C^3\Delta_u \rightarrow X^3\Sigma_g^-$ in argon and krypton and $c^1\Sigma_u^- \rightarrow a^1\Delta_g$ in xenon. These transitions have not been observed in the gas phase and the transition origins established here confirm previous tentative assignments of vibrational numberings of the upper states by Herzberg and Degan, respectively. The emission in xenon is very unusual for a solid phase spectrum in that emission occurs from several excited vibrational levels, which are apparently being populated directly by intersystem crossing. It is also unusual in that the lower state of the emission is not the ground state. No significant chemical interaction between the molecule and the rare gas is seen for any of the observed states.

16613. Mihalas, D., Kunasz, P. B., Hummer, D. G., **Solution of the comoving-frame equation of transfer in spherically symmetric flows. IV. Frequency-dependent source functions for scattering by atoms and electrons,** *Astrophys. J.* **210,** No. 2, 419-433 (Dec. 1, 1976).

Key words: early-type stars; electron scattering; spectral-line formation; stellar atmospheres.

A numerical method is presented of solving the radiative transfer equation in the comoving frame of a spherically symmetric expanding atmosphere in which both the line and the electron-scattering source function can depend on frequency (i.e., when there is partial frequency redistribution in the scattering process). This method is used to assess the adequacy of various assumptions regarding frequency redistribution in the comoving frame and to discuss the effects of electron scattering more accurately than previously possible. The methods developed here can be used in realistic model atmospheres to account for the (major) effects of electron scattering upon emergent flux profiles.

16614. Langhoff, P. W., Hernandez, A. J., **On the Brueckner and Goldstone forms of the linked-cluster theorem,** *Int. J. Quant. Chem. Symp.* **10,** 337-352 (1976).

Key words: diagrammatic perturbation theory; linked-cluster theorem; many-body theory.

Connections between the Brueckner and Goldstone forms of the linked-cluster theorem are clarified in an elementary fashion employing a finite many-body system of electrons interacting via two-body forces as an illustrative example. It is shown that the order-by-order cancellations of Brueckner unlinked terms in the many-body wave function and energy occur in the Goldstone development upon the additions of the different time orderings of Feynman-Goldstone diagrams having disconnected vacuum parts. The factoring of the vacuum amplitude from the wave function, upon which customary presentations of the theorem focus attention, is shown to be irrelevant to the cancellations of Brueckner unlinked terms, and has to do, rather, with the presence of secular and normalization terms in the time-dependent perturbation functions for an adiabatically-switched static perturbation. Similarly, the equivalence of the vacuum amplitude with the exponential of all connected vacuum diagrams, originally demonstrated by Feynman in the case of hole theory, is shown to be irrelevant to the cancellations of Brueckner unlinked terms in the energy, which occur in the Goldstone development upon the summations over all time orderings of disconnected vacuum diagrams. The distinction between Brueckner unlinked terms on the one hand, and secular and normalization terms on the other, is confused in customary presentations of the linked-cluster theorem by the use of exponential switching, following Gell-Mann and Low, and is clarified in the present development by considering the Friedrichs limit of ideal adiabatic switching.

16615. Zamir, E., Szöke, A., Osgood, R., **Fluorescence and dissociative energy transfer in high pressure Ar-HCN mixtures excited by relativistic electrons,** *J. Chem. Phys.* **65,** No. 11, 4885-4894 (Dec. 1, 1976).

Key words: energy transfer, electronic; fluorescence; molecular dissociation; relativistic electrons, excitation.

Studies of the radiation from Ar-HCN and Ar-H_2O mixtures, excited by relativistic electrons from a Febetron 706 electron gun, are presented. The energy deposited by the electrons channels rapidly into the Ar* and Ar_2* states; then by dissociative collisions with HCN it is transferred partly into the CN(B) state and partly into a reservoir state [most probably the CN(A) state] with near unit efficiency. Fluorescence emission from the electronic states $A(^2\Pi_i)$ and $B(^2\Sigma^+)$ of the CN radical, as well as the emission from the Ar_2* excimer state, were measured for an Ar pressure range of 750-9000 torr [15-180 psi(absolute)], and an HCN pressure range of 0.2-13 torr. The quenching rates of Ar* metastable and the Ar_2* excimer states, by collision with HCN molecules, were measured to be 6×10^{-10} and 1×10^{-9} cm^3 sec^{-1}, respectively. Our results suggest that population inversion can be achieved by collisional dissociation of simple molecules with excited rare gas atoms and excimers. Indeed the peak CN(B) population density was found to be 1.5×10^{15} cm^{-3}, which corresponds to an optical gain for the B-X transition of 0.4 cm^{-1} if the ground state is empty. A computer kinetic model is presented that explains the time dependence and intensity of the CN(B) emission. In Ar-H_2O mixtures the reaction rate for quenching of Ar_2* excimer by H_2O molecules is extremely high; however, the yield into the OH($A^2\Sigma^+$) is only 3 percent.

16616. Maxfield, B. W., Linzer, M., McConnaughey, W. B., Hulbert, J. K., **Design of permanent magnet electromagnetic acoustic-wave transducers (EMATs),** *Proc. 1976 IEEE Ultrasonics Symp., Annapolis, MD, Sept. 29-Oct. 1, 1976,* 4 pages (The Institute of Electrical and Electronics Engineers, Inc., New York, NY, 1976).

Key words: electromagnetic transducer; EMAT; transducer; ultrasonics.

Electromagnetic acoustic-wave transducers (EMATs) provide a means of generating and detecting shear and compressional acoustic waves of known amplitude in conductors by electromagnetic instead of mechanical coupling to the material under study. An EMAT consists of a coil to generate eddy currents in the conductor and a magnetic field to provide coupling between the eddy currents and the metal lattice. Most work to date has been on EMATs utilizing either large permanent magnets or electromagnets. Here we describe a simple but very practical model for a rare-earth cobalt permanent magnet EMAT. This model is analyzed in detail and compared with measurements of the performance of a compact (250 gram) EMAT.

16617. Wiederhorn, S. M., Fuller, E. R., Jr., Mandel, J., Evans, A. G., **An error analysis of failure prediction techniques derived from fracture mechanics,** *J. Am. Ceram. Soc.* **59,** No. 9-10, 403-411 (Sept.-Oct. 1976).

Key words: crack propagation; error analysis; failure prediction; failure prevention; fracture; statistics; strength.

Three principal methods of failure prediction for brittle materials are analyzed statistically. Each method depends on fracture mechanics for its predictive value; hence the variance of the failure time depends on the scatter in the fracture mechanics data and the scatter in the estimate of the initial size of the strength-limiting crack. The variance is used to calculate confidence limits

for the prediction of failure for glass and SiC. Procedures for the collection and analysis of data are discussed and the implications of the analysis for lifetime prediction are evaluated.

16618. Brandt, M. A., Truhlar, D. G., Van-Catledge, F. A., **Electron scattering by nitrogen molecules: Theory and application to elastic scattering and rotational excitation at 30-75 eV,** *J. Chem. Phys.* **64,** No. 12, 4957-4967 (1976).

Key words: close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory.

An effective potential model applicable to electron scattering by small or large molecules, including rotational and vibrational motions, is developed for electron scattering by N_2. The INDO-/1*s* method is used to calculate the static potential at a large number of distances and a simple model is used for the polarization potential. The rotational and vibrational matrix elements of these potentials are accurately calculated and the scattering is treated by a truncated close-coupling expansion. With no adjustable parameters, calculated electronically and vibrationally elastic scattering cross sections are in reasonable agreement with experiment for angles 40°-50° and less at energies 30-75 eV. The rotational excitation cross sections have never been measured for N_2 but are predicted to be large (as large as half the pure elastic cross sections when integrated over scattering angles and larger than the pure elastic differential cross sections at a range of large scattering angles at each energy).

16619. Kostkowski, H. J., **Current status and future plans for NBS radiometric source standards,** *Proc. AIAA/NASA/ASTM/IES Space Simulation Conf. Silver Spring, MD, Nov. 3-5, 1975,* Paper No. 66, pp. 799-805 (National Aeronautics and Space Administration, Washington, DC, 1976).

Key words: blackbodies; lamp standards; radiometry; remote sensing; solar monitoring; source standards.

The accuracy and long-term stability of currently available NBS radiometric source standards will be described. Current research efforts and expected results in this area will be outlined.

16620. Buehler, M. G., Sawyer, D. E., **Microelectronic test patterns for use in procuring reliable, custom integrated circuit chips,** (Proc. Government Microcircuit Applications Conf., Orlando, FL, Nov. 9-11, 1976), Paper in *Government Microcircuit Applications Conference Digest,* **VI,** 62-65 (Nov. 1976).

Key words: circuit procurement; component screening; custom circuits; LSI; microelectronics; parameter control; process uniformity; random faults; reliability; test patterns; TTL; vendor qualification.

The current procurement methods for obtaining custom integrated circuits for high-reliability applications are expensive, less than fully effective, and cause long delays in delivery.

An approach being developed at the National Bureau of Standards focuses on a process validation wafer (PVW) concept which is intended to evaluate process and circuit parameter uniformity, and to measure the occurrence of random faults such as pin holes, multi-contact resistance, and emitter-collector pipes. The PVW is an entire wafer of test structures and is intended to be fabricated along with product wafers on a periodic basis. As a process characterization tool, it can be used to qualify vendors and can serve as a circuit acceptance criterion. This concept has the potential of greatly reducing the user-imposed requirements that now accompany a high-reliability component purchase.

16621. Smith, W. W., Gilbert, D. A., Peterson, C. W., **Vacuum ultraviolet emission spectra from keV energy rare gas ion-atom collisions,** (Proc. 4th Int. Conf. on Beam Foil Spectroscopy, Gatlinburg, TN, Sept. 15-19, 1975), Paper in *Beam-Foil Spectroscopy,* I. A. Sellin and D. J. Pegg, Eds., **2,** 695-704 (Plenum Press, New York, NY, 1976).

Key words: electron-promotion model; ion-atom collisions; solar corona; vacuum ultraviolet emission spectra; vacuum ultraviolet lasers.

Emission spectra have been observed under single-collision conditions in the 500-1100 Å wavelength range and 10-30 keV ion beam energy range for collisions of $(He^+, Ne^+, Ar^+) + Ar$, as well as $Ar^+ + Ne$, $Ar^+ + He$ and $Ne^+ + Ne$. The Ar I and Ar II spectra observed with an argon gas target are similar to those observed previously with $He^+ + Ar$ by de Heer and by Isler, except that with $Ar^+ + Ar$ excitation both the Ar I 4s resonance lines and the 3d-3p transitions in the Ar I spectrum are relatively more prominent than with the other projectiles. A striking difference is found between the strong excitation of the 920 and 932 Å lines of Ar II by a Ne^+ beam on Ar (cross section $\sim 7 \times 10^{-17}$ cm^2 at 30 keV) compared with weak excitation of these lines using $Ar^+ + Ne$ in the same energy range. With $Ne^+ + Ne$, the most prominent lines observed were the 3s and 4s resonance lines of Ne I. Approximate absolute emission cross sections are given for a number of lines. The results are discussed in terms of the electron-promotion (molecular orbital) model of ion-atom collisions. This work may have applications to excitation processes in the solar corona and in vacuum uv lasers.

16622. Wacker, P. F., **Quantifying hazardous microwave fields: Analysis,** *Proc. Symp. on the Biological Effects and Health Implications of Microwave Radiation, Richmond, VA, Sept. 17-19, 1969, BRH/DBE 70-2,* 197-203 (U.S. Department of Health, Education, and Welfare, Rockville, MD, June 1970).

Key words: hazardous microwave fields.

The existing standards for microwave radiation hazards are based upon far-field concepts which may have little or even no validity in near fields. However, hazards occur largely in near fields, and even many dosimetry experiments are carried out in near fields. Because of the great complexity possible in a near field, a probe should, in principle, simulate the individual who might be subject to the possible hazard; however, such a probe is not feasible. Electric energy density provides a reasonable index of a large class of microwave radiation hazards and is simpler to measure in a near field than is energy flow. Analytical aspects of near field measurements are discussed in general, and design of a possible probe described in detail.

16623. Freund, S. M., Sweger, D. M., Travis, J. C., **Quantitative detection of nitrogen dioxide in nitrogen using laser magnetic resonance at 1616 cm^{-1},** *Anal. Chem.* **48,** No. 13, 1944-1946 (Nov. 1976).

Key words: infrared detection; laser magnetic resonance; modulated absorption; nitrogen dioxide; NO_x detection; quantitative detection.

The selective, quantitative detection of nitrogen dioxide in part-per-million concentrations in nitrogen using magnetic field modulation of the molecular absorption of 1616 cm^{-1} carbon monoxide laser radiation is reported. A magnetic field of less than 500 gauss is sufficient to shift the infrared transition of interest into coincidence with the laser. The Zeeman-modulated absorption of the laser light is synchronously detected, and is found to vary linearly with NO_2 concentration over the two orders of magnitude investigated. The synchronous detection scheme discriminates against nonparamagnetic species, such as water and ethylene, which could interfere with direct absorption measurements.

16624. Conti, D. M., **A method for estimating service bureau processing charges,** *Proc. 7th Int. Conf. of the Computer Measurement Group, Inc., Atlanta, GA, Nov. 16-19, 1976*, pp. 34-60 (Computer Measurement Group, Camp Springs, MD, Nov. 1976).

Key words: benchmarking; charging algorithms; service bureaus; synthetic benchmarking; workload characterization.

This paper describes the development of a new synthetic benchmark technique for estimating batch processing charges at service bureau sites. This technique was used to estimate the cost of processing a large batch workload at a number of service bureaus within the same vendor line. The method was found to be low-cost, yet reasonably accurate for a certain class of service bureau charging algorithms. Refinements of this method are suggested which will extend its applicability to other algorithms. The procedures used to create and run the benchmark, together with the projection of total workload costs are described.

16625. McMichael, J. M., Mease, N. E., **On the application of tension to compliant membranes,** *AIAA J. Tech. Notes* **14,** No. 10, 1490-1492 (Oct. 1976).

Key words: air impedance; compliant surface; drag reduction; membranes; tension; vibrating membranes.

In connection with a study of the feasibility of achieving drag reduction by the use of compliant surfaces in turbulent boundary-layers, a method of applying tension to rectangular compliant membranes by the use of suction in chambers adjacent to the free membrane area has been developed. A description of the method is presented along with data evaluating the method. Measurements of the impedance effect of the ambient air on the frequencies of the normal modes of vibration are also presented.

16626. Penn, R. W., Fong, J. T., Kearsley, E. A., **Experience in data acquisition and reduction for a biaxial mechanical testing program,** *Am. Soc. Test. Mater. Spec. Tech. Publ. 613, Use of Computers in the Fatigue Laboratory*, pp. 78-93 (American Society for Testing and Materials, Philadelphia, PA, 1976).

Key words: biaxial; fatigue; fracture; laboratory automation; mechanical testing; plasticity; polyvinyl chloride; servo-hydraulic system; viscoelasticity; yield point.

The inadequacy of uniaxial mechanical testing data as a basis for predicting multiaxial deformation and fracture is well known. For optimal biaxial tests, computer control of simultaneous variation of loadings using hydraulic power under closed loop servocontrol is essential. Computer assistance in real time data reduction from a biaxial mechanical test is economical. Physical features of computer hardware, software, and a hydraulic biaxial system are described along with sample results illustrating cross effects in fatigue and yield surface calculations. Significance of the graphical output based on thin tube specimens of 1-in. (2.54-cm) nominal diameter, schedule 80, commercial grade polyvinyl chloride pipes, and the limitations of the present system are discussed.

16627. Truhlar, D. G., Merrick, J. A., Duff, J. W., **Comparison of trajectory calculations, transition state theory, quantum mechanical reaction probabilities, and rate constants for the collinear reaction $H + Cl_2 \rightarrow HCl + Cl$,** *J. Am. Chem. Soc.* **98,** 22, 6771-6783 (Oct. 27, 1976).

Key words: chemical reactions; chlorine molecules; classical scattering matrix theory; collision theory; cross sections; hydrogen atoms; rate coefficients; scattering theory; trajectories; transition-state theory.

Quantum mechanical rate constants are computed for the collinear reaction $H + Cl_2 \rightarrow HCl + Cl$ using the reaction probabilities of Baer. For comparison we also computed reaction probabilities and rate constants for this reaction using (a) the quasiclassical trajectory method, (b) the reverse quasiclassical trajectory method, (c) the classical S matrix theory (using real-valued trajectories only), and (d) transition-state theory assuming separability of the reaction coordinate at the transition state. Comparisons are made not only for total reaction probability and total rate constant but also in general for state-to-state reaction probabilities and state-to-state rate constants. The quasiclassical trajectory method is generally accurate except in the threshold regions for various state-to-state processes. It is more accurate for total reaction probabilities and total rate constants than for state-to-state reaction probabilities and rate constants. The quasiclassical trajectory calculations of total rate constants for reaction in a given initial vibrational state agree with the quantum calculations within 29 percent for the 300-1000 K temperature range but the state-to-state rate constants may be in error by a factor of 2 or more even for processes which are classically allowed in the sense of classical S matrix theory. Classical S matrix theory does not always provide a more accurate way to extract state-to-state reaction probabilities from these trajectories. Transition state theory (which yields average reaction probabilities and total rate constants for a thermal distribution of initial states but does not yield state-to-state results) is fairly accurate for this reaction even with the assumption that the reaction coordinate is separable.

16628. Parris, G. E., Brinckman, F. E., **Reactions which relate to environmental mobility of arsenic and antimony. II. Oxidation of trimethylarsine and trimethylstibine,** *Environ. Sci. Technol.* **10,** No. 12, 1128-1134 (Nov. 1976).

Key words: antimony; antimony oxide; arsenic; arsenic acid; biomethylation; cacodylic acid; diffusion; flame retardant; oxidation rate; stibinic acid; trimethylarsine; trimethylstibine.

Oxidation of trimethylarsine and trimethylstibine by atmospheric oxygen and other reagents is examined, and semiquantitative rate constants are calculated. In methanol solution the rate constant for reaction of dissolved oxygen with trimethylstibine is greater than 10^{-2} M^{-1} s^{-1}, whereas for the oxidation of trimethylarsine, the rate constant is less than 10^{-2} M^{-1} s^{-1}. In the gas phase the rate constants are estimated as 10^{3} and 10^{-6} M^{-1} s^{-1} for reaction of trimethylstibine and trimethylarsine, respectively, with oxygen. A scheme based on PMR evidence for reactive intermediates is suggested to account for the products of oxidation, $(CH_3)_3EO$ and $(CH_3)_2EO_2H$, of these compounds $(CH_3)_3E$,E = Sb, As. From these results, even if biological methylation of antimony occurs in nature analogous to that of arsenic, the rapidity with which $(CH_3)_3Sb$ is oxidized would probably prevent hazardous concentrations from building up in aerated surroundings.

16628A. Parris, G. E., Brinckman, F. E., **Reactions which relate to the environmental mobility of arsenic and antimony. I. Quaternization of trimethylarsine and trimethylstibine,** *J. Org. Chem. Notes* **40,** No. 25, 3801–3803 (1975).

Key words: alkyl halides; antimony; arsenic; environment; kinetics; methylation; nucleophilic reactivity; onium salts; polar solvents; pollutants; quaternization.

The quarternization reactions of trimethylstibine and trimethylarsine with CH_3I, CH_3CH_2I and $CH_3CH_2CH_2I$ to produce the corresponding stibonium and arsonium salts have been studied in methanol and acetonitrile solvents. The reactions are of the S_N2 type. Trimethylarsine reacts about ten times as fast as trimethylstibine and the reactions are about five times faster in acetonitrile than in methanol. The reactivity of the alkyl halides is $CH_3I >> CH_3CH_2I > CH_3CH_2CH_2I$. It is suggested that quaternization is one of several reactions which potentially effects the mobilization of antimony and arsenic in environmental situations.

16629. Voth, R. O., Hord, J., **Economics of cryocables,** *Int. J. Hydrogen Energy* **1,** 271-289 (1976).

Key words: a.c. power; cryoresistive; energy transmission economics; helium; hydrogen energy; liquid hydrogen; liquid nitrogen; power transmission cables; safety; slush hydrogen; superconducting.

This paper examines the technical and economic feasibilities of: (1) using cryogenic hydrogen to cool a.c. cryoresistive or a.c. superconducting power transmission cables and, (2) delivering liquid hydrogen concurrently with cryoresistive or superconducting electrical power through a common cable. Cryogenic hydrogen coolant options considered are subcooled liquid and slush. Cryogenic nitrogen and helium coolants are also considered for cryoresistive and superconducting cables, respectively, to provide reference data for comparison with our H_2-coolant calculations. Thermodynamic analyses are performed to optimize the coolant flow rate and refrigerator spacing for each specific coolant, coolant fluid state, cable design, cable insulation quality and energy delivery option. The use of hydrogen as a coolant in electrical cables is discussed from a safety viewpoint.

Helium-cooled and hydrogen-cooled superconducting power transmission lines are shown to be economically competitive and offer lower unit-transmission costs than conventional underground power lines. The hybrid hydrogen-superconducting cable concurrently transmits liquid hydrogen and electricity at the lowest unit cost of all cryocable energy systems examined. Hydrogen-cooled power lines and hybrid hydrogen-electric energy cables appear to be technically and economically feasible; however, they do not currently provide sufficient economic incentive to warrant the increased hazard of operation.

16630. Kusuda, T., **Procedure employed by the ASHRAE Task Group for the determination of heating and cooling loads for building energy analysis,** *ASHRAE Trans.* **82,** Pt. 1, 305-322 (1976).

Key words: algorithm; ASHRAE; buildings; computer; energy calculation; heat transfer; heating and cooling loads; response factor.

Most up-to-date thermal load calculation methodology recommended by the ASHRAE Task Group on Energy Requirements is based upon an exact solution of the heat exchange equations among the room surfaces, room furnishings, lighting fixtures, equipment, occupants, and room air. Simplified calculation procedures are possible by the use of transfer functions or by a linear regression equation which could be derived from the rigorous calculation. Although the simplified solutions are entirely adequate for the energy calculation of conventional residential buildings or buildings which do not have the multiplicity of zones and complex air side systems, an exact and rigorous calculation method has a few advantages, some of which were discussed in the main text.

The advantages or the uniqueness of exact calculation procedures are to assist engineers who are willing to explore various energy conservation features or innovative building designs such as the use of interior mass of the building for the storage of off-peak cooling, nighttime setback of the thermostat, flushing of the building with cool night air and the critical matching of the equipment with the indoor comfort requirements.

Although the exact method may appear formidable from the standpoint of algorithmic complexity as compared to the simplified steady state calculation, the use of computer programs which employ such a method will become much easier as the programming technique improves and as more computers are made larger, faster and more readily accessible in the near future.

Only the comprehensive load calculation methodology prepared by the ASHRAE Task Group on Energy Requirements enables the engineer to take advantage of the rapidly growing computer technology to meet the challenges of innovative building design.

16631. Diller, D. E., **Thermophysical properties data research on compressed and liquefied gases at the NBS Cryogenics Division,** (Proc. Cryogenic Engineering Conf., Advances in Cryogenic Engineering, Kingston, Ontario, Canada, July 22-25, 1975), Paper M-7 in *Advances in Cryogenic Engineering* **21,** 522-531 (Plenum Press, New York, NY, 1976).

Key words: density; dielectric constant; electromagnetic properties; equation of state; ethane; hydrocarbon; liquefied natural gas; measurements; methane; mixtures; thermodynamic.

This report summarizes important NBS contributions to accurate thermophysical properties data from compressed and liquefied gases (helium, hydrogen, nitrogen, oxygen, fluorine and argon), and discusses research on liquefied hydrocarbon gases (methane, ethane, ethylene, etc.) and their mixtures. Representative results of research on the thermophysical properties of methane and mixtures containing methane are presented. Additional contributions expected through 1977 are summarized.

16632. Fickett, F. R., **Magnetic and electrical properties of internally oxidized CuFe alloys,** (Proc. Joint MMM-Intermag Conf., Pittsburgh, PA, June 15-18, 1976), *AIP Conf. Proc. No. 34, Magnetism and Magnetic Materials—1976,* J. J. Becker and G. H. Lander, Eds., pp. 25-26 (American Institute of Physics, New York, NY, 1976).

Key words: alloy; copper; cryogenic; iron; oxide; resistivity; remanance; susceptibility.

A series of CuFe alloys containing 1-100 at. ppm Fe has been internally oxidized. In nearly all cases the specimens become ferromagnetic. We have measured the remanent moment and low field susceptibility at room temperature, and the electrical resistivity at 273 K and 4 K. These data combined with Curie temperature measurements and scanning electron microscopy indicate the presence of very small single domain grains of copper ferrite within the copper matrix. The annealing process appears to be capable of sweeping most of the iron impurities from the matrix in spite of their very low concentrations.

16633. Daney, D. E., **Low-temperature losses in supercritical helium refrigerators,** (Proc. Cryogenic Engineering Conf., Kingston, Ontario, Canada, July 22-25, 1975), Paper E-4 in *Advances in Cryogenic Engineering* **21,** 205-212 (Plenum Press, New York, NY, 1976).

Key words: Brayton cycle; cryogenic refrigeration; refrigeration; superconducting transmission lines.

A comparison is made of the efficiencies of the low temperature portion of three alternative schemes of supercritical helium refrigeration for higher temperature superconducting transmission lines. The range of transmission line operating conditions considered is load pressures from 3 to 20 atm and load temperatures from 8 to 14 K. The analysis indicates that no single scheme demonstrates a marked superiority at higher pressures, and that the use of a low temperature pump does not greatly reduce the system efficiency at higher pressures.

16634. Arvidson, J. M., Hord, J., Mann, D. B., **Dispersion of hydrogen or methane fuels released into an automobile interior,** (Proc. Cryogenic Engineering Conf., Advances in Cryogenic Engineering, Kingston, Ontario, Canada, July 22-25, 1975),

Paper J-3 in *Advances in Cryogenic Engineering* **21,** 387-398 (Plenum Press, New York, NY, 1976).

Key words: automobile; detection; dispersion; explosion; fire; hydrogen; leakage; methane; safety; vents.

Gasoline-powered automobiles are being converted to operate on gaseous fuels such as hydrogen (H_2) or methane (CH_4). The fuel is often stored as a cryogenic liquid (H_2 at 20 K and CH_4 at 112 K) in dewar-like vessels located in the trunk of the car. Cryogenic storage provides four to five times greater vehicle range than gas storage in high pressure cylinders of comparable volume. Potential leakage of these gaseous fuels into the passenger compartment of the vehicle constitutes a safety threat. Definitive experiments were performed to identify the explosion hazards and establish venting criteria and general safe-guards for H_2 or CH_4 fueled passenger vehicles. Initial tests were conducted using methane at three inlet temperatures (300, 200, and 121 K) and it was determined that the gas dispersion patterns were not temperature dependent. Appropriately designed ventilation systems can significantly reduce the safety hazards associated with accumulated combustible gases. Vents are recommended for all autos converted to burn H_2 or CH_4 and may possibly be eliminated in new cars that are designed for gaseous fuel operation. Combustible gas warning systems are recommended, at least in the interim, for all (converted and new-design) gaseous fueled vehicles. H_2 and CH_4 gases appear equally safe as vehicular fuels if used in properly designed vehicles.

16635. Ledbetter, H. M., Moment, R. L., **Elastic properties of face-centered-cubic plutonium,** *Acta Met.* **24,** No. 10, 891-899 (Oct. 1976).

Key words: bulk modulus; compressibility; Debye temperature; elastic constants; plutonium; plutonium alloy; Poisson ratio; shear modulus; sound velocity; Young modulus.

The three principal elastic constants, C_{ij}, of f.c.c. plutonium were determined by measuring the ultrasonic wave velocities along a near−6110⟩ direction in a single crystal. The elastic anisotropy is twice that known for any other f.c.c. metal. The elastic-anisotropy problem is considered using a general two-body central-force interatomic potential. Based on the C_{ij}, polar plots of the wave velocities and Young's modulus were determined. The C_{ij} were "averaged" to obtain quasi-isotropic elastic constants, which are compared with existing polycrystalline elastic data. The elastic Debye temperature was computed by numerically integrating the Christoffel equations.

16636. Clark, A. F., **Stress effects in superconductors,** *Cryogenics* **16,** No. 10, 632-633 (Oct. 1976).

Key words: critical current; mechanical properties; stress effects; superconductors; symposium.

A one day symposium on stress effects in superconductors is summarized.

16637. Parrish, W. R., Hiza, M. J., **On the consistency of liquid-vapor equilibria data for binary mixtures on methane with the light paraffin hydrocarbons,** (Proc. Cryogenic Engineering Conf., Advances in Cryogenic Engineering, Kingston, Ontario, Canada, July 22-25, 1975), Paper M-2 in *Advances in Cryogenic Engineering* **21,** 485-492 (Plenum Press, New York, NY, 1976).

Key words: critical loci; excess Gibbs' energies; Henry's constants; liquid-vapor equilibria; methane-light hydrocarbon binary mixtures.

Published experimental liquid-vapor equilibria data for the binary systems of methane with ethane, propane, isobutane, and normal butane have been compiled and evaluated for internal and mutual consistency. Equimolar excess Gibbs energies and infinite dilution Henry's constants are obtained by a method which uses only $P - x$ data. The derived equimolar excess Gibbs energies are compared with those calculated from a modified hard-sphere model for the equimolar mixtures. Critical loci (P_c, T_c, x_c) are also examined where available. Discrepancies in the data are enumerated which suggest the desirability of more precise and accurate measurements.

16638. Siegwarth, J. D., Holste, J. C., Morrow, A. J., **Polarization and dielectric constant of potassium tantalate,** *J. Appl. Phys.* **47,** No. 11, 4791-4793 (Nov. 1976).

Key words: dielectric constant; dielectric relaxation; electret; polarization; potassium tantalate.

The polarization of $KTaO_3$ single crystal and some $KTaO_3$ ceramic specimens has been measured using a dc technique. A remanent polarization was found as well as hysteresis in the polarization as a function of field. Peaks in the ac dielectric constant were also observed. These dielectric properties are attributed to dielectric relaxation effects and the existence of an electret state.

16639. Siegwarth, J. D., Morrow, A. J., **Low-temperature polarization in impure $SrTiO_3$ ceramics,** *J. Appl. Phys.* **47,** No. 11, 4784-4790 (Nov. 1976).

Key words: dielectric relaxation; electret state; impurity; ordering transition; polarization; remanent; strontium titanate.

Measurements of the temperature dependence of the dielectric constant and polarization in a constant field have been made on nominally pure $SrTiO_3$ ceramics and $SrTiO_3$ ceramics containing vanadium and niobium impurities. The peaks in the dielectric constant and the remanent polarization observed are apparently not due to a ferroelectric or antiferroelectric transition but rather to the presence of a thermoelectret state existing for permanent dipoles in the materials. It is suggested that the permanent dipoles have an origin similar to the impurity-vacancy dipoles found in alkali halides.

16640. Fowlkes, C. W., Tobler, R. L., **Fracture testing and results for a Ti-6Al-4V alloy at liquid helium temperature,** *Eng. Fract. Mech.* **8, 487-500 (1976).**

Key words: crack propagation; cryostats; fracture tests; low temperature tests; mechanical tests; titanium alloys.

This paper discusses fracture toughness and fatigue crack growth testing at liquid helium temperature, 4 K (− 452 °F). The design and performance of a fracture testing cryostat and associated instrumentation are described. Fracture toughness and fatigue crack growth data for Ti-6Al-4V from room temperature to 4 K are presented.

16641. Jespersen, J. L., **Topside spread-F and satellite radio scintillations,** (Proc. 10th Annual Symp. of the Ionospheric Research Committee of the Avionics Panel of AGARD/NATO, Rome, Italy, Sept. 21-25, 1965), Chapter 3-9 in *AGARD Conference Proceedings 3, Propagation Factors in Space Communications,* pp. 203-207 (Technivision, Maidenhead, England, 1967).

Key words: absorption; high latitude; ionosphere; ionospheric scattering; irregularity; satellite; scintillation; spread-F; topside.

Over the last decade many workers have studied the relation between spread-*F*, detected by ground-based ionospheric sounders, and the scintillation of a radio signal either from a radio star

or from an artificial earth satellite. In this paper the relation between scintillations and spread-*F* detected by the topside sounder satellite, *Alouette I*, near College, Alaska, is studied. The scintillations are correlated with small-scale irregularities in the vicinity of the satellite. This supports the view that high-latitude irregularities extend from near h_{max} to as high as 1000 km. Simultaneous topside and bottomside soundings of the ionosphere, taken together with the scintillation observations, suggest that on occasion the ionospheric disturbance, associated with the irregularities, extends below h_{mac} into the *D* region.

16642. Smith, R. V., **Fluid dynamics,** Chapter 5 in *Cryogenic Fundamentals*, pp. 237-310 (Academic Press, New York, NY, 1971).

Key words: compressibility flow; cryogenics; fluid dynamics; pressure drop; superfluid helium; two phase flow.

This chapter reviews the field of fluid dynamics with special emphasis on the behavior of cryogenic fluids.

16643. Peterson, R. L., **The magnetophonon effect,** Chapter 4 in *Semiconductors and Semimetals* **10,** *Transport Phenomena*, R. K. Willardson and A. C. Beer, Eds., pp. 221-289 (Academic Press, New York, NY, 1975).

Key words: magnetophonon effect; semiconductors; transport theory.

This article is a comprehensive review of the magnetophonon effect. All theoretical and experimental articles published to date are referenced and discussed. An attempt is made to point out the weaknesses and unique contributions of the various publications. A broad overview, and a discussion of uncompleted work and likely areas for new efforts, are also given so that both the casual reader and the serious researcher will be benefitted.

16644. Jespersen, J. L., Gatterer, L. E., Hanson, D. W., Hamilton, W. F., **Artificial satellites as a means of time dissemination,** *Proc. Int. Conf. on Space and Communications, Paris, France, Mar. 29-Apr. 2, 1971, Paper 16 D*, pp. 426-433 (L'Espace et la Communication Observation: Metrologie, Geodesia Localisation, Paris, France 1971).

Key words: communication satellite; communication system; hf time dissemination services; navigation system; satellite time and frequency dissemination services.

Satellite time and frequency dissemination systems offer certain advantages over conventional HF broadcast services. Some of the important deficiencies of HF broadcasts are discussed together with the corresponding advantages of satellite systems. Experimental results obtained at NBS using UHF/VHF satellite transponders are reviewed. Work performed by other experimenters at higher frequencies is described.

The relationship of disseminated time and frequency to the design and operation of navigation and communication systems is described. There are significant advantages to relating the time and frequency information disseminated incidental to navigation and communication system operation to external standards.

16645. Haynes, W. M., Hiza, M. J., Frederick, N. V., **Magnetic suspension densimeter for measurements on fluids of cryogenic interest,** *Rev. Sci. Instrum* **47,** No. 10, 1237-1250 (Oct. 1976).

Key words: apparatus; density; experimental; magnetic suspension; methane; nitrogen; saturated liquid; tables.

An apparatus incorporating a magnetic suspension technique has been developed for density measurements on liquids and liquid mixtures, particularly at saturation, at temperatures between 90 and 300 K and at pressures to 5 MPa (approximately 50 atm). The feasibility of adapting this method, previously used at room temperature, for low temperature use had been demonstrated in an earlier study with a density measurement on saturated liquid nitrogen near its normal boiling point. The present apparatus, which is significantly improved, and in most respects different from the earlier model, is described in detail. It includes a cryostat for continuous wide-range temperature control, a windowed equilibrium cell particularly suited for studies of liquid mixtures, and a new electronic servocircuit with a linear differential transformer for position control of the magnetic buoy. Extensive tests and density measurements have been carried out to evaluate the performance of this apparatus. Densities of saturated liquid nitrogen between 95 and 120 K and saturated liquid methane between 105 and 160 K are reported. The estimated standard deviation of a single density measurement is less than 0.02 percent. The total systematic error in the measurement process from known sources is approximately 0.05 percent. The total uncertainty of a single density measurement, which is taken as three times the standard deviation plus the systematic error, is approximately 0.1 percent. Comprehensive comparisons of the present results with previous experimental data are presented.

16646. Haynes, W. M., Hiza, M. J., **Orthobaric liquid densities of normal butane from 135 to 300 K as determined with a magnetic suspension densimeter,** (Proc. Cryogenic Engineering, Conf., Advances in Cryogenic Engineering, Kingston, Ontario, Canada, July 22-25, 1975), Paper M-6 in *Advances in Cryogenic Engineering* **21,** 516-521 (Plenum Press, New York, NY, 1976).

Key words: density; experimental; magnetic suspension densimeter; normal butane; saturated liquid; table.

A magnetic suspension densimeter, developed for absolute density measurements of the principal components of liquefied natural gas and their mixtures, has been used to determine the orthobaric (saturated) liquid densities of normal butane from 135 to 300 K. These measurements provide the first set of density data for liquid-*n*-butane that spans the range of temperatures from near ambient to just above the triple point, 134.8 K. These new data have been fitted to a simple analytical expression to provide a convenient and precise interpolation method. This equation has also been used to calculate densities for the subcooled liquid region at temperatures normally associated with liquefied natural gas. The precision and repeatability of measurement is within two parts in 10,000 or better. The absolute error in the densities is estimated to be less than ± 0.1 percent.

16647. Warnar, R. B. J., **Letter to Editor on "Trends in Computer Hardware Technology," by David A. Hodges,** *Computer Design* **15,** No. 12, 14 (Dec. 1976).

Key words: cells; charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon.

The December 1976 COMPUTER DESIGN magazine includes a "Letter to the Editor" from the Information Technology Division, ICST, regarding an article "Trends in Computer Hardware Technology" (COMPUTER DESIGN, February 1976, pp. 77-85). Information included in the letter was derived from the soon-to-be-published Special Publications "Foreign and Domestic Accomplishments in Magnetic Bubble Device Technology" and "Foreign and Domestic Accomplishments in Charge-Transfer Device Technology." Information included in the letter clarified certain specific statements of the February article in the areas of bit-density and cost of charge-coupled devices (CCD's) and magnetic bubble memories (MB's). Specific differences in fabrication techniques between conven-

tional LSI solid-state circuitry and CCD/MB fabrication techniques are highlighted.

16648. McLaughlin, W. L., Humphreys, J. C., Chappell, S. E., Olejnik, T. A., Fox, C. E., **Physical measurements for quality control in industrial radiation sterilization,** (Proc. Int. Conf. on Physics in Industry, Dublin, Ireland, Mar. 8-13, 1976), Paper in *Physics in Industry*, E. O'Mongain and C. P. O'Toole, Eds., pp. 567-573 (Pergamon Press, Oxford, England, 1976).

Key words: dosimetry; electron beams; gamma rays; physical measurements; quality control; radiation measurement; radiation processing; radiation sterilization; radiochromic dyes; Red Perspex; sterility control.

The use of ionizing radiation has brought about a growing industry for the sterilization of disposable surgical equipment, medical supplies, and containers for biological specimens. For many products, irradiation has become an alternative to autoclaving or gas treatment by ethylene oxide. Over fifteen years of experience with industrial sterilization by cobalt-60 gamma radiation have shown that radiation methods provide a clear advantage over gas sterilization, in that sterilization can be performed on nonpermeable sealed packages. Moreover, regulatory agencies, such as the Food and Drug Administration in the U.S.A., are reappraising the requirements for sterility assurance. For products released to the public, consideration is now being given to the use of physical dosimetry, i.e., the measurement of radiation dose by physical methods. This is based on a knowledge of the microbial burden of the product before sterilization and on the probability of killing microorganisms by a given radiation dose. Because physical dosimetry is easier to control and less complicated than biological tests, it may be considered in the future the basis for quality assurance of the sterilized product. Some of the problems associated with standardized measurement techniques in radiation sterilization include the choice of dosimetry and its calibration, as well as methods and procedures used to minimize errors due to variations in radiation flux density, source geometry with respect to the product, and environmental factors.

16649. Hall, J. L., Lee, S. A., **Control techniques for cw dye lasers,** *Proc. Conf. on Tuneable Lasers and Their Applications, Leon, Norway, June 1976*, pp. 361-366 (Springer-Verlag, Berlin, Germany, 1976).

Key words: cw dye laser; frequency control; laser wavelength determination; scanning interferometer.

Stabilized cw dye lasers are potentially a most useful spectroscopic took but they bring a troublesome technology. We list the major problems specific to these lasers. We present a stabilized dye laser design which addresses these problems successfully to produce a useful widely tuneable laser with 50 kHz spectral width and exceptional high single mode power covers 10 K efficiency (12%). An automatic interferometer system is described which gives realtime numerical laser wavelength readout of sub-Doppler absolute accuracy.

16650. Zelkowitz, M. V., **Automatic program analysis and evaluation,** *Proc. 2nd Int. Conf. on Software Engineering, San Francisco, CA, Oct. 13-15, 1976*, pp. 158-163 (IEEE Computer Society, Long Beach, CA, Oct. 1976).

Key words: dynamic analysis; errors; evaluation; program complexity; program measurement static.

There is currently considerable interest in the computing community in the evaluation of computer programming. However, in order to objectively evaluate such concepts, it is necessary to undertake a thorough evaluation of the programming process itself. Most previous studies of this type have analyzed, by hand usually, a few instances of programs. This has led to some general conjectures; however, the amount of information that must be processed precludes any large scale analysis. In order to avoid this problem, an automatic data collection facility has been implemented as part of a PL/1 compiler at the University of Maryland. This system automatically collects information on each program that has been compiled—at almost no additional cost to the user of the compiler. This paper will describe the system and will evaluate some of the characteristics of some of the 25,000 programs that have been run since July, 1975.

16651. Crawford, M. L., Smart, G. R., **New coaxial thermistor mounts for use as precision transfer standards,** *Proc. Instrument Society of America Conf., Philadelphia, PA, Oct. 26-29, 1970*, No. 708-70, 1-6 (Instrument Society of America, Pittsburgh, PA, 1970).

Key words: coaxial thermistor mounts; precision transfer standards.

Improved thermistor mounts have been designed and constructed for use as precision low power transfer standards. Characteristics of these mounts which represent improvements over typical commercially available thermistor mounts are as follows: 1) Input VSWR ≤ 1.03 as compared to typical VSWR ≥ 1.1; 2) Provision for checking thermistor pair match (for similar characteristics), when dc bias is applied; 3) Use of precision 14 mm input connectors; 4) Extended frequency range from 1 MHz to 4.0 GHz and at specified frequencies from 4 to 8 GHz.

The paper describes the thermistor mount design and includes a mathematical analysis of an approximation to their equivalent circuit. Design equations and experimental results are given for the mounts along with a brief analysis of the errors.

16652. Mandel, J., **Statistical methods in analytical chemistry,** Chapter in *Treatise on Analytical Chemistry*, I. M. Kolthoff and P. M. Elving, Eds., Part III, Section C, **3**, 79-125 (John Wiley and Sons, New York, NY, 1976).

Key words: analytical chemistry; data analysis; design of experiments; statistics.

This chapter is an introduction, written mainly for the analytical chemist, to the use of statistics in designing experiments and analyzing data. Subjects covered include basic statistical concepts, precision and accuracy, interlaboratory comparisons and the Youden plot, calibration experiments, factorial experiments, analysis of structure, block experiments, comparison of test methods, control charts, confidence statements and propagation of errors. All subjects are illustrated in terms of data taken from analytical chemistry.

16653. Unassigned.

16654. Wyly, R. S., Galowin, L. S., **An approach to performance evaluation for water supply and drainage for buildings,** *Proc. CIB Commission W62 Symp., 1975, Drainage and Water Supply for Buildings, University of Glasgow, Glasgow, Scotland, Sept. 30-Oct. 1, 1975*, pp. 12/1-12/31 (1975).

Key words: acceptance protocol; performance approach; performance-based plumbing standard; performance statement; plumbing performance criteria; plumbing performance evaluation; plumbing performance.

The performance concept is reviewed as it relates to water supply and drainage for buildings.

An approach is described that is being utilized in connection with the development of a performance standard for plumbing as a complement to an updated specification-type (model) code of practice (National Plumbing Code) under the procedures of the American National Standards Institute.

The recommendation is made that the work in connection with the National Plumbing Code program include first a comprehensive review of existing information to identify existing performance statements, both those actually stated and those merely implied. Several examples are developed illustrating this concept.

It is concluded that the needs in further development and implementation of the performance approach include education, acceptance protocol and new research. The new research would be needed to establish definitive performance criteria, reproducible test procedures or predictive models, and systematic inspection procedures. During the period of transition to performance evaluation methodology, continued reliance will need to be placed on specification-oriented acceptance protocol, expert judgment and experience.

16655. Radebaugh, R., **He^3, He^4 refrigeration,** *Cryogenics* **11,** No. 1, 63 (Feb. 1971).

Key words: demagnetization; dilution refrigerator; helium 3; helium 4; liquid helium; mixtures; refrigeration.

A report of papers presented at the September 11, 1970 afternoon session of the IIP Commission I meeting is given. These papers are on the subjects of dilution and He^3 refrigerators.

16656. Sprowls, D. O., Summerson, T. J., Ugiansky, G. M., Epstein, S. G., Craig, H. L., Jr., **Evaluation of a proposed standard method of testing for susceptibility to stress-corrosion cracking of high-strength 7XXX series aluminum alloy products,** *Am. Soc. Test. Mater. Spec. Tech. Publ. 610, Stress Corrosion—New Approaches,* pp. 3-31 (American Society for Testing and Materials, Philadelphia, PA, Nov. 1976).

Key words: Aluminum Association; ASTM; industrial atmosphere; round robin tests; seacoast atmosphere; standard; stress-corrosion; 3.5 percent NaCl; 7XXX aluminum alloys.

A task group sponsored jointly by The Aluminum Association and the ASTM has recommended a standard method of test for susceptibility to stress-corrosion cracking (SCC) of 7XXX aluminum alloy products (ASTM G 47-76). The proposed standard is a comprehensive method that specifies the corrosive environment and period of exposure, type of test specimen and method of loading, procedures for sampling various manufactured product forms, and guidelines for interpretation of test results. Final selection of test procedures was based on round robin tests performed in nine different laboratories and 3-year exposures to the atmosphere in both seacoast and inland industrial locations. A summary of test results is given to illustrate how the relative performance of three different tempers of 7075 alloy plate can be influenced by the choice of a test specimen, differences in the outdoor atmosphere, and interlaboratory variations in performing the standard 3.5 percent sodium chloride alternate immersion test.

16657. Ritter, J. J., Freund, S. M., **CO_2 transverse excitation laser induced photochemical enrichment of carbon isotopes,** *J. Chem. Soc. Chem. Commun.*, No. 20, 811-813 (Oct. 20, 1976).

Key words: carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; isotope ratio; nitric oxide; oxygen; tetrafluoroethylene; transverse excitation laser; 2-methyl propene.

CO_2 transverse excitation laser photolysis of mixtures of Cl_2CF_2 with O_2, NO, and $Me_2C=CH_2$ is isotopically selective for carbon and experimental evidence indicates that the reaction may involve a laser produced difluorocarbene intermediate.

16658. Kessler, K. G., **The optics program in the Optical Physics Division at NBS,** *Opt. Eng.* **12,** No. 3, p. 85 (May/June 1973).

Key words: optics; research at NBS.

Introduction to a series of papers describing optics research at NBS.

5. LISTING OF NBS PAPERS BY MAJOR SUBJECT AREA

This section provides a listing of 1976 papers organized by primary subject matter as follows:

Acoustics and Sound
Analytical Chemistry
Atomic and Molecular Studies
Building Technology
Computer Science and Technology
Health and Safety
Consumer Information and Protection
Electromagnetic Metrology
Electronic Technology
Energy Conservation and Production
Engineering, Product and Information Standards
Environmental Studies: Pollution Measurement
Failure Analysis
Fire Research
Fluids: Liquids, Gases and Plasmas
General Theoretical Chemistry and Physics
Instrumentation and Experimental Methods
Lasers and Their Applications
Low Temperature Science and Engineering
Mathematical and Statistical Methods
Measurement Science and Technology:
  Policy and State-of-the-Art Surveys
Measurement Science and Technology:
  Physical Standards and Fundamental Constants
Metrology: Physical Measurements
Nuclear Physics and Radiation Technology
Mechanics: Design, Testing and Measurement
Operations Analysis and Applications
Processing and Performance of Materials
Properties of Materials: Electronic, Magnetic and Optical
Properties of Materials: Structural and Mechanical
Properties of Materials: Thermodynamic and Transport
Standard Reference Data
Standard Reference Materials
Surfaces and Interfaces
Thermodynamics and Chemical Kinetics
Technology Incentives
Other Subjects of General Interest

It permits users of this catalog to scan the Bureau's output by major subject category. The user should bear in mind that a paper is listed once by major subject even though it might well contain other secondary subject matters of interest. The key-word index permits the reader to determine the overall context of a paper, and provides an excellent secondary reference source.

The categories currently in use for classifying NBS publications are listed below and are followed by a listing of each paper by category. Full citations (including key-words and abstracts) will be found under the appropriate publication series, which is included in the paper title. Also of use will be the key-word index (mentioned above) and the author index. See Section 6 on page 413 for information on their organization and use.

Acoustics and Sound

SP386, 1976 Edition. **Standards on noise measurements, rating schemes, and definitions: A compilation,** T. L. Quindry, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 386, 1976 Edition,* 84 pages (Apr. 1976) SD Catalog No. C13.10:386.

The role of the analytical blank in accurate trace analysis, T. J. Murphy, *SP422,* pp. 509-539 (Aug. 1976).

The analysis of surfaces and microstructural detail, F. Bacon and E. Lifshin, *SP422,* pp. 541-573 (Aug. 1976).

The effects of container composition, storage duration, and temperature on serum mineral levels, G. L. Fisher, L. G. Davies, and L. S. Rosenblatt, *SP422,* pp. 575-591 (Aug. 1976).

Biological sample contamination due to quartz container in neutron activation analysis, B. Maziere, A. Gaudry, J. Gros, and D. Comar, *SP422,* pp. 593-604 (Aug. 1976).

Preparation of biological materials for chromium analysis, W. R. Wolf and F. E. Greene, *SP422,* pp. 605-610 (Aug. 1976).

Stability of chromium ions at low concentrations in aqueous and biological matrices stored in glass, polyethylene, and polycarbonate containers, V. D. Anand and D. M. Ducharme, *SP422,* pp. 611-619 (Aug. 1976).

A possibility of state analysis of plasma spectrometry, S. Hanamura, *SP422,* pp. 621-625 (Aug. 1976).

Preparation and analysis of aquatic-related samples, N. M. Ferguson, J. R. Lund, R. R. Rickard, and L. T. Corbin, *SP422,* pp. 627-632 (Aug. 1976).

Stability of metal ions in aqueous environmental samples, A. Rattonetti, *SP422,* pp. 633-648 (Aug. 1976).

Resin-loaded papers—sampling and trace analysis using neutron activation and x-ray spectrography, S. L. Law and W. J. Campbell, *SP422,* pp. 649-658 (Aug. 1976).

Losses, interferences, and contamination in trace metal analysis—some examples, F. Amore, *SP422*, pp. 661-668 (Aug. 1976).

Sampling problems and the determination of mercury in surface water, seawater, and air, H. A. Das and H. A. van der Sloot, *SP422*, pp. 669-699 (Aug. 1976).

Control of blanks in the analysis of phthalates in air and ocean biota samples, C. S. Giam and H. S. Chan, *SP422*, pp. 701-708 (Aug. 1976).

Mass spectrometric analysis for fractional ppb atomic content of boron in trichlorosilane, J. A. Baker, *SP422*, pp. 709-714 (Aug. 1976).

The challenge of getting the lead out, E. Berman, *SP422*, pp. 715-719 (Aug. 1976).

Rapid homogenization and drying of biological material, I. Y. Donev, *SP422*, pp. 721-726 (Aug. 1976).

Problems in trace analysis of nitrosamines in foodstuffs, E. A. Walker and M. Castegnaro, *SP422*, pp. 727-736 (Aug. 1976).

Effects of storage conditions on residues of 2,4-D and 2,4-DCP in potatoes, D. Bristol, *SP422*, pp. 737-745 (Aug. 1976).

Sampling problems in the investigation of high purity metals, M. Radwan, L. Walis, and H. Jaskólska, *SP422*, pp. 747-755 (Aug. 1976).

Analytical methodology for accurate determination of trace constituents in highly pure materials, P. Albert, *SP422*, pp. 759-772 (Aug. 1976).

Analytical methodology—rocks and ores, H. Onishi, *SP422*, pp. 773-790 (Aug. 1976).

The past, present, and future of the analysis of atmospheric particulates, R. K. Skogerboe, *SP422*, pp. 791-803 (Aug. 1976).

Analytical chemistry of natural waters, D. E. Robertson, *SP422*, pp. 805-836 (Aug. 1976).

Analytical methodology for accurate analysis in clinical chemistry, S. S. Brown and F. L. Mitchell, *SP422*, pp. 837-850 (Aug. 1976).

Trace level determination of triclosan by gas chromatography, F. H. Marquardt, J. Schulze, and D. Smith, *SP422*, pp. 851-859 (Aug. 1976).

Electrochemical trace analyses based on Faraday's Law, D. J. Curran, *SP422*, pp. 861-869 (Aug. 1976).

The non-faradaic background in pulse polarography, R. A. Osteryoung and J. H. Christie, *SP422*, pp. 871-879 (Aug. 1976).

Improved anodic stripping voltammetry for accurate trace analysis, M. Ariel and J. Wang, *SP422*, pp. 881-897 (Aug. 1976).

Monitoring dissolved copper in seawater by means of ion-selective electrodes, G. K. Rice and R. J. Jasinski, *SP422*, pp. 899-915 (Aug. 1976).

Electroanalytical determination and characterization of some heavy metals in seawater, M. Branica, L. Sipos, S. Bubic, and S. Kozar, *SP422*, pp. 917-928 (Aug. 1976).

The accurate determination of lead in biological and environmental samples by isotope dilution mass spectrometry, L. A. Machlan, J. W. Gramlich, T. J. Murphy, and I. L. Barnes, *SP422*, pp. 929-935 (Aug. 1976).

Rare earth element analysis by isotope dilution, G. N. Hanson, *SP422*, pp. 937-949 (Aug. 1976).

An accurate determination of electrolyte concentrations in blood serum by isotope dilution mass spectrometry, E. L. Garner, L. A. Machlan, J. W. Gramlich, L. J. Moore, T. J. Murphy, and I. L. Barnes, *SP422*, pp. 951-960 (Aug. 1976).

Spiking isotope dilution and its application to fluorine determinations, H. A. Das and T. Wals, *SP422*, pp. 961-982 (Aug. 1976).

The determination of small amounts of nitrogen (0 to 20 ppm) in plain carbon steels, H. F. Pronk, J. de Boer, and N. Butter-Bijwaard, *SP422*, pp. 983-1003 (Aug. 1976).

Trace element analysis of nickel and nickel-base alloys—a review of current methods, C. M. Davis, *SP422*, pp. 1005-1016 (Aug. 1976).

Nonuniform distribution (both micro and macro) of trace elements in high-temperature alloys, O. H. Kriege and J. Y. Marks, *SP422*, pp. 1017-1022 (Aug. 1976).

Monitoring of an atomic absorption spectrophotometer using cumulative sum statistical control charts, J. R. Montgomery, *SP422*, pp. 1023-1033 (Aug. 1976).

Signal characterization and measurement in microsample atomic absorption spectrometry, R. S. Vogel and A. M. Hartley, *SP422*, pp. 1035-1043 (Aug. 1976).

An intercomparison of flame and nonflame systems in atomic absorption spectrometry, T. C. Rains and O. Menis, *SP422*, pp. 1045-1051 (Aug. 1976).

Atomic absorption spectrophotometry of air filter paper tape samples, F. J. Muñoz-Ribadeneira, M. L. Nazario, and A. Vega, *SP422*, pp. 1053-1061 (Aug. 1976).

Analysis of cadmium in fish tissue by flameless atomic absorption with a tantalum ribbon, E. R. Blood and G. C. Grant, *SP422*, pp. 1063-1072 (Aug. 1976).

Methodological considerations in western Lake Superior water-sediment exchange studies of some trace elements, J. E. Poldoski and G. E. Glass, *SP422*, pp. 1073-1088 (Aug. 1976).

Accuracy in determining trace element concentrations in marine sediments, E. D. Wood and N. A. Cintron, *SP422*, pp. 1089-1102 (Aug. 1976).

Significant improvement of accuracy and precision in the determination of trace rare earths by fluorescence analysis, L. Ozawa and H. N. Hersh, *SP422*, pp. 1103-1107 (Aug. 1976).

The advantages of x-ray fluorescence analysis for trace elements in silicate rocks, B. M. Gunn, *SP422*, pp. 1109-1118 (Aug. 1976).

Monitoring of smog aerosols with elemental analysis by accelerator beams, T. A. Cahill, R. G. Flocchini, R. A. Eldred, P. J. Feeney, S. Lange, D. Shadoan, and G. Wolfe, *SP422*, pp. 1119-1136 (Aug. 1976).

Characteristics of environmental airborne fissionable material, B. M. Center, K. E. Jackson, and F. H. Ruddy, *SP422*, pp. 1132-1142 (Aug. 1976).

Analytical design in activation analysis: The role of accuracy and precision, D. A. Becker, *SP422*, pp. 1143-1155 (Aug. 1976).

A search for accuracy in activation analysis of trace elements in different matrices, S. Meloni, M. T. Ganzerli-Valentini, V. Caramella-Crespi, V. Maxia, L. Maggi, U. Pisani, R. Soma, and P. Borroni, *SP422*, pp. 1157-1164 (Aug. 1976).

Surface effects on accuracy in activation analysis, G. Revel and M. Federoff, *SP422*, pp. 1165-1171 (Aug. 1976).

A study into the accuracy of a remote-controlled system for multielement determination in foodstuffs using NAA, R. Schelenz and J. F. Diehl, *SP422*, pp. 1173-1180 (Aug. 1976).

Neutron activation analysis of elements extracted into organic media, R. Stella and N. Genova, *SP422*, pp. 1181-1187 (Aug. 1976).

Estimation of primary reaction interferences in fast particle activation analysis by calculations using cross section data, V. Krivan, *SP422*, pp. 1189-1214 (Aug. 1976).

Activation analysis with charged particles of intermediate energy: Performances and applications, J. N. Barrandon and J. L. Debrun, *SP422*, pp. 1215-1232 (Aug. 1976).

Organomercury and total mercury content of environmental matrices as determined by neutron activation analysis, E. Orvini and M. Gallorini, *SP422*, pp. 1233-1240 (Aug. 1976).

Determination of elements in standard material (Bovine Liver SRM 1577), I. Y. Donev and L. M. Marichkova, *SP422*, pp. 1293-1304 (Aug. 1976).

Evaluation of error in the instrumental activation analysis of rocks, R. J. Rosenberg, *SP422*, pp. 1241-1256 (Aug. 1976).

Neutron activation analysis for some nonstoichiometric constituents in a large number of natural and synthetic beryl samples, S. M. Ristic, *SP422*, pp. 1257-1274 (Aug. 1976).

Control of sample configuration as an aid to accuracy in instrumental neutron activation analysis, R. E. Heft, *SP422*, pp. 1275-1281 (Aug. 1976).

Observations on the quantitative electron probe microanalysis of particles, C. E. Fiori, K. F. J. Heinrich, R. L. Myklebust, and M. M. Darr, *SP422*, pp. 1283-1291 (Aug. 1976).

U.S. Patent 3,966,413. **Electrochemical chlorine flux monitor,** G. Marinenko, (June 29, 1976).

15715. Fiori, C. E., Myklebust, R. L., Heinrich, K. F. J., Yakowitz, H., **Prediction of continuum intensity in energy-dispersive x-ray micro-analysis,** *Anal. Chem.* **48,** No. 1, 172-176 (Jan. 1976).

15722. Heinrich, K. F. J., Yakowitz, H., **Absorption of primary x rays in electron probe microanalysis,** *Anal. Chem.* **47,** No. 14, 2408-2411 (Dec. 1975).

Atomic and Molecular Studies

Line strengths and lifetimes of levels in neutral uranium, C. H. Corliss, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 1, 1-7 (Jan.-Feb. 1976).

Extinction coefficients of NO_2 and N_2O_4, A. M. Bass, A. E. Ledford, Jr., and A. H. Laufer, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 2, 143-166 (Mar.-Apr. 1976).

Structure- and solvent-property relationships for the electronic energies of charge-transfer complexes between certain benzene derivatives, H. Argentar, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 2, 173-187 (Mar.-Apr. 1976).

Energy levels, classified lines, and Zeeman effect of neutral thorium, R. Zalubas, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 2, 221-358 (Mar.-Apr. 1976).

Fluorescence quantum yield measurements, J. B. Birks, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 389-399 (May-June 1976).

On the actinometric measurement of absolute luminescence quantum yields, J. N. Demas and B. H. Blumenthal, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 409-412 (May-June 1976).

The calorimetric detection of excited states, J. B. Callis, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 413-419 (May-June 1976).

Oscillator strengths for lines of ionized uranium (U II), C. H. Corliss, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 429-438 (May-June 1976).

Calculations of configurations of doubly ionized copper (Cu III), J. Sugar and W. C. Martin, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 465-476 (May-June 1976).

Revised lifetimes of energy levels in neutral iron, C. H. Corliss and J. L. Tech, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), Nos. 5 and 6, 787-797 (Sept.-Dec. 1976).

Monogr. 153. **The first spectrum of hafnium (Hf I),** W. F. Meggers and C. E. Moore, *Nat. Bur. Stand. (U.S.), Monogr. 153,* 117 pages (July 1976) SD Catalog No. C13.44:153.

SP426. **Bibliography of low energy electron and photon cross section data (through December 1974),** L. J. Kieffer, *Nat. Bur. Stand. (U.S.), Spec. Publ. 426,* 219 pages (Mar. 1976) SD Catalog No. C13.10:426.

SP428. Parts 1, 2, and 3. **Bibliography of infrared spectroscopy through 1960,** C. N. R. Rao, S. K. Dikshit, S. A. Kudchadker, D. S. Gupta, V. A. Narayan, and J. J. Comeford, *Nat. Bur. Stand. (U.S.), Spec. Publ. 428/1-3,* 2399 pages (Jan. 1976) SD Catalog No. C13.10:428/1-3.

NBSIR 75-751. **Thermodynamics of chemical laser and high temperature species,** C. W. Beckett, 37 pages (Oct. 1975). Order from NTIS as ADA017626.

NBSIR 76-1061. **An annotated bibliography on proton affinities,** K. Hartman, S. Lias, P. J. Ausloos, and H. M. Rosenstock, 52 pages (July 1976). Order from NTIS as PB256328.

15717. Shine, R., Gerola, H., Linsky, J. L., **Diffusion effects on the line intensities of He I and He II in the solar transition region,** *Astrophys. J.* **202,** L101-L105 (Dec. 1, 1975).

Building Technology

SP439. **The Center for Building Technology: A perspective,** M. Olmert, *Nat. Bur. Stand. (U.S.), Spec. Publ. 439,* 30 pages (Jan. 1976) SD Catalog No. C13.10:439.

SP444. **Wind and seismic effects.** Proceedings of the Sixth Joint Panel Conference of the U.S.-Japan Cooperative Program in Natural Resources, National Bureau of Standards, Gaithersburg, MD, May 15-17 (1974), H. S. Lew, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 444,* 462 pages (Apr. 1976) SD Catalog No. C13.10:444.

On the gust response of long-span suspension bridges, N. Narita and K. Yokoyama, *SP444,* pp. I-1 – I-20 (Apr. 1976).

Extreme winds in hurricanes and possibility of modifying them, R. C. Gentry, *SP444,* pp. I-21 – I-33 (Apr. 1976).

Extreme winds in the United States, A. R. Hull and P. E. Hughes, *SP444,* pp. I-34 – I-39 (Apr. 1976).

Wind tunnel experiments for studying a local wind, K. Suda, S. Soma, and K. Takeuchi, *SP444,* pp. II-1 – II-20 (Apr. 1976).

A study of wind pressures on a single-family dwelling in model and full scale, R. D. Marshall, *SP444,* pp. II-21 – II-51 (Apr. 1976).

Nonlinear calculations of ground response in earthquakes, W. B. Joyner, A. T. F. Chen, and P. C. Doherty, *SP444,* pp. III-1 – III-12 (Apr. 1976).

Observation and analysis of ground response in earthquakes, S. Hayashi and H. Tsuchida, *SP444,* pp. III-13 – III-23 (Apr. 1976).

Research study on liquefaction, W. F. Marcuson, III, *SP444,* pp. III-24 – III-37 (Apr. 1976).

Estimation of liquefaction potential by means of explosion test, K. Yamamura and Y. Koga, *SP444,* pp. III-38 – III-51 (Apr. 1976).

Landslide incidence and mechanisms during earthquakes, G. E. Ericksen, *SP444,* pp. III-52 – III-71 (Apr. 1976).

Stress condition effects on dynamic properties of soils, E. Kuribayashi and T. Iwasaki, *SP444,* pp. III-72 – III-83 (Apr. 1976).

Prediction of maximum earthquake intensities for the San Francisco Bay Region, R. D. Borcherdt and J. F. Gibbs, *SP444,* III-84 – III-94 (Apr. 1976).

A statistical approach to loading and failure of structures, R. G. Merritt, *SP444,* pp. IV-1 – IV-15 (Apr. 1976).

Synthetic experimental research on the ductility of short reinforced concrete columns under large deflection, K. Nakano and M. Hirosawa, *SP444,* pp. IV-16 – IV-36 (Apr. 1976).

Nonlinear analysis of a guyed tower, S. K. Takahashi and W. A. Shaw, *SP444,* pp. IV-37 – IV-54 (Apr. 1976).

A standard for the structural integrity of prefabricated dwellings, K. Nakano, M. Hirosawa, and T. Murota, *SP444,* pp. IV-55 – IV-69 (Apr. 1976).

An analytical model for determining energy dissipation in dynamically loaded structures, J. F. McNamara and S. K. Sharma, *SP444,* pp. IV-70 – IV-89 (Apr. 1976).

Design of pile foundations subjected to lateral loads, M. Nagao, T. Okubo, K. Komada, and A. Yamakawa, *SP444,* pp. IV-90 – IV-112 (Apr. 1976).

Comprehensive seismic design provisions for buildings, C. G. Culver, *SP444,* pp. IV-113 – IV-126 (Apr. 1976).

Wind loading and modern building codes, E. Simiu and R. D. Marshall, *SP444,* pp. IV-127 – IV-144 (Apr. 1976).

Seismic retrofitting of existing highway bridges, J. D. Cooper, R. R. Robinson, and A. Longinow, *SP444,* pp. V-1 – V-24 (Apr. 1976).

Dynamic tests of structures using a large scale shake table, S. Inaba, *SP444,* pp. V-25 – V-34 (Apr. 1976).

229-317 O - 77 - 24

A methodology for evaluation of existing buildings against earthquakes, hurricanes and tornadoes, H. S. Lew and C. G. Culver, *SP444*, pp. V-35 – V-49 (Apr. 1976).

Experimental research on the aseismic characteristic of spherical steel tank for liquid petroleum gas, K. Nakano and M. Watabe, *SP444*, pp. V-50 – V-62 (Apr. 1976).

Research on minimizing earthquake structural damage to single-family dwellings, W. J. Werner, *SP444*, pp. V-63 – V-65 (Apr. 1976).

Earthquake engineering research supported by the National Science Foundation, C. C. Thiel, *SP444*, pp. V-66 – V-79 (Apr. 1976).

The wind engineering program, M. P. Gaus, *SP444*, pp. V-80 – V-82 (Apr. 1976).

Preliminary report on present status and development project of volcanological observation and research in Indonesia, A. Suwa, *SP444*, pp. VI-1 – VI-15 (Apr. 1976).

Use of stabilized adobe block and cane in construction of low-cost housing in Peru, S. G. Fattal, *SP444*, pp. VI-16 – VI-24 (Apr. 1976).

A comment on the technological aid to developing countries, M. Nagao and T. Okubo, *SP444*, pp. VI-25 – VI-31 (Apr. 1976).

SP446. **Building technology project summaries,** M. Olmert, *Nat. Bur. Stand. (U.S.), Spec. Publ. 446*, 108 pages (May 1976) SD Catalog No. C13.10:446.

SP457. **Building technology publications 1965-1975,** J. R. Debelius, S. G. Weber, and K. N. DeCorte, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 457*, 107 pages (Dec. 1976) SD Catalog No. C13.10:457.

BSS67. **Abnormal loading on buildings and progressive collapse. An annotated bibliography,** E. V. Leyendecker, J. E. Breen, N. F. Somes, and M. Swatta, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 67*, 60 pages (Jan. 1976) SD Catalog No. C13.29/2:67.

BSS73. **Structural performance of masonry walls under compression and flexure,** S. G. Fattal and L. E. Cattaneo, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 73*, 65 pages (June 1976) SD Catalog No. C13.29/2:73.

BSS76. **Analysis of reinforced concrete beams subjected to fire,** B. Ellingwood and J. R. Shaver, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 76*, 83 pages (July 1976) SD Catalog No. C13.29/2:76.

BSS80. **Safety during construction of concrete buildings – A status report,** H. S. Lew, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 80*, 56 pages (Jan. 1976) SD Catalog No. C13.29/2:80.

BSS81. **Survey of ground fault circuit interrupter usage for protection against hazardous shock,** R. W. Beausoliel and W. J. Meese, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 81*, 19 pages (Mar. 1976) SD Catalog No. C13.29/2:81.

BSS83. **Polymer impregnated hardened cement pastes and mortars,** J. R. Clifton, J. E. Fearn, and E. D. Anderson, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 83*, 21 pages (Apr. 1976) SD Catalog No. C13.29/2:83.

Computer Science and Technology

SP384. **Annotated bibliography of the literature on resource sharing computer networks. Revised 1976,** H. M. Wood, S. W. Watkins, and I. W. Cotton, *Nat. Bur. Stand. (U.S.), Spec. Publ. 384 (revised),* 179 pages (Sept. 1976) SD Catalog No. C13.10:384/rev.

SP451. **Data base directions. The next steps.** Proceedings of the Workshop of the National Bureau of Standards and the Association for Computing Machinery, held at Fort Lauderdale, FL, Oct. 29-31, 1975, J. L. Berg, Ed., R. G. Canning, D. L. Adams, R. W. Bemer, G. Dodd, R. M. Gall, and C. D. Trigg, *Nat. Bur. Stand. (U.S.), Spec. Publ. 451,* 175 pages (Sept. 1976) SD Catalog No. C13.10:451.

Introduction, R. G. Canning, General Chairman, *SP451,* pp. 1-2 (Sept. 1976).

A manager's viewpoint, D. B. Magraw, Keynote Speaker, *SP451,* pp. 3-11 (Sept. 1976).

What experience has taught us, R. M. Gall, Chairman, *SP451,* pp. 13-28 (Sept. 1976).

Standards: A data base imperative, R. W. Bemer, Chairman, *SP451,* pp. 31-39 (Sept. 1976).

Auditing the data base, D. L. Adams, Chairman, *SP451,* pp. 41-64 (Sept. 1976).

Impact of government regulations, C. D. Trigg, Chairman, *SP451,* pp. 67-78 (Sept. 1976).

Data base technology—Present and future, G. Dodd, Chairman, *SP451,* pp. 81-103 (Sept. 1976).

Background, *SP451,* pp. 105-106 (Sept. 1976).

FIPS PUB 38. **Guidelines for documentation of computer programs and automated data systems,** B. Marron, Standards Coordinator, *Nat. Bur. Stand. (U.S.), Fed. Info. Process. Stand. Publ. (FIPS PUB) 38,* 50 pages (1975).

TN897. **Interpretation of data in the network measurement system,** S. W. Watkins and M. D. Abrams, *Nat. Bur. Stand. (U.S.), Tech. Note 897,* 46 pages (Mar. 1976) SD Catalog No. C13.46:897.

TN906. **A methodology for evaluating alternative technical and information management approaches to privacy requirements,** R. C. Goldstein, H. H. Seward, and R. L. Nolan, *Nat. Bur.*

Stand. (U.S.), Tech. Note 906, 72 pages (June 1976) SD Catalog No. C13.46:906.

TN908. **Measurement of computer communication networks,** M. D. Abrams, S. Treu, and R. P. Blanc, *Nat. Bur. Stand. (U.S.), Tech. Note 908,* 95 pages (July 1976) SD Catalog No. C13.46:908.

TN912. **The network measurement machine—A data collection device for measuring the performance and utilization of computer networks,** R. Rosenthal, D. E. Rippy, and H. M. Wood, *Nat. Bur. Stand. (U.S.), Tech. Note 912,* 91 pages (Apr. 1976) SD Catalog No. C13.46:912.

TN916. **Software exchange directory for university research administration,** Z. G. Ruthberg and G. R. Bolotsky, *Nat. Bur. Stand. (U.S.), Tech. Note 916,* 215 pages (Apr. 1976) SD Catalog No. C13.46:916.

TN917. **A review of network access techniques with a case study: The network access machine,** R. Rosenthal, *Nat. Bur. Stand. (U.S.), Tech. Note 917,* 36 pages (July 1976) SD Catalog No. C13.46:917.

TN919. **Operating system structures to support security and reliable software,** T. A. Linden, *Nat. Bur. Stand. (U.S.), Tech. Note 919,* 51 pages (Aug. 1976) SD Catalog No. C13.46:919.

TN920. **Use of synthetic benchmarks for estimating service bureau processing charges,** D. M. Conti, *Nat. Bur. Stand. (U.S.), Tech. Note 920,* 47 pages (July 1976) SD Catalog No. C13.46:920.

NBSIR 73-423. **Guidelines for the use of computer technology in the developing countries,** R. A. Simmons, 172 pages (Dec. 1973). Order from NTIS as COM 74-11722.

NBSIR 75-735. **An expandable total energy data editor,** R. H. F. Jackson, 151 pages (Aug. 1976). Order from NTIS as PB256295.

NBSIR 75-973. **Guide to improving the performance of a manipulator system for nuclear fuel handling through computer controls,** J. M. Evans, Jr., J. S. Albus, A. J. Barbera, R. Rosenthal, and W. B. Truitt, 53 pages (Nov. 1975). Order from NTIS as PB249255.

NBSIR 76-1015. **Management of data elements in information processing.** Proceedings of a Second Symposium Sponsored by the American National Standards Institute and by the National Bureau of Standards, October 23-24, 1975, NBS, Gaithersburg, Md., H. E. McEwen, Ed., 263 pages (Apr. 1976). Order from NTIS as PB249530.

On-line tactical data inputting: Research in operator training and performance, I. Alderman, *NBSIR 76-1015,* pp. 1-8 (Apr. 1976).

"Turning the Corner" on MIS, a proposed program of data standards in post-secondary education, D. R. Arnold, *NBSIR 76-1015,* pp. 9-16 (Apr. 1976).

ASCII—The data alphabet that will endure, R. W. Bemer, *NBSIR 76-1015,* pp. 17-22 (Apr. 1976).

Techniques in developing standard procedures for data editing, G. W. Covill, *NBSIR 76-1015,* pp. 23-43 (Apr. 1976).

An adaptive file management system, D. L. Dance and U. W. Pooch, *NBSIR 76-1015,* pp. 45-55 (Apr. 1976).

A focus on the role of the data manager, R. M. Davis, *NBSIR 76-1015,* pp. 57-60 (Apr. 1976).

A proposed standard routine for generating proposed standard check characters, P. A. Desjardins, *NBSIR 76-1015,* pp. 61-67 (Apr. 1976).

Methodology for development of standard data elements within multiple public agencies, L. D. England, S. L. Eberle, B. H. Schiff, and A. S. Huffman, *NBSIR 76-1015,* pp. 69-76 (Apr. 1976).

The role of the internal auditor in data management, R. H. Fahnline, *NBSIR 76-1015,* pp. 77-81 (Apr. 1976).

Semantic coding and data element characterization in medical computing, E. R. Gabrieli, *NBSIR 76-1015,* pp. 83-89 (Apr. 1976).

Principles and concepts of data resource managment system development, A. Hochman, *NBSIR 76-1015,* pp. 91-98 (Apr. 1976).

The design of data elements: A data base perspective, M. A. Huffenberger, *NBSIR 76-1015,* pp. 99-112 (Apr. 1976).

A challenging aspect of word processing, V. G. Kehler, *NBSIR 76-1015,* pp. 113-118 (Apr. 1976).

Data element lexicon needs a new home, R. J. Kirkbride, *NBSIR 76-1015,* p. 119 (Apr. 1976).

Check characters and the "Self-Checking String"—What, where, why, when and how, J. R. Kraska, J. R. Nelson, and E. Hellerman, *NBSIR 76-1015,* pp. 121-138 (Apr. 1976).

The standards implications of the developing interrelationships between on-line bibliographic retrieval, data manipulation and micrographics display, R. M. Landau, *NBSIR 76-1015,* pp. 139-145 (Apr. 1976).

Product coding-one number from maker to user, J. T. Langan, *NBSIR 76-1015,* pp. 147-150 (Apr. 1976).

Development of a data dictionary/directory using a data base management system, E. K. C. Lee and E. Y. S. Lee, *NBSIR 76-1015,* pp. 151-162 (Apr. 1976).

Systems design considerations for the U.S. Army Materiel Command (AMC) data element dictionary/directory system, F. Puente, *NBSIR 76-1015,* pp. 163-167 (Apr. 1976).

A data element directory for a state motor vehicles agency, J. Roberts, *NBSIR 76-1015,* pp. 169-190 (Apr. 1976).

An integrated dictionary for systems and data components, C. Shields, *NBSIR 76-1015,* pp. 191-193 (Apr. 1976).

An information documentation language: A framework for deriving information from data, W. M. Taggart, Jr., *NBSIR 76-1015,* pp. 195-210 (Apr. 1976).

International standards for data transmission, V. N. Vaughan, Jr., *NBSIR 76-1015,* pp. 211-220 (Apr. 1976).

An information management view of data management, M. G. Wallis, *NBSIR 76-1015,* pp. 221-230 (Apr. 1976).

Data standardization, H. S. White, Jr., *NBSIR 76-1015,* pp. 231-235 (Apr. 1976).

Data element analysis and use of a relational data, M. E. Williams, S. Preece, and S. Rouse, *NBSIR 76-1015,* pp. 237-252 (Apr. 1976).

Status of the Army Materiel Command's progression from reports control to data element management, E. F. Young, *NBSIR 76-1015,* pp. 253-256 (Apr. 1976).

NBSIR 76-1041. **Security analysis and enhancements of computer operating systems,** The RISOS Project, Lawrence Livermore Laboratory, 70 pages (Apr. 1976). Order from NTIS as PB257087.

NBSIR 76-1100. **Appraisal of Federal Government Cobol standards and software management: Survey results,** D. R. Deutsch, 75 pages (June 1976). Order from NTIS as PB258371.

NBS-GCR-73-17. **A candidate standard for fundamental BASIC,** J. A. N. Lee, S. R. Bechhardt, and A. I. Karshmer, 148 pages (Oct. 19, 1973). Order from NTIS as COM 74-10932.

NBS-GCR-74-28. **Study of teletypewriter interface and communications standard. Volume I,** 265 pages (Jan. 16, 1967). Order from NTIS as PB176912.

NBS-GCR-74-29. **Study of teletypewriter interface and communications standard formulation and recommendation of factors for standardization. Volume II,** 69 pages (Jan. 16, 1967). Order from NTIS as PB176913.

NBS-GCR-74-30. **Study of teletypewriter interface and communications standards. Task 1. Review of previous standardization programs and existing standards,** P. J. Mellett, 43 pages (Sept. 15, 1966). Order from NTIS as COM 74-11732.

NBS-GCR-74-31. **Study of teletypewriter interface and communications standards. Task 3. Review and comparison of communications terminal equipment of common carriers and other suppliers,** P. J. Mellett, 25 pages (Sept. 30, 1966). Order from NTIS as COM 74-11733.

NBS-GCR-75-44. **Computer/communications networks on a communitywide basis,** E. F. Clark, S. B. Harvey, C. B. Robbins, R. S. Tall, S. S. Tyler, and G. R. Weinberg, 215 pages (June 1975). Order from NTIS as COM 75-10991.

NBS-GCR-75-46. **Methodology for the effective test case selection, Part 1,** W. Howden and L. G. Stucki, 171 pages (Jan. 1974). Order from NTIS as PB247235.

NBS-GCR-75-47. **Methodology for the effective test selection, Phase II, Volumes I and II,** W. Howden and L. G. Stucki, 381 pages (Apr. 1975). Order from NTIS as PB247236.

NBS-GCR-76-63. **Disk drive interface characteristics,** 105 pages (Apr. 9, 1976). Order from NTIS as PB256440.

NBS-GCR-76-69. **Methodology for the effective test case selection, Phase III. Final report,** W. Howden and L. G. Stucki, 123 pages (Mar. 1976). Order from NTIS as PB254276.

Health and Safety

Cancer detection by NMR in the living animal, I. D. Weisman, L. H. Bennett, L. R. Maxwell, Sr., and D. E. Henson, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 439-450 (May-June 1976).

Nationwide survey of ^{60}Co teletherapy dosimetry, M. Ehrlich and G. L. Welter, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 663-668 (July-Aug. 1976).

SP400-28. **Semiconductor measurement technology: NBS/FDA workshop. Reliability technology for cardiac pacemakers,** H. A. Schafft, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 400-28,* 49 pages (June 1976) SD Catalog No. C13.10:400-28.

SP453. **Ultrasonic tissue characterization.** Proceedings of a Seminar held at the National Bureau of Standards, Gaithersburg, MD, May 28-30, 1975, M. Linzer, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 453,* 274 pages (Oct. 1976) SD Catalog No. C13.10:453.

The NSF (RANN) integrated program on medical ultrasonics, G. B. Devey, *SP453,* pp. 7-10 (Oct. 1976).

Challenges and opportunities in ultrasound, J. M. Reid, *SP453,* pp. 11-17 (Oct. 1976).

Ultrasonic attenuation, absorption, and velocity in tissues and organs, F. Dunn, *SP453,* pp. 21-28 (Oct. 1976).

The scattering of ultrasound by tissues, J. M. Reid, *SP453,* pp. 29-47 (Oct. 1976).

Use of pattern recognition for signal processing in ultrasonic histopathology, K. Preston, Jr., *SP453,* pp. 51-59 (Oct. 1976).

Quantitative A-scan analysis of normal and cirrhotic liver, P. N. T. Wells, R. A. Mountford, M. Halliwell, and P. Atkinson, *SP453,* pp. 61-70 (Oct. 1976).

Digital A-scan analysis in the diagnosis of chronic splenic enlargement, K. J. W. Taylor and J. Milan, *SP453,* pp. 71-78 (Oct. 1976).

Attenuation and velocity measurements in tissue using time delay spectrometry, D. H. Le Croissette and R. C. Heyser, *SP453,* pp. 81-95 (Oct. 1976).

Methods of tissue identification by ultrasonic spectra, A. Sokollu, E. W. Purnell, E. Holasek, W. Jennings, and A. Kaya, *SP453,* pp. 97-107 (Oct. 1976).

Algebraic reconstruction of spatial distributions of refractive index and attenuation in tissues from time-of-flight and amplitude profiles, J. F. Greenleaf and S. A. Johnson, *SP453,* pp. 109-119 (Oct. 1976).

Measurement of ultrasonic tissue characteristics by direct and phase-contrast imaging, R. S. Mezrich, D. H. R. Vilkomerson, and K. F. Etzold, *SP453,* pp. 121-133 (Oct. 1976).

Reflection techniques for measurement of attenuation and velocity, G. Kossoff, *SP453,* pp. 135-139 (Oct. 1976).

Ultrasonically-induced transient thermal gradients: Their potential role in acoustic parameter characterization of tissue, F. J. Fry, *SP453,* pp. 143-151 (Oct. 1976).

TAST: A non-invasive tissue analytic system, T. D. Sachs, P. T. Anderson, R. S. Grimes, S. J. Wright, Jr., and R. M. P. Donaghy, *SP453,* pp. 153-163 (Oct. 1976).

Tissue characterization by ultrasonic frequency-dependent attenuation and scattering, P. P. Lele, A. B. Mansfield, A. I. Murphy, J. Namery, and N. Senapati, *SP453,* pp. 167-196 (Oct. 1976).

Frequency and angular dependence of ultrasonic scattering from tissue, C. R. Hill, *SP453,* pp. 197-206 (Oct. 1976).

The scattering of ultrasound by red blood cells, K. K. Shung, R. A. Sigelmann, and J. M. Reid, *SP453,* pp. 207-212 (Oct. 1976).

Swept-frequency ultrasonic determination of tissue macrostructure, R. C. Waag, R. M. Lerner, and R. Gramiak, *SP453,* pp. 213-228 (Oct. 1976).

Acoustic impedance profiling: An analytical and physical model study, A. C. Kak and F. J. Fry, *SP453,* pp. 231-251 (Oct. 1976).

Current problems in ultrasonic impediography, J. P. Jones, *SP453,* pp. 253-258 (Oct. 1976).

Tissue characterization by means of acoustic microscopy, L. W. Kessler, *SP453,* pp. 261-267 (Oct. 1976).

TN895. **An overview of floor slip-resistance research with annotated bibliography,** R. J. Brungraber, *Nat. Bur. Stand. (U.S.), Tech. Note 895,* 113 pages (Jan. 1976) SD Catalog No. C13.46:895.

TN921. **Survey manual for estimating the incidence of lead paint in housing,** W. G. Hall and L. T. Slovic, *Nat. Bur. Stand. (U.S.), Tech. Note 921,* 111 pages (Sept. 1976) SD Catalog No. C13.46:921.

TN922. **Economic analysis of experimental lead paint abatement methods: Phase I,** R. E. Chapman, *Nat. Bur. Stand. (U.S.), Tech. Note 922,* 112 pages (Sept. 1976) SD Catalog No. C13.46:922.

NBSIR 75-667. **Interaction of blood proteins with solid surfaces,** R. R. Stromberg, B. W. Morrissey, L. E. Smith, W. H. Grant, and C. A. Fenstermaker, 42 pages (Jan. 15, 1975). Order from NTIS as PB241267.

NBSIR 75-719. **A compliance testing system for NILECJ,** R. Mills, 24 pages (Feb. 1976). Order from NTIS as PB251410.

NBSIR 75-722. **Closure testing equipment instruction manual,**

M. S. Morse, 42 pages (Oct. 1975). Order from NTIS as PB248641.

NBSIR 75-755. **The CPSC road test of bicycle braking performance—Experimental evaluation,** D. E. Marlowe, 32 pages (Aug. 1975). Order from NTIS as PB248642.

NBSIR 75-786. **The CPSC road test of bicycle braking performance—Kinetic and error analyses,** L. Mordfin, 75 pages (Oct. 1975). Order from NTIS as PB251411.

NBSIR 75-791. **Procedural options for modification of architectural glass in residences to improve occupant safety,** S. W. Stiefel, 57 pages (Dec. 1975). Order from NTIS as PB253229.

NBSIR 75-913. **Structural test procedures for bicycles,** D. E. Marlowe, 50 pages (Oct. 1975). Order from NTIS as PB248911.

NBSIR 75-953. **A procedure for determining bicycle braking performance,** D. E. Marlowe, 26 pages (July 1976). Order from NTIS as PB256219.

NBSIR 75-960. **The police patrol car: State of the art,** R. G. Massey, 61 pages (Nov. 1975). Order from NTIS as PB249774.

NBSIR 75-961. **The police patrol car: Economic efficiency in acquisition, operation, and disposition,** R. T. Ruegg, 225 pages (June 1976). Order from NTIS as PB257466.

NBSIR 75-971. **A fire hazard evaluation of the interior of WMATA Metrorail cars,** E. Braun, 34 pages (Dec. 1975). Order from NTIS as PB249776.

NBSIR 75-972. **Skid resistance measurement tests at the FHWA eastern field test center,** R. W. Kearns and J. F. Ward, 98 pages (July 1976). Order from NTIS as PB259630.

NBSIR 75-974. **The demonstration of experimental lead paint hazard abatement in Atlanta, Georgia,** T. H. Boone, H. W. Berger, A. P. Cramp, and H. A. Jackson, 121 pages (Dec. 1975). Order from NTIS as PB249777.

NBSIR 75-977. **Development of solid state samplers for work atmospheres: Phosphine,** B. Greifer and J. K. Taylor, 32 pages (Jan. 1976). Order from NTIS as PB251220.

NBSIR 76-996. **Testing for the impact resistance of ophthalmic lenses,** R. E. Berger, 34 pages (Mar. 1976). Order from NTIS as PB251998.

NBSIR 76-998. **Development of a solid sorption tube and analytical procedure for hydrogen cyanide in the workplace atmosphere,** B. C. Cadoff and J. K. Taylor, 25 pages (Apr. 1976). Order from NTIS as PB253228.

NBSIR 76-1007. **Psychological deterrents to nuclear theft: A preliminary literature review and bibliography,** P. G. Meguire and J. J. Kramer, 51 pages (Mar. 1976). Order from NTIS as PB252021.

NBSIR 76-1017. **Interaction of blood proteins with solid surfaces,** R. R. Stromberg, B. W. Morrissey, L. E. Smith, W. H. Grant, and R. E. Dehl, 38 pages (Mar. 5, 1976). Order from NTIS as PB251917.

NBSIR 76-1022. **Evaluation of thrown objects tests for proposed safety standard for power lawn mowers,** D. C. Robinson and R. B. Clough, 25 pages (June 1976). Order from NTIS as PB259628.

NBSIR 76-1024. **Statistical analysis of blood lead levels of children surveyed in Pittsburgh, Pennsylvania: Analytical methodology and summary results,** W. D. Urban, 75 pages (Apr. 1976). Order from NTIS as PB255876.

NBSIR 76-1039. **Evaluation of selected connectors for aluminum wire in residential structures,** O. B. Laug, 37 pages (Mar. 1976). Order from NTIS as PB254047.

NBSIR 76-1066. **Center for consumer product technology publications, November 1974 to April 1976,** S. Halpin, 13 pages (June 1976). Order from NTIS as PB254473.

NBSIR 76-1072. **Back-up report for the proposed standard for the flammability of general wearing apparel,** E. Braun, V. B. Cobble, S. Helzer, J. F. Krasny, R. D. Peacock, and A. K. Stratton, 51 pages (June 1976). Order from NTIS as PB255446.

NBSIR 76-1095. **Properties and interactions of oral structures and restorative materials,** J. M. Cassell, 77 pages (Aug. 1976). Order from NTIS as PB255808.

NBSIR 76-1096. **Guidelines for the determination and development of generic safety standards,** R. G. Hendrickson, 58 pages (Aug. 1976). Order from NTIS as PB257076.

NBSIR 76-1097. **Illustrative generic standard for the control of thermal burn hazards in household appliances,** R. G. Hendrickson, E. M. Robertson, and R. V. Kelly, 49 pages (Aug. 1976). Order from NTIS as PB257141.

NBSIR 76-1107. **Considerations in developing test methods for protective headgear,** R. E. Berger, 55 pages (Aug. 1976). Order from NTIS as PB258322.

NBSIR 76-1109. **Architectural glazing safety standard: Survey of codes and standards,** S. C. Adler, 65 pages (Aug. 1976). Order from NTIS as PB257194.

NBSIR 76-1112. **Technical assessment of safety for hair dryer/stylers,** Y. C. Wu, 36 pages (Sept. 1976). Order from NTIS as PB259636.

NBSIR 76-1126. **Field investigation of residential smoke detectors,** R. W. Bukowski, 53 pages (Nov. 1976). Order from NTIS as PB260878.

NBSIR 76-1131. **A model performance standard for guardrails,** S. G. Fattal, L. E. Cattaneo, G. E. Turner, and S. N. Robinson, 31 pages (July 1976). Order from NTIS as PB259242.

NBSIR 76-1132. **Personnel guardrails for the prevention of occupational accidents,** S. G. Fattal, L. E. Cattaneo, G. E. Turner, and S. N. Robinson, 80 pages (July 1976). Order from NTIS as PB260363.

NBSIR 76-1133. **Skid resistance measurement tests of FHWA reference systems at the Western Field Test Center,** R. W. Kearns and J. F. Ward, 167 pages (Oct. 1976). Order from NTIS as PB261228.

NBS-GCR-73-18. **Source mechanisms of microearthquakes associated with underground mines in Eastern Utah,** R. B. Smith, P. L. Winkler, J. G. Anderson, and C. H. Scholz, 46 pages (Oct. 1973). Order from NTIS as COM 73-11783.

NBS-GCR-74-24. **Development of a test for impact protection,** J. M. Akridge, W. J. Freeston, Jr., W. L. J. Leverett, W. D. McLeod, M. K. Rao, and W. Wullff, 78 pages (Apr. 1973). Order from NTIS as COM 74-10983.

NBS-GCR-74-32. **Design concepts for safer matches and lighters,** 60 pages (Sept. 29, 1972). Order from NTIS as COM 75-10039.

NBS-GCR-75-36. **Methodology for hazard evaluation of buildings, Vol. I: Technical report,** J. H. Wiggins, G. C. Hart, T. Hasselman, and R. W. White, 353 pages (Dec. 1973). Order from NTIS as PB261144.

NBS-GCR-75-37. **Methodology for hazard evaluation of buildings, Vol. II: Computer program users manual,** T. K. Hasselman, R. W. White, and G. Brandow, 112 pages (Dec. 14, 1973). Order from NTIS as PB261145.

NBS-GCR-75-38. **Methodology for hazard evaluation of buildings, Vol. III: Demonstration report,** J. H. Wiggins, G. C. Hart, and R. W. White, 76 pages (Dec. 1973). Order from NTIS as PB261021.

NBS-GCR-75-45. **Pilot investigations into the effect of glare on psychomotor performance,** R. J. Senter, 13 pages (July 1975). Order from NTIS as PB257835.

NBS-GCR-75-51. **Detector sensitivity and siting requirements for dwellings,** R. W. Bukowski, T. E. Waterman, and W. J. Christian, 337 pages (1975). Order from NTIS as PB247483.

NBS-GCR-76-75. **Accident research methodologies,** N. W. Heimstra, 27 pages (Dec. 10, 1976). Order from NTIS as PB261201.

NBS-GCR-76-76. **Home accidents and safety,** M. Werber, 100 pages (Dec. 10, 1976). Order from NTIS as PB261200.

U.S. Patent 3,973,970. **Additive composition for making dental materials,** C. P. Mabie, (Aug. 10, 1976).

U.S. Patent 3,975,940. **Portable tester for measuring the static coefficient of friction between a floor surface or the like and a shoe sole or heel material or the like,** R. J. Brungraber, (Aug. 24, 1976).

Engineering, Product and Information Standards

H116. **American National Standard N540; classification of radioactive self-luminous light sources,** *Nat. Bur. Stand. (U.S.), Handb. 116,* 15 pages (Jan. 1976) SD Catalog No. C13.11:116.

SP432. **NBS time and frequency dissemination services,** S. L. Howe, Ed., (Supersedes NBS Special Publication 236, 1974 and previous editions), *Nat. Bur. Stand. (U.S.), Spec. Publ. 432,* 32 pages (Jan. 1976) SD Catalog No. C13.10:432.

FIPS PUB 39. **Glossary for computer systems security,** D. Branstad and R. Krell, *Nat. Bur. Stand. (U.S.), Fed. Info. Process. Stand. Publ. (FIPS PUB) 39,* 19 pages (Jan. 1976).

FIPS PUB 40. **Guideline for optical character recognition forms,** T. C. Bagg, Standard Coordinator, *Nat. Bur. Stand. (U.S.), Fed. Info. Process. Stand. Publ. (FIPS PUB) 40,* 60 pages (1976).

FIPS PUB 44. **COBOL coding form,** M. V. Vickers, Standards Coordinator, *Nat. Bur. Stand. (U.S.), Fed. Info. Process. Stand. Publ. (FIPS PUB) 44,* 3 pages (1976).

FIPS PUB 45. **Guide for the development, implementation and maintenance of standards for the representation of computer processed data elements,** H. S. White, Ed., *Nat. Bur. Stand. (U.S.), Fed. Info. Process. Stand. Publ. (FIPS PUB)45,* 51 pages (1976).

PS64-75. **School paste.** *(ANS Z 297.2-1975),* C. W. Devereux, Technical Standards Coordinator, *Nat. Bur. Stand. (U.S.), Prod. Stand. 64-75,* 6 pages (Apr. 1976) SD Catalog No. C13.20/2:64-75.

PS65-75. **Paints and inks for art education in schools.** *(ANS Z297.1-1975),* G. S. Chaconas, Technical Standards Coordinator, *Nat. Bur. Stand. (U.S.), Prod. Stand. 65-75,* 7 pages (Mar. 1976) SD Catalog No. C13.20/2:65-75.

PS66-75. **Safety requirements for home playground equipment.** *(ANS Z 304.1-1975),* J. M. Tascher, Technical Standards Coordinator, *Nat. Bur. Stand. (U.S.), Prod. Stand. 66-75,* 14 pages (July 1976) SD Catalog No. C13.20/2:66.75.

TN915. **Metrication problems in the construction codes and standards sector,** C. T. Mahaffey, *Nat. Bur. Stand. (U.S.), Tech. Note 915,* 25 pages (June 1976) SD Catalog No. C13.46:915.

TN918. **Survey of building code provisions for historic structures,** M. Green and P. W. Cooke, *Nat. Bur. Stand. (U.S.), Tech. Note 918,* 47 pages (Sept. 1976) SD Catalog No. C13.46:918.

NBSIR 76-1058. **Performance of mobile homes—Summary report,** J. H. Pielert, W. E. Greene, Jr., L. F. Skoda, and W. G. Street, 143 pages (Apr. 1976). Order from NTIS as PB262097.

NBSIR 76-1140. **Standards referenced in selected building codes,** B. M. Vogel, 447 pages (Oct. 1976). Order from NTIS as PB259626.

NBS-GCR-73-19. **Regulation and evaluation of industrialized building: A literature review with annotated bibliography,** J. N. Thompson and C. T. Grimm, 60 pages (Dec. 1973). Order from NTIS as COM 74-10481.

NBS-GCR-76-55. **Technology for the formulation and expression of specifications. Vol. I: Final report,** J. R. Harris, J. W. Melin, R. L. Tavis, and R. N. Wright, 72 pages (Dec. 1975). Order from NTIS as PB250571.

NBS-GCR-76-56. **Technology for the formulation and expression of specifications. Vol. II: Program user's manual,** J. R. Harris, J. W. Melin, and C. Albarran, 63 pages (Dec. 1975). Order from NTIS as PB250572.

NBS-GCR-76-57. **Technology for the formulation and expression of specifications. Vol. III: Technical reference manual,** R. N. Wright, J. R. Harris, J. W. Melin, and C. Albarran, 118 pages (Dec. 1975). Order from NTIS as PB250573.

15756. Hahn, M. H., Robinson, H. E., Flynn, D. R., **Robinson line-heat-source guarded hot plate apparatus,** *Am. Soc. Test.*

Mater. Spec. Tech. Publ. 544, pp. 167-192 (1974).

15829. Hermach, F. L., Road, R. A., **Changes in metering covered by revised ANSI code,** *Transmission & Distribution* **28,** No. 3, 24-25, 44 (Mar. 1976).

Environmental Studies: Pollution Measurement

H119. **Quieting: A practical guide to noise control,** R. D. Berendt, E. L. R. Corliss, and M. S. Ojalvo, *Nat. Bur. Stand. (U.S.), Handb. 119,* 163 pages (July 1976) SD Catalog No. C13.11:119.

TN889. **Trace hydrocarbon analysis: The National Bureau of Standards Prince William Sound/Northeastern Gulf of Alaska baseline study,** S. N. Chesler, B. H. Gump, H. S. Hertz, W. E. May, S. M. Dyszel, and D. P. Enagonio, *Nat. Bur. Stand. (U.S.), Tech. Note 889,* 73 pages (Jan. 1976) SD Catalog No. C13.46:889.

TN929. **A survey of current literature on sampling, sample handling, and long term storage for environmental materials,** E. J. Maienthal and D. A. Becker, *Nat. Bur. Stand. (U.S.), Tech. Note 929,* 40 pages (Oct. 1976) SD Catalog No. C13.46:929.

NBSIR 75-958. **Simulated precipitation reference materials,** J. K. Taylor, E. R. Deardorff, R. A. Durst, E. J. Maienthal, T. C. Rains, and E. P. Scheide, 25 pages (Oct. 1975). Order from NTIS as PB248743.

NBSIR 76-1000. **The construction, operation and performance of a reactive gas generator; with specific application to HCHO, CH_3CHO, CH_2CHCHO, SO_2, HCN and HCl production,** J. A. Walker and W. Tsang, 55 pages (Jan. 1976). Order from NTIS as PB251219.

NBSIR 76-1130. **Program and abstracts. Symposium on non-biological transport and transformation of pollutants on land and water: Processes and critical data required for predictive description, May 11-13, 1976, National Bureau of Standards, Gaithersburg, MD,** L. H. Gevantman, Ed., 199 pages (May 1976). Order from NTIS as PB257347.

15744. Currie, L. A., Lindstrom, R. M., **The NBS measurement system for natural argon-37,** (Proc. Noble Gases Symp., Las Vegas, NV, Sept. 24-28, 1973), Paper in *Noble Gases,* R. E. Stanley and A. A. Moghissi, Eds., CONF-730915, pp. 40-57 (U.S. Environmental Protection Agency, Las Vegas, NV, Dec. 1975).

15755. Huebner, R. H., Bushnell, D. L., Jr., Celotta, R. J., Mielczarek, S. R., Kuyatt, C. E., **Ultraviolet photoabsorption by halocarbons 11 and 12 from electron impact measurements,** *Nature* **257,** No. 5525, 376-378 (Oct. 2, 1975).

15783. Harrison, S. H., **Neutron activation analysis: A useful tool for evaluating water sampling and analysis techniques,** *Proc. Transactions American Nuclear Society, New Orleans, LA, June 6-13, 1975,* **21,** 110-111 (1975).

15792. Kilmer, R. D., Leasure, W. A., Jr., Mathews, D. E., **Truck Noise I-C: Pavement surface effects on the generation of truck tire noise,** *Report No. DOT-TST-76-49,* 111 pages (Available from the National Technical Information Service, Springfield, VA 22161, Oct. 1975).

15810. Marshall, H. E., Ruegg, R. T., **Cost sharing to induce efficient techniques of abating wastewater pollution,** *J. Environ. Econ. Manage.* **2,** 107-119 (1975).

15839. Schwarz, F. P., Wasik, S. P., **Fluorescence measurements of carcinogenic and polycylic aromatic hydrocarbons in water,** (Proc. Int. Conf. on Environmental Sensing and Assessment, Las Vegas, NV, Sept. 14-19, 1975), Paper in *International Conference on Environmental Sensing and Assessment* **2,** Session 30-2, 1-5 (Institute of Electrical and Electronics Engineers, New York, NY, 1976).

15874. Brinckman, F. E., Jewett, K. L., Blair, W. R., Iverson, W. P., Huey, C., **Mercury distribution in the Chesapeake Bay,** *Prog. Water Technol.* **7,** 251-252 (1974).

15897. Iverson, W. P., Huey, C., Brinckman, F. E., Jewett, K. L., Blair, W., **Biological and nonbiological transformations of mercury in aquatic systems,** *Prog. Water Technol.* **7,** 193-195 (1974).

15933. Noyce, J. R., Hutchinson, J. M. R., Mann, W. B., Mullen, P. A., **Development of a National Bureau of Standards environmental radioactivity standard: River sediment,** (Proc. Int. Conf. on Environmental Sensing and Assessment, Las Vegas, NV, Sept. 14-19, 1975), Paper in *International Conference on Environmental Sensing and Assessment,* **1,** Session 19-5, 1-9 (Institute of Electrical and Electronics Engineers, Inc., New York, NY, 1976).

15944. Wasik, S. P., Brown, R. L., Minor, J. I., Jr., **Partition coefficients and solubility measurements of dimethylmercury in fresh and sea water over a temperature range 0-25 °C,** *J. Environ. Sci. Health—Environ. Sci. Eng.* **A11,** No. 1, 99-105 (1976).

15948. Mann, W. B., Schima, F. J., Unterweger, M. P., **Radioactivity standards of the Noble gases,** (Proc. Symp. on Noble Gases, Las Vegas, NV, Sept. 24-28, 1973), Chapter IV in *Noble Gases,* R. E. Stanley and A. A. Moghissi, Eds., ERDA TIC as Conf. 730915, pp. 144-153 (1975).

15966. Kuehner, E. C., Cassatt, W. A., **A laser microphotometer for determining uniformity of particulate deposits on membrane filters,** *Appl. Spectrosc.* **30,** No. 3, 289-290 (May-June 1976).

15972. Hughes, E. E., **Development of standard reference materials for air quality measurement,** *ISA Trans.* **14,** No. 4, 281-291 (1975).

15978. Taylor, J. K., **Evaluation of data obtained by reference methods,** (Proc. American Society for Testing and Materials Symp. on Calibration in Air Monitoring, Boulder, CO, Aug. 4-8, 1975), *Am. Soc. Test. Mater. Spec. Tech. Publ. 598,* pp. 156-163 (1976).

15982. Hughes, E. E., **Role of the National Bureau of Standards in calibration problems associated with air pollution measurements,** (Proc. American Society for Testing and Materials Symp. on Calibration in Air Monitoring, Boulder, CO, Aug. 4-8, 1975), *Am. Soc. Test. Mater. Spec. Tech. Publ. 598,* pp. 223-231 (1976).

15984. Pella, P. A., Kuehner, E. C., Cassatt, W. A., **Development of a particulate reference sample on membrane filters for the standardization of x-ray fluorescence spectrometers,** (Proc. 24th Annual Conf. on Applications of X-Ray Analysis, Denver, CO, Aug. 6-8, 1975), Chapter in *Advances in X-Ray Analysis,* R. W. Gould, C. S. Barrett, J. B. Newkirk, and C. O. Ruud, Eds., **19,** 463-472 (Kendall/Hunt Publ. Co., Dubuque, IA, 1976).

15995. Bushnell, D. L., Jr., Huebner, R. H., Celotta, R. J., Mielczarek, S. R., **Preliminary report on electron energy-loss measurements for $CClF_3$, CCl_2F_2, and CCl_3F,** *Argonne Natl. Lab. Report No. ANL-75-60,* Part I. Radiological and Environmental Research Annual Report on Fundamental Molecular Physics and Chemistry, pp. 7-17 (Argonne National Laboratory, Argonne, IL, July 1974-June 1975).

15997. Huebner, R. H., Bushnell, D. L., Jr., Celotta, R. J., Mielczarek, S. R., Kuyatt, C. E., **Ultraviolet photoabsorption by halocarbons 11 and 12 from electron-impact measurements (Summary),** *Argonne Natl. Lab. Report No. ANL-75-60, Part I. Radiological and Environmental Research Annual Report on Fundamental Molecular Physics and Chemistry,* pp. 18-21 (Argonne National Laboratory, Argonne, IL, July 1974-June 1975).

15998. Huebner, R. H., Celotta, R. J., Mielczarek, S. R., Kuyatt, C. E., **Apparent oscillator strengths for nitrous oxide (Summary),** *Argonne Natl. Lab. Report No. ANL-75-60, Part I. Radiological and Environmental Research Annual Report on Fundamental Molecular Physics and Chemistry,* pp. 3-6 (Ar-

gonne National Laboratory, Argonne, IL, July 1974-June 1975).

16628A. Parris, G. E., Brinckman, F. E., **Reactions which relate to the environmental mobility of arsenic and antimony. I. Quaternization of trimethylarsine and trimethylstibine,** *J. Org. Chem. Notes* **40,** No. 25, 3801–3803 (1975).

Failure Analysis

SP423. **MFPG—Mechanical failure: Definition of the problem.** Proceedings of the 20th Meeting of the Mechanical Failures Prevention Group, held at the National Bureau of Standards, Washington, DC, May 8-10, 1974, T. R. Shives and W. A. Willard, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 423,* 228 pages (Apr. 1976) SD Catalog No. C13.10:423.

What we can learn from the examination of service failures, J. A. Bennett, *SP423,* pp. 3-11 (Apr. 1976).

Failure by fatigue, A. J. McEvily, *SP423,* pp. 13-24 (Apr. 1976).

Failure by stress corrosion cracking—Current approaches toward failure prediction, J. Kruger, *SP423,* pp. 27-40 (Apr. 1976).

Elastohydrodynamics in concentrated contacts, H. S. Cheng, *SP423,* pp. 41-54 (Apr. 1976).

Failure in gears and related machine components, R. A. Wilde, *SP423,* pp. 55-66 (Apr. 1976).

Bearing damage analysis, R. L. Widner and W. E. Littmann, *SP423,* pp. 67-84 (Apr. 1976).

Anti-friction bearing design, inspection and recycling, K. M. Glaesner, *SP423,* pp. 87-91 (Apr. 1976).

Holographic NDI of P-3 wing plank splices, A. J. Koury, M. J. Devine, J. F. Erthal, and P. D. Bhuta, *SP423,* pp. 93-103 (Apr. 1976).

Economic considerations in failure prevention, H. E. Morgan, *SP423,* pp. 107-116 (Apr. 1976).

Economic impact of tribology, H. P. Jost, *SP423,* pp. 117-139 (Apr. 1976).

Nuclear power plant safety, P. A. Morris, *SP423,* pp. 143-151 (Apr. 1976).

Mechanical failures and public expectations of safe transportation, H. H. Wakeland, *SP423,* pp. 153-163 (Apr. 1976).

Public safety and construction surety, J. Feld, *SP423,* pp. 165-170 (Apr. 1976).

229-317 O - 77 - 25

The people considerations of automotive service, F. J. Uhlig, *SP423,* pp. 171-178 (Apr. 1976).

Mechanical failures: Implications for science; J. P. Hirth, *SP423,* pp. 181-191 (Apr. 1976).

Implications for action for engineering, H. W. Paxton, *SP423,* pp. 193-197 (Apr. 1976).

Mechanical reliability—Implications for engineering, manufacturing and design, W. D. Compton, *SP423,* pp. 199-208 (Apr. 1976).

Implications for action—Industry, J. E. Ryan, *SP423,* pp. 209-212 (Apr. 1976).

The implications of mechanical failures for consumer product safety—Vice versa, L. M. Kushner, *SP423,* pp. 215-219 (Apr. 1976).

Mechanical failure—A material matter, R. W. Roberts, *SP423,* pp. 221-225 (Apr. 1976).

SP433. **MFPG—Success by design: Progress through failure analysis.** Proceedings of the 21st Meeting of the Mechanical Failures Prevention Group, held at the National Bureau of Standards, Gaithersburg, MD, Nov. 7-8, 1974, T. R. Shives and W. A. Willard, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 433,* 229 pages (July 1976) SD Catalog No. C13.10:433.

Creative student engineering design, P. S. De Jong, *SP433,* pp. 3-5 (July 1976).

The designer's contribution in the development of new products, J. J. Lesko, *SP433,* pp. 7-14 (July 1976).

Successful redesign and launch performance of the ERTS/Nimbus adapter after an acceleration test failure, V. T. Sweet and W. B. Keegan, *SP433,* pp. 19-72 (July 1976).

Agricultural equipment for underdeveloped countries, C. W. Suggs, *SP433,* pp. 74-81 (July 1976).

Safety success through design, D. W. Logan, *SP433,* pp. 83-87 (July 1976).

Reliability, pollutants and aluminum raw material, V. D. Matney, *SP433,* pp. 89-101 (July 1976).

Rotor burst protection program, G. J. Mangano, *SP433,* pp. 103-119 (July 1976).

Airframe "crashworthiness" experiments, N. N. Shapter, *SP433,* pp. 122-128 (July 1976).

Redesign and assembly of anti-friction bearing housings for improved life, G. D. Xistris and D. C. Watson, *SP433,* pp. 131-142 (July 1976).

Case history of failures in a hammer mill, J. K. L. Bajaj, *SP433,* pp. 144-158 (July 1976).

Solution of an art restoration problem, E. Passaglia, *SP433,* pp. 159-161 (July 1976).

Elimination of failures of U-bolts in farm tractor dual wheels, B. P. Bardes, *SP433,* pp. 164-165 (July 1976).

Structural in-flight wing failures, M. L. Marx, *SP433,* pp. 166-177 (July 1976).

Use of cases in engineering education—Their special value, H. O. Fuchs, *SP433,* pp. 180-182 (July 1976).

What can be learned from cases, G. Kardos, *SP433,* pp. 183-187 (July 1976).

Student written design case studies, C. O. Smith, *SP433,* pp. 188-190 (July 1976).

Teacher feedback on the use of engineering case studies, B. J. Pelan, *SP433,* pp. 192-198 (July 1976).

Some thermal problems in the design of fluid film bearings, D. D. Fuller, *SP433,* pp. 205-211 (July 1976).

Never overlook notches, C. O. Smith, *SP433,* pp. 212-213 (July 1976).

Innovation or reliability, H. O. Fuchs, *SP433,* pp. 214-215 (July 1976).

The "model" designer, R. E. Maringer, *SP433,* pp. 216-217 (July 1976).

The misuse of tensile strength as a design parameter, T. J. Dolan, *SP433,* pp. 218-219 (July 1976).

Inspection consideration at the design stage, J. F. Erthal, *SP433,* p. 222 (July 1976).

NBSIR 73-264. **Examination of failed one inch black iron pipe natural gas service line, Iowa Public Service Company, Eagle Grove, Iowa,** T. R. Shives, 24 pages (Aug. 30, 1973). Order from NTIS as PB243541.

NBSIR 73-299. **Examination of failed eight inch welded steel pipe natural gas main, UGI Corp., Coopersburg, Pennsylvania,** M. L. Picklesimer and T. R. Shives, 35 pages (Nov. 1973). Order from NTIS as PB243543.

NBSIR 74-625. **Examination of failed two inch steel pipe natural gas main, Columbia Gas Company, Spring Garden Township, York County, Pennsylvania,** T. R. Shives, 41 pages (Jan. 1975). Order from NTIS as PB243547.

NBSIR 76-1136. **Failure analysis of fiberglass insulator rods,** L. Mordfin and N. Halsey, 57 pages (July 1976). Order from NTIS as PB261965.

NBSIR 76-1154, Vol. 1. **Consideration of fracture mechanics analysis and defect dimension measurement assessment for the Trans-Alaska Oil Pipeline girth welds,** H. Berger and J. H. Smith, Eds., 183 pages (Oct. 18, 1976). Order from NTIS as PB260400.

NBSIR 76-1154, Vol. 2. **Consideration of fracture mechanics analysis and defect dimension measurement assessment for the Trans-Alaska Oil Pipeline girth welds,** H. Berger and J. H. Smith, Eds., 135 pages (Oct. 18, 1976). Order from NTIS as PB260401.

NBS-GCR-75-43. **Feasibility study for a diesel engine condition monitoring system for 1179 class LSTs,** M. B. Peterson, 102 pages (Aug. 1975). Order from NTIS as AD-16782.

16101. Beausoliel, R. W., Phillips, C. W., Snell, J. E., **Field investigation of natural gas pipeline accident, Canterbury Woods, Annandale, VA,** *Fire J.* **68,** No. 3, 77-84 (May 1974).

Fire Research

SP416, 1976 Edition. **Attacking the fire problem: A plan for action—1976 Edition,** F. B. Clarke and D. W. Raisher, Eds., (Supersedes NBS Special Publication 416, 1975 Edition) *Nat. Bur. Stand. (U.S.), Spec. Publ. 416, 1976 Edition,* 41 pages (Jan. 1976) SD Catalog No. C13.10:416, 1976 Ed..

BSS85. **Survey results for fire loads and live loads in office buildings,** C. G. Culver, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 85,* 157 pages (May 1976) SD Catalog No. C13.29/2:85.

NBSIR 75-706. **Calculations of radiant heat flux in the proposed floor covering flame spread test apparatus,** J. Quintiere and K. Bromberg, 21 pages (Dec. 1975). Order from NTIS as PB248640.

NBSIR 75-757. **A technique for the measurement of flash fire potential of polymeric materials,** J. E. Brown and J. J. Comeford, 33 pages (Dec. 1975). Order from NTIS as PB248914.

NBSIR 75-782. **Full-scale corridor fire experiment using a glass fiber carpet,** L. H. Breden, 33 pages (Dec. 1975). Order from NTIS as PB248643.

NBSIR 75-788. **Evaluation of the fire hazard in a mobile home resulting from an ignition on the kitchen range,** E. K. Budnick and D. P. Klein, 28 pages (Feb. 1976). Order from NTIS as PB250843.

NBSIR 75-902. **A survey of fire accidents involving curtains and draperies—deaths, injuries and financial loss,** L. D. Moore and A. K. Vickers, 35 pages (Dec. 1975). Order from NTIS as PB249539.

NBSIR 75-920. **Distribution of water through a vertical plane from automatic sprinkler heads,** R. L. P. Custer and K. Wahle, 48 pages (Dec. 1975). Order from NTIS as PB248913.

NBSIR 75-950. **Proposed criteria for use of the critical radiant**

flux test method, I. A. Benjamin and C. H. Adams, 49 pages (Dec. 1975). Order from NTIS as PB250664.

NBSIR 75-966. **Measurements and observations of the toxicological hazard of fire in a Metrorail interior mock-up,** M. M. Birky, A. W. Coats, S. E. Alderson, J. E. Brown, M. Paabo, and B. Pitt, 20 pages (Feb. 1976). Order from NTIS as PB250768.

NBSIR 75-967. **Radiative ignition of some typical floor covering materials,** K. D. Braven, 22 pages (Dec. 1975). Order from NTIS as PB251413.

NBSIR 76-990. **Report of fire tests on eight TGS semiconductor gas sensor residential fire/smoke detectors,** R. G. Bright, 17 pages (Apr. 1976). Order from NTIS as PB251769.

NBSIR 76-1012. **Fire performance testing of bulkhead insulation systems for high strength to weight ship structures,** B. T. Lee, 64 pages (Aug. 1976). Order from NTIS as PB257197.

NBSIR 76-1013. **Flame spread of carpet systems involved in room fires,** K. M. Tu and S. Davis, 42 pages (June 1976). Order from NTIS as PB256130.

NBSIR 76-1014. **Space heater involvements in fabric fires,** W. D. Hayes, Jr., 25 pages (Mar. 1976). Order from NTIS as PB251414.

NBSIR 76-1016. **Mobile home smoke detector siting study,** W. M. Gawin and R. G. Bright, 55 pages (May 1976). Order from NTIS as PB254177.

NBSIR 76-1018. **Evaluation of the fire performance of carpet underlayments,** S. Alderson and L. Breden, 69 pages (Sept. 1976). Order from NTIS as PB257779.

NBSIR 76-1021. **Fire spread along a mobile home corridor,** E. K. Budnick, 58 pages (July 1976). Order from NTIS as PB257101.

NBSIR 76-1028. **A new concept for automatic detection and extinction of fires,** D. Lay, 20 pages (Mar. 1976). Order from NTIS as PB251415.

NBSIR 76-1031. **Shape dependence of light-scattering behavior of dust particles,** R. Zerull, 23 pages (June 1976). Order from NTIS as PB253932.

NBSIR 76-1037. **Integral measurement procedures for determining particle size in aerosols,** F. J. Kraus, 38 pages (May 1976). Order from NTIS as PB253933.

NBSIR 76-1040. **Points of view in testing flame detectors,** M. Schnell, 24 pages (May 1976). Order from NTIS as PB254178.

NBSIR 76-1052. **Naval shipboard fire risk criteria—Berthing compartment fire study and fire performance guidelines,** B. T. Lee and W. J. Parker, 86 pages (Sept. 1976). Order from NTIS as PB258118.

NBSIR 76-1076. **Flammability limits: Thermodynamics and kinetics,** A. Maček, 27 pages (May 1976). Order from NTIS as PB254180.

NBSIR 76-1120. **Fire research publications, 1975,** N. H. Jason, 17 pages (Sept. 1976). Order from NTIS as PB257837.

NBSIR 76-1172. **A new test method for automatic fire detection devices,** R. G. Bright, 29 pages (Dec. 1976). Order from NTIS as PB261217.

NBS-GCR-73-1. **Characterization of bedding and upholstery fires,** C. A. Hafer and C. H. Yuill, 46 pages (Mar. 1970). Order from NTIS as PB192365.

NBS-GCR-73-2. **Fabric flammability test development,** W. R. Brown and F. A. Vassallo, 87 pages (May 1970). Order from NTIS as PB194614.

NBS-GCR-73-4. **The influence of fine structure on the pyrolysis and combustion of cellulosics,** M. Lewin and A. Basch, 62 pages (1972). Order from NTIS as COM 73-10323.

NBS-GCR-73-5. **National fire data system, system design project, final report,** 175 pages (Mar. 9, 1973). Order from NTIS as COM 73-10951.

NBS-GCR-73-6. **A study of preignition heat transfer through a fabric-skin system subjected to a heat source,** G. Heskestad, A. S. Kalelkar, and H. C. Kung, 53 pages (Dec. 1971). Order from NTIS as COM 73-10959.

NBS-GCR-73-7. **Study of ignition and exposure,** L. Fourt, 52 pages (Dec. 31, 1971). Order from NTIS as COM 73-10958.

NBS-GCR-73-8. **A study of hazards from burning apparel and the relation of hazards to test methods,** A. Alkidas, R. W. Hess, W. Wulff, and N. Zuber, 208 pages (Dec. 1971). Order from NTIS as COM 73-10954.

NBS-GCR-73-9. **Study of hazards from burning apparel and the relation of hazard to test methods: Flammability of clothing assemblies,** J. F. Krasny and A. L. Fisher, 50 pages (Jan. 19, 1972). Order from NTIS as COM 73-10953.

NBS-GCR-73-10. **Firefighters' breathing system study,** 171 pages (Apr. 1972). Order from NTIS as COM 73-10952.

NBS-GCR-73-11. **Study of hazards from burning apparel and the relation of hazards to test methods,** O. A. A. Naveda, P. Durbetaki, P. T. Williams, W. Wulff, A. Alkidas, E. R. Champion, W. E. Giddens, R. W. Hess, and B. Kumar, 274 pages (Dec. 31, 1972). Order from NTIS as PB242597.

NBS-GCR-73-12. **Ease of ignition of fabrics exposed to flaming heat sources,** G. Heskestad, 113 pages (Jan. 1973). Order from NTIS as COM 73-10955.

NBS-GCR-73-13. **Hazards from burning garments,** G. Arnold, A. Fisher, and G. Frohnsdorff, 85 pages (Mar. 26, 1973). Order from NTIS as COM 73-10957.

NBS-GCR-73-14. **Measurement of flammability and burn potential of fabrics, summary report, December 1, 1970-November 30, 1971,** A. K. Mehta and F. Wong, 69 pages (Feb. 15, 1973). Order from NTIS as COM 73-10950.

NBS-GCR-73-15. **Measurement of flammability and burn potential of fabrics,** A. K. Mehta and F. Wong, 331 pages (Feb. 15, 1973). Order from NTIS as PB242582.

NBS-GCR-73-16. **Status and prospects for flame resistant polyester/cellulose blend fabrics,** G. C. Tesoro, 56 pages (Mar. 15, 1973). Order from NTIS as COM 73-11265.

NBS-GCR-74-25. **Use type tests for comfort and effectiveness of firemen's turnout coats,** N. R. S. Hollies, L. Fourt, G. A. Arnold, and N. Custer, 129 pages (May 1974). Order from NTIS as COM 74-11075.

NBS-GCR-75-34. **Dynamics of textile fires,** G. H. Markstein and J. deRis, 54 pages (Mar. 1974). Order from NTIS as COM 75-10128.

NBS-GCR-75-50. **A theoretical analysis of the ASTM E-119 standard fire test of building construction and materials,** A. M. Kanury and D. J. Holve, 141 pages (Aug. 1975). Order from NTIS as PB247939.

NBS-GCR-76-54. **Characterization of the Stanford Research Institute large-scale heat-release-rate calorimeter,** S. B. Martin, 81 pages (Oct. 1975). Order from NTIS as PB251682.

NBS-GCR-76-58. **Residential sprinkler-protection study,** H. C. Kung, 126 pages (Nov. 1975). Order from NTIS as PB256291.

NBS-GCR-76-60. **Fire fighter mortality report,** T. Balanoff, 170 pages (Mar. 1976). Order from NTIS as PB253588.

NBS-GCR-76-70. **An investigation of test methods for determining the flammability hazards of fabrics,** K. N. Yeh, I. Block, B. F. Smith, and S. Spivak, 67 pages (June 21, 1976). Order from NTIS as PB254748.

NBS-GCR-76-71. **Extinguishment in apparel textiles,** G. Tesoro and S. Backer, 60 pages (Oct. 1975). Order from NTIS as PB254751.

NBS-GCR-76-72. **Evaluation of fire protection spray devices: The state-of-the-art,** W. G. Labes, 102 pages (June 30, 1976). Order from NTIS as PB256190.

NBS-GCR-76-73. **Mapping of recurrent behavior patterns in institutional building under fire: Ten case studies of nursing facilities,** L. Lerup, D. Greenwood, and J. S. Burke, 165 pages (July 1976). Order from NTIS as PB257424.

NBS-GCR-76-79. **A problem in fire safety: Flame spreading across liquid fuels,** F. L. Dryer, I. Glassman, and W. A. Sirignano, 30 pages (Sept. 15, 1976). Order from NTIS as PB259127.

NBS-GCR-ETIP 76-22. **Development of flame retardants for polyester/cotton blends,** R. H. Barker and M. J. Drews, 472 pages (Sept. 1976). Order from NTIS as PB257884.

Instrumentation and Experimental Methods

A self-balancing nanovolt potentiometric system for thermometry and calorimetry, S. S. Chang, *J. Res. Nat. Bur. Stand. (U.S.),* (Phys. and Chem.), No. 4, 669-675 (July-Aug. 1976).

SP460. **Use of Monte Carlo calculations in electron probe microanalysis and scanning electron microscopy.** Proceedings of a workshop held at the National Bureau of Standards, Gaithersburg, MD, Oct. 1-3, 1975, K. F. J. Heinrich, D. E. Newbury, and H. Yakowitz, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 460,* 169 pages (Feb. 1977) SD Catalog No. C13.10:460.

The history and development of Monte Carlo methods for use in x-ray microanalysis, H. E. Bishop, *SP460,* pp. 5-14 (Dec. 1976).

Studies of the distribution of signals in the SEM/EPMA by Monte Carlo electron trajectory calculations—An outline, D. E. Newbury and H. Yakowitz, *SP460,* pp. 15-44 (Dec. 1976).

The effect of scattering models on the results of Monte Carlo calculations, L. Reimer and E. R. Krefting, *SP460,* pp. 45-60 (Dec. 1976).

Characteristics of a Monte Carlo program for microanalysis study of energy loss, J. Heńoc and F. Maurice, *SP460,* pp. 61-96 (Dec. 1976).

Evaluation of formulas for inner-shell ionization cross sections, C. J. Powell, *SP460,* pp. 97-104 (Dec. 1976).

NBS Monte Carlo electron trajectory calculation program, R. L. Myklebust, D. E. Newbury, and H. Yakowitz, *SP460,* pp. 105-128 (Dec. 1976).

Application of Monte Carlo simulation to electron microprobe analysis of thin films on substrates, D. F. Kyser and K. Murata, *SP460,* pp. 129-138 (Dec. 1976).

Calculation of type II magnetic contrast in the low-loss image in the scanning electron microscope, O. C. Wells, *SP460,* pp. 139-150 (Dec. 1976).

A study of type II magnetic domain contrast in the SEM by Monte Carlo electron trajectory simulation, D. E. Newbury, H. Yakowitz, and R. L. Myklebust, *SP460,* pp. 151-164 (Dec. 1976).

TN678. **An electrically calibrated pyroelectric radiometer system,** C. A. Hamilton, G. W. Day, and R. J. Phelan, Jr., *Nat. Bur. Stand. (U.S.), Tech. Note 678,* 50 pages (Mar. 1976) SD Catalog No. C13.46:678.

TN894. **Apparatus for testing oceanographic resistance thermometers,** G. T. Furukawa and J. L. Riddle, *Nat. Bur. Stand. (U.S.), Tech. Note 894,* 59 pages (Jan. 1976) SD Catalog No. C13.46:894.

TN905. **A test method for determining the effect of thermal transients on pressure-transducer response,** J. S. Hilten, C. F. Vezzetti, J. F. Mayo-Wells, and P. S. Lederer, *Nat. Bur. Stand. (U.S.), Tech. Note 905,* 52 pages (Mar. 1976) SD Catalog No. C13.46:905.

NBSIR 75-775. **Electrical measurement of high voltage pulses in diagnostic x-ray units,** R. E. Hebner, Jr., 62 pages (Nov. 1, 1975). Order from NTIS as PB248684.

NBSIR 76-834. **A system for inflating a balloon using helium stored in the liquid phase,** C. F. Sindt and W. R. Parrish, 38 pages (Jan. 1976). Order from NTIS as PB250666.

NBSIR 76-991. **Evaluation of transparent electro-photographic film and camera system,** T. C. Bagg, 8 pages (Jan. 1976). Order from NTIS as ADA021255.

NBSIR 76-1038. **NBS InterAgency transducer project, Progress Report No. 3,** P. S. Lederer and J. S. Hilten, 24 pages (Apr. 1976). Order from NTIS as PB251918.

NBSIR 76-1060. **NBS interagency transducer project. Progress Report No. 4,** P. S. Lederer, J. S. Hilten, C. F. Vezzetti, and J. F. Mayo-Wells, 26 pages (June 10, 1976). Order from NTIS as PB253934.

NBSIR 76-1087. **On a scattered-light measuring device for use in testing types of smoke detectors,** M. Pistor, 35 pages (July 1976). Order from NTIS as PB257202.

Lasers and Their Applications

A study of the chemiluminescence of the Pb + O_3 reactions, M. J. Kurylo, W. Braun, S. Abramowitz, and M. Krauss, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 2, 167-171 (Mar.-Apr. 1976).

Fluorescence efficiency of laser dyes, K. H. Drexhage, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 421-428 (May-June 1976).

SP435. **Laser induced damage in optical materials: 1975.** Proceedings of a Symposium sponsored by: National Bureau of Standards, American Society for Testing and Materials, Office of Naval Research, Energy Research and Development Administration, NBS Boulder, CO, July 29-31, 1975, A. J. Glass and A. H. Guenther, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 435,* 437 pages (Apr. 1976) SD Catalog No. C13.10:435.

Fabrication of laser optics at Lawrence Livermore laboratory, N. J. Brown, *SP435,* pp. 3-9 (Apr. 1976).

Standard industrial polishing of high energy laser optics, W. J. Spawr, *SP435,* pp. 10-13 (Apr. 1976).

Ion planing and coating of sodium chloride, R. A. Hoffman, W. J. Lange, and W. J. Choyke, *SP435,* pp. 14-19 (Apr. 1976).

Polishing studies and backscatter measurements on alkali-halide windows, M. J. Soileau, H. E. Bennett, J. M. Bethke, and J. Shaffer, *SP435,* pp. 20-28 (Apr. 1976).

1.06 μm 150 psec laser damage study of diamond turned, diamond turned/polished and polished metal mirrors, T. T. Saito, D. Milam, P. Baker, and G. Murphy, *SP435,* pp. 29-40 (Apr. 1976).

Pulsed laser damage to uncoated metallic reflectors, I. Goldstein, D. Bua, and F. A. Horrigan, *SP435,* pp. 41-48 (Apr. 1976).

Diamond-turned mirrors, H. E. Bennett, M. J. Soileau, and P. C. Archibald, *SP435,* pp. 49-56 (Apr. 1976).

Results of optical measurements of surface quality and figure of diamond-turned mirrors, R. E. Sladky and R. H. Dean, *SP435,* pp. 57-65 (Apr. 1976).

Dielectric coated diamond turned mirrors, J. R. Buckmelter, T. T. Saito, R. Esposito, L. P. Mott, and R. Standlund, *SP435,* pp. 66-74 (Apr. 1976).

Slide-position errors degrade machined optical component quality, J. B. Arnold, P. J. Steger, and R. R. Burleson, *SP435,* pp. 75-89 (Apr. 1976).

Ultrasonic cleaning of optical surfaces, W. E. K. Gibbs and A. D. McLachlan, *SP435,* pp. 90-97 (Apr. 1976).

Thermal diffusivity of germanium gallium arsenide and cadmium telluride over the temperature range 80 K-900 K, R. Doussain, H. P. le Bodo, *SP435,* pp. 98-106 (Apr. 1976).

Damage to 10.6 μm window materials due to CO_2 TEA laser pulses, K. M. Leung, M. Bass, and A. G. J. Balbin-Villaverde, *SP435,* pp. 107-117 (Apr. 1976).

Improvements in the breakdown threshold in alkali halides at 10.6 μm, V. Wang, C. R., Giuliano, S. D. Allen, and R. C. Pastor, *SP435,* pp. 118-125 (Apr. 1976).

Optical distortion by laser heated windows, J. S. Loomis and E. G. Bernal, *SP435,* pp. 126-141 (Apr. 1976).

Thermal distortion studies of ZnSe windows by far field irradiance measurements, J. A. Detrio and R. D. Petty, *SP435,* pp. 142-147 (Apr. 1976).

Spectral emittance measurements with a cryogenically cooled instrument, D. L. Stierwalt, *SP435,* pp. 149-156 (Apr. 1976).

Surface studies with acoustic probe techniques, J. H. Parks and D. A. Rockwell, *SP435,* pp. 157-163 (Apr. 1976).

Photoelastic constants of infrared materials, A. Feldman, D.

Horowitz, and R. M. Waxler, *SP435*, pp. 164-169 (Apr. 1976).

Refractive index and temperature coefficient of index of CVD zinc selenide, M. J. Dodge and I. H. Malitson, *SP435*, pp. 170-174 (Apr. 1976).

Laser window test facility, J. L. Zar, *SP435*, pp. 175-188 (Apr. 1976).

Optical material damage from 10.6 μm CW radiation, C. A. Huguley and J. S. Loomis, *SP435*, pp. 189-201 (Apr. 1976).

10.6 μm component damage from a 20 μsec rapidly pulsed laser, A. B. Callender, *SP435*, pp. 202-206 (Apr. 1976).

Laser damage measurements at CO_2 and DF wavelengths, J. O. Porteus, M. J. Soileau, H. E. Bennett, and M. Bass, *SP435*, pp. 207-215 (Apr. 1976).

Single and multilongitudinal mode damage in multilayer reflectors at 10.6 μm as a function of spot size and pulse duration, V. Wang, C. R. Giuliano, and B. Garcia, *SP435*, pp. 216-229 (Apr. 1976).

Temperature and wavelength dependence of the reflectance of multilayer dielectric mirrors for infrared laser applications, D. L. Decker, *SP435*, pp. 230-235 (Apr. 1976).

Preparation and evaluation of ZnS/CeF_3 AR coatings for 10.6 micron KCl laser windows, A. Golubovic, W. Ewing, R. Bradbury, I. Berman, J. Bruce, and J. J. Comer, *SP435*, pp. 236-243 (Apr. 1976).

As_2S_3 coatings on KCl, A. D. Baer, T. M. Donovan, and M. J. Soileau, *SP435*, pp. 244-247 (Apr. 1976).

Design for high power resistance, A. L. Bloom and V. R. Costich, *SP435*, pp. 248-253 (Apr. 1976).

Influence of standing-wave fields on the laser damage resistance of dielectric films, B. E. Newnam, D. H. Gill, and G. Faulkner, *SP435*, pp. 254-271 (Apr. 1976).

Threshold ambiguities in absorptive laser damage to dielectric films, R. H. Picard, D. Milam, R. A. Bradbury, and J. C. C. Fan, *SP435*, pp. 272-283 (Apr. 1976).

Time resolved study of laser-induced structural damage in thin films, N. Alyassini and J. H. Parks, *SP435*, pp. 284-288 (Apr. 1976).

The importance of refractive index, number density, and surface roughness in the laser-induced damage of thin films and bare surfaces, J. R. Bettis, R. A. House, A. H. Guenther, and R. Austin, *SP435*, pp. 289-295 (Apr. 1976).

Investigation of the damage properties of multilayer dielectric coatings for use in high power Nd:glass lasers, C. E. Thomas, B. Guscott, K. Moncur, S. Hildum, and R. Sigler, *SP435*, pp. 298-304 (Apr. 1976).

Correlation of laser-induced damage with surface structure and preparation techniques of several optical glasses at 1.06 μm, R. A. House, J. R. Bettis, A. H. Guenther, and R. Austin, *SP435*, pp. 305-320 (Apr. 1976).

Picosecond breakdown studies: Threshold and nonlinear refractive index measurements and damage morphology, W. L. Smith, J. H. Bechtel, and N. Bloembergen, *SP435*, pp. 321-330 (Apr. 1976).

Current status of electron-avalanche-breakdown theories, M. Sparks, *SP435*, pp. 331-346 (Apr. 1976).

A statistical analysis of laser induced gas breakdown—A test of the lucky electron theory of avalanche formation, D. Milam, R. A. Bradbury, and R. H. Picard, *SP435*, pp. 347-355 (Apr. 1976).

Measurement of free electron density at the onset of laser-induced surface damage in BSC-2, N. Alyassini and J. H. Parks, *SP435*, pp. 356-361 (Apr. 1976).

Multi-pulse optical damage of NaCl, P. Bräunlich and P. Kelly, *SP435*, pp. 362-365 (Apr. 1976).

Do multi-photon induced collision chains lead to pre-breakdown material modifications in alkali halides?, A. Schmid, P. Bräunlich, and P. K. Rol, *SP435*, pp. 366-368 (Apr. 1976).

Multiphoton absorption coefficients in compound semiconductors from ruby to CO_2 laser wavelengths, R. A. Shatas, S. S. Mitra, and L. M. Narducci, *SP435*, pp. 369-388 (Apr. 1976).

Electroabsorption: A possible damage consideration, R. P. Benedict and A. H. Guenther, *SP435*, pp. 389-394 (Apr. 1976).

Irradiance limits for vacuum ultraviolet material failure, C. J. Duthler and M. Sparks, *SP435*, pp. 395-405 (Apr. 1976).

TN670. **An infrared spectrometer utilizing a spin flip Raman laser, IR frequency synthesis techniques, and CO_2 laser frequency standards,** J. S. Wells, F. R. Petersen, G. E. Streit, P. D. Goldan, and C. M. Sadowski, *Nat. Bur. Stand. (U.S.), Tech. Note 670*, 54 pages (Jan. 1976) SD Catalog No. C13.46:670.

TN677. **Laser attenuators for the production of low power beams in the visible and 1.06 μm regions,** B. L. Danielson and Y. Beers, *Nat. Bur. Stand. (U.S.), Tech. Note 677*, 25 pages (Jan. 1976) SD Catalog No. C13.46:677.

TN680. **Application of infrared frequency synthesis techniques with metal-insulator-metal diodes to the spin flip Raman laser,** J. S. Wells, G. E. Streit, and F. R. Petersen, *Nat. Bur. Stand. (U.S.), Tech. Note 680*, 14 pages (Apr. 1976) SD Catalog No. C13.46:680.

U.S. Patent 3,996,120. **Laser-induced photochemical enrichment of boron isotopes,** S. M. Freund and J. J. Ritter, (Dec. 7, 1976).

15743. Howard, C. J., Evenson, K. M., **Rate constants for the reactions of OH with CH_4 and fluorine, chlorine, and bromine substituted methanes at 296 K,** *J. Chem. Phys.* **64,** No. 1, 197-202 (Jan. 1, 1976).

Mathematical and Statistical Methods

Nonnegative sums of roots of unity, M. Newman, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 1, 1-4 (Jan.-Mar. 1976).

Optimal facility location for normally and exponentially distributed points, I. N. Katz and L. Cooper, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 1, 53-73 (Jan.-Mar. 1976).

Real, 3×3, D-stable matrices, B. E. Cain, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 1, 75-77 (Jan.-Mar. 1976).

Equivalence of partitioned matrices, R. B. Feinberg, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 1, 89-98 (Jan.-Mar. 1976).

Tables of binomial coefficients and Stirling numbers, K. Goldberg, F. T. Leighton, M. Newman, and S. L. Zuckerman, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 1, 99-171 (Jan.-Mar. 1976).

The dependence of inspection-system performance on levels of penalties and inspection resources, A. J. Goldman and M. H. Pearl, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 189-236 (Apr.-June 1976).

A minimax-measure intersection problem, P. R. Meyers, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 237-243 (Apr.-June 1976).

Inverting sparse matrices by tree partitioning, D. R. Shier, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 245-257 (Apr.-June 1976).

The structure of higher degree symmetry classes of tensors, R. Merris, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 259-264 (Apr.-June 1976).

The Kronecker power of a permutation, R. Merris, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 265-268 (Apr.-June 1976).

On Iohvidov's proofs of the Fischer-Frobenius theorem, R. C. Thompson, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 269-272 (Apr.-June 1976).

Matrix algebra and eigenvalues for the bead/spring model of polymer solutions, J. T. Fong and A. Peterlin, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 273-284 (Apr.-June 1976).

Predictable regular continued cotangent expansions, J. Shallit, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 285-290 (Apr.-June 1976).

Automatic computing methods for special functions. Part III. The sine, cosine, exponential integrals, and related functions, I. A. Stegun and R. Zucker, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 291-313 (Apr.-June 1976).

Definite integrals of the complete elliptic integral K, M. L. Glasser, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 2, 313-323 (Apr.-June 1976).

A note on pairs of matrices with product zero, C. R. Johnson, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 3, 333-335 (July-Sept. 1976).

Finding the circuits of a matroid, E. Minieka, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 3, 337-342 (July-Sept. 1976).

One-sided tolerance limits for the normal distribution, $P=0.80$, $\gamma=0.80$, R. H. Wampler, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 3, 343-346 (July-Sept. 1976).

Spectral measures and separation of variables, D. W. Fox, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 3, 347-351 (July-Sept. 1976).

A more tractable solution to a singular integral equation obtained by solving a related Hilbert problem for two unknowns, J. A. Pennline, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 3, 403-414 (July-Sept. 1976).

Sampling expansion for a Languerre-L_ν^α transform, A. J. Jerri, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 3, 415-418 (July-Sept. 1976).

An inequality for doubly stochastic matrices, C. R. Johnson and R. Bruce Kellogg, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 4, 433–436 (Oct.-Dec. 1976).

Improved error bounds for second-order differential equations with two turning points, F. W. J. Olver, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 4, 437–440 (Oct.-Dec. 1976).

Pseudointersection graphs, P. J. Slater, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 4, 441–445 (Oct.-Dec. 1976).

An efficient linear algebraic algorithm for the determination of isomorphism in pairs of undirected graphs, C. R. Johnson and F. T. Leighton, *J. Res. Nat. Bur. Stand. (U.S.),* **80B** (Math. Sci.), No. 4, 447–483 (Oct.-Dec. 1976).

Measurement Science and Technology: Policy and State-of-the-Art Surveys

SP413, 1976 Edition. **Special technical facilities at the National Bureau of Standards,** H. L. Mason and I. M. Lloyd, Eds., (Supersedes NBS Special Publication 413, 1975 Edition), *Nat. Bur. Stand. (U.S.), Spec. Publ. 413, 1976 Edition,* 50 pages (Mar. 1976) SD Catalog No. C13.10:413/1976 Ed.

SP431. **Fourth international congress for stereology.** Proceedings of the Fourth International Congress for Stereology held at the National Bureau of Standards, Gaithersburg, MD, Sept. 4-9, 1975, E. E. Underwood, R. de Wit, and G. A. Moore, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 431,* 547 pages (Jan. 1976) SD Catalog No. C13.10:431.

On estimating aggregate and overall characteristics from thick sections by transmission microscopy, R. E. Miles, *SP431,* pp. 3-12 (Jan. 1976).

Computational methods in stereology, R. S. Anderssen and A. J. Jakeman, *SP431,* pp. 13-18 (Jan. 1976).

Estimation of linear functionals by maximum likelihood, W. L. Nicholson, *SP431,* pp. 19-24 (Jan. 1976).

The geometry and stereology of "Cubo-Spherical" particles, R. Warren, *SP431,* pp. 25-28 (Jan. 1976).

Quantitative microscopy of lineal features in three dimensions, R. T. DeHoff and S. M. Gehl, *SP431,* pp. 29-40 (Jan. 1976).

Connectivity of "Dispersed" particles: A probabilistic computation, G. A. Moore, *SP431,* pp. 41-44 (Jan. 1976).

Analytic results for the connectivity of dispersed particles, R. de Wit, *SP431,* pp. 45-48 (Jan. 1976).

Topological analysis of dendritic trees, M. Berry, *SP431,* pp. 49-54 (Jan. 1976).

Theoretical and experimental studies of the stereological properties of porosity, specific surface, and connectivity, R. B. Martin, *SP431,* pp. 55-58 (Jan. 1976).

Assessment of sampling errors in stereological analysis, J. E. Hilliard, *SP431,* pp. 59-67 (Jan. 1976).

On optimal forms for stereological data, A. J. Jakeman and R. S. Anderssen, *SP431,* pp. 69-74 (Jan. 1976).

Multivariate data analysis to describe intra- and intergranular relations in thin sections, W. Good, *SP431,* pp. 75-78 (Jan. 1976).

Correction of stereological parameters from biased samples on nucleated particle phases, L. M. Cruz-Orive, *SP431,* pp. 79-82 (Jan. 1976).

Stochastic models in stereology: Strength and weaknesses, J. P. Serra, *SP431,* pp. 83-86 (Jan. 1976).

A stereological view of data analysis, G. A. Moore and G. T. Eden, *SP431,* pp. 87-90 (Jan. 1976).

Three-dimensional shape parameters from planar sections, E. E. Underwood, *SP431,* pp. 91-92 (Jan. 1976).

Interpretation of some of the basic features of field-ion image projections from a hemispherical to a planar surface using Moire patterns, P. D. Ownby, R. M. Doerr, and W. Bollmann, *SP431,* pp. 93-98 (Jan. 1976).

Network simulation of connectivity and aggregate size in two-phase mixtures, W. D. Leahy and J. H. Steele, Jr., *SP431,* pp. 99-105 (Jan. 1976).

What can pattern recognition do for stereology?, G. C. Cheng, *SP431,* pp. 107-112 (Jan. 1976).

Theory and applications of imagery pattern recognition, C. H. Chen, *SP431,* pp. 113-116 (Jan. 1976).

A new, fast and storage-saving image analysis procedure for investigating individuals by a digital computer, M. Rink, *SP431,* pp. 117-120 (Jan. 1976).

System for computer input and processing of two-dimensional pictures, I. Krekule and M. Indra, *SP431,* pp. 121-122 (Jan. 1976).

Pattern recognition on the quantimet 720 image analyzing computer, K. E. Lawson, *SP431,* pp. 123-126 (Jan. 1976).

Recognition and classification of structure by means of stereological methods in neurobiology, G. Bernroider, *SP431,* pp. 127-132 (Jan. 1976).

Projectors in pattern recognition categories, M. Pavel, *SP431,* pp. 133-139 (Jan. 1976).

Automatic image analyzing instruments today, H. P. Hougardy, *SP431,* pp. 141-148 (Jan. 1976).

Texture analysis of stereological specimens, W. Hunn, *SP431,* pp. 149-154 (Jan. 1976).

A computerized image process for isolating individuals in an originally netted pattern, M. Rink, *SP431,* pp. 155-158 (Jan. 1976).

An image analysis system based on feature descriptors, R. R. A. Morton, *SP431,* pp. 159-162 (Jan. 1976).

Implications of recent advances in image analysis for stereological theory, H. Schmeisser, *SP431,* pp. 163-166 (Jan. 1976).

Experiences with optomanual automated evaluation-systems in biological research, especially in neuromorphology, H. Haug, *SP431,* pp. 167-172 (Jan. 1976).

A user-oriented automatic scanning optical microscope, J. E. Hilliard, *SP431,* pp. 173-176 (Jan. 1976).

The determination of particle shape and size distributions using automatic image analysis techniques, J. Slater and B. Ralph, *SP431,* pp. 177-180 (Jan. 1976).

Some shape functions for use in automatic image analysers for the classification of particulate materials, A. C. Terrell and R. J. Willes, *SP431,* pp. 181-184 (Jan. 1976).

Determination of particle size and shape distribution by automatic feature analysis, J. R. Schopper, *SP431,* pp. 185-188 (Jan. 1976).

Stereology and the automatic linear analysis of mineralogical materials, M. P. Jones and G. Barbery, *SP431,* pp. 189-192 (Jan. 1976).

A new opto-manual semi-automatic evaluation system, H. P. Rohr, *SP431,* pp. 193-195 (Jan. 1976).

Automated measurements for determination of the statistical nature of the distribution of inclusions in steel, G. A. Moore, *SP431,* pp. 197-198 (Jan. 1976).

Reconstruction from projections: A survey of applications, R. Gordon, *SP431,* pp. 201-202 (Jan. 1976).

Morphometric analysis of neurons in different depths of the cat's brain cortex after hypoxia, O. Hunziker, U. Schulz, C. Walliser, and J. Serra, *SP431,* pp. 203-206 (Jan. 1976).

Three-dimensional reconstruction from serial high voltage electron micrographs, L. D. Peachey, C. H. Damsky, and A. Veen, *SP431,* pp. 207-210 (Jan. 1976).

Determining three-dimensional intracellular structure data from scanning proton microscopy luminescence data, D. G. Oldfield, *SP431,* pp. 211-214 (Jan. 1976).

Artifacts in three-dimensional reconstruction from medical radiographic data, E. L. Hall, G. C. Huth, R. A. Gans, and I. S. Reed, *SP431,* pp. 215-218 (Jan. 1976).

Artificial stereo: A generalized computer algorithm for combining multi-channel image data, W. G. Pichel, R. L. Brower, D. R. Brandman, and R. J. Moy, *SP431,* pp. 219-220 (Jan. 1976).

Stereoscopic photomacrography and stereoscopic projection, Y. Fujimoto and Y. Ohta, *SP431,* pp. 221-222 (Jan. 1976).

Holographic methods for in-depth viewing of microscopic subjects, R. J. Schaefer and J. A. Blodgett, *SP431,* pp. 223-224 (Jan. 1976).

Evaluation of a new technique for determining the volume of the human left ventricle from one-plane radiographic measurements, R. Moore, I. Beranek, S. Kim, and K. Amplatz, *SP431,* pp. 225-228 (Jan. 1976).

Movie: Prim-9. Viewing high dimensional point clouds, J. W. Tukey, *SP431,* p. 229 (Jan. 1976).

Applications of quantitative microscopy in metal science, F. N. Rhines, *SP431,* pp. 233-244 (Jan. 1976).

Applications of stereological techniques to the quantitative characterization of wood microstructure, J. H. Steele, Jr., G. Ifju, and J. A. Johnson, *SP431,* pp. 245-256 (Jan. 1976).

Texture analyzer measurements and physical anisotropy of tropical woods, A. Mariaux, O. Peray, and J. Serra, *SP431,* pp. 257-260 (Jan. 1976).

Decision criteria in quality control of steel with respect to nonmetallic inclusions, S. Johansson, *SP431,* pp. 261-264 (Jan. 1976).

Automatic recognition of nonmetallic stringers in steel, D. Jeulin and J. Serra, *SP431,* pp. 265-268 (Jan. 1976).

Metallographic characterization of fracture surface profiles on sectioning planes, J. R. Pickens and J. Gurland, *SP431,* pp. 269-272 (Jan. 1976).

The equivalent foil thickness principle, S. M. El-Soudani, *SP431,* pp. 273-276 (Jan. 1976).

Stereological method for estimating relative membrane surfaces in freeze-fracture preparations, E. R. Weibel, G. A. Losa, and R. P. Bolender, *SP431,* pp. 277-280 (Jan. 1976).

Application of various stereological methods to the study of the grain and the crack structure of concrete, P. Stroeven, *SP431,* pp. 281-286 (Jan. 1976).

The use of quantitative metallography and stereological methods to describe composite materials, J. L. Chermant and M. Coster, *SP431,* pp. 287-290 (Jan. 1976).

A definition of the two-dimensional size of irregular bodies, G. M. Timčák, *SP431,* pp. 291-294 (Jan. 1976).

Stereometric microstructure and properties of two-phase materials, G. Ondracek, *SP431,* pp. 295-298 (Jan. 1976).

Use of mathematical morphology to estimate comminution efficiency, P. Cauwe, *SP431,* pp. 299-303 (Jan. 1976).

Microscopy, radial distribution analysis, and sortability, R. M. Doerr, *SP431,* pp. 305-308 (Jan. 1976).

Size distribution analysis in situ on individual or interconnected phases by image analyses, C. Gateau and J. M. Prévosteau, *SP431,* pp. 309-314 (Jan. 1976).

Stereological determination of the proportional volume of dendrites in cast iron by measuring plan micrographs, R. Wlodawer, *SP431,* pp. 315-318 (Jan. 1976).

Morphometry, stereometry and stereology applied to cancer development in the large intestine of man, H. Elias, D. Bokelmann, and R. Vögtle, *SP431,* pp. 321-326 (Jan. 1976).

Analysis of the heterogeneous composition of central nervous tissue, S. Eins and J. R. Wolff, *SP431,* pp. 327-330 (Jan. 1976).

Stereological analysis of the heterogeneous composition of central nervous tissue: Synapses of the cerebral cortex, J. R. Wolff, *SP431,* pp. 331-334 (Jan. 1976).

The development of myelinated fibers in the visual cortex of cats, H. Haug, *SP431,* pp. 335-336 (Jan. 1976).

The volumes of elastic tissue and smooth muscle cells in the arterial wall, V. Levický, *SP431,* pp. 337-340 (Jan. 1976).

Progress, success and problems in applying stereology in biological research, E. R. Weibel, *SP431,* pp. 341-350 (Jan. 1976).

Hexachlorobenzene-induced smooth endoplastic reticulum in rat liver: A correlated stereologic and biochemical study, T. Kuiper-Goodman, D. Kreweski, H. Combley, M. Doran, and D. L. Grant, *SP431,* pp. 351-354 (Jan. 1976).

Automated measurement of airspaces in lungs from dogs chronically exposed to air pollutants, D. Hyde, A. Wiggins, D. Dungworth, W. Tyler, and J. Orthoefer, *SP431,* pp. 355-358 (Jan. 1976).

Volumetric determinations of cells and cell organelles from two-dimensional transsections, L. G. Lindberg, *SP431,* pp. 359-362 (Jan. 1976).

Morphometric analysis of thymic cells during murine radioleukemogenesis, J. Boniver, R. Courtoy, and L. J. Simar, *SP431,* pp. 363-366 (Jan. 1976).

Studies on the partially-oriented surfaces of skeletal muscle mitochondria, N. T. James and G. A. Meek, *SP431,* pp. 367-370 (Jan. 1976).

Determination of the number of cells with multiple nucleoli in histological sections, A. Schleicher, H. J. Kretschmann, F. Wingert, and K. Zilles, *SP431,* pp. 371-374 (Jan. 1976).

Combined light and electron microscopy of serially sectioned cells and tissues, Y. Collan, *SP431,* pp. 375-378 (Jan. 1976).

Morphometric "organelle profiles" as metabolic indicators, S. Malamed an K. C. Z ller, *SP431,* pp. 379-384 (Jan. 1976).

A quantitative analysis of some ultrastructural aspects of seed development, C. E. Hughes and L. G. Briarty, *SP431,* pp. 385-388 (Jan. 1976).

The brain as a "stereological device," T. Radil-We ss and J. Radilová, *SP431,* pp. 389-391 (Jan. 1976).

Stereological analysis of neural organogenesis in the chick embryo, O. Mathieu and P. E. Messier, *SP431,* pp. 393-396 (Jan. 1976).

Application of stereological methods to the study of preim-

plantation embryogenesis in mice, R. L. Deter, *SP431,* pp. 397-400 (Jan. 1976).

The determination of size distribution on lymphoblasts in acute leukemia, E. Feinermann and G. A. Langlet, *SP431,* pp. 401-404 (Jan. 1976).

A morphometric study of human placentae of different gestational ages from normal and triplet pregnancies, I. Bhargava, K. Kamashki, and Y. Dodge, *SP431,* pp. 405-408 (Jan. 1976).

The effects of optical resolution on the estimation of stereological parameters, H. J. Keller, H. P. Friedli, P. Gehr, M. Bachofen, and E. R. Weibel, *SP431,* pp. 409-410 (Jan. 1976).

Quantification of rarely occurring structures in electron microscopy, U. Pfeifer, *SP431,* pp. 411-414 (Jan. 1976).

The morphometry and stereology of cerebral arterial bifurcations, P. B. Canham, J. G. Walmsley, and J. F. H. Smith, *SP431,* pp. 415-418 (Jan. 1976).

Karyo-interkaryometry as a periodic control for clinical prognosis, E. C. Craciun and C. Tasca, *SP431,* pp. 419-422 (Jan. 1976).

Nucleic acids content-nuclear volume correlation as a quantitative parameter in cellular malignancy, C. Tasca and E. C. Craciun, *SP431,* pp. 423-426 (Jan. 1976).

Is there an unrecognized systematic error in the estimation of surface density of biomembranes?, A. Reith and T. Barnard, *SP431,* pp. 427-428 (Jan. 1976).

Quantitative studies with the optical and electronic microscope of the pathological cells of the acute leukemia and chronic lymphocytic leukemia, J. L. Binet, P. Debré, P. d'Athis, D. Dighiero, and F. de Montaut, *SP431,* p. 429 (Jan. 1976).

Simple devices for stereology and morphometry, H. Elias and E. Botz, *SP431,* pp. 431-434 (Jan. 1976).

The edema syndrome in motion pictures, O. C. Jaffee, *SP431,* p. 435 (Jan. 1976).

Overview, R. T. DeHoff, *SP431,* pp. 439-443 (Jan. 1976).

Probabilistic foundations of stereology, R. E. Miles and P. Davy, *SP431,* pp. 443-445 (Jan. 1976).

Volume fraction analysis, H. E. Exner, *SP431,* pp. 446-448 (Jan. 1976).

Surface area, E. R. Weibel, *SP431,* pp. 448-455 (Jan. 1976).

Length of lineal features in space, R. T. DeHoff, *SP431,* pp. 455-457 (Jan. 1976).

The area tangent count and the total curvature, R. T. DeHoff, *SP431,* pp. 457-459 (Jan. 1976).

Granulometry for isolated particles or connected media, J. Serra, *SP431,* pp. 460-461 (Jan. 1976).

Statistics of measurement, W. L. Nicholson, *SP431,* pp. 461-464 (Jan. 1976).

Introduction remarks, B. H. Kaye, *SP431,* pp. 467-468 (Jan. 1976).

Stereology and particle technology, H. E. Exner, *SP431,* pp. 469-470 (Jan. 1976).

Representation of particle size and shape, B. Scarlett, *SP431,* pp. 471-476 (Jan. 1976).

The application of stereology to particle technology, B. Scarlett and P. J. Lloyd, *SP431,* pp. 477-482 (Jan. 1976).

Techniques for particle measurement using image analysis, R. R. A. Morton, *SP431,* pp. 483-486 (Jan. 1976).

Microscopic characterization of fine powders, P. Ramakrishnan, *SP431,* pp. 487-490 (Jan. 1976).

Stereology of paint films, B. H. Kaye and I. Robb, *SP431,* pp. 491-492 (Jan. 1976).

Concluding remarks, B. H. Kaye, *SP431,* p. 493 (Jan. 1976).

Estimation of linear properties of spherical bodies in thin foils from their projections, F. Piefke, *SP431,* pp. 497-498 (Jan. 1976).

On size distribution methods, F. A. L. Dullien and K. S. Chang, *SP431,* pp. 499-502 (Jan. 1976).

Size distribution of retained austenite phase in a quenched stainless steel, A. V. Samudra and O. Johari, *SP431,* pp. 503-506 (Jan. 1976).

Analysis of a set of spherical cells relative to their volume, P. d'Athis, *SP431,* pp. 507-508 (Jan. 1976).

Appendix—Basic stereology, E. E. Underwood, *SP431,* pp. 509-512 (Jan. 1976).

SP438. **Testing and certification for export products in industrializing countries.** Proceedings of a Regional Seminar held at the Regional English Language Centre and International House, Singapore, May 19-20, 1975, H. S. Peiser and R. S. Marvin, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 438,* 160 pages (Feb. 1976) SD Catalog No. C13.10:438.

Export testing, labeling and certification—An overview, W. E. Andrus, Jr., *SP438,* pp. 9-21 (Feb. 1976).

Testing and certification of export products in the Republic of China, W. Y. F. Ning, *SP438,* pp. 23-27 (Feb. 1976).

Pre-export testing and certification in Sri Lanka, R. T. Wijewantha, *SP438,* pp. 29-34 (Feb. 1976).

Development of a National infrastructure of support services for quality control for export, M. Probine, *SP438,* pp. 45-62 (Feb. 1976).

Metrology plan for Korean industrial development, K. Zae-Quan, *SP438,* pp. 69-78 (Feb. 1976).

Can data collection and analysis reduce the rejection of exported products?, J. Hilsenrath, *SP438,* pp. 83-89 (Feb. 1976).

The institution of a worldwide integrated system of testing facilities (WISTF), F. von Ranke, *SP438,* p. 95 (Feb. 1976).

Thailand's certification and quality marks program, K. S. Stephens, *SP438,* pp. 105-124 (Feb. 1976).

Basic export inspection policy in Korea, C. Jong Wan, *SP438,* pp. 127-131 (Feb. 1976).

Testing and certification of Philippine export products, V. F. Ranoa, *SP438,* pp. 133-135 (Feb. 1976).

Certification mark and export inspection in India, A. B. Rao, *SP438,* pp. 139-141 (Feb. 1976).

Quality certification in developing countries, R. Estrada, *SP438,* pp. 143-148 (Feb. 1976).

Pre-export quality control scheme for crumb rubber: Pilot project and experience of Indonesia, N. N. Sumantri, *SP438,* pp. 149-151 (Feb. 1976).

SP443. **Hydraulic research in the United States and Canada, 1974,** G. Kulin and P. H. Gurewitz, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 443,* 359 pages (June 1976) SD Catalog No. C13.10:443.

SP445-1. **The National Measurement System for Time and Frequency,** A. S. Risley, *Nat. Bur. Stand. (U.S.), Spec. Publ. 445-1,* 72 pages (June 1976) SD Catalog No. C13.10:445-1.

NBSIR 75-825. **The National Measurement System for cryogenics,** T. M. Flynn, 76 pages (Oct. 1975). Order from NTIS as PB258913.

NBSIR 75-926. **The National Measurement System for length and related dimensional measurements, Part I,** J. W. Lazar and R. L. Bach, 115 pages (Aug. 1976). Order from NTIS as PB257467.

NBSIR 75-927. **The national measurement system for surface finish,** R. D. Young, 51 pages (July 1976). Order from NTIS as PB255809.

NBSIR 75-929. **A study of the National Force Measurement System,** D. E. Marlowe, 40 pages (June 1975). Order from NTIS as PB261498.

NBSIR 75-930. **The national measurement system for fluid flow,** W. C. Haight, P. S. Klebanoff, F. W. Ruegg, and G. Kulin, 66 pages (Aug. 1976). Order from NTIS as PB258250.

NBSIR 75-931. **The National Measurement System for pressure,** P. L. M. Heydemann, 42 pages (Sept. 1976). Order from NTIS as PB261030.

NBSIR 75-932. **The National Measurement System for tempera-**

ture, J. F. Schooley, 61 pages (Aug. 1976). Order from NTIS as PB257425.

NBSIR 75-933. **A study of the national humidity and moisture measurement system,** A. Wexler, 52 pages (Aug. 1975). Order from NTIS as PB248983.

NBSIR 75-937. **The national measurement system for medical ultrasonics,** P. A. Hudson, 20 pages (Feb. 1976). Order from NTIS as PB265614.

NBSIR 75-942. **The national measurement system for optics,** D. A. Swyt, 63 pages (Aug. 1976). Order from NTIS as PB256644.

NBSIR 75-943. **Transactions matrix description of the National System of Physical Measurements,** R. C. Sangster, 91 pages (Aug. 1976). Order from NTIS as PB258914.

NBSIR 75-944. **National measurement system for the physical properties of atoms and molecules,** J. W. Cooper, A. V. Phelps, and S. J. Smith, 39 pages (Sept. 1976). Order from NTIS as PB258372.

NBSIR 75-947. **Collected executive summaries. Studies of the National Measurement System 1972-75,** R. C. Sangster, 56 pages (Aug. 1976). Order from NTIS as PB258323.

NBSIR 75-976. **Standards and measurement capabilities in the Kingdom of Saudi Arabia,** A. A. Bates, 37 pages (Spring 1975). Order from NTIS as PB248986.

NBSIR 76-988. **Regional seminar on a system of standardization and metrology for Latin America,** H. S. Peiser and R. S. Marvin, Eds., 100 pages (Feb. 1976). Order from NTIS as PB254469.

NBSIR 76-1083. **Report to AID on a Philippines survey on standardization and measurement services,** H. S. Peiser and R. S. Marvin, Eds., 124 pages (June 1976). Order from NTIS as PB255803.

NBSIR 76-1099. **Standardization and measurement services in Bolivia,** H. S. Peiser, R. S. Marvin, and J. Mejeur, Eds., 105 pages (Sept. 1976). Order from NTIS as PB258612.

Measurement Science and Technology:

Physical Standards and Fundamental Constants

The International Practical Temperature Scale of 1968 in the region 90.188 K to 903.89 K as maintained at the National Bureau of Standards, G. T. Furukawa, J. L. Riddle, and W. R. Bigge, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 477-504 (May-June 1976).

Vapor pressure of water at its triple point, L. A. Guildner, D. P. Johnson, and F. E. Jones, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 505-521 (May-June 1976).

Deviation of international practical temperatures from thermodynamic temperatures in the temperature range from 273.16 K to 730 K, L. A. Guildner and R. E. Edsinger, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), Nos. 5 and 6, 703-738 (Sept.-Dec. 1976).

SP447. **Weights and measures standards of the United States—A brief history,** L. V. Judson, *Nat. Bur. Stand. (U.S.), Spec. Publ. 447,* 44 pages (Mar. 1976) SD Catalog No. C13.10:447.

TN689. **A simulation of the fluctuations of international atomic time,** J. A. Barnes, *Nat. Bur. Stand. (U.S.), Tech. Note 689,* 23 pages (Nov. 1976) SD Catalog No. C13.46:689.

NBSIR 75-768. **Reevaluation of the densities of the four NBS silicon crystal standards,** H. A. Bowman, R. M. Schoonover, and C. L. Carroll, 36 pages (Aug. 1975). Order from NTIS as PB247943.

U.S. Patent 3,958,269. **Color subcarrier frequency comparator,** D. D. Davis, (May 18, 1976).

15732. Johnson, D. P., Guildner, L. A., Jones, F. E., **Vapor pressure of water at its triple point,** (Proc. 8th Int. Conf. on the Properties of Water and Steam, Giens, France, Sept. 23-27, 1974), Paper in *Proceedings of the 8th International Conference on the Properties of Water and Steam,* P. Bury, H. Perdon, and B. Vodar, Eds., **1,** 365-377 (Ministère de l'Industrie et de la Recherche, Paris, France, 1975).

Metrology: Physical Measurements

Bidirectional reflectometry. Part I. A high resolution laser bidirectional reflectometer with results on several optical coatings, J. J. Hsia and J. C. Richmond, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 2, 189-205 (Mar.-Apr. 1976).

Bidirectional reflectometry. Part II. Bibliography on scattering by reflection from surfaces, J. C. Richmond and J. J. Hsia, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 2, 207-220 (Mar.-Apr. 1976).

Some methods of luminescence efficiency measurements, A. Bril and A. W. de Jager-Veenis, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 3, 401-407 (May-June 1976).

Diffuse reflectance spectroscopy; applications, standards, and calibration (with special reference to chromatography), R. W. Frei, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 551-565 (July-Aug. 1976).

The interpretation of diffuse reflectance spectra, H. G. Hecht, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 567-583 (July-Aug. 1976).

Calibration of reflectance standards, W. Budde, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 585-595 (July-Aug. 1976).

Understanding bidirectional reflectance and transmission for space applications, J. B. Schutt, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 597-603 (July-Aug. 1976).

Standardization of light scattering measurement in conjunction with immunochemical analysis, G. J. Buffone, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 605-608 (July-Aug. 1976).

Errors in spectrophotometry and calibration procedures to avoid them, A. G. Reule, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 609-624 (July-Aug. 1976).

Standardization in transmission spectrophotometry in the visible and ultraviolet spectral regions, A. R. Robertson, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 625-630 (July-Aug. 1976).

Acidic potassium dichromate solutions as ultraviolet absorbance standards, R. W. Burke and R. Mavrodineanu, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 631-636 (July-Aug. 1976).

Considerations for the use of semitransparent metallic thin films as potential transmittance standards in spectrophotometry, R. Mavrodineanu, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 4, 637-641 (July-Aug. 1976).

Measurement of melting point and radiance temperature (at melting point and at 653 nm) of hafnium-3(wt.%) zirconium by a pulse heating method, A. Cezairliyan and J. L. McClure, *J.*

Res. Nat. Bur. Stand. (U.S.), **80A** (Phys. and Chem.), No. 4, 659-662 (July-Aug. 1976).

Monogr. 150. **Liquid-in-glass thermometry,** J. A. Wise, *Nat. Bur. Stand. (U.S.), Monogr. 150,* 30 pages (Jan. 1976) SD Catalog No. C13.44:150.

BSS82. **A new look at the research basis for lighting level recommendations,** G. T. Yonemura and Y. Kohayakawa, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 82,* 13 pages (Mar. 1976) SD Catalog No. C13.29/2:82.

TN594-11. **Optical radiation measurements: Development of an NBS reference spectrophotometer for diffuse transmittance and reflectance,** W. H. Venable, Jr., J. J. Hsia, and V. R. Weidner, *Nat. Bur. Stand. (U.S.), Tech. Note 594-11,* 47 pages (Oct. 1976) SD Catalog No. C13.46:594-11.

TN594-12. **Optical radiation measurements: The translucent blurring effect—Method of evaluation and estimation,** J. J. Hsia, *Nat. Bur. Stand. (U.S.), Tech. Note 594-12,* 31 pages (Oct. 1976) SD Catalog No. C13.46:594-12.

TN681. **A satellite-controlled digital clock,** J. V. Cateora, D. D. Davis, and D. W. Hanson, *Nat. Bur. Stand. (U.S.), Tech. Note 681,* 46 pages (June 1976) SD Catalog No. C13.46:681.

TN691. **Clock synchronization and comparison: Problems, techniques and hardware,** J. E. Gray, *Nat. Bur. Stand. (U.S.), Tech. Note 691,* 12 pages (Nov. 1976) SD Catalog No. C13.46:691.

TN902. **Evaluation, revision and application of the NBS stylus/computer system for the measurement of surface roughness,** E. C. Teague, *Nat. Bur. Stand. (U.S.), Tech. Note 902,* 151 pages (Apr. 1976) SD Catalog No. C13.46:902.

TN910-1. **Self-study manual on optical radiation measurements: Part I—Concepts, Chapters 1 to 3,** F. E. Nicodemus, Ed., *Nat. Bur. Stand. (U.S.), Tech. Note 910-1,* 93 pages (Mar. 1976) SD Catalog No. C13.46:910-1.

TN913. **Modification of an NBS reference spectrophotometer,** K. L. Eckerle, *Nat. Bur. Stand. (U.S.), Tech. Note 913,* 43 pages (July 1976) SD Catalog No. C13.46:913.

TN924. **Procedures for the calibration of ASTM E127-type ultrasonic reference blocks,** D. J. Chwirut, G. F. Sushinsky, and D. G. Eitzen, *Nat. Bur. Stand. (U.S.), Tech. Note 924,* 43 pages (Sept. 1976) SD Catalog No. C13.46:924.

TN930. **A measurement assurance program for electric energy,** N. M. Oldham, *Nat. Bur. Stand. (U.S.), Tech. Note 930,* 23 pages (Sept. 1976) SD Catalog No. C13.46:930.

NBSIR 74-518. **Instrumental colorimetry of retroreflective sign materials,** I. Nimeroff and W. A. Hall, 89 pages (Aug. 1974). Order from NTIS as PB239633.

NBSIR 75-750. **The calibration of indexing tables by subdivision,** C. P. Reeve, 38 pages (July 1975). Order from NTIS as PB249934.

NBSIR 75-924. **Evaluation, revision and application of the NBS stylus/computer system for surface roughness measurement: Minicomputer software,** E. C. Teague, 79 pages (Apr. 1975). Order from NTIS as PB248686.

NBSIR 75-975. **The calibration of an optical flat by interferometric comparison to a master optical flat,** C. P. Reeve, 40 pages (Dec. 1975). Order from NTIS as PB253113.

NBSIR 76-979. **Intercomparison procedures for gage blocks using electromechanical comparators,** J. S. Beers and C. D. Tucker, 23 pages (Jan. 1976). Order from NTIS as PB248992.

NBSIR 76-993. **The calibration of a pentaprism,** C. P. Reeve and R. C. Veale, 33 pages (Jan. 1976). Order from NTIS as PB253227.

NBSIR 76-1019. **Notes on the preparation of silicon density artifacts,** R. M. Schoonover, 11 pages (Feb. 1976). Order from NTIS as PB251944.

NBSIR 76-1142. **Considerations and standards for visual inspection techniques,** G. T. Yonemura, 17 pages (Oct. 1976). Order from NTIS as PB263099.

Nuclear Physics and Radiation Technology

Optical properties of nuclear matter, J. S. O'Connell, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 1, 9-13 (Jan.-Feb. 1976).

Monogr. 154. **The dynamics of fields of higher spin,** R. W. Hayward, *Nat. Bur. Stand. (U.S.), Monogr. 154,* 99 pages (Aug. 1976) SD Catalog No. C13.44:154.

SP456. **Measurements for the safe use of radiation.** Proceedings of an NBS 75th ANNIVERSARY Symposium held at the National Bureau of Standards, Gaithersburg, MD, Mar. 1-4, 1976, S. P. Fivozinsky, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 456,* 437 pages (Nov. 1976) SD Catalog No. C13.10:456.

Historical development of the need for radiation protection and measurements in the United States, L. S. Taylor, *SP456,* pp. 5-11 (Nov. 1976).

The standards laboratory and the radiation measurement system, R. S. Caswell, *SP456,* pp. 13-24 (Nov. 1976).

The federal regulatory agency and the radiation measurement system, R. H. Schneider, *SP456,* pp. 25-29 (Nov. 1976).

State responsibilities and the radiation measurement system, M. W. Parrott, *SP456,* pp. 31-36 (Nov. 1976).

Ionization chamber for absorbed-dose calibration, J. S. Pruitt and R. Loevinger, *SP456,* pp. 37-39 (Nov. 1976).

The development and application of monoenergetic x-ray sources, J. H. Sparrow and C. E. Dick, *SP456,* pp. 41-45 (Nov. 1976).

The design of a mobile radiation calibration laboratory, R. C. Placious and J. C. Humphreys, *SP456,* pp. 47-51 (Nov. 1976).

Automated calibration and recordkeeping system for x-ray survey instruments, T. R. Ohlhaber, F. J. Prevo, and T. L. Miller, *SP456,* pp. 53-57 (Nov. 1976).

Standardization of a nationwide gamma radiation calibration system, E. F. Williams, Jr., P. V. Barrans, and G. H. Brodie, *SP456,* pp. 59-63 (Nov. 1976).

A reliable calibration program for ionizing radiation measurement, A. Jacobsen, *SP456,* pp. 65-69 (Nov. 1976).

AIF-NBS radioactivity measurements assurance program for the radiopharmaceutical industry, R. Collé, *SP456,* pp. 71-76 (Nov. 1976).

American National Standards Institute quality assurance program in radioactivity measurements, C. W. Seidel and J. M. R. Hutchinson, *SP456,* pp. 77-82 (Nov. 1976).

Filtered beams at the NBS reactor, R. B. Schwartz, I. G. Schroder, and E. D. McGarry, *SP456,* pp. 83-85 (Nov. 1976).

229-317 O - 77 - 26

Neutron source calibrations at NBS for calibration checks of neutron radiation instruments, V. Spiegel, *SP456,* pp. 87-89 (Nov. 1976).

Ultrasonic measurements and calibration, H. F. Stewart, M. E. Haran, and B. A. Herman, *SP456,* pp. 91-97 (Nov. 1976).

Methods for the evaluation and calibration of microwave survey instruments, M. L. Swicord, H. I. Bassen, and W. A. Herman, *SP456,* pp. 99-105 (Nov. 1976).

NBS ultraviolet radiometric standards, W. R. Ott, *SP456,* pp. 107-110 (Nov. 1976).

Quality assurance for measurements in therapy, R. J. Shalek, P. Kennedy, M. Stovall, J. H. Cundiff, W. F. Gagnon, W. Grant, III, and W. F. Hanson, *SP456,* pp. 111-118 (Nov. 1976).

Quality assurance measurements in diagnostic radiology, M. P. Siedband, *SP456,* pp. 119-130 (Nov. 1976).

Quality assurance for measurements in nuclear medicine, B. A. Rhodes, W. B. Hladik, and J. H. Gallagher, *SP456,* pp. 131-138 (Nov. 1976).

State and federal regulatory measurement responsibilities around medical facilities, L. H. Lanzl, *SP456,* pp. 139-146 (Nov. 1976).

Nationwide evaluation of x-ray trends (next) program—And radiation measurements in the state, J. W. Shaver, *SP456,* pp. 147-152 (Nov. 1976).

Low level environmental radiation measurements with a plastic scintillation detector system, A. P. Hull and G. S. Levine, *SP456,* pp. 153-157 (Nov. 1976).

Precise environmental gamma-ray measurements utilizing standard Ge(Li) detectors, R. M. Keyser, G. V. Walford, and J. A. Cooper, *SP456,* pp. 159-167 (Nov. 1976).

The minimum-detectable-activity concept, J. C. Lochamy, *SP456,* pp. 169-172 (Nov. 1976).

Use of NBS mixed-radionuclide gamma-ray standards for calibration of Ge(Li) detectors used in the assay of environmental radioactivity, B. M. Coursey, *SP456,* pp. 173-179 (Nov. 1976).

The safety and reliability of decentralized TLD, C. O. Widell, *SP456,* pp. 181-185 (Nov. 1976).

Error analysis of environmental radiation measurements made with integrating detectors, G. de Planque Burke and T. F. Gesell, *SP456,* pp. 187-198 (Nov. 1976).

Radio-frequency electromagnetic radiation from portable and mobile telecommunication transmitters, J. F. Thiel, *SP456,* pp. 199-202 (Nov. 1976).

An automated measurement system for determining environmental radiofrequency field intensities II, R. A. Tell, N. N. Hankin, J. C. Nelson, T. W. Athey, and D. E. Janes, Jr., *SP456,* pp. 203-213 (Nov. 1976).

The measurement of optical radiations: Selected practical considerations, R. W. Peterson, J. M. Coakley, K. Mohan, and R. James, *SP456,* pp. 215-221 (Nov. 1976).

X-ray leakage from conventional and high voltage electron microscopes, D. F. Parsons, V. A. Phillips, and J. S. Lally, *SP456,* pp. 223-224 (Nov. 1976).

Intercomparison of personnel dosimeters, H. W. Dickson, W. F. Fox, and F. F. Haywood, *SP456,* pp. 225-232 (Nov. 1976).

Environmental radiation measurements, J. E. McLaughlin, *SP456,* pp. 233-248 (Nov. 1976).

Environmental measurements and regulatory responsibilities, J. M. Matuszek, *SP456,* pp. 249-261 (Nov. 1976).

Environmental radioactivity standards, A. N. Jarvis and D. G. Easterly, *SP456,* pp. 263-265 (Nov. 1976).

Personnel monitoring measurements, R. V. Griffith, *SP456,* pp. 267-276 (Nov. 1976).

Personnel monitoring performance standards, B. H. Weiss, *SP456,* pp. 277-284 (Nov. 1976).

Optical interferometric measurements of ultrasonic radiation and its applications to medicine, M. E. Haran and H. F. Stewart, *SP456,* pp. 285-297 (Nov. 1976).

Photon mass energy-absorption coefficient air/medium ratios for ionometric dosimetry 0.1 keV to 20 MeV, J. H. Hubbell, *SP456,* pp. 299-306 (Nov. 1976).

Electron dosimetry with ionization chambers, M. J. Berger, S. M. Seltzer, S. R. Domen, and P. J. Lamperti, *SP456,* pp. 307-312 (Nov. 1976).

Dose profiles in tissue and in air for therapeutic electron beams, G. Osman, *SP456,* pp. 313-326 (Nov. 1976).

Calorimetric dose measurements in fast neutron and cobalt-60 gamma-ray fields, J. C. McDonald, J. S. Laughlin, and L. J. Goodman, *SP456,* pp. 327-333 (Nov. 1976).

Scattered radiation from a neutron collimator, F. H. Attix, L. S. August, and P. Shapiro, *SP456,* pp. 335-341 (Nov. 1976).

Dose control in radiation therapy, K. R. Kase, B. E. Bjarngard, B. J. Maddox, and G. K. Svensson, *SP456,* pp. 343-350 (Nov. 1976).

Dosimetry procedures at the Northwest Medical Physics Center, D. Jones, D. Schumacher, and J. Washington, *SP456,* pp. 351-358 (Nov. 1976).

Intercomparison of prescription dose delivery in the New England region, J. S. Blinick, J. Spira, D. Cail, and P. Plazeski, *SP456,* pp. 359-363 (Nov. 1976).

Electron-therapy dosimetry, M. Ehrlich and P. J. Lamperti, *SP456,* pp. 365-370 (Nov. 1976).

Thyroid monitoring and minimizing I-125 uptake, M. M. Gabel, K. W. Price, and G. R. Holeman, *SP456,* pp. 371-379 (Nov. 1976).

Attenuation phantoms for patient exposure measurement during radiographic examinations utilizing phototiming techniques, P. J. P. Lin, *SP456,* pp. 381-388 (Nov. 1976).

Effects of measuring apparatus on x-ray attenuation measurements, T. J. Morgan, L. B. Smith, and Z. R. Hashmi, *SP456,* pp. 389-394 (Nov. 1976).

kVp measurement for dental x-ray units, M. S. Moroz and J. A. Vukan, *SP456,* pp. 395-401 (Nov. 1976).

National ionizing radiation standards, J. E. Leiss, *SP456,* pp. 403-416 (Nov. 1976).

Non-ionizing electromagnetic radiation standardization, R. C. Baird and A. A. Sanders, *SP456,* pp. 417-425 (Nov. 1976).

TN901. **Comparison of theoretical and experimental photoeffect data 0.1 keV to 1.5 MeV,** J. H. Hubbell and W. J. Veigele, *Nat. Bur. Stand. (U.S.), Tech. Note 901,* 43 pages (Apr. 1976) SD Catalog No. C13.46:901.

TN903. **The NIRA computer program package (Photonuclear Data Center),** H. J. Vander Molen and H. M. Gerstenberg, *Nat. Bur. Stand. (U.S.), Tech. Note 903,* 30 pages (Feb. 1976) SD Catalog No. C13.46:903.

Processing and Performance of Materials

SP452. **MFPG—The role of coatings in the prevention of mechanical failures.** Proceedings of the 23d Meeting of the Mechanical Failures Prevention Group, held at the National Bureau of Standards, Gaithersburg, MD, Oct. 29-31, 1975, T. R. Shives and W. A. Willard, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 452,* 199 pages (Sept. 1976) SD Catalog No. C13.10:452.

The friction and wear of polymeric coatings on metal, K. C. Ludema, *SP452,* pp. 3-13 (Sept. 1976).

Performance studies of polymer processed mechanical and structural components, M. J. Devine, *SP452,* pp. 14-24 (Sept. 1976).

Nylon 11 as a lubricant and corrosion preventative coating, R. G. Baker, G. H. Kitchen, and R. R. Wells, *SP452,* pp. 25-30 (Sept. 1976).

Mechanical design concepts for coated nuclear fuel particles, J. M. Tobin, *SP452,* pp. 31-42 (Sept. 1976).

Nickel-phosphorus alloy coatings for wear resistance, C. E. Johnson, F. Ogburn, *SP452,* pp. 45-55 (Sept. 1976).

Chromium deposit structure has a profound influence on properties, W. H. Safranek, *SP452,* pp. 56-63 (Sept. 1976).

Plated coatings for electric contacts, M. Antler, *SP452,* pp. 64-71 (Sept. 1976).

Compatibility effects when soft metals are used as solid lubricants, E. Rabinowicz, *SP452,* pp. 72-83 (Sept. 1976).

Reduction of sliding wear by metallic coatings, S. Jahanmir and N. P. Suh, *SP452,* pp. 84-93 (Sept. 1976).

The search for factors to prevent mechanical failures due to corrosion with solid film lubricants, M. K. Gabel and M. B. Peterson, *SP452,* pp. 97-105 (Sept. 1976).

Rust-inhibited nonreactive perfluorinated polymer greases, J. Messina, *SP452,* pp. 106-119 (Sept. 1976).

The role of coatings in the prevention of erosion damage, A. P. Thiruvengadam and A. A. Hochrein, Jr., *SP452,* pp. 120-123 (Sept. 1976).

Solid film lubricant to prevent fretting damage in titanium engine components, B. D. McConnell, *SP452,* pp. 124-131 (Sept. 1976).

A study of solid lubricated gears at elevated temperatures, A. J. Haltner, D. K. Snediker, K. E. Demorest, and G. C. Marshall, *SP452,* pp. 132-148 (Sept. 1976).

Vapor deposition of wear-resistant coatings, W. J. Wilson, M. F. Browning, and J. M. Blocher, Jr., *SP452,* pp. 151-169 (Sept. 1976).

Barrier films for miniature bearings, M. K. Bernett and H. Ravner, *SP452,* pp. 170-176 (Sept. 1976).

Potential of sputtered coatings for improved gas bearing instrument performance, L. L. Fehrenbacher, B. D. McConnell, C. Pellerin, and K. R. Mecklenburg, *SP452,* pp. 177-186 (Sept. 1976).

Ferrography of polymer formation under lubricated rubbing contact—An exploratory investigation, A. A. Reda, *SP452,* pp. 187-191 (Sept. 1976).

SP462. **Laser induced damage in optical materials: 1976.** Proceedings of a Symposium Sponsored by: National Bureau of Standards, American Society for Testing and Materials, Office of Naval Research, Energy Research and Development Administration, Defense Advanced Research Project Agency, July 13-15, 1976, NBS Boulder, CO, A. J. Glass and A. H. Guenther, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 462,* 410 pages (Dec. 1976) SD Catalog No. C13.10:462.

Thermal distortion thresholds for optical trains handling high pulse powers, H. E. Bennett, *SP462,* pp. 11-24 (Dec. 1976).

Electric fields and power dissipation in windows at oblique incidence, J. H. Apfel, *SP462,* pp. 25-28 (Dec. 1976).

Analysis of laser-induced thermal stresses in laser windows, R. E. Rondeau and D. Ford, *SP462,* pp. 29-35 (Dec. 1976).

Interferometric measurement of laser heated windows, E. Bernal and J. S. Loomis, *SP462,* pp. 36-44 (Dec. 1976).

New materials for chemical laser windows, J. A. Harrington, *SP462,* pp. 45-49 (Dec. 1976).

Studies of absorption in mid IR laser window materials, A. Hordvik, B. Bendow, H. G. Lipson, L. H. Skolnik, and R. N. Brown, *SP462,* pp. 50-57 (Dec. 1976).

Effect of temperature and stress on the refractive index of window materials, A. Feldman, D. Horowitz, and R. M. Waxler, *SP462*, pp. 58-63 (Dec. 1976).

Refractive index and temperature coefficient of refractive index of hot-forged calcium fluoride, M. J. Dodge, *SP462*, pp. 64-68 (Dec. 1976).

Fabrication and properties of laser window materials, R. M. Cannon, H. K. Bowen, A. M. Glaeser, H. J. Mayson, F. A. McClintock, W. M. Sherry, J. B. Vander Sande, and M. F. Yan, *SP462*, pp. 69-81 (Dec. 1976).

Double-doped alkali halide laser windows, H. Posen, N. Klausutis, J. Bruce, J. A. Adamski, J. R. Weiner, and S. A. Kulin, *SP462*, pp. 82-86 (Dec. 1976).

Intermediate temperature (0.5 to 0.7 T_{mp} K) forging of calcium fluoride crystals, R. H. Anderson, B. G. Koepke, and E. Bernal, *SP462*, pp. 87-94 (Dec. 1976).

Forging finished halide optical components, R. H. Anderson, E. Bernal, and R. J. Stokes, *SP462*, pp. 95-99 (Dec. 1976).

Vapor deposition and mechanical properties of CdTe, H. L. Tuller, K. Uematsu, J. B. Vander Sande, E. L. Hall, and H. K. Bowen, *SP462*, pp. 100-118 (Dec. 1976).

Absorbing tellurium inclusions in polycrystalline cadmium telluride: Estimates for extrinsic damage thresholds, H. S. Bennett and C. D. Cantrell, *SP462*, pp. 119-125 (Dec. 1976).

Hot-pressed $CdCr_2S_4$ for Faraday effect isolation at 10.6 μm: Preliminary damage tests, S. D. Jacobs and K. J. Teegarden, *SP462*, pp. 126-135 (Dec. 1976).

Pulsed laser induced damage at the DF laser wavelength, M. Bass, K. M. Leung, C. Tang, and M. J. Soileau, *SP462*, pp. 136-144 (Dec. 1976).

Naval Weapons Center diamond turned optics facility, D. L. Decker and R. E. Cram, *SP462*, pp. 145-148 (Dec. 1976).

10.6 μm pulsed laser damage studies of diamond turned KCl window surfaces, M. J. Soileau, J. M. Bennett, J. O. Porteus, W. Faith, J. Jernigan, and T. T. Saito, *SP462*, pp. 149-157 (Dec. 1976).

Surface, optical and laser damage characteristics of diamond-turned metal mirrors, D. L. Decker, M. J. Soileau, J. O. Porteus, and J. M. Bennett, *SP462*, pp. 158-164 (Dec. 1976).

Character of pulsed laser damage to Al at 10.6 μm inferred from single-crystal targets in vacuum, J. O. Porteus, M. J. Soileau, and C. W. Fountain, *SP462*, pp. 165-180 (Dec. 1976).

Laser-induced damage of mirror and window materials at 10.6 μm, R. Gibbs and R. M. Wood, *SP462*, pp. 181-188 (Dec. 1976).

Absorptance of dielectric enhanced mirrors at 5.3 μm, P. Kraatz, J. R. Buckmelter, and S. J. Holmes, *SP462*, pp. 189-194 (Dec. 1976).

Optical properties of mirrors prepared by ultraclean dc sputter deposition, P. A. Temple, D. K. Burge, and J. M. Bennett, *SP462*, pp. 195-202 (Dec. 1976).

Materials for high-power window and mirror coatings and multilayer-dielectric reflectors, M. Sparks, *SP462*, pp. 203-213 (Dec. 1976).

Alternate materials for infrared window coatings, A. D. Baer, T. M. Donovan, A. K. Green, and G. Turner, *SP462*, pp. 214-220 (Dec. 1976).

Design of three-layer antireflectance coatings, A. D. Baer, *SP462*, pp. 221-229 (Dec. 1976).

Characteristics of plasma polymerized ethane for laser window coating, T. A. Reis, H. Hiratsuka, A. T. Bell, and M. Shen, *SP462*, pp. 230-238 (Dec. 1976).

Epitaxy and optical scattering in TlI films, R. A. Skogman, *SP462*, pp. 239-245 (Dec. 1976).

Thin-film coating evaluation by attenuated total reflection, R. T. Holm and E. D. Palik, *SP462*, pp. 246-252 (Dec. 1976).

ZnSe sputtered coatings, D. A. Walsh and J. A. Detrio, *SP462*, pp. 253-263 (Dec. 1976).

Laser damage studies of low index coating materials at 10.6 μm, M. J. Soileau, A. D. Baer, J. O. Porteus, J. L. Hernigan, W. N. Faith, T. M. Donovan, and A. K. Green, *SP462*, pp. 264-278 (Dec. 1976).

The use of rare earth fluorides as 10.6 μm antireflective coatings, A. Golubovic, J. Fitzgerald, I. Berman, J. Bruce, R. Bradbury, J. J. Comer, W. S. Ewing, and H. G. Lipson, *SP462*, pp. 271-278 (Dec. 1976).

Performance of $Ge_{0.45}Se_{0.55}/As_2S_3$ antireflection coatings at 3.8, 5.3, and 10.6 μm, J. F. Lewis and M. C. Ohmer, *SP462*, pp. 279-282 (Dec. 1976).

AR-coated KCl damage at 10.6 μm, J. A. Detrio, R. D. Petty, M. C. Ohmer, and O. F. Swenson, *SP462*, pp. 283-291 (Dec. 1976).

Spectral dependence of damage resistance of refractory oxide optical coatings, B. E. Newnam and D. H. Gill, *SP462*, pp. 292-300 (Dec. 1976).

The role of electric field strength in laser damage of dielectric multilayers, J. H. Apfel, J. S. Matteucci, B. E. Newnam, and D. H. Gill, *SP462*, pp. 301-309 (Dec. 1976).

Preparation techniques and hydroxyl concentration vs. surface damage threshold, R. A. House, J. R. Bettis, and A. H. Guenther, *SP462*, pp. 310-314 (Dec. 1976).

Laser induced damage to thin films immersed in liquids, A. Balbin-Villaverde and L. G. DeShazer, *SP462*, pp. 315-330 (Dec. 1976).

Dielectric coatings on metal substrates, S. S. Glaros, P. Baker, and D. Milam, *SP462*, pp. 331-337 (Dec. 1976).

Spot size and pulse duration dependence of laser-induced damage, J. R. Bettis, R. A. House, and A. H. Guenther, *SP462*, pp. 338-345 (Dec. 1976).

Re-examination of laser induced breakdown in the alkali halides at 10.6 μm, C. C. Tang, K. M. Leung, and M. Bass, *SP462*, pp. 346-349 (Dec. 1976).

Can a model which describes gas breakdown also describe laser damage to the bulk and surfaces of solid dielectrics, D. Milam, *SP462*, pp. 350-356 (Dec. 1976).

Laser damage to semiconductor materials from 10.6 μm CW CO_2 laser radiation, S. K. Gulati and W. W. Grannemann, *SP462*, pp. 357-364 (Dec. 1976).

Phototransport damage of optical materials, S. M. Wong and D. L. Olson, *SP462*, pp. 365-370 (Dec. 1976).

Resonant defect enhancement of the laser electric field, P. A. Temple and M. J. Soileau, *SP462*, pp. 371-378 (Dec. 1976).

BSS92. **The viscosities of roofing asphalts at application temperatures,** W. J. Rossiter, Jr., and R. G. Mathey, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 92*, 44 pages (Nov. 1976) SD Catalog No. C13.29/2:92.

Surfaces and Interfaces

SP455. **Electrocatalysis on non-metallic surfaces.** Proceedings of a workshop held at the National Bureau of Standards, Gaithersburg, MD, Dec. 9-12, 1975, A. D. Franklin, Ed., *Nat. Bur.*

Stand. (U.S.), Spec. Publ. 455, 372 pages (Nov. 1976) SD Catalog No. C13.10:455.

Electron transfer and electrocatalysis, H. Gerischer, *SP455,* pp. 1-19 (Nov. 1976).

Surface states, chemisorption and catalytic processes on transition metal oxides, T. Wolfram, F. J. Morin, and R. Hurst, *SP455,* pp. 21-52 (Nov. 1976).

Hartree-Fock calculations of hydrogen adsorption on nickel, copper, and magnesium oxide, A. B. Kunz, M. P. Guse, and R. J. Blint, *SP455,* pp. 53-58 (Nov. 1976).

Stark model of the excitonic surface states observed on MgO[1], H. J. Zeiger, V. E. Henrich, and G. Dresselhaus, *SP455,* pp. 59-65 (Nov. 1976).

Quantum chemistry and catalysis, R. P. Messmer and K. H. Johnson, *SP455,* pp. 67-86 (Nov. 1976).

Relationship between electronic structure and catalytic behavior of transition metal carbides, D. R. Jennison, D. L. Klein, A. B. Kunz, K. M. Hall, and W. S. Williams, *SP455,* pp. 87-92 (Nov. 1976).

The study of electrode surfaces by electrochemical methods, B. E. Conway and H. Angerstein-Kozlowska, *SP455,* pp. 107-124 (Nov. 1976).

Electroreflectance study of the defect states in reduced n-type titanium dioxide, S. S. M. Lu, F. H. Pollak, and P. M. Raccah, *SP455,* pp. 125-131 (Nov. 1976).

Electron energy loss spectroscopy of surface states on titanium and vanadium oxides, V. E. Henrich, H. J. Zeiger, and G. Dresselhaus, *SP455,* pp. 133-138 (Nov. 1976).

Dislocations in ZnO as channels for electron transfer from surface species, S. R. Morrison and T. Freund, *SP455,* pp. 139-148 (Nov. 1976).

Characterization of semiconductor electrodes in nonaqueous solvents, S. N. Frank, D. Laser, K. L. Hardee, and A. J. Bard, *SP455,* pp. 149-152 (Nov. 1976).

Chemical theory of chemisorption and catalysis on the surfaces of non-metals, R. L. Burwell, Jr., *SP455,* pp. 155-166 (Nov. 1976).

Electrocatalysis at transition metal oxide and carbide surfaces, P. Stonehart, *SP455,* pp. 167-174 (Nov. 1976).

Adsorption and oxidation of bromide ion on tin oxide electrodes, H. Yoneyama and H. A. Laitinen, *SP455,* pp. 175-181 (Nov. 1976).

Cathodic pyrophosphate-lead dioxide electrode reaction properties, C. O. Huber, T. A. Berger, and R. E. Reim, *SP455,* pp. 183-189 (Nov. 1976).

Electrolysis by foreign metal monolayers, R. R. Adžić, A. R. Despić, D. N. Simić, and D. M. Dražić, *SP455,* pp. 191-200 (Nov. 1976).

Mechanisms of electrochemical reactions on non-metallic surfaces, E. Yeager, *SP455,* pp. 203-219 (Nov. 1976).

Photoelectrolysis of water, J. G. Mavroides, D. I. Tchernev, J. A. Kafalas, and D. F. Kolesar, *SP455,* pp. 221-227 (Nov. 1976).

Electrochemical processes on strontium titanate electrodes, D. M. Tench and D. O. Raleigh, *SP455,* pp. 229-240 (Nov. 1976).

Electrochemical activity of polymeric and monomeric iron phthalocyanines as a function of their spectral properties, A. J. Appleby and M. Savy, *SP455,* pp. 241-251 (Nov. 1976).

Electrocatalytic activity of phthalocyanines for oxygen reduction, R. J. Brodd, V. Z. Leger, R. F. Scarr, and A. Kozawa, *SP455,* pp. 253-258 (Nov. 1976).

Continued growth of anodic oxide films at platinum and the mechanism and catalysis of oxygen evolution, A. Damjanovic, *SP455,* pp. 259-266 (Nov. 1976).

Electrochemical surface reactions on non-metals, R. Memming, *SP455,* pp. 267-280 (Nov. 1976).

Oxygen evolution on semiconducting oxides, A. C. C. Tseung and S. Jasem, *SP455,* pp. 281-288 (Nov. 1976).

Mixed oxides as oxygen electrodes, G. Singh, M. H. Miles, and S. Srinivasan, *SP455,* pp. 289-296 (Nov. 1976).

Surface and electrocatalytic properties of tungsten bronzes, M. F. Weber and H. R. Shanks, *SP455,* pp. 297-303 (Nov. 1976).

The electrochemistry of molybdenum oxides, J. Horkans, M. W. Shafer, and R. Peekema, *SP455,* pp. 305-312 (Nov. 1976).

Titanates as oxygen electrodes, U. Bertocci, M. I. Cohen, J. L. Mullen, and T. Negas, *SP455,* pp. 313-321 (Nov. 1976).

Ionic transport and electronic exchange at solid electrolyte interfaces, M. W. Breiter and G. C. Farrington, *SP455,* pp. 323-340 (Nov. 1976).

Influence of water on beta alumina interfacial ion transport, G. C. Farrington, *SP455,* pp. 341-349 (Nov. 1976).

Overvoltage phenomena in solid-oxide electrolyte cells at elevated temperatures, W. L. Worrell, *SP455,* pp. 351-358 (Nov. 1976).

Thermodynamics and Chemical Kinetics

Relative enthalpy of solid beryllium aluminate (chrysoberyl), $BeO{\cdot}Al_2O_3$, from 1175 to 2025 K, and of liquid beryllium aluminate from 2170 to 2350 K, S. Ishihara and E. D. West, *J. Res. Nat. Bur. Stand. (U.S.),* **80A** (Phys. and Chem.), No. 1, 65-73 (Jan.-Feb. 1976).

SP449. **Chemical kinetics of the gas phase combustion of fuels. (A Bibliography on the Rates and Mechanisms of Oxidation of Aliphatic C_1 to C_{10} Hydrocarbons and of Their Oxygenated Derivatives),** F. Westley, *Nat. Bur. Stand. (U.S.), Spec. Publ. 449,* 138 pages (Oct. 1976) SD Catalog No. C13.10:449.

SP454. **An annotated bibliography of compiled thermodynamic data sources for biochemical and aqueous systems (1930 to 1975). Equilibrium, enthalpy, heat capacity, and entropy data,** G. T. Armstrong and R. N. Goldberg, *Nat. Bur. Stand. (U.S.), Spec. Publ. 454,* 67 pages (Sept. 1976) SD Catalog No. C13.10:454.

TN684. **Thermophysical properties of ethane, from 90 to 600 K at pressures to 700 bar,** R. D. Goodwin, H. M. Roder, and G. C. Straty, *Nat. Bur. Stand. (U.S.), Tech. Note 684,* 326 pages (Aug. 1976) SD Catalog No. C13.46:684.

TN928. **Computer programs for the evaluation of activity and osmotic coefficients,** B. R. Staples and R. L. Nuttall, *Nat. Bur. Stand. (U.S.), Tech. Note 928,* 56 pages (Dec. 1976) SD Catalog No. C13.46:928.

NBSIR 76-1034. **Chemical thermodynamic properties of compounds of sodium, potassium and rubidium: An interim tabulation of selected values,** D. D. Wagman, W. H. Evans, V. B. Parker, and R. H. Schumm, 76 pages (Apr. 1976). Order from NTIS as PB254460.

NBSIR 76-1147. **A combined least sums and least squares approach to the evaluation of thermodynamic data networks,** D. Garvin, V. B. Parker, D. D. Wagman, and W. H. Evans, 41 pages (July 1976). Order from NTIS as PB259637.

Technology Incentives

NBSIR 75-954. **A survey of manufacturers' views on the ETIP procurement experiment. Volume one: Refrigerator-freezers,** P. C. Goodman, 36 pages (Dec. 1975). Order from NTIS as PB253242.

NBSIR 76-983. **A survey of manufacturers' views on the ETIP procurement experiment. Volume two: Water heaters,** P. C. Goodman, 34 pages (Jan. 1976). Order from NTIS as PB251213.

NBSIR 76-997. **Proceedings of procurement practices symposium—Health care, October 14-16, 1975,** J. G. Berke, Ed., 82 pages (Feb. 1976). Order from NTIS as PB254298.

NBSIR 76-1027. **A survey of manufacturers' views on the ETIP procurement experiment. Volume three: Ranges,** P. C. Goodman, 33 pages (Feb. 1976). Order from NTIS as PB253243.

NBSIR 76-1124. **Evaluation system proposal preparation and evaluation procedure,** C. W. N. Thompson, 89 pages (Feb. 1976). Order from NTIS as PB261846.

NBS-GCR-73-3. **Conversion of scientific and technical resources economic challenge—Social opportunity,** E. R. Mottur, 204 pages (Mar. 1971). Order from NTIS as COM 71-00605.

NBS-GCR-75-42. **Technological innovation for civilian, social purposes,** E. R. Mottur, 574 pages (July 1971). Order from NTIS as COM 75-10805.

NBS-GCR-ETIP 73-01. **Study of strategies for market aggregation,** J. D. Lewis and H. S. Kleiman, 253 pages (May 11, 1973). Order from NTIS as COM 73-11373.

NBS-GCR-ETIP 73-02. **Government procurement as an incentive to commercial technology and innovation,** 159 pages (Mar. 1973). Order from NTIS as COM 73-11375.

NBS-GCR-ETIP 73-03. **Technology transfer and technological innovation: Annotated and selected bibliographies,** 107 pages (July 10, 1973). Order from NTIS as COM 73-11374.

NBS-GCR-ETIP 73-04. **Experimental technology incentives program procurement experiment plan 1: Stimulating noise control technology in consumer products through federal government procurement action,** 18 pages (Oct. 1973). Order from NTIS as COM 74-10256.

NBS-GCR-ETIP 73-05. **Experimental technology incentives program procurement experiment plan 2: Stimulating efficiency and noise abatement in room air conditioners through federal government procurement action,** 51 pages (Nov. 1973). Order from NTIS as COM 74-10257.

NBS-GCR-ETIP 73-06. **Experimental technology incentives program procurement experiment plan 3: Stimulating increased efficiency in frostless household refrigerators through federal government procurement action,** 45 pages (Nov. 1973). Order from NTIS as COM 74-10258.

NBS-GCR-ETIP 73-07, Vol. 1. **Development of criteria and an operating procedure for screening government owned patents,** P. G. Dickey, K. D. Brown, R. W. Aaron, and S. A. Lambert, 82 pages (Apr. 30, 1973). Order from NTIS as COM 74-10939.

NBS-GCR-ETIP 73-07, Vol. 2. **Development of criteria and an operating procedure for screening government owned patents,** P. G. Dickey, K. D. Brown, R. W. Aaron, and S. A. Lambert, 316 pages (Apr. 30, 1973). Order from NTIS as COM 74-10940.

NBS-GCR-ETIP 75-01. **Fiber, textile and apparel research—Cotton polyester blends, July 1974-75,** 143 pages (Aug. 1975). Order from NTIS as COM 75-11369.

NBS-GCR-ETIP 76-03. **Federal funding of civilian research and development, Vol. 1. Summary,** 62 pages (Feb. 1976). Order from NTIS as PB251266.

NBS-GCR-ETIP 76-04. **Federal funding of civilian research and development, Vol. 2. Case studies,** 335 pages (Feb. 1976). Order from NTIS as PB251683.

NBS-GCR-ETIP 76-05. **Analysis of federally funded demonstration projects, Vol. 1. Executive summary,** W. S. Baer, L. L. Johnson, and E. W. Merrow, 32 pages (1976). Order from NTIS as PB253108.

NBS-GCR-ETIP 76-06. **Analysis of federally funded demonstration projects, Vol. 2. Final report,** W. S. Baer, L. L. Johnson, and E. W. Merrow, 197 pages (1976). Order from NTIS as PB253918.

NBS-GCR-ETIP 76-08. **An analysis of venture capital market imperfections executive summary,** 46 pages (Feb. 1976). Order from NTIS as PB254078.

NBS-GCR-ETIP 76-09. **Life cycle costing in the procurement of electric ranges,** 27 pages (1976). Order from NTIS as PB253488.

NBS-GCR-ETIP 76-10. **Life cycle costing in the procurement of refrigerator-freezers,** 40 pages (1976). Order from NTIS as PB253260.

NBS-GCR-ETIP 76-11. **An evaluation of the Small Business Administration Innovation Loan Program,** 119 pages (1976). Order from NTIS as PB253115.

NBS-GCR-ETIP 76-12. **An analysis of venture capital market imperfections,** 438 pages (Feb. 1976). Order from NTIS as PB254996.

NBS-GCR-ETIP 76-13. **Life cycle costing, procurement case 1, room air conditioners,** 28 pages (July 1975). Order from NTIS as PB253475.

NBS-GCR-ETIP 76-14. **Life cycle costing, procurement case 2, water heaters,** 24 pages (July 1975). Order from NTIS as PB253476.

NBS-GCR-ETIP 76-15. **Life cycle costing, procurement case 3, gas ranges,** 30 pages (Jan. 1976). Order from NTIS as PB253477.

NBS-GCR-ETIP 76-16. **An experiment on accelerating the writing of nuclear standards conducted for the American National Standards Institute,** N. G. Wittenbrock, 237 pages (Sept. 1975). Order from NTIS as PB256129.

NBS-GCR-ETIP 76-17. **A guide for applying the concepts of life cycle costing to procurements by state and local governments,** 209 pages (1976). Order from NTIS as PB254233.

NBS-GCR-ETIP 76-18. **Value incentive program household goods shipping containers,** 40 pages (July 1976). Order from NTIS as PB256642.

NBS-GCR-ETIP 76-19. **Life cycle costing in the procurement of window air conditioners,** 38 pages (July 1976). Order from NTIS as PB256643.

NBS-GCR-ETIP 76-23. **Value incentive program computer room air conditioning units,** 35 pages (July 1976). Order from NTIS as PB258991.

NBS-GCR-ETIP 76-24. **A framework for analyzing commodity supply restrictions,** 240 pages (1976). Order from NTIS as PB258093.

Other Subjects of General Interest

SP305. Supplement 7. **Publications of the National Bureau of Standards 1975 catalog. A compilation of abstracts and key word and author indexes,** B. L. Hurdle, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 305 Suppl. 7,* 595 pages (June 1976) SD Catalog No. C13.10:305 Suppl. 7.

SP424. **A contribution to computer typesetting techniques: Tables of coordinates for Hershey's repertory of occidental type fonts and graphic symbols,** N. M. Wolcott and J. Hilsenrath, *Nat. Bur. Stand. (U.S.), Spec. Publ. 424,* 173 pages (Apr. 1976) SD Catalog No. C13.10:424.

SP441. **Successful experiences in teaching metric.** A Conference in Celebration of the One Hundredth Anniversary of the Metric Convention, 1875-1975, held at the National Bureau of Standards, Gaithersburg, MD, May 20-21, 1975, J. V. Odom, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 441,* 115 pages (Jan. 1976) SD Catalog No. C13.10:441.

The International System of Units, R. W. Roberts, *SP441,* pp. 1-3 (Jan. 1976).

Principles and practices of teaching the metric system in public schools, G. W. Bright, *SP441,* pp. 4-12 (Jan. 1976).

Metric in general (elementary) education, L. Smith, *SP441,* pp. 13-15 (Jan. 1976).

Metrication and the school librarian, P. Lawrence, *SP441,* pp. 16-17 (Jan. 1976).

Teaching the metric system through television and other audio visual means, N. F. Calhoun, *SP441*, pp. 18-22 (Jan. 1976).

Metric and mathematics education, S. A. Choate, *SP441*, pp. 23-29 (Jan. 1976).

Experiences in teaching the metric system in science classes, B. Logan, *SP441*, pp. 30-42 (Jan. 1976).

Metric gaming, C. R. Trueblood and M. Szabo, *SP441*, pp. 43-50 (Jan. 1976).

Metric in preservice teacher training, J. Lindbeck, *SP441*, pp. 51-54 (Jan. 1976).

Constructing metric education workshops—A model, P. T. Larsen, *SP441*, pp. 55-62 (Jan. 1976).

Metric for the blind, A. Nadash, *SP441*, pp. 63-66 (Jan. 1976).

Metric in sports and physical education, F. Burgee, *SP441*, pp. 67-68 (Jan. 1976).

Metrication and State departments of education, A. V. Buffington, *SP441*, pp. 69-71 (Jan. 1976).

Metrication in a local education agency, T. E. Rowan, *SP441*, pp. 72-76 (Jan. 1976).

Successful experiences in teaching metrics in home economics, C. A. Ford, *SP441*, pp. 81-84 (Jan. 1976).

Successful experiences in teaching metric conference, E. M. Schanbacher, *SP441*, pp. 85-89 (Jan. 1976).

A basis for successful teaching of vocational metric education, R. A. Dieffenderfer, *SP441*, pp. 90-96 (Jan. 1976).

What can we learn from the English and Australian experiences in metric education?, A. B. Chalupsky, *SP441*, pp. 97-100 (Jan. 1976).

SP448. **Automation technology applied to public service.** Proceedings of a Conference on Automation Technology Applied to Public Service, held at the National Bureau of Standards, Gaithersburg, MD, May 21-22, 1974, E. G. Johnsen, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 448*, 87 pages (Sept. 1976) SD Catalog No. C13.10:448.

Introductory address, R. M. Davis, *SP448*, pp. 1-4 (Sept. 1976).

Keynote address: Automation Technology: Key to public service productivity improvement, T. D. Morris, *SP448*, pp. 5-7 (Sept. 1976).

Economic and social view of automation: A labor view of automation technology, M. Roberts, *SP448*, pp. 8-9 (Sept. 1976).

Technology, humanity and the cities, L. H. Blair, *SP448*, pp. 9-10 (Sept. 1976).

Session I: Automation for urban public service operations, J. M. Carlson, C. F. Guarino, W. W. Isman, M. G. Stragier, D. S. Wasserman, and J. McManama, *SP448*, pp. 11-19 (Sept. 1976).

Session II: Automation for occupational welfare, J. H. Stender, R. L. Atwood, W. E. Bradley, W. R. Knowles, and R. J. Straw, *SP448*, pp. 20-28 (Sept. 1976).

Session III: Automation for the handicapped, J. M. Benjamin, Jr., K. R. Ingham, E. Kwatny, W. G. Holsberg, and J. S. Albus, *SP448*, pp. 29-35 (Sept. 1976).

Session IV: Recovery of ocean resources for public benefit, A. Spilhaus, M. G. Johnson, A. Mucciardi, E. J. Beck, R. W. Uhrich, G. Guenther, and R. H. Cassis, Jr., *SP448*, pp. 36-43 (Sept. 1976).

Session V: Recovery of underground resources for public benefit, W. B. Schmidt, W. C. Helt, and B. M. Goldwater, Jr., *SP448*, pp. 44-48 (Sept. 1976).

Session VI: Impact of automation on the public, W. Lepkowski, B. Bova, J. McCarthy, J. S. Albus, D. V. DeSimone, L. K. O'Leary, M. MacCoby, and G. Tyler, *SP448*, pp. 49-59 (Sept. 1976).

Session VII: Automation for transportation, R. H. Cannon, Jr., C. R. Peterson, J. D. Ward, D. Roos, and D. L. Cooper, *SP448*, pp. 60-64 (Sept. 1976).

SP459. **Performance evaluation of programmable robots and manipulators.** Report of a Workshop held at Annapolis, MD, Oct. 23-25, 1975, T. B. Sheridan, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 459*, 213 pages (Oct. 1976) SD Catalog No. C13.10:459.

Evaluation of tools and tasks: Reflections on the problem of specifying robot/manipulator performance, T. B. Sheridan, *SP459*, pp. 27-37 (Oct. 1976).

Performance evaluation of manipulators from a kinematic viewpoint, B. Roth, *SP459*, pp. 39-61 (Oct. 1976).

Performance evaluation of ROMANSY from the viewpoints of mechanics and control, A. E. Kobrinski, *SP459*, pp. 63-68 (Oct. 1976).

Performance measurement and evaluation of general purpose manipulators, R. L. Paul, *SP459*, pp. 69-83 (Oct. 1976).

Manipulator system performance evaluation: Problems and approaches, N. L. Shields, Jr., T. B. Malone, and M. Kirkpatrick, *SP459*, pp. 83-90 (Oct. 1976).

Research on remote manipulation at NASA/AMES research center, W. L. Verplank, *SP459*, pp. 91-95 (Oct. 1976).

Experience and remarks on manipulator evaluation, J. Vertut, *SP459*, pp. 97-112 (Oct. 1976).

Performance evaluation of industrial robots, J. F. Engelberger, *SP459*, pp. 113-119 (Oct. 1976).

Robots for automated production of conventional ammunition, D. A. Morlock, *SP459*, pp. 121-122 (Oct. 1976).

Servicing of industrial robots—The modular concept, M. S. Konstantinov, *SP459*, pp. 123-129 (Oct. 1976).

A computer-aided robot operation systems design (Part 1), Y. Hasegawa, I. Masaki, and M. Iwasawa, *SP459*, pp. 131-139 (Oct. 1976).

Characteristics and evaluation of "Master-Slave Manipulators," D. G. Jelatis, *SP459*, pp. 141-146 (Oct. 1976).

Design and performance requirements for fuel recycle manipulation systems, J. G. Grundmann, *SP459*, pp. 147-154 (Oct. 1976).

Master slave manipulators and remote maintenance at the Oak Ridge National Laboratory, R. G. Jenness and C. D. Wicker, *SP459*, pp. 155-157 (Oct. 1976).

Performance evaluation studies at JPL for space manipulator systems, A. K. Bejczy, *SP459*, pp. 159-174 (Oct. 1976).

Performance measurement for undersea systems, A. J. Pesch and W. R. Bertsche, *SP459*, pp. 175-197 (Oct. 1976).

Contributions to forming criteria for the evaluation of robots and manipulators, M. Vukobratovic, *SP459*, pp. 197-203 (Oct. 1976).

TN896. **NBS Reactor: Summary of activities July 1974 to June 1975,** R. S. Carter, *Nat. Bur. Stand. (U.S.), Tech. Note 896*, 150 pages (Jan. 1976) SD Catalog No. C13.46:896.

6. INDEXES

6.1. HOW TO USE THE INDEXES

In addition to the usual author index, a subject index is provided in the form of a permuted key work index. In this type of index the key words in each publication or paper are arranged by shifting each group of key words along the horizontal printing line so that each key word in turn has an opportunity to appear alphabetically. The user is thus able to locate papers of interest to him through the subject-related words he finds in the key word index.

The index symbols used in the author and key word indexes are explained in the following three tables. These tables also give the pages on which the abstracts of the various publication series begin.

Table A. Symbols for the Periodicals

NBS Journal of Research	Index Symbol			Issue Date	Page Number
	Vol.	Sec.	No.		
Section A	J80	A	1	January–February 1976	37
	J80	A	2	March–April 1976	38
	J80	A	3	May–June 1976	39
	J80	A	4	July–August 1976	40
	J80	A	5 & 6	September–December 1976	44
Section B	J80	B	1	January–March 1976	45
	J80	B	2	April–June 1976	46
	J80	B	3	July–September 1976	47
	J80	B	4	October–December 1976	48

Journal of Physical and Chemical Reference Data	Index Symbol		Issue Date	Page Number
	Vol.	No.		
J. Phys. Chem. Ref. Data	5	1	1976	49
	5	2	1976	50
	5	3	1976	50
	5	4	1976	51

DIMENSIONS/NBS	Index Symbol		Issue Date	Page Number
	Vol.	No.		
DIM	60	1	January 1976	52
DIM	60	2	February 1976	52
DIM	60	3	March 1976	52
DIM	60	4	April 1976	52
DIM	60	5	May 1976	52
DIM	60	6	June 1976	53
DIM	60	7	July 1976	53
DIM	60	8	August 1976	53

6.3. KEY WORD INDEX

A

a posteriori precision; chi-square test; precision; precision of analytical method; ultratrace level; accuracy; analysis of precision; *a priori* error; *a priori* precision; *SP422*, pp. 127-139 (Aug. 1976).

a priori error; *a priori* precision; *a posteriori* precision; chi-square test; precision; precision of analytical method; ultratrace level; accuracy; analysis of precision; *SP422*, pp. 127-139 (Aug. 1976).

a priori precision; *a posteriori* precision; chi-square test; precision; precision of analytical method; ultratrace level; accuracy; analysis of precision; *a priori* error; *SP422*, pp. 127-139 (Aug. 1976).

α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; *16419*.

Ab initio calculation; O_2 absorption; oscillator strength; transition moment; *15872*.

Ab initio potentials; argon oxide; collision-induced emission; rare-gas oxide excimers; *15868*.

ab initio potentials; atom-molecule interactions; curved classical trajectories; HCl, CO, CO_2 with He, Ar; rotation-vibration spectra; semiclassical *S*-matrix; spectral line broadening; *16528*.

Abatement; barrier materials; building materials; children; housing; lead-based paint; lead poisoning; paint removal; *NBSIR 75-974*.

Abatement; building economics; building materials; economic analysis; housing; lead-based paint; lead poisoning; *TN922*.

Abelian summation; ordered spans; random walks; stable distributions; *16011*.

Aberration; electron optics; electron scattering; electrostatic lens; image; low energy; *15913*.

Abnormal loading; alternate path; annotated bibliography; bibliography; building code; building regulations; collapse; failures; progressive collapse; specific resistance; *BSS67*.

Abnormal loading; building regulations; design process; European; progressive collapse; regulatory process; *NBS-GCR-75-48*.

Abrasion; brittle surfaces; chipping fracture; hardness; wear rate; *16335*.

Abrasion; corrosion protection; friction; marine environment; powder coating; salt water; solid lubrication; *SP452*, pp. 25-30 (Sept. 1976).

Abrasive wear; adhesive wear; gear failure; machine component failure; mechanical failure; surface pitting; *SP423*, pp. 55-66 (Apr. 1976).

Absolute; Apollo; composition; isotopic; lithium; potassium; relative; rocks; rubidium; soils; *15869*.

Absolute absorptivities; continuum models; diffuse reflectance; radiative transfer; reflectance spectra; scattering coefficients; statistical models; *J. Res.* **80A** No. 4, 567-583 (1976).

Absolute ampere; fundamental constants; Josephson effect; *15979*.

Absolute cross sections; electron impact; mercury ions; 285-nm radiation; 480-nm radiation; *16588*.

Absolute electrical standards; electrical standards; electrical units; *16166*.

Absolute quantum efficiency; absolute quantum yield; calorimetry; luminescence; photoacoustic spectrometer; piezocalorimeter; transducers; triplet formation; *J. Res.* **80A** No. 3, 413-419 (1976).

Absolute quantum yield; calorimetry; luminescence; photoacoustic spectrometer; piezocalorimeter; transducers; triplet formation; absolute quantum efficiency; *J. Res.* **80A** No. 3, 413-419 (1976).

Absolute (unambiguous) readout; piston; precision attenuator; sensor; waveguide-below-cutoff; *NBSIR 76-833*.

Absolute yield; chemical actinometry; correction factors; luminescence; quantum-flat actinometer; quantum yield; *J. Res.* **80A** No. 3, 409-412 (1976).

Absorbance linearity; accuracy; acidic potassium dichromate solutions; calibration of ultraviolet spectrophotometers; liquid filters; transfer standards; ultraviolet absorbance standards; *J. Res.* **80A** No. 4, 631-636 (1976).

Absorbed dose; calculation; dosimetry; nuclear medicine; radionuclide; radiopharmaceutical; *15977*.

Absorbed dose; calibration; cavity chamber; graphite chamber; ionization chamber; *SP456*, pp. 37-39 (Nov. 1976).

Absorbed dose; calorimeter; calorimetric comparisons; electron beams; *NBSIR 76-1023*.

Absorbed dose; calorimeter; electrons; heat defect in graphite; *16473*.

Absorbed dose; calorimetry; dose distributions; dosimetry; electron beams; holography; interferometry; water phantoms; *15852*.

Absorbed dose; cobalt-60 gamma radiation; computation check; dose interpretation; mailings; results; therapy departments; thermoluminescence dosimeters; uncertainty; water phantom; *J. Res.* **80A** No. 4, 663-668 (1976).

Absorbing inclusions; damage statistics; laser damage; reflectors; ThF_4; thin film; ZnSe; 10.6 μm; *SP435*, pp. 216-229 (Apr. 1976).

Absorptance; antireflectance coating; bandwidth; coating design; multilayer coating; *SP462*, pp. 221-229 (Dec. 1976).

Absorptance; CO laser calorimetry; CO laser mirrors; dielectric-enhanced mirrors; infrared laser mirrors; metal mirrors; reflectance; *SP462*, pp. 189-194 (Dec. 1976).

Absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; *SP453*.

Absorption; antireflection coatings; attenuated total reflection; laser windows; spectroscopic; *SP462*, pp. 246-252 (Dec. 1976).

Absorption; antireflection coatings; germanium selenide; infrared laser windows; *SP462*, pp. 279-282 (Dec. 1976).

Absorption; attenuation; brain; neoplasm; TAST; thermal effects; tissue; tumor; ultrasonic; velocity; *SP453*, pp. 153-163 (Oct. 1976).

Absorption; attenuation; impedance gradient; transient thermal gradients; ultrasonics; velocity; *SP453*, pp. 143-151 (Oct. 1976).

Absorption; attenuation; mammalian tissues; tissue parameters; ultrasound; velocity; *SP453*, pp. 21-28 (Oct. 1976).

Absorption; avalanche ionization; damage morphology; damage statistics; distribution of damage times; photoionization; *SP462*, pp. 350-356 (Dec. 1976).

Absorption; B-stars; C IV; O-stars; Si IV; spectra; stellar; ultraviolet; *16271.*

Absorption; carcinogenic; fluorescence; polycyclic aromatic hydrocarbons; quantum yields; water; *15831.*

Absorption; dielectric layers; irregularities; metallic thin films; microirregularities; overcoating; plasmons; scatter; *J. Res.* **80A** No. 4, 643-658 (1976).

Absorption; electrotransport; ionic segregation; laser; momentum transfer; phototransport; scattering; vacancies; *SP462*, pp. 365-370 (Dec. 1976).

Absorption: extinction coefficients; N_2O_4; NO_2; spectra; temperature effects; *J. Res.* **80A** No. 2, 143-166 (1976).

Absorption; high latitude; ionosphere; ionospheric scattering; irregularity; satellite; scintillation; spread-F; topside; *16641.*

Absorption; intracavity; laser; low density; *16559.*

Absorption coefficients; barothermal gas cell; gas pressure; highly transparent solids; thermal conduction; *15914.*

Absorption coefficients; cylindrical configurations; gas pressure; heat transfer; photoacoustic; transparent materials; *15936.*

Absorption coefficients; heat diffusion equations; highly transparent solids; hydrodynamic equations; optical materials; photoacoustic method; *15971.*

Absorption correction; primary emission; quantitative electron probe analysis; x-ray absorption factor; *15722.*

Absorption cross section; index of refraction; nuclear matter; optical properties; photon; plasma frequency; *J. Res.* **80A** No. 1, 9-13 (1976).

Absorption damage levels; coatings; CVD; hot pressed; sputtered; *SP462*, pp. 253-263 (Dec. 1976).

Absorption isotherm; environmental samples; fluorine; isotope dilution; radionuclides; substoichiometry; *SP422*, pp. 961-982 (Aug. 1976).

Absorption spectrum; band experiment; CF_2; CH_2F_2 photolysis; fluorescence spectrum; matrix isolation; *15908.*

Absorption spectrum; identification atlas; nitric oxide; Rydberg series; *JPCRD* **5**, No. 2, 309-318 (1976).

Abstract; compromise; ineffectiveness; measurements; radiation; regulations; states; *SP456*, pp. 31-36 (Nov. 1976).

Abstract data types; class; cluster; data abstraction; data type; module; programming methods; program modifications; type; *16246.*

Abstracts; Center for Building Technology; key words; publications; *SP457.*

Abstracts; NBS publications; key words; publications; *SP305. Supplement 7.*

Ac bridges; bridges; platinum thermometers; resistance measurements; thermometry; two-stage transformers; *16404.*

Ac Josephson effect; low-temperature voltage divider; superconducting tunnel junctions; voltage standard; *16251.*

A.c. power; cryoresistive; energy transmission economics; helium; hydrogen energy; liquid hydrogen; liquid nitrogen; power transmission cables; safety; slush hydrogen; superconducting; *16629.*

Ac susceptibility; gadolinium sulphate; germanium resistance thermometers; IPTS-68; low temperature scales, 1-83 K; magnetic thermometer; manganous ammonium sulphate; paramagnetic salts; platinum resistance thermometers; ac-dc resistance thermometry; *15903.*

Accelerated atom beam; experimental relativity; laser spectroscopy; laser stabilization; saturated absorption; *15905.*

Accelerated testing; alkyd paints; environmental chamber; exterior exposure; latex paints; nonmercurial fungicides; *16416.*

Accelerated testing; clinical; hazards; legal problem packaging; shipping; stability; standard reference materials; *16110.*

Acceleration measurement: fundamental constant; gravitational attraction; gravitational constant; rotating reference frame; *16222.*

Accelerations; building codes; buildings; deflections; dynamic response; gust factors; structural engineering; wind engineering; wind loads; *15871.*

Accelerators; acoustic facilities; calorimeters; electrical measurements facilities; high pressure facilities; high temperature facilities; spectroscopy facilities; *SP413, 1976 Edition.*

Accelerometer; calibration; electromechanical transducer; galvanometer; galvanometer amplifier; seismic system; seismometer; *NBSIR 76-1089.*

Accelerometer; calibration; FFT; Fourier transform; Fourier transform frequency; mechanical shock; shock generator; *16128.*

Acceptability; coding; costs; data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; *NBS-GCR-74-29.*

Acceptance protocol; performance approach; performance-based plumbing standard; performance statement; plumbing performance criteria; plumbing performance evaluation; plumbing performance; *16654.*

Acceptance testing; compliance testing; laboratory evaluation; performance testing; qualified products lists; testing; *NBSIR 75-719.*

Acceptance tests; AID; Bolivia; CENACO; computing using Spanish; foreign relations; international agreement; lectures; OMNITAB II computing system; technology transfer; terminals; *NBSIR 76-1176.*

Access procedures; command language; computer networks; job control language; macros; minicomputers; protocols; teleprocessing; *TN917.*

Access procedures; computer networks; macros; minicomputers; *16177.*

Accident data; data systems; fabric flammability; FFACTS; fire accidents; fire data systems; fire hazards; fires; hazard analysis; NEISS; plastics flammability; product safety; *16361.*

Accident reduction, skidding; correlation, skid resistance; highway safety; pavement, skid resistance; pavement wetting system, tire-pavement interface forces; wet pavement; *NBSIR 75-972.*

Accident reduction, skidding; correlation, skid resistance; highway safety; measurement, skid resistance; pavement, skid resistance; pavement wetting system; tire-pavement interface forces; wet pavement; *NBSIR 76-1133.*

Accident research; consumer accidents; epidimiology hazards; home safety; methodology; safety; accidents; *NBS-GCR-76-76.*

Accident research; countermeasures; epidimiology; laboratory research; methodology; naturalistic studies; safety; *NBS-GCR-76-75.*

Accidents; accident research; consumer accidents; epidimiology hazards; home safety; methodology; safety; *NBS-GCR-76-76.*

Accidents; buildings; construction; maintenance; research accidents; safety; *16315.*

Accuracy; accurate measurement system; precision; reference methods; standard reference material; systematic errors; *SP422*, pp. 41-63 (Aug. 1976).

Accuracy; acidic potassium dichromate solutions; calibration of ultraviolet spectrophotometers; liquid filters; transfer standards; ultraviolet absorbance standards; absorbance linearity; *J. Res.* **80A** No. 4, 631-636 (1976).

Accuracy; activation analysis; airborne particulates; air filter analysis; atomic absorption; emission spectroscopy; environmental pollutants; intercomparisons; multi-element analysis; trace element analysis; x-ray fluorescence; *SP422*, pp. 173-188 (Aug. 1976).

Accuracy; activation analysis; air filter analysis; analytical quality control; atomic absorption spectrometry; environmen-

tal analysis; fresh water analysis; intercomparisons; precision; round-robin experiments; trace element analysis; *SP422*, pp. 189-197 (Aug. 1976).

Accuracy; activation analysis; copper; gold; hafnium; palladium; platinum; precision; radiochemical separations; silver; *SP422*, pp. 1157-1164 (Aug. 1976).

Accuracy; activation analysis; charged particle irradiation; diffusion; etching; metals; neutron irradiation; recoil; surface effect; *SP422*, pp. 1165-1171 (Aug. 1976).

Accuracy; activation analysis; analytical chemistry; charged particle activation analysis; cross sections; excitation functions; fast neutron activation analysis; fast particle activation analysis; interferences; primary interference reactions; *SP422*, pp. 1189-1214 (Aug. 1976).

Accuracy; analysis; analytical chemistry; sample handling; sampling; trace analysis; *SP422. Volume I and II.*

Accuracy; analysis of precision; *a priori* error; *a priori* precision; *a posteriori* precision; chi-square test; precision; precision of analytical method; ultratrace level; *SP422*, pp. 127-139 (Aug. 1976).

Accuracy; analysts; apparatus; blank; contamination; environment; purity; reagents; *SP422*, pp. 509-539 (Aug. 1976).

Accuracy; analytical bias; reference samples; silicate analysis; *SP422*, pp. 79-89 (Aug. 1976).

Accuracy; analytical chemistry; standard reference material; statistics; syndrome; *SP422*, pp. 123-126 (Aug. 1976).

Accuracy; analytical chemistry; contamination; errors; natural water; sample storage; sampling; *SP422*, pp. 805-836 (Aug. 1976).

Accuracy; anodic stripping voltammetry; arc emission spectroscopy; atomic absorption; environmental analyses; interlaboratory tests; neutron activation analysis; plasma emission; round robin; x-ray fluorescence; *SP422*, pp. 199-210 (Aug. 1976).

Accuracy; antenna; calibration; Cassiopeia A; error analysis; flux density; G/T (system gain/system noise temperature); ground station; radio star; *16499*.

Accuracy; atomic absorption; environment; neutron activation analysis; precision; x-ray fluorescence; *SP422*, pp. 239-245 (Aug. 1976).

Accuracy; Atomic Absorption Spectrometry; Caribbean; precision; Puerto Rico; replicates; sediments; standard; trace elements; *SP422*, pp. 1089-1102 (Aug. 1976).

Accuracy; atomic clocks; clocks; crystal oscillator; frequency standards; stability; survey of clocks; *15719*.

Accuracy; biological materials; data interpretation; standard materials; trace elements; *SP422*, pp. 65-77 (Aug. 1976).

Accuracy; blood lead analyses; clinical chemistry; industrial lead hygiene; interlaboratory correlations; lead hygiene control; occupational exposure standard criteria; occupational health control; precision; trace element analyses; *SP422*, pp. 275-282 (Aug. 1976).

Accuracy; clinical analysis; clinical chemistry; health; precision; *SP422*, pp. 837-850 (Aug. 1976).

Accuracy; conservation; measurements; nondestructive evaluation; productivity; reliability; reproducibility; safety; *16301*.

Accuracy; continuum radiation; electron probe microanalysis; fluorescent excitation; *16392*.

Accuracy; data interpretation; monitoring; water; water quality; *SP422*, pp. 91-107 (Aug. 1976).

Accuracy; drugs; foods; regulation; regulatory agency; *SP422*, pp. 3-8 (Aug. 1976).

Accuracy; flameless atomic absorption; freshwater; interlaboratory comparison; method evaluation; trace metal analysis; *SP422*, pp. 247-265 (Aug. 1976).

Accuracy; measurement; measurement compatibility; National Bureau of Standards; reference materials; standard reference materials; Standard Reference Materials program; *16549*.

Accuracy; optical radiation measurement; radiometry; systematic errors; uncertainties; *16583*.

Accuracy and precision; activation analysis; analytical design; irradiation procedures; radioactivity detection systems; radiochemical separations; sampling and sample handling; *SP422*, pp. 1143-1155 (Aug. 1976).

Accuracy and precision; air; air particulates; air pollution; analysis of air; atmosphere; gaseous pollutants; sampling air; *SP422*, pp. 311-320 (Aug. 1976).

Accuracy and precision; analysis of body fluids; clinical analysis; clinical chemistry; clinical sampling; enzyme analysis; storage of clinical samples; *SP422*, pp. 353-361 (Aug. 1976).

Accuracy and precision; clinical chemistry; quality control; surrogate specimens; trace elements; *SP422*, pp. 35-40 (Aug. 1976).

Accuracy and precision; comparison of trace analytical methods; contamination; rocks and ores; sample preparation; trace element analysis; *SP422*, pp. 773-790 (Aug. 1976).

Accuracy of atomic absorption analytical techniques; accuracy of isotope dilution analytical techniques; errors in lead analyses; lead; lead contamination evaluation and control; lead in animals and plants; pollution, lead; sampling techniques; *SP422*, pp. 321-351 (Aug. 1976).

Accuracy of isotope dilution analytical techniques; errors in lead analyses; lead; lead contamination evaluation and control; lead in animals and plants; pollution, lead; sampling techniques; trace analysis of lead; waters, lead in; *SP422*, pp. 321-351 (Aug. 1976).

Accuracy, precision and specificity of analytical methods; biological and genetic variability; clinical laboratory data; specimen collection; specimen handling; *SP422*, pp. 109-122 (Aug. 1976).

Accurate; blood; concentrations; determination; dilution; electrolyte; isotope; mass spectrometry; serum; *SP422*, pp. 951-960 (Aug. 1976).

Accurate and precise analysis; biological and environmental samples; blanks; homogeneity of lead content; isotope dilution mass spectrometry; lead analysis; *SP422*, pp. 929-935 (Aug. 1976).

Accurate frequency measurement; accurate time measurement; frequency; frequency stability; frequency stability analysis; models of frequency stability; picosecond time difference measurements; *15740*.

Accurate measurement system; precision; reference methods; standard reference material; systematic errors; accuracy; *SP422*, pp. 41-63 (Aug. 1976).

Accurate time measurement; frequency; frequency stability; frequency stability analysis; models of frequency stability; picosecond time difference measurements; accurate frequency measurement; *15740*.

Ac-dc resistance thermometry; ac susceptibility; gadolinium sulphate; germanium resistance thermometers; IPTS-68; low temperature scales, 1-83 K; magnetic thermometer; manganous ammonium sulphate; paramagnetic salts; platinum resistance thermometers; *15903*.

α-cellulose; flame spread; instability; radiant flux; *16107*.

Acetaldehyde; acrolein; formaldehyde; gas chromatography; hydrogen chloride; hydrogen cyanide; pollution; pyrolysis; reactive gas generator; sulfur dioxide; *NBSIR 76-1000*.

Acetaldehyde; internal rotation; interstellar molecules; microwave spectrum; radio astronomy; rotational transitions; *JPCRD* **5**, No. 1, 53-78 (1976).

Acetonitrile; cyclic voltammetry; electrochemistry; nonaqueous; semiconductor; silicon; titanium dioxide; *SP455*, pp. 149-152 (Nov. 1976).

Acidic potassium dichromate solutions; calibration of ultraviolet spectrophotometers; liquid filters; transfer standards; ul-

traviolet absorbance standards; absorbance linearity; accuracy; *J. Res.* **80A** No. 4, 631-636 (1976).
Acidity; contact; decantate; electrode; error; extract; paper; pH; suspension; *NBSIR 75-915.*
Acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; *SP453.*
Acoustic attenuation; acoustic velocity; breast tumor; computerized tomography; heart; reconstruction; refractive index; synthetic focus; tissues; ultrasound; *SP453*, pp. 109-119 (Oct. 1976).
Acoustic calibrators; A-weighting; barometric pressure; crest factor; ground cover; humidity; instrumentation; microphones; sound level meters; statistical control processes; temperature; *TN931.*
Acoustic emission; acoustics; flaw detection; nondestructive inspection; *16269.*
Acoustic emission; aluminum; fatigue cracks; flat bottomed holes; standards; steel; titanium; transducer calibration; ultrasonic reference blocks; *16252.*
Acoustic emission; amorphous polymer; crazing; fatigue; Kaiser's effect; *16417.*
Acoustic emission; Auger electron spectroscopy; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; dopant profiles; electrical properties; electronics; four-probe method; hermeticity; interface states; ion implantation; *SP400-25.*
Acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; charge-coupled device structures; Darlington pairs; deep depletion; dopant profiles; electrical properties; electron beam induced current; *SP400-19.*
Acoustic emission; crack propagation; cyclic conditions; failure times; high temperatures; silicon nitride; slow crack growth; *16064.*
Acoustic emission; dislocations; nondestructive evaluation; spectral analysis; *16602.*
Acoustic emission; macrocracking; porcelain insulators; proof testing; residual strain; *16069.*
Acoustic facilities; calorimeters; electrical measurements facilities; high pressure facilities; high temperature facilities; spectroscopy facilities; accelerators; *SP413, 1976 Edition.*
Acoustic imaging; acoustic microscopy; attenuation; frequency dependence; impedance; microstructural analysis; tissue; ultrasound; velocity; *SP453*, pp. 261-267 (Oct. 1976).
Acoustic impedance; Bragg diffraction; computer processing; frequency-dependent attenuation; internal scattering; myocardial infarction; scattering; surface scattering; tissue characterization; ultrasonic spectroscopy; ultrasound diagnosis; *SP453*, pp. 167-196 (Oct. 1976).
Acoustic microscopy; attenuation; frequency dependence; impedance; microstructural analysis; tissue; ultrasound; velocity; acoustic imaging; *SP453*, pp. 261-267 (Oct. 1976).
Acoustic modelling; acoustics; impact noise; noise; reverberation rooms; room acoustics; sound power; *16433.*
Acoustic probe techniques; infrared window laser absorption; KCl absorption; laser induced damage; surface absorption; *SP435*, pp. 157-163 (Apr. 1976).
Acoustic properties of liquids; acoustics; Knester liquids; normal liquids; sound; *16170.*
Acoustic quantities; electrical quantities; electromagnetic quantities; end-use measurements; ionizing radiation; measurement activities; measurement institutions; mechanical quantities; National Measurement System; optical quantities; thermal quantities; *NBSIR 75-943.*
Acoustic velocity; breast tumor; computerized tomography; heart; reconstruction; refractive index; synthetic focus; tissues; ultrasound; acoustic attenuation; *SP453*, pp. 109-119 (Oct. 1976).
Acoustical emission; fracture mechanics; mortars; polymer impregnated mortars; slow crack growth; *16360.*
Acoustical energy density; acoustics; diffuse sound fields; reflection and interference of sound; room acoustics theory; sound fields; *16318.*
Acoustics; atomic properties; economics; electrical quantities; ionizing radiation; mechanical quantities; national measurement system; optical quantities; surface properties; thermal quantities; time and frequency; *NBSIR 75-947.*
Acoustics; building acoustics; impact noise; noise; structural vibration; *NBS-GCR-75-33.*
Acoustics; coal; earthquakes; geologic faults; mining; tectonics; *NBS-GCR-73-18.*
Acoustics; diffuse sound fields; reflection and interference of sound; room acoustics theory; sound fields; acoustical energy density; *16318.*
Acoustics; environmental conditions; noise measurement; noise (sound); transportation noise; truck; *NBSIR 76-1138.*
Acoustics; flaw detection; nondestructive inspection; acoustic emission; *16269.*
Acoustics; impact noise; noise; reverberation rooms; room acoustics; sound power; acoustic modelling; *16433.*
Acoustics; Knester liquids; normal liquids; sound; acoustic properties of liquids; *16170.*
Acoustics; noise; rating scheme; sound; standards organization; *SP386, 1976 Edition.*
Acoustics; noise measurement; noise (sound); tire noise; transportation noise; truck; *15792.*
Acoustics; noise measurement; noise (sound); tire noise; transportation noise; truck; *16370.*
Acrolein; formaldehyde; gas chromatography; hydrogen chloride; hydrogen cyanide; pollution; pyrolysis; reactive gas generator; sulfur dioxide; acetaldehyde; *NBSIR 76-1000.*
Acrylic resins; chemistry; composite resins; dental materials; hydroxybenzoic acids; pit and fissure sealants; preventive dental materials; *15939.*
Actinide; atomic energy levels; isoelectronic sequence; protactinium; rare earth; sliding spark discharge lamp; spectrum; uranium; *15990.*
Actinium; excitation energy; *U; 5f* electron; *16581.*
Activation analysis; adsorption isotherm; environmental samples; mercury; preconcentration; trace elements; *SP422*, pp. 669-699 (Aug. 1976).
Activation analysis; air filter analysis; analytical quality control; atomic absorption spectrometry; environmental analysis; fresh water analysis; intercomparisons; precision; round-robin experiments; trace element analysis; accuracy; *SP422*, pp. 189-197 (Aug. 1976).
Activation analysis; airborne particulates; air filter analysis; atomic absorption; emission spectroscopy; environmental pollutants; intercomparisons; multi-element analysis; trace element analysis; x-ray fluorescence; accuracy; *SP422*, pp. 173-188 (Aug. 1976).
Activation analysis; analytical design; irradiation procedures; radioactivity detection systems; radiochemical separations; sampling and sample handling; accuracy and precision; *SP422*, pp. 1143-1155 (Aug. 1976).
Activation analysis; analytical chemistry; charged particle activation analysis; cross sections; excitation functions; fast neutron activation analysis; fast particle activation analysis; interferences; primary interference reactions; *SP422*, pp. 1189-1214 (Aug. 1976).
Activation analysis; charged particle irradiation; diffusion;

etching; metals; neutron irradiation; recoil; surface effect; accuracy; *SP422*, pp. 1165-1171 (Aug. 1976).
Activation analysis; charged particle; cyclotron; method evaluation; multielemental analysis; *SP422*, pp. 1215-1232 (Aug. 1976).
Activation analysis; copper; gold; hafnium; palladium; platinum; precision; radiochemical separations; silver; accuracy; *SP422*, pp. 1157-1164 (Aug. 1976).
Activation analysis; crystal structure; diffraction; isotopes; molecular dynamics; neutron; nuclear reactor; radiation; *TN896*.
Activation energy; bond dissociation energy; computer programs; explosive sensitivity tests; heat of decomposition; oxygen balance; *15957*.
Active; chemistry; dioxide; heterogeneous; manganese; organic; oxidation; *15902*.
Active; manganese dioxide; organic chemistry; oxidation; reagent; review; *15880*.
Active devices; hot spots; laser scanning; logic flow observation; LSI testing; nondestructive test; nonlinearity measurement; UHF transistor measurement; *15781*.
Active devices; hot-spot behavior; laser scanning; nondestructive testing; silicon optical absorption coefficient; temperature mapping; *16577*.
Active devices; laser scanning; logic flow observation; LSI testing; measurement of operating margins; nondestructive tests; P-MOS shift register; *15833*.
Activity coefficients; aqueous; computer programs; data evaluation; electrolytes; electromotive force; isopiestic method; osmotic coefficients; nonlinear least squares; thermodynamic properties; vapor pressure; *TN928*.
Acutance; contrast transfer function; edge gradient; image quality; light equivalent background; light induced background; limit resolution; line spread function; optical transfer function; point spread function; *16197*.
Adaptive control; computer control; control theory; hierarchical control; man-machine communication and automation; *16175*.
Adatom; binding energy; field ion microscope; surface; *16543*.
Add-on films; information storage; microforms; transparent electrophotographic material; *NBSIR 76-991*.
Adenosine 5′-triphosphate; biochemistry; coupled equilibrium; enzyme catalyzed reactions; glucose; heat measurement; hexokinase; magnesium; metabolic processes; microcalorimetry; thermochemistry; thermodynamics; *16385*.
Adherence; diamond machining; dielectric mirror; electroplating; laser damage resistance; stress relief; *SP435*, pp. 66-74 (Apr. 1976).
Adhesion; adsorption; alloys; composites; dental; grafting; investments; polymer; resin; wear; *NBSIR 76-1095*.
Adhesion; cavitation; coatings; design charts; elastomers; erosion; Hopkinson pressure bar apparatus; impedances; mismatching; stress wave interactions; substrates; tearing; vibratory apparatus; *SP452*, pp. 120-123 (Sept. 1976).
Adhesion; coatings; friction; metal; polymers; wear; *SP452*, pp. 3-13 (Sept. 1976).
Adhesion effect; laser induced damage; optical probe technique; thin film; time resolved damage; *SP435*, pp. 284-288 (Apr. 1976).
Adhesive wear; gear failure; machine component failure; mechanical failure; surface pitting; abrasive wear; *SP423*, pp. 55-66 (Apr. 1976).
Adhesive-bonded joints; bonded joints; double-lap joint analysis; finite element analysis; joining; joints; single-lap joint analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; *NBSIR 75-957*.
Adiabatic collisions; charge transfer; nonresonant; potential curves; resonant; spin exchange; *15875*.
Administrative experiment; American National Standards Institute; Experimental Technology Incentives Program; Nuclear Regulatory Commission; standards development; technological change; *NBS-GCR-ETIP 76-16*.
Admittance; current; impedance; phase angles; power; reflection coefficient; six-port; voltage; *15800*.
Admixture; anharmonicities; branching ratios; electron scattering; phonons; reorientation effect; *16508*.
Adobe; cane; earthquake; housing; Peru; technical aid; *SP444*, pp. VI-16—VI-24 (Apr. 1976).
ADP; ADP-ribose; chromatography; impurities in NADH preparations; NADH stability; preparative chromatography on DEAE-cellulose; spectrophotometric properties of pure NADH; *16316*.
ADP; COBOL; Federal ADP installations; Federal Standard COBOL; impact evaluation; sample; software management; survey; *NBSIR 76-1100*.
ADP security; computer networks; controlled accessibility; encryption; evaluation criteria; key; password; personal identification; terminals; verification; *16013*.
ADP standards; BASIC; compilers; compiler validation; computer programming; formal language; programming language standards; *NBS-GCR-73-17*.
ADP-ribose; chromatography; impurities in NADH preparations; NADH stability; preparative chromatography on DEAE-cellulose; spectrophotometric properties of pure NADH; ADP; *16316*.
Adriatic Sea; cadmium; copper; electrochemical analysis; heavy metals; lead; seawater analysis; speciation; stability of water samples; zinc; *SP422*, pp. 917-928 (Aug. 1976).
Adsorbate; chemisorption; ruthenium; ultraviolet photoelectron spectroscopy; x-ray photoelectron spectroscopy; *15814*.
Adsorption; adsorption on mercury; desorption; polymers; polystyrene; radiotracer measurements; rates of adsorption; surfaces; *15853*.
Adsorption; alloys; composites; dental; grafting; investments; polymer; resin; wear; adhesion; *NBSIR 76-1095*.
Adsorption; angular distributions; photoemission; photoionization; *15748*.
Adsorption; anodic oxidation; electrocatalysis; semiconductor electrode; tin oxide electrode; transparent electrode; *SP455*, pp. 175-181 (Nov. 1976).
Adsorption; blood protein; bound fraction; ellipsometry; implants; polymer adsorption; protein adsorption; synthetic implants; *NBSIR 75-667*.
Adsorption; blood protein; bound fraction; ellipsometry; implants; polymer adsorption; protein adsorption; synthetic implants; *NBSIR 76-1017*.
Adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; *16419*.
Adsorption; carbon monoxide; chemisorption; desorption; photoelectron spectroscopy; photoemission; single crystal; tungsten; ultraviolet photoelectron spectroscopy; virgin CO; *15851*.
Adsorption; catalysis; copper hydride; magnesium oxide; molecular structure; nickel hydride; *SP455*, pp. 53-58 (Nov. 1976).
Adsorption; catalysis; electronic structure; surface states; transition metal carbide; *SP455*, pp. 87-92 (Nov. 1976).
Adsorption; chemisorption; CO; cyclotron resonance; electron cyclotron resonance; magnetic field; microwave discharge; photoemission; tungsten; ultraviolet photoemission; *16016*.
Adsorption; chemisorption; electronic properties of solids; molecules; surfaces; *15758*.

Adsorption; copper; cupric ion; flow cell; ion-selective electrode; seawater analysis; *SP422*, pp. 899-915 (Aug. 1976).

Adsorption; electron gas; photoemission; relaxation energy; *16421*.

Adsorption; electron spectroscopy; ligand-field splitting; surface excitons; surface states; transition-metal oxides; *SP455*, pp. 133-138 (Nov. 1976).

Adsorption; nitrogen; physical adsorption; tungsten; work function; *16460*.

Adsorption; nonbiological transformation; nonbiological transport; pollutant photochemistry; pollutants; soil pollution; solar spectrum; water pollution; *NBSIR 76-1130*.

Adsorption isotherm; environmental samples; mercury; preconcentration; trace elements; activation analysis; *SP422*, pp. 669-699 (Aug. 1976).

Adsorption losses; biological systems; chromium; stability; storage containers; *SP422*, pp. 611-619 (Aug. 1976).

Adsorption on mercury; desorption; polymers; polystyrene; radiotracer measurements; rates of adsorption; surfaces; adsorption; *15853*.

Aerodynamics; air flow; flow measurement; fluid flow; fluid metering; hydraulics; *NBSIR 75-930*.

Aerodynamics; boundary layers; buildings; codes and standards; wind loads; wind tunnels; *SP444*, pp. II-21—II-51 (Apr. 1976)

Aerosol; California aerosol monitoring program; elemental analysis; ion beam analysis; monitoring; particle sizing; time resolution; *SP422*, pp. 1119-1136 (Aug. 1976).

Aerosols; dusts; light-scattering; Mie theory; particles Rayleigh scattering; *NBSIR 76-1037*.

Aerosols; ionization chambers; light attenuation; scattered light; smoke detectors; test methods; *NBSIR 76-1037*.

Aggregation, market; market aggregation; tool, market; *NBS-GCR-ETIP 73-01*.

Aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; *16158*.

Aging test; building elements and materials; degradation factors; durability; property measurement test; standard test methods; *NBSIR 75-955*.

Agriculture; computer control; position sensors; RF interferometer; *16143*.

AID; assistance; certification programs; education of metrologists; industrializing nations; LDC's; metrology; *NBSIR 76-988*.

AID; Bolivia; CENACO; computing using Spanish; foreign relations; international agreement; lectures; OMNITAB II computing system; technology transfer; terminals; acceptance tests; *NBSIR 76-1176*.

Air; air particulates; air pollution; analysis of air; atmosphere; gaseous pollutants; sampling air; accuracy and precision; *SP422*, pp. 311-320 (Aug. 1976).

Air; argon; hydrogen; ionized gases; nitrogen; oxygen; thermodynamic properties; *16167*.

Air; building codes; computer tapes; energy; fire; helmets; mobile homes; phase diagrams; tire pressure; *DIM/NBS* **60,** No. 12, 1-24 (1976).

Air; gases; high density; mixtures; thermodynamic properties; *16455*.

Air analysis; air sampling; gas analysis; industrial hygiene; phosphine; sorber; work atmosphere; *NBSIR 75-977*.

Air analysis; air sampling; gas analysis; hydrogen cyanide; industrial hygiene; ion selective electrode; sodium hydroxide; work atmosphere; *NBSIR 76-998*.

Air analysis; analytical blank; gas chromatography; ocean biota analysis; phthalate trace analysis; *SP422*, pp. 701-708 (Aug. 1976).

Air and water quality; energy; pollutants; standard reference materials; *16157*.

Air conditioners; attic fans; basic research; chemical thermodynamics; door security; Elliot Richardson; energy conservation; engineering; fashion; flammability; laser measurement; science; *DIM/NBS* **60,** No. 6, 1-24 (1976).

Air conditioning criteria; human comfort; physiological indices; predicted indoor habitability index (PIHI); weather building human systems; *16152*.

Air constituents; critical region parameters; ethylene; heavy noble gases; helium; linear model; methane; NBS equation; scaling laws; statistical analysis; steam; universality; *JPCRD* **5,** No. 1, 1-52 (1976).

Air filter analysis; analytical quality control; atomic absorption spectrometry; environmental analysis; fresh water analysis; intercomparisons; precision; round-robin experiments; trace element analysis; accuracy; activation analysis; *SP422*, pp. 189-197 (Aug. 1976).

Air filter analysis; atomic absorption; emission spectroscopy; environmental pollutants; intercomparisons; multi-element analysis; trace element analysis; x-ray fluorescence; accuracy; activation analysis; airborne particulates; *SP422*, pp. 173-188 (Aug. 1976).

Air flow; flow measurement; fluid flow; fluid metering; hydraulics; aerodynamics; *NBSIR 75-930*.

Air flow rate; electrical, mechanical and thermal hazards; hair dryer/stylers; heat flux; safety; technical analysis; temperature; *NBSIR 76-1112*.

Air impedance; compliant surface; drag reduction; membranes; tension; vibrating membranes; *16625*.

Air infiltration; energy conservation; measurement techniques; ventilation of office buildings; *16342*.

Air infiltration instrumentation; air infiltration measurement; building ventilation rates; sulfur hexafluoride tracer; *TN898*.

Air infiltration measurement; building ventilation rates; sulfur hexafluoride tracer; air infiltration instrumentation; *TN898*.

Air infiltration measurement; air leakage measurement; mobile home tightness; sulfur hexafluoride tracer measurement; *NBSIR 76-1063*.

Air leakage; building design; energy conservation; fenestration; HVAC systems; illumination; insulation; lighting; performance standard; thermal performance; ventilation; water heating; *NBSIR 74-452*.

Air leakage measurement; mobile home tightness; sulfur hexafluoride tracer measurement; air infiltration measurement; *NBSIR 76-1063*.

Air particulates; air pollution; analysis of air; atmosphere; gaseous pollutants; sampling air; accuracy and precision; air; *SP422*, pp. 311-320 (Aug. 1976).

Air particulates; blood; chemistry; computer graphics; geochemistry; medicine; pattern recognition; trace elements; *SP422*, pp. 151-162 (Aug. 1976).

Air pollution; analysis of air; atmosphere; gaseous pollutants; sampling air; accuracy and precision; air; air particulates; *SP422*, pp. 311-320 (Aug. 1976).

Air pollution; analyzing; gas analysis; gases; emission; monitors; standards; *15982*.

Air pollution; calibration; evaluation; inter-calibration; quality control; standards; *15978*.

Air pollution; carbon monoxide; gas analysis; gas standards; nitric oxide; nitrogen dioxide; sulfur dioxide; *15972*.

Air quality; intermittent operation; maximum allowable concentration of CO_2; New York City schools; ventilation; *16550*.

Air quality measurements; improved resolution spectroscopy; infrared frequency measurements; infrared spectrometer; spin flip laser; tunable IR laser; *TN670*.

Air sampling; atomic absorption spectrophotometry; high temperature ashing; trace elements; *SP422*, pp. 1053-1061 (Aug. 1976).
Air sampling; gas analysis; hydrogen cyanide; industrial hygiene; ion selective electrode; sodium hydroxide; work atmosphere; air analysis; *NBSIR 76-998*.
Air sampling; gas analysis; industrial hygiene; phosphine; sorber; work atmosphere; air analysis; *NBSIR 75-977*.
Air separation; electrical power generation; energy recovery; hydrogen; liquefaction energy; *15878*.
Air traffic control models; altimetry; altitude; aviation; collision risk; error analysis; mathematical models; safety; separation; vertical separation; aircraft; air transportation; *NBSIR 76-1067*.
Air transportation; air traffic control models; altimetry; altitude; aviation; collision risk; error analysis; mathematical models; safety; separation; vertical separation; aircraft; *NBSIR 76-1067*.
Airborne particulates; air filter analysis; atomic absorption; emission spectroscopy; environmental pollutants; intercomparisons; multi-element analysis; trace element analysis; x-ray fluorescence; accuracy; activation analysis; *SP422*, pp. 173-188 (Aug. 1976).
Airborne and structure-borne sounds; aircraft noise intrusion; annoyance; appliance noise; health and hearing hazards; household noise; legal and community action; loudness; noise control and abatement; traffic noise; *H119*.
Airborne sound transmission; architectural acoustics; building acoustics; sound reduction index; sound transmission loss; transmission loss; *15708*.
Air-conditioning; heating; *16336*.
Aircraft; air transportation; air traffic control models; altimetry; altitude; aviation; collision risk; error analysis; mathematical models; safety; separation; vertical separation; *NBSIR 76-1067*.
Aircraft component failure; continuous wave holograms; crack detection; holographic techniques; pulsed laser holograms; stress corrosion cracking; ultrasonic inspection; *SP423*, pp. 93-103 (Apr. 1976).
Aircraft engine bearings; antifriction bearings; bearing failure; bearing failure modes; bearing inspection; bearing reclamation; bearing recycling; *SP423*, pp. 87-91 (Apr. 1976).
Aircraft fires; fire hazard; flash fire; polyurethane; pyrolysis; *NBSIR 75-757*.
Aircraft navigation systems; digital frequency synthesis; national standards; precision audiofrequency signal generation; precision FM signal generation; precision phase angle generation; radio navigation; VOR; *16530*.
Aircraft noise intrusion; annoyance; appliance noise; health and hearing hazards; household noise; legal and community action; loudness; noise control and abatement; traffic noise; airborne and structure-borne sounds; *H119*.
Airglow; atomic oxygen; cascade radiation; emission cross section; radiation trapping; *15927*.
Al mirrors; Auger spectroscopy; damage morphology; electron emission; electron imaging; ion emission; laser-induced damage; surface characterization; surface temperature; *SP435*, pp. 207-215 (Apr. 1976).
Alarm; audio alarm; burglar alarm; intrusion alarm; intrusion detector; sound sensing; standard; *16367*.
Alarm signals; hearing; loudness functions; masking; sirens; speech recognition; traffic noise; *16573*.
Albedo; angular distribution; backscatter; charged particles; Monte Carlo; reflection; *16097*.
Albedo; collimation; dosimetry; ion chambers; n-γ dosimetry; neutrons; scattering; *SP456*, pp. 335-341 (Nov. 1976).
Alcohols; chemical activation; nonequilibrium; oxygen atoms; RRKM; thermal decomposition; *15881*.
Alcohols; heats of formation; hydroxy-alkyl radicals; shock tube; thermal decomposition; 2,3-dimethylbutanol-2; 3,3-dimethylbutanol-2; *15904*.
Algebraic; cones; faces; Jordan-equivalent; matrices; polyhedral; *16044*.
Algebraic numbers; conjugates; roots of unity; *J. Res.* **80B** No. 1, 1-4 (1976).
Algorithm; ASHRAE; buildings; computer; energy calculation; heat transfer; heating and cooling loads; response factor; *16630*.
Algorithm; graph; matroid; network; operations research; *J. Res.* **80B** No. 3, 337-342 (1976).
Alignment; stresses; tension tests; *16324*.
Alkali antimonates; crystal growth; ionic conductors; potassium antimonate; sodium antimonate; sodium antimony oxyfluoride; *J. Res.* **80A** Nos. 5 and 6, 761-774 (1976).
Alkali atoms; atomic beam deflection; atom surface potential; gold surfaces; Lifshitz theory; Van der Waals forces; *15953*.
Alkali halide crystals; laser induced damage; RAP grown materials; *SP462*, pp. 346-349 (Dec. 1976).
Alkali halides; antireflectance coating; chalcogenide glasses; infrared optical properties; laser damage; optical absorption; optical scattering; thin-film coating; *SP462*, pp. 214-220 (Dec. 1976).
Alkali halides; antireflection coatings; coatings; KCl; laser damage; *SP462*, pp. 283-291 (Dec. 1976).
Alkali halides; bulk damage; longitudinal mode control; pulsed 10.6 μm laser damage; RAP materials; transmitted pulse cutoff; variable pulse duration; *SP435*, pp. 118-125 (Apr. 1976).
Alkali halides; collision chains; halogen emission; intrinsic damage; multi-photon absorption; *SP435*, pp. 366-368 (Apr. 1976).
Alkali halides; optical constants; refractive index; temperature coefficient of refractive index; *JPCRD* **5**, No. 2, 329-528 (1976).
Alkali ions; calcium; charge exchange; charge transfer; cross section calculations; ion-atom collisions; rare-gas ions; uranium; *16126*.
Alkali metal-noble gas vapors; gas vapors; metal-noble gas vapors; vapors, gas; *16217*.
Alkali-halide; KCl; laser windows; optical figure; polishing; scattered light; surface absorption; *SP435*, pp. 20-28 (Apr. 1976).
Alkali-halide; negative ions; photoelectron spectroscopy; polar molecules; *15791*.
Alkali-halides; alkaline-earth fluorides; bulk damage; focal spot diameter; inclusion damage; interference ripples; pulsed DF laser damage; sapphire; scattering; waveform distortion; *SP462*, pp. 136-144 (Dec. 1976).
Alkaline-earth fluorides; bulk damage; focal spot diameter; inclusion damage; interference ripples; pulsed DF laser damage; sapphire; scattering; waveform distortion; alkali-halides; *SP462*, pp. 136-144 (Dec. 1976).
Alkane; chemical shift tensor; methylene; NMR; ^{13}C; *16041*.
Alkane ions; alkanes; charge transfer; ion-cyclotron resonance; ion-molecule reactions; ionization potentials; rate constants; *16506*.
Alkanes; charge transfer; ion-cyclotron resonance; ion-molecule reactions; ionization potentials; rate constants; alkane ions; *16506*.
Alkanes; longitudinal acoustical mode; methyl group branches; polyethylene; Raman spectroscopy; *16279*.
Alkyd paints; environmental chamber; exterior exposure; latex paints; nonmercurial fungicides; accelerated testing; *16416*.
Alkyl halides; antimony; arsenic; environment; kinetics; methylation; nucleophilic reactivity; onium salts; polar solvents; pollutants; quaternization; *16628A*.

Alloy; austenite; electron microscopy; iron-nickel; martensite; meteorite; Tishomingo; *15764.*
Alloy; boundary layer; fluid flow; interface; solidification; stability; *15766.*
Alloy; copper; cryogenic; iron; oxide; resistivity; remanance; susceptibility; *16632.*
Alloy; metallurgy; phase diagram; *16312.*
Alloying; inclusions; low temperature; rolling; ships; steel; welding; *16145.*
Alloys; aluminum; catalysis; hydrogenation; iron; Mössbauer spectra; zinc; *16537.*
Alloys; aluminum; copper-aluminum; nonisothermal diffusion; silver-aluminum; thermomigration; vacancies; *15774.*
Alloys; anisotropy; interface kinetics; solidification; stability; surface tension; *16213.*
Alloys; cobalt; copper; diffusion; electromigration; iron; nickel; palladium; platinum; rhodium; ruthenium; thermomigration; *JPCRD* **5,** No. 1, 103-200 (1976).
Alloys; coefficients of thermal expansion; compilation; critical evaluation; elements; thermal expansion; *16005.*
Alloys; composites; dental; grafting; investments; polymer; resin; wear; adhesion; adsorption; *NBSIR 76-1095.*
Alloys; copper; electronic density of states; lanthanum; nickel; nuclear magnetic resonance; platinum; x-ray photoemission; *15768.*
Alloys; corrosion; metallurgically-bonded; metals; plastic-bonded; soils; telephone cables; underground; *16352.*
AlO_2; Al_2O_3; emissivity; evaporation coefficient; Langmuir vaporization; optical pyrometry; radiation heating; vapor pressures; *16540.*
Alpha particle; beta particle; gamma-ray; radioactivity; sediment; standard; x ray; *15933.*
Alpha particle tracks; fission radiography; solid dielectric track recorders; ^{239}Pu track; *SP422,* pp. 1132-1142 (Aug. 1976).
Alpha particles; backscattering; gadolinium-148; polonium-210; self absorption; uranium-oxide; *15807.*
Alpha particles; backscattering; disintegration rate; ranges; self-absorption; uranium oxide; *15808.*
Alpha particles; boron; ion microprobe mass analyzer; nuclear track technique; standard reference material; steel; *15789.*
Alphabets; COM; computerized typesetting; digital plotting; graphics; Hershey character set; plotting; type fonts; typesetting; vectorized characters; *SP424.*
Alphanumeric symbols; AUTODIN (Automatic Digital Network); JOSS; keyboards; MAC project; *NBS-GCR-74-28.*
Alternate path; annotated bibliography; bibliography; building code; building regulations; collapse; failures; progressive collapse; specific resistance; abnormal loading; *BSS67.*
Altimetry; altitude; aviation; collision risk; error analysis; mathematical models; safety; separation; vertical separation; aircraft; air transportation; air traffic control models; *NBSIR 76-1067.*
Altitude; aviation; collision risk; error analysis; mathematical models; safety; separation; vertical separation; aircraft; air transportation; air traffic control models; altimetry; *NBSIR 76-1067.*
Aluminum; argon; atomic transition probabilities; beryllium; boron; carbon; chlorine; helium; hydrogen; lithium; magnesium; nitrogen; oxygen potassium; sodium; *16164.*
Aluminum; catalysis; hydrogenation; iron; Mössbauer spectra; zinc; alloys; *16537.*
Aluminum; copper; flash desorption spectroscopy; gold; reflectance; silver; sputter deposition; *SP462,* pp. 195-202 (Dec. 1976).
Aluminum; copper-aluminum; nonisothermal diffusion; silver-aluminum; thermomigration; vacancies; alloys; *15774.*
Aluminum; fatigue cracks; flat bottomed holes; standards; steel; titanium; transducer calibration; ultrasonic reference blocks; acoustic emission; *16252.*
Aluminum alloys; composites; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; *NBSIR 76-839.*
Aluminum alloys; composites; elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; *NBSIR 76-848.*
Aluminum Association; ASTM; industrial atmosphere; round robin tests; seacoast atmosphere; standard; stress-corrosion; 3.5 percent NaCl; 7XXX aluminum alloys; *16656.*
Aluminum bulkhead; combustion gases; fire endurance; insulation; intumescent paint; potential heat; reinforced plastic; small furnace test; smoke; *NBSIR 76-1012.*
Aluminum oxide; microhardness; plastic deformation; slip; transmission electron microscopy; twinning; *15825.*
Aluminum ultrasonic reference standards; ASTM-type reference standards; calibration; interim reference standard; longitudinal beam; measurement system; nondestructive evaluation; pulse-echo; ultrasonics; *TN924.*
Aluminum ultrasonic standards; ASTM-type reference standards; calibration; fabrication variables; immersion testing; interim reference standard; longitudinal waves; metallurgical variables; nondestructive evaluation; pulse echo; steel ultrasonic standards; *NBSIR 76-984.*
Aluminum wire; nondispersive x-ray analysis; overheated receptacle; scanning electron microscope; *16317.*
Aluminum wire; splices; terminals; *NBSIR 76-1039.*
Always convergent algorithms; exponentially distributed points; facility location; location theory; normally distributed points; numerical analysis; optimization; stochastic Weber problem; *J. Res.* **80B** No. 1, 53-73 (1976).
Al_2O_3; complex equilibria; convective diffusion; evaporative rate; purification (evaporative); solutal-capillary; thermal capillary convection; vacuum vaporization; *15968.*
Al_2O_3; emissivity; evaporation coefficient; Langmuir vaporization; optical pyrometry; radiation heating; vapor pressures; AlO_2; *16540.*
Amalgam; composite materials; dental gold alloys; dental research; panoramic x ray; silicate cement; turbine handpiece; *16212.*
Ambient air; automotive emissions; laser magnetic resonance technique; stack emissions; *16109.*
Ambient pressure probe; omnidirectional pressure probe; pressure probe shroud; static pressure; weatherproof pressure probe; wind field pressure measurements; *U.S. Patent 3,950,995.*
Ambient temperature index; edge-heat-loss; errors; guarded-hot-plate apparatus; line-heat-source; thermal conductivity; *16084.*
American National Standards; American National Standards Institute; data; data base systems; data elements; data management; data processing; Federal Information Processing Standards; information interchange; information processing; *NBSIR 76-1015.*
American National Standards; computers; data; data elements; data processing; information; information processing; International Standards; U.S. Government; *FIPS PUB 45.*
American National Standards Institute; data; data base systems; data elements; data management; data processing; Federal Information Processing Standards; information interchange; information processing; information systems; *NBSIR 76-1015.*
American National Standards Institute; Experimental Technology Incentives Program; Nuclear Regulatory Commission;

standards development; technological change; administrative experiment; *NBS-GCR-ETIP 76-16.*

Amides; carbon-13 magnetic resonance; chemical shifts; cis and trans isomers; peptides; proline; ring conformation; substituent effects; *16235.*

Aminocoumarins; carbazine dyes; deuterium effect; fluorescence quantum yield; laser dyes; molecular structure; oxazine dyes; quenching; xanthene dyes; *J. Res.* **80A** No. 3, 421-428 (1976).

Ammonia; appearance potential; autoionization; deuterated species; enthalpy of formation; ionization potential; NH_2^+; OH^+; photoionization; predissociation; Rydberg states; *16539.*

Ammonium stabilized silica and alumina sols; colloidal alumina and silica for dental porcelain; dental porcelain; porcelain balling reduction; *U.S. Patent 3,973,970.*

Amorphous; magnetization; metal; Mössbauer; ^{57}Fe; ^{161}Dy; *16403.*

Amorphous calcium phosphate; bone mineral; fluorapatite; hydroxyapatite; morphology; nonstoichiometry; octacalcium phosphate; solubility; surface; *16307.*

Amorphous magnetism; direct current sputtering; inelastic neutron scattering; magnetic structures; magnetism; neutron diffraction; rare earth alloys; *16555.*

Amorphous polymer; crazing; fatigue; Kaiser's effect; acoustic emission; *16417.*

Amphorous Tb_xFe_{1-x}; Curie temperatures; magnetization measurement; neutron diffraction; *16405.*

Amperometry; chlorine monitoring; chlorine residuals; coulometry; flux-monitor; water analysis; water pollution; *16082.*

Amperometry; cyclic voltammetry; electrosorption; Langmuir; lead dioxide; pyrophosphate; Temkin; wax-bound electrode; *SP455*, pp. 183-189 (Nov. 1976).

Amplifier noise performance; mismatch considerations; *15836.*

Amplitude; computer controlled; diode detectors; microwave measurements; phase angle; self-calibration; seven-port junction; vector voltmeter; *NBSIR 76-844.*

Amplitude density function; arithmetic average; autocorrelation function; average wavelength; kurtosis; minicomputer software; random error; skewness; surface microtopography; surface roughness; surface texture; systematic error; *TN902.*

Amplitude density function; arithmetic average; autocorrelation function; linear least-squares fit; machine language; minicomputer software; surface texture measurement; *NBSIR 75-924.*

Amplitude modulation; instrument landing system; modulation measurements; modulation meter; percent modulation; *16516.*

Analog-digital converter; A-scan; digitization; pattern recognition; speech spectrogram; ultrasound; *SP453*, pp. 51-59 (Oct. 1976).

Analysis; analytical chemistry; sample handling; sampling; trace analysis; accuracy; *SP422. Volume I and II.*

Analysis; ashing; blood lead; contamination; dairy products; digestion; interferences; losses; mercury; trace metal; *SP422*, pp. 661-668 (Aug. 1976).

Analysis; carbon; crud; filtration; pressurized water reactors; primary coolant; sampling; water; *SP422*, pp. 429-438 (Aug. 1976).

Analysis; diversion of nuclear materials; diversion path analysis; internal control system characterization; nuclear material safeguards; safeguards; *16536.*

Analysis; experimental; floor systems; human response; random process; spectral analysis; vibration; *TN904.*

Analysis; experimental; floor systems; human response; random process; spectral analysis; vibration; *NBSIR 75-951.*

Analysis, Hf I spectrum; hafnium, analysis of first spectrum; spectrum, Hf I; Zeeman effect, Hf I; *Monogr. 153.*

Analysis of air; atmosphere; gaseous pollutants; sampling air; accuracy and precision; air; air particulates; air pollution; *SP422*, pp. 311-320 (Aug. 1976).

Analysis of body fluids; clinical analysis; clinical chemistry; clinical sampling; enzyme analysis; storage of clinical samples; accuracy and precision; *SP422*, pp. 353-361 (Aug. 1976).

Analysis of precision; *a priori* error; *a priori* precision; *a posteriori* precision; chi-square test; precision; precision of analytical method; ultratrace level; accuracy; *SP422*, pp. 127-139 (Aug. 1976).

Analysts; apparatus; blank; contamination; environment; purity; reagents; accuracy; *SP422*, pp. 509-539 (Aug. 1976).

Analytic function; Cauchy principle value; Hilbert problem for two unknowns; singular integral equation; wave-guide boundary problem; *J. Res.* **80B** No. 3, 403-414 (1976).

Analytical bias; reference samples; silicate analysis; accuracy; *SP422*, pp. 79-89 (Aug. 1976).

Analytical blank; gas chromatography; ocean biota analysis; phthalate trace analysis; air analysis; *SP422*, pp. 701-708 (Aug. 1976).

Analytical blanks; analytical reagents; contamination control; high-purity reagents; membrane filtration; mercury cathode electrolysis; prepurification; purity definition; reagent contamination; ultrapurification; *SP422*, pp. 363-375 (Aug. 1976).

Analytical blanks; atmospheric sampling; coastal sampling; contamination of atmospheric particulate samples; sample handling; shipboard atmospheric sampling; *SP422*, pp. 377-388 (Aug. 1976).

Analytical chemistry; charged particle activation analysis; cross sections; excitation functions; fast neutron activation analysis; fast particle activation analysis; interferences; primary interference reactions; systematic errors; *SP422*, pp. 1189-1214 (Aug. 1976).

Analytical chemistry; contamination; errors; natural water; sample storage; sampling; accuracy; *SP422*, pp. 805-836 (Aug. 1976).

Analytical chemistry; curve fitting; data reduction; feature selection; multivariate analysis; optimization techniques; pattern recognition; signal processing; spectral resolution; statistics; *15964.*

Analytical chemistry; data analysis; design of experiments; statistics; *16652.*

Analytical chemistry; nomenclature; photochemistry; photometry; physical optics; radiometry; spectrometry; spectroradiometry; *16331.*

Analytical chemistry; sample handling; sampling; trace analysis; accuracy; analysis; *SP422. Volume I and II.*

Analytical chemistry; standard reference material; statistics; syndrome; accuracy; *SP422*, pp. 123-126 (Aug. 1976).

Analytical data; analytical work; critical evaluation of an analytical procedure; industrial chemical analysis; interlaboratory comparisons; sampling error; *16001.*

Analytical design; irradiation procedures; radioactivity detection systems; radiochemical separations; sampling and sample handling; accuracy and precision; activation analysis; *SP422*, pp. 1143-1155 (Aug. 1976).

Analytical error; geochemical variance; particle size distribution; particle size errors; sampling errors; trace analysis; *SP422*, pp. 421-427 (Aug. 1976).

Analytical methods; coal; environmental samples; environmental standards; fly ash; instrumental neutron activation analysis (INAA); instrumental photon activation analysis (IPAA); natural radioactivity; standard reference materials; *SP422*, pp. 211-223 (Aug. 1976).

Analytical model; dynamic analysis; dynamic loading; earthquake; energy dissipation; finite element; seismic response; structural engineering; *SP444*, pp. IV-70—IV-89 (Apr. 1976).

Analytical performance; between-run; calibration; precision; quality control; systematic error; Youden plot; *SP422*, pp. 141-150 (Aug. 1976).

Analytical predictions; constant stress rate; empirical measurements; fracture stress; slow crack growth; *16034*.

Analytical quality control; atomic absorption spectrometry; environmental analysis; fresh water analysis; intercomparisons; precision; round-robin experiments; trace element analysis; accuracy; activation analysis; air filter analysis; *SP422*, pp. 189-197 (Aug. 1976).

Analytical reagents; contamination control; high-purity reagents; membrane filtration; mercury cathode electrolysis; prepurification; purity definition; reagent contamination; ultrapurification; analytical blanks; *SP422*, pp. 363-375 (Aug. 1976).

Analytical techniques; fractional crystallization; geochemistry; isotope dilution; partial melting; rare earth elements; trace element models; volcanic rocks; *SP422*, pp. 937-949 (Aug. 1976).

Analytical work; critical evaluation of an analytical procedure; industrial chemical analysis; interlaboratory comparisons; sampling error; analytical data; *16001*.

Analyzing; gas analysis; gases; emission; monitors; standards; air pollution; *15982*.

Angle and energy distributions; charged particle spectroscopy; electron-stimulated desorption of ions (ESDIAD); field-ion microscopy (FIM); low energy electron diffraction (LEED); ultraviolet photoelectron spectroscopy (UPS); *16078*.

Angle of incidence; polarization; pulsed laser damage; thermal model; *SP435*, pp. 41-48 (Apr. 1976).

Angle standard; autocollimator; calibration; complete closure design; indexing table; least squares estimation; partial closure design; standard deviation; subdivision; variance-covariance matrix; *NBSIR 75-750*.

Angular dependence; blood; compressibility; density; distribution function; erythrocytes; hematocrit; scattering; ultrasound; *SP453*, pp. 207-212 (Oct. 1976).

Angular distribution; backscatter; charged particles; Monte Carlo; reflection; Albedo; *16097*.

Angular distribution; photoabsorption; soft x rays; subshell structure; *16386*.

Angular distributions; chemisorption; electron spectroscopy; photoemission; *15759*.

Angular distributions; gamma-gamma correlations; quark models; symmetries; ψ particles; χ particles; *15962*.

Angular distributions; photoemission; photoionization; adsorption; *15748*.

Angular divergence; asymmetric diffraction; diffraction topography; dynamical diffraction; rocking curve; *16055*.

Angular insensitivity; fluidic device; hot wire anemometer; ion deflection device; laser Doppler anemometer; Reynolds number; *16108*.

Anharmonic crystal; computer simulation; energy transport; heat pulse; interatomic potential; molecular dynamics; second sound; shock wave; stress wave; temperature wave; thermal diffusivity; thermal relaxation; *16138*.

Anharmonic crystal; computer simulation; energy transport; heat pulse; molecular dynamics; second sound; stress pulse; temperature wave; thermal diffusivity; thermal equilibrium; thermal relaxation; *16589*.

Anharmonicities; branching ratio; charge distribution; electron scattering; quadrupole phonons; vibrational nuclei; *16507*.

Anharmonicities; branching ratios; electron scattering; phonons; reorientation effect; admixture; *16508*.

Anisotropy; chemorheology; degradation; elasticity; finite deformation; incompressible materials; permanent set; polymers; rubbers, viscoelasticity; *16339*.

Anisotropy; interface kinetics; solidification; stability; surface tension; alloys; *16213*.

Annals of Mathematical Statistics; bibliography; distribution-free methods; educational testing; mathematical statistics; multivariate analysis; order statistics; social sciences, services to; statistical education in the United States; *16114*.

Annandale; field test; gas explosion; leak detection; *16101*.

Annealing; calcium fluoride; defect pairs; equilibria; model; point defects; *15820*.

Annealing; fracture energy (γ_c); isostatic forging; kinking; microstructures; recrystallization temperature; veiling; *SP462*, pp. 87-94 (Dec. 1976).

Annotated bibliography; bibliography; building code; building regulations; collapse; failures; progressive collapse; specific resistance; abnormal loading; alternate path; *BSS67*.

Annoyance; appliance noise; health and hearing hazards; household noise; legal and community action; loudness; noise control and abatement; traffic noise; airborne and structure-borne sounds; aircraft noise intrusion; *H119*.

Anodic decomposition; cathodic decomposition; electrochemistry; inorganic bronze electrodes; metal electrodes; semiconductor electrodes; stability, surface layers; surface reactions; *SP455*, pp. 267-280 (Nov. 1976).

Anodic films; dual barrier, electrocatalysis; oxygen evolution; platinum anodes; reaction mechanism; *SP455*, pp. 259-266 (Nov. 1976).

Anodic oxidation; electrocatalysis; semiconductor electrode; tin oxide electrode; transparent electrode; adsorption; *SP455*, pp. 175-181 (Nov. 1976).

Anodic stripping voltammetry; arc emission spectroscopy; atomic absorption; environmental analyses; interlaboratory tests; neutron activation analysis; plasma emission; round robin; x-ray fluorescence; accuracy; *SP422*, pp. 199-210 (Aug. 1976).

Anodic stripping voltammetry; background current compensation; differential anodic stripping voltammetry; electrochemical analysis; twin electrode balancing; *SP422*, pp. 881-897 (Aug. 1976).

Anodic stripping voltammetry; flameless atomic absorption; interstitial water; Lake Superior chemical analysis; trace element water analysis; water filtration; water sampling apparatus; *SP422*, pp. 1073-1088 (Aug. 1976).

Antenna; calibration; Cassiopeia A; error analysis; flux density; G/T (system gain/system noise temperature); ground station; radio star; accuracy; *16499*.

Antenna; director; driven element; gain; radiation pattern; reflector; Yagi; *TN688*.

Antenna; microwave; minicomputer; radiofrequency; RF exposure; spectrum analyzer; *SP456*, pp. 203-213 (Nov. 1976).

Antenna gain, polarization and pattern; deconvolution; extrapolation; fields and antennas; *15827*.

Antenna measurements; antenna theory; scattering-matrix theory of antennas; antenna-antenna interactions; *J. Res.* **80B** No. 1, 5-51 (1976).

Antenna specifications; mobile telecommunication transmitters; RF radiation; *SP456*, pp. 199-202 (Nov. 1976).

Antenna theory; scattering-matrix theory of antennas; antenna-antenna interactions; antenna measurements; *J. Res.* **80B** No. 1, 5-51 (1976).

Antenna-antenna interactions; antenna measurements; antenna theory; scattering-matrix theory of antennas; *J. Res.* **80B** No. 1, 5-51 (1976).

Antenna-support materials; environmental degradation; guys, nonmetallic; marine atmospheres; plastics, fiber-reinforced; pultrusions; stress-rupture testing; sunlight; ultraviolet radiation; weatherability; *NBSIR 76-1069*.

Anthropometric manikin; free-field measurements; hearing aid tests; orthotelephonic response; *16033*.

Anthropometric measurements; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; structural safety; *NBSIR 76-1132*.

Anthropomorphic units; bicentennial; history of measurement; metric conversion; metric roll call; metrology; Public Law 93-380; Public Law 94-168; *16195*.

Antibodies; antigens; biological polymers; immunochemical analysis; light scattering; polymers; proteins; solid standards; *J. Res.* **80A** No. 4, 605-608 (1976).

Antiferroelectric; dielectric constant; heat capacity; lead pyroniobate; low temperature; polarization; *16527*.

Antiferromagnetic transition; antiferromagnetism; dipolar interactions; $ErPO_4$; magnetic phase diagram; Néel temperature; spin-flop; *16436*.

Antiferromagnetism; critical temperature; dipole-dipole interaction; erbium phosphate ground state; heat capacity; lattice sums; magnetic; susceptibility; *15866*.

Antiferromagnetism; dipolar interactions; $ErPO_4$; magnetic phase diagram; Néel temperature; spin-flop; antiferromagnetic transition; *16436*.

Antifriction bearings; bearing failure; bearing failure modes; bearing inspection; bearing reclamation; bearing recycling; aircraft engine bearings; *SP423*, pp. 87-91 (Apr. 1976).

Antigens; biological polymers; immunochemical analysis; light scattering; polymers; proteins; solid standards; antibodies; *J. Res.* **80A** No. 4, 605-60 , (1976).

Antimony; antimony oxide; arsenic; arsenic acid; biomethylation; cacodylic acid; diffusion; flame retardant; oxidation rate; stibinic acid; trimethylarsine; trimethylstibine; *16628*.

Antimony; arsenic; environment; kinetics; methylation; nucleophilic reactivity; onium salts; polar solvents; pollutants; quaternization; alkyl halides; *16628A*.

Antimony oxide; arsenic; arsenic acid; biomethylation; cacodylic acid; diffusion; flame retardant; oxidation rate; stibinic acid; trimethylarsine; trimethylstibine; antimony; *16628*.

Antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; *NBS-GCR-ETIP 76-22*.

Antimony trioxide; friction; molybdenum disulfide; spin axis gas bearings; sputtered coatings; surface characterization; wear life; *SP452*, pp. 177-186 (Sept. 1976).

Antireflectance coating; bandwidth; coating design; multilayer coating; absorptance; *SP462*, pp. 221-229 (Dec. 1976).

Antireflectance coating; chalcogenide glasses; infrared optical properties; laser damage; optical absorption; optical scattering; thin-film coating; alkali halides; *SP462*, pp. 214-220 (Dec. 1976).

Antireflection coatings; attenuated total reflection; laser windows; spectroscopic; absorption; *SP462*, pp. 246-252 (Dec. 1976).

Antireflection coatings; coatings; KCl; laser damage; alkali halides; *SP462*, pp. 283-291 (Dec. 1976).

Antireflection coatings; germanium selenide; infrared laser windows; absorption; *SP462*, pp. 279-282 (Dec. 1976).

Apollo; composition; isotopic; lithium; potassium; relative; rocks; rubidium; soils; absolute; *15869*.

Apollo 17; background; cosmic-ray proton; induced radioactivity; secondary neutrons; sodium iodide detector; *15727*.

Apparatus; blank; contamination; environment; purity; reagents; accuracy; analysts; *SP422*, pp. 509-539 (Aug. 1976).

Apparatus; density; experimental; magnetic suspension; methane; nitrogen; saturated liquid; tables; *16645*.

Apparatus and methods; infrared lasers; magnetic resonance; molecular spectroscopy; NO, NO_2, pollutant detection; *16456*.

Apparel; burn injury; carpets; draperies; fabrics; flammability; heat flux; standards; tents; tests; uniforms; upholstered furniture; *16144*.

Apparel; burn injury; ease of ignition; fabrics; fire; flammability tests; garments; heat transfer; standards; *NBSIR 76-1072*.

Apparel, burn injuries; burn injuries, fabric related; burning apparel; fabric related burn injuries; *NBS-GCR-73-11*.

Apparel fabric; fabric; fire hazard; flammability testing; thermal measurements; thermodynamic properties; *NBS-GCR-73-8*.

Apparel fabrics; fabrics; fire hazards; flammability testing; ignition; skin; thermal burns; thermal measurements; *NBS-GCR-73-6*.

Apparel fabrics; fabrics; fire hazard; flammability testing; ignition; thermal burns; *NBS-GCR-73-7*.

Apparel fabrics; fabrics; fire hazard; flammability testing; skin; thermal burns; thermal measurements; *NBS-GCR-73-9*.

Apparel fabrics; fabrics; fire hazards; flammability testing; ignition; thermal burns; thermal measurements; *NBS-GCR-73-12*.

Apparel fabrics; fabrics; fire hazard; flammability testing; simulation; skin; thermal burns; *NBS-GCR-73-13*.

Apparel fabrics; fire hazard; flammability testing; heat conductivity; simulation; skin; *NBS-GCR-73-14*.

Appearance potential; autoionization; deuterated species; enthalpy of formation; ionization potential; NH_2^+; OH^+; photoionization; predissociation; Rydberg states; ammonia; *16539*.

Appearance potential; gaseous positive ions; heat of formation; ionization potential; measurement; *16205*.

Appliance noise; health and hearing hazards; household noise; legal and community action; loudness; noise control and abatement; traffic noise; airborne and structure-borne sounds; aircraft noise intrusion; annoyance; *H119*.

Appliances; behavioral science; human factors; product safety; safety; safety research; *16215*.

Application of six-port junction concept; automated measurements; broadband measurements; microwave measurements; microwave power measurements; one-port parameters; six-port junction; *16501*.

Application of standards; basic standards; cesium standards; frequency accuracy; frequency stability; frequency standards; hydrogen standards; ion storage; laser stabilization; rubidium standards; saturated absorption; time standards; *15736*.

Application temperature; asphalt; built-up roofing; interply thickness; roofing membranes; viscosity; *BSS92*.

Applied microeconomic framework; commodity supply crisis; econometric analysis; economic impacts; efficiency impacts; income distribution effects; policy alternatives; *NBS-GCR-ETIP 76-24*.

Applied research; imaging; instrumentation technology; medical ultrasonics; NSF; RANN; R & D incentives; tissue characterization; tissue signature; ultrasonic diagnosis; ultrasound; *SP453*, pp. 7-10 (Oct. 1976).

Aquatic insects; atomic absorption; clean room; fish; mini-computer; sample preparation; toxic metals; trace determination; *SP422*, pp. 627-632 (Aug. 1976).

Aqueous; computer programs; data evaluation; electrolytes; electromotive force; isopiestic method; osmotic coefficients; nonlinear least squares; thermodynamic properties; vapor pressure; activity coefficients; *TN928*.

Aqueous systems; bibliography; biochemical systems; enthalpy data; entropy data; equilibrium data; Gibbs energy data; heat capacity data; partial molal properties; thermochemistry; thermodynamics; review articles; water pollution; *SP454*.

Ar metastable interactions; $ClHCl^-$; emission spectrum; HAr_n^+; $HCCl_2^+$; $HCCl_2^-$; $HCCl_3$; infrared spectrum; matrix isolation; molecular rotation in solid Ar; photoinduced proton transfer; ultraviolet spectrum; *15757*.

Aramid fiber rope; breaking load, rope; cable, aramid-fiber; end fittings, rope; fatigue damage; rope, aramid-fiber; slings, cargo; terminations, rope; weathering, simulated; *NBSIR 76-1159*.

Arc emission spectroscopy; atomic absorption; environmental analyses; interlaboratory tests; neutron activation analysis; plasma emission; round robin; x-ray fluorescence; accuracy; anodic stripping voltammetry; *SP422*, pp. 199-210 (Aug. 1976).

Arc-connectedness; Carlson-Johnson conjecture; *D*-stable; positive stable matrix; *J. Res.* **80B** No. 1, 75-77 (1976).

Architectural acoustics; building acoustics; sound reduction index; sound transmission loss; transmission loss; airborne sound transmission; *15708*.

Architectural glass products; Consumer Product Safety Act; residence-related products; residential safety modification; safety implementation approaches; *16006*.

Architectural glass products; Consumer Product Safety Act; residence-related products; residential safety modification; safety implementation approaches; *NBSIR 75-791*.

Architectural glazing; codes; Consumer Product Safety Committee; Consumer Safety Glazing Committee; glazing; impact tests; safety glazing; standards; state law; *NBSIR 76-1109*.

Architectural heritage; fire; guardrail; high-capacity; mathematics; mercury; performance standard; pressure transducers; SRM; surgical implants; testing; thermal transients; *DIM/NBS* **60**, No. 8, 1-24 (1976).

Architectural indexing systems; architecture; building; construction; design; information; information retrieval system; *NBSIR 76-1064*.

Architectural psychology; architectural research; building research; building safety; perception; stair safety research; *NBSIR 76-1046*.

Architectural research; building research; building safety; perception; stair safety research; architectural psychology; *NBSIR 76-1046*.

Architectural-design teaching; assemblage; design critiques; feedback; teaching method; *16020*.

Architecture; building; construction; design; information; information retrieval system; architectural indexing systems; *NBSIR 76-1064*.

Architecture; buildings; design; energy; legislation; solar; State; *NBSIR 76-1082*.

Arcing/sparking; branch circuit; contact resistance; electrical connections; fire hazard; glowing electrical connections; *NBSIR 76-1011*.

Argon; atomic transition probabilities; beryllium; boron; carbon; chlorine; helium; hydrogen; lithium; magnesium; nitrogen; oxygen potassium; sodium; aluminum; *16164*.

Argon; bulk viscosity; density expansion; methane; modified Enskog theory; molecular correlations; nitrogen; sound absorption; *16483*.

Argon; calibration; detector, radioactive argon; ionization chamber; sodium-22; standard reference materials; *16325*.

Argon; hydrogen; ionized gases; nitrogen; oxygen; thermodynamic properties; air; *16167*.

Argon oxide; collision-induced emission; rare-gas oxide excimers; ab initio potentials; *15868*.

Argon-37; atmospheric mixing; blank corrections; cosmic ray reactions; effectively zero background; environmental radioactivity; low-level counting statistics; radioactive rare gases; reduced activity; *16345*.

Argon-37; direct standardization; environmental radioactivity; internal gas counters; isotope separator; krypton-85; proportional counters; radioactivity standardization; xenon-133, 131m; *15948*.

Arithmetic average; autocorrelation function; average wavelength; kurtosis; minicomputer software; random error; skewness; surface microtopography; surface roughness; surface texture; systematic error; amplitude density function; *TN902*.

Arithmetic average; autocorrelation function; linear least-squares fit; machine language; minicomputer software; surface texture measurement; amplitude density function; *NBSIR 75-924*.

Armor; ballistic helmet; ballistic impact; ballistic penetration; bulletproof helmet; *16295*.

Aroclor; chlorinated biphenyl; chlorinated naphthalene; electric field measurement; electro-optic; high voltage measurement; Kerr coefficients; Kerr effect; space charge; *16384*.

Aromatic amine; benzene derivative; charge-transfer complex; dental materials; electron affinity; electron spin resonance spectroscopy; extrathermodynamic relationships; ionization potential; linear free-energy relationship; *J. Res.* **80A** No. 2, 173-187 (1976).

Aromatic asphaltenes; caking; coal gasification; liquefaction processes; *16365*.

Arsenic; arsenic acid; biomethylation; cacodylic acid; diffusion; flame retardant; oxidation rate; stibinic acid; trimethylarsine; trimethylstibine; antimony; antimony oxide; *16628*.

Arsenic; atomic absorption; atomic spectrometry; background, correction; nonflame, atomization; stray light; xenon-mercury, arc lamp; *15894*.

Arsenic; evironment; kinetics; methylation; nucleophilic reactivity; onium slats; polar solvents; pollutants; quaternization; alkyl halides; antimony; *16628A*.

Arsenic acid; biomethylation; cacodylic acid; diffusion; flame retardant; oxidation rate; stibinic acid; trimethylarsine; trimethylstibine; antimony; antimony oxide; arsenic; *16628*.

Arsenic trisulphide; ion planing; protective films; moisture resistance; sodium chloride; *SP435*, pp. 14-19 (Apr. 1976).

Arson; firesetting; psychopathic personality; *15837*.

Art education; inks for art education; paints and inks; schools, paints and inks; *PS65-75*.

Artificial intelligence; automation; computer control; manipulators; robots; robot systems; *16047*.

Aryl phosphines; cyclic voltammetry; desulfurization; phosphines; tetracyanotetrathiafulvalene; tetracyanotetrathiafulvalene-triphenylphosphine; $\Delta^{2,2'}$-bis-14.5-dicyano-1,3-dithiodene; 1,3-dithiolenes; ^{31}P NMR; *15991*.

Ar-37; atmospheric radioactivity; cosmic-ray reactions; exponential distribution; low-level counting; noble gas separation; on-line computer; pulse shape discrimination; tropospheric mixing; *15744*.

A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; *SP453*.

A-scan; attenuation; computer analysis; impedance; liver cirrhosis; ultrasonics; *SP453*, pp. 61-70 (Oct. 1976).

A-scan; digitization; pattern recognition; speech spectrogram; ultrasound; analog-digital converter; *SP453*, pp. 51-59 (Oct. 1976).

A-scan analysis; digital; grey-scale ultrasound; spleen; splenomegaly; *SP453*, pp. 71-78 (Oct. 1976).

Ashing; blood lead; contamination; dairy products; digestion; interferences; losses; mercury; trace metal; analysis; *SP422*, pp. 661-668 (Aug. 1976).

Ashing techniques; dissolution; dry ashing; organic materials analysis; trace element analysis; wet ashing; *SP422*, pp. 491-507 (Aug. 1976).

Ashing (wet and dry); chemical errors; contamination; dissolution techniques; fusion dissolution; radiochemical analyses; *SP422*, pp. 463-490 (Aug. 1976).

ASHRAE; buildings; computer; energy calculation; heat transfer; heating and cooling loads; response factor; algorithm; *16630*.

ASHRAE task group on energy requirements; conduction transfer functions; heating and cooling load; National Bureau of Standards heating and cooling load computer program; *BSS69.*

Askarel; capacitors; insulating fluids; liquid insulators; polychlorinated biphenyls; transformers; *NBSIR 76-1054.*

Asphalt; built-up roofing; interply thickness; roofing membranes; viscosity; application temperature; *BSS92.*

Assemblage; design critiques; feedback; teaching method; architectural-design teaching; *16020.*

Assistance; certification programs; education of metrologists; industrializing nations; LDC's; metrology; AID; *NBSIR 76-988.*

Associated particle technique; neutron detector; neutron flux monitor; neutron standards; neutrons; $T(p,n)^3He$ reaction; *16159.*

Assurance; measurement; radioactivity; radiopharmaceutical; standards; traceability; *SP456,* pp. 71-76 (Nov. 1976).

ASTM; classification; fire hazard; participation; property; system; test method; *16124.*

ASTM; industrial atmosphere; round robin tests; seacoast atmosphere; standard; stress-corrosion; 3.5 percent NaCl; 7XXX aluminum alloys; Aluminum Association; *16656.*

ASTM Standard E119; building construction; charring; combustion; fire endurance; fire test; flame emissivity; heat transfer; pyrolysis; radiant heat; thermal inertia; *NBS-GCR-75-50.*

ASTM-type reference standards; calibration; interim reference standard; longitudinal beam; measurement system; nondestructive evaluation; pulse-echo; ultrasonics; aluminum ultrasonic reference standards; *TN924.*

ASTM-type reference standards; calibration; fabrication variables; immersion testing; interim reference standard; longitudinal waves; metallurgical variables; nondestructive evaluation; pulse echo; steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; *NBSIR 76-984.*

Astronomy; manpower problems; *15886.*

Asymmetric; diffraction; intensifier; topography; x ray; *16356.*

Asymmetric diffraction; diffraction topography; dynamical diffraction; rocking curve; angular divergence; *16055.*

Asymptotic analysis; Darboux's method; definite integrals; hypergeometric functions; incomplete gamma function; Legendre functions; ordinary differential equations; saddle points; special functions; turning points; Whittaker functions; *15818.*

Asymptotics; elastic; oscillations; Pomeranchuk; shrinkage; theorem; *16249.*

As_2S_3; coating deposition; index of refraction; laser windows; surface composition; 10.6 μm; *SP435,* pp. 244-247 (Apr. 1976).

Atmosphere; gaseous pollutants; sampling air; accuracy and precision; air; air particulates; air pollution; analysis of air; *SP422,* pp. 311-320 (Aug. 1976).

Atmospheres, stellar; atomic and molecular processes; line formation; radiative transfer; *15723.*

Atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; quantum yield; rate constant; *16067.*

Atmospheric contamination; blank value; indophenol blue reaction; Kjeldahl digestion technique; limit of detection; nitrogen in steel; *SP422,* pp. 983-1003 (Aug. 1976).

Atmospheric mixing; atmospheric radioactivity; cosmic ray reactions; isotopic enrichment; ^{37}Ar; *16388.*

Atmospheric mixing; blank corrections; cosmic ray reactions; effectively zero background; environmental radioactivity; low-level counting statistics; radioactive rare gases; reduced activity; argon-37; *16345.*

Atmospheric particulates; direct analysis techniques; emission spectroscopy; particulate analysis; particulate characterization; sampling methods; X-ray fluorescence; *SP422,* pp. 791-803 (Aug. 1976).

Atmospheric pollution; chlorine nitrate; dipole moment; microwave spectrum; ozone depletion; rotational constants; stratospheric chemistry; *16584.*

Atmospheric radioactivity; cosmic-ray reactions; exponential distribution; low-level counting; noble gas separation; on-line computer; pulse shape discrimination; tropospheric mixing; Ar-37; *15744.*

Atmospheric radioactivity; cosmic ray reactions; isotopic enrichment; ^{37}Ar; atmospheric mixing; *16388.*

Atmospheric sampling; coastal sampling; contamination of atmospheric particulate samples; sample handling; shipboard atmospheric sampling; analytical blanks; *SP422,* pp. 377-388 (Aug. 1976).

Atom; collision; Coulomb-interaction; electron; energy exchange; ionization; threshold; *15884.*

Atom; collision cross section; detachment; dissociation; elastic scattering; electron; excitation; fluorescence; ion; ionization; molecule; photon; positron; *SP426.*

Atom; collisions; electron; low energy; review; scattering; theory; *15883.*

Atom; energy generation; industrial technology; molecule; primary standards; properties; *NBSIR 75-944.*

Atom migration; correlation factor; crystal defect; diffusion coefficient; matrix equations; nonrandom walk equation; *15776.*

Atom surface potential; gold surfaces; Lifshitz theory; Van der Waals forces; alkali atoms; atomic beam deflection; *15953.*

Atomic absorption; emission spectroscopy; environmental pollutants; intercomparisons; multi-element analysis; trace element analysis; x-ray fluorescence; accuracy; activation analysis; airborne particulates; air filter analysis; *SP422,* pp. 173-188 (Aug. 1976).

Atomic absorption; atomic spectrometry; background, correction; nonflame, atomization; stray light; xenon-mercury, arc lamp; arsenic; *15894.*

Atomic absorption; background correction; Delves Cup; lead; spectrophotometry; *SP422,* pp. 1035-1043 (Aug. 1976).

Atomic absorption; bluegills; cadmium; fish; heavy metal; tissue; trace element analysis; water pollution; *SP422,* pp. 1063-1072 (Aug. 1976).

Atomic absorption; cadmium; copper; lead; manganese; sensitivity; spectrophotometry; statistical methods; zinc; *SP422,* pp. 1023-1033 (Aug. 1976).

Atomic absorption; clean room; fish; mini-computer; sample preparation; toxic metals; trace determination; aquatic insects; *SP422,* pp. 627-632 (Aug. 1976).

Atomic absorption; determination; lead; paint; wire loop; *16334.*

Atomic absorption; environmental analyses; interlaboratory tests; neutron activation analysis; plasma emission; round robin; x-ray fluorescence; accuracy; anodic stripping voltammetry; arc emission spectroscopy; *SP422,* pp. 199-210 (Aug. 1976).

Atomic absorption; environment; neutron activation analysis; precision; x-ray fluorescence; accuracy; *SP422,* pp. 239-245 (Aug. 1976).

Atomic absorption spectrometry; environmental analysis; fresh water analysis; intercomparisons; precision; round-robin experiments; trace element analysis; accuracy; activation analysis; air filter analysis; analytical quality control; *SP422,* pp. 189-197 (Aug. 1976).

Atomic absorption analysis; Californium-252; Mahoning River; neutron activation analysis; pollution; sediment; trace elements; water; wet chemical analysis; *SP422,* pp. 225-230 (Aug. 1976).

Atomic absorption spectrometry; isotope dilution analysis; mercury in water, trace analysis; mercury in water, stabilization of; neutron activation analysis; spark source mass spectrometry; *SP422*, pp. 267-273 (Aug. 1976).

Atomic absorption spectrometry; blood analyses; contaminations; flameless methods; lead; lead blood analyses; methodology; trace element analyses; *SP422*, pp. 715-719 (Aug. 1976).

Atomic absorption spectrometry; nonflame graphite furnace; sensitivity *vs.* precision and accuracy; Standard Reference Materials; *SP422*, pp. 1045-1051 (Aug. 1976).

Atomic Absorption Spectrometry; Caribbean; precision; Puerto Rico; replicates; sediments; standard; trace elements; accuracy; *SP422*, pp. 1089-1102 (Aug. 1976).

Atomic absorption spectrophotometry; calcium; container effects; copper; magnesium; potassium; serum minerals; serum storage effects; sodium; temperature effects; trace elements; zinc; *SP422*, pp. 575-591 (Aug. 1976).

Atomic absorption spectrophotometry; emission spectroscopy; nickel; nickel-base alloys; polarography; spectrophotometry; x-ray fluorescence spectroscopy; *SP422*, pp. 1005-1016 (Aug. 1976).

Atomic absorption spectrophotometry; high temperature ashing; trace elements; air sampling; *SP422*, pp. 1053-1061 (Aug. 1976).

Atomic absorption spectroscopy; fish analysis; sample size variations; trace analysis; trace metals; *SP422*, pp. 163-172 (Aug. 1976).

Atomic absorption spectroscopy (AAS); comparison between NAA and AAS; neutron activation analysis (NAA); time of analysis in NAA and AAS; trace element content in liver biopsies; trace element content in tumor bearing animals; *SP422*, pp. 231-238 (Aug. 1976).

Atomic and molecular processes; line formation; radiative transfer; atmospheres, stellar; *15723*.

Atomic and molecular processes; comets; line formation; polarization; quantum mechanics; *15746*.

Atomic beam; autoionization; differential metastability; fine structure; inner shell excitation; rf spectroscopy; rubidium; Zeeman effect; *16098*.

Atomic beam; delayed coincidence; imprisonment; lifetime; mean life; resonance radiation; transition probability; U I; uranium; *16322*.

Atomic beam deflection; atom surface potential; gold surfaces; Lifshitz theory; Van der Waals forces; alkali atoms; *15953*.

Atomic beams; atomic clock; atomic time; cesium beam tube; definition of the second; frequency accuracy; international atomic time; primary frequency standard; *16487*.

Atomic beams; multiphoton ionization; sodium; spontaneous Raman scattering in free atoms; *16572*.

Atomic clock; atomic time; cesium beam tube; definition of the second; frequency accuracy; international atomic time; primary frequency standard; atomic beams; *16487*.

Atomic clocks; clock acceleration effect; definition of the second; frequency accuracy; frequency standards; general relativity; gravitational redshift; primary frequency standards; proper time; UTC; *16236*.

Atomic clocks; clocks; crystal oscillator; frequency standards; stability; survey of clocks; accuracy; *15719*.

Atomic clocks; frequency stability; portable clocks; rubidium frequency standard; time comparison; *16489*.

Atomic energy levels; atomic line shapes; atomic spectra; atomic transition probabilities; bands, molecular; energy levels, atomic; line shapes, atomic; molecular bands; molecular spectra; rotational constants; *15901*.

Atomic energy levels; atomic spectra; atomic theory; copper; doubly ionized copper; electron configuration; *J. Res.* **80A** No. 3, 465-476 (1976).

Atomic energy levels; isoelectronic sequence; protactinium; rare earth; sliding spark discharge lamp; spectrum; uranium; actinide; *15990*.

Atomic energy levels, O I; atomic spectra, O I; multiplet table, O I; oxygen, first spectrum; spectrum O I; wavelengths, O I; *NSRDS-NBS3, Section 7*.

Atomic flame fluorescence; barium fluorescence; cw dye laser; sodium fluorescence; *16594*.

Atomic frequency standards; aviation industry; electric power industry; National Measurement System, position location; shipping and boating industries; Standards laboratories; telephone industry and specialized carriers; time and frequency; time scales; *SP445-1*.

Atomic hydrogen; Balmer alpha; beam foil; crossed beams; electrons; excitation; optical spectroscopy; Stark effect; *15891*.

Atomic layers; chemisorption; cyclic-voltammetry; electrochemical adsorption; monolayers; surface processes; *SP455*, pp. 107-124 (Nov. 1976).

Atomic line shapes; atomic spectra; atomic transition probabilities; bands, molecular; energy levels, atomic; line shapes, atomic; molecular bands; molecular spectra; rotational constants; atomic energy levels; *15901*.

Atomic ordering; A15 compounds; intermetallic compounds; nonstoichiometry; phase composition; phase stability; *15848*.

Atomic oscillator strengths; beam-foil spectroscopy; fusion plasma research; plasma radiative losses; sodium isoelectronic sequence; Tokamak plasmas; *16320*.

Atomic oxygen; cascade radiation; emission cross section; radiation trapping; airglow; *15927*.

Atomic physics; synchrotron radiation; vacuum ultraviolet; *15795*.

Atomic processes; sun, corona; sun, flares; sun, prominences; sun, spectra; ultraviolet, spectra; *15987*.

Atomic processes, interstellar; matter, line profiles; *16012*.

Atomic properties; economics; electrical quantities; ionizing radiation; mechanical quantities; national measurement system; optical quantities; surface properties; thermal quantities; time and frequency; acoustics; *NBSIR 75-947*.

Atomic spectra; atomic theory; copper; doubly ionized copper; electron configuration; atomic energy levels; *J. Res.* **80A** No. 3, 465-476 (1976).

Atomic spectra; atomic transition probabilities; bands, molecular; energy levels, atomic; line shapes, atomic; molecular bands; molecular spectra; rotational constants; atomic energy levels; atomic line shapes; *15901*.

Atomic spectra; energy levels; Fe I; iron; iron lifetimes; lifetimes in Fe I; *J. Res.* **80A** Nos. 5 and 6, 787-797 (1976).

Atomic spectra, O I; multiplet table, O I; oxygen, first spectrum; spectrum O I; wavelengths, O I; atomic energy levels, O I; *NSRDS-NBS3, Section 7*.

Atomic spectrometry; background, correction; nonflame, atomization; stray light; xenon-mercury, arc lamp; arsenic; atomic absorption; *15894*.

Atomic spectroscopy; dispersion; photoabsorption; refractive index; *16379*.

Atomic spectroscopy; photoabsorption; *16253*.

Atomic structure; barium; N_{IV} edges; spectroscopy; vacuum ultraviolet; 4*d* photoabsorption; *15845*.

Atomic theory; copper; doubly ionized copper; electron configuration; atomic energy levels; atomic spectra; *J. Res.* **80A** No. 3, 465-476 (1976).

Atomic time; cesium beam tube; definition of the second; frequency accuracy; international atomic time; primary frequency standard; atomic beams; atomic clock; *16487*.

Atomic transition probabilities; bands, molecular; energy levels, atomic; line shapes, atomic; molecular bands; molecular spectra; rotational constants; atomic energy levels; atomic line shapes; atomic spectra; *15901*.

Atomic transition probabilities; beryllium; boron; carbon; chlorine; helium; hydrogen; lithium; magnesium; nitrogen; oxygen potassium; sodium; aluminum; argon; *16164*.

Atom-molecule interactions; curved classical trajectories; HCl, CO, CO_2 with He, Ar; rotation-vibration spectra; semiclassical *S*-matrix; spectral line broadening; *ab initio* potentials; *16528*.

Atoms; classification; energy levels; ions; rare earths; spectroscopy; *16022*.

Atriums; fire detection; flame detectors; heat detectors; hospitals; hotels; maintenance; nursing homes; reliability; schools; smoke detectors; *16179*.

Attenuated total reflection; laser windows; spectroscopic; absorption; antireflection coatings; *SP462*, pp. 246-252 (Dec. 1976).

Attenuated total reflection spectroscopy; dielectric coatings; infrared lasers; laser damage; thin films; *SP462*, pp. 203-213 (Dec. 1976).

Attenuation; automated; bolometer mount efficiency; measurements; network analyzer; phase; reflection coefficient; *16509*.

Attenuation; brain; neoplasm; TAST; thermal effects; tissue; tumor; ultrasonic; velocity; absorption; *SP453*, pp. 153-163 (Oct. 1976).

Attenuation; breast; reflection techniques; ultrasound; velocity; *SP453*, pp. 135-139 (Oct. 1976).

Attenuation; breast tissue; broadband; high resolution; imaging; large aperture; pathology; pellicle; phase-contrast; transmission; ultrasound; velocity; *SP453*, pp. 121-133 (Oct. 1976).

Attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; *SP453*.

Attenuation; computer; deconvolution; impedance; impulse response; layer model; lucite; ultrasound; *SP453*, pp. 231-251 (Oct. 1976).

Attenuation; computer analysis; impedance; liver cirrhosis; ultrasonics; A-scan; *SP453*, pp. 61-70 (Oct. 1976).

Attenuation; exposure; phantoms; phototiming; radiographic examination; x-ray tube potential; *SP456*, pp. 381-388 (Nov. 1976).

Attenuation; frequency dependence; impedance; microstructural analysis; tissue; ultrasound; velocity; acoustic imaging; acoustic microscopy; *SP453*, pp. 261-267 (Oct. 1976).

Attenuation; impedance gradient; transient thermal gradients; ultrasonics; velocity; absorption; *SP453*, pp. 143-151 (Oct. 1976).

Attenuation; mammalian tissues; tissue parameters; ultrasound; velocity; absorption; *SP453*, pp. 21-28 (Oct. 1976).

Attenuation; phase; swept frequency; time delay spectrometry; tissue; transmission; velocity; *SP453*, pp. 81-95 (Oct. 1976).

Attenuation coefficient; cross section; dosimetry; energy-absorption coefficient; gamma-ray; photon; x ray; *SP456*, pp. 299-306 (Nov. 1976).

Attenuation coefficients; cross sections; gamma rays; photoelectric effect; photons; x rays; *TN901*.

Attic fans; basic research; chemical thermodynamics; door security; Elliot Richardson; energy conservation; engineering; fashion; flammability; laser measurement; science; air conditioners; *DIM/NBS* **60**, No. 6, 1-24 (1976).

Attitudes; conservation; energy; industrial; systems; *SP403*, pp. 113-117 (June 1976).

A-type stars; convection theory; convection zones; metallic-line stars; stellar structure; *16606*.

Audio alarm; burglar alarm; intrusion alarm; intrusion detector; sound sensing; standard; alarm; *16367*.

Audiofrequency modulation; communications; electromagnetic compatibility; law enforcement; personal transmitter; portable transmitter; radio frequency carrier; transmitter; *16285*.

Audiometry; diffraction; head diffraction; hearing aids; instruments for hearing; manikin; *NBSIR 76-1110*.

Auditing; cost/benefit analysis; data base; data base management; DBMS; government regulation; management objectives; privacy; security; standards; technology assessment; user experience; *SP451*.

Auger analysis; diamond-turned metal mirrors; laser damage; light scattering; optical absorption; surface roughness; *SP462*, pp. 158-164 (Dec. 1976).

Auger electron spectroscopy; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; dopant profiles; electrical properties; electronics; four-probe method; hermeticity; interface states; ion implantation; *SP400-25*.

Auger electron spectroscopy; depth impurity profiling; ion implantation; ion sputtering; microelectronic materials; Rutherford backscattering; secondary ion mass spectroscopy; silicon; silicon dioxide; surface analysis; x-ray photoelectron spectroscopy; *15739*.

Auger electron spectroscopy; electrocatalyst; oxygen reduction; sodium depletion; Tafel plots; tungsten bronzes; *SP455*, pp. 297-303 (Nov. 1976).

Auger spectrometry; electron microprobe analysis; ESCA; ion scattering; secondary ion mass spectrometry; surface analysis; *SP422*, pp. 541-573 (Aug. 1976).

Auger spectroscopy; damage morphology; electron emission; electron imaging; ion emission; laser-induced damage; surface characterization; surface temperature; Al mirrors; *SP435*, pp. 207-215 (Apr. 1976).

Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; insulator films; interface characteristics; internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; photovoltaic imaging; Rutherford backscattering; *SP400-23*.

Auger-electron spectroscopy; cross sections; electron probe microanalysis; electrons; inner-shell; *15855*.

Austenite; electron microscopy; iron-nickel; martensite; meteorite; Tishomingo; alloy; *15764*.

Austenitic stainless steel; electrical resistivity; high temperature; low temperature; standard reference materials; thermal conductivity; *16494*.

Austenitic steel; cryogenics; electrical resistivity; electrolytic iron; Lorenz ratio; thermal conductivity; *16206*.

Authority; building; energy; legislation; regulations; state; *NBSIR 76-986*.

Auto-catalytic; auto-catalytic nickel; electroless; electroless nickel, hardness of; nickel; nickel-phosphorus alloy, wear of; *16391*.

Auto-catalytic nickel; auto-catalytic nickel, hardness of; auto-catalytic nickel, wear of; electroless nickel; electroless nickel, hardness of; electroless nickel, wear of; nickel, auto-catalytic; nickel, electroless; nickel-phosphorus alloy; *SP452*, pp. 45-55 (Sept. 1976).

Auto-catalytic nickel; electroless; electroless nickel, hardness of; nickel; nickel-phosphorus alloy, wear of; auto-catalytic; *16391*.

Auto-catalytic nickel, hardness of; auto-catalytic nickel, wear of; electroless nickel; electroless nickel, hardness of; electroless nickel, wear of; nickel, auto-catalytic; nickel, electroless; nickel-phosphorus alloy; wear resistant alloy; *SP452*, pp. 45-55 (Sept. 1976).

Auto-catalytic nickel, wear of; electroless nickel; electroless nickel, hardness of; electroless nickel, wear of; nickel, auto-catalytic; nickel, electroless; nickel-phosphorus alloy; wear resistant alloy; auto-catalytic nickel; *SP452*, pp. 45-55 (Sept. 1976).

229-317 O - 77 - 31

Autocollimator; calibration; complete closure design; indexing table; least squares estimation; partial closure design; standard deviation; subdivision; variance-covariance matrix; angle standard; *NBSIR 75-750.*

Autocollimator; calibration; constant deviation prism; geometrical model; optical square; pentaprism; reflection; refraction; standard deviation; uncertainty; *NBSIR 76-993.*

Autocorrelation function; average wavelength; kurtosis; minicomputer software; random error; skewness; surface microtopography; surface roughness; surface texture; systematic error; amplitude density function; arithmetic average; *TN902.*

Autocorrelation function; linear least-squares fit; machine language; minicomputer software; surface texture measurement; amplitude density function; arithmetic average; *NBSIR 75-924.*

AUTODIN (Automatic Digital Network); JOSS; keyboards; MAC project; alphanumeric symbols; *NBS-GCR-74-28.*

Autoionization; deuterated species; enthalpy of formation; ionization potential; NH_2^+; OH^+; photoionization; predissociation; Rydberg states; ammonia; appearance potential; *16539.*

Autoionization; differential metastability; fine structure; inner shell excitation; rf spectroscopy; rubidium; Zeeman effect atomic beam; *16098.*

Automated; bolometer mount efficiency; measurements; network analyzer; phase; reflection coefficient; attenuation; *16509.*

Automated; calculator; calibration; crossbar switch; low-level voltage measurements; MIDAS; programmable desk calculator; standard cell comparator; *15906.*

Automated data systems; computer programs; documentation; documentation content guidelines; FIPS guidelines; software; *FIPS PUB 38.*

Automated measurement; pulse; rise time; sampling oscilloscope; spectrum amplitude; time domain; transient; *16477.*

Automated measurements; broadband measurements; microwave measurements; microwave power measurements; one-port parameters; six-port junction; application of six-port junction concept; *16501.*

Automated measurements; computer-aided measurements; computer-controlled instruments; *NBSIR 75-801.*

Automated reading technology; circuitry; computer applications; computer engineering; distributed systems; interface standards; memory technology; protocols; *16553.*

Automatic; broad frequency; equations; network analyzers; open circuit reflection coefficient; short circuit; standards; *16510.*

Automatic control; automation; robots; *16036.*

Automatic data processing; building codes; building regulations; computer applications; computers; enforcement; evaluation; information systems; microfilm; microform; state-of-the-art study; *NBS-GCR-74-26.*

Automatic network analyzer; microwave; microwave measurement; six-port; *16475.*

Automatic network analyzer; Q cavity; two-ports; *15867.*

Automatic network analyzers; computer-controlled measurement; magic tee; microwave measurement methods; multiple probe devices; reflectometers; rotating probe devices; slotted lines; survey of automatic techniques; swept frequency measurements; Wheatstone Bridge; *Monogr. 151.*

Automatic potentiometry; automation; calorimetry; Diesselhorst ring; potentiometer; programmable potentiometer; self-balancing potentiometers; thermometry; *J. Res.* **80A** No. 4, 669-675 (July-Aug. 1976).

Automatic sprinkler; corridor sprinkler systems; discharge patterns; spray distribution; water distribution; water spray; *NBSIR 75-920.*

Automatic sprinklers; bedroom fires; droplet size; heat absorption; pool fires; residential sprinkler protection; sprinkler operation; *NBS-GCR-76-58.*

Automatic sprinklers; bibliography; droplet size; fire suppression; spray nozzles; spray patterns; test methods; water distribution; water spray; *NBS-GCR-76-72.*

Automatic sprinklers; carbon dioxide; fire detection; fire extinguishment; flame detection; heat detection; smoke detection; *NBSIR 76-1028.*

Automatic testing; computer program testing; FORTRAN programs; program analysis; software verification; *NBS-GCR-75-46.*

Automatic testing; computer program testing; FORTRAN programs; program analysis; software verification; *NBS-GCR-75-47.*

Automatic testing; computer program testing; FORTRAN programs; program analysis; software correctness; software verification; symbolic program evaluation; *NBS-GCR-76-69.*

Automatic titrations; coulometric titrations; current integration; digital timing; epinephrine; linear sweep voltammetry; manganese; micrometer cell; thin layer electrochemistry; vanadium; *SP422*, pp. 861-869 (Aug. 1976).

Automatic vehicle locator; car locators; law enforcement; *16266.*

Automation; calibration; computer; recordkeeping; x ray; *SP456*, pp. 53-57 (Nov. 1976).

Automation; calorimetry; Diesselhorst ring; potentiometer; programmable potentiometer; self-balancing potentiometers; thermometry; automatic potentiometry; *J. Res.* **80A** No. 4, 669-675 (July-Aug. 1976).

Automation; coal; coal mine safety; dielectric constant; energy; microwave measurement; nondestructive testing; thickness of coal layer; *NBSIR 76-840.*

Automation; computer aided manufacturing systems; computer integrated manufacturing systems; interfaces; motivation for standardization; standards; *16350.*

Automation; computer control; manipulators; robots; robot systems; artificial intelligence; *16047.*

Automation; computer utilization; dedicated computers; EDP expenditure; employment; finance; productivity; services—state/local government; *16075.*

Automation; consumers; innovation; institutional barriers; productivity; service sector; *16319.*

Automation; electrical measurements; electrooptics; high voltage measurement; Kerr effect; optical coupling; pulse measurement; *15718.*

Automation; electronics; integrated circuits; measurement technology; semiconductor devices; semiconductor process control; silicon; *NBS-GCR-76-64.*

Automation; integrated circuits; measurements; microelectronics; process control; reliability; semiconductor; *16116.*

Automation; robots; automatic control; *16036.*

Automation technology; economic impact of automation; productivity improvement; public services; social impact of automation; *SP448.*

Automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; *SP403.*

Automobile; detection; dispersion; explosion; fire; hydrogen; leakage; methane; safety; vents; *16634.*

Automobile; economic; energy; model; transform analysis; *SP403*, pp. 65-74 (June 1976).

Automobile exhaust; catalytic oxidation converter; dilution tunnel; isopropanol; particulate filtration; sulfate; sulfur dioxide; sulfur trioxide; sulfur trioxide condensation; *SP422*, pp. 389-400 (Aug. 1976).

Automotive emissions; laser magnetic resonance technique; stack emissions; ambient air; *16109.*
Automotive environment; calibration; low flow rates; *16267.*
Automotive repair; automotive repair effectiveness; automotive service; customer-mechanic relationship; human factor considerations; universal symbol diagram approach; *SP423,* pp. 171-178 (Apr. 1976).
Automotive repair effectiveness; automotive service; customer-mechanic relationship; human factor considerations; universal symbol diagram approach; automotive repair; *SP423,* pp. 171-178 (Apr. 1976).
Automotive service; customer-mechanic relationship; human factor considerations; universal symbol diagram approach; automotive repair; automotive repair effectiveness; *SP423,* pp. 171-178 (Apr. 1976).
Avalanche breakdown, intrinsic damage; mode-locked pulse trains; *SP435,* pp. 362-365 (Apr. 1976).
Avalanche ionization; damage morphology; damage statistics; distribution of damage times; photoionization; absorption; *SP462,* pp. 350-356 (Dec. 1976).
Avalanche ionization; dielectric breakdown; inclusions; laser damage threshold; morphology; nonlinear refractive index; picosecond laser pulses; *SP435,* pp. 321-330 (Apr. 1976).
Avalanche ionization; infrared windows; laser damage; metal mirrors; optical fabrication; optical materials; thin films; *SP462.*
Avalanche ionization; IR windows and mirrors; laser damage; laser materials; multiphoton processes; self-focusing; thin films; *SP435.*
Avalanches; earthquakes; falls; flows; landslides; mechanisms; slides; *SP444,* pp. III-52—III-71 (Apr. 1976).
Average distance; distance; multiple integrals; transportation problem; *16088.*
Average wavelength; kurtosis; minicomputer software; random error; skewness; surface microtopography; surface roughness; surface texture; systematic error; amplitude density function; arithmetic average; autocorrelation function; *TN902.*
Averaging; differential equations; domains of stability; integral manifold; Liapunov functions; stability; *15940.*
Averaging sphere; averaging ultraviolet and visible light; radiation converter; ultraviolet averaging sphere; ultraviolet to visible converter; *U.S. Patent 3,968,363.*
Averaging sphere; diffusing effectiveness; efficiency; fluorescent wavelength converter; photometry; spectrophotometry; ultraviolet; visible; *16333.*
Averaging sphere; efficiency; radiometry; spectrophotometry; sphere coatings; *15896.*
Averaging spheres; high accuracy transmittance; light averaging devices; linearity; photometric precision; reference spectrophotometer; ultraviolet; wavelength calibration; *TN913.*
Averaging ultraviolet and visible light; radiation converter; ultraviolet averaging sphere; ultraviolet to visible converter; averaging sphere; *U.S. Patent 3,968,363.*
Aviation; collision risk; error analysis; mathematical models; safety; separation; vertical separation; aircraft; air transportation; air traffic control models; altimetry; altitude; *NBSIR 76-1067.*
Aviation industry; electric power industry; National Measurement System, position location; shipping and boating industries; Standards laboratories; telephone industry and specialized carriers; time and frequency; time scales; users of NBS radio broadcasts; *SP445-1.*
Avogadro; crystal; physical constant; x ray; *16223.*
Avogadro constant; crystals; lattice parameter; *16255.*
A-weighting; barometric pressure; crest factor; ground cover; humidity; instrumentation; microphones; sound level meters; statistical control processes; temperature; acoustic calibrators; *TN931.*
A15 compounds; intermetallic compounds; nonstoichiometry; phase composition; phase stability; atomic ordering; *15848.*

B

β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; *16419.*
Back pressure; backsiphonage; guide criteria; potable water protection; plumbing guide criteria; backflow; backflow prevention devices; *NBSIR 76-1020.*
Back pressure; back-siphonage; cross connections; health hazard; potable water; vacuum breaker; water supply; backflow; backflow preventers; *NBSIR 76-1070.*
Backflow; backflow preventers; back pressure; back-siphonage; cross connections; health hazard; potable water; vacuum breaker; water supply; *NBSIR 76-1070.*
Backflow; backflow prevention devices; back pressure; backsiphonage; guide criteria; potable water protection; plumbing guide criteria; *NBSIR 76-1020.*
Backflow preventers; back pressure; back-siphonage; cross connections; health hazard; potable water; vacuum breaker; water supply; backflow; *NBSIR 76-1070.*
Backflow prevention devices; back pressure; backsiphonage; guide criteria; potable water protection; plumbing guide criteria; backflow; *NBSIR 76-1020.*
Background; continuous x rays; electron probe microanalysis; energy-dispersive x-ray analysis; lithium-drifted silicon detector; *15715.*
Background; cosmic-ray proton; induced radioactivity; secondary neutrons; sodium iodide detector; Apollo 17; *15727.*
Background; critical level; detection limit; determination limit; less-than level; minimum detectable activity; statistical; *SP456,* pp. 169-172 (Nov. 1976).
Background; gamma-ray astronomy; induced radioactivity; Monte Carlo calculation; response; scintillation detector; *16431.*
Background correction; continuous radiation; electron microprobe correction procedure; energy-dispersive x-ray spectrometry; lithium-drifted silicon detector; *16401.*
Background correction; Delves Cup; lead; spectrophotometry; atomic absorption; *SP422,* pp. 1035-1043 (Aug. 1976).
Background correction; differential pulse polarography; dropping mercury electrode; electroanalysis; pulse polarography; trace analysis; *SP422,* pp. 871-879 (Aug. 1976).
Background, correction; nonflame, atomization; stray light; xenon-mercury, arc lamp; arsenic; atomic absorption; atomic spectrometry; *15894.*
Background current compensation; differential anodic stripping voltammetry; electrochemical analysis; twin electrode balancing; anodic stripping voltammetry; *SP422,* pp. 881-897 (Aug. 1976).
Backscatter; charged particles; Monte Carlo; reflection; Albedo; angular distribution; *16097.*
Backscattered electrons; domain walls; magnetic domains; scanning electron microscope; silicon steel; transformer steel; *15921.*
Backscattered electrons; electron probe microanalysis; Monte Carlo electron trajectory simulation; scanning electron microscopy; secondary electrons; x rays; *SP460,* pp. 15-44 (Dec. 1976).

Backscattering; disintegration rate; ranges; self-absorption; uranium oxide; alpha particles; *15808*.

Backscattering; gadolinium-148; polonium-210; self absorption; uranium-oxide; alpha particles; *15807*.

Backscattering measurements; Fe-57 Mössbauer spectra; Mössbauer spectra; *16387*.

Back-siphonage; cross connections; health hazard; potable water; vacuum breaker; water supply; backflow; backflow preventers; back pressure; *NBSIR 76-1070*.

Backsiphonage; guide criteria; potable water protection; plumbing guide criteria; backflow; backflow prevention devices; back pressure; *NBSIR 76-1020*.

Bacteria; elemental mercury; flameless atomic absorption spectroscopy; laser Raman spectroscopy; nuclear magnetic resonance spectroscopy; phenylmercuric acetate; volatilization; *15897*.

Bacteriostats; blood analysis; gas chromatography; trace analysis; triclosan; 2-hydroxy-2′,4′,4-trichlorodiphenyl ether; *SP422*, pp. 851-859 (Aug. 1976).

BaF_2; CaF_2; fused silica; interferometry; photoelasticity; piezooptic constants; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; *SP462*, pp. 58-63 (Dec. 1976).

BaF_2; CaF_2; fused silica; interferometry; photoelasticity; piezooptic constants; refractive index; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; *NBSIR 76-1115*.

Ballistic helmet; ballistic impact; ballistic penetration; bulletproof helmet; armor; *16295*.

Ballistic impact; ballistic penetration; bulletproof helmet; armor; ballistic helmet; *16295*.

Ballistic penetration; bulletproof helmet; armor; ballistic helmet; ballistic impact; *16295*.

Balloon; cryogenic balloon inflation; heat transfer; liquid helium; packed bed heat exchangers; *NBSIR 76-834*.

Balmer alpha; beam foil; crossed beams; electrons; excitation; optical spectroscopy; Stark effect; atomic hydrogen; *15891*.

Band center; intensities; laser magnetic resonance; nitrogen dioxide; rotational assignment; spin-rotation splittings; *15788*.

Band experiment; CF_2; CH_2F_2 photolysis; fluorescence spectrum; matrix isolation; absorption spectrum; *15908*.

Band structure; energy levels; excitation potential; ground state potential; nickel; *15842*.

Band structure; properties of semiconductors; semiconductors; thermoelectric power; *16161*.

Bands, molecular; energy levels, atomic; line shapes, atomic; molecular bands; molecular spectra; rotational constants; atomic energy levels; atomic line shapes; atomic spectra; atomic transition probabilities; *15901*.

Bandwidth; calibration; errors in spectrophotometry; interferences; multiple reflections; photometric linearity; polarization; sample characteristics; straylight; wavelength accuracy; *J. Res.* **80A** No. 4, 609-624 (1976).

Bandwidth; coating design; multilayer coating; absorptance; antireflectance coating; *SP462*, pp. 221-229 (Dec. 1976).

Bangladesh; housing; low-cost housing; low-rise buildings; wind; *NBS-GCR-76-74*.

Barium; cesium; lanthanum; spectra; ultraviolet; wavelengths; *16035*.

Barium; electron impact; excitation; *16262*.

Barium; N_{IV} edges; spectroscopy; vacuum ultraviolet; 4*d* photoabsorption; atomic structure; *15845*.

Barium ferrite; low temperature; thermal expansion; *16196*.

Barium fluorescence; cw dye laser; sodium fluorescence; atomic flame fluorescence; *16594*.

Barium sulfate; diffuse reflectance spectra; magnesium oxide; opal glass; radiant flux; reflectance standards; standards calibration; *J. Res.* **80A** No. 4, 585-595 (1976).

Barium sulphate; bidirectional reflectance; bidirectional reflectometer; black coating; gonioreflectometer; magnesium oxide; mu sulphur; reflectance; reflectometer; sodium chloride; *J. Res.* **80A** No. 2, 189-205 (1976).

Barium titanate; dielectric properties; ferroelectrics; KDP; PZT 65/35; thallium chloride; very low temperatures; *16491*.

Barometric pressure; crest factor; ground cover; humidity; instrumentation; microphones; sound level meters; statistical control processes; temperature; acoustic calibrators; A-weighting; *TN931*.

Barothermal; gas pressure; heat diffusion; heat transfer; optical absorption coefficients; transparent materials; *15916*.

Barothermal gas cell; gas pressure; highly transparent solids; thermal conduction; absorption coefficients; *15914*.

Barrier film; chemical coatings; failure prevention; mechanical failure; metal coatings; plated coatings; polymer coatings; solid film lubricants; sputtered coatings; wear; *SP452*.

Barrier films; bearings; fluorinated polymers; lubricant migration; lubricants; spreading prevention; *SP452*, pp. 170-176 (Sept. 1976).

Barrier materials; building materials; children; housing; lead-based paint; lead poisoning; paint removal; abatement; *NBSIR 75-974*.

Barrier to rotation; crystal; crystal structure; hexamethylbenzene; hindered rotation; phase transition; torsional oscillation; λ-point; *16137*.

Base catalyzed decomposition; fluorodisilane; pentafluorodisilane; physical properties; pyrolysis; silicon difluoride; *16014*.

Base station transmitter; communications; fixed transmitter; FM transmitter; law enforcement; transmitter; *16286*.

Base widening; current crowding; hot spots; power transistors; safe operating area; second breakdown; thermal instability; *16451*.

Baseline studies; gas chromatography; gas chromatography-mass spectrometry; hydrocarbons; liquid chromatography; petroleum analysis; trace analysis; *TN889*.

BASIC; compilers; compiler validation; computer programming; formal language; programming language standards; ADP standards; *NBS-GCR-73-17*.

Basic research; chemical thermodynamics; door security; Elliot Richardson; energy conservation; engineering; fashion; flammability; laser measurement; science; air conditioners; attic fans; *DIM/NBS* **60**, No. 6, 1-24 (1976).

Basic standards; cesium standards; frequency accuracy; frequency stability; frequency standards; hydrogen standards; ion storage; laser stabilization; rubidium standards; saturated absorption; time standards; application of standards; *15736*.

Basicity; bibliography, appearance potential; heat of formation; ion-molecule equilibrium; proton affinity; proton transfer; *NBSIR 76-1061*.

Basis functions; configuration mixing; dipole moments; electronic structure of molecules; Hartree-Fock; integrals, evaluation of; molecular structure; orbitals; potential energy curves; pseudopotentials; self-consistent field; valence electrons; *16611*.

Batteries; cells, primary; dry cells; primary batteries; primary cells; *16043*.

Batteries; dental materials; industry; integrated utilities system; mass spectrometry; motorized criminal; ozone puzzle; portable transceiver batteries; RF power meter; utilities system; *DIM/NBS* **60**, No. 3, 1-24 (1976)

Battery performance standard; law enforcement communications, Law Enforcement Standards Laboratory; personal/portable transceivers; primary battery; secondary battery; transceiver; *16296*.

BBN-TENEX; IBM OS/360; operating system security; security flaws; software security; taxonomy of integrity flaws;

UNIVAC 1100 Series OS; *NBSIR 76-1041.*
Be energy levels; model potential theory; *16608.*
Beach accretion; coastal processes; offshore zone; oscillatory water tunnel; permeability effect on sand transport; ripples, sand; sand motion under waves; *15793.*
Beach erosion control; Corps of Engineers; cost sharing; efficiency; hurricane protection; shoreline management; shoreline protection; *16059.*
Bead-spring model; block copolymers; dilute polymer solutions; limiting viscosity number; Mandelkern-Flory-Scheraga equation; molecular weight determination; sedimentation coefficient; translational diffusion coefficient; Zimm theory; *16026.*
Bead/spring model; dilute polymer solutions; eigenvalue; hydrodynamic interaction; matrix algebra; necklace model; polymer physics; *J. Res.* **80B** No. 2, 273-284 (1976).
Beam foil; crossed beams; electrons; excitation; optical spectroscopy; Stark effect; atomic hydrogen; Balmer alpha; *15891.*
Beam splitter; laser attenuation; neutral density filter; *TN677.*
Beam-foil spectroscopy; fusion plasma research; plasma radiative losses; sodium isoelectronic sequence; Tokamak plasmas; atomic oscillator strengths; *16320.*
Beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; charge-coupled device structures; Darlington pairs; deep depletion; dopant profiles; electrical properties; electron beam induced current; electron beam induced damage; *SP400-19.*
Beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; dopant profiles; electrical properties; electronics; four-probe method; hermeticity; interface states; ion implantation; ion microprobe mass analysis; leak tests; *SP400-25.*
Bearing failure; bearing failure modes; bearing inspection; bearing reclamation; bearing recycling; aircraft engine bearings; antifriction bearings; *SP423,* pp. 87-91 (Apr. 1976).
Bearing failure; bearing loading; bearing lubrication; bearing misalignment; bearing temperature; mechanical failure; *SP423,* pp. 67-84 (Apr. 1976).
Bearing failure modes; bearing inspection; bearing reclamation; bearing recycling; aircraft engine bearings; antifriction bearings; bearing failure; *SP423,* pp. 87-91 (Apr. 1976).
Bearing inspection; bearing reclamation; bearing recycling; aircraft engine bearings; antifriction bearings; bearing failure; bearing failure modes; *SP423,* pp. 87-91 (Apr. 1976).
Bearing loading; bearing lubrication; bearing misalignment; bearing temperature; mechanical failure; bearing failure; *SP423,* pp. 67-84 (Apr. 1976).
Bearing lubrication; bearing misalignment; bearing temperature; mechanical failure; bearing failure; bearing loading; *SP423,* pp. 67-84 (Apr. 1976).
Bearing misalignment; bearing temperature; mechanical failure; bearing failure; bearing loading; bearing lubrication; *SP423,* pp. 67-84 (Apr. 1976).
Bearing reclamation; bearing recycling; aircraft engine bearings; antifriction bearings; bearing failure; bearing failure modes; bearing inspection; *SP423,* pp. 87-91 (Apr. 1976).
Bearing recycling; aircraft engine bearings; antifriction bearings; bearing failure; bearing failure modes; bearing inspection; bearing reclamation; *SP423,* pp. 87-91 (Apr. 1976).
Bearing temperature; mechanical failure; bearing failure; bearing loading; bearing lubrication; bearing misalignment; *SP423,* pp. 67-84 (Apr. 1976).
Bearings; fluorinated polymers; lubricant migration; lubricants; spreading prevention; barrier films; *SP452,* pp. 170-176 (Sept. 1976).
Bedding; beds; carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; furniture; life hazard; oxygen; smoke; temperature; toxicity; upholstery; *NBS-GCR-73-1.*
Bedroom fires; droplet size; heat absorption; pool fires; residential sprinkler protection; sprinkler operation; automatic sprinklers; *NBS-GCR-76-58.*
Beds; carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; furniture; life hazard; oxygen; smoke; temperature; toxicity; upholstery; bedding; *NBS-GCR-73-1.*
Behavioral impact; cognitive processes; nuclear weapon theft; perceptual processes; psychological deterrence; security systems; sensory processes; threat analysis; *NBSIR 76-1007.*
Behavioral science; human factors; product safety; safety; safety research; appliances; *16215.*
Bell numbers; branching theorem; Clebsch-Gordon series; irreducible character; matrix functions; multiple transitivity; permutation group; Stirling numbers; *J. Res.* **80B** No. 2, 265-268 (1976).
Benchmarking; charging algorithms; service bureaus; synthetic benchmarking; workload characterization; *16624.*
Benchmarking; charging algorithms; service bureaus; synthetic benchmarking; workload characterization; *TN920.*
Bending moments; building codes; column (supports); frames; long columns; reinforced concrete; slenderness ratio; strength; structural analysis; structural design; ultimate strength; *16412.*
Benefits, industry-society; materials research; measurements-standards; NBS-industry; transfer; *16280.*
Benzene; electronic structure; multiphoton ionization; *15941.*
Benzene derivative; charge-transfer complex; dental materials; electron affinity; electron spin resonance spectroscopy; extrathermodynamic relationships; ionization potential; linear free-energy relationship; polarography; *J. Res.* **80A** No. 2, 173-187 (1976).
Beryllium; boron; carbon; chlorine; helium; hydrogen; lithium; magnesium; nitrogen; oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; *16164.*
Beryllium aluminate; chrysoberyl; drop calorimetry; enthalpy measurements; high temperature calorimetry; specific heat; thermodynamic properties; *J. Res.* **80A** No. 1, 65-73 (1976).
Beryllium oxide; refractory metals; sheathed thermocouples; tantalum; temperature measurements; thermal emf drift; tungsten-rhenium alloys; *15797.*
Beta; coincidence counting; gamma; radioactivity; standardization; ^{129}I; *16259.*
Beta alumina; blocking electrode; interface; solid electrolyte; water; *SP455,* pp. 341-349 (Nov. 1976).
Beta particle; gamma-ray; radioactivity; sediment; standard; x ray; alpha particle; *15933.*
Betas; calibrations; dosimetry; gammas; neutrons; plutonium; x rays; *SP456,* pp. 267-276 (Nov. 1976).
Bethe theory; cross sections; electron; inner-shell electrons; ionization; *K*-shell; *L*-shell; photoabsorption; *15812.*
Between-run; calibration; precision; quality control; systematic error; Youden plot; analytical performance; *SP422,* pp. 141-150 (Aug. 1976).
Bias pressure; calibration; dynamic calibration; dynamic pressure; high pressure; liquid medium; pogo pressure; pressure source; pressure transducer; sinusoidal; space shuttle; transducer; *TN927.*
Bias-isolation unit; capacitance measurements at high applied-bias voltage; capacitance-meter; extended-range capacitance measurement; high-voltage C(V) measurements; modified MIS C(V) measurements; *SP400-34.*
Bias-temperature stress test; boron redistribution; capacitance-voltage methods; charge-coupled device structures; Darlington pairs; deep depletion; dopant profiles; electrical properties; electron beam induced current; electron beam induced damage; electronics; *SP400-19.*
Bias-temperature stress test; boron redistribution; capacitance-voltage methods; dopant profiles; electrical properties; elec-

tronics; four-probe method; hermeticity; interface states; ion implantation; ion microprobe mass analysis; leak tests; measurement methods; *SP400-25.*

Biaxial; fatigue; fracture; laboratory automation; mechanical testing; plasticity; polyvinyl chloride; servo-hydraulic system; viscoelasticity; yield point; *16626.*

Biaxial birefringence; epitaxial microstructure; optical scattering; *SP462,* pp. 239-245 (Dec. 1976).

Bibliographic data files; communications technology developments; computer developments; COM systems extension; copyright protection; facsimile transmission extension; photocopying; reprography developments; *16040.*

Bibliographic information systems; computer technology; information storage and retrieval; interactive systems; online services; online systems; *16548.*

Bibliographies; building fires; construction materials; fire departments; fire detection system; fire tests; flame detectors; flammability tests; hazard analysis; interior furnishings; toxicity; *NBSIR 76-1120.*

Bibliographies; consumer product safety; consumer product standards; consumer product technology; law enforcement equipment; law enforcement equipment standards; product performance; product safety; *NBSIR 76-1066.*

Bibliography; biochemical systems; enthalpy data; entropy data; equilibrium data; Gibbs energy data; heat capacity data; partial molal properties; thermochemistry; thermodynamics; review articles; water pollution; aqueous systems; *SP454.*

Bibliography; building code; building regulations; collapse; failures; progressive collapse; specific resistance; abnormal loading; alternate path; annotated bibliography; *BSS67.*

Bibliography; chemical kinetics; combustion; free radicals; gas phase; hydrocarbons; oxidation; oxygen; oxygenated organic compounds; ozone; *SP449.*

Bibliography; composition; critical fields; critical temperature; crystallographic data; low temperature; superconductive materials; superconductivity; *JPCRD* **5,** No. 3, 581-822 (1976).

Bibliography; computer network; data communications; resource sharing; *SP384.*

Bibliography; data; infrared; inorganic; minerals; ores; organic; polymers; spectroscopy; *SP428. Parts 1, 2, and 3.*

Bibliography; distribution-free methods; educational testing; mathematical statistics; multivariate analysis; order statistics; social sciences, services to; statistical education in the United States; statistical tolerance limits; U.S. Army programs in statistics; *16114.*

Bibliography; droplet size; fire suppression; spray nozzles; spray patterns; test methods; water distribution; water spray; automatic sprinklers; *NBS-GCR-76-72.*

Bibliography; emittance; heat transfer; measurement techniques; periodic surfaces; polarization; random surfaces; reflectance; reflectance of coherent radiation; scattering; scattering theory; surface roughness; transmittance; *J. Res.* **80A** No. 2, 207-220 (1976).

Bibliography; indexes; mathematics bibliography; *16173.*

Bibliography, appearance potential; heat of formation; ion-molecule equilibrium; proton affinity; proton transfer; basicity; *NBSIR 76-1061.*

Bibliography, technological innovation; innovation, technological; technological innovation; *NBS-GCR-ETIP 73-03.*

Bicentennial; history of measurement; metric conversion; metric roll call; metrology; Public Law 93-380; Public Law 94-168; anthropomorphic units; *16195.*

Bicycle; consumer safety; regulations; safety; structural testing; *NBSIR 75-913.*

Bicycle brakes; brakes, bicycle; dynamics, bicycle; error analysis; friction, tire/pavement; kinetics, bicycle; measurements, bicycle braking; pitchover; standards, bicycle safety; test method, bicycle; *NBSIR 75-786.*

Bicycles; braking; consumer safety; handbrake; safety; testing; *NBSIR 75-755.*

Bicycles; braking; consumer safety; handbrakes; testing; *NBSIR 75-953.*

Bid evaluation; Experimental Technology Incentives Program (ETIP); innovation; life cycle costing; local government; procurement policy; state government; *NBS-GCR-ETIP 76-17.*

Bidirectional radiometry; canopies; diffuse reflectance; diffuse transmission; reflectance standards; scattering surfaces; *J. Res.* **80A** No. 4, 597-603 (1976).

Bidirectional reflectance; bidirectional reflectometer; black coating; gonioreflectometer; magnesium oxide; mu sulphur; reflectance; reflectometer; sodium chloride; barium sulphate; *J. Res.* **80A** No. 2, 189-205 (1976).

Bidirectional reflectance factor; diffuse reflectance; diffuse transmittance; reflectance; spectrophotometry; *TN594-11.*

Bidirectional reflectometer; black coating; gonioreflectometer; magnesium oxide; mu sulphur; reflectance; reflectometer; sodium chloride; barium sulphate; bidirectional reflectance; *J. Res.* **80A** No. 2, 189-205 (1976).

Biferrocenylene; delocalization; intramolecular exchange; magnetic susceptibility; mixed valence; Mössbauer spectra; optical; *16049.*

Bike regulations; bomb disarmament; computer auditing; energy options; explosive vapor detectors; firebug; impulse generators; MHD electrode materials; optical standards; safety wheels; *DIM/NBS* **60,** No. 7, 1-24 (1976).

Bilirubin; brain damage; hyperbilirubinemia; neonatal hyperbilirubinemia; phototherapy; *16366.*

Binary mixture; coexistence curve; critical phenomena; density; isobutyric acid; magnetic densimeter; phase equilibria, carbon disulfide, nitromethane; water; *16480.*

Binding energy; field ion microscope; surface; adatom; *16543.*

Binding energy shifts; core level shifts; tin; *16015.*

Binomial coefficients; modular computation; Stirling numbers; *J. Res.* **80B** No. 1, 99-171 (1976).

Bioassay; combustion products; fire; hazard assessment; toxicity; *16204.*

Bioassay; I-125 uptake; thyroid monitoring; *SP456,* pp. 371-379 (Nov. 1976).

Biochemical systems; enthalpy data; entropy data; equilibrium data; Gibbs energy data; heat capacity data; partial molal properties; thermochemistry; thermodynamics; review articles; water pollution; aqueous systems; bibliography; *SP454.*

Biochemistry; coupled equilibrium; enzyme catalyzed reactions; glucose; heat measurement; hexokinase; magnesium; metabolic processes; microcalorimetry; thermochemistry; thermodynamics; adenosine 5′-triphosphate; *16385.*

Biography; Wall, L. A.; *16068.*

Biological analysis; container blank; neutron activation analysis; wet-ashing blank; *SP422,* pp. 593-604 (Aug. 1976).

Biological and environmental samples; blanks; homogeneity of lead content; isotope dilution mass spectrometry; lead analysis; accurate and precise analysis; *SP422,* pp. 929-935 (Aug. 1976).

Biological and genetic variability; clinical laboratory data; specimen collection; specimen handling; accuracy, precision and specificity of analytical methods; *SP422,* pp. 109-122 (Aug. 1976).

Biological material; biological standards; data evaluation; distillation; food composition; gamma spectrometry; inorganic separators; isotopic exchange; multielement determination; neutron activation; radiochemical separation; trace elements; *SP422,* pp. 1173-1180 (Aug. 1976).

Biological materials; biological standards; chromium; flameless atomic absorption; volatile chromium compounds; *SP422*, pp. 605-610 (Aug. 1976).

Biological materials; chromium; cobalt; contamination; manganese; sampling; serum; *SP422*, pp. 299-310 (Aug. 1976).

Biological materials; data interpretation; standard materials; trace elements; accuracy; *SP422*, pp. 65-77 (Aug. 1976).

Biological materials; homogenization; lyophilization; noncontaminating; sample preparation; *SP422*, pp. 721-726 (Aug. 1976).

Biological polymers; immunochemical analysis; light scattering; polymers; proteins; solid standards; antibodies; antigens; *J. Res.* **80A** No. 4, 605-608 (1976).

Biological standards; chromium; flameless atomic absorption; volatile chromium compounds; biological materials; *SP422*, pp. 605-610 (Aug. 1976).

Biological standards; data evaluation; distillation; food composition; gamma spectrometry; inorganic separators; isotopic exchange; multielement determination; neutron activation; radiochemical separation; trace elements; biological material; *SP422*, pp. 1173-1180 (Aug. 1976).

Biological systems; chromium; stability; storage containers; adsorption losses; *SP422*, pp. 611-619 (Aug. 1976).

Biomedical; clinical; measurements system; radioisotopes; radiopharmaceuticals; reference sources; standards; SRM's; *16151*.

Biomethylation; cacodylic acid; diffusion; flame retardant; oxidation rate; stibinic acid; trimethylarsine; trimethylstibine; antimony; antimony oxide; arsenic; arsenic acid; *16628*.

Biopolymers; helix-coil transition; phase transitions in biopolymers; self-assembly; structural transformations; surface adsorption; *15721*.

Biotite stoichiometry; geochemical standards; geochronological standards; K-Ar dating; sampling a biotite; sampling constants; standard biotite; *SP422*, pp. 401-419 (Aug. 1976).

Birefringence; elastooptic constants; infrared-laser window materials; interferometry; KCl; photoelasticity; piezo-optic constants; refractive index; stress-optical constants; thermal coefficient of refractive index; *NBSIR 76-1010*.

Birefringence; germanium; KCl; refractive index; single crystal; stress optic constants; *SP435*, pp. 164-169 (Apr. 1976).

Bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; *16420*.

Black coating; gonioreflectometer; magnesium oxide; mu sulphur; reflectance; reflectometer; sodium chloride; barium sulphate; bidirectional reflectance; bidirectional reflectometer; *J. Res.* **80A** No. 2, 189-205 (1976).

Black coatings; detectors; radiometry; reflectances; *16102*.

Black iron pipe; dimpled rupture; ductile fracture; gas pipe; *NBSIR 73-264*.

Blackbodies; lamp standards; radiometry; remote sensing; solar monitoring; source standards; *16619*.

Blank; contamination; environment; purity; reagents; accuracy; analysts; apparatus; *SP422*, pp. 509-539 (Aug. 1976).

Blank corrections; cosmic ray reactions; effectively zero background; environmental radioactivity; low-level counting statistics; radioactive rare gases; reduced activity; argon-37; atmospheric mixing; *16345*.

Blank value; indophenol blue reaction; Kjeldahl digestion technique; limit of detection; nitrogen in steel; atmospheric contamination; *SP422*, pp. 983-1003 (Aug. 1976).

Blanks; homogeneity of lead content; isotope dilution mass spectrometry; lead analysis; accurate and precise analysis; biological and environmental samples; *SP422*, pp. 929-935 (Aug. 1976).

Blast furnace slag; blended cement; fly ash; materials and energy conservation; *16408*.

Blast furnace slag; blended cements; energy conservation; fly ash; *NBSIR 76-1008*.

Blended cement; fly ash; materials and energy conservation; blast furnace slag; *16408*.

Blended cements; energy conservation; fly ash; blast furnace slag; *NBSIR 76-1008*.

Block copolymers; dilute polymer solutions; limiting viscosity number; Mandelkern-Flory-Scheraga equation; molecular weight determination; sedimentation coefficient; translational diffusion coefficient; Zimm theory; bead-spring model; *16026*.

Block copolymers; homogeneous anionic polymerization; monodisperse polymers; unsaturated monomers; *16057*.

Block Gaussian elimination; graph; inversion; partitioning; sparse matrix; tree; *J. Res.* **80B** No. 2, 245-257 (1976).

Block-cutpoint tree; graph; tree; 2-connected; *16154*.

Blocking electrode; interface; solid electrolyte; water; beta alumina; *SP455*, pp. 341-349 (Nov. 1976).

Blood; blood lead; children; housing; lead paint; lead poisoning; surveys; *NBSIR 76-1024*.

Blood; carbon dioxide; carbon monoxide; cyanide; fire; hydrogen chloride; hydrogen cyanide; oxygen; rats; *NBSIR 75-966*.

Blood; chemistry; computer graphics; geochemistry; medicine; pattern recognition; trace elements; air particulates; *SP422*, pp. 151-162 (Aug. 1976).

Blood; compressibility; density; distribution function; erythrocytes; hematocrit; scattering; ultrasound; angular dependence; *SP453*, pp. 207-212 (Oct. 1976).

Blood; concentrations; determination; dilution; electrolyte; isotope; mass spectrometry; serum; accurate; *SP422*, pp. 951-960 (Aug. 1976).

Blood; cross-section; diagnosis; scattering; standardization; tissue characterization; ultrasound; *SP453*, pp. 29-47 (Oct. 1976).

Blood analyses; contaminations; flameless methods; lead; lead blood analyses; methodology; trace element analyses; atomic absorption spectrometry; *SP422*, pp. 715-719 (Aug. 1976).

Blood analysis; gas chromatography; trace analysis; triclosan; 2-hydroxy-2′,4′,4-trichlorodiphenyl ether; bacteriostats; *SP422*, pp. 851-859 (Aug. 1976).

Blood banking; cost analysis; economics; indirect costs; subsidized costs; *16070*.

Blood lead; children; housing; lead paint; lead poisoning; surveys; blood; *NBSIR 76-1024*.

Blood lead; contamination; dairy products; digestion; interferences; losses; mercury; trace metal; analysis; ashing; *SP422*, pp. 661-668 (Aug. 1976).

Blood lead analyses; clinical chemistry; industrial lead hygiene; interlaboratory correlations; lead hygiene control; occupational exposure standard criteria; occupational health control; precision; trace element analyses; accuracy; *SP422*, pp. 275-282 (Aug. 1976).

Blood protein; bound fraction; ellipsometry; implants; polymer adsorption; protein adsorption; synthetic implants; adsorption; *NBSIR 75-667*.

Blood protein; bound fraction; ellipsometry; implants; polymer adsorption; protein adsorption; synthetic implants; adsorption; *NBSIR 76-1017*.

Blood protein adsorption; conformation adsorbed proteins; ellipsometry; surface potential; *16396*.

Blood proteins; infrared bound fraction; protein adsorption; protein conformation; *15707*.

Blooming; contrast transfer function; distortion; flare; image quality; light induced background; limiting resolution; night vision devices; optical transfer function; resolution charts; veiling glare; *16599*.

Bluegills; cadmium; fish; heavy metal; tissue; trace element

analysis; water pollution; atomic absorption; *SP422*, pp. 1063-1072 (Aug. 1976).
Blum, William; electrodeposition; government laboratories; plating; *16203*.
Blur circle; circular diffraction grating; diamond-turned mirrors; diffraction pattern; machine cusp; scattered light; surface figure; *SP435*, pp. 57-65 (Apr. 1976).
Blurring effect; edge loss; error analysis; flux loss; plastics; reflectance; scattering; spectrophotometry; translucency; transmittance; Vitrolite glass; *TN594-12*.
Body worn antenna; bugging; eavesdropping; electronic surveillance; microphones; receiver; tape recorder; telephone; transmitter; wiretapping; *16237*.
Bogoliubov transformation; bosons; helium; lambda point; lattice model; phase transition; *15870*.
Boiler oversizing; efficiency vs. heating load; modular boilers; modular concept; seasonal efficiency; *15712*.
Boilers; computer simulation; DEPAB (DEsign and Performance Analysis of Boilers); energy saving measures; performance at part load; seasonal efficiency; *16347*.
Bolivia; CENACO; computing using Spanish; foreign relations; international agreement; lectures; OMNITAB II computing system; technology transfer; terminals; acceptance tests; AID; *NBSIR 76-1176*.
Bolivia; measurements; quality control; standardization; testing facilities; *NBSIR 76-1099*.
Bolometer; microwave; power measurement; *16504*.
Bolometer mount; connector compatibility; directional coupler; interlaboratory standards; *16554*.
Bolometer mount efficiency; measurements; network analyzer; phase; reflection coefficient; attenuation; automated; *16509*.
Bomb calorimetry with fluorine; enthalpy of formation, fluorides; flame calorimetry of fluorine and fluorides; procedures, experimental for handling fluorine; *16100*.
Bomb disarmament; computer auditing; energy options; explosive vapor detectors; firebug; impulse generators; MHD electrode materials; optical standards; safety wheels; bike regulations; *DIM/NBS* **60**, No. 7, 1-24 (1976).
Bomb disarmament; explosive; x-ray equipment; performance standard, EOD; *16346*.
Bombs; building codes; design criteria; explosions; gas; hazardous materials; loads; progressive collapse; sonic boom; vehicular collision; *BSS89*.
Bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; *SP400-18*.
Bond dissociation energy; computer programs; explosive sensitivity tests; heat of decomposition; oxygen balance; activation energy; *15957*.
Bond energy; chain reaction; determination of photochemical mechanism; flash photolysis; intermittent illumination; photochemical principles; photochemical reaction of atoms and molecules; photochemistry in the atmosphere; photochemistry of air pollution; *16515*.
Bond method; generalization of silicon; lattice, parameter of; lattice parameters; precision; *15945*.
Bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; *SP400-18*.
Bond strength; coated reinforcing bars; evaluation; organic coatings; pullout tests; *15782*.
Bonded joints; computer simulation; cyclic loading; debond analysis; finite element analysis; joints; nonlinear analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; *16147*.
Bonded joints; double-lap joint analysis; finite element analysis; joining; joints; single-lap joint analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; adhesive-bonded joints; *NBSIR 75-957*.
Bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; *SP400-18*.
Bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; *SP400-18*.
Bone; dispersion phenomena; Maxwell-Wagner polarization; piezoelectric *d* constant; piezoelectricity; relative humidity; temperature; *16314*.
Bone mineral; fluorapatite; hydroxyapatite; morphology; nonstoichiometry; octacalcium phosphate; solubility; surface; amorphous calcium phosphate; *16307*.
Boron; carbon; chlorine; helium; hydrogen; lithium; magnesium; nitrogen; oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; beryllium; *16164*.
Boron; cryogenics; glass; graphite; literature review; PRD-49; reinforced aluminum; reinforced plastics; structural composites; tensile moduli; tensile strength; thermal conductivity; thermal contraction; *15745*.
Boron; ion microprobe mass analyzer; nuclear track technique; standard reference material; steel; alpha particles; *15789*.
Boron hydrides; deuterium; iridium; maleonitriledithiolate; metalloboranes; nuclear magnetic resonance; oxidative addition; palladium; *16566*.
Boron isotope separation; boron trichloride; isotope enrichment; laser isotope separation; photochemical enrichment; *U.S. Patent 3,996,120*.
Boron measurements; mass spectrometry; semiconductor grade silicon; trichlorosilane; *SP422*, pp. 709-714 (Aug. 1976).
Boron redistribution; capacitance-voltage methods; charge-coupled device structures; Darlington pairs; deep depletion; dopant profiles; electrical properties; electron beam induced current; electron beam induced damage; electronics; epitaxial layer thickness; *SP400-19*.
Boron redistribution; capacitance-voltage methods; dopant profiles; electrical properties; electronics; four-probe method; hermeticity; interface states; ion implantation; ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; *SP400-25*.
Boron trichloride; isotope enrichment; laser isotope separation; photochemical enrichment; boron isotope separation; *U.S. Patent 3,996,120*.
Bosons; helium; lambda point; lattice model; phase transition; Bogoliubov transformation; *15870*.
Bottle caps; child protection; closure testing; containers; medicine bottles; poison packaging; *NBSIR 75-722*.
Bound fraction; ellipsometry; implants; polymer adsorption; protein adsorption; synthetic implants; adsorption; blood protein; *NBSIR 75-667*.
Bound fraction; ellipsometry; implants; polymer adsorption; protein adsorption; synthetic implants; adsorption; blood protein; *NBSIR 76-1017*.
Boundary layer; fluid flow; interface; solidification; stability; alloy; *15766*.
Boundary layer; hurricanes; loads (forces); natural analysis; tall buildings; wind profiles; *15899*.

Boundary layers; buildings; codes and standards; wind loads; wind tunnels; aerodynamics; *SP444,* pp. 11-21—11-51 (Apr. 1976).

Boundary-value problem; eigenvalues; parabolic cylinder functions; resonance; rotating disks; singular perturbations; turning-point; viscous flow; Weber's equation; *16459.*

Bragg diffraction; computer processing; frequency-dependent attenuation; internal scattering; myocardial infarction; scattering; surface scattering; tissue characterization; ultrasonic spectroscopy; ultrasound diagnosis; acoustic impedance; *SP453,* pp. 167-196 (Oct. 1976).

Bragg diffraction; diagnosis; frequency dependence; orientation dependence; scattering; tissue characterization; ultrasound; *SP453,* pp. 197-206 (Oct. 1976).

Brain; neoplasm; TAST; thermal effects; tissue; tumor; ultrasonic; velocity; absorption; attenuation; *SP453,* pp. 153-163 (Oct. 1976).

Brain damage; hyperbilirubinemia; neonatal hyperbilirubinemia; phototherapy; bilirubin; *16366.*

Brakes, bicycle; dynamics, bicycle; error analysis; friction, tire/pavement; kinetics, bicycle; measurements, bicycle braking; pitchover; standards, bicycle safety; test method, bicycle; bicycle brakes; *NBSIR 75-786.*

Braking; consumer safety; handbrake; safety; testing; bicycles; *NBSIR 75-755.*

Braking; consumer safety; handbrakes; testing; bicycles; *NBSIR 75-953.*

Branch circuit; contact resistance; electrical connections; fire hazard; glowing electrical connections; arcing/sparking; *NBSIR 76-1011.*

Branch circuit protection; electrical safety; electric shock; ground fault; leakage current; prevention of electrocution; *BSS81.*

Branching; limiting viscosity numbers; long-chain branching; nuclear magnetic resonance; polyethylene; short-chain branching; *16244.*

Branching ratio; charge distribution; electron scattering; quadrupole phonons; vibrational nuclei; anharmonicities; *16507.*

Branching ratios; electron scattering; phonons; reorientation effect; admixture; anharmonicities; *16508.*

Branching theorem; Clebsch-Gordon series; irreducible character; matrix functions; multiple transitivity; permutation group; Stirling numbers; bell numbers; *J. Res.* **80B** No. 2, 265-268 (1976).

Brayton cycle; cryogenic refrigeration; refrigeration; superconducting transmission lines; *16633.*

Breakdown, electrical; failure analysis; fiberglass-reinforced plastics; flammability; guy insulators; high-voltage tests; insulators, tower guy; Loran C; pultruded rods; rods, insulator; *NBSIR 76-1136.*

Break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; *SP403.*

Break-even analysis; economics; energy; industrial; *SP403,* pp. 77-93 (June 1976).

Breaking load, rope; cable, aramid-fiber; end fittings, rope; fatigue damage; rope, aramid-fiber; slings, cargo; terminations, rope; weathering, simulated; aramid fiber rope; *NBSIR 76-1159.*

Breast; reflection techniques; ultrasound; velocity; attenuation; *SP453,* pp. 135-139 (Oct. 1976).

Breast tissue; broadband; high resolution; imaging; large aperture; pathology; pellicle; phase-contrast; transmission; ultrasound; velocity; attenuation; *SP453,* pp. 121-133 (Oct. 1976).

Breast tumor; computerized tomography; heart; reconstruction; refractive index; synthetic focus; tissues; ultrasound; acoustic attenuation; acoustic velocity; *SP453,* pp. 109-119 (Oct. 1976).

Breathing apparatus; closed loop breathing apparatus; equipment design; fire fighters; fire fighting; fire fighting equipment; fire gases; open loop breathing apparatus; protective clothing; smoke inhalation; standards; *NBS-GCR-73-10.*

Brick; buckling; composite walls; compressive strength; concrete block; constitutive relations; flexural strength; masonry; masonry walls; mortar; slenderness ratio; standards; stiffness; structural stability; walls; *BSS73.*

Bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; *TN894.*

Bridge; design; field data; gust response; model; specifications; structure; theory; wind; *SP444,* pp. I-1—I-20 (Apr. 1976).

Bridge; gust; meteorological data; topographical model; wind load; wind profile; wind tunnel; *SP444,* pp. II-1—II-20 (Apr. 1976).

Bridge decks; chloride ions; corrosion; deicing salts; epoxy coatings; organic coatings; steel reinforcing bars; *16189.*

Bridges; buildings; codes; disaster; dynamic analysis; earthquakes; modeling; soils; structural response; volcanoes; wind; *SP444.*

Bridges; platinum thermometers; resistance measurements; thermometry; two-stage transformers; ac bridges; *16404.*

Brittle fracture; economics of failure prevention; fatigue failure; mechanical failure; mechanical reliability; stress corrosion cracking; *SP423.*

Brittle fracture; gas main pipe; welded steel pipe; *NBSIR 73-299.*

Brittle fracture; gas main pipe; impact; low carbon steel; stress corrosion cracking; *NBSIR 74-625.*

Brittle solids; ceramic surfaces; crack; degradation; fracture; Hertzian; indentation; strength; *15856.*

Brittle solids; chipping; fracture; indentation; residual stress; stress analysis; *16306.*

Brittle surfaces; chipping fracture; hardness; wear rate; abrasion; *16335.*

Broad frequency; equations; network analyzers; open circuit reflection coefficient; short circuit; standards; automatic; *16510.*

Broadband; high resolution; imaging; large aperture; pathology; pellicle; phase-contrast; transmission; ultrasound; velocity; attenuation; breast tissue; *SP453,* pp. 121-133 (Oct. 1976).

Broadband antenna; electromagnetic compatibility; fiber optics; field strength measurement; isolated EMC antenna; sensitive isotropic probe; *16210.*

Broadband interactive terminals; cable television uses; checkless society; computer/communications networks; computer/communications services; computer/communications standards; interactive cable television; nonentertainment television; two-way television; *NBS-GCR-75-44.*

Broadband measurements; microwave measurements; microwave power measurements; one-port parameters; six-port junction; application of six-port junction concept; automated measurements; *16501.*

Broadband signal generator; impulse bandwidth; receiver bandwidth calibration; rf burst generator; spectral intensity; *NBSIR 74-371.*

Broadbeam antennas; planar near field measurements; *16470.*

Broadcast; communication; frequency; ratio; synchronization; time; *16496.*

Broadcast of standard frequencies; frequency calibration; high frequency; low frequency; standard frequencies; television color subcarrier; time calibration; time signals; *SP432.*

Bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; *NBS-GCR-ETIP 76-22.*

Bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; *NBS-GCR-ETIP 76-22.*

B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; *SP453.*

B-stars; C IV; O-stars; Si IV; spectra; stellar; ultraviolet; absorption; *16271.*

β-tricalcium; calcification; calcium; dicalcium phosphate; octacalcium phosphate; pyrolysis; pyrophosphate; stoichiometry; whitlockite; *15996.*

Buckling; composite walls; compressive strength; concrete block; constitutive relations; flexural strength; masonry; masonry walls; mortar; slenderness ratio; standards; stiffness; structural stability; walls; brick; *BSS73.*

Bugging; eavesdropping; electronic surveillance; microphones; receiver; tape recorder; telephone; transmitter; wiretapping; body worn antenna; *16237.*

Building; codes; concrete; construction; falsework; formwork; loads; reshoring; safety; shoring; standards; *BSS80.*

Building; construction; design; information; information retrieval system; architectural indexing systems; architecture; *NBSIR 76-1064.*

Building; energy; legislation; regulations; state; authority; *NBSIR 76-986.*

Building; estimating; fire; furniture; hazard; interior finish; smoke; *16123.*

Building acoustics; impact noise; noise; structural vibration; acoustics; *NBS-GCR-75-33.*

Building acoustics; sound reduction index; sound transmission loss; transmission loss; airborne sound transmission; architectural acoustics; *15708.*

Building classification; building thermal mass; building thermal performance; building thermal time constant; housing systems; industrialized housing; mass per unit area; Operation BREAKTHROUGH; U-value; *NBSIR 75-678.*

Building code; building regulations; collapse; failures; progressive collapse; specific resistance; abnormal loading; alternate path; annotated bibliography; bibliography; *BSS67.*

Building code; damage classification; extreme wind; tornado; wind loads; *SP444,* pp. I-34—I-39 (Apr. 1976).

Building code provisions; building codes; building component classification; building specifications; building standards; performance concept; *BSS90.*

Building codes; building component classification; building specifications; building standards; performance concept; building code provisions; *BSS90.*

Building codes; building laws and regulations; building materials—testing and evaluation; building systems; industrialized housing; mobile homes; modular construction; prefabrication; zoning; *NBS-GCR-73-19.*

Building codes; building regulations; building regulatory system; standards; *NBSIR 76-1140.*

Building codes; building regulations; computer applications; computers; enforcement; evaluation; information systems; microfilm; microform; state-of-the-art study; automatic data processing; *NBS-GCR-74-26.*

Building codes; buildings; deflections; dynamic response; gust factors; structural engineering; wind engineering; wind loads; accelerations; *15871.*

Building codes; buildings; deflections; dynamic response; gust factors; structural engineering; wind loads; *SP444,* pp. IV-127—IV-144 (Apr. 1976).

Building codes; buildings; design; earthquakes; structural engineering; *SP444,* pp. IV-113—IV-126 (Apr. 1976).

Building codes; certification; compliance assurance; evaluation; inspection; manufactured building; model documents; NCSBCS; standards; state regulation; *BSS87.*

Building codes; cities; health and safety; historic preservation; states; *TN918.*

Building codes; column (supports); frames; long columns; reinforced concrete; slenderness ratio; strength; structural analysis; structural design; ultimate strength; bending moments; *16412.*

Building codes; computer model; decision theory; networks; specifications; standards; system engineering; *NBS-GCR-76-55.*

Building codes; computer program; decision theory; networks; specifications; standards; systems engineering; *NBS-GCR-76-56.*

Building codes; computer program; decision theory; FORTRAN; logic design; networks; specifications; standards; systems engineering; *NBS-GCR-76-57.*

Building codes; computer tapes; energy; fire; helmets; mobile homes; phase diagrams; tire pressure; air; *DIM/NBS* **60,** No. 12, 1-24 (1976).

Building codes; construction practices; damage; earthquake; houses; residential dwelling; *SP444,* pp. V-63—V-65 (Apr. 1976).

Building codes; design criteria; explosions; gas; hazardous materials; loads; progressive collapse; sonic boom; vehicular collision; bombs; *BSS89.*

Building codes; design standards; masonry construction; roofs; siding; structural engineering; wind; wind damage; wind engineering; *TN909.*

Building codes; door assemblies; performance requirements; physical security; standards; *16142.*

Building codes; factory-built housing; industrialized building; inspection; manufactured building; model codes; model documents; NCSBCS; on-site construction; prefabricated construction; standards; state-local relationship; state regulations; *NBS-GCR-74-27.*

Building codes; industrialization; less-developed country; SASO; Saudi Arabia; standardization; tentative standards; *NBSIR 75-976.*

Building collapse; corrosion; energy; environmental; frequency standards; hearing aids; high-rise buildings; metals; radiation safety; standards laboratory; synchrotron; *DIM/NBS* **60,** No. 5, 1-24 (1976).

Building component classification; building specifications; building standards; performance concept; building code provisions; building codes; *BSS90.*

Building construction; building design; building materials; building research; environmental protection; international cooperation; international standards; materials conservation; materials science; performance concept; *16027.*

Building construction; charring; combustion; fire endurance; fire test; flame emissivity; heat transfer; pyrolysis; radiant heat; thermal inertia; ASTM Standard E119; *NBS-GCR-75-50.*

Building design; building materials; building research; environmental protection; international cooperation; international standards; materials conservation; materials science; performance concept; building construction; *16027.*

Building design; consumer protection; fire control; fire detection; fire research; fire spread; flammability; *SP416, 1976 Edition.*

Building design; energy conservation; fenestration; HVAC systems; illumination; insulation; lighting; performance standard; thermal performance; ventilation; water heating; air leakage; *NBSIR 74-452.*

Building economics; building materials; economic analysis; housing; lead-based paint; lead poisoning; abatement; *TN922.*

Building elements and materials; degradation factors; durability; property measurement test; standard test methods; aging test; *NBSIR 75-955.*

Building fires; case studies; critical events; decisions; episodes; fires; home for the aged; hospital fires; human behavior; institutions; mapping; models; nursing homes; realms; *NBS-GCR-76-73.*

Building fires; construction materials; fire departments; fire detection system; fire tests; flame detectors; flammability tests; hazard analysis; interior furnishings; toxicity; bibliographies; *NBSIR 76-1120.*

Building heat transfer; computer programs; dynamic thermal performance; heat flow analysis; heating and cooling loads; thermal analysis; transient heat flows; *15762.*

Building industry; calibration system; centigrade/celsius; computer; electrical industries; environments; glass standards; government intervention; heating/cooling; lead-paint; metric; pressure transducers; thermal comforts; *DIM/NBS* **60,** No. 10, 1-24 (1976).

Building laws and regulations; building materials—testing and evaluation; building systems; industrialized housing; mobile homes; modular construction; prefabrication; zoning; building codes; *NBS-GCR-73-19.*

Building materials; building research; environmental protection; international cooperation; international standards; materials conservation; materials science; performance concept; building construction; building design; *16027.*

Building materials; calorimetry; combustibility; flammability; heat release rate; potential heat; self heating; *16111.*

Building materials; children; housing; lead-based paint; lead poisoning; paint removal; abatement; barrier materials; *NBSIR 75-974.*

Building materials; economic analysis; housing; lead-based paint; lead poisoning; abatement; building economics; *TN922.*

Building materials; fires; optical density; room furnishings; smoke production; smoke tests; *16557.*

Building materials—testing and evaluation; building systems; industrialized housing; mobile homes; modular construction; prefabrication; zoning; building codes; building laws and regulations; *NBS-GCR-73-19.*

Building regulations; building regulatory system; standards; building codes; *NBSIR 76-1140.*

Building regulations; collapse; failures; progressive collapse; specific resistance; abnormal loading; alternate path; annotated bibliography; bibliography; building code; *BSS67.*

Building regulations; computer applications; computers; enforcement; evaluation; information systems; microfilm; microform; state-of-the-art study; automatic data processing; building codes; *NBS-GCR-74-26.*

Building regulations; design process; European; progressive collapse; regulatory process; abnormal loading; *NBS-GCR-75-48.*

Building regulations; dimensional coordination; metric conversion; planning and scheduling; *16556.*

Building regulations; dimensional coordination; metric conversion; planning and scheduling; *TN915.*

Building regulatory system; standards; building codes; building regulations; *NBSIR 76-1140.*

Building research; building safety; perception; stair safety research; architectural psychology; architectural research; *NBSIR 76-1046.*

Building research; building technology; codes; criteria; project summaries; standards; technical bases; *SP446.*

Building research; cooperative programs; information exchange; international building research; international organization memberships; special foreign currency programs; *NBSIR 76-1162.*

Building research; criteria; energy; engineering; industry construction; measurement techniques; standards; *SP439.*

Building research; environmental protection; international cooperation; international standards; materials conservation; materials science; performance concept; building construction; building design; building materials; *16027.*

Building safety; floor surface friction; occupancy safety; slip-resistance; slip-resistance testers; walking friction; *TN895.*

Building safety; perception; stair safety research; architectural psychology; architectural research; building research; *NBSIR 76-1046.*

Building specifications; building standards; performance concept; building code provisions; building codes; building component classification; *BSS90.*

Building standards; performance concept; building code provisions; building codes; building component classification; building specifications; *BSS90.*

Building systems; industrialized housing; mobile homes; modular construction; prefabrication; zoning; building codes; building laws and regulations; building materials—testing and evaluation; *NBS-GCR-73-19.*

Building technology; codes; criteria; project summaries; standards; technical bases; building research; *SP446.*

Building technology; information handling; measurement services; Philippines; standardization; testing facilities; *NBSIR 76-1083.*

Building thermal mass; building thermal performance; building thermal time constant; housing systems; industrialized housing; mass per unit area; Operation BREAKTHROUGH; U-value; building classification; *NBSIR 75-678.*

Building thermal performance; building thermal time constant; housing systems; industrialized housing; mass per unit area; Operation BREAKTHROUGH; U-value; building classification; building thermal mass; *NBSIR 75-678.*

Building thermal time constant; housing systems; industrialized housing; mass per unit area; Operation BREAKTHROUGH; U-value; building classification; building thermal mass; building thermal performance; *NBSIR 75-678.*

Building ventilation rates; sulfur hexafluoride tracer; air infiltration instrumentation; air infiltration measurement; *TN898.*

Buildings; codes; disaster; dynamic analysis; earthquakes; modeling; soils; structural response; volcanoes; wind; bridges; *SP444.*

Buildings; codes and standards; wind loads; wind tunnels; aerodynamics; boundary layers; *SP444,* pp. II-21—II-51 (Apr. 1976).

Buildings; codes and standards; housing; hurricanes; low-rise buildings; natural disaster; structural connections; typhoons; wind loads; *NBSIR 75-790.*

Buildings; computer; energy calculation; heat transfer; heating and cooling loads; response factor; algorithm; ASHRAE; *16630.*

Buildings; computers; data processing; fire loads; load surveys; *NBSIR 76-982.*

Buildings; construction; maintenance; research accidents; safety; accidents; *16315.*

Buildings; cooling; heating; hot water; performance criteria; solar energy; standards; *NBSIR 76-1187.*

Buildings; cyclones; disasters; structural engineering; tides; wind; *BSS86.*

Buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornadoes, wind; *SP444,* pp. V-35—V-49 (Apr. 1976).

Buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; *NBS-GCR-75-36.*

Buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; *NBS-GCR-75-37.*

Buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; *NBS-GCR-75-38.*

Buildings; deflections; dynamic response; gust factors; structural engineering; wind engineering; wind loads; accelerations; building codes; *15871.*

Buildings; deflections; dynamic response; gust factors; structural engineering; wind loads; building codes; *SP444,* pp. IV-127—IV-144 (Apr. 1976).

Buildings; design; earthquakes; structural engineering; building codes; *SP444,* pp. IV-113—IV-126 (Apr. 1976).

Buildings; design; energy; legislation; solar; State; architecture; *NBSIR 76-1082.*

Buildings; energy conservation; heat transfer; *16446.*

Buildings; fire growth; flame spread; heat release; interior finish; reduced scale modeling; room corner tests; smoke; *16183.*

Buildings; fire loads; load surveys; occupancy live loads; structural engineering; *16072.*

Buildings; fire loads; load surveys; occupancy live loads; structural engineering; *BSS85.*

Buildings; fires; loads; safety; surveys; *16087.*

Buildings; solar energy; standards; *NBSIR 76-1143.*

Buildings (codes); excavation; foundations; geotechnical engineering; standards; *16535.*

Buildings (codes); failure; probability distribution functions; reliability; structural engineering; wind (meteorology); wind pressure; *16544.*

Buildings (codes); hurricanes; probability distribution functions; reliability; risk; statistical analysis; storms; structural engineering; wind pressure; wind speed; *16545.*

Buildings energy; energy conservation; NBS programs; *16120.*

Built-up roofing; insulation; performance; radiative cooling; roofing; solar heating; surface temperature; *NBSIR 76-987.*

Built-up roofing; interply thickness; roofing membranes; viscosity; application temperature; asphalt; *BSS92.*

Bulk; electron mean free path; exchange and correlation; jellium; *15843.*

Bulk absorption; CO laser; HF laser; infrared laser window materials; multiphonon absorption; surface absorption; *SP462,* pp. 50-57 (Dec. 1976).

Bulk absorption coefficients; Fourier amplitudes; gas pressure; heat transfer; phase shifts; photoacoustic; surface absorption coefficients; transparent materials; *16558.*

Bulk damage; focal spot diameter; inclusion damage; interference ripples; pulsed DF laser damage; sapphire; scattering; waveform distortion; alkali-halides; alkaline-earth fluorides; *SP462,* pp. 136-144 (Dec. 1976).

Bulk damage; longitudinal mode control; pulsed 10.6 μm laser damage; RAP materials; transmitted pulse cutoff; variable pulse duration; alkali halides; *SP435,* pp. 118-125 (Apr. 1976).

Bulk excitons; electron loss spectroscopy; ionic crystals; Madelung potential; Mg^{+}; Mg^{2+}; MgO; Stark spectrum; surface excitons; *SP455,* pp. 59-65 (Nov. 1976).

Bulk modulus; composite materials; elastic constants; filled polymers; mechanical properties; particulate composites; Poisson's ratio; shear modulus; Young's modulus; *16264.*

Bulk modulus; compressibility; copper; copper alloys; elastic constants; Poisson ratio; pulse-echo method; resonance method; shear modulus; sound velocity; Young's modulus; *16505.*

Bulk modulus; compressibility; Debye temperature; elastic constants; plutonium; plutonium alloy; Poisson ratio; shear modulus; sound velocity; Young modulus; *16635.*

Bulk modulus; equation of state; high pressure; phase transitions; potassium chloride; ultrasonics; *16029.*

Bulk resistivity; collector resistivity; four-probe; planar test structure; resistivity; semiconductor characterization; semiconductor device; silicon; square array; *16424.*

Bulk viscosity; density expansion; methane; modified Enskog theory; molecular correlations; nitrogen; sound absorption; argon; *16483.*

Bulletproof helmet; armor; ballistic helmet; ballistic impact; ballistic penetration; *16295.*

Bullets; cartridges; handgun ammunition; law enforcement; relative incapacitation index; relative stopping power; *16305.*

Bunsen ice calorimeter; calorimetric standards; calorimetry; heat standards; phase-change calorimeter; plutonium dioxide; plutonium isotopes; radionuclide calorimetry; radionuclide decay power; standards; *16443.*

Buoyancy; channels; film boiling; forced convection; helium I; helium II; mixed convection; nucleate boiling; subcritical; supercritical; transition; turbulent flow; *TN675.*

Buoyant flows; geophysical fluid flows; inertial waves; internal waves; rotating fluids; stratified fluids; waves in fluids; *J. Res.* **80B** No. 3, 353-402 (1976).

Burglar alarm; intrusion alarm; intrusion detector; sound sensing; standard; alarm; audio alarm; *16367.*

Burglary; consultants; crimes of opportunity; directory, (security); investigations; law enforcement; resources; security; shoplifting; theft; *16369.*

Burn, fabric; fabric, burn; flammability; *NBS-GCR-73-15.*

Burn hazards, household appliances; fault-tree diagrams; generic safety standards; household appliances; operations research; thermal burn hazards; *NBSIR 76-1097.*

Burn injuries, fabric related; burning apparel; fabric related burn injuries; apparel, burn injuries; *NBS-GCR-73-11.*

Burn injury; carpets; draperies; fabrics; flammability; heat flux; standards; tents; tests; uniforms; upholstered furniture; apparel; *16144.*

Burn injury; ease of ignition; fabrics; fire; flammability tests; garments; heat transfer; standards; apparel; *NBSIR 76-1072.*

Burning apparel; fabric related burn injuries; apparel, burn injuries; burn injuries, fabric related; *NBS-GCR-73-11.*

Burns; fabric fires; FFACTS; garments; ignition sources; space heaters; *NBSIR 76-1014.*

Burns; fabric fires; fire injuries; flammable fabrics; ignition hazards; ignition sources; lighters; matches; *NBS-GCR-74-32.*

Bus transit; busways; carpools; energy impacts; mode choice; pollution reduction; *15724.*

Business forms; computers; data entry systems; information processing systems; information processing standards; OCR; OCR forms; optical character recognition; standards; *FIPS PUB 40.*

Busways; carpools; energy impacts; mode choice; pollution reduction; bus transit; *15724.*

C

C; laser; laser frequency measurement; length standard saturated absorption stabilization; speed of light; *15898.*

ψ and χ particles; 1^{--} states; e^+e^- annihilation; exotic mesons; meson classification; *15961*.

C IV; O-stars; Si IV; spectra; stellar; ultraviolet; absorption; B-stars; *16271*.

ψ particles; χ particles; angular distributions; gamma-gamma correlations; quark models; symmetries; *15962*.

Cable, aramid-fiber; end fittings, rope; fatigue damage; rope, aramid-fiber; slings, cargo; terminations, rope; weathering, simulated; aramid fiber rope; breaking load, rope; *NBSIR 76-1159*.

Cable assembly; coaxial cable; insertion loss; mobile antenna; mobile transceiver; transmission; *16294*.

Cable television uses; checkless society; computer/communications networks; computer/communications services; computer/communications standards; interactive cable television; nonentertainment television; two-way television; wired city; wired nation; *NBS-GCR-75-44*.

Cacodylic acid; diffusion; flame retardant; oxidation rate; stibinic acid; trimethylarsine; trimethylstibine; antimony; antimony oxide; arsenic; arsenic acid; biomethylation; *16628*.

CAD; CAD/CAM; computer-aided design; manufacturing; *16146*.

CAD/CAM; computer-aided design; manufacturing; CAD; *16146*.

Cadmium; fish; heavy metal; tissue; trace element analysis; water pollution; atomic absorption; bluegills; *SP422*, pp. 1063-1072 (Aug. 1976).

Cadmium; condensation energy; demagnetization coefficient; fluctuations; inhomogeneous superconductor; intermediate state; superconducting-normal transition; superconductor; surface energy type I superconductors; *16450*.

Cadmium; copper; lead; manganese; sensitivity; spectrophotometry; statistical methods; zinc; atomic absorption; *SP422*, pp. 1023-1033 (Aug. 1976).

Cadmium; copper; electrochemical analysis; heavy metals; lead; seawater analysis; speciation; stability of water samples; zinc; Adriatic Sea; *SP422*, pp. 917-928 (Aug. 1976).

Cadmium; environmental Standard Reference Materials; isotope dilution; lead; molybdenum; rubidium; strontium; trace analyses; *16221*.

Cadmium telluride; elastic compliance tensor; elastic moduli; extrinsic damage thresholds; high-power lasers; infrared materials; tensile stress; *SP462*, pp. 119-125 (Dec. 1976).

Cadmium telluride; gallium arsenide; germanium; laser flash method; laser windows; thermal diffusivity; *SP435*, pp. 98-106 (Apr. 1976).

Cadmium telluride; growth kinetics; mechanical properties; microstructure; stoichiometry; transmission electron microscopy; vapor deposition; *SP462*, pp. 100-118 (Dec. 1976).

CaF_2; crack coalescence; flaw detection; flaw distribution; forging; grain boundary mobility; subgrains; *SP462*, pp. 69-81 (Dec. 1976).

CaF_2; fused silica; interferometry; photoelasticity; piezo-optic constants; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; *SP462*, pp. 58-63 (Dec. 1976).

CaF_2; fused silica; interferometry; photoelasticity; piezo-optic constants; refractive index; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; *NBSIR 76-1115*.

Caking; coal gasification; liquefaction processes; aromatic asphaltenes; *16365*.

Calcification; calcium; dicalcium phosphate; octacalcium phosphate; pyrolysis; pyrophosphate; stoichiometry; whitlockite; β-tricalcium; *15996*.

Calcium; charge exchange; charge transfer; cross section calculations; ion-atom collisions; rare-gas ions; uranium; alkali ions; *16126*.

Calcium; container effects; copper; magnesium; potassium; serum minerals; serum storage effects; sodium; temperature effects; trace elements; zinc; atomic absorption spectrophotometry; *SP422*, pp. 575-591 (Aug. 1976).

Calcium; dicalcium phosphate; octacalcium phosphate; pyrolysis; pyrophosphate; stoichiometry; whitlockite; β-tricalcium; calcification; *15996*.

Calcium diphosphate; calcium pyrophosphate; chondrocalcinosis; pseudogout; solubility; solubility product; synovial fluid; *16230*.

Calcium fluoride; defect pairs; equilibria; model; point defects; annealing; *15820*.

Calcium fluoride; refractive index; temperature coefficient of refractive index; *SP462*, pp. 64-68 (Dec. 1976).

Calcium hydroxide; crystal growth; crystals, electrochemical; electrolysis; solution; *16302*.

Calcium pyrophosphate; chondrocalcinosis; pseudogout; solubility; solubility product; synovial fluid; calcium diphosphate; *16230*.

Calculated powder patterns; I/I_c; microabsorption effects; quantitative phase analysis; quantitative powder diffraction; reference intensity ratios; systematic errors in powder diffraction; *15929*.

Calculation; dosimetry; nuclear medicine; radionuclide; radiopharmaceutical; absorbed dose; *15977*.

Calculations; hydrocarbon crystals; internal friction; molecular defects; pair potentials; site model; *16074*.

Calculator; calibration; crossbar switch; low-level voltage measurements; MIDAS; programmable desk calculator; standard cell comparator; automated; *15906*.

Calibration; calibration chain; pressure; pressure measurement; *NBSIR 75-931*.

Calibration; Cassiopeia A; error analysis; flux density; G/T (system gain/system noise temperature); ground station; radio star; accuracy; antenna; *16499*.

Calibration; cavity chamber; graphite chamber; ionization chamber; absorbed dose; *SP456*, pp. 37-39 (Nov. 1976).

Calibration; ceramic; condenser; electret; humidity; microphones; reciprocity; sensitivity; temperature; *NBSIR 76-1090*.

Calibration; communication; consumers; grain moisture measurement; laws and regulations; measurement; metric; packaging and labeling; police radar equipment; standards; supermarket automation; weights and measures; *SP442*.

Calibration; comparator; gage blocks; length; measurement process; *NBSIR 76-979*.

Calibration; complete closure design; indexing table; least squares estimation; partial closure design; standard deviation; subdivision; variance-covariance matrix; angle standard; autocollimator; *NBSIR 75-750*.

Calibration; computer; recordkeeping; x ray; automation; *SP456*, pp. 53-57 (Nov. 1976).

Calibration; constant deviation prism; geometrical model; optical square; pentaprism; reflection; refraction; standard deviation; uncertainty; autocollimator; *NBSIR 76-993*.

Calibration; crossbar switch; low-level voltage measurements; MIDAS; programmable desk calculator; standard cell comparator; automated; calculator; *15906*.

Calibration; detector, radioactive argon; ionization chamber; sodium-22; standard reference materials; argon; *16325*.

Calibration; diagnostic ultrasound; ultrasonic measurements; ultrasonic techniques; *SP456*, pp. 91-97 (Nov. 1976).

Calibration; diameter; gravitational bending; interferometry; least squares line; linear model; optical flat; profile; standard deviation; uncertainty; *NBSIR 75-975*.

Calibration; dosimetry; ionization chamber; secondary standardization; *SP456*, pp. 65-69 (Nov. 1976).
Calibration; dynamic; dynamic calibration; dynamic pressure; dynamic pressure source; liquid column; pressure; pressure source; pressure transducer; sinusoidal pressure; transducer; *TN914*.
Calibration; dynamic; electronic flash; photographic flashbulb; pressure; pressure measurement; pressure transducer; thermal transient; transducer; zero shift; *TN905*.
Calibration; dynamic; electronic flash; photoflash bulb; pressure; pressure measurement; pressure transducer; pressure transducer response; response; thermal transient; transducer; zero shift; *NBSIR 76-1038*.
Calibration; dynamic calibration; dynamic pressure; high pressure; liquid medium; pogo pressure; pressure source; pressure transducer; sinusoidal; space shuttle; transducer; bias pressure; *TN927*.
Calibration; electrical measurements; electro-optics; frequency response; high voltage; Kerr effect; operational amplifier; pulses; radiation; safety; x-ray generators; x rays; *NBSIR 75-775*.
Calibration; electromechanical transducer; galvanometer; galvanometer amplifier; seismic system; seismometer; accelerometer; *NBSIR 76-1089*.
Calibration; emergent stem; liquid-in-glass thermometer; reference point; stirred liquid comparison bath; temperature scale; *Monogr. 150*.
Calibration; environmental gamma-rays; field testing; instruments; source distributions; *SP456*, pp. 233-248 (Nov. 1976).
Calibration; errors in spectrophotometry; interferences; multiple reflections; photometric linearity; polarization; sample characteristics; straylight; wavelength accuracy; bandwidth; *J. Res.* **80A** No. 4, 609-624 (1976).
Calibration; evaluation; inter-calibration; quality control; standards; air pollution; *15978*.
Calibration; exposure rate; geometry; instrument; ion chamber; roentgen; standard; γ radiation; γ response; *SP456*, pp. 59-63 (Nov. 1976).
Calibration; fabrication variables; immersion testing; interim reference standard; longitudinal waves; metallurgical variables; nondestructive evaluation; pulse echo; steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; *NBSIR 76-984*.
Calibration; FFT; Fourier transform; Fourier transform frequency; mechanical shock; shock generator; accelerometer; *16128*.
Calibration; filters; orchard leaves; reference sample; x-ray analysis; *15984*.
Calibration; filters; orchard leaves; standard reference sample; x-ray analysis; *16065*.
Calibration; Fourier transform; impulse generator; pulse measurement; spectrum; spectrum amplitude; *16463*.
Calibration; intercomparison studies; quality assurance; quality control; radioactivity; reference methods; *SP456*, pp. 263-265 (Nov. 1976).
Calibration; interim reference standard; longitudinal beam; measurement system; nondestructive evaluation; pulse-echo; ultrasonics; aluminum ultrasonic reference standards; ASTM-type reference standards; *TN924*.
Calibration; light emitting diode; spectral irradiance; *16437*.
Calibration; low flow rates; automotive environment; *16267*.
Calibration; manganous sulfate; neutron source; radiation instruments; *SP456*, pp. 87-89 (Nov. 1976).
Calibration; measurement; nondestructive assay; nuclear; safeguards; traceability; *16414*..
Calibration; megavoltage radiotherapy; quality assurance; *SP456*, pp. 351-358 (Nov. 1976).
Calibration; precision; quality control; systematic error; Youden plot; analytical performance; between-run; *SP422*, pp. 141-150 (Aug. 1976).
Calibration cell; chlorine concentration; chlorine monitor; electrochemical calibration; internal calibration; iodine detection; potassium iodide; *U.S. Patent 3,966,413*.
Calibration chain; pressure; pressure measurement; calibration; *NBSIR 75-931*.
Calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; *16158*.
Calibration designs; chain blocks; collaborative tests; diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; interlaboratory tests; randomization, constrained; ruggedness test; statistical techniques; Youden plot; Youden squares; *16115*.
Calibration device; dinitrotoluene; ethylene glycol dinitrate; explosives; generator; trinitrotoluene; vapors; *16402*.
Calibration of ultraviolet spectrophotometers; liquid filters; transfer standards; ultraviolet absorbance standards; absorbance linearity; accuracy; acidic potassium dichromate solutions; *J. Res.* **80A** No. 4, 631-636 (1976).
Calibration reference materials; calibrators; clinical control materials; clinical standards; consensus standards; reference materials; *16358*.
Calibration system; centigrade/celsius; computer; electrical industries; environments; glass standards; government intervention; heating/cooling; lead-paint; metric; pressure transducers; thermal comforts; weights and measures; *DIM/NBS* **60**, No. 10, 1-24 (1976).
Calibrations; calorimeters; detectors; lasers; radiometry; *SP456*, pp. 215-221 (Nov. 1976).
Calibrations; dosimetry; gammas; neutrons; plutonium; x rays; betas; *SP456*, pp. 267-276 (Nov. 1976).
Calibrations; electromagnetic hazards; field meters; gain; microwave; near-field; *NBSIR 75-805*.
Calibrations; environment; measurements; medical; radiation; standards; *SP456*.
Calibrations; laser calorimeters; measurement assurance programs; non-ionizing EM radiation hazards; RF and microwave measurements; standards; *SP456*, pp. 417-425 (Nov. 1976).
Calibrators; clinical control materials; clinical standards; consensus standards; reference materials; calibration reference materials; *16358*.
California aerosol monitoring program; elemental analysis; ion beam analysis; monitoring; particle sizing; time resolution; aerosol; *SP422*, pp. 1119-1136 (Aug. 1976).
Californium-252; Mahoning River; neutron activation analysis; pollution; sediment; trace elements; water; wet chemical analysis; atomic absorption analysis; *SP422*, pp. 225-230 (Aug. 1976).
Calorimeter; calorimetric comparisons; electron beams; absorbed dose; *NBSIR 76-1023*.
Calorimeter; combustion; fire test; heat release; limiting thermal index; pyrolysis; radiant heat; thermal sensitivity index; *NBS-GCR-76-54*.
Calorimeter; dose/ionization conversion; dosimetry; electrons; ionization chamber; stopping-power ratios; *SP456*, pp. 307-312 (Nov. 1976).
Calorimeter; dosimetry; fast neutron; tissue equivalent; *SP456*, pp. 327-333 (Nov. 1976).
Calorimeter; electrons; heat defect in graphite; absorbed dose; *16473*.
Calorimeter; ultrasonic calorimeter; ultrasonic power measurements; *TN686*.

Calorimeters; detectors; lasers; radiometry; calibrations; *SP456*, pp. 215-221 (Nov. 1976).

Calorimeters; electrical measurements facilities; high pressure facilities; high temperature facilities; spectroscopy facilities; accelerators; acoustic facilities; *SP413, 1976 Edition.*

Calorimetric comparisons; electron beams; absorbed dose; calorimeter; *NBSIR 76-1023.*

Calorimetric standards; calorimetry; heat standards; phase-change calorimeter; plutonium dioxide; plutonium isotopes; radionuclide calorimetry; radionuclide decay power; standards; Bunsen ice calorimeter; *16443.*

Calorimetry; cobalt-60; ionization chamber; *16435.*

Calorimetry; combustibility; flammability; heat release rate; potential heat; self heating; building materials; *16111.*

Calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; *NBS-GCR-ETIP 76-22.*

Calorimetry; Diesselhorst ring; potentiometer; programmable potentiometer; self-balancing potentiometers; thermometry; automatic potentiometry; automation; *J. Res.* **80A** No. 4, 669-675 (July-Aug. 1976).

Calorimetry; dose distributions; dosimetry; electron beams; holography; interferometry; water phantoms; absorbed dose; *15852.*

Calorimetry; heat standards; phase-change calorimeter; plutonium dioxide; plutonium isotopes; radionuclide calorimetry; radionuclide decay power; standards; Bunsen ice calorimeter; calorimetric standards; *16443.*

Calorimetry; laser; laser materials; optical absorption; *15935.*

Calorimetry; luminescence; photoacoustic spectrometer; piezocalorimeter; transducers; triplet formation; absolute quantum efficiency; absolute quantum yield; *J. Res.* **80A** No. 3, 413-419 (1976).

Cancer; mice; NMR; spin-lattice relaxation; spin-spin relaxation; *J. Res.* **80A** No. 3, 439-450 (1976).

Candela; lumen; luminous flux; luminous intensity; photometry; SI basic unit; *16397.*

Cane; earthquake; housing; Peru; technical aid; adobe; *SP444*, pp. VI-16—VI-24 (Apr. 1976).

Canopies; diffuse reflectance; diffuse transmission; reflectance standards; scattering surfaces; bidirectional radiometry; *J. Res.* **80A** No. 4, 597-603 (1976).

Capability; capability-based addressing; computer security; extended-type objects; operating system structures; protection; reliable software; reliability; security; small protection domains; types; *TN919.*

Capability-based addressing; computer security; extended-type objects; operating system structures; protection; reliable software; reliability; security; small protection domains; types; capability; *TN919.*

Capacitance measurements; current comparators; current transformers; high voltage bridges; high voltage capacitors; high voltage measurements; impedance bridges; *15720.*

Capacitance measurements at high applied-bias voltage; capacitance-meter; extended-range capacitance measurement; high-voltage C(V) measurements; modified MIS C(V) measurements; bias-isolation unit; *SP400-34.*

Capacitance-meter; extended-range capacitance measurement; high-voltage C(V) measurements; modified MIS C(V) measurements; bias-isolation unit; capacitance measurements at high applied-bias voltage; *SP400-34.*

Capacitance-voltage methods; charge-coupled device structures; Darlington pairs; deep depletion; dopant profiles; electrical properties; electron beam induced current; electron beam induced damage; electronics; epitaxial layer thickness; four-probe method; hermeticity; *SP400-19.*

Capacitance-voltage methods; dopant profiles; electrical properties; electronics; four-probe method; hermeticity; interface states; ion implantation; ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; *SP400-25.*

Capacitors; insulating fluids; liquid insulators; polychlorinated biphenyls; transformers; askarel; *NBSIR 76-1054.*

Capital market imperfections; federal technology policy; SBIC's; securities and tax regulation; small firm finances; technological change; technology subsidies; venture capital; *NBS-GCR-ETIP 76-08.*

Capital market imperfections; federal technology policy; SBIC's; securities and tax regulation; small firm finances; technological change; technology subsidies; venture capital; *NBS-GCR-ETIP 76-12.*

Car locators; law enforcement; automatic vehicle locator; *16266.*

Carbazine dyes; deuterium effect; fluorescence quantum yield; laser dyes; molecular structure; oxazine dyes; quenching; xanthene dyes; aminocoumarins; *J. Res.* **80A** No. 3, 421-428 (1976).

Carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; *16419.*

Carbon; chlorine; helium; hydrogen; lithium; magnesium; nitrogen; oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; beryllium; boron; *16164.*

Carbon; crud; filtration; pressurized water reactors; primary coolant; sampling; water; analysis; *SP422*, pp. 429-438 (Aug. 1976).

Carbon; electrocatalysis; nickel oxide; oxide electrodes; oxygen electrochemistry; semiconductor electrodes; *SP455*, pp. 203-219 (Nov. 1976).

Carbon dioxide; carbon monoxide; chemisorption; formaldehyde; oxygen; physisorption; surface chemistry; tungsten; x-ray photoelectron spectroscopy; *16085.*

Carbon dioxide; carbon monoxide; cyanide; fire; hydrogen chloride; hydrogen cyanide; oxygen; rats; blood; *NBSIR 75-966.*

Carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; furniture; life hazard; oxygen; smoke; temperature; toxicity; upholstery; bedding; beds; *NBS-GCR-73-1.*

Carbon dioxide; cross section; electrons; excitation; infrared; rate coefficient; *16256.*

Carbon dioxide; fire detection; fire extinguishment; flame detection; heat detection; smoke detection; automatic sprinklers; *NBSIR 76-1028.*

Carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; isotope ratio; nitric oxide; oxygen; tetrafluoroethylene; transverse excitation laser; 2-methyl propene; *16657.*

Carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; *16419.*

Carbon monoxide; chemisorption; desorption; photoelectron spectroscopy; photoemission; single crystal; tungsten; ultraviolet photoelectron spectroscopy; virgin CO; adsorption; *15851.*

Carbon monoxide; chemisorption; ESCA; extra-atomic relaxation; formaldehyde; oxygen; photoelectron spectroscopy; physisorption; tungsten; xenon; XPS; *16023.*

Carbon monoxide; chemisorption; formaldehyde; oxygen; phy-

sisorption; surface chemistry; tungsten; x-ray photoelectron spectroscopy; carbon dioxide; *16085*.
Carbon monoxide; chemisorption; electron stimulated desorption; ion angular distribution; oxygen; tungsten; *16398*.
Carbon monoxide; combustion products; fire gases; fire hazards; furniture; life hazard; oxygen; smoke; temperature; toxicity; upholstery; bedding; beds; carbon dioxide; *NBS-GCR-73-1*.
Carbon monoxide; cyanide; fire; hydrogen chloride; hydrogen cyanide; oxygen; rats; blood; carbon dioxide; *NBSIR 75-966*.
Carbon monoxide; gas analysis; gas standards; nitric oxide; nitrogen dioxide; sulfur dioxide; air pollution; *15972*.
Carbon monoxide; hydrocarbons; measurement; nitrogen dioxide; particulate matter; photochemical oxidants; standards; sulfur dioxide; *16121*.
Carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; isotope ratio; nitric oxide; oxygen; tetrafluoroethylene; transverse excitation laser; 2-methyl propene; carbon isotopes; *16657*.
Carbonyl sulfide; chemical kinetics; ethylene; flash photolysis resonance fluorescence; infrared laser; oxygen atoms; vibrationally excited reactant molecules; *16453*.
Carbonyl sulfide; dipole moments; infrared; lasers; spectra; spectroscopy; Stark effect; *16181*.
Carbon-13 magnetic resonance; chemical shifts; cis and trans isomers; peptides; proline; ring conformation; substituent effects; amides; *16235*.
Carbon-13 NMR; coordination compounds; metal carbonyl; thiocarbonyl; 1,3-dithiolane-2-thione; 1,3-dithiolene-2-thione; *16585*.
Carcinogenic; fluorescence; polycyclic aromatic hydrocarbons; quantum yields; water; absorption; *15831*.
Carcinogenic compounds; partition coefficient; photon counting; polycyclic aromatics; spectrofluorimetry; water; *15839*.
Carcinogens; food; nitrosamines; trace analysis; *SP422*, pp. 727-736 (Aug. 1976).
Cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; process control; reliability; semiconductor devices; surgical implants; *SP400-28*.
Caribbean; precision; Puerto Rico; replicates; sediments; standard; trace elements; accuracy; Atomic Absorption Spectrometry; *SP422*, pp. 1089-1102 (Aug. 1976).
CARISMA program; ion microprobe mass analysis; local thermodynamic equilibrium model; quantitative analysis; secondary ion mass spectrometry; surface analysis; *15862*.
Carlson-Johnson conjecture; *D*-stable; positive stable matrix; arc-connectedness; *J. Res.* **80B** No. 1, 75-77 (1976).
Carpet; corridor test; fire testing; flammability; glass fiber; *NBSIR 75-782*.
Carpet systems; carpets; fire safety; flame spread; floor coverings; flooring radiant panel test; ignition sources; pill test; room fires; *NBSIR 76-1013*.
Carpets; draperies; fabrics; flammability; heat flux; standards; tents; tests; uniforms; upholstered furniture; apparel; burn injury; *16144*.
Carpets; fire; flammability; floor coverings; pad; underlayments; *NBSIR 76-1018*.
Carpets; fire safety; flame spread; floor coverings; flooring radiant panel test; ignition sources; pill test; room fires; carpet systems; *NBSIR 76-1013*.
Carpets; floor coverings; horizontal; ignition; ignition time; pilot ignition; radiant heat flux; *NBSIR 75-967*.
Carpools; energy impacts; mode choice; pollution reduction; bus transit; busways; *15724*.
Carrier mobility; damping rates; laser damage of semiconductors; parametric plasma instability; photon induced excitation; *SP462*, pp. 357-364 (Dec. 1976).
CARS; diphenyloctatetraene (dilute solution); four-wave numbering; HORSES; nonlinear optics; Raman spectroscopy; *15716*.
Cartridges; handgun ammunition; law enforcement; relative incapacitation index; relative stopping power; bullets; *16305*.
Cascade radiation; emission cross section; radiation trapping; airglow; atomic oxygen; *15927*.
Case studies; critical events; decisions; episodes; fires; home for the aged; hospital fires; human behavior; institutions; mapping; models; nursing homes; realms; building fires; *NBS-GCR-76-73*.
Cassiopeia A; error analysis; flux density; G/T (system gain/system noise temperature); ground station; radio star; accuracy; antenna; calibration; *16499*.
Castable refractories; coal gasification; deformation; erosion; fracture; wear; *16600*.
Catalysis; characterization; chemisorption; electrocatalysis; electrochemistry; electrode processes; nonmetals; photoelectrolysis; solid electrolytes; surfaces; *SP455*.
Catalysis; chemisorption; cluster states; electronic structure; energy bands; perovskites; surface states; transition metal oxides; *SP455*, pp. 21-52 (Nov. 1976).
Catalysis; chemisorption theory; metal clusters; molecular orbitals; quantum chemistry; transition metal complexes; *SP455*, pp. 67-86 (Nov. 1976).
Catalysis; copper hydride; magnesium oxide; molecular structure; nickel hydride; adsorption; *SP455*, pp. 53-58 (Nov. 1976).
Catalysis; electrocatalysis; electrochemistry; electrodes; fuel cells; surface physics and chemistry; *NBSIR 76-1049*.
Catalysis; electronic structure; surface states; transition metal carbide; adsorption; *SP455*, pp. 87-92 (Nov. 1976).
Catalysis; hydrogenation; iron; Mössbauer spectra; zinc; alloys; aluminum; *16537*.
Catalysis; Mössbauer effect; Raney-iron-activation; *16273*.
Catalytic hydrogenation; catalytic oxidation; chemisorption; cus; heterogeneous catalysis; surface coordinative unsaturation; *SP455*, pp. 155-166 (Nov. 1976).
Catalytic oxidation; chemisorption; cus; heterogeneous catalysis; surface coordinative unsaturation; catalytic hydrogenation; *SP455*, pp. 155-166 (Nov. 1976).
Catalytic oxidation converter; dilution tunnel; isopropanol; particulate filtration; sulfate; sulfur dioxide; sulfur trioxide; sulfur trioxide condensation; automobile exhaust; *SP422*, pp. 389-400 (Aug. 1976).
Cathode-ray excitation; luminescence; luminescence standards; phosphors; quantum efficiencies; radiant efficiencies; UV excitation; x-ray excitation; *J. Res.* **80A** No. 3, 401-407 (1976).
Cathodic decomposition; electrochemistry; inorganic bronze electrodes; metal electrodes; semiconductor electrodes; stability, surface layers; surface reactions; anodic decomposition; *SP455*, pp. 267-280 (Nov. 1976).
Cauchy principle value; Hilbert problem for two unknowns; singular integral equation; wave-guide boundary problem; analytic function; *J. Res.* **80B** No. 3, 403-414 (1976).
Causality; high spin fields; inhomogeneous Lorentz group; relativistic fields; wave equations; *Monogr. 154*.
Cavitation; coatings; design charts; elastomers; erosion; Hopkinson pressure bar apparatus; impedances; mismatching; stress wave interactions; substrates; tearing; vibratory apparatus; adhesion; *SP452*, pp. 120-123 (Sept. 1976).
Cavity chamber; graphite chamber; ionization chamber; absorbed dose; calibration; *SP456*, pp. 37-39 (Nov. 1976).
Cavity stabilization; frequency multiplication; frequency stability; frequency synthesis; Gunn oscillator; infrared; injection stabilization; klystron; *X* band; *16520*.
$CClF_3$; CCl_2F_2; electron energy-loss; freons; uv photoabsorption; *15995*.

CCl_2, CF_2; CCl_2H^+, CF_2H^+; displacement reactions; four-center reactions; ion molecule reactions; proton affinity; proton transfer; rate coefficients; *16598.*

CCl_2F_2; electron energy-loss; freons; uv photoabsorption; $CClF_3$; *15995.*

CCl_2H^+, CF_2H^+; displacement reactions; four-center reactions; ion molecule reactions; proton affinity; proton transfer; rate coefficients; CCl_2, CF_2; *16598.*

$CdCr_2S_4$; chalcogenide spinel; Faraday effect; ferromagnetic semiconductor; hot-pressed; infrared transmission; laser induced damage; optical isolation; *SP462,* pp. 126-135 (Dec. 1976).

CdF_2; Dy^3; paramagnetic resonance; *16051.*

CeF_3; CO_2 pulsed laser damage; coating topography; KCl; laser window coatings; ZnS; *SP435,* pp. 236-243 (Apr. 1976).

Cells; charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; *16647.*

Cells, primary; dry cells; primary batteries; primary cells; batteries; *16043.*

Cellulosic fibers; combustion; cotton fibers; flame retardant treatments; phosphorous acids; pyrolysis; ramie; rayon; sulfur; *NBS-GCR-73-4.*

Cement; compressive strength; flexural strength; fracture mechanics; polymer impregnated cement; polymer impregnated mortar; porosity; scanning electron microscopy; *BSS83.*

CENACO; computing using Spanish; foreign relations; international agreement; lectures; OMNITAB II computing system; technology transfer; terminals; acceptance tests; AID; Bolivia; *NBSIR 76-1176.*

Center for Building Technology; key words; publications; abstracts; *SP457.*

Centigrade/celsius; computer; electrical industries; environments; glass standards; government intervention; heating/cooling; lead-paint; metric; pressure transducers; thermal comforts; weights and measures; building industry; *DIM/NBS* **60,** No. 10, 1-24 (1976).

Central computer; computer programs; data manipulation; digital data; mass storage; NIRA; Photonuclear Data Center; *TN903.*

Ceramic; condenser; electret; humidity; microphones; reciprocity; sensitivity; temperature; calibration; *NBSIR 76-1090.*

Ceramic materials; cyclic crack propagation; high frequency; plasticity; *16445.*

Ceramic surfaces; crack; degradation; fracture; Hertzian; indentation; strength; brittle solids; *15856.*

Ceramics; coal conversion; coal gasification; corrosion; fracture; vaporization; *16243.*

Ceramics; educational priorities; energy; engineer-scientist; environmental quality; materials; minerals; *16156.*

Cerium dioxide; degradation; electrocatalysis; fuel cells; refractory hard metal; solid electrolytes; *NBSIR 76-1091.*

Cerium oxide; magnetohydrodynamics; system K_2O-ZrO_2-cerium oxide; thermal microbalance; x-ray diffraction; *16440.*

Cerous magnesium nitrate; crystal structure; *g*-factors; ground state energy; Luttinger-Tisza method; translation vectors; *16512.*

Certification; compliance assurance; evaluation; inspection; manufactured building; model documents; NCSBCS; standards; state regulation; building codes; *BSS87.*

Certification; developing countries; exports; industrializing countries; labeling; seminar; South Asia trade; testing; *SP438.*

Certification programs; education of metrologists; industrializing nations; LDC's; metrology; AID; assistance; *NBSIR 76-988.*

Certification programs; ETIP; incentives; innovation; life cycle costing; medical products and standards; procurement policies; product testing; specifications; unsolicited proposals; VA; *NBSIR 76-997.*

Cesium; energy levels; spectra; *15798.*

Cesium; lanthanum; spectra; ultraviolet; wavelengths; barium; *16035.*

Cesium; multiphoton processes; photoionization; *16298.*

Cesium and scandium content; natural and synthetic beryls; neutron activation analysis; *SP422,* pp. 1257-1274 (Aug. 1976).

Cesium beam tube; definition of the second; frequency accuracy; international atomic time; primary frequency standard; atomic beams; atomic clock; atomic time; *16487.*

Cesium standards; frequency accuracy; frequency stability; frequency standards; hydrogen standards; ion storage; laser stabilization; rubidium standards; saturated absorption; time standards; application of standards; basic standards; *15736.*

CF_2; CH_2F_2 photolysis; fluorescence spectrum; matrix isolation; absorption spectrum; band experiment; *15908.*

Chain blocks; collaborative tests; diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; interlaboratory tests; randomization, constrained; ruggedness test; statistical techniques; Youden plot; Youden squares; Youden, W. J.; *16115.*

Chain folds; differential scanning calorimetry; linear polyethylene fractions; low angle x ray; mechanical relaxation; tetranonacontane; *16289.*

Chain reaction; determination of photochemical mechanism; flash photolysis; intermittent illumination; photochemical principles; photochemical reaction of atoms and molecules; photochemistry in the atmosphere; photochemistry of air pollution; *16515.*

Chalcogenide glasses; infrared optical properties; laser damage; optical absorption; optical scattering; thin-film coating; alkali halides; antireflectance coating; *SP462,* pp. 214-220 (Dec. 1976).

Chalcogenide spinel; Faraday effect; ferromagnetic semiconductor; hot-pressed; infrared transmission; laser induced damage; optical isolation; $CdCr_2S_4$; *SP462,* pp. 126-135 (Dec. 1976).

Chamber energy response; geometry effects; half-value layer; photon attenuation; *SP456,* pp. 389-394 (Nov. 1976).

Chamfering; continuous polishing; grinding; metal polishing; optical fabrication; *SP435,* pp. 3-9 (Apr. 1976).

Channels; film boiling; forced convection; helium I; helium II; mixed convection; nucleate boiling; subcritical; supercritical; transition; turbulent flow; buoyancy; *TN675.*

Characterization; chemisorption; electrocatalysis; electrochemistry; electrode processes; nonmetals; photoelectrolysis; solid electrolytes; surfaces; catalysis; *SP455.*

Charge distribution; electron scattering; quadrupole phonons; vibrational nuclei; anharmonicities; branching ratio; *16507.*

Charge exchange; charge transfer; cross section calculations; ion-atom collisions; rare-gas ions; uranium; alkali ions; calcium; *16126.*

Charge flow; isomer; Mössbauer; phase diagram; $TiFeH_x$ alloys; volume effects; *16597.*

Charge transfer; cross section calculations; ion-atom collisions; rare-gas ions; uranium; alkali ions; calcium; charge exchange; *16126.*

Charge transfer; H-atom transfer reactions; hydrogen halides; ion molecule reactions; ion cyclotron spectrometry; rate coefficients; *16362.*

Charge transfer; ion-cyclotron resonance; ion-molecule reactions; ionization potentials; rate constants; alkane ions; alkanes; *16506.*

Charge transfer; lasers; sputtering; visible; *16497.*

229-317 O - 77 - 32

Charge transfer; nonresonant; potential curves; resonant; spin exchange; adiabatic collisions; *15875.*

Charge transfer, color centers; crystal field; d^4 ions; EPR; iron 4+; optical absorption; perovskite; strontium titanate; transition metal; zero phonon line; *16201.*

Charge transfer processes; conduction mechanisms; interfacial phenomena; solid electrolyte; *SP455,* pp. 323-340 (Nov. 1976).

Charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; cells; *16647.*

Charge-coupled device structures; Darlington pairs; deep depletion; dopant profiles; electrical properties; electron beam induced current; electron beam induced damage; electronics; epitaxial layer thickness; four-probe method; hermeticity; leak tests; measurement methods; *SP400-19.*

Charged particle; cyclotron; method evaluation; multielemental analysis; activation analysis; *SP422,* pp. 1215-1232 (Aug. 1976).

Charged particle irradiation; diffusion; etching; metals; neutron irradiation; recoil; surface effect; accuracy; activation analysis; *SP422,* pp. 1165-1171 (Aug. 1976).

Charged particle activation analysis; cross sections; excitation functions; fast neutron activation analysis; fast particle activation analysis; interferences; primary interference reactions; systematic errors; trace analysis; accuracy; *SP422,* pp. 1189-1214 (Aug. 1976).

Charged particle excitation; inner shells; ionization; photoionization; *16299.*

Charged particle spectroscopy; electron-stimulated desorption of ions (ESDIAD); field-ion microscopy (FIM); low energy electron diffraction (LEED); ultraviolet photoelectron spectroscopy (UPS); angle and energy distributions; *16078.*

Charged particles; Monte Carlo; reflection; Albedo; angular distribution; backscatter; *16097.*

Charge-transfer complex; dental materials; electron affinity; electron spin resonance spectroscopy; extrathermodynamic relationships; ionization potential; linear free-energy relationship; polarography; solvatochromic relationship; *J. Res.* **80A** No. 2, 173-187 (1976).

Charging algorithms; service bureaus; synthetic benchmarking; workload characterization; benchmarking; *16624.*

Charging algorithms; service bureaus; synthetic benchmarking; workload characterization; benchmarking; *TN920.*

Charring; combustion; fire endurance; fire test; flame emissivity; heat transfer; pyrolysis; radiant heat; thermal inertia; ASTM Standard E119; building construction; *NBS-GCR-75-50.*

Checkless society; computer/communications networks; computer/communications services; computer/communications standards; interactive cable television; nonentertainment television; two-way television; wired city; wired nation; broadband interactive terminals; *NBS-GCR-75-44.*

Chemical; coating; deposition; vapor; wear; *SP452,* pp. 151-169 (Sept. 1976).

Chemical actinometry; correction factors; luminescence; quantum-flat actinometer; quantum yield; absolute yield; *J. Res.* **80A** No. 3, 409-412 (1976).

Chemical activation; nonequilibrium; oxygen atoms; RRKM; thermal decomposition; alcohols; *15881.*

Chemical analysis; environmental samples; long-term storage; microbiologicals; organics; pesticides; radionuclides; sample handling; sampling; trace elements; *TN929.*

Chemical analysis; fluid interactions; geology; minerals; Raman spectroscopy; *15930.*

Chemical analysis; rainwater analysis; reference materials; *NBSIR 75-958.*

Chemical applications; instrumentation; Mössbauer spectrometry; nuclear parameters; recent advances; tables; theory; *16332.*

Chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; *16419.*

Chemical breakdown; chloride ion; corrosion; ferrous alloys; localized corrosion; passivity; *16018.*

Chemical breakdown of passivity; chloride; crevice corrosion; ellipsometry; iron; molybdenum; repassivation kinetics; stress corrosion; *NBSIR 75-916.*

Chemical coatings; failure prevention; mechanical failure; metal coatings; plated coatings; polymer coatings; solid film lubricants; sputtered coatings; wear; barrier film; *SP452.*

Chemical errors; contamination; dissolution techniques; fusion dissolution; radiochemical analyses; ashing (wet and dry); *SP422,* pp. 463-490 (Aug. 1976).

Chemical ionization mass spectrometry; mass spectrometry; sulfur nitride; tetracyanoquinodimethane; tetrasulfur tetranitride; tetrathiafulvalene; vaporization; *16422.*

Chemical kinetics; combustion; free radicals; gas phase; hydrocarbons; oxidation; oxygen; oxygenated organic compounds; ozone; bibliography; *SP449.*

Chemical kinetics; data center operation; information analysis center; photochemistry; stratospheric chemistry; *16364.*

Chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; quantum yield; rate constant; atmospheric chemistry; *16067.*

Chemical kinetics; data evaluation; gas phase; hydrocarbons; ion-molecule reactions; mass spectrometry; rate coefficients; *JPCRD* **5,** No. 4, 1123-1146 (1976).

Chemical kinetics; diffusion flames; flame extinction; flame temperature; flame velocity; flammability; flammability limits; oxygen index test; thermodynamics; *NBSIR 76-1076.*

Chemical kinetics; ethylene; flash photolysis resonance fluorescence; infrared laser; oxygen atoms; vibrationally excited reactant molecules; carbonyl sulfide; *16453.*

Chemical kinetics; free radicals; measurement; stratosphere; *16130.*

Chemical lasers; infrared materials; laser windows; multiphonon absorption; optical absorption; water repellent coatings; *SP462,* pp. 45-49 (Dec. 1976).

Chemical monitoring and analysis; double resonance; microwave instrumentation; microwave spectroscopy; radio astronomy; short-lived molecules; *16400.*

Chemical reactions; chlorine molecules; classical scattering matrix theory; collision theory; cross sections; hydrogen atoms; rate coefficients; scattering theory; trajectories; transition-state theory; *16627.*

Chemical reactions; classical scattering matrix theory; collision theory; hydrogen atoms; hydrogen molecules; scattering theory; trajectories; uniform approximation; *16054.*

Chemical reactions; classical probability matrix theory; classical scattering matrix theory; collision theory; energy transfer in collisions; hydrogen molecules; information theory; scattering theory; trajectories; vibrational energy; *16607.*

Chemical reactions; collision theory; hydrogen atoms; hydrogen molecules; indistinguishable particles; nuclear spin; rate coefficients; transition-state theory; *16214.*

Chemical reactions; collision theory; cross sections; dissociation; hot atoms; isotope effects; kinetics; molecular beams; quantum mechanics; rate coefficients; recombinations; scattering theory; *16591.*

Chemical shift; fluoroalkanes; molecular dynamics; NMR; relaxation; *16327.*

Chemical shift tensor; methylene; NMR; ^{13}C; alkane; *16041.*

Chemical shifts; cis and trans isomers; peptides; proline; ring conformation; substituent effects; amides; carbon-13 magnetic resonance; *16235*.

Chemical structure; hydroperoxyl; microwave; *15849*.

Chemical thermodynamics; door security; Elliot Richardson; energy conservation; engineering; fashion; flammability; laser measurement; science; air conditioners; attic fans; basic research; *DIM/NBS* **60,** No. 6, 1-24 (1976).

Chemical vapor deposited ZnSe; elastic compliance; elastic constants; polycrystalline ZnSe; refractive index; stress-optic constants; temperature coefficient of index; thermal expansion; ZnSe; *15938*.

Chemiluminescence; electronic states; gas kinetics; laser enhanced reactions; O_3; PbO; *J. Res.* **80A** No. 2, 167-171 (1976).

Chemiluminescent; diatomic molecules; dissociation energies; high temperature; PbO; thermophysical measurements; *NBSIR 75-751*.

Chemisorption; cluster states; electronic structure; energy bands; perovskites; surface states; transition metal oxides; catalysis; *SP455*, pp. 21-52 (Nov. 1976).

Chemisorption; CO; cyclotron resonance; electron cyclotron resonance; magnetic field; microwave discharge; photoemission; tungsten; ultraviolet photoemission; adsorption; *16016*.

Chemisorption; corrosion preventives; inhibitor additives; LOX compatible greases; nonreactive lubricants; rust inhibited perfluoro greases; surface chemistry lubrication; *SP452*, pp. 106-119 (Sept. 1976).

Chemisorption; cus; heterogeneous catalysis; surface coordinative unsaturation; catalytic hydrogenation; catalytic oxidation; *SP455*, pp. 155-166 (Nov. 1976).

Chemisorption; cyclic-voltammetry; electrochemical adsorption; monolayers; surface processes; atomic layers; *SP455*, pp. 107-124 (Nov. 1976).

Chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; *16419*.

Chemisorption; desorption; photoelectron spectroscopy; photoemission; single crystal; tungsten; ultraviolet photoelectron spectroscopy; virgin CO; adsorption; carbon monoxide; *15851*.

Chemisorption; electrocatalysis; electrochemistry; electrode processes; nonmetals; photoelectrolysis; solid electrolytes; surfaces; catalysis; characterization; *SP455*.

Chemisorption; electrocatalysis; electron transfer theory; multistep redox reactions; semiconductor surface states; *SP455*, pp. 1-19 (Nov. 1976).

Chemisorption; electron spectroscopy; photoemission; angular distributions; *15759*.

Chemisorption; electron stimulated desorption; ion angular distribution; oxygen; tungsten; carbon monoxide; *16398*.

Chemisorption; electronic properties of solids; molecules; surfaces; adsorption; *15758*.

Chemisorption; ESCA; extra-atomic relaxation; formaldehyde; oxygen; photoelectron spectroscopy; physisorption; tungsten; xenon; XPS; carbon monoxide; *16023*.

Chemisorption; ESCA; field emission; photoemission; surfaces; x-ray photoemission; *16454*.

Chemisorption; formaldehyde; oxygen; physisorption; surface chemistry; tungsten; x-ray photoelectron spectroscopy; carbon dioxide; carbon monoxide; *16085*.

Chemisorption; photoemission; relaxation energy; surface plasmons; *15857*.

Chemisorption; ruthenium; ultraviolet photoelectron spectroscopy; x-ray photoelectron spectroscopy; adsorbate; *15814*.

Chemisorption theory; metal clusters; molecular orbitals; quantum chemistry; transition metal complexes; catalysis; *SP455*, pp. 67-86 (Nov. 1976).

Chemistry; composite resins; dental materials; hydroxybenzoic acids; pit and fissure sealants; preventive dental materials; acrylic resins; *15939*.

Chemistry; computer graphics; geochemistry; medicine; pattern recognition; trace elements; air particulates; blood; *SP422*, pp. 151-162 (Aug. 1976).

Chemistry; dioxide; heterogeneous; manganese; organic; oxidation; active; *15902*.

Chemorheology; degradation; elasticity; finite deformation; incompressible materials; permanent set; polymers; rubbers, viscoelasticity; anisotropy; *16339*.

Chesapeake Bay; elemental sulfur; flameless atomic absorption; petroleum; plankton; sediments; total mercury; water; *15874*.

Chevron; garnet; large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; cells; charge-coupled device (CCD); *16647*.

Child protection; closure testing; containers; medicine bottles; poison packaging; bottle caps; *NBSIR 75-722*.

Children; housing; lead paint; lead poisoning; surveys; blood; blood lead; *NBSIR 76-1024*.

Children; housing; lead-based paint; lead poisoning; paint removal; abatement; barrier materials; building materials; *NBSIR 75-974*.

Chip detectors; ferrograph; lube oil analysis; magnetic drain plugs; oil filters; oil monitors; particle detectors; spectrograph; *NBS-GCR-74-23*.

Chipping; fracture; indentation; residual stress; stress analysis; brittle solids; *16306*.

Chipping fracture; hardness; wear rate; abrasion; brittle surfaces; *16335*.

Chi-square test; precision; precision of analytical method; ultratrace level; accuracy; analysis of precision; *a priori* error; *a priori* precision; *a posteriori* precision; *SP422*, pp. 127-139 (Aug. 1976).

Chloride; crevice corrosion; ellipsometry; iron; molybdenum; repassivation kinetics; stress corrosion; chemical breakdown of passivity; *NBSIR 75-916*.

Chloride ion; corrosion; ferrous alloys; localized corrosion; passivity; chemical breakdown; *16018*.

Chloride ions; corrosion; deicing salts; epoxy coatings; organic coatings; steel reinforcing bars; bridge decks; *16189*.

Chlorinated biphenyl; chlorinated naphthalene; electric field measurement; electro-optic; high voltage measurement; Kerr coefficients; Kerr effect; space charge; Aroclor; *16384*.

Chlorinated naphthalene; electric field measurement; electro-optic; high voltage measurement; Kerr coefficients; Kerr effect; space charge; Aroclor; chlorinated biphenyl; *16384*.

Chlorine; helium; hydrogen; lithium; magnesium; nitrogen; oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; beryllium; boron; carbon; *16164*.

Chlorine atoms; kinetics; ozone; resonance fluorescence; stratosphere; *15949*.

Chlorine concentration; chlorine monitor; electrochemical calibration; internal calibration; iodine detection; potassium iodide; calibration cell; *U.S. Patent 3,966,413*.

Chlorine effect; counting corrections; gamma intensity attenuation; neutron flux depression; organic liquid sample irradiation; palladium distribution ratios; platinum distribution ratios; *SP422*, pp. 1181-1187 (Aug. 1976).

Chlorine isotope; isotope separation; laser-induced reaction; laser irradiation; photochemical reaction; thiophosgene; *15959*.

Chlorine molecules; classical scattering matrix theory; collision theory; cross sections; hydrogen atoms; rate coefficients; scattering theory; trajectories; transition-state theory; chemical reactions; *16627.*

Chlorine monitor; electrochemical calibration; internal calibration; iodine detection; potassium iodide; calibration cell; chlorine concentration; *U.S. Patent 3,966,413.*

Chlorine monitoring; chlorine residuals; coulometry; flux-monitor; water analysis; water pollution; amperometry; *16082.*

Chlorine nitrate; dipole moment; microwave spectrum; ozone depletion; rotational constants; stratospheric chemistry; atmospheric pollution; *16584.*

Chlorine residuals; coulometry; flux-monitor; water analysis; water pollution; amperometry; chlorine monitoring; *16082.*

Chlorofluoromethanes; ideal gas thermodynamic functions; principal moments of inertia; standard enthalpy of formation; vibrational fundamentals; *JPCRD* **5**, No. 3, 571-580 (1976).

Chondrocalcinosis; pseudogout; solubility; solubility product; synovial fluid; calcium diphosphate; calcium pyrophosphate; *16230.*

Chromatography; color matching; color measurement; diffuse reflectance; Kubelka-Munk function; reflectance; reflectance standards; thin layer chromatography; *J. Res.* **80A** No. 4, 551-565 (1976).

Chromatography; coupling of high speed plasma; gas chromatography; high speed plasma; plasma; *16340.*

Chromatography; impurities in NADH preparations; NADH stability; preparative chromatography on DEAE-cellulose; spectrophotometric properties of pure NADH; ADP; ADP-ribose; *16316.*

Chromium; cobalt; contamination; manganese; sampling; serum; biological materials; *SP422*, pp. 299-310 (Aug. 1976).

Chromium; flameless atomic absorption; volatile chromium compounds; biological materials; biological standards; *SP422*, pp. 605-610 (Aug. 1976).

Chromium; stability; storage containers; adsorption losses; biological systems; *SP422*, pp. 611-619 (Aug. 1976).

Chromium carbonyl; infrared spectroscopy; metal carbonyl; molybdenum carbonyl; NMR spectroscopy; 1,3-dithiolene-2-thione; *15985.*

Chromium 3+; crystal vacancies; cubic crystals; depolarization; impurity compensation; luminescence; magnesium oxide; MgO; optical properties; polarized luminescence; symmetry; transition metal ions; *16521.*

Chromospheres; line formation; radiative transfer; stars: *16052.*

Clinical chemistry; clinical sampling; enzyme analysis; storage of clinical samples; accuracy and precision; analysis of body fluids; clinical analysis; *SP422,* pp. 353-361 (Aug. 1976).

Clinical chemistry; health; precision; accuracy; clinical analysis; *SP422,* pp. 837-850 (Aug. 1976).

Clinical chemistry; industrial lead hygiene; interlaboratory correlations; lead hygiene control; occupational exposure standard criteria; occupational health control; precision; trace element analyses; accuracy; blood lead analyses; *SP422,* pp. 275-282 (Aug. 1976).

Clinical chemistry; quality control; surrogate specimens; trace elements; accuracy and precision; *SP422,* pp. 35-40 (Aug. 1976).

Clinical control materials; clinical standards; consensus standards; reference materials; calibration reference materials; calibrators; *16358.*

Clinical instruments; instruments, clinical; temperature measurements; *16021.*

Clinical laboratory data; specimen collection; specimen handling; accuracy, precision and specificity of analytical methods; biological and genetic variability; *SP422,* pp. 109-122 (Aug. 1976).

Clinical reference method; definitive glucose method; glucose in serum; isotope dilution-mass spectrometry; serum glucose; *16343.*

Clinical sampling; enzyme analysis; storage of clinical samples; accuracy and precision; analysis of body fluids; clinical analysis; clinical chemistry; *SP422,* pp. 353-361 (Aug. 1976).

Clinical standards; consensus standards; reference materials; calibration reference materials; calibrators; clinical control materials; *16358.*

Clique; clique graph; intersection graph; pseudointersection graph; set covering; *J. Res.* **80B** No. 4, 441-445 (1976).

Clique graph; intersection graph; pseudointersection graph; set covering; clique; *J. Res.* **80B** No. 4, 441-445 (1976).

Clock; microprocessor; satellite; time; time code; *TN681.*

Clock acceleration effect; definition of the second; frequency accuracy; frequency standards; general relativity; gravitational redshift; primary frequency standards; proper time; UTC; atomic clocks; *16236.*

Clocks; crystal oscillator; frequency standards; stability; survey of clocks; accuracy; atomic clocks; *15719.*

Clocks; frequency accuracy; frequency stability; frequency standards; infrared frequency multiplication; noise; time scale; time standards; *16488.*

Clocks; frequency and time; measurement of time and frequency; time and frequency; *16569.*

Close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; sudden approximation; *15951.*

Close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; *16618.*

Close-coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory; *16532.*

Close-coupling calculations; crossed beams; cross sections; differential cross sections; electron scattering; inelastic scattering; nitrogen molecules; polarization potential; scattering; static potential; vibrational excitation; *16533.*

Closed circuit television; court proceedings; court security; trial proceedings; videotape recording; *16185.*

Closed circuit television; court proceedings; court security; trial proceedings; videotape recording; *16186.*

Closed die; forging; isostatic; polishing; quartz; shaping; *SP462,* pp. 95-99 (Dec. 1976).

Closed loop breathing apparatus; equipment design; fire fighters; fire fighting; fire fighting equipment; fire gases; open loop breathing apparatus; protective clothing; smoke inhalation; standards; breathing apparatus; *NBS-GCR-73-10.*

Closure testing; containers; medicine bottles; poison packaging; bottle caps; child protection; *NBSIR 75-722.*

Clothing; firemen's turnout coats; use type tests for comfort and effectiveness; *NBS-GCR-74-25.*

Cloud seeding; frequency distribution; hurricanes; typhoon; wind; wind intensities; *SP444,* pp. I-21—I-33 (Apr. 1976).

Cluster; data abstraction; data type; module; programming methods; program modifications; type; abstract data types; class; *16246.*

Cluster states; electronic structure; energy bands; perovskites; surface states; transition metal oxides; catalysis; chemisorption; *SP455,* pp. 21-52 (Nov. 1976).

Clusters; metal-metal bonding; metal sulfides; sulfides; tungsten; x-ray crystallography; *16071.*

CO^+; CO_2^+; coincidence; electron impact; ions; lifetime; molecule; N_2^+; radiative; transition probability; *15912.*

Co; Cr; *d*-band widths; electronic structure; Fe; ferromagnetism; soft x-ray emission; soft x-ray spectra; transition metals; *15780.*

CO; cyclotron resonance; electron cyclotron resonance; magnetic field; microwave discharge; photoemission; tungsten; ultraviolet photoemission; adsorption; chemisorption; *16016.*

CO laser; HF laser; infrared laser window materials; multiphonon absorption; surface absorption; bulk absorption; *SP462,* pp. 50-57 (Dec. 1976).

CO laser calorimetry; CO laser mirrors; dielectric-enhanced mirrors; infrared laser mirrors; metal mirrors; reflectance; absorptance; *SP462,* pp. 189-194 (Dec. 1976).

CO laser mirrors; dielectric-enhanced mirrors; infrared laser mirrors; metal mirrors; reflectance; absorptance; CO laser calorimetry; *SP462,* pp. 189-194 (Dec. 1976).

Coal; coal mine safety; dielectric constant; energy; microwave measurement; nondestructive testing; thickness of coal layer; automation; *NBSIR 76-840.*

Coal; earthquakes; geologic faults; mining; tectonics; acoustics; *NBS-GCR-73-18.*

Coal; energy; fuel; graphite; hydrocarbons; metering; methane; natural gas; petroleum; physical properties; standard reference materials; *SP434.*

Coal; environmental samples; environmental standards; fly ash; instrumental neutron activation analysis (INAA); instrumental photon activation analysis (IPAA); natural radioactivity; standard reference materials; trace elements; *SP422,* pp. 211-223 (Aug. 1976).

Coal conversion; coal gasification; corrosion; fracture; vaporization; ceramics; *16243.*

Coal gasification; corrosion; fracture; vaporization; ceramics; coal conversion; *16243.*

Coal gasification; deformation; erosion; fracture; wear; castable refractories; *16600.*

Coal gasification; liquefaction processes; aromatic asphaltenes; caking; *16365.*

Coal mine safety; dielectric constant; energy; microwave mea-

surement; nondestructive testing; thickness of coal layer; automation; coal; *NBSIR 76-840.*

Coastal processes; offshore zone; oscillatory water tunnel; permeability effect on sand transport; ripples, sand; sand motion under waves; beach accretion; *15793.*

Coastal sampling; contamination of atmospheric particulate samples; sample handling; shipboard atmospheric sampling; analytical blanks; atmospheric sampling; *SP422,* pp. 377-388 (Aug. 1976).

Coated reinforcing bars; evaluation; organic coatings; pullout tests; bond strength; *15782.*

Coating; deposition; vapor; wear; chemical; *SP452,* pp. 151-169 (Sept. 1976).

Coating damage; laser damage; mirrors; multilayer dielectric coatings; polarizers; *SP435,* pp. 298-304 (Apr. 1976).

Coating deposition; index of refraction; laser windows; surface composition; 10.6 μm; As_2S_3; *SP435,* pp. 244-247 (Apr. 1976).

Coating design; multilayer coating; absorptance; antireflectance coating; bandwidth; *SP462,* pp. 221-229 (Dec. 1976).

Coating topography; KCl; laser window coatings; ZnS; CeF_3; CO_2 pulsed laser damage; *SP435,* pp. 236-243 (Apr. 1976).

Coatings; corrosion behavior; field tests; galvanic couples; soil environment; stainless steels; stress-corrosion behavior; *NBSIR 76-1081.*

Coatings; CVD; hot pressed; sputtered; absorption damage levels; *SP462,* pp. 253-263 (Dec. 1976).

Coatings; design charts; elastomers; erosion; Hopkinson pressure bar apparatus; impedances; mismatching; stress wave interactions; substrates; tearing; vibratory apparatus; adhesion; cavitation; *SP452,* pp. 120-123 (Sept. 1976).

Coatings; dynamic; dynamic response; pressure transducer; protective coatings; shock tube; tape; thermal radiant-energy response; thermal transient response; transducers; zero shift; *NBSIR 76-1144.*

Coatings; friction; metal; polymers; wear; adhesion; *SP452,* pp. 3-13 (Sept. 1976).

Coatings; KCl; laser damage; alkali halides; antireflection coatings; *SP462,* pp. 283-291 (Dec. 1976).

Coatings; laser damage; laser windows; 10.6 μm lasers; *SP462,* pp. 264-278 (Dec. 1976).

Coatings; photoflash bulb; pressure transducer; protective coatings; thermal radiant-energy response; thermal transient response; transducer; *NBSIR 76-1060.*

Coatings, metallic; metallic coatings; sliding wear; *SP452,* pp. 84-93 (Sept. 1976).

Coaxial cable; insertion loss; mobile antenna; mobile transceiver; transmission; cable assembly; *16294.*

Coaxial connectors; connectors; RF connectors; SMA connectors; *16476.*

Coaxial connectors; insertion loss; microwave; reflection coefficient magnitude; repeatability; *16495.*

Coaxial thermistor mounts; precision transfer standards; *16651.*

Cobalt; contamination; manganese; sampling; serum; biological materials; chromium; *SP422,* pp. 299-310 (Aug. 1976).

Cobalt; copper; diffusion; electromigration; iron; nickel; palladium; platinum; rhodium; ruthenium; thermomigration; alloys; *JPCRD* **5,** No. 1, 103-200 (1976).

Cobalt-60; exposure standard; international intercomparison; *16095.*

Cobalt-60; ionization chamber; calorimetry; *16435.*

Cobalt-60 gamma radiation; computation check; dose interpretation; mailings; results; therapy departments; thermoluminescence dosimeters; uncertainty; water phantom; absorbed dose; *J. Res.* **80A** No. 4, 663-668 (1976).

COBOL; COBOL coding form; Federal Information Processing Standard; Federal Standard COBOL; software; standards conformance; *FIPS PUB 44.*

COBOL; Federal ADP installations; Federal Standard COBOL; impact evaluation; sample; software management; survey; ADP; *NBSIR 76-1100.*

COBOL coding form; Federal Information Processing Standard; Federal Standard COBOL; software; standards conformance; COBOL; *FIPS PUB 44.*

CODATA compatible values; enthalpies of formation; entropy; Gibbs energy of formation; selected thermodynamic values; thermodynamic properties; *NBSIR 75-968.*

Code; definitions; demand meters; electricity metering; performance requirements; standards; test methods; watthour meters; *15829.*

Codes; concrete; construction; falsework; formwork; loads; reshoring; safety; shoring; standards; building; *BSS80.*

Codes; Consumer Product Safety Committee; Consumer Safety Glazing Committee; glazing; impact tests; safety glazing; standards; state law; architectural glazing; *NBSIR 76-1109.*

Codes; criteria; project summaries; standards; technical bases; building research; building technology; *SP446.*

Codes; disaster; dynamic analysis; earthquakes; modeling; soils; structural response; volcanoes; wind; bridges; buildings; *SP444.*

Codes and standards; housing; hurricanes; low-rise buildings; natural disaster; structural connections; typhoons; wind loads; buildings; *NBSIR 75-790.*

Codes and standards; wind loads; wind tunnels; aerodynamics; boundary layers; buildings; *SP444,* pp. II-21—II-51 (Apr. 1976)

Coding; costs; data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; *NBS-GCR-74-29.*

Coding; interfaces; modems; signal processing; standards; teletypewriters; *NBS-GCR-74-30.*

Coefficients of thermal expansion; compilation; critical evaluation; elements; thermal expansion; alloys; *16005.*

Coexistence curve; critical phenomena; density; isobutyric acid; magnetic densimeter; phase equilibria, carbon disulfide, nitromethane; water; binary mixture; *16480.*

Coexistence curves; critical exponents; fluid critical point; history; Kamerlingh Onnes collection; surface tension; Van der Waals collection; Verschaffelt; *16372.*

Cognitive processes; nuclear weapon theft; perceptual processes; psychological deterrence; security systems; sensory processes; threat analysis; behavioral impact; *NBSIR 76-1007.*

Coincidence; electron impact; ions; lifetime; molecule; N_2^+; radiative; transition probability; CO^+; CO_2^+; *15912.*

Coincidence; mass spectrometry; photoionization; propane; propane-d_2; propane-d_6; propane-d_8; threshold photoelectron spectroscopy; *16590.*

Coincidence counting; gamma; radioactivity; standardization; ^{129}I; beta; *16259.*

Coincidence counting; gamma rays; ground state decay; radioactivity; selenium-75; standardization; *15846.*

Cole-Cole plots; dielectric constants of polymers; dielectrics; electric dispersion; permeability of polymers; *16290.*

Collaborative tests; diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; interlaboratory tests; randomization, constrained; ruggedness test; statistical techniques; Youden plot; Youden squares; Youden, W. J.; calibration designs; *16115.*

Collagen; conformation; correlation times; cyanogen bromide peptides; polypeptides; relaxation times; rotational diffusion; ^{13}C magnetic resonance; *16211.*

Collapse; failures; progressive collapse; specific resistance; abnormal loading; alternate path; annotated bibliography;

bibliography; building code; building regulations; *BSS67.*

Collector resistivity; four-probe; planar test structure; resistivity; semiconductor characterization; semiconductor device; silicon; square array; bulk resistivity; *16424.*

Collimation; dosimetry; ion chambers; n-γ dosimetry; neutrons; scattering; albedo; *SP456,* pp. 335-341 (Nov. 1976).

Collision; Coulomb-interaction; electron; energy exchange; ionization; threshold; atom; *15884.*

Collision chains; halogen emission; intrinsic damage; multiphoton absorption; alkali halides; *SP435,* pp. 366-368 (Apr. 1976).

Collision cross section; detachment; dissociation; elastic scattering; electron; excitation; fluorescence; ion; ionization; molecule; photon; positron; atom; *SP426.*

Collision model; early afterglow; electron temperature; helium metastables; helium plasma; pulse discharge; *15958.*

Collision processes; halocarbon ions; hydrocarbons; ion-molecule reactions; kinetics; rate constants; *15811.*

Collision risk; error analysis; mathematical models; safety; separation; vertical separation; aircraft; air transportation; air traffic control models; altimetry; altitude; aviation; *NBSIR 76-1067.*

Collision theory; cross sections; dissociation; hot atoms; isotope effects; kinetics; molecular beams; quantum mechanics; rate coefficients; recombinations; scattering theory; chemical reactions; *16591.*

Collision theory; cross sections; hydrogen atoms; rate coefficients; scattering theory; trajectories; transition-state theory; chemical reactions; chlorine molecules; classical scattering matrix theory; *16627.*

Collision theory; energy transfer in collisions; hydrogen molecules; information theory; scattering theory; trajectories; vibrational energy; chemical reactions; classical probability matrix theory; classical scattering matrix theory; *16607.*

Collision theory; hydrogen atoms; hydrogen molecules; scattering theory; trajectories; uniform approximation; chemical reactions; classical scattering matrix theory; *16054.*

Collision theory; hydrogen atoms; hydrogen molecules; indistinguishable particles; nuclear spin; rate coefficients; transition-state theory; chemical reactions; *16214.*

Collision theory; scattering theory; trajectories; classical scattering matrix theory; *16593.*

Collision-induced emission; rare-gas oxide excimers; ab initio potentials; argon oxide; *15868.*

Collisions; electron; excitation; hydrogen; ionization; theoretical; *15893.*

Collisions; electron; low energy; review; scattering; theory; atom; *15883.*

Collisions; laser-excited fluorescence; Rayleigh scattering; *15910.*

Collisions; near-resonant scattering; redistribution; strontium; *16261.*

Colloidal alumina and silica for dental porcelain; dental porcelain; porcelain balling reduction; ammonium stabilized silica and alumina sols; *U.S. Patent 3,973,970.*

Color; colorimetry; *16117.*

Color composite technique; counting statistics; electron beam scanning; electron probe microanalysis; x-ray analysis; *15787.*

Color matching; color measurement; diffuse reflectance; Kubelka-Munk function; reflectance; reflectance standards; thin layer chromatography; chromatography; *J. Res.* **80A** No. 4, 551-565 (1976).

Color measurement; diffuse reflectance; Kubelka-Munk function; reflectance; reflectance standards; thin layer chromatography; chromatography; color matching; *J. Res.* **80A** No. 4, 551-565 (1976).

Color subcarrier; frequency calibration; frequency comparator; frequency measurements; oscillator calibration; phase comparison; television receiver; *U.S. Patent 3,958,269.*

Color superposition photography; field-ion microscopy; image analysis; three-color superposition; *16228.*

Color-coded B-scan; Fourier transform; spectral analysis; tissue structure; ultrasound; *SP453,* pp. 97-107 (Oct. 1976).

Colorimetry; color; *16117.*

Colorimetry; highway signs; photoelectric tristimus colorimeters; photometry of retroreflective materials; retroreflective sign materials; *NBSIR 74-518.*

Colorimetry of signals; effective intensity of flashing lights; legibility of signs; visual signaling; *16003.*

Colour dosimeters; dosimetry; dyes; glass; plastics; radiation; radiochromic dyes; spectrophotometry; *15960.*

Column; ductility; earthquake; reinforced concrete; shear tests; structural engineering; web reinforcement; *SP444,* pp. IV-16—IV-36 (Apr. 1976).

Column materials; detectors; gas chromatography; theory of chromatography; *15926.*

Column (supports); frames; long columns; reinforced concrete; slenderness ratio; strength; structural analysis; structural design; ultimate strength; bending moments; building codes; *16412.*

COM; computerized typesetting; digital plotting; graphics; Hershey character set; plotting; type fonts; typesetting; vectorized characters; alphabets; *SP424.*

COM systems extension; copyright protection; facsimile transmission extension; photocopying; reprography developments; bibliographic data files; communications technology developments; computer developments; *16040.*

Combination refrigerator-freezers; consumer information; efficiency; energy labeling; room air conditioners; water heaters; *15888.*

Combinatorial analysis; combinatorial probability; measure theory; minimax; *J. Res.* **80B** No. 2, 237-243 (1976).

Combinatorial equivalence; linear inequalities; linear programs; pivot operations; skew symmetry; *16127.*

Combinatorial probability; measure theory; minimax; combinatorial analysis; *J. Res.* **80B** No. 2, 237-243 (1976).

Combustibility; flammability; heat release rate; potential heat; self heating; building materials; calorimetry; *16111.*

Combustion; cotton fibers; flame retardant treatments; phosphorous acids; pyrolysis; ramie; rayon; sulfur; cellulosic fibers; *NBS-GCR-73-4.*

Combustion; data base; energy conservation; estimation schemes; kinetics; modeling; oxidation; pyrolysis; *NBSIR 75-910.*

Combustion; fire endurance; fire test; flame emissivity; heat transfer; pyrolysis; radiant heat; thermal inertia; ASTM Standard E119; building construction; charring; *NBS-GCR-75-50.*

Combustion; fire test; heat release; limiting thermal index; pyrolysis; radiant heat; thermal sensitivity index; calorimeter; *NBS-GCR-76-54.*

Combustion; free radicals; gas phase; hydrocarbons; oxidation; oxygen; oxygenated organic compounds; ozone; bibliography; chemical kinetics; *SP449.*

Combustion gases; fire endurance; insulation; intumescent paint; potential heat; reinforced plastic; small furnace test; smoke; aluminum bulkhead; *NBSIR 76-1012.*

Combustion models; flame spread; fluid flow; laser doppler velocimetry; liquid fuels; solid fuels; surface tension; *NBS-GCR-76-79.*

Combustion products; fire; hazard assessment; toxicity; bioassay; *16204.*

Combustion products; fire gases; fire hazards; furniture; life hazard; oxygen; smoke; temperature; toxicity; upholstery; bedding; beds; carbon dioxide; carbon monoxide; *NBS-GCR-73-1.*

Combustion thermodynamics; enthalpies of formation; incinerators, industrial; thermodynamic data; waste disposal; *16032*.

Comet; electric-dipole transition; excited states; NH; spin-orbit coupling; transition probability; *16502*.

Comets; fluorescence; OH-18-cm radiation; optical pumping; polarization; *16513*.

Comets; line formation; polarization; quantum mechanics; atomic and molecular processes; *15746*.

Command language; computer networks; job control language; macros; minicomputers; protocols; teleprocessing; access procedures; *TN917*.

Commercial alloys; corrosion; data sources; metals; *SP396-3*.

Commercial alloys; data sources; electrical properties; magnetic properties; metals; *SP396-4*.

Commercial buildings; energy conservation; energy consumption; Manchester office building; National Bureau of Standards; New York State offices; office buildings; *16547*.

Commodity flow analysis; economic analysis; National Network Simulation system; *NBSIR 75-918*.

Commodity supply crisis; econometric analysis; economic impacts; efficiency impacts; income distribution effects; policy alternatives; applied microeconomic framework; *NBS-GCR-ETIP 76-24*.

Common carriers; computer networks; interfaces; modems; telecommunication; *NBS-GCR-74-31*.

Common practices; communication; compatibility; convertibility; information interchange; information networks; interfacing; interlibrary communication; man-machine interaction; network protocols; *16053*.

Communication; compatibility; convertibility; information interchange; information networks; interfacing; interlibrary communication; man-machine interaction; network protocols; common practices; *16053*.

Communication; computer networks; network access techniques; *16063*.

Communication; consumers; grain moisture measurement; laws and regulations; measurement; metric; packaging and labeling; police radar equipment; standards; supermarket automation; weights and measures; calibration; *SP442*.

Communication; frequency; ratio; synchronization; time; broadcast; *16496*.

Communication satellite; communication system; hf time dissemination services; navigation system; satellite time and frequency dissemination services; *16644*.

Communication system; hf time dissemination services; navigation system; satellite time and frequency dissemination services; communication satellite; *16644*.

Communications; digital communications; guideline; law enforcement equipment report, Law Enforcement Standards Laboratory; mobile digital equipment; National Institute of Law Enforcement and Criminal Justice; *16190*.

Communications; electromagnetic compatibility; law enforcement; personal transmitter; portable transmitter; radio frequency carrier; transmitter; audiofrequency modulation; *16285*.

Communications; fixed transmitter; FM transmitter; law enforcement; transmitter; base station transmitter; *16286*.

Communications networks; computer networks; cost; interactive service; measurement; measures; performance; usability; *TN908*.

Communications technology developments; computer developments; COM systems extension; copyright protection; facsimile transmission extension; photocopying; reprography developments; bibliographic data files; *16040*.

Community noise; computer interface; instrumentation; minicomputer; noise; *NBSIR 75-692*.

Community services; cooling; electric power; energy conservation; heating; incineration; integrated utility systems; resource conservation; utilities; utility services; water reuse; *16153*.

Comparative analyses; error evaluation; geological materials; instrumental-neutron activation analysis; *SP422*, pp. 1241-1256 (Aug. 1976).

Comparator; gage blocks; length; measurement process; calibration; *NBSIR 76-979*.

Comparator; International Practical Temperature Scale of 1968; IPTS-68; oxygen point; platinum resistance thermometer; temperature standard; tin point; triple point of water; zinc point; *J. Res.* **80A** No. 3, 477-504 (1976).

Comparison between NAA and AAS; neutron activation analysis (NAA); time of analysis in NAA and AAS; trace element content in liver biopsies; trace element content in tumor bearing animals; Wilson's disease; *SP422*, pp. 231-238 (Aug. 1976).

Comparison of trace analytical methods; contamination; rocks and ores; sample preparation; trace element analysis; accuracy and precision; *SP422*, pp. 773-790 (Aug. 1976).

Compatibility; convertibility; information interchange; information networks; interfacing; interlibrary communication; man-machine interaction; network protocols; common practices; communication; *16053*.

Compatibility; electropolated soft metal film coatings; metallurgical; metals; soft metals; solid lubricants; *SP452*, pp. 72-83 (Sept. 1976).

Compilation; critical evaluation; elements; thermal expansion; alloys; coefficients of thermal expansion; *16005*.

Compiler validation; computer programming; formal language; programming language standards; ADP standards; BASIC; compilers; *NBS-GCR-73-17*.

Compilers; compiler validation; computer programming; formal language; programming language standards; ADP standards; BASIC; *NBS-GCR-73-17*.

Complete closure design; indexing table; least squares estimation; partial closure design; standard deviation; subdivision; variance-covariance matrix; angle standard; autocollimator; calibration; *NBSIR 75-750*.

Complete elliptic integral; cubic lattice; definite integral; special functions; *J. Res.* **80B** No. 2, 313-323 (1976).

Complex equilibria; convective diffusion; evaporative rate; purification (evaporative); solutal-capillary; thermal capillary convection; vacuum vaporization; Al_2O_3; *15968*.

Complex object; laminagraphy; multiple-film; radiographic inspection; thermal neutrons; three-dimensional; *16371*.

Compliance assurance; evaluation; inspection; manufactured building; model documents; NCSBCS; standards; state regulation; building codes; certification; *BSS87*.

Compliance testing; laboratory evaluation; performance testing; qualified products lists; testing; acceptance testing; *NBSIR 75-719*.

Compliant surface; drag reduction; membranes; tension; vibrating membranes; air impedance; *16625*.

Component screening; custom circuits; LSI; microelectronics; parameter control; process uniformity; random faults; reliability; test patterns; TTL; vendor qualification; circuit procurement; *16620*.

Components, structural; dry powder painting; mechanical and structural components; polymer processed mechanical and structural components; structural and mechanical components; *SP452*, pp. 14-24 (Sept. 1976).

Composite materials; dental gold alloys; dental research; panoramic x ray; silicate cement; turbine handpiece; amalgam; *16212*.

Composite materials; elastic constants; filled polymers; mechanical properties; particulate composites; Poisson's ratio; shear modulus; Young's modulus; bulk modulus; *16264*.

Composite materials; elastic constants; filled polymers;

mechanical properties; particulate composites; Poisson's ratio; Young's modulus; *J. Res.* **80A** No. 1, 45-49 (1976).
Composite resins; composites; dental materials; fillers; porous glass; radiopacity; reinforcements; wear; *16586.*
Composite resins; composites; dental materials; fillers; porous glass; radiopacity; reinforcements; wear; *16587.*
Composite resins; dental materials; hydroxybenzoic acids; pit and fissure sealants; preventive dental materials; acrylic resins; chemistry; *15939.*
Composite walls; compressive strength; concrete block; constitutive relations; flexural strength; masonry; masonry walls; mortar; slenderness ratio; standards; stiffness; structural stability; walls; brick; buckling; *BSS73.*
Composites; copper alloys; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; *NBSIR 75-828.*
Composites; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; aluminum alloys; *NBSIR 76-839.*
Composites; dental; grafting; investments; polymer; resin; wear; adhesion; adsorption; alloys; *NBSIR 76-1095.*
Composites; dental materials; fillers; porous glass; radiopacity; reinforcements; wear; composite resins; *16586.*
Composites; dental materials; fillers; porous glass; radiopacity; reinforcements; wear; composite resins; *16587.*
Composites; elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; *NBSIR 76-848.*
Composition; critical fields; critical temperature; crystallographic data; low temperature; superconductive materials; superconductivity; bibliography; *JPCRD* **5,** No. 3, 581-822 (1976).
Composition; isotopic; lithium; potassium; relative; rocks; rubidium; soils; absolute; Apollo; *15869.*
Compounds; induced matrices; Kronecker powers; roots of unity; Schur matrix; *15955.*
Compressibility; configuration; entropy; heat capacity; holes; polymer; poly(vinyl acetate); pressure; thermal; volume; *16077.*
Compressibility; copper; copper alloys; elastic constants; Poisson ratio; pulse-echo method; resonance method; shear modulus; sound velocity; Young's modulus; bulk modulus; *16505.*
Compressibility; Debye temperature; elastic constants; plutonium; plutonium alloy; Poisson ratio; shear modulus; sound velocity; Young modulus; bulk modulus; *16635.*
Compressibility; density; distribution function; erythrocytes; hematocrit; scattering; ultrasound; angular dependence; blood; *SP453,* pp. 207-212 (Oct. 1976).
Compressibility; density; liquid compressibility; liquid density; *16171.*
Compressibility flow; cryogenics; fluid dynamics; pressure drop; superfluid helium; two phase flow; *16642.*
Compression; eccentric loading; flat-end; kern; loading rate; pin-end; test method; wall panels; walls; *NBSIR 75-779.*
Compressive strength; concrete block; constitutive relations; flexural strength; masonry; masonry walls; mortar; slenderness ratio; standards; stiffness; structural stability; walls; brick; buckling; composite walls; *BSS73.*
Compressive strength; concrete; maturity; mechanical properties; nondestructive evaluation; pull-out strength; splitting tensile strength; *TN932.*
Compressive strength; flexural strength; fracture mechanics; polymer impregnated cement; polymer impregnated mortar; porosity; scanning electron microscopy; cement; *BSS83.*
Compressor efficiency; cycle efficiency; heat exchanger losses; hydrogen liquefier; pressure drop losses; *15879.*
Compromise; ineffectiveness; measurements; radiation; regulations; states; abstract; *SP456,* pp. 31-36 (Nov. 1976).
Computation check; dose interpretation; mailings; results; therapy departments; thermoluminescence dosimeters; uncertainty; water phantom; absorbed dose; cobalt-60 gamma radiation; *J. Res.* **80A** No. 4, 663-668 (1976).
Computations; cooling system; cryogenics; electric power transmission; flow stability; helium; oscillations; superconductors; theory; *15809.*
Computer; consumer; drugs; electrical pulses; environmental standards; friction measurement; lead poisoning; LNG data; optical; standard reference materials; thermophysical properties symposium; waste heat; *DIM/NBS* **60,** No. 9, 1-24 (1976).
Computer; data processing; definitions; Federal Information Processing Standards Publication; information processing; privacy; security; terms; vocabulary; *FIPS PUB 39.*
Computer; deconvolution; impedance; impulse response; layer model; lucite; ultrasound; attenuation; *SP453,* pp. 231-251 (Oct. 1976).
Computer; electrical industries; environments; glass standards; government intervention; heating/cooling; lead-paint; metric; pressure transducers; thermal comforts; weights and measures; building industry; calibration system; *DIM/NBS* **60,** No. 10, 1-24 (1976).
Computer; energy calculation; heat transfer; heating and cooling loads; response factor; algorithm; ASHRAE; buildings; *16630.*
Computer; energy measurement; EPIC; FIPS; kitchen ranges; mercury; metal fires; metric; safety; WWV/WWVH; *DIM/NBS* **60,** No. 1, 1-24 (1976).
Computer; fingerprint; identification; pattern recognition; scanner; classification; *16030.*
Computer; interactive; measurement; procurement; response; service; *16247.*
Computer; recordkeeping; x ray; automation; calibration; *SP456,* pp. 53-57 (Nov. 1976).
Computer age; data system; materials research; measurement challenge; science and technology; sea of data; standard reference data system; *DIM/NBS* **60/Suppl.,** Anniversary Issue, 1-32 (1976).
Computer aided manufacturing systems; computer integrated manufacturing systems; interfaces; motivation for standardization; standards; automation; *16350.*
Computer air conditioning units; Experimental Technology Incentives Program (ETIP); Federal Supply Service; life cycle costing; procurement policy; specifications; value incentives; *NBS-GCR-ETIP 76-23.*
Computer analysis; impedance; liver cirrhosis; ultrasonics; A-scan; attenuation; *SP453,* pp. 61-70 (Oct. 1976).
Computer analysis; laser induced stresses; stress analysis; thermal analysis; zinc selenide window; *SP462,* pp. 29-35 (Dec. 1976).
Computer applications; computer engineering; distributed systems; interface standards; memory technology; protocols; automated reading technology; circuitry; *16553.*
Computer applications; computers; enforcement; evaluation; information systems; microfilm; microform; state-of-the-art study; automatic data processing; building codes; building regulations; *NBS-GCR-74-26.*
Computer auditing; energy options; explosive vapor detectors; firebug; impulse generators; MHD electrode materials; optical standards; safety wheels; bike regulations; bomb disarmament; *DIM/NBS* **60,** No. 7, 1-24 (1976).
Computer calculations; crystal structure; epitaxy; lattice misfit; pattern recognition; twinning; *TN893.*

Computer communications; computer networking; data communications; networks; performance requirements; telecommunications; *16551.*

Computer control; control theory; hierarchical control; man-machine communication and automation; adaptive control; *16175.*

Computer control; manipulators; robots; robot systems; artificial intelligence; automation; *16047.*

Computer control; position sensors; RF interferometer; agriculture; *16143.*

Computer control of automation systems; computer interface; computer software for robot control; hierarchical control of manipulators; position servos; trajectory control; *NBSIR 75-973.*

Computer controlled; diode detectors; microwave measurements; phase angle; self-calibration; seven-port junction; vector voltmeter; amplitude; *NBSIR 76-844.*

Computer developments; COM systems extension; copyright protection; facsimile transmission extension; photocopying; reprography developments; bibliographic data files; communications technology developments; *16040.*

Computer disk controllers; computer disk drives; computer disk interface; disk controllers; disk drive characteristics; disk pack interchangeability; disk track format; interface electrical characteristics; interface functional characteristics; removable disk packs; *NBS-GCR-76-63.*

Computer disk drives; computer disk interface; disk controllers; disk drive characteristics; disk pack interchangeability; disk track format; interface electrical characteristics; interface functional characteristics; removable disk packs; computer disk controllers; *NBS-GCR-76-63.*

Computer disk interface; disk controllers; disk drive characteristics; disk pack interchangeability; disk track format; interface electrical characteristics; interface functional characteristics; removable disk packs; computer disk controllers; computer disk drives; *NBS-GCR-76-63.*

Computer education and training; computer technology; less-developed countries; technology transfer; U.S. foreign assistance; *NBSIR 73-423.*

Computer engineering; distributed systems; interface standards; memory technology; protocols; automated reading technology; circuitry; computer applications; *16553.*

Computer graphics; geochemistry; medicine; pattern recognition; trace elements; air particulates; blood; chemistry; *SP422,* pp. 151-162 (Aug. 1976).

Computer integrated manufacturing systems; interfaces; motivation for standardization; standards; automation; computer aided manufacturing systems; *16350.*

Computer interface; computer software for robot control; hierarchical control of manipulators; position servos; trajectory control; computer control of automation systems; *NBSIR 75-973.*

Computer interface; instrumentation; minicomputer; noise; community noise; *NBSIR 75-692.*

Computer model; computer security; confidentiality; cost model; data security costs; PL-93-579; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; *NBSIR 76-985.*

Computer model; decision theory; networks; specifications; standards; system engineering; building codes; *NBS-GCR-76-55.*

Computer modeling on a microscale; elastoplastic micropressure vessels; failure predictability through small size; microencapsulated coated fuel particles; *SP452,* pp. 31-42 (Sept. 1976).

Computer network; data communications; resource sharing; bibliography; *SP384.*

Computer networking; data communications; networks; performance requirements; telecommunications; computer communications; *16551.*

Computer networking; distributed networks; network service; *16045.*

Computer networking; load leveling; resource sharing; scheduling; *16570.*

Computer networks; controlled accessibility; encryption; evaluation criteria; key; password; personal identification; terminals; verification; ADP security; *16013.*

Computer networks; cost; interactive service; measurement; measures; performance; usability; communications networks; *TN908.*

Computer networks; data acquisition; man-machine interaction; minicomputer; network measurement; performance measurement; *TN912.*

Computer networks; data analysis; interactive; network service; performance evaluation; performance measurement; service; *TN897.*

Computer networks; data communications; networks; packet-switching; standards; *16025.*

Computer networks; data communications; data networks; networks; packet switching; protocol; standards; *16576.*

Computer networks; interfaces; modems; telecommunication; common carriers; *NBS-GCR-74-31.*

Computer networks; job control language; macros; minicomputers; protocols; teleprocessing; access procedures; command language; *TN917.*

Computer networks; macros; minicomputers; access procedures; *16177.*

Computer networks; minicomputers; Network Access Machine; network services; response time; response time predictions; *16326.*

Computer networks; network access techniques; communication; *16063.*

Computer output microforms; information storage and retrieval; libraries; microfilm; microforms; micrographics; *16038.*

Computer power; computer standard; corrosion; environment; health care; housing production; I-R 100 awards; NIKE missile; papers available; stereology; toy safety; x-ray units; *DIM/NBS* **60,** No. 11, 1-24 (1976).

Computer processing; frequency-dependent attenuation; internal scattering; myocardial infarction; scattering; surface scattering; tissue characterization; ultrasonic spectroscopy; ultrasound diagnosis; acoustic impedance; Bragg diffraction; *SP453,* pp. 167-196 (Oct. 1976).

Computer program; decision theory; networks; specifications; standards; systems engineering; building codes; *NBS-GCR-76-56.*

Computer program; decision theory; FORTRAN; logic design; networks; specifications; standards; systems engineering; building codes; *NBS-GCR-76-57.*

Computer program; Fourier transform NMR; homonuclear lock; phase adjustment; phase correction algorithm; quadrature; *15970.*

Computer program for buildings; conduction transfer functions; heating and cooling load; National Bureau of Standards load determination procedure; *16118.*

Computer program testing; FORTRAN programs; program analysis; software verification; automatic testing; *NBS-GCR-75-46.*

Computer program testing; FORTRAN programs; program analysis; software verification; automatic testing; *NBS-GCR-75-47.*

Computer program testing; FORTRAN programs; program analysis; software correctness; software verification; symbolic program evaluation; automatic testing; *NBS-GCR-76-69.*

Computer programming; formal language; programming language standards; ADP standards; BASIC; compilers; compiler validation; *NBS-GCR-73-17.*

Computer programs; data evaluation; electrolytes; electromotive force; isopiestic method; osmotic coefficients; nonlinear least squares; thermodynamic properties; vapor pressure; activity coefficients; aqueous; *TN928.*

Computer programs; data manipulation; digital data; mass storage; NIRA; Photonuclear Data Center; central computer; *TN903.*

Computer programs; documentation; documentation content guidelines; FIPS guidelines; software; automated data systems; *FIPS PUB 38.*

Computer programs; dynamic thermal performance; heat flow analysis; heating and cooling loads; thermal analysis; transient heat flows; building heat transfer; *15762.*

Computer programs; explosive sensitivity tests; heat of decomposition; oxygen balance; activation energy; bond dissociation energy; *15957.*

Computer security; confidentiality; cost model; data security costs; PL 93-597; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; *TN906.*

Computer security; confidentiality; cost model; data security costs; PL-93-579; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer model; *NBSIR 76-985.*

Computer security; extended-type objects; operating system structures; protection; reliable software; reliability; security; small protection domains; types; capability; capability-based addressing; *TN919.*

Computer security; information handling; privacy; safeguards for security and privacy; technology for security and privacy; *16439.*

Computer security; minicomputers; *16447.*

Computer simulation; correlation factor for diffusion; diffusion; matrix calculation; Monte Carlo calculation; theory of diffusion; vacancy diffusion; *16073.*

Computer simulation; cyclic loading; debond analysis; finite element analysis; joints; nonlinear analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; bonded joints; *16147.*

Computer simulation; DEPAB (DEsign and Performance Analysis of Boilers); energy saving measures; performance at part load; seasonal efficiency; boilers; *16347.*

Computer simulation; energy transport; heat pulse; interatomic potential; molecular dynamics; second sound; shock wave; stress wave; temperature wave; thermal diffusivity; thermal relaxation; anharmonic crystal; *16138.*

Computer simulation; energy transport; heat pulse; molecular dynamics; second sound; stress pulse; temperature wave; thermal diffusivity; thermal equilibrium; thermal relaxation; anharmonic crystal; *16589.*

Computer software for robot control; hierarchical control of manipulators; position servos; trajectory control; computer control of automation systems; computer interface; *NBSIR 75-973.*

Computer standard; corrosion; environment; health care; housing production; I-R 100 awards; NIKE missile; papers available; stereology; toy safety; x-ray units; computer power; *DIM/NBS* **60,** No. 11, 1-24 (1976).

Computer systems; environmental; fire; glass door; lead nitrate; mercury thermometers; metric; nuclear power; police radars; solar energy; SRM's; *DIM/NBS* **60,** No. 2, 1-25 (1976).

Computer tapes; energy; fire; helmets; mobile homes; phase diagrams; tire pressure; air; building codes; *DIM/NBS* **60,** No. 12, 1-24 (1976).

Computer techniques; construction; enforcement process; housing; hurricane Agnes; mobile home parks; mobile homes; performance data; regulatory process; standards; *NBSIR 76-1058.*

Computer technology; information storage and retrieval; interactive systems; online services; online systems; bibliographic information systems; *16548.*

Computer technology; less-developed countries; technology transfer; U.S. foreign assistance; computer education and training; *NBSIR 73-423.*

Computer utilization; dedicated computers; EDP expenditure; employment; finance; productivity; services—state/local government; automation; *16075.*

Computer-aided design; manufacturing; CAD; CAD/CAM; *16146.*

Computer-aided measurements; computer-controlled instruments; automated measurements; *NBSIR 75-801.*

Computer/communications networks; computer/communications services; computer/communications standards; interactive cable television; nonentertainment television; two-way television; wired city; wired nation; broadband interactive terminals; cable television uses; *NBS-GCR-75-44.*

Computer/communications services; computer/communications standards; interactive cable television; nonentertainment television; two-way television; wired city; wired nation; broadband interactive terminals; cable television uses; checkless society; *NBS-GCR-75-44.*

Computer/communications standards; interactive cable television; nonentertainment television; two-way television; wired city; wired nation; broadband interactive terminals; cable television uses; checkless society; computer/communications networks; *NBS-GCR-75-44.*

Computer-controlled instruments; automated measurements; computer-aided measurements; *NBSIR 75-801.*

Computer-controlled measurement; magic tee; microwave measurement methods; multiple probe devices; reflectometers; rotating probe devices; slotted lines; survey of automatic techniques; swept frequency measurements; Wheatstone Bridge; automatic network analyzers; *Monogr. 151.*

Computerized data analysis; data evaluation; least squares (L2); least sums (L1); thermochemistry; thermodynamic data networks; *NBSIR 76-1147.*

Computerized tomography; heart; reconstruction; refractive index; synthetic focus; tissues; ultrasound; acoustic attenuation; acoustic velocity; breast tumor; *SP453,* pp. 109-119 (Oct. 1976).

Computerized typesetting; digital plotting; graphics; Hershey character set; plotting; type fonts; typesetting; vectorized characters; alphabets; COM; *SP424.*

Computers; confidentiality; data systems; health records; information policy; management principles; medical records; privacy; recordkeeping practices; security; citizen rights; *Monogr. 157.*

Computers; data; data elements; data processing; information; information processing; International Standards; U.S. Government; American National Standards; *FIPS PUB 45.*

Computers; data base management; governments; management information systems; public services; security; standards; user groups; *15923.*

Computers; data editing; energy conservation; *NBSIR 75-735.*

Computers; data entry systems; information processing systems; information processing standards; OCR; OCR forms; optical character recognition; standards; business forms; *FIPS PUB 40.*

Computers; data processing; fire loads; load surveys; buildings; *NBSIR 76-982.*

Computers; enforcement; evaluation; information systems; microfilm; microform; state-of-the-art study; automatic data

processing; building codes; building regulations; computer applications; *NBS-GCR-74-26.*

Computing using Spanish; foreign relations; international agreement; lectures; OMNITAB II computing system; technology transfer; terminals; acceptance tests; AID; Bolivia; CENACO; *NBSIR 76-1176.*

Concentration; detectors; extraction; gas chromatography; isolation and clean-up; mass spectrometry; organic trace analysis; qualitative accuracy; quality control; quantitative accuracy; reference materials; sampling; *SP422,* pp. 9-34 (Aug. 1976).

Concentrations; determination; dilution; electrolyte; isotope; mass spectrometry; serum; accurate; blood; *SP422,* pp. 951-960 (Aug. 1976).

Concrete; concrete-polymer systems; polymers; polymer-impregnated concrete; sulfur-impregnated concrete; *16349.*

Concrete; construction; falsework; formwork; loads; reshoring; safety; shoring; standards; building; codes; *BSS80.*

Concrete; maturity; mechanical properties; nondestructive evaluation; pull-out strength; splitting tensile strength; compressive strength; *TN932.*

Concrete block; constitutive relations; flexural strength; masonry; masonry walls; mortar; slenderness ratio; standards; stiffness; structural stability; walls; brick; buckling; composite walls; compressive strength; *BSS73.*

Concrete-polymer systems; polymers; polymer-impregnated concrete; sulfur-impregnated concrete; concrete; *16349.*

Condensation energy; demagnetization coefficient; fluctuations; inhomogeneous superconductor; intermediate state; superconducting-normal transition; superconductor; surface energy type I superconductors; cadmium; *16450.*

Condenser; electret; humidity; microphones; reciprocity; sensitivity; temperature; calibration; ceramic; *NBSIR 76-1090.*

Conditional probability; Ising spin; Monte Carlo method; spin system; triangular lattice; *15865.*

Conduction; electrical conduction in gases; gases; *16165.*

Conduction; energy conservation; heat transfer; insulation; thermal conductivity; thermal insulation; *15756.*

Conduction band; drift mobility; energy levels; excess electrons; hydrocarbons; ion mobility; liquids; mobility; quasifree electrons; solvated electrons; *NSRDS-NBS58.*

Conduction mechanisms; interfacial phenomena; solid electrolyte; charge transfer processes; *SP455,* pp. 323-340 (Nov. 1976).

Conduction transfer functions; heating and cooling load; National Bureau of Standards load determination procedure; computer program for buildings; *16118.*

Conduction transfer functions; heating and cooling load; National Bureau of Standards heating and cooling load computer program; ASHRAE task group on energy requirements; *BSS69.*

Conductivity; electric field effects; insulating films; insulators; metal oxidation; metals; MOM devices; oxidation; oxidation theory; parabolic law for metal oxidation; semiconductors; *16260.*

Conductivity; electrical; heat conductivity; heat transfer; Lorenz function; thermal conductivity; *15986.*

Conductivity; thermal conductivity; *16169.*

Cone; Lyapunov's theorem; stable matrix; *15763.*

Cones; faces; Jordan-equivalent; matrices; polyhedral; algebraic; *16044.*

Confidentiality; cost model; data security costs; PL 93-597; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer security; *TN906.*

Confidentiality; cost model; data security costs; PL-93-579; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer model; computer security; *NBSIR 76-985.*

Confidentiality; data systems; health records; information policy; management principles; medical records; privacy; record-keeping practices; security; citizen rights; computers; *Monogr. 157.*

Configuration; entropy; heat capacity; holes; polymer; poly(vinyl acetate); pressure; thermal; volume; compressibility; *16077.*

Configuration mixing; dipole moments; electronic structure of molecules; Hartree-Fock; integrals, evaluation of; molecular structure; orbitals; potential energy curves; pseudopotentials; self-consistent field; valence electrons; basis functions; *16611.*

Conformation; correlation times; cyanogen bromide peptides; polypeptides; relaxation times; rotational diffusion; ^{13}C magnetic resonance; collagen; *16211.*

Conformation adsorbed proteins; ellipsometry; surface potential; blood protein adsorption; *16396.*

Conformation adsorbed proteins; ellipsometry; infrared bound fraction; protein adsorption; *16427.*

Conjugates; roots of unity; algebraic numbers; *J. Res.* **80B** No. 1, 1-4 (1976).

Connector compatibility; directional coupler; interlaboratory standards; bolometer mount; *16554.*

Connectors; RF connectors; SMA connectors; coaxial connectors; *16476.*

Consensus standards; reference materials; calibration reference materials; calibrators; clinical control materials; clinical standards; *16358.*

Conservation; cooling; cost; energy; heating; *SP403,* pp. 163-191 (June 1976).

Conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; *SP403.*

Conservation; costs; economics; energy; thermal; *SP403,* pp. 95-101 (June 1976).

Conservation; economic; energy; management; manufacturing; *SP403,* pp. 103-111 (June 1976).

Conservation; energy; industrial; systems; attitudes; *SP403,* pp. 113-117 (June 1976).

Conservation; energy; organization; *SP403,* pp. 13-18 (June 1976).

Conservation; measurements; nondestructive evaluation; productivity; reliability; reproducibility; safety; accuracy; *16301.*

Conservation of material resources; failure prevention; government action; mechanical failure; mechanical reliability; safety standards; *SP423,* pp. 221-225 (Apr. 1976).

Constant deviation prism; geometrical model; optical square; pentaprism; reflection; refraction; standard deviation; uncertainty; autocollimator; calibration; *NBSIR 76-993.*

Constant stress rate; empirical measurements; fracture stress; slow crack growth; analytical predictions; *16034.*

Constant volume; ethane; heat capacity; liquid; saturated liquid; specific heat; vapor; *J. Res.* **80A** Nos. 5 and 6, 739-759 (1976).

Constitutive relations; flexural strength; masonry; masonry walls; mortar; slenderness ratio; standards; stiffness; structural stability; walls; brick; buckling; composite walls; compressive strength; concrete block; *BSS73.*

Constrictions; gas discharge; helium; ionized gas; numerical solutions; *16000.*

Construction; corridor test; fire endurance furnace; fire growth; heat release; smoke abatement; sprinkler system; *16150.*

Construction; design; developing countries; earthquakes; low-cost housing; natural disasters; Philippines; socioeconomic aspects; typhoons; *NBS-GCR-73-21.*

Construction; design; information; information retrieval system; architectural indexing systems; architecture; building; *NBSIR 76-1064.*

Construction; enforcement process; housing; hurricane Agnes; mobile home parks; mobile homes; performance data; regulatory process; standards; computer techniques; *NBSIR 76-1058.*

Construction; falsework; formwork; loads; reshoring; safety; shoring; standards; building; codes; concrete; *BSS80.*

Construction; maintenance; research accidents; safety; accidents; buildings; *16315.*

Construction materials; fire departments; fire detection system; fire tests; flame detectors; flammability tests; hazard analysis; interior furnishings; toxicity; bibliographies; building fires; *NBSIR 76-1120.*

Construction practices; damage; earthquake; houses; residential dwelling; building codes; *SP444,* pp. V-63 – V-65 (Apr. 1976).

Construction safety; construction surety; degradation of safety with age and use; maintenance of safety; public safety; safety responsibility; *SP423,* pp. 165-170 (Apr. 1976).

Construction surety; degradation of safety with age and use; maintenance of safety; public safety; safety responsibility; construction safety; *SP423,* pp. 165-170 (Apr. 1976).

Consultants; crimes of opportunity; directory, (security); investigations; law enforcement; resources; security; shoplifting; theft; burglary; *16369.*

Consumer; drugs; electrical pulses; environmental standards; friction measurement; lead poisoning; LNG data; optical; standard reference materials; thermophysical properties symposium; waste heat; computer; *DIM/NBS* **60,** No. 9, 1-24 (1976).

Consumer accidents; epidimiology hazards; home safety; methodology; safety; accidents; accident research; *NBS-GCR-76-76.*

Consumer information; efficiency; energy labeling; room air conditioners; water heaters; combination refrigerator-freezers; *15888.*

Consumer product standards; consumer product technology; law enforcement equipment; law enforcement equipment standards; product performance; product safety; bibliographies; consumer product safety; *NBSIR 76-1066.*

Consumer product hazard; risk-benefit; *16248.*

Consumer product hazard; risk-benefit; *16250.*

Consumer product safety; consumer product standards; consumer product technology; law enforcement equipment; law enforcement equipment standards; product performance; product safety; bibliographies; *NBSIR 76-1066.*

Consumer product safety; failure prevention; government action; government responsibility; mechanical failure; safety standards; *SP423,* pp. 215-219 (Apr. 1976).

Consumer Product Safety Act; residence-related products; residential safety modification; safety implementation approaches; architectural glass products; *16006.*

Consumer Product Safety Act; residence-related products; residential safety modification; safety implementation approaches; architectural glass products; *NBSIR 75-791.*

Consumer Product Safety Committee; Consumer Safety Glazing Committee; glazing; impact tests; safety glazing; standards; state law; architectural glazing; codes; *NBSIR 76-1109.*

Consumer product technology; law enforcement equipment; law enforcement equipment standards; product performance; product safety; bibliographies; consumer product safety; consumer product standards; *NBSIR 76-1066.*

Consumer products; marketing; mechanical failure; product performance; product reliability; product testing; *SP423,* pp. 209-212 (Apr. 1976).

Consumer products; product safety; refrigerator standards; risk measurement; safety standard; unreasonable hazards; *16131.*

Consumer protection; fire control; fire detection; fire research; fire spread; flammability; building design; *SP416, 1976 Edition.*

Consumer safety; handbrake; safety; testing; bicycles; braking; *NBSIR 75-755.*

Consumer safety; handbrakes; testing; bicycles; braking; *NBSIR 75-953.*

Consumer safety; regulations; safety; structural testing; bicycle; *NBSIR 75-913.*

Consumer Safety Glazing Committee; glazing; impact tests; safety glazing; standards; state law; architectural glazing; codes; Consumer Product Safety Committee; *NBSIR 76-1109.*

Consumers; grain moisture measurement; laws and regulations; measurement; metric; packaging and labeling; police radar equipment; standards; supermarket automation; weights and measures; calibration; communication; *SP442.*

Consumers; innovation; institutional barriers; productivity; service sector; automation; *16319.*

Contact; decantate; electrode; error; extract; paper; pH; suspension; acidity; *NBSIR 75-915.*

Contact fracture; degradation; Hertzian cracks; indentation fracture; median vents; penny crack; *15822.*

Contact lubrication; corrosion inhibitors; electrical contacts; gold plate; palladium; polymer in gold; porosity in gold; solder plate; tin-nickel alloy; tin plate; underplatings for gold; wear of gold; *SP452,* pp. 64-71 (Sept. 1976).

Contact lubrication; elastohydrodynamic contacts; fatigue; lubricant film thickness; scuffing; wear; *SP423,* pp. 41-54 (Apr. 1976).

Contact resistance; electrical connections; fire hazard; glowing electrical connections; arcing/sparking; branch circuit; *NBSIR 76-1011.*

Container blank; neutron activation analysis; wet-ashing blank; biological analysis; *SP422,* pp. 593-604 (Aug. 1976).

Container effects; copper; magnesium; potassium; serum minerals; serum storage effects; sodium; temperature effects; trace elements; zinc; atomic absorption spectrophotometry; calcium; *SP422,* pp. 575-591 (Aug. 1976).

Containers; medicine bottles; poison packaging; bottle caps; child protection; closure testing; *NBSIR 75-722.*

Containment; designation; light sources; national standard; radiation source; radioactive; radioluminous products; self-luminous sources; test procedures; classification; *H116.*

Contamination; dairy products; digestion; interferences; losses; mercury; trace metal; analysis; ashing; blood lead; *SP422,* pp. 661-668 (Aug. 1976).

Contamination; dissolution techniques; fusion dissolution; radiochemical analyses; ashing (wet and dry); chemical errors; *SP422,* pp. 463-490 (Aug. 1976).

Contamination; environment; purity; reagents; accuracy; analysts; apparatus; blank; *SP422,* pp. 509-539 (Aug. 1976).

Contamination; errors; natural water; sample storage; sampling; accuracy; analytical chemistry; *SP422,* pp. 805-836 (Aug. 1976).

Contamination; gas analysis; high purity; materials analysis; neutron activation analysis; *SP422,* pp. 759-772 (Aug. 1976).

Contamination; geological sample; rocks and minerals; sample preparation; sampling; trace analysis; water sampling; *SP422,* pp. 285-297 (Aug. 1976).

Contamination; manganese; sampling; serum; biological materials; chromium; cobalt; *SP422,* pp. 299-310 (Aug. 1976).

Contamination; rocks and ores; sample preparation; trace element analysis; accuracy and precision; comparison of trace analytical methods; *SP422,* pp. 773-790 (Aug. 1976).

Contamination control; high-purity reagents; membrane filtration; mercury cathode electrolysis; prepurification; purity definition; reagent contamination; ultrapurification; analytical blanks; analytical reagents; *SP422*, pp. 363-375 (Aug. 1976).

Contamination of atmospheric particulate samples; sample handling; shipboard atmospheric sampling; analytical blanks; atmospheric sampling; coastal sampling; *SP422*, pp. 377-388 (Aug. 1976).

Contaminations; flameless methods; lead; lead blood analyses; methodology; trace element analyses; atomic absorption spectrometry; blood analyses; *SP422*, pp. 715-719 (Aug. 1976).

Continued cotangent; continued fraction; quadratic irrational; *J. Res.* **80B** No. 2, 285-290 (1976).

Continued fraction; cosine integral; exponential integral; FORTRAN program; hyperbolic sine and cosine integrals; key values; recurrence relations; *J. Res.* **80B** No. 2, 291-313 (1976).

Continued fraction; quadratic irrational; continued cotangent; *J. Res.* **80B** No. 2, 285-290 (1976).

Continuous interface profile; diffusion equation; hypergeometric differential equation; interfacial force; liquid-vapor interface; Markov Stochastic model; self-diffusion; *15726*.

Continuous polishing; grinding; metal polishing; optical fabrication; chamfering; *SP435*, pp. 3-9 (Apr. 1976).

Continuous radiation; electron microprobe correction procedure; energy-dispersive x-ray spectrometry; lithium-drifted silicon detector; background correction; *16401*.

Continuous radiation; electron probe microanalyzer; glass standard; lithium drifted silicon detector; Monte Carlo; particle analysis; *SP422*, pp. 1283-1291 (Aug. 1976).

Continuous wave holograms; crack detection; holographic techniques; pulsed laser holograms; stress corrosion cracking; ultrasonic inspection; aircraft component failure; *SP423*, pp. 93-103 (Apr. 1976).

Continuous x rays; electron probe microanalysis; energy-dispersive x-ray analysis; lithium-drifted silicon detector; background; *15715*.

Continuum; discrete spectrum; *f*-sum rule; *f*-values; lithium sequence; oscillator strength distribution; oscillator strengths; relativistic effects; spectral series; systematic trends; *15817*.

Continuum cracks; continuum mechanics; failure mechanisms; mechanical failure; microstructural effects on mechanical failure; *SP423*, pp. 181-191 (Apr. 1976).

Continuum mechanics; failure mechanisms; mechanical failure; microstructural effects on mechanical failure; continuum cracks; *SP423*, pp. 181-191 (Apr. 1976).

Continuum models; diffuse reflectance; radiative transfer; reflectance spectra; scattering coefficients; statistical models; absolute absorptivities; *J. Res.* **80A** No. 4, 567-583 (1976).

Continuum radiation; electron probe microanalysis; fluorescent excitation; accuracy; *16392*.

Continuum theory of diffusion; density; kinetic temperature; molecular dynamics; numerical error; perfect lattice; thermal conductivity; thermal diffusivity; thermo-elastic coupling; *16281*.

Contrast calculations; energy filtering; low-loss electron image; magnetic contrast; Monte Carlo electron trajectory calculations; scanning electron microscopy; *SP460*, pp. 139-150 (Dec. 1976).

Contrast conditions; dynamical images; immobile dislocations; Lomer locks; sessile dislocations; x-ray dynamical diffraction; x-ray topography; *16373*.

Contrast transfer function; distortion; flare; image intensifier tubes; infrared searchlights; infrared viewers; light equivalent background; light induced background; optical gain; *16238*.

Contrast transfer function; distortion; flare; image quality; light induced background; limiting resolution; night vision devices; optical transfer function; resolution charts; veiling glare; blooming; *16599*.

Contrast transfer function; edge gradient; image quality; light equivalent background; light induced background; limit resolution; line spread function; optical transfer function; point spread function; acutance; *16197*.

Contrast transfer function; flare; image intensifiers; law enforcement; light equivalent background; light induced; optical gain; night vision; *16239*.

Control theory; hierarchical control; man-machine communication and automation; adaptive control; computer control; *16175*.

Controlled accessibility; encryption; evaluation criteria; key; password; personal identification; terminals; verification; ADP security; computer networks; *16013*.

Controlled environment; diamond machining; machined optics; nondistortion part support; position errors; quality and compatible part material; quality diamond tools; *SP435*, pp. 75-89 (Apr. 1976).

Convection; crystal growth; crystal perfection; microgravity; purification; space processing; *NBSIR 76-980*.

Convection; drops; Marangoni effect; surface tension; thermocapillarity; *16341*.

Convection theory; convection zones; stellar structures; *16605*.

Convection theory; convection zones; metallic-line stars; stellar structure; A-type stars; *16606*.

Convection zones; metallic-line stars; stellar structure; A-type stars; convection theory; *16606*.

Convection zones; stellar structures; convection theory; *16605*.

Convective diffusion; evaporative rate; purification (evaporative); solutal-capillary; thermal capillary convection; vacuum vaporization; Al_2O_3; complex equilibria; *15968*.

Conversion to metric; government metrication; metrication; metric system; SI; timetable for metrication; *16231*.

Convertibility; information interchange; information networks; interfacing; interlibrary communication; man-machine interaction; network protocols; common practices; communication; compatibility; *16053*.

Convolution; Hilbert space; separation of variables; spectral measure; tensor products; *J. Res.* **80B** No. 3, 347-351 (1976).

Cooling; cost; energy; heating; conservation; *SP403*, pp. 163-191 (June 1976).

Cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; *SP403*.

Cooling; electric power; energy conservation; heating; incineration; integrated utility systems; resource conservation; utilities; utility services; water reuse; community services; *16153*.

Cooling; heating; hot water; performance criteria; solar energy; standards; buildings; *NBSIR 76-1187*.

Cooling system; cryogenics; electric power transmission; flow stability; helium; oscillations; superconductors; theory; computations; *15809*.

Cooperative programs; information exchange; international building research; international organization memberships; special foreign currency programs; building research; *NBSIR 76-1162*.

Coordinate systems; geodesy; geodynamics; lasers; tectonics; VLBI; *15801*.

Coordinate systems; geodesy; geodynamics; lasers; tectonics; VLBI; *15806*.

Coordination compounds; metal carbonyl; thiocarbonyl; 1,3-dithiolane-2-thione; 1,3-dithiolene-2-thione; carbon-13 NMR; *16585*.

Coordination polymers; role of metal and ligand; thermal stability; *16308*.

Copernicus observations; ultraviolet stellar spectra; Wilson-Bappu effect; chromospheres, stellar; *15784*.

Copper; lead; manganese; sensitivity; spectrophotometry; statistical methods; zinc; atomic absorption; cadmium; *SP422*, pp. 1023-1033 (Aug. 1976).
Copper; copper alloys; elastic constants; Poisson ratio; pulse-echo method; resonance method; shear modulus; sound velocity; Young's modulus; bulk modulus; compressibility; *16505*.
Copper; corrosion; galvanic corrosion; soil corrosion; stainless steel; underground corrosion; *16355*.
Copper; cryogenic; iron; oxide; resistivity; remanance; susceptibility; alloy; *16632*.
Copper; cupric ion; flow cell; ion-selective electrode; seawater analysis; adsorption; *SP422*, pp. 899-915 (Aug. 1976).
Copper; diffusion; electromigration; iron; nickel; palladium; platinum; rhodium; ruthenium; thermomigration; alloys; cobalt; *JPCRD* **5**, No. 1, 103-200 (1976).
Copper; doubly ionized copper; electron configuration; atomic energy levels; atomic spectra; atomic theory; *J. Res.* **80A** No. 3, 465-476 (1976).
Copper; electrochemical analysis; heavy metals; lead; seawater analysis; speciation; stability of water samples; zinc; Adriatic Sea; cadmium; *SP422*, pp. 917-928 (Aug. 1976).
Copper; electron channeling; electron microscope; metals; particle analysis; plastic deformation; surfaces; wear; wear debris; x-ray analysis; *NBSIR 76-1141*.
Copper; electronic density of states; lanthanum; nickel; nuclear magnetic resonance; platinum; x-ray photoemission; alloys; *15768*.
Copper; flash desorption spectroscopy; gold; reflectance; silver; sputter deposition; aluminum; *SP462*, pp. 195-202 (Dec. 1976).
Copper; gold; hafnium; palladium; platinum; precision; radiochemical separations; silver; accuracy; activation analysis; *SP422*, pp. 1157-1164 (Aug. 1976).
Copper; magnesium; potassium; serum minerals; serum storage effects; sodium; temperature effects; trace elements; zinc; atomic absorption spectrophotometry; calcium; container effects; *SP422*, pp. 575-591 (Aug. 1976).
Copper; molybdenum; optician; polishing; surfaces; zinc selenide; *SP435*, pp. 10-13 (Apr. 1976).
Copper alloys; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; composites; *NBSIR 75-828*.
Copper alloys; elastic constants; Poisson ratio; pulse-echo method; resonance method; shear modulus; sound velocity; Young's modulus; bulk modulus; compressibility; copper; *16505*.
Copper electrodes; interfacial resistance; metal-metal oxide electrodes; oxygen transport; steady-state overvoltages; *SP455*, pp. 351-358 (Nov. 1976).
Copper hydride; magnesium oxide; molecular structure; nickel hydride; adsorption; catalysis; *SP455*, pp. 53-58 (Nov. 1976).
Copper mirror; damage threshold; dark field photography; diamond turned optics; 1.06 μm polishing; *SP435*, pp. 29-40 (Apr. 1976).
Copper-aluminum; nonisothermal diffusion; silver-aluminum; thermomigration; vacancies; alloys; aluminum; *15774*.
Copper-base alloy properties; electrical resistivity; Smith-Palmer equation; thermal conductivity; *NBSIR 76-1003*.
Copyright protection; facsimile transmission extension; photocopying; reprography developments; bibliographic data files; communications technology developments; computer developments; COM systems extension; *16040*.
Core level; implant; noble metals; rare gas; shift; *16080*.
Core level shifts; tin; binding energy shifts; *16015*.
Core structure; dislocation core structure; FIM analysis; *16383*.
Coronal holes; diffusion; transition region-sun; ultraviolet spectrum-sun; chromosphere-sun; *15717*.
Corps of Engineers; cost sharing; efficiency; hurricane protection; shoreline management; shoreline protection; beach erosion control; *16059*.
Correction factors; luminescence; quantum-flat actinometer; quantum yield; absolute yield; chemical actinometry; *J. Res.* **80A** No. 3, 409-412 (1976).
Corrections; matrix effects; standard reference materials; x-ray fluorescence; *15983*.
Correlation; economic; energy; imports; international; petroleum; *SP403*, pp. 21-41 (June 1976).
Correlation; equation of state; excess function; hydrogen; interpolation methods; least squares; methane; thermodynamic properties; transport properties; *15731*.
Correlation; esters; heat capacity; oligomers; sebacates; triglycerides; *16275*.
Correlation factor; crystal defect; diffusion coefficient; matrix equations; nonrandom walk equation; atom migration; *15776*.
Correlation factor for diffusion; diffusion; matrix calculation; Monte Carlo calculation; theory of diffusion; vacancy diffusion; computer simulation; *16073*.
Correlation length; critical point; gas-liquid; nonspherical molecules; Ornstein-Zernike theory; thermal conductivity; *16484*.
Correlation length; Ginzburg-Landau theory; glass; inhomogeneous system; subcritical region; viscosity; *16258*.
Correlation, skid resistance; highway safety; pavement, skid resistance; pavement wetting system, tire-pavement interface forces; wet pavement; accident reduction, skidding; *NBSIR 75-972*.
Correlation, skid resistance; highway safety; measurement, skid resistance; pavement, skid resistance; pavement wetting system; tire-pavement interface forces; wet pavement; accident reduction, skidding; *NBSIR 76-1133*.
Correlation times; cyanogen bromide peptides; polypeptides; relaxation times; rotational diffusion; ^{13}C magnetic resonance; collagen; conformation; *16211*.
Corridor fire test; interior finish material; intumescent coating; life safety; mobile home; smoke detector; surface flame spread; *NBSIR 76-1021*.
Corridor sprinkler systems; discharge patterns; spray distribution; water distribution; water spray; automatic sprinkler; *NBSIR 75-920*.
Corridor test; fire endurance furnace; fire growth; heat release; smoke abatement; sprinkler system; construction; *16150*.
Corridor test; fire testing; flammability; glass fiber; carpet; *NBSIR 75-782*.
Corrosion; corrosion control; metallic piping; nondestructive evaluation; survey; water hardness; *NBSIR 75-923*.
Corrosion; crack-free chromium; electroplating; fast plating; fatigue strength; grinding; hardness; stress; tensile strength; wear; *SP452*, pp. 56-63 (Sept. 1976).
Corrosion; data sources; metals; commercial alloys; *SP396-3*.
Corrosion; deicing salts; epoxy coatings; organic coatings; steel reinforcing bars; bridge decks; chloride ions; *16189*.
Corrosion; electrochemical; lubricants; salt-spray; *SP452*, pp. 97-105 (Sept. 1976).
Corrosion; energy; environmental; frequency standards; hearing aids; high-rise buildings; metals; radiation safety; standards laboratory; synchrotron; building collapse; *DIM/NBS* **60**, No. 5, 1-24 (1976).
Corrosion; environment; health care; housing production; I-R 100 awards; NIKE missile; papers available; stereology; toy safety; x-ray units; computer power; computer standard; *DIM/NBS* **60**, No. 11, 1-24 (1976).
Corrosion; failure prediction; film rupture-metal dissolution;

hydrogen embrittlement; stress corrosion cracking; stress-sorption; *SP423*, pp. 27-40 (Apr. 1976).
Corrosion; ferrous alloys; localized corrosion; passivity; chemical breakdown; chloride ion; *16018*.
Corrosion; fracture; vaporization; ceramics; coal conversion; coal gasification; *16243*.
Corrosion; galvanic; hydrogen embrittlement; soil; stainless steel; stress; stress-corrosion; underground; *16354*.
Corrosion; galvanic corrosion; soil corrosion; stainless steel; underground corrosion; copper; *16355*.
Corrosion; metallurgically-bonded; metals; plastic-bonded; soils; telephone cables; underground; alloys; *16352*.
Corrosion; microstructures; titanium; *15765*.
Corrosion behavior; field tests; galvanic couples; soil environment; stainless steels; stress-corrosion behavior; coatings; *NBSIR 76-1081*.
Corrosion control; metallic piping; nondestructive evaluation; survey; water hardness; corrosion; *NBSIR 75-923*.
Corrosion inhibitors; electrical contacts; gold plate; palladium; polymer in gold; porosity in gold; solder plate; tin-nickel alloy; tin plate; underplatings for gold; wear of gold; contact lubrication; *SP452*, pp. 64-71 (Sept. 1976).
Corrosion preventives; inhibitor additives; LOX compatible greases; nonreactive lubricants; rust inhibited perfluoro greases; surface chemistry lubrication; chemisorption; *SP452*, pp. 106-119 (Sept. 1976).
Corrosion protection; friction; marine environment; powder coating; salt water; solid lubrication; abrasion; *SP452*, pp. 25-30 (Sept. 1976).
Cosine integral; exponential integral; FORTRAN program; hyperbolic sine and cosine integrals; key values; recurrence relations; continued fraction; *J. Res.* **80B** No. 2, 291-313 (1976).
Cosmic ray reactions; effectively zero background; environmental radioactivity; low-level counting statistics; radioactive rare gases; reduced activity; argon-37; atmospheric mixing; blank corrections; *16345*.
Cosmic ray reactions; isotopic enrichment; ^{37}Ar; atmospheric mixing; atmospheric radioactivity; *16388*.
Cosmic-ray proton; induced radioactivity; secondary neutrons; sodium iodide detector; Apollo 17; background; *15727*.
Cosmic-ray reactions; exponential distribution; low-level counting; noble gas separation; on-line computer; pulse shape discrimination; tropospheric mixing; Ar-37; atmospheric radioactivity; *15744*.
Cost; energy; heating; conservation; cooling; *SP403*, pp. 163-191 (June 1976).
Cost; interactive service; measurement; measures; performance; usability; communications networks; computer networks; *TN908*.
Cost analysis; economics; indirect costs; subsidized costs; blood banking; *16070*.
Cost model; data security costs; PL 93-597; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer security; confidentiality; *TN906*.
Cost model; data security costs; PL-93-579; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer model; computer security; confidentiality; *NBSIR 76-985*.
Cost sharing; economic efficiency; environment; equity; financing; grants; pollution abatement; user fees; wastewater; water pollution; water resources; *16564*.
Cost sharing; efficiency; environment; financing; grants; pollution abatement; wastewater; water pollution; water resources; *15810*.
Cost sharing; efficiency; hurricane protection; shoreline management; shoreline protection; beach erosion control; Corps of Engineers; *16059*.
Cost/benefit analysis; data base; data base management; DBMS; government regulation; management objectives; privacy; security; standards; technology assessment; user experience; auditing; *SP451*.
Costs; data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; *NBS-GCR-74-29*.
Costs; economics; energy; environment; *SP403*, pp. 215-223 (June 1976).
Costs; economics; energy; fuel; imports; *SP403*, pp. 3-12 (June 1976).
Costs; economics; energy; thermal; conservation; *SP403*, pp. 95-101 (June 1976).
Costs; energy; financial; resources; risk; *SP403*, pp. 237-241 (June 1976).
Costs; energy; heating; manufacturing; marketing; *SP403*, pp. 199-213 (June 1976).
Cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; precondensates; *NBS-GCR-ETIP 76-22*.
Cotton; cotton/polyester; extinguishment; fabric flammability; fabrics; fibers; finishes; flame retardant treatments; nylon; wool; *NBS-GCR-76-71*.
Cotton; cushioning; fire retardant; furniture; glowing; inhibitor; oxidative pyrolysis; oxygen index; rayon; smoke; smoldering; upholstery fabric; *16224*.
Cotton; fabrics; flame retardants; flammability; phosphorus; polyester; rayon; treatments; *NBS-GCR-73-16*.
Cotton fabrics; extinguishability; flammability; polyester/cotton fabrics; *16149*.
Cotton fibers; flame retardant treatments; phosphorous acids; pyrolysis; ramie; rayon; sulfur; cellulosic fibers; combustion; *NBS-GCR-73-4*.
Cotton polyester blends; ETIP; flame retardants; flammability; R&D contracting; radiation grafting; research consortia; *NBS-GCR-ETIP 75-01*.
Cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; precondensates; *NBS-GCR-ETIP 76-22*.
Cotton/polyester; extinguishment; fabric flammability; fabrics; fibers; finishes; flame retardant treatments; nylon; wool; cotton; *NBS-GCR-76-71*.
Coulomb-interaction; electron; energy exchange; ionization; threshold; atom; collision; *15884*.
Coulometric titrations; current integration; digital timing; epinephrine; linear sweep voltammetry; manganese; micrometer cell; thin layer electrochemistry; vanadium; automatic titrations; *SP422*, pp. 861-869 (Aug. 1976).
Coulometry; electrochemical equivalent; electrochemical equivalent of silver; Faraday; silver; *15922*.
Coulometry; flux-monitor; water analysis; water pollution; amperometry; chlorine monitoring; chlorine residuals; *16082*.
Countermeasures; epidimiology; laboratory research; methodology; naturalistic studies; safety; accident research; *NBS-GCR-76-75*.
Counting corrections; gamma intensity attenuation; neutron flux depression; organic liquid sample irradiation; palladium distribution ratios; platinum distribution ratios; chlorine effect; *SP422*, pp. 1181-1187 (Aug. 1976).

Counting statistics; electron beam scanning; electron probe microanalysis; x-ray analysis; color composite technique; *15787.*

Coupled equilibrium; enzyme catalyzed reactions; glucose; heat measurement; hexokinase; magnesium; metabolic processes; microcalorimetry; thermochemistry; thermodynamics; adenosine 5′-triphosphate; biochemistry; *16385.*

Coupling constants; fluorine; fluoroalkylsilanes; NMR; relative signs; silicon; *16432.*

Coupling of high speed plasma; gas chromatography; high speed plasma; plasma; chromatography; *16340.*

Court proceedings; court security; trial proceedings; videotape recording; closed circuit television; *16185.*

Court proceedings; court security; trial proceedings; videotape recording; closed circuit television; *16186.*

Court security; trial proceedings; videotape recording; closed circuit television; court proceedings; *16185.*

Court security; trial proceedings; videotape recording; closed circuit television; court proceedings; *16186.*

CO_2^+; coincidence; electron impact; ions; lifetime; molecule; N_2^+; radiative; transition probability; CO^+; *15912.*

CO_2; critical exponents; critical point; equation of state; SF_6; Xe; *16081.*

CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; isotope ratio; nitric oxide; oxygen; tetrafluoroethylene; transverse excitation laser; 2-methyl propene; carbon isotopes; carbonyl fluoride; *16657.*

CO_2 laser radiation; Cu; CW laser damage; grating; infrared windows; KCl; mirror; Mo; NaCl; window; ZnSe; *SP435,* pp. 189-201 (Apr. 1976).

CO_2 pulsed laser damage; coating topography; KCl; laser window coatings; ZnS; CeF_3; *SP435,* pp. 236-243 (Apr. 1976).

CO_3^-; $CO_3^- \cdot H_2O$; *D* region; electron density; molecule; negative ion; O^-; O_3^-; photodetachment; photodissociation; *15877.*

$CO_3^- \cdot H_2O$; *D* region; electron density; molecule; negative ion; O^-; O_3^-; photodetachment; photodissociation; CO_3^-; *15877.*

Cr; *d*-band widths; electronic structure; Fe; ferromagnetism; soft x-ray emission; soft x-ray spectra; transition metals; Co; *15780.*

Crack; degradation; fracture; Hertzian; indentation; strength; brittle solids; ceramic surfaces; *15856.*

Crack coalescence; flaw detection; flaw distribution; forging; grain boundary mobility; subgrains; CaF_2; *SP462,* pp. 69-81 (Dec. 1976).

Crack detection; holographic techniques; pulsed laser holograms; stress corrosion cracking; ultrasonic inspection; aircraft component failure; continuous wave holograms; *SP423,* pp. 93-103 (Apr. 1976).

Crack growth; fracture; fracture mechanics; glass; static fatigue; strength; *15821.*

Crack initiation; crack propagation; fatigue crack growth; fatigue failure; metal fatigue; *SP423,* pp. 13-24 (Apr. 1976).

Crack propagation; cryostats; fracture tests; low temperature tests; mechanical tests; titanium alloys; *16640.*

Crack propagation; cyclic conditions; failure times; high temperatures; silicon nitride; slow crack growth; acoustic emission; *16064.*

Crack propagation; determination of stress; measurement; mechanical tests; plastic deformation; proportional limit; *16468.*

Crack propagation; error analysis; failure prediction; failure prevention; fracture; statistics; strength; *16617.*

Crack propagation; error analysis; failure prediction; failure prevention; fracture; statistics; strength; *NBSIR 75-952.*

Crack propagation; failure analysis; failure prevention; fracture; fractography; mechanical failure; *SP423,* pp. 3-11 (Apr. 1976).

Crack propagation; fatigue crack growth; fatigue failure; metal fatigue; crack initiation; *SP423,* pp. 13-24 (Apr. 1976).

Crack-free chromium; electroplating; fast plating; fatigue strength; grinding; hardness; stress; tensile strength; wear; corrosion; *SP452,* pp. 56-63 (Sept. 1976).

Cracks; experimental mechanics; fracture; fracture toughness; interferometry; model experiments; stress; stress intensity; *15742.*

Crash; helmet; impact attenuation; penetration; retention system strength; visual clearance; *16287.*

Crazing; cryogenic temperatures; crystalline polymers; environmental effects on crazing; fractional free volume; glass transition temperature; smectic polypropylene; spherulitic polypropylene; *15772.*

Crazing; fatigue; Kaiser's effect; acoustic emission; amorphous polymer; *16417.*

Creep; dissipation; elevated temperature; energy; hold-time; hysteresis; low-cycle fatigue; plasticity; stainless steel; stress relaxation; thermodynamics; viscoelasticity; *16004.*

Creep; fire endurance; fire tests; reinforced concrete; sensitivity analysis; steel; structural mechanics; uncertainty; *BSS76.*

Creep; instrumentation; stress rupture; testing machine; *NBSIR 76-1074.*

Crest factor; ground cover; humidity; instrumentation; microphones; sound level meters; statistical control processes; temperature; acoustic calibrators; A-weighting; barometric pressure; *TN931.*

Crevice corrosion; ellipsometry; iron; molybdenum; repassivation kinetics; stress corrosion; chemical breakdown of passivity; chloride; *NBSIR 75-916.*

Crimes of opportunity; directory, (security); investigations; law enforcement; resources; security; shoplifting; theft; burglary; consultants; *16369.*

Cristobalite; deformation; electron microscopy; microstructure; oxidation; silicon nitride; slow crack growth enstatite; *NBSIR 76-1153.*

Criteria; decision making; human systems; measuring instruments; research assistants; test device evaluation; *16091.*

Criteria; energy; engineering; industry construction; measurement techniques; standards; building research; *SP439.*

Criteria; project summaries; standards; technical bases; building research; building technology; codes; *SP446.*

Critical current; mechanical properties; stress effects; superconductors; symposium; *16636.*

Critical currents; magnets; magnet wire; Nb_3Sn; Nb_3Sn magnets; Nb_3Sn multifilamentary wires; strain; stress; superconducting magnets; *16474.*

Critical density; critical exponents; critical pressure; critical region; critical temperature; equation of state; linear model; scaled equation; steam; *15730.*

Critical evaluation; elements; thermal expansion; alloys; coefficients of thermal expansion; compilation; *16005.*

Critical evaluation of an analytical procedure; industrial chemical analysis; interlaboratory comparisons; sampling error; analytical data; analytical work; *16001.*

Critical events; decisions; episodes; fires; home for the aged; hospital fires; human behavior; institutions; mapping; models; nursing homes; realms; building fires; case studies; *NBS-GCR-76-73.*

Critical exponents; critical pressure; critical region; critical temperature; equation of state; linear model; scaled equation; steam; critical density; *15730.*

Critical exponents; critical point; equation of state; SF_6; Xe; CO_2; *16081.*

Critical exponents; critical region; homogeneity; polar fluids; scaling; steam; universality; *15733.*

Critical exponents; fluid critical point; history; Kamerlingh

229-317 O - 77 - 33

Onnes collection; surface tension; Van der Waals collection; Verschaffelt; coexistence curves; *16372.*

Critical fields; critical temperature; crystallographic data; low temperature; superconductive materials; superconductivity; bibliography; composition; *JPCRD* **5,** No. 3, 581-822 (1976).

Critical level; detection limit; determination limit; less-than level; minimum detectable activity; statistical; background; *SP456,* pp. 169-172 (Nov. 1976).

Critical loci; excess Gibbs' energies; Henry's constants; liquid-vapor equilibria; methane-light hydrocarbon binary mixtures; *16637.*

Critical phenomena; density; isobutyric acid; magnetic densimeter; phase equilibria, carbon disulfide, nitromethane; water; binary mixture; coexistence curve; *16480.*

Critical phenomena; dielectric constant; sulfur hexafluoride; Clausius-Mossotti equation; *16542.*

Critical point; equation of state; SF_6; Xe; CO_2; critical exponents; *16081.*

Critical point; gas-liquid; nonspherical molecules; Ornstein-Zernike theory; thermal conductivity; correlation length; *16484.*

Critical point; gravity effects; phase transitions; *TN925.*

Critical pressure; critical region; critical temperature; equation of state; linear model; scaled equation; steam; critical density; critical exponents; *15730.*

Critical region; critical temperature; equation of state; linear model; scaled equation; steam; critical density; critical exponents; critical pressure; *15730.*

Critical region; homogeneity; polar fluids; scaling; steam; universality; critical exponents; *15733.*

Critical region parameters; ethylene; heavy noble gases; helium; linear model; methane; NBS equation; scaling laws; statistical analysis; steam; universality; air constituents; *JPCRD* **5,** No. 1, 1-52 (1976).

Critical temperature; crystallographic data; low temperature; superconductive materials; superconductivity; bibliography; composition; critical fields; *JPCRD* **5,** No. 3, 581-822 (1976).

Critical temperature; dipole-dipole interaction; erbium phosphate ground state; heat capacity; lattice sums; magnetic; susceptibility; antiferromagnetism; *15866.*

Critical temperature; equation of state; linear model; scaled equation; steam; critical density; critical exponents; critical pressure; critical region; *15730.*

Critically evaluated data; experimental; ionized spectra; Stark broadening parameters; Stark shifts; Stark widths; *JPCRD* **5,** No. 2, 259-308 (1976).

Cross connections; health hazard; potable water; vacuum breaker; water supply; backflow; backflow preventers; back pressure; back-siphonage; *NBSIR 76-1070.*

Cross section; dosimetry; energy-absorption coefficient; gamma-ray; photon; x ray; attenuation coefficient; *SP456,* pp. 299-306 (Nov. 1976).

Cross section; electrons; excitation; infrared; rate coefficient; carbon dioxide; *16256.*

Cross section; inner-shell excitation; krypton; photoionization; vacuum ultraviolet; xenon; *16541.*

Cross section calculations; ion-atom collisions; rare-gas ions; uranium; alkali ions; calcium; charge exchange; charge transfer; *16126.*

Cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; sudden approximation; close coupling calculations; *15951.*

Cross sections; differential cross sections; elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory; close-coupling calculations; *16532.*

Cross sections; differential cross sections; electron scattering; inelastic scattering; nitrogen molecules; polarization potential; scattering; static potential; vibrational excitation; close-coupling calculations; crossed beams; *16533.*

Cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; close coupling calculations; *16618.*

Cross sections; dissociation; hot atoms; isotope effects; kinetics; molecular beams; quantum mechanics; rate coefficients; recombinations; scattering theory; chemical reactions; collision theory; *16591.*

Cross sections; electron; inner-shell electrons; ionization; *K*-shell; *L*-shell; photoabsorption; Bethe theory; *15812.*

Cross sections; electron probe microanalysis; electrons; inner-shell; Auger-electron spectroscopy; *15855.*

Cross sections; electron-probe microanalysis; electrons; inner-shell; ionization; *SP460,* pp. 97-104 (Dec. 1976).

Cross sections; excitation functions; fast neutron activation analysis; fast particle activation analysis; interferences; primary interference reactions; systematic errors; trace analysis; accuracy; activation analysis; analytical chemistry; *SP422,* pp. 1189-1214 (Aug. 1976).

Cross sections; gamma rays; photoelectric effect; photons; x rays; attenuation coefficients; *TN901.*

Cross sections; hydrogen atoms; rate coefficients; scattering theory; trajectories; transition-state theory; chemical reactions; chlorine molecules; classical scattering matrix theory; collision theory; *16627.*

Crossbar switch; low-level voltage measurements; MIDAS; programmable desk calculator; standard cell comparator; automated; calculator; calibration; *15906.*

Crossed beams; cross sections; differential cross sections; electron scattering; inelastic scattering; nitrogen molecules; polarization potential; scattering; static potential; vibrational excitation; close-coupling calculations; *16533.*

Crossed beams; electrons; excitation; optical spectroscopy; Stark effect; atomic hydrogen; Balmer alpha; beam foil; *15891.*

Cross-linking of rubber; dicumyl peroxide; elasticity theory of rubber; entanglements in rubber; gel point; modulus of rubber; molecular interpretation of rubber elasticity; rubber elasticity; statistical theory of rubber elasticity; *J. Res.* **80A** No. 3, 451-463 (1976).

Cross-section; diagnosis; scattering; standardization; tissue characterization; ultrasound; blood; *SP453,* pp. 29-47 (Oct. 1976).

Cross-section measurements; electrons; H_3O^+; ion trap; recombination; *15859.*

Crud; filtration; pressurized water reactors; primary coolant; sampling; water; analysis; carbon; *SP422,* pp. 429-438 (Aug. 1976).

Crustal moments; earth rotation; geodynamics; lunar distance; microwave interferometry; plate tectonics; satellite geodesy; *15799.*

Cryogenic; helium; meeting summary; refrigeration; superconductivity; *15832.*

Cryogenic; iron; oxide; resistivity; remanance; susceptibility; alloy; copper; *16632.*

Cryogenic; Josephson junction; standard cell; voltage reference; *16377.*

Cryogenic balloon inflation; heat transfer; liquid helium; packed bed heat exchangers; balloon; *NBSIR 76-834.*

Cryogenic fluid; door locks; energy; EPIC supplement; high winds; home security; nondestructive evaluation; research associate program; school systems; smoke detectors; teaching metric; *DIM/NBS* **60,** No. 4, 1-24 (1976).

Cryogenic refrigeration; refrigeration; superconducting transmission lines; Brayton cycle; *16633*.
Cryogenic temperatures; crystalline polymers; environmental effects on crazing; fractional free volume; glass transition temperature; smectic polypropylene; spherulitic polypropylene; crazing; *15772*.
Cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; composites; copper alloys; *NBSIR 75-828*.
Cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; aluminum alloys; composites; *NBSIR 76-839*.
Cryogenic temperatures; epoxy resin-copper seal; indium O-ring; *15854*.
Cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; fatigue; *NBSIR 76-848*.
Cryogenically cooled; spectral emittance; *SP435*, pp. 149-156 (Apr. 1976).
Cryogenics; crystallinity; density; expansion; paraffins; *16184*.
Cryogenics; CTR; electric power; energy storage; generators; instrumentation; MHD; superconductivity; *16465*.
Cryogenics; data; flowmeter; instrumentation; measurements; National Measurement System; *NBSIR 75-825*.
Cryogenics; electric power transmission; flow stability; helium; oscillations; superconductors; theory; computations; cooling system; *15809*.
Cryogenics; electrical resistivity; electrolytic iron; Lorenz ratio; thermal conductivity; austenitic steel; *16206*.
Cryogenics; electronic tunneling; Josephson effect; superconductivity; *16200*.
Cryogenics; fatigue; fiber composites; liquid helium; low temperature tests; mechanical properties; *16194*.
Cryogenics; fluid dynamics; pressure drop; superfluid helium; two phase flow; compressibility flow; *16642*.
Cryogenics; glass; graphite; literature review; PRD-49; reinforced aluminum; reinforced plastics; structural composites; tensile moduli; tensile strength; thermal conductivity; thermal contraction; boron; *15745*.
Cryogenics; heat transfer; hemisphere; horizontal cylinder; liquid deuterium, liquid hydrogen, liquid nitrogen; natural convection; sphere; vertical cylinder; *16207*.
Cryogenics; infrared; Josephson junctions; lasers; radiation detectors; superconductors; *16458*.
Cryogenics; materials; mechanical properties; review, thermal properties; *15838*.
Cryoresistive; energy transmission economics; helium; hydrogen energy; liquid hydrogen; liquid nitrogen; power transmission cables; safety; slush hydrogen; superconducting; a.c. power; *16629*.
Cryostat; defects; gold-doped silicon; measurement methods; microelectronics; MOS capacitor; *p-n* junctions; semiconductors; silicon; thermally stimulated capacitance; thermally stimulated current; *SP400-26*.
Cryostats; fracture tests; low temperature tests; mechanical tests; titanium alloys; crack propagation; *16640*.
Crystal; crystal structure; hexamethylbenzene; hindered rotation; phase transition; torsional oscillation; λ-point; barrier to rotation; *16137*.
Crystal; disclination; dislocation; pseudopentagonal; stacking fault; twin; wedge; *15767*.
Crystal; physical constant; x ray; Avogadro; *16223*.
Crystal defect; diffusion coefficient; matrix equations; nonrandom walk equation; atom migration; correlation factor; *15776*.
Crystal diffraction; gamma-ray wavelength; gold 198; goniometer; x-ray interferometry; *16227*.
Crystal field; d^4 ions; EPR; iron 4+; optical absorption; perovskite; strontium titanate; transition metal; zero phonon line; charge transfer, color centers; *16201*.
Crystal field; photoemission; physisorption; tungsten (100); xenon; *15813*.
Crystal growth; crystal perfection; microgravity; purification; space processing; convection; *NBSIR 76-980*.
Crystal growth; crystals, electrochemical; electrolysis; solution; calcium hydroxide; *16302*.
Crystal growth; ionic conductors; potassium antimonate; sodium antimonate; sodium antimony oxyfluoride; alkali antimonates; *J. Res.* **80A** Nos. 5 and 6, 761-774 (1976).
Crystal oscillator; frequency standards; stability; survey of clocks; accuracy; atomic clocks; clocks; *15719*.
Crystal perfection; Czochralski growth; domain walls; magnetic domains; nickel single crystals; surface reflection topography; transmission topography; x-ray diffraction topography; *16503*.
Crystal perfection; microgravity; purification; space processing; convection; crystal growth; *NBSIR 76-980*.
Crystal structure; diffraction; isotopes; molecular dynamics; neutron; nuclear reactor; radiation; activation analysis; *TN896*.
Crystal structure; epitaxy; lattice misfit; pattern recognition; twinning; computer calculations; *TN893*.
Crystal structure; *g*-factors; ground state energy; Luttinger-Tisza method; translation vectors; cerous magnesium nitrate; *16512*.
Crystal structure; hexamethylbenzene; hindered rotation; phase transition; torsional oscillation; λ-point; barrier to rotation; crystal; *16137*.
Crystal structure; integrated intensities; lattice constants; peak intensities; powder patterns; reference intensities; standard; x-ray diffraction; *Monogr. 25, Section 13*.
Crystal structure; lithium tantalate; *M*-$LiTa_3O_8$; wodginite; *15974*.
Crystal vacancies; cubic crystals; depolarization; impurity compensation; luminescence; magnesium oxide; MgO; optical properties; polarized luminescence; symmetry; transition metal ions; chromium 3+; *16521*.
Crystalline polymers; environmental effects on crazing; fractional free volume; glass transition temperature; smectic polypropylene; spherulitic polypropylene; crazing; cryogenic temperatures; *15772*.
Crystallinity; density; expansion; paraffins; cryogenics; *16184*.
Crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; spinning; stirred solution; *16274*.
Crystallization; magnetohydrodynamics; potassium activity; synthetic coal slags; system K_2O-CaO-Al_2O_3-SiO_2; vaporization; *16457*.
Crystallographic data; errors; probability plots; residuals; statistics; uncertainties; *NBSIR 76-1102*.
Crystallographic data; low temperature; superconductive materials; superconductivity; bibliography; composition; critical fields; critical temperature; *JPCRD* **5**, No. 3, 581-822 (1976).
Crystallography, elementary; crystals, hexagonal; hexagonal crystals; hexagonal lattices; *16086*.
Crystals; damage; glass; infrared; interferometry; lasers; photoelasticity; polarimetry; *15969*.
Crystals; ionic conductivity; ionic crystals; properties of ionic crystals; *16160*.
Crystals; lattice parameter; Avogadro constant; *16255*.
Crystals, electrochemical; electrolysis; solution; calcium hydroxide; crystal growth; *16302*.

Crystals, hexagonal; hexagonal crystals; hexagonal lattices; crystallography, elementary; *16086.*

CTR; electric power; energy storage; generators; instrumentation; MHD; superconductivity; cryogenics; *16465.*

Cu; CW laser damage; grating; infrared windows; KCl; mirror; Mo; NaCl; window; ZnSe; CO_2 laser radiation; *SP435,* pp. 189-201 (Apr. 1976).

Cu II spectrum; ultraviolet laser, 250.0 nm; *16192.*

Cubic crystals; depolarization; impurity compensation; luminescence; magnesium oxide; MgO; optical properties; polarized luminescence; symmetry; transition metal ions; chromium 3+; crystal vacancies; *16521.*

Cubic lattice; definite integral; special functions; complete elliptic integral; *J. Res.* **80B** No. 2, 313-323 (1976).

Cupric ion; flow cell; ion-selective electrode; seawater analysis; adsorption; copper; *SP422,* pp. 899-915 (Aug. 1976).

Cuprous oxide; implantation; ion; nondestructive testing; Raman scattering; sample characterization; semiconductor; *15915.*

Curie temperatures; magnetization measurement; neutron diffraction; amorphous Tb_xFe_{1-x}; *16405.*

Curing agent; fretting; silicone resin; solid lubricants; titanium; wear; *SP452,* pp. 124-131 (Sept. 1976).

Current; impedance; phase angles; power; reflection coefficient; six-port; voltage; admittance; *15800.*

Current comparators; current transformers; high voltage bridges; high voltage capacitors; high voltage measurements; impedance bridges; capacitance measurements; *15720.*

Current crowding; hot spots; power transistors; safe operating area; second breakdown; thermal instability; base widening; *16451.*

Current crowding; hot spots; reliability; safe operating area limits; second breakdown; semiconductor devices; thermal resistance; transistor, power; *16328.*

Current integration; digital timing; epinephrine; linear sweep voltammetry; manganese; micrometer cell; thin layer electrochemistry; vanadium; automatic titrations; coulometric titrations; *SP422,* pp. 861-869 (Aug. 1976).

Current transformers; high voltage bridges; high voltage capacitors; high voltage measurements; impedance bridges; capacitance measurements; current comparators; *15720.*

Curtains; draperies; FFACTS system; fire; flammable fabrics; NFPA; *NBSIR 75-902.*

Curve fitting; data reduction; feature selection; multivariate analysis; optimization techniques; pattern recognition; signal processing; spectral resolution; statistics; analytical chemistry; *15964.*

Curved classical trajectories; HCl, CO, CO_2 with He, Ar; rotation-vibration spectra; semiclassical *S*-matrix; spectral line broadening; *ab initio* potentials; atom-molecule interactions; *16528.*

Cus; heterogeneous catalysis; surface coordinative unsaturation; catalytic hydrogenation; catalytic oxidation; chemisorption; *SP455,* pp. 155-166 (Nov. 1976).

Cushioning; fire retardant; furniture; glowing; inhibitor; oxidative pyrolysis; oxygen index; rayon; smoke; smoldering; upholstery fabric; cotton; *16224.*

Custom circuits; LSI; microelectronics; parameter control; process uniformity; random faults; reliability; test patterns; TTL; vendor qualification; circuit procurement; component screening; *16620.*

Customer-mechanic relationship; human factor considerations; universal symbol diagram approach; automotive repair; automotive repair effectiveness; automotive service; *SP423,* pp. 171-178 (Apr. 1976).

CVD; hot pressed; sputtered; absorption damage levels; coatings; *SP462,* pp. 253-263 (Dec. 1976).

Cw dye laser; frequency control; laser wavelength determination; scanning interferometer; *16649.*

Cw dye laser; sodium fluorescence; atomic flame fluorescence; barium fluorescence; *16594.*

CW laser damage; grating; infrared windows; KCl; mirror; Mo; NaCl; window; ZnSe; CO_2 laser radiation; Cu; *SP435,* pp. 189-201 (Apr. 1976).

Cyanide; fire; hydrogen chloride; hydrogen cyanide; oxygen; rats; blood; carbon dioxide; carbon monoxide; *NBSIR 75-966.*

Cyanogen bromide peptides; polypeptides; relaxation times; rotational diffusion; ^{13}C magnetic resonance; collagen; conformation; correlation times; *16211.*

Cycle efficiency; heat exchanger losses; hydrogen liquefier; pressure drop losses; compressor efficiency; *15879.*

Cyclic conditions; failure times; high temperatures; silicon nitride; slow crack growth; acoustic emission; crack propagation; *16064.*

Cyclic crack propagation; high frequency; plasticity; ceramic materials; *16445.*

Cyclic loading; debond analysis; finite element analysis; joints; nonlinear analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; bonded joints; computer simulation; *16147.*

Cyclic voltammetry; desulfurization; phosphines; tetracyanotetrathiafulvalene; tetracyanotetrathiafulvalene·triphenylphosphine; $\Delta^{2,2'}$-bis-14.5-dicyano-1,3-dithiodene; 1,3-dithiolenes; ^{31}P NMR; 4,5-dicyano-1,3-dithiolene-2-thione; *15991.*

Cyclic voltammetry; electrochemistry; nonaqueous; semiconductor; silicon; titanium dioxide; acetonitrile; *SP455,* pp. 149-152 (Nov. 1976).

Cyclic voltammetry; electrosorption; Langmuir; lead dioxide; pyrophosphate; Temkin; wax-bound electrode; amperometry; *SP455,* pp. 183-189 (Nov. 1976).

Cyclic-voltammetry; electrochemical adsorption; monolayers; surface processes; atomic layers; chemisorption; *SP455,* pp. 107-124 (Nov. 1976).

Cyclones; disasters; structural engineering; tides; wind; buildings; *BSS86.*

Cyclotron; method evaluation; multielemental analysis; activation analysis; charged particle; *SP422,* pp. 1215-1232 (Aug. 1976).

Cyclotron resonance; electron cyclotron resonance; magnetic field; microwave discharge; photoemission; tungsten; ultraviolet photoemission; adsorption; chemisorption; CO; *16016.*

Cylindrical configurations; gas pressure; heat transfer; photoacoustic; transparent materials; absorption coefficients; *15936.*

Cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; spinning; stirred solution; crystallization; *16274.*

Czochralski growth; domain walls; magnetic domains; nickel single crystals; surface reflection topography; transmission topography; x-ray diffraction topography; crystal perfection; *16503.*

D

δ'; $\overline{Ll_2}$; metastable phase; ordering reaction; satellites; spinodal decomposition; superlattice reflections; transmission electron microscopy; *15840.*

D region; electron density; molecule; negative ion; O^-; O_3^-; photodetachment; photodissociation; CO_3^-; $CO_3^-\cdot H_2O$; *15877.*

Dairy products; digestion; interferences; losses; mercury; trace metal; analysis; ashing; blood lead; contamination; *SP422*, pp. 661-668 (Aug. 1976).

Damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornadoes, wind; buildings; *SP444*, pp. V-35—V-49 (Apr. 1976).

Damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; *NBS-GCR-75-36*.

Damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; *NBS-GCR-75-37*.

Damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; *NBS-GCR-75-38*.

Damage; earthquake; houses; residential dwelling; building codes; construction practices; *SP444*, pp. V-63—V-65 (Apr. 1976).

Damage; glass; infrared; interferometry; lasers; photoelasticity; polarimetry; crystals; *15969*.

Damage classification; extreme wind; tornado; wind loads; building code; *SP444*, pp. I-34—I-39 (Apr. 1976).

Damage electron density; electron density transient; free electron absorption; laser induced surface damage; optical probe technique; refractive index variation; *SP435*, pp. 356-361 (Apr. 1976).

Damage morphology; damage statistics; distribution of damage times; photoionization; absorption; avalanche ionization; *SP462*, pp. 350-356 (Dec. 1976).

Damage morphology; electron emission; electron imaging; ion emission; laser-induced damage; surface characterization; surface temperature; Al mirrors; Auger spectroscopy; *SP435*, pp. 207-215 (Apr. 1976).

Damage statistics; distribution of damage times; photoionization; absorption; avalanche ionization; damage morphology; *SP462*, pp. 350-356 (Dec. 1976).

Damage statistics; laser damage; reflectors; ThF_4; thin film; ZnSe; 10.6 μm; absorbing inclusions; *SP435*, pp. 216-229 (Apr. 1976).

Damage theory; laser damage; 10.6 μm laser; *SP462*, pp. 371-378 (Dec. 1976).

Damage threshold; dark field photography; diamond turned optics; 1.06 μm polishing; copper mirror; *SP435*, pp. 29-40 (Apr. 1976).

Damage threshold; dielectric films; heat conduction; laser damage; multiphoton absorption; rf sputtering; *SP435*, pp. 272-283 (Apr. 1976).

Damage threshold; etching; flame polishing; fused silica; hydroxyl; ion polishing; polishing; roughness; surface damage; thin films; threshold; *SP462*, pp. 310-314 (Dec. 1976).

Damage threshold; optical coatings; thin films; *SP435*, pp. 248-253 (Apr. 1976).

Damage thresholds; dielectric thin films; electric fields; electron-gun evaporation; picosecond pulses; rf sputtering; standing-wave patterns; *SP435*, pp. 254-271 (Apr. 1976).

Damage thresholds; electron avalanche; picosecond pulses; refractory oxides; standing-wave fields; thin films; two-photon absorption; *SP462*, pp. 292-300 (Dec. 1976).

Damage thresholds; fused silica; ion polishing; surface damage; surface roughness; surface structure; thin films; ultrasonic cleaning; *SP435*, pp. 305-320 (Apr. 1976).

Damage thresholds; laser damage; refractive index; surface damage; surface roughness; thin films; *SP435*, pp. 289-295 (Apr. 1976).

Damping; damping coefficients; shear modulus; soil; tests; torsional excitation; *SP444*, pp. III-72—III-83 (Apr. 1976).

Damping coefficients; shear modulus; soil; tests; torsional excitation; damping; *SP444*, pp. III-72—III-83 (Apr. 1976).

Damping rates; laser damage of semiconductors; parametric plasma instability; photon induced excitation; carrier mobility; *SP462*, pp. 357-364 (Dec. 1976).

Darboux's method; definite integrals; hypergeometric functions; incomplete gamma function; Legendre functions; ordinary differential equations; saddle points; special functions; turning points; Whittaker functions; asymptotic analysis; *15818*.

Dark field photography; diamond turned optics; 1.06 μm polishing; copper mirror; damage threshold; *SP435*, pp. 29-40 (Apr. 1976).

Darlington pairs; deep depletion; dopant profiles; electrical properties; electron beam induced current; electron beam induced damage; electronics; epitaxial layer thickness; four-probe method; hermeticity; leak tests; measurement methods; microelectronics; *SP400-19*.

Data; data base systems; data elements; data management; data processing; Federal Information Processing Standards; information interchange; information processing; information systems; American National Standards; *NBSIR 76-1015*.

Data; data elements; data processing; information; information processing; International Standards; U.S. Government; American National Standards; computers; *FIPS PUB 45*.

Data; flowmeter; instrumentation; measurements; National Measurement System; cryogenics; *NBSIR 75-825*.

Data; infrared; inorganic; minerals; ores; organic; polymers; spectroscopy; bibliography; *SP428. Parts 1, 2, and 3*.

Data; International Practical Temperature Scale; measurements; National Measurement System; standards; thermometry; *NBSIR 75-932*.

Data abstraction; data type; module; programming methods; program modifications; type; abstract data types; class; cluster; *16246*.

Data acquisition; data display; integrated circuits; measurement technology; microelectronics; process control; reliability; semiconductors; silicon; test patterns; *SP 400-15*.

Data acquisition; man-machine interaction; minicomputer; network measurement; performance measurement; computer networks; *TN912*.

Data analysis; design of experiments; statistics; analytical chemistry; *16652*.

Data analysis; fundamental constants; least-squares adjustments; quantum electrodynamics; *15947*.

Data analysis; interactive; network service; performance evaluation; performance measurement; service; computer networks; *TN897*.

Data banks; failure analysis; failure modes; hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; *SP400-28*.

Data base; data base management; DBMS; government regulation; management objectives; privacy; security; standards; technology assessment; user experience; auditing; cost/benefit analysis; *SP451*.

Data base; data integration; implementation; modelling; technology; terminology; *16329*.

Data base; data-base machines; data-base management; data definition; data dictionary; data independence; data manipulation; data model; distributed data base; generalized processing; *16330*.

Data base; energy conservation; estimation schemes; kinetics; modeling; oxidation; pyrolysis; combustion; *NBSIR 75-910*.

Data base management; DBMS; government regulation; management objectives; privacy; security; standards; technology assessment; user experience; auditing; cost/benefit analysis; data base; *SP451*.

Data base management; governments; management information systems; public services; security; standards; user groups; computers; *15923.*

Data base systems; data elements; data management; data processing; Federal Information Processing Standards; information interchange; information processing; information systems; American National Standards; American National Standards Institute; *NBSIR 76-1015.*

system; computer age; *DIM/NBS* **60/Suppl.,** Anniversary Issue, 1-32 (1976).
Data systems; fabric flammability; FFACTS; fire accidents; fire data systems; fire hazards; fires; hazard analysis; NEISS; plastics flammability; product safety; accident data; *16361.*
Data systems; health records; information policy; management principles; medical records; privacy; recordkeeping practices; security; citizen rights; computers; confidentiality; *Monogr. 157.*
Data tabulations; evaluated data; material properties; referral centers; sources of data; data centers; *16007.*
Data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; costs; *NBS-GCR-74-29.*
Data type; module; programming methods; program modifications; type; abstract data types; class; cluster; data abstraction; *16246.*
Data-base machines; data-base management; data definition; data dictionary; data independence; data manipulation; data model; distributed data base; generalized processing; data base; *16330.*
Data-base management; data definition; data dictionary; data independence; data manipulation; data model; distributed data base; generalized processing; data base; data-base machines; *16330.*
Daylight gathering; daylighting of buildings; energy conservation; lenses; light conduits; light control; reflectors; skylights; windows; *NBSIR 76-1098.*
Daylighting of buildings; energy conservation; lenses; light conduits; light control; reflectors; skylights; windows; daylight gathering; *NBSIR 76-1098.*
d-band widths; electronic structure; Fe; ferromagnetism; soft x-ray emission; soft x-ray spectra; transition metals; Co; Cr; *15780.*
DBMS; government regulation; management objectives; privacy; security; standards; technology assessment; user experience; auditing; cost/benefit analysis; data base; data base management; *SP451.*
D.c. conductivity; microwave conductivity; organic conductors; thermal expansion; TTF–TCNQ; *16050.*
Debond analysis; finite element analysis; joints; nonlinear analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; bonded joints; computer simulation; cyclic loading; *16147.*
Debye temperature; elastic constants; plutonium; plutonium alloy; Poisson ratio; shear modulus; sound velocity; Young modulus; bulk modulus; compressibility; *16635.*
Decantate; electrode; error; extract; paper; pH; suspension; acidity; contact; *NBSIR 75-915.*
Decentralized TLD; dosimeters; TLD reliability; TLD systems; *SP456*, pp. 181-185 (Nov. 1976).
Decision makers; decision structure; information flows; nuclear material information systems; nuclear materials safeguards; safeguards; *16526.*
Decision making; human systems; measuring instruments; research assistants; test device evaluation; criteria; *16091.*
Decision structure; information system; nuclear material diversion; nuclear materials; safeguards; safeguards information system; *16525.*
Decision structure; information flows; nuclear material information systems; nuclear materials safeguards; safeguards; decision makers; *16526.*
Decision theory; FORTRAN; logic design; networks; specifications; standards; systems engineering; building codes; computer program; *NBS-GCR-76-57.*
Decision theory; networks; specifications; standards; system engineering; building codes; computer model; *NBS-GCR-76-55.*
Decision theory; networks; specifications; standards; systems engineering; building codes; computer program; *NBS-GCR-76-56.*
Decisionmaking; economics; errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; costs; data transmission systems; *NBS-GCR-74-29.*
Decisionmaking; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; policies; private sector; R&D; technological change; *NBS-GCR-ETIP 76-03.*
Decisionmaking; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; policies; private sector; R&D; technological change; *NBS-GCR-ETIP 76-04.*
Decisions; episodes; fires; home for the aged; hospital fires; human behavior; institutions; mapping; models; nursing homes; realms; building fires; case studies; critical events; *NBS-GCR-76-73.*
Decomposable (or pure) tensor products; irreducible complex character; orthogonality relations; permutation group; *J. Res.* **80B** No. 2, 259-264 (1976).
Deconvolution; extrapolation; fields and antennas; antenna gain, polarization and pattern; *15827.*
Deconvolution; impedance; impulse response; layer model; lucite; ultrasound; attenuation; computer; *SP453*, pp. 231-251 (Oct. 1976).
Deconvolution; impedance profiling; impediography; impulse response; time-domain deconvolution; *SP453*, pp. 253-258 (Oct. 1976).
Dedicated computers; EDP expenditure; employment; finance; productivity; services—state/local government; automation; computer utilization; *16075.*
Deep depletion; dopant profiles; electrical properties; electron beam induced current; electron beam induced damage; electronics; epitaxial layer thickness; four-probe method; hermeticity; leak tests; measurement methods; microelectronics; moisture infusion; *SP400-19.*
Deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; *TN894.*
Defect pairs; equilibria; model; point defects; annealing; calcium fluoride; *15820.*
Defect states; *d*-electrons; electrolyte electroreflectance; surface states; titanium dioxide; transition-metal oxides; *SP455*, pp. 125-131 (Nov. 1976).
Defects; gold-doped silicon; measurement methods; microelectronics; MOS capacitor; *p-n* junctions; semiconductors; silicon; thermally stimulated capacitance; thermally stimulated current; cryostat; *SP400-26.*
Definite integral; special functions; complete elliptic integral; cubic lattice; *J. Res.* **80B** No. 2, 313-323 (1976).
Definite integrals; hypergeometric functions; incomplete gamma function; Legendre functions; ordinary differential equations; saddle points; special functions; turning points; Whittaker functions; asymptotic analysis; Darboux's method; *15818.*
Definition of the second; frequency accuracy; frequency standards; general relativity; gravitational redshift; primary frequency standards; proper time; UTC; atomic clocks; clock acceleration effect; *16236.*
Definition of the second; frequency accuracy; international atomic time; primary frequency standard; atomic beams; atomic clock; atomic time; cesium beam tube; *16487.*
Definitions; demand meters; electricity metering; performance requirements; standards; test methods; watthour meters; code; *15829.*

Definitions; Federal Information Processing Standards Publication; information processing; privacy; security; terms; vocabulary; computer; data processing; *FIPS PUB 39.*

Definitive glucose method; glucose in serum; isotope dilution-mass spectrometry; serum glucose; clinical reference method; *16343.*

Definitive method; matrix reference materials; pure reference materials; reference methods; routine methods; secondary reference materials; Standard Reference Materials; *16104.*

Deflection; dynamic; floor systems; human responses; performance criteria; serviceability; static; vibration; *TN900.*

Deflections; dynamic response; gust factors; structural engineering; wind engineering; wind loads; accelerations; building codes; buildings; *15871.*

Deflections; dynamic response; gust factors; structural engineering; wind loads; building codes; buildings; *SP444*, pp. IV-127 – IV-144 (Apr. 1976).

Defocusing; image space off-axis; line scanner; optical; *16288.*

Deformation; electron microscopy; microstructure; oxidation; silicon nitride; slow crack growth enstatite; cristobalite; *NBSIR 76-1153.*

Deformation; erosion; fracture; wear; castable refractories; coal gasification; *16600.*

Degradation; elasticity; finite deformation; incompressible materials; permanent set; polymers; rubbers, viscoelasticity; anisotropy; chemorheology; *16339.*

Degradation; electrocatalysis; fuel cells; refractory hard metal; solid electrolytes; cerium dioxide; *NBSIR 76-1091.*

Degradation; fracture; Hertzian; indentation; strength; brittle solids; ceramic surfaces; crack; *15856.*

Degradation; Hertzian cracks; indentation fracture; median vents; penny crack; contact fracture; *15822.*

Degradation; kinetics; oxidation; parameter jump method; polystyrene; relaxation methods; thermogravimetry; weight-loss; *15858.*

Degradation factors; durability; property measurement test; standard test methods; aging test; building elements and materials; *NBSIR 75-955.*

Degradation of safety with age and use; maintenance of safety; public safety; safety responsibility; construction safety; construction surety; *SP423*, pp. 165-170 (Apr. 1976).

Deicing salts; epoxy coatings; organic coatings; steel reinforcing bars; bridge decks; chloride ions; corrosion; *16189.*

Delayed coincidence; imprisonment; lifetime; mean life; resonance radiation; transition probability; U I; uranium; atomic beam; *16322.*

d-electrons; electrolyte electroreflectance; surface states; titanium dioxide; transition-metal oxides; defect states; *SP455*, pp. 125-131 (Nov. 1976).

Delocalization; intramolecular exchange; magnetic susceptibility; mixed valence; Mössbauer spectra; optical; biferrocenylene; *16049.*

Delves Cup; lead; spectrophotometry; atomic absorption; background correction; *SP422*, pp. 1035-1043 (Aug. 1976).

Demagnetization; dilution refrigerator; helium 3; helium 4; liquid helium; mixtures; refrigeration; *16655.*

Demagnetization coefficient; fluctuations; inhomogeneous superconductor; intermediate state; superconducting-normal transition; superconductor; surface energy type I superconductors; cadmium; condensation energy; *16450.*

Demand meters; electricity metering; performance requirements; standards; test methods; watthour meters; code; definitions; *15829.*

Demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; policies; R&D; technological change; technology; *NBS-GCR-ETIP 76-05.*

Demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; policies; R&D; technological change; technology; *NBS-GCR-ETIP 76-06.*

Densities; enthalpies; entropies; equation of state; ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; *TN684.*

Density; dielectric constant; electromagnetic properties; equation of state; ethane; hydrocarbon; liquefied natural gas; measurements; methane; mixtures; thermodynamic; *16631.*

Density; distribution function; erythrocytes; hematocrit; scattering; ultrasound; angular dependence; blood; compressibility; *SP453*, pp. 207-212 (Oct. 1976).

Density; energy gap; inorganic compounds; melting point; structure; *16163.*

Density; etching; grinding; sawing; silicon; standard; weighing; *NBSIR 76-1019.*

Density; ethane; vapor pressure; *PVT; J. Res.* **80A** No. 1, 35-39 (1976).

Density; expansion; paraffins; cryogenics; crystallinity; *16184.*

Density; experimental; magnetic suspension; methane; nitrogen; saturated liquid; tables; apparatus; *16645.*

Density; experimental; magnetic suspension densimeter; normal butane; saturated liquid; table; *16646.*

Density; isobutyric acid; magnetic densimeter; phase equilibria, carbon disulfide, nitromethane; water; binary mixture; coexistence curve; critical phenomena; *16480.*

Density; kinetic temperature; molecular dynamics; numerical error; perfect lattice; thermal conductivity; thermal diffusivity; thermo-elastic coupling; continuum theory of diffusion; *16281.*

Density; liquid compressibility; liquid density; compressibility; *16171.*

Density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; *16419.*

Density expansion; methane; modified Enskog theory; molecular correlations; nitrogen; sound absorption; argon; bulk viscosity; *16483.*

Density measurement; electromanometer; large volume calibration; *NBSIR 75-900.*

Density standard; phase shift; silicon; *NBSIR 75-768.*

Dental; grafting; investments; polymer; resin; wear; adhesion; adsorption; alloys; composites; *NBSIR 76-1095.*

Dental; kVp; x ray; *SP456*, pp. 395-401 (Nov. 1976).

Dental gold alloys; dental research; panoramic x ray; silicate cement; turbine handpiece; amalgam; composite materials; *16212.*

Dental materials; electron affinity; electron spin resonance spectroscopy; extrathermodynamic relationships; ionization potential; linear free-energy relationship; polarography; solvatochromic relationship; *J. Res.* **80A** No. 2, 173-187 (1976).

Dental materials; fillers; porous glass; radiopacity; reinforcements; wear; composite resins; composites; *16586.*

Dental materials; fillers; porous glass; radiopacity; reinforcements; wear; composite resins; composites; *16587.*

Dental materials; hydroxybenzoic acids; pit and fissure sealants; preventive dental materials; acrylic resins; chemistry; composite resins; *15939.*

Dental materials; industry; integrated utilities system; mass spectrometry; motorized criminal; ozone puzzle; portable transceiver batteries; RF power meter; utilities system; batteries; *DIM/NBS* **60**, No. 3, 1-24 (1976)

Dental porcelain; porcelain balling reduction; ammonium stabilized silica and alumina sols; colloidal alumina and silica for dental porcelain; *U.S. Patent 3,973,970.*

Dental research; panoramic x ray; silicate cement; turbine handpiece; amalgam; composite materials; dental gold alloys; *16212*.

DEPAB (DEsign and Performance Analysis of Boilers); energy saving measures; performance at part load; seasonal efficiency; boilers; computer simulation; *16347*.

Depolarization; impurity compensation; luminescence; magnesium oxide; MgO; optical properties; polarized luminescence; symmetry; transition metal ions; chromium 3+; crystal vacancies; cubic crystals; *16521*.

Deposition; vapor; wear; chemical; coating; *SP452*, pp. 151-169 (Sept. 1976).

Depth impurity profiling; ion implantation; ion sputtering; microelectronic materials; Rutherford backscattering; secondary ion mass spectroscopy; silicon; silicon dioxide; surface analysis; x-ray photoelectron spectroscopy; Auger electron spectroscopy; *15739*.

Depth profiles; electron beam induced imaging; ESCA; insulator films; interface characteristics; internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; photovoltaic imaging; Rutherford backscattering; SCANIIR; *SP400-23*.

Design; developing countries; earthquakes; low-cost housing; natural disasters; Philippines; socioeconomic aspects; typhoons; construction; *NBS-GCR-73-21*.

Design; development; fabrication; life cycle costing; materials policy; nondestructive evaluation; performance; processing; technical strategy; *15873*.

Design; dynamic loads; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; static loads; stiffness; structural safety; *NBSIR 76-1131*.

Design; earthquake; highway bridges; lateral loads; pile head; piles; structural engineering; *SP444*, pp. IV-90 – IV-112 (Apr. 1976).

Design; earthquakes; highway bridges; retrofitting; soil-structure interaction; structural engineering; *SP444*, pp. V-1 – V-24 (Apr. 1976).

Design; earthquakes; structural engineering; building codes; buildings; *SP444*, pp. IV-113 – IV-126 (Apr. 1976).

Design; energy; legislation; solar; State; architecture; buildings; *NBSIR 76-1082*.

Design; engineering education; failure analysis; failure analysis case histories; failure prevention; reliability; safety; *SP433*.

Design; field data; gust response; model; specifications; structure; theory; wind; bridge; *SP444*, pp. I-1 – I-20 (Apr. 1976).

Design; information; information retrieval system; architectural indexing systems; architecture; building; construction; *NBSIR 76-1064*.

Design charts; elastomers; erosion; Hopkinson pressure bar apparatus; impedances; mismatching; stress wave interactions; substrates; tearing; vibratory apparatus; adhesion; cavitation; coatings; *SP452*, pp. 120-123 (Sept. 1976).

Design criteria; explosions; gas; hazardous materials; loads; progressive collapse; sonic boom; vehicular collision; bombs; building codes; *BSS89*.

Design criteria; fire hazards; fire losses; fire reporting; fire safety; information systems; National Fire Data System; specifications; state governments; systems analysis; *NBS-GCR-73-5*.

Design critiques; feedback; teaching method; architectural-design teaching; assemblage; *16020*.

Design engineering; material deterioration; mechanical failure; mechanical integrity; mechanical reliability; performance envelope; predicting product reliability; *SP423*, pp. 199-208 (Apr. 1976).

Design of experiments; statistics; analytical chemistry; data analysis; *16652*.

Design process; European; progressive collapse; regulatory process; abnormal loading; building regulations; *NBS-GCR-75-48*.

Design standards; masonry construction; roofs; siding; structural engineering; wind; wind damage; wind engineering; building codes; *TN909*.

Designation; light sources; national standard; radiation source; radioactive; radioluminous products; self-luminous sources; test procedures; classification; containment; *H116*.

Desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; *16419*.

Desorption; photoelectron spectroscopy; photoemission; single crystal; tungsten; ultraviolet photoelectron spectroscopy; virgin CO; adsorption; carbon monoxide; chemisorption; *15851*.

Desorption; polymers; polystyrene; radiotracer measurements; rates of adsorption; surfaces; adsorption; adsorption on mercury; *15853*.

Desulfurization; phosphines; tetracyanotetrathiafulvalene; tetracyanotetrathiafulvalene·triphenylphosphine; $\Delta^{2,2'}$-bis-14.5-dicyano-1,3-dithiodene; 1,3-dithiolenes; ^{31}P NMR; 4,5-dicyano-1,3-dithiolene-2-thione; aryl phosphines; *15991*.

Detachment; dissociation; elastic scattering; electron; excitation; fluorescence; ion; ionization; molecule; photon; positron; atom; collision cross section; *SP426*.

Detection; dispersion; explosion; fire; hydrogen; leakage; methane; safety; vents; automobile; *16634*.

Detection; fire detectors; flame detectors; heat detectors; infrared detectors; smoke detectors; testing; ultraviolet detectors; *NBSIR 76-1040*.

Detection; flameless atomic spectrophotometry; gas chromatography; graphite furnace; methylation of metals; microbial transformation; speciation; volatile metal compounds; *16409*.

Detection limit; determination limit; less-than level; minimum detectable activity; statistical; background; critical level; *SP456*, pp. 169-172 (Nov. 1976).

Detector; infrared; pyroelectric; spectral response; *16472*.

Detector; photodiode; silicon; ultraviolet; uniformity of response; *16413*.

Detector; pyroelectric; radiometry; *TN678*.

Detector calibrations; fluorescence x-ray sources; K x-ray sources; pulsed x rays; radiographic imaging; steady-state x rays; *SP456*, pp. 41-45 (Nov. 1976).

Detector, radioactive argon; ionization chamber; sodium-22; standard reference materials; argon; calibration; *16325*.

Detector sensitivity; detector siting; escape time; fire tests; heat detectors; residential fires; smoke detectors; *NBSIR 76-1126*.

Detector sensitivity; detector siting; heat detectors; ionization smoke detectors; photoelectric smoke detectors; residential fires; smoke detectors; tenability levels; *NBS-GCR-75-51*.

Detector sensitivity; fire detectors; mobile homes; photoelectric smoke detectors; smoke detector installation; smoke detector placement; smoke detectors; *NBSIR 76-1016*.

Detector siting; escape time; fire tests; heat detectors; residential fires; smoke detectors; detector sensitivity; *NBSIR 76-1126*.

Detector siting; heat detectors; ionization smoke detectors; photoelectric smoke detectors; residential fires; smoke detectors; tenability levels; detector sensitivity; *NBS-GCR-75-51*.

Detector techniques; nuclear track analysis; sample homogeneity; *SP422*, pp. 457-459 (Aug. 1976).

Detectors; diodes; linearity; square-law; *16490*.

Detectors; extraction; gas chromatography; isolation and clean-up; mass spectrometry; organic trace analysis; qualitative accuracy; quality control; quantitative accuracy; reference materials; sampling; concentration; *SP422*, pp 9-34 (Aug. 1976).

Detectors; fire detectors; gas detectors; smoke detectors; Taguchi gas sensors; *NBSIR 76-990.*

Detectors; gas chromatography; theory of chromatography; column materials; *15926.*

Detectors; germanium; ion chamber; liquid scintillation; sodium iodide; standard; *SP456*, pp. 77-82 (Nov. 1976).

Detectors; lasers; radiometry; calibrations; calorimeters; *SP456*, pp. 215-221 (Nov. 1976).

Detectors; NBS; radiometry; sources; standards; survey; ultraviolet; *SP456*, pp. 107-110 (Nov. 1976).

Detectors; radiometry; reflectances; black coatings; *16102.*

Determinant; Hadamard's inequality; Hermitian component; positive definite; *15861.*

Determinantal divisors; equivalence; matric equation; partitioned matrix; Smith normal form; *J. Res.* **80B** No. 1, 89-98 (1976).

Determination; dilution; electrolyte; isotope; mass spectrometry; serum; accurate; blood; concentrations; *SP422*, pp. 951-960 (Aug. 1976).

Determination; lead; paint; wire loop; atomic absorption; *16334.*

Determination limit; less-than level; minimum detectable activity; statistical; background; critical level; detection limit; *SP456*, pp. 169-172 (Nov. 1976).

Determination of photochemical mechanism; flash photolysis; intermittent illumination; photochemical principles; photochemical reaction of atoms and molecules; photochemistry in the atmosphere; photochemistry of air pollution; primary and secondary photochemical processes; *16515.*

Determination of stress; measurement; mechanical tests; plastic deformation; proportional limit; crack propagation; *16468.*

Deuterated species; enthalpy of formation; ionization potential; NH_2^+; OH^+; photoionization; predissociation; Rydberg states; ammonia; appearance potential; autoionization; *16539.*

Deuterium; iridium; maleonitriledithiolate; metalloboranes; nuclear magnetic resonance; oxidative addition; palladium; boron hydrides; *16566.*

Deuterium, arc lamps; Halon; integrating spheres; *16058.*

Deuterium effect; fluorescence quantum yield; laser dyes; molecular structure; oxazine dyes; quenching; xanthene dyes; aminocoumarins; carbazine dyes; *J. Res.* **80A** No. 3, 421-428 (1976).

Developing countries; earthquakes; low-cost housing; natural disasters; Philippines; socioeconomic aspects; typhoons; construction; design; *NBS-GCR-73-21.*

Developing countries; exports; industrializing countries; labeling; seminar; South Asia trade; testing; certification; *SP438.*

Development; fabrication; life cycle costing; materials policy; nondestructive evaluation; performance; processing; technical strategy; design; *15873.*

Device inspection; electron-beam-induced current; microelectronics; *p-n* junctions; scanning electron microscopy; semiconductor devices; *16449.*

Device nonlinearity measurements; hot spots, transistor; laser scanning; nondestructive tests; semiconductor devices; UHF transistor measurements; *16571.*

Devices, effects on magnetic media; fields, effects on magnetic media; magnetic fields, erasure of data; magnetic media, data erasure; magnetic media, data protection; data loss, magnetic media; *16056.*

Diagnosis; Doppler effect; optimization; resonance; scattering; tissue characterization; tissue parameters; tumor detection; ultrasound; *SP453*, pp. 11-17 (Oct. 1976).

Diagnosis; frequency dependence; orientation dependence; scattering; tissue characterization; ultrasound; Bragg diffraction; *SP453*, pp. 197-206 (Oct. 1976).

Diagnosis; measurement accuracy; medical facilities; regulatory; therapy; traceability; *SP456*, pp. 139-146 (Nov. 1976).

Diagnosis; scattering; standardization; tissue characterization; ultrasound; blood; cross-section; *SP453*, pp. 29-47 (Oct. 1976).

Diagnostic; nationwide evaluation; physician; technologist; x-ray departments; x-ray trends; *SP456*, pp. 147-152 (Nov. 1976).

Diagnostic radiology; pass-fail tests; quality assurance measurements; x-ray quality control; *SP456*, pp. 119-130 (Nov. 1976).

Diagnostic systems; diesel engines; maintenance costs; monitoring systems; *NBS-GCR-75-43.*

Diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; interlaboratory tests; randomization, constrained; ruggedness test; statistical techniques; Youden plot; Youden squares; Youden, W. J; calibration designs; chain blocks; *16115.*

Diagnostic ultrasound; ultrasonic measurements; ultrasonic techniques; calibration; *SP456*, pp. 91-97 (Nov. 1976).

Diagonal scaling; doubly stochastic matrix; Perron-Frobenius eigenvalue; *J. Res.* **80B** No. 4, 433-436 (1976).

Diagrammatic perturbation theory; linked-cluster theorem; many-body theory; *16614.*

Diamagnetism; light scattering; molecular diffusion; organic molecule; superconductor; susceptibility; *16529.*

Diameter; gravitational bending; interferometry; least squares line; linear model; optical flat; profile; standard deviation; uncertainty; calibration; *NBSIR 75-975.*

Diamond absorption coefficient; laser window heating; laser window testing; Type II diamond windows; *SP435*, pp. 175-188 (Apr. 1976).

Diamond cell; electrical resistance; high pressure; nuclear decay; pressure calibrations; spectroscopy; x-ray diffraction; *16375.*

Diamond machining; dielectric mirror; electroplating; laser damage resistance; stress relief; adherence; *SP435*, pp. 66-74 (Apr. 1976).

Diamond machining; machined optics; nondistortion part support; position errors; quality and compatible part material; quality diamond tools; controlled environment; *SP435*, pp. 75-89 (Apr. 1976).

Diamond single point turning; interferometric control; laser damage threshold; optical absorption; optical components; optical scattering; *SP462*, pp. 145-148 (Dec. 1976).

Diamond turned optics; 1.06 μm polishing; copper mirror; damage threshold; dark field photography; *SP435*, pp. 29-40 (Apr. 1976).

Diamond turning; KCl laser windows; laser damage; 10.6 μm laser; *SP462*, pp. 149-157 (Dec. 1976).

Diamond turning; laser damage; metal mirrors; micromachining; optical figure; scattered light; *SP435*, pp. 49-56 (Apr. 1976).

Diamond-turned metal mirrors; laser damage; light scattering; optical absorption; surface roughness; Auger analysis; *SP462*, pp. 158-164 (Dec. 1976).

Diamond-turned mirrors; diffraction pattern; machine cusp; scattered light; surface figure; blur circle; circular diffraction grating; *SP435*, pp. 57-65 (Apr. 1976).

Diatomic molecules; dissociation energies; high temperature; PbO; thermophysical measurements; chemiluminescent; *NBSIR 75-751.*

Dicalcium phosphate; octacalcium phosphate; pyrolysis; pyrophosphate; stoichiometry; whitlockite; β-tricalcium; calcification; calcium; *15996.*

Dicumyl peroxide; elasticity theory of rubber; entanglements in rubber; gel point; modulus of rubber; molecular interpretation of rubber elasticity; rubber elasticity; statistical theory of rubber elasticity; *J. Res.* **80A** No. 3, 451-463 (1976).

Dielectric breakdown; inclusions; laser damage threshold; morphology; nonlinear refractive index; picosecond laser pulses; avalanche ionization; *SP435*, pp. 321-330 (Apr. 1976).

Dielectric coatings; infrared laser windows; laser heating of metal surfaces; laser mirrors; pulsed CO_2 laser damage; surface damage; 10.6 μm absorption; 10.6 μm optical components; *SP462*, pp. 181-188 (Dec. 1976).
Dielectric coatings; infrared lasers; laser damage; thin films; attenuated total reflection spectroscopy; *SP462*, pp. 203-213 (Dec. 1976).
Dielectric constant; dielectric relaxation; electret; polarization; potassium tantalate; *16638*.
Dielectric constant; electromagnetic properties; equation of state; ethane; hydrocarbon; liquefied natural gas; measurements; methane; mixtures; thermodynamic; density; *16631*.
Dielectric constant; energy; microwave measurement; nondestructive testing; thickness of coal layer; automation; coal; coal mine safety; *NBSIR 76-840*.
Dielectric constant; equation of state (PVT); ethane; Clausius-Mossotti function; *16462*.
Dielectric constant; heat capacity; lead pyroniobate; low temperature; polarization; antiferroelectric; *16527*.
Dielectric constant; sulfur hexafluoride; Clausius-Mossotti equation; critical phenomena; *16542*.
Dielectric constants of polymers; dielectrics; electric dispersion; permeability of polymers; Cole-Cole plots; *16290*.
Dielectric films; electric fields; laser damage; optical coatings; standing-waves; *SP462*, pp. 301-309 (Dec. 1976).
Dielectric films; heat conduction; laser damage; multiphoton absorption; rf sputtering; damage threshold; *SP435*, pp. 272-283 (Apr. 1976).
Dielectric layers; irregularities; metallic thin films; microirregularities; overcoating; plasmons; scatter; absorption; *J. Res.* **80A** No. 4, 643-658 (1976).
Dielectric mirror; electroplating; laser damage resistance; stress relief; adherence; diamond machining; *SP435*, pp. 66-74 (Apr. 1976).
Dielectric properties; ferroelectrics; KDP; PZT 65/35; thallium chloride; very low temperatures; barium titanate; *16491*.
Dielectric relaxation; electret; polarization; potassium tantalate; dielectric constant; *16638*.
Dielectric relaxation; electret state; impurity; ordering transition; polarization; remanent; strontium titanate; *16639*.
Dielectric thin films; electric fields; electron-gun evaporation; picosecond pulses; rf sputtering; standing-wave patterns; damage thresholds; *SP435*, pp. 254-271 (Apr. 1976).
Dielectric-enhanced mirrors; infrared laser mirrors; metal mirrors; reflectance; absorptance; CO laser calorimetry; CO laser mirrors; *SP462*, pp. 189-194 (Dec. 1976).
Dielectrics; electric dispersion; permeability of polymers; Cole-Cole plots; dielectric constants of polymers; *16290*.
Dielectrics; frequency dependence; magnitude; electron-avalanche breakdown; *SP435*, pp. 331-346 (Apr. 1976).
Diesel engines; maintenance costs; monitoring systems; diagnostic systems; *NBS-GCR-75-43*.
Diesel-electric sets; gears; looseness; signature analysis; unbalance; vibration; *NBS-GCR-74-22*.
Diesselhorst ring; potentiometer; programmable potentiometer; self-balancing potentiometers; thermometry; automatic potentiometry; automation; calorimetry; *J. Res.* **80A** No. 4, 669-675 (July-Aug. 1976).
Differential anodic stripping voltammetry; electrochemical analysis; twin electrode balancing; anodic stripping voltammetry; background current compensation; *SP422*, pp. 881-897 (Aug. 1976).
Differential cross sections; elastic scattering; electron scattering; hydrogen molecules; momentum transfer; rotational excitation; scattering theory; sudden approximation; *15761*.
Differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; sudden approximation; close coupling calculations; cross sections; *15951*.
Differential cross sections; elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory; close-coupling calculations; cross sections; *16532*.
Differential cross sections; electron scattering; inelastic scattering; nitrogen molecules; polarization potential; scattering; static potential; vibrational excitation; close-coupling calculations; crossed beams; cross sections; *16533*.
Differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; close coupling calculations; cross sections; *16618*.
Differential equations; domains of stability; integral manifold; Liapunov functions; stability; averaging; *15940*.
Differential metastability; fine structure; inner shell excitation; rf spectroscopy; rubidium; Zeeman effect; atomic beam; autoionization; *16098*.
Differential pulse polarography; dropping mercury electrode; electroanalysis; pulse polarography; trace analysis; background correction; *SP422*, pp. 871-879 (Aug. 1976).
Differential reflection; epitaxial semiconductor devices; Kramers-Kronig relation; multiple reflection; sapphire surfaces; silicon films; specular reflection; *NBS-GCR-76-61*.
Differential scanning calorimetry; linear polyethylene fractions; low angle x ray; mechanical relaxation; tetranonacontane; chain folds; *16289*.
Diffraction; Fourier transform; scattering; tissue characterization; ultrasound; *SP453*, pp. 213-228 (Oct. 1976).
Diffraction; head diffraction; hearing aids; instruments for hearing; manikin; audiometry; *NBSIR 76-1110*.
Diffraction; intensifier; topography; x ray; asymmetric; *16356*.
Diffraction; isotopes; molecular dynamics; neutron; nuclear reactor; radiation; activation analysis; crystal structure; *TN896*.
Diffraction pattern; machine cusp; scattered light; surface figure; blur circle; circular diffraction grating; diamond-turned mirrors; *SP435*, pp. 57-65 (Apr. 1976).
Diffraction topography; dynamical diffraction; rocking curve; angular divergence; asymmetric diffraction; *16055*.
Diffractometer; direct methods; explosives; single-crystal; triazine; x ray; *15735*.
Diffuse reflectance; diffuse transmittance; reflectance; spectrophotometry; bidirectional reflectance factor; *TN594-11*.
Diffuse reflectance; diffuse transmission; reflectance standards; scattering surfaces; bidirectional radiometry; canopies; *J. Res.* **80A** No. 4, 597-603 (1976).
Diffuse reflectance; Kubelka-Munk function; reflectance; reflectance standards; thin layer chromatography; chromatography; color matching; color measurement; *J. Res.* **80A** No. 4, 551-565 (1976).
Diffuse reflectance; radiative transfer; reflectance spectra; scattering coefficients; statistical models; absolute absorptivities; continuum models; *J. Res.* **80A** No. 4, 567-583 (1976).
Diffuse reflectance spectra; magnesium oxide; opal glass; radiant flux; reflectance standards; standards calibration; barium sulfate; *J. Res;* **80A** No. 4, 585-595 (1976).
Diffuse sound fields; reflection and interference of sound; room acoustics theory; sound fields; acoustical energy density; acoustics; *16318*.
Diffuse transmission; reflectance standards; scattering surfaces; bidirectional radiometry; canopies; diffuse reflectance; *J. Res.* **80A** No. 4, 597-603 (1976).
Diffuse transmittance; reflectance; spectrophotometry; bidirectional reflectance factor; diffuse reflectance; *TN594-11*.
Diffusing effectiveness; efficiency; fluorescent wavelength con-

verter; photometry; spectrophotometry; ultraviolet; visible; averaging sphere; *16333*.

Diffusion; dilute alloys; interstitial solute vacancy pairs; kinetic theory; pair association method; thermomigration; *15847*.

Diffusion; electrical conductivity; magnetohydrodynamics (MHD); phase equilibria; transport properties; vaporization; viscosity; *16321*.

Diffusion; electromigration; iron; nickel; palladium; platinum; rhodium; ruthenium; thermomigration; alloys; cobalt; copper; *JPCRD* **5**, No. 1, 103-200 (1976).

Diffusion; etching; metals; neutron irradiation; recoil; surface effect; accuracy; activation analysis; charged particle irradiation; *SP422*, pp. 1165-1171 (Aug. 1976).

Diffusion; excitation exchange; radiative transfer; spectral line profiles; *15714*.

Diffusion; flame retardant; oxidation rate; stibinic acid; trimethylarsine; trimethylstibine; antimony; antimony oxide; arsenic; arsenic acid; biomethylation; cacodylic acid; *16628*.

Diffusion; glass; homogeneity; melting; vaporization; *15989*.

Diffusion; matrix calculation; Monte Carlo calculation; theory of diffusion; vacancy diffusion; computer simulation; correlation factor for diffusion; *16073*.

Diffusion; transition region-sun; ultraviolet spectrum-sun; chromosphere-sun; coronal holes; *15717*.

Diffusion coefficient; matrix equations; nonrandom walk equation; atom migration; correlation factor; crystal defect; *15776*.

Diffusion equation; hypergeometric differential equation; interfacial force; liquid-vapor interface; Markov Stochastic model; self-diffusion; continuous interface profile; *15726*.

Diffusion flames; flame extinction; flame temperature; flame velocity; flammability; flammability limits; oxygen index test; thermodynamics; chemical kinetics; *NBSIR 76-1076*.

Difluorocarbene; difluorodichloromethane; isotope ratio; nitric oxide; oxygen; tetrafluoroethylene; transverse excitation laser; 2-methyl propene; carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; *16657*.

Difluorodichloromethane; isotope ratio; nitric oxide; oxygen; tetrafluoroethylene; transverse excitation laser; 2-methyl propene; carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; *16657*.

Digestion; interferences; losses; mercury; trace metal; analysis; ashing; blood lead; contamination; dairy products; *SP422*, pp. 661-668 (Aug. 1976).

Digital; drive; electronic; generator; motor; stepping; *16399*.

Digital; grey-scale ultrasound; spleen; splenomegaly; A-scan analysis; *SP453*, pp. 71-78 (Oct. 1976).

Digital bipolar circuits; integrated injection logic; radiation damage; radiation effects; *16180*.

Digital communications; guideline; law enforcement equipment report, Law Enforcement Standards Laboratory; mobile digital equipment; National Institute of Law Enforcement and Criminal Justice; communications; *16190*.

Digital data; mass storage; NIRA; Photonuclear Data Center; central computer; computer programs; data manipulation; *TN903*.

Digital frequency synthesis; national standards; precision audiofrequency signal generation; precision FM signal generation; precision phase angle generation; radio navigation; VOR; aircraft navigation systems; *16530*.

Digital microwave hygrometer; hygrometer, digital microwave; microwave, digital, hygrometer; *16199*.

Digital plotting; graphics; Hershey character set; plotting; type fonts; typesetting; vectorized characters; alphabets; COM; computerized typesetting; *SP424*.

Digital timing; epinephrine; linear sweep voltammetry; manganese; micrometer cell; thin layer electrochemistry; vanadium; automatic titrations; coulometric titrations; current integration; *SP422*, pp. 861-869 (Aug. 1976).

Digitization; pattern recognition; speech spectrogram; ultrasound; analog-digital converter; A-scan; *SP453*, pp. 51-59 (Oct. 1976).

Dilute alloys; interstitial solute vacancy pairs; kinetic theory; pair association method; thermomigration; diffusion; *15847*.

Dilute polymer solutions; eigenvalue; hydrodynamic interaction; matrix algebra; necklace model; polymer physics; bead/spring model; *J. Res.* **80B** No. 2, 273-284 (1976).

Dilute polymer solutions; limiting viscosity number; Mandelkern-Flory-Scheraga equation; molecular weight determination; sedimentation coefficient; translational diffusion coefficient; Zimm theory; bead-spring model; block copolymers; *16026*.

Dilution; electrolyte; isotope; mass spectrometry; serum; accurate; blood; concentrations; determination; *SP422*, pp. 951-960 (Aug. 1976).

Dilution refrigerator; helium 3; helium 4; liquid helium; mixtures; refrigeration; demagnetization; *16655*.

Dilution tunnel; isopropanol; particulate filtration; sulfate; sulfur dioxide; sulfur trioxide; sulfur trioxide condensation; automobile exhaust; catalytic oxidation converter; *SP422*, pp. 389-400 (Aug. 1976).

Dimensional; gage; instrument; laser; length; machine; measurements; standard; *NBSIR 75-926*.

Dimensional coordination; metric conversion; planning and scheduling; building regulations; *16556*.

Dimensional coordination; metric conversion; planning and scheduling; building regulations; *TN915*.

Dimensional measurements; length measurements; National Measurement System; *16042*.

Dimensional metrology; integrated circuits; line-width measurements; microelectronics; optical microscope; photomasks; scanning electron microscope; *15864*.

Dimethylmercury; partition coefficient; sea water; solubility; *15944*.

Dimpled rupture; ductile fracture; gas pipe; black iron pipe; *NBSIR 73-264*.

Dinitrotoluene; ethylene glycol dinitrate; explosives; generator; trinitrotoluene; vapors; calibration device; *16402*.

Diode detectors; microwave measurements; phase angle; self-calibration; seven-port junction; vector voltmeter; amplitude; computer controlled; *NBSIR 76-844*.

Diodes; gamma rays; hardness assurance; microwave mixer diodes; mixers; neutrons; radiation hardness; receivers; Schottky-barrier diodes; semiconductors; solid-state devices; x-band measurements; *SP400-7*.

Diodes; linearity; square-law; detectors; *16490*.

Dioxide; heterogeneous; manganese; organic; oxidation; active; chemistry; *15902*.

Diphenyloctatetraene (dilute solution); four-wave numbering; HORSES; nonlinear optics; Raman spectroscopy; CARS; *15716*.

Dipolar interactions; $ErPO_4$; magnetic phase diagram; Néel temperature; spin-flop; antiferromagnetic transition; antiferromagnetism; *16436*.

Dipole moment; microwave spectrum; molecular structure; silacyclopentane; small-ring molecule; Stark effect; *16046*.

Dipole moment; microwave spectrum; ozone depletion; rotational constants; stratospheric chemistry; atmospheric pollution; chlorine nitrate; *16584*.

Dipole moments; electronic structure of molecules; Hartree-Fock; integrals, evaluation of; molecular structure; orbitals; potential energy curves; pseudopotentials; self-consistent field; valence electrons; basis functions; configuration mixing; *16611*.

Dipole moments; infrared; lasers; spectra; spectroscopy; Stark effect; carbonyl sulfide; *16181*.

Dipole-dipole interaction; erbium phosphate ground state; heat capacity; lattice sums; magnetic; susceptibility; antiferromagnetism; critical temperature; *15866.*

Dipoles; electret; glass; piezoelectric; polarization; polyvinyl chloride; pyroelectric; *16277.*

Direct analysis techniques; emission spectroscopy; particulate analysis; particulate characterization; sampling methods; X-ray fluorescence; atmospheric particulates; *SP422,* pp. 791-803 (Aug. 1976).

Direct current sputtering; inelastic neutron scattering; magnetic structures; magnetism; neutron diffraction; rare earth alloys; amorphous magnetism; *16555.*

Direct methods; explosives; single-crystal; triazine; x ray; diffractometer; *15735.*

Direct standardization; environmental radioactivity; internal gas counters; isotope separator; krypton-85; proportional counters; radioactivity standardization; xenon-133, 131m; argon-37; *15948.*

Direct sums; formal power series; Jordan canonical form; permutation congruence; polynomials; *15965.*

Directional coupler; fast risetime; flat pulse baseline/topline; pulse generator; step waveform; tunnel diode; *U.S. Patent 3,967,140.*

Directional coupler; interlaboratory standards; bolometer mount; connector compatibility; *16554.*

Directional coupler; measurement standards; self-calibration; *15828.*

Directional coupler; power detectors; sidearm power detector; *16567.*

Director; driven element; gain; radiation pattern; reflector; Yagi; antenna; *TN688.*

Directory; equipment management software; fiscal administration software; grant/contract software; personnel management software; proposal/award software; research administration; software exchange; software summary; software survey; space management software; *TN916.*

Directory, (security); investigations; law enforcement; resources; security; shoplifting; theft; burglary; consultants; crimes of opportunity; *16369.*

Disaster; dynamic analysis; earthquakes; modeling; soils; structural response; volcanoes; wind; bridges; buildings; codes; *SP444.*

Disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornadoes, wind; buildings; damage; *SP444,* pp. V-35—V-49 (Apr. 1976).

Disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; *NBS-GCR-75-36.*

Disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; *NBS-GCR-75-37.*

Disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; *NBS-GCR-75-38.*

Disasters; structural engineering; tides; wind; buildings; cyclones; *BSS86.*

Discharge; discharge tubes; hollow cathode; spectroscopy; trace detection; tunable lasers; *16604.*

Discharge patterns; spray distribution; water distribution; water spray; automatic sprinkler; corridor sprinkler systems; *NBSIR 75-920.*

Discharge tubes; hollow cathode; spectroscopy; trace detection; tunable lasers; discharge; *16604.*

Disclination; dislocation; pseudopentagonal; stacking fault; twin; wedge; crystal; *15767.*

Discrete spectrum; *f*-sum rule; *f*-values; lithium sequence; oscillator strength distribution; oscillator strengths; relativistic effects; spectral series; systematic trends; continuum; *15817.*

Disintegration rate; ranges; self-absorption; uranium oxide; alpha particles; backscattering; *15808.*

Disk controllers; disk drive characteristics; disk pack interchangeability; disk track format; interface electrical characteristics; interface functional characteristics; removable disk packs; computer disk controllers; computer disk drives; computer disk interface; *NBS-GCR-76-63.*

Disk drive characteristics; disk pack interchangeability; disk track format; interface electrical characteristics; interface functional characteristics; removable disk packs; computer disk controllers; computer disk drives; computer disk interface; disk controllers; *NBS-GCR-76-63.*

Disk pack interchangeability; disk track format; interface electrical characteristics; interface functional characteristics; removable disk packs; computer disk controllers; computer disk drives; computer disk interface; disk controllers; disk drive characteristics; *NBS-GCR-76-63.*

Disk track format; interface electrical characteristics; interface functional characteristics; removable disk packs; computer disk controllers; computer disk drives; computer disk interface; disk controllers; disk drive characteristics; disk pack interchangeability; *NBS-GCR-76-63.*

Dislocation; electrochemical; exchange current; semiconductor; traps; zinc oxide; *SP455,* pp. 139-148 (Nov. 1976).

Dislocation; pseudopentagonal; stacking fault; twin; wedge; crystal; disclination; *15767.*

Dislocation core structure; FIM analysis; core structure; *16383.*

Dislocation theory; imperfect continua; internal stress; nondestructive evaluation; residual stress; *16411.*

Dislocations; nondestructive evaluation; spectral analysis; acoustic emission; *16602.*

Dispersion; explosion; fire; hydrogen; leakage; methane; safety; vents; automobile; detection; *16634.*

Dispersion; photoabsorption; refractive index; atomic spectroscopy; *16379.*

Dispersion phenomena; Maxwell-Wagner polarization; piezoelectric *d* constant; piezoelectricity; relative humidity; temperature; bone; *16314.*

Dispersion tests; lawn mowers; penetration tests; power lawn mowers; safety standard; thrown objects tests; *NBSIR 76-1022.*

Displacement reactions; four-center reactions; ion molecule reactions; proton affinity; proton transfer; rate coefficients; CCl_2, CF_2; CCl_2H^+, CF_2H^+; *16598.*

Dissipation; elevated temperature; energy; hold-time; hysteresis; low-cycle fatigue; plasticity; stainless steel; stress relaxation; thermodynamics; viscoelasticity; creep; *16004.*

Dissociation; elastic scattering; electron; excitation; fluorescence; ion; ionization; molecule; photon; positron; atom; collision cross section; detachment; *SP426.*

Dissociation; hot atoms; isotope effects; kinetics; molecular beams; quantum mechanics; rate coefficients; recombinations; scattering theory; chemical reactions; collision theory; cross sections; *16591.*

Dissociation energies; high temperature; PbO; thermophysical measurements; chemiluminescent; diatomic molecules; *NBSIR 75-751.*

Dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; *16419.*

Dissolution; dry ashing; organic materials analysis; trace element analysis; wet ashing; ashing techniques; *SP422,* pp. 491-507 (Aug. 1976).

Dissolution techniques; fusion dissolution; radiochemical analyses; ashing (wet and dry); chemical errors; contamination; *SP422*, pp. 463-490 (Aug. 1976).

Distance; multiple integrals; transportation problem; average distance; *16088*.

Distillation; food composition; gamma spectrometry; inorganic separators; isotopic exchange; multielement determination; neutron activation; radiochemical separation; trace elements; biological material; biological standards; data evaluation; *SP422*, pp. 1173-1180 (Aug. 1976).

Distortion; flare; image intensifier tubes; infrared searchlights; infrared viewers; light equivalent background; light induced background; optical gain; contrast transfer function; *16238*.

Distortion; flare; image quality; light induced background; limiting resolution; night vision devices; optical transfer function; resolution charts; veiling glare; blooming; contrast transfer function; *16599*.

Distributed data base; generalized processing; data base; data-base machines; data-base management; data definition; data dictionary; data independence; data manipulation; data model; *16330*.

Distributed networks; network service; computer networking; *16045*.

Distributed systems; interface standards; memory technology; protocols; automated reading technology; circuitry; computer applications; computer engineering; *16553*.

Distribution function; electronic properties of solids; energy band; *16162*.

Distribution function; erythrocytes; hematocrit; scattering; ultrasound; angular dependence; blood; compressibility; density; *SP453*, pp. 207-212 (Oct. 1976).

Distribution functions; electron probe microanalysis; semiconductor materials; thin films; x-ray fluorescence; x-ray microanalysis; *15967*.

Distribution of damage times; photoionization; absorption; avalanche ionization; damage morphology; damage statistics; *SP462*, pp. 350-356 (Dec. 1976).

Distribution-free methods; educational testing; mathematical statistics; multivariate analysis; order statistics; social sciences, services to; statistical education in the United States; statistical tolerance limits; U.S. Army programs in statistics; *16114*.

Diversion of nuclear materials; diversion path analysis; internal control system characterization; nuclear material safeguards; safeguards; analysis; *16536*.

Diversion path analysis; internal control system characterization; nuclear material safeguards; safeguards; analysis; diversion of nuclear materials; *16536*.

Documentation; documentation content guidelines; FIPS guidelines; software; automated data systems; computer programs; *FIPS PUB 38*.

Documentation content guidelines; FIPS guidelines; software; automated data systems; computer programs; documentation; *FIPS PUB 38*.

Domain walls; magnetic domains; scanning electron microscope; silicon steel; transformer steel; backscattered electrons; *15921*.

Domain walls; magnetic domains; nickel single crystals; surface reflection topography; transmission topography; x-ray diffraction topography; crystal perfection; Czochralski growth; *16503*.

Domains of stability; integral manifold; Liapunov functions; stability; averaging; differential equations; *15940*.

Door assemblies; performance requirements; physical security; standards; building codes; *16142*.

Door locks; energy; EPIC supplement; high winds; home security; nondestructive evaluation; research associate program; school systems; smoke detectors; teaching metric; cryogenic fluid; *DIM/NBS* **60**, No. 4, 1-24 (1976).

Door security; Elliot Richardson; energy conservation; engineering; fashion; flammability; laser measurement; science; air conditioners; attic fans; basic research; chemical thermodynamics; *DIM/NBS* **60**, No. 6, 1-24 (1976).

Dopant density; microelectronics; MOS capacitors; *n-p-n* transistor fabrication; *p-n* junctions; resistivity; semiconductor electronics; sheet resistors; silicon; test pattern; test structures; *SP400-22*.

Dopant profiles; electrical properties; electron beam induced current; electron beam induced damage; electronics; epitaxial layer thickness; four-probe method; hermeticity; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; *SP400-19*.

Dopant profiles; electrical properties; electronics; four-probe method; hermeticity; interface states; ion implantation; ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; *SP400-25*.

Doppler effect; optimization; resonance; scattering; tissue characterization; tissue parameters; tumor detection; ultrasound; diagnosis; *SP453*, pp. 11-17 (Oct. 1976).

Dose distributions; dosimetry; electron beams; holography; interferometry; water phantoms; absorbed dose; calorimetry; *15852*.

Dose interpretation; mailings; results; therapy departments; thermoluminescence dosimeters; uncertainty; water phantom; absorbed dose; cobalt-60 gamma radiation; computation check; *J. Res.* **80A** No. 4, 663-668 (1976).

Dose profiles; electron dosimetry; pencil beam; therapeutic beam; *SP456*, pp. 313-326 (Nov. 1976).

Dose/ionization conversion; dosimetry; electrons; ionization chamber; stopping-power ratios; calorimeter; *SP456*, pp. 307-312 (Nov. 1976).

Dosimeters; TLD reliability; TLD systems; decentralized TLD; *SP456*, pp. 181-185 (Nov. 1976).

Dosimetry; dyes; glass; plastics; radiation; radiochromic dyes; spectrophotometry; colour dosimeters; *15960*.

Dosimetry; electron beams; gamma rays; physical measurements; quality control; radiation measurement; radiation processing; radiation sterilization; radiochromic dyes; Red Perspex; sterility control; *16648*.

Dosimetry; electron beams; holography; interferometry; water phantoms; absorbed dose; calorimetry; dose distributions; *15852*.

Dosimetry; electrons; impact; improvement; performance; radiation therapy; service; *SP456*, pp. 365-370 (Nov. 1976).

Dosimetry; electrons; ionization chamber; stopping-power ratios; calorimeter; dose/ionization conversion; *SP456*, pp. 307-312 (Nov. 1976).

Dosimetry; energy-absorption coefficient; gamma-ray; photon; x ray; attenuation coefficient; cross section; *SP456*, pp. 299-306 (Nov. 1976).

Dosimetry; fast neutron; tissue equivalent; calorimeter; *SP456*, pp. 327-333 (Nov. 1976).

Dosimetry; gamma; intercomparison; neutron; personnel; reactor; *SP456*, pp. 225-232 (Nov. 1976).

Dosimetry; gammas; neutrons; plutonium; x rays; betas; calibrations; *SP456*, pp. 267-276 (Nov. 1976).

Dosimetry; intercomparisons; radiation; supervoltage; therapy; *SP456*, pp. 359-363 (Nov. 1976).

Dosimetry; ion chamber; patient; precision; therapy; TLD; *SP456*, pp. 343-350 (Nov. 1976).

Dosimetry; ion chambers; n-γ dosimetry; neutrons; scattering; albedo; collimation; *SP456*, pp. 335-341 (Nov. 1976).

Dosimetry; ionization chamber; secondary standardization; calibration; *SP456*, pp. 65-69 (Nov. 1976).

Dosimetry; nuclear medicine; radionuclide; radiopharmaceutical; absorbed dose; calculation; 15977.

Double resonance; microwave instrumentation; microwave spectroscopy; radio astronomy; short-lived molecules; chemical monitoring and analysis; *16400*.

Double-doped KCl laser windows; grain boundary stability; hot forging; KCl; mechanical strength; microstructure; optical absorption; RbCl; $SrCl_2$; *SP462*, pp. 82-86 (Dec. 1976).

Double-lap joint analysis; finite element analysis; joining; joints; single-lap joint analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; adhesive-bonded joints; bonded joints; *NBSIR 75-957*.

Doubling; laser; potassium pentaborate; u.v. generation; *15932*.

Doubly ionized copper; electron configuration; atomic energy levels; atomic spectra; atomic theory; copper; *J. Res.* **80A** No. 3, 465-476 (1976).

Doubly stochastic matrix; Perron-Frobenius eigenvalue; diagonal scaling; *J. Res.* **80B** No. 4, 433-436 (1976).

Drag reduction; membranes; tension; vibrating membranes; air impedance; compliant surface; *16625*.

Draperies; fabrics; flammability; heat flux; standards; tents; tests; uniforms; upholstered furniture; apparel; burn injury; carpets; *16144*.

Draperies; FFACTS system; fire; flammable fabrics; NFPA; curtains; *NBSIR 75-902*.

Drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; spinning; stirred solution; crystallization; cylindrite; *16274*.

Drift mobility; energy levels; excess electrons; hydrocarbons; ion mobility; liquids; mobility; quasifree electrons; solvated electrons; conduction band; *NSRDS-NBS58*.

Drift tubes; velocity distributions; *15892*.

Drive; electronic; generator; motor; stepping; digital; *16399*.

Driven element; gain; radiation pattern; reflector; Yagi; antenna; director; *TN688*.

Drop ball test; impact resistance; ophthalmic lens; proof testing; research associate program; sampling test; *NBSIR 76-996*.

Drop calorimetry; enthalpy measurements; high temperature calorimetry; specific heat; thermodynamic properties; beryllium aluminate; chrysoberyl; *J. Res.* **80A** No. 1, 65-73 (1976).

Drop-ball test; edge; fracture; impact; ophthalmic lenses; shape; *16311*.

Drop-ball test; impact; lens; ophthalmic lens; quasi-static theory; strain gage measurements; *16310*.

Droplet size; fire suppression; spray nozzles; spray patterns; test methods; water distribution; water spray; automatic sprinklers; bibliography; *NBS-GCR-76-72*.

Droplet size; heat absorption; pool fires; residential sprinkler protection; sprinkler operation; automatic sprinklers; bedroom fires; *NBS-GCR-76-58*.

Dropping mercury electrode; electroanalysis; pulse polarography; trace analysis; background correction; differential pulse polarography; *SP422*, pp. 871-879 (Aug. 1976).

Drops; Marangoni effect; surface tension; thermocapillarity; convection; *16341*.

Drugs; electrical pulses; environmental standards; friction measurement; lead poisoning; LNG data; optical; standard reference materials; thermophysical properties symposium; waste heat; computer; consumer; *DIM/NBS* **60**, No. 9, 1-24 (1976).

Drugs; foods; regulation; regulatory agency; accuracy; *SP422*, pp. 3-8 (Aug. 1976).

Dry ashing; organic materials analysis; trace element analysis; wet ashing; ashing techniques; dissolution; *SP422*, pp. 491-507 (Aug. 1976).

Dry cells; primary batteries; primary cells; batteries; cells, primary; *16043*.

Dry powder painting; mechanical and structural components; polymer processed mechanical and structural components; structural and mechanical components; components, structural; *SP452*, pp. 14-24 (Sept. 1976).

D-stable; positive stable matrix; arc-connectedness; Carlson-Johnson conjecture; *J. Res.* **80B** No. 1, 75-77 (1976).

D-stable matrix; field of values; Gersgorin's theorem; nonnegative matrix; Perron-Frobenius eigenvalue; spectrum of a square complex matrix; *15770*.

Dual barrier, electrocatalysis; oxygen evolution; platinum anodes; reaction mechanism; anodic films; *SP455*, pp. 259-266 (Nov. 1976).

Ductile fracture; gas pipe; black iron pipe; dimpled rupture; *NBSIR 73-264*.

Ductility; earthquake; reinforced concrete; shear tests; structural engineering; web reinforcement; column; *SP444*, pp. IV-16—IV-36 (Apr. 1976).

Durability; electrical conductivity; high temperature; MHD-power generation; spinel structure; *15943*.

Durability; field inspection; foam and beam; honeycomb; impact; lightweight structures; military; reliability; sandwich panel; shelter; *NBSIR 76-1025*.

Durability; property measurement test; standard test methods; aging test; building elements and materials; degradation factors; *NBSIR 75-955*.

Dusts; light-scattering; Mie theory; particles; Rayleigh scattering; aerosols; *NBSIR 76-1031*.

Dye laser use for resonance fluorescence; furnace atmosphere sodium contamination; furnace qualification; resonance fluorescence; sodium trace detection; *16574*.

Dyes; glass; plastics; radiation; radiochromic dyes; spectrophotometry; colour dosimeters; dosimetry; *15960*.

Dynamic; dynamic calibration; dynamic pressure; dynamic pressure source; liquid column; pressure; pressure source; pressure transducer; sinusoidal pressure; transducer; calibration; *TN914*.

Dynamic; dynamic response; pressure transducer; protective coatings; shock tube; tape; thermal radiant-energy response; thermal transient response; transducers; zero shift; coatings; *NBSIR 76-1144*.

Dynamic; electronic flash; photographic flashbulb; pressure; pressure measurement; pressure transducer; thermal transient; transducer; zero shift; calibration; *TN905*.

Dynamic; electronic flash; photoflash bulb; pressure; pressure measurement; pressure transducer; pressure transducer response; response; thermal transient; transducer; zero shift; calibration; *NBSIR 76-1038*.

Dynamic; floor systems; human responses; performance criteria; serviceability; static; vibration; deflection; *TN900*.

Dynamic analysis; dynamic loading; earthquake; energy dissipation; finite element; seismic response; structural engineering; analytical model; *SP444*, pp. IV-70—IV-89 (Apr. 1976).

Dynamic analysis; earthquake; seismic design; seismic response; spherical tanks; structural design; *SP444*, pp. V-50—V-62 (Apr. 1976).

Dynamic analysis; earthquakes; modeling; soils; structural response; volcanoes; wind; bridges; buildings; codes; disaster; *SP444*.

Dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornadoes, wind; buildings; damage; disaster; *SP444*, pp. V-35—V-49 (Apr. 1976).

Dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; *NBS-GCR-75-36*.

Dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; *NBS-GCR-75-37*.

Dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; *NBS-GCR-75-38.*

Dynamic analysis; errors; evaluation; program complexity; program measurement static; *16650.*

Dynamic boiler efficiency; efficiency vs cycling rate; efficiency vs heating load; gas-fired boiler; *16338.*

Dynamic calibration; dynamic pressure; dynamic pressure source; liquid column; pressure; pressure source; pressure transducer; sinusoidal pressure; transducer; calibration; dynamic; *TN914.*

Dynamic calibration; dynamic pressure; high pressure; liquid medium; pogo pressure; pressure source; pressure transducer; sinusoidal; space shuttle; transducer; bias pressure; calibration; *TN927.*

Dynamic force; economic; force; metrication; national measurement system; standards; *NBSIR 75-929.*

Dynamic loading; earthquake; energy dissipation; finite element; seismic response; structural engineering; analytical model; dynamic analysis; *SP444,* pp. IV-70—IV-89 (Apr. 1976).

Dynamic loads; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; static loads; stiffness; structural safety; design; *NBSIR 76-1131.*

Dynamic model; environmental chamber experiment; heating and cooling load computer program; heating load; masonry building; *16092.*

Dynamic pressure; dynamic pressure source; liquid column; pressure; pressure source; pressure transducer; sinusoidal pressure; transducer; calibration; dynamic; dynamic calibration; *TN914.*

Dynamic pressure; high pressure; liquid medium; pogo pressure; pressure source; pressure transducer; sinusoidal; space shuttle; transducer; bias pressure; calibration; dynamic calibration; *TN927.*

Dynamic pressure source; liquid column; pressure; pressure source; pressure transducer; sinusoidal pressure; transducer; calibration; dynamic; dynamic calibration; dynamic pressure; *TN914.*

Dynamic pressure transducer; polymeric film transducer; sandwiched polymeric films; vibration transducer; *U.S. Patent 3,970,862.*

Dynamic response; gust factors; structural engineering; wind engineering; wind loads; accelerations; building codes; buildings; deflections; *15871.*

Dynamic response; gust factors; structural engineering; wind loads; building codes; buildings; deflections; *SP444,* pp. IV-127—IV-144 (Apr. 1976).

Dynamic response; pressure transducer; protective coatings; shock tube; tape; thermal radiant-energy response; thermal transient response; transducers; zero shift; coatings; dynamic; *NBSIR 76-1144.*

Dynamic tests; earthquake simulator; shake table; structural engineering; tests; *SP444,* pp. V-25—V-34 (Apr. 1976).

Dynamic thermal performance; heat flow analysis; heating and cooling loads; thermal analysis; transient heat flows; building heat transfer; computer programs; *15762.*

Dynamical diffraction; rocking curve; angular divergence; asymmetric diffraction; diffraction topography; *16055.*

Dynamical diffraction equation; imperfect crystals; scattering matrix theory; *15779.*

Dynamical images; immobile dislocations; Lomer locks; sessile dislocations; x-ray dynamical diffraction; x-ray topography; contrast conditions; *16373.*

Dynamics, bicycle; error analysis; friction, tire/pavement; kinetics, bicycle; measurements, bicycle braking; pitchover; standards, bicycle safety; test method, bicycle; bicycle brakes; brakes, bicycle; *NBSIR 75-786.*

Dy^{3}; paramagnetic resonance; CdF_2; *16051.*

$\Delta^{2,2'}$-bis-14.5-dicyano-1,3-dithiodene; 1,3-dithiolenes; ^{31}P NMR; 4,5-dicyano-1,3-dithiolene-2-thione; aryl phosphines; cyclic voltammetry; desulfurization; phosphines; tetracyanotetrathiafulvalene; *15991.*

D^4 ions; EPR; iron 4+; optical absorption; perovskite; strontium titanate; transition metal; zero phonon line; charge transfer, color centers; crystal field; *16201.*

E

E^+e^- annihilation; exotic mesons; meson classification; ψ and χ particles; 1^{--} states; *15961.*

Early afterglow; electron temperature; helium metastables; helium plasma; pulse discharge; collision model; *15958.*

Early-type stars; electron scattering; spectral-line formation; stellar atmospheres; *16613.*

Earmuffs; earplugs; gunfire noise; hearing damage; hearing protectors; law enforcement equipment; *16368.*

Earplugs; gunfire noise; hearing damage; hearing protectors; law enforcement equipment; earmuffs; *16368.*

Earth rotation; geodesy; geodynamics; geophysics; laser distance measurements; moon; *16448.*

Earth rotation; geodynamics; lunar distance; microwave interferometry; plate tectonics; satellite geodesy; crustal moments; *15799.*

Earthfill dams; earthquakes; ground shaking; liquefaction; soil density; stability; *SP444,* pp. III-24—III-37 (Apr. 1976).

Earthquake; empirical relation; Franciscan Formation; geological character; ground shaking; intensity; *SP444,* III-84—III-94 (Apr. 1976).

Earthquake; energy dissipation; finite element; seismic response; structural engineering; analytical model; dynamic analysis; dynamic loading; *SP444,* pp. IV-70—IV-89 (Apr. 1976).

Earthquake; explosion test; ground strength; ground vibration; liquefaction; pore-water pressure; *SP444,* pp. III-38—III-51 (Apr. 1976).

Earthquake; field data; ground response; seismic waves; seismometer; soil-structure interaction; *SP444,* pp. III-13—III-23 (Apr. 1976).

Earthquake; highway bridges; lateral loads; pile head; piles; structural engineering; design; *SP444,* pp. IV-90—IV-112 (Apr. 1976).

Earthquake; houses; residential dwelling; building codes; construction practices; damage; *SP444,* pp. V-63—V-65 (Apr. 1976).

Earthquake; housing; performance specification; prefabricated dwelling; standards; structural design; *SP444,* pp. IV-55—IV-69 (Apr. 1976).

Earthquake; housing; Peru; technical aid; adobe; cane; *SP444,* pp. VI-16—VI-24 (Apr. 1976).

Earthquake; Japan; natural disaster; storm; structural engineering; technological aid; *SP444,* pp. VI-25—VI-31 (Apr. 1976).

Earthquake; reinforced concrete; shear tests; structural engineering; web reinforcement; column; ductility; *SP444,* pp. IV-16—IV-36 (Apr. 1976).

Earthquake; seismic design; seismic response; spherical tanks; structural design; dynamic analysis; *SP444,* pp. V-50—V-62 (Apr. 1976).

Earthquake engineering; grant; RANN; sponsorship; structural engineering; *SP444,* pp. V-66—V-79 (Apr. 1976).

Earthquake simulator; shake table; structural engineering; tests; dynamic tests; *SP444,* pp. V-25—V-34 (Apr. 1976).

Earthquakes; falls; flows; landslides; mechanisms; slides; avalanches; *SP444,* pp. III-52—III-71 (Apr. 1976).

Earthquakes; geologic faults; mining; tectonics; acoustics; coal; *NBS-GCR-73-18.*

Earthquakes; ground shaking; liquefaction; soil density; stability; earthfill dams; *SP444*, pp. III-24—III-37 (Apr. 1976).
Earthquakes; highway bridges; retrofitting; soil-structure interaction; structural engineering; design; *SP444*, pp. V-1—V-24 (Apr. 1976).
Earthquakes; hurricanes; natural hazards; structural engineering; tornadoes, wind; buildings; damage; disaster; dynamic analysis; *SP444*, pp. V-35—V-49 (Apr. 1976).
Earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; *NBS-GCR-75-36*.
Earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; *NBS-GCR-75-37*.
Earthquakes; hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; *NBS-GCR-75-38*.
Earthquakes; low-cost housing; natural disasters; Philippines; socioeconomic aspects; typhoons; construction; design; developing countries; *NBS-GCR-73-21*.
Earthquakes; modeling; soils; structural response; volcanoes; wind; bridges; buildings; codes; disaster; dynamic analysis; *SP444*.
Earthquakes; structural engineering; building codes; buildings; design; *SP444*, pp. IV-113—IV-126 (Apr. 1976).
Ease of ignition; fabrics; fire; flammability tests; garments; heat transfer; standards; apparel; burn injury; *NBSIR 76-1072*.
Eavesdropping; electronic surveillance; microphones; receiver; tape recorder; telephone; transmitter; wiretapping; body worn antenna; bugging; *16237*.
Eccentric loading; flat-end; kern; loading rate; pin-end; test method; wall panels; walls; compression; *NBSIR 75-779*.
Econometric analysis; economic impacts; efficiency impacts; income distribution effects; policy alternatives; applied microeconomic framework; commodity supply crisis; *NBS-GCR-ETIP 76-24*.
Economic; energy; imports; international; petroleum; correlation; *SP403*, pp. 21-41 (June 1976).
Economic; energy; input-output model; *SP403*, pp. 43-56 (June 1976).
Economic; energy; management; manufacturing; conservation; *SP403*, pp. 103-111 (June 1976).
Economic; energy; model; transform analysis; automobile; *SP403*, pp. 65-74 (June 1976).
Economic; force; metrication; national measurement system; standards; dynamic force; *NBSIR 75-929*.
Economic analysis; housing; lead-based paint; lead poisoning; abatement; building economics; building materials; *TN922*.
Economic analysis; National Network Simulation system; commodity flow analysis; *NBSIR 75-918*.
Economic challenge; scientific and technical resources, converting; social opportunity; *NBS-GCR-73-3*.
Economic cost of failure prevention; frequency of failure; government action; life-cycle costing; marginal analysis; quality control; safety standards; *SP423*, pp. 107-116 (Apr. 1976).
Economic efficiency; environment; equity; financing; grants; pollution abatement; user fees; wastewater; water pollution; water resources; cost sharing; *16564*.
Economic factors; measurement; surface; surface finish; surface roughness; technology assessment; *NBSIR 75-927*.
Economic impact of automation; productivity improvement; public services; social impact of automation; automation technology; *SP448*.
Economic impacts; efficiency impacts; income distribution effects; policy alternatives; applied microeconomic framework; commodity supply crisis; econometric analysis; *NBS-GCR-ETIP 76-24*.
Economic savings of failure prevention; friction; lubrication; mechanical failure; tribology; wear; *SP423*, pp. 117-139 (Apr. 1976).
Economics; electrical quantities; ionizing radiation; mechanical quantities; national measurement system; optical quantities; surface properties; thermal quantities; time and frequency; acoustics; atomic properties; *NBSIR 75-947*.
Economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; *SP403*.
Economics; energy; environment; costs; *SP403*, pp. 215-223 (June 1976).
Economics; energy; fuel; imports; costs; *SP403*, pp. 3-12 (June 1976).
Economics; energy; industrial; break-even analysis; *SP403*, pp. 77-93 (June 1976).
Economics; energy; thermal; conservation; costs; *SP403*, pp. 95-101 (June 1976).
Economics; errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; costs; data transmission systems; decisionmaking; *NBS-GCR-74-29*.
Economics; indirect costs; subsidized costs; blood banking; cost analysis; *16070*.
Economics of failure prevention; fatigue failure; mechanical failure; mechanical reliability; stress corrosion cracking; brittle fracture; *SP423*.
Eddy currents; electron paramagnetic resonance; microwave conductivity; tetrathiofulvalinium-tetracyano-quinodimethane; TTF-TCNQ; *15917*.
Edge; fracture; impact; ophthalmic lenses; shape; drop-ball test; *16311*.
Edge gradient; image quality; light equivalent background; light induced background; limit resolution; line spread function; optical transfer function; point spread function; acutance; contrast transfer function; *16197*.
Edge loss; error analysis; flux loss; plastics; reflectance; scattering; spectrophotometry; translucency; transmittance; Vitrolite glass; blurring effect; *TN594-12*.
Edge-heat-loss; errors; guarded-hot-plate apparatus; line-heat-source; thermal conductivity; ambient temperature index; *16084*.
Edges; fabric construction; fabric flammability; fire spread; flame spread; flame spread rate; surfaces; textiles; *NBS-GCR-75-34*.
EDP expenditure; employment; finance; productivity; services—state/local government; automation; computer utilization; dedicated computers; *16075*.
Education; International System of Units; metrication; metric education; metric system; training; Treaty of the Meter; *SP441*.
Education of metrologists; industrializing nations; LDC's; metrology; AID; assistance; certification programs; *NBSIR 76-988*.
Educational priorities; energy; engineer-scientist; environmental quality; materials; minerals; ceramics; *16156*.
Educational testing; mathematical statistics; multivariate analysis; order statistics; social sciences, services to; statistical education in the United States; statistical tolerance limits; U.S. Army programs in statistics; U.S. Government, services to; *16114*.
Effective intensity of flashing lights; legibility of signs; visual signaling; colorimetry of signals; *16003*.
Effective irradiance; radiometry; solar energy conversion; *15711*.

229-317 O - 77 - 34

Effectively zero background; environmental radioactivity; low-level counting statistics; radioactive rare gases; reduced activity; argon-37; atmospheric mixing; blank corrections; cosmic ray reactions; *16345*.

Effects of mechanical failure on environment; failure prevention; government action; mechanical failure; safety standards; transportation safety; *SP423*, pp. 153-163 (Apr. 1976).

Efficiency; energy labeling; room air conditioners; water heaters; combination refrigerator-freezers; consumer information; *15888*.

Efficiency; environment; financing; grants; pollution abatement; wastewater; water pollution; water resources; cost sharing; *15810*.

Efficiency; fluorescent wavelength converter; photometry; spectrophotometry; ultraviolet; visible; averaging sphere; diffusing effectiveness; *16333*.

Efficiency; hurricane protection; shoreline management; shoreline protection; beach erosion control; Corps of Engineers; cost sharing; *16059*.

Efficiency; radiometry; spectrophotometry; sphere coatings; averaging sphere; *15896*.

Efficiency impacts; income distribution effects; policy alternatives; applied microeconomic framework; commodity supply crisis; econometric analysis; economic impacts; *NBS-GCR-ETIP 76-24*.

Efficiency vs cycling rate; efficiency vs heating load; gas-fired boiler; dynamic boiler efficiency; *16338*.

Efficiency vs heating load; gas-fired boiler; dynamic boiler efficiency; efficiency vs cycling rate; *16338*.

Efficiency vs. heating load; modular boilers; modular concept; seasonal efficiency; boiler oversizing; *15712*.

Ehrenfest relation; glassy state; order-parameters; polymer thermodynamics; *16283*.

Eigenvalue; hydrodynamic interaction; matrix algebra; necklace model; polymer physics; bead/spring model; dilute polymer solutions; *J. Res.* **80B** No. 2, 273-284 (1976).

Eigenvalues; independence; quadratic form; random variable; singular value decomposition; *J. Res.* **80B** No. 3, 333-335 (1976).

Eigenvalues; parabolic cylinder functions; resonance; rotating disks; singular perturbations; turning-point; viscous flow; Weber's equation; boundary-value problem; *16459*.

Eigenvector; normal matrix; numerical range; orthogonal; spectrum; *16348*.

Elastic; oscillations; Pomeranchuk; shrinkage; theorem; asymptotics; *16249*.

Elastic compliance; elastic constants; polycrystalline ZnSe; refractive index; stress-optic constants; temperature coefficient of index; thermal expansion; ZnSe; chemical vapor deposited ZnSe; *15938*.

Elastic compliance tensor; elastic moduli; extrinsic damage thresholds; high-power lasers; infrared materials; tensile stress; cadmium telluride; *SP462*, pp. 119-125 (Dec. 1976).

Elastic constants; elasto-optic; photoelasticity; polycrystalline ZnSe; stress optical constants; *15931*.

Elastic constants; filled polymers; mechanical properties; particulate composites; Poisson's ratio; shear modulus; Young's modulus; bulk modulus; composite materials; *16264*.

Elastic constants; filled polymers; mechanical properties; particulate composites; Poisson's ratio; Young's modulus; composite materials; *J. Res.* **80A** No. 1, 45-49 (1976).

Elastic constants; plutonium; plutonium alloy; Poisson ratio; shear modulus; sound velocity; Young modulus; bulk modulus; compressibility; Debye temperature; *16635*.

Elastic constants; Poisson ratio; pulse-echo method; resonance method; shear modulus; sound velocity; Young's modulus; bulk modulus; compressibility; copper; copper alloys; *16505*.

Elastic constants; polycrystalline ZnSe; refractive index; stress-optic constants; temperature coefficient of index; thermal expansion; ZnSe; chemical vapor deposited ZnSe; elastic compliance; *15938*.

Elastic medium; engineering seismology; ground layer; numerical solution; shear wave; *SP444*, pp. III-1–III-12 (Apr. 1976).

Elastic moduli; extrinsic damage thresholds; high-power lasers; infrared materials; tensile stress; cadmium telluride; elastic compliance tensor; *SP462*, pp. 119-125 (Dec. 1976).

Elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; composites; copper alloys; cryogenic temperatures; *NBSIR 75-828*.

Elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; aluminum alloys; composites; cryogenic temperatures; *NBSIR 76-839*.

Elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; *NBSIR 76-848*.

Elastic scattering; electron; excitation; fluorescence; ion; ionization; molecule; photon; positron; atom; collision cross section; detachment; dissociation; *SP426*.

Elastic scattering; electron scattering; hydrogen molecules; momentum transfer; rotational excitation; scattering theory; sudden approximation; differential cross sections; *15761*.

Elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; sudden approximation; close coupling calculations; cross sections; differential cross sections; *15951*.

Elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory; close-coupling calculations; cross sections; differential cross sections; *16532*.

Elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; close coupling calculations; cross sections; differential cross sections; *16618*.

Elasticity; finite deformation; incompressible materials; permanent set; polymers; rubbers, viscoelasticity; anisotropy; chemorheology; degradation; *16339*.

Elasticity; finite torsion; natural rubber; scaling law; simple materials assumption; *16278*.

Elasticity theory of rubber; entanglements in rubber; gel point; modulus of rubber; molecular interpretation of rubber elasticity; rubber elasticity; statistical theory of rubber elasticity; swelling of rubber network; *J. Res.* **80A** No. 3, 451-463 (1976).

Elastohydrodynamic contacts; fatigue; lubricant film thickness; scuffing; wear; contact lubrication; *SP423*, pp. 41-54 (Apr. 1976).

Elastomers; erosion; Hopkinson pressure bar apparatus; impedances; mismatching; stress wave interactions; substrates; tearing; vibratory apparatus; adhesion; cavitation; coatings; design charts; *SP452*, pp. 120-123 (Sept. 1976).

Elasto-optic; photoelasticity; polycrystalline ZnSe; stress optical constants; elastic constants; *15931*.

Elastooptic constants; infrared-laser window materials; interferometry; KCl; photoelasticity; piezo-optic constants; refractive index; stress-optical constants; thermal coefficient of refractive index; birefringence; *NBSIR 76-1010*.

Elasto-optical constants; infrared materials; KCl; laser windows; photoelasticity; piezo-optical constants; refractive index; *15937*.

Elastoplastic micropressure vessels; failure predictability through small size; microencapsulated coated fuel particles; computer modeling on a microscale; *SP452*, pp. 31-42 (Sept. 1976).

Electret; glass; piezoelectric; polarization; polyvinyl chloride; pyroelectric; dipoles; *16277*.

Electret; humidity; microphones; reciprocity; sensitivity; temperature; calibration; ceramic; condenser; *NBSIR 76-1090*.

Electret; piezoelectricity; polarization electrostriction; polymer; pyroelectricity; *16284*.

Electret; polarization; potassium tantalate; dielectric constant; dielectric relaxation; *16638*.

Electret state; impurity; ordering transition; polarization; remanent; strontium titanate; dielectric relaxation; *16639*.

Electric dispersion; permeability of polymers; Cole-Cole plots; dielectric constants of polymers; dielectrics; *16290*.

Electric energy; electricity; electric power; measurement assurance; transport standard; watthour meter; *TN930*.

Electric energy density; energy density; near-field energy density; *16563*.

Electric field effects; insulating films; insulators; metal oxidation; metals; MOM devices; oxidation; oxidation theory; parabolic law for metal oxidation; semiconductors; conductivity; *16260*.

Electric field measurement; electro-optic; high voltage measurement; Kerr coefficients; Kerr effect; space charge; Aroclor; chlorinated biphenyl; chlorinated naphthalene; *16384*.

Electric fields; electron-gun evaporation; picosecond pulses; rf sputtering; standing-wave patterns; damage thresholds; dielectric thin films; *SP435*, pp. 254-271 (Apr. 1976).

Electric fields; laser damage; oblique incidence; standing waves; *SP462*, pp. 25-28 (Dec. 1976).

Electric fields; laser damage; optical coatings; standing-waves; dielectric films; *SP462*, pp. 301-309 (Dec. 1976).

Electric power; energy conservation; heating; incineration; integrated utility systems; resource conservation; utilities; utility services; water reuse; community services; cooling; *16153*.

Electric power; energy storage; generators; instrumentation; MHD; superconductivity; cryogenics; CTR; *16465*.

Electric power; measurement assurance; transport standard; watthour meter; electric energy; electricity; *TN930*.

Electric power industry; National Measurement System, position location; shipping and boating industries; Standards laboratories; telephone industry and specialized carriers; time and frequency; time scales; users of NBS radio broadcasts; atomic frequency standards; *SP445-1*.

Electric power transmission; flow stability; helium; oscillations; superconductors; theory; computations; cooling system; cryogenics; *15809*.

Electric ranges; energy efficient products; Experimental Technology Incentives Program; life cycle costing; procurement experiments; *NBS-GCR-ETIP 76-09*.

Electric shock; ground fault; leakage current; prevention of electrocution; branch circuit protection; electrical safety; *BSS81*.

Electrical; heat conductivity; heat transfer; Lorenz function; thermal conductivity; conductivity; *15986*.

Electrical conduction in gases; gases; conduction; *16165*.

Electrical conductivity; high temperature; MHD-power generation; spinel structure; durability; *15943*.

Electrical conductivity; magnetohydrodynamics (MHD); phase equilibria; transport properties; vaporization; viscosity; diffusion; *16321*.

Electrical conductivity; organic conductors; tetrathiafulvalenium-tetracyanoquinodimethanide; TTF-TCNQ; *16061*.

Electrical connections; fire hazard; glowing electrical connections; arcing/sparking; branch circuit; contact resistance; *NBSIR 76-1011*.

Electrical contacts; gold plate; palladium; polymer in gold; porosity in gold; solder plate; tin-nickel alloy; tin plate; underplatings for gold; wear of gold; contact lubrication; corrosion inhibitors; *SP452*, pp. 64-71 (Sept. 1976).

Electrical industries; environments; glass standards; government intervention; heating/cooling; lead-paint; metric; pressure transducers; thermal comforts; weights and measures; building industry; calibration system; *DIM/NBS* **60**, No. 10, 1-24 (1976).

Electrical measurements; electrooptics; high voltage measurement; Kerr effect; optical coupling; pulse measurement; automation; *15718*.

Electrical measurements; electro-optics; frequency response; high voltage; Kerr effect; operational amplifier; pulses; radiation; safety; x-ray generators; x rays; calibration; *NBSIR 75-775*.

Electrical measurements; radio frequency; voltage measurements; *16519*.

Electrical measurements facilities; high pressure facilities; high temperature facilities; spectroscopy facilities; accelerators; acoustic facilities; calorimeters; *SP413, 1976 Edition*.

Electrical, mechanical and thermal hazards; hair dryer/stylers; heat flux; safety; technical analysis; temperature; air flow rate; *NBSIR 76-1112*.

Electrical power generation; energy recovery; hydrogen; liquefaction energy; air separation; *15878*.

Electrical properties; electron beam induced current; electron beam induced damage; electronics; epitaxial layer thickness; four-probe method; hermeticity; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; oxide films; *SP400-19*.

Electrical properties; electronics; four-probe method; hermeticity; interface states; ion implantation; ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; *SP400-25*.

Electrical properties; magnetic properties; metals; commercial alloys; data sources; *SP396-4*.

Electrical pulses; environmental standards; friction measurement; lead poisoning; LNG data; optical; standard reference materials; thermophysical properties symposium; waste heat; computer; consumer; drugs; *DIM/NBS* **60**, No. 9, 1-24 (1976).

Electrical quantities; electromagnetic quantities; end-use measurements; ionizing radiation; measurement activities; measurement institutions; mechanical quantities; National Measurement System; optical quantities; thermal quantities; time and frequency; *NBSIR 75-943*.

Electrical quantities; ionizing radiation; mechanical quantities; national measurement system; optical quantities; surface properties; thermal quantities; time and frequency; acoustics; atomic properties; economics; *NBSIR 75-947*.

Electrical resistance; high pressure; nuclear decay; pressure calibrations; spectroscopy; x-ray diffraction; diamond cell; *16375*.

Electrical resistivity; electrolytic iron; Lorenz ratio; thermal conductivity; austenitic steel; cryogenics; *16206*.

Electrical resistivity; high temperature; low temperature; standard reference materials; thermal conductivity; austenitic stainless steel; *16494*.

Electrical resistivity; Smith-Palmer equation; thermal conductivity; copper-base alloy properties; *NBSIR 76-1003*.

Electrical safety; electric shock; ground fault; leakage current; prevention of electrocution; branch circuit protection; *BSS81*.

Electrical standards; electrical units; absolute electrical standards; *16166*.

Electrical standards; standard cells; U.S. legal volt; volt; voltage measurement; *16268*.

Electrical units; absolute electrical standards; electrical standards; *16166.*

Electrically calibrated pyroelectric detector; gold-black; piezoelectric; pulse laser power; *16135.*

Electric-dipole transition; excited states; NH; spin-orbit coupling; transition probability; comet; *16502.*

Electricity; electric power; measurement assurance; transport standard; watthour meter; electric energy; *TN930.*

Electricity metering; performance requirements; standards; test methods; watthour meters; code; definitions; demand meters; *15829.*

Electroabsorption; IR optics; laser damage; multiphoton processes; uv; *SP435*, pp. 389-394 (Apr. 1976).

Electroacoustic; integration; transducer; *15804.*

Electroacoustics; medical diagnostics; radiation safety; radiation therapy (ultrasonic); ultrasonics; *NBSIR 75-937.*

Electroanalysis; pulse polarography; trace analysis; background correction; differential pulse polarography; dropping mercury electrode; *SP422*, pp. 871-879 (Aug. 1976).

Electrocatalysis; electrochemistry; electrode processes; nonmetals; photoelectrolysis; solid electrolytes; surfaces; catalysis; characterization; chemisorption; *SP455.*

Electrocatalysis; electrochemistry; electrodes; fuel cells; surface physics and chemistry; catalysis; *NBSIR 76-1049.*

Electrocatalysis; electron transfer theory; multistep redox reactions; semiconductor surface states; chemisorption; *SP455*, pp. 1-19 (Nov. 1976).

Electrocatalysis; electronic structure; hydrogen peroxide; iron phthalocyanines; Mössbauer; optical spectra; oxygen; reaction mechanisms; ring-disk electrodes; *SP455*, pp. 241-251 (Nov. 1976).

Electrocatalysis; foreign metal monolayers; Fe^{2+}/Fe^{3+} reaction; formic acid oxidation; oxygen reduction; underpotential deposition; *SP455*, pp. 191-200 (Nov. 1976).

Electrocatalysis; fuel cells; mixed oxides; oxygen reduction; phosphoric acid; ternary metal-sulfur arrays; transition elements; triphenylphosphine; tungsten bronze; *NBSIR 75-742.*

Electrocatalysis; fuel cells; refractory hard metal; solid electrolytes; cerium dioxide; degradation; *NBSIR 76-1091.*

Electrocatalysis; heteropolyanions; phosphotungstate complex ions; "spillover" effect; transition metal carbides; transition metal oxides; tungsten bronze; tungsten carbide; *SP455*, pp. 167-174 (Nov. 1976).

Electrocatalysis; nickel oxide; oxide electrodes; oxygen electrochemistry; semiconductor electrodes; carbon; *SP455*, pp. 203-219 (Nov. 1976).

Electrocatalysis; nickel-cobalt oxide; nickel oxide; oxide electrodes; oxygen electrode reaction; ruthenium dioxide/titanium dioxide; spinel; *SP455*, pp. 289-296 (Nov. 1976).

Electrocatalysis; semiconductor electrode; tin oxide electrode; transparent electrode; adsorption; anodic oxidation; *SP455*, pp. 175-181 (Nov. 1976).

Electrocatalyst; hydrogen evolution; lanthanum titanate; oxygen electrode; photo-assisted electrolysis; rutile; *SP455*, pp. 313-321 (Nov. 1976).

Electrocatalyst; oxygen reduction; sodium depletion; Tafel plots; tungsten bronzes; Auger electron spectroscopy; *SP455*, pp. 297-303 (Nov. 1976).

Electrochemical; exchange current; semiconductor; traps; zinc oxide; dislocation; *SP455*, pp. 139-148 (Nov. 1976).

Electrochemical; lubricants; salt-spray; corrosion; *SP452*, pp. 97-105 (Sept. 1976).

Electrochemical adsorption; monolayers; surface processes; atomic layers; chemisorption; cyclic-voltammetry; *SP455*, pp. 107-124 (Nov. 1976).

Electrochemical analysis; heavy metals; lead; seawater analysis; speciation; stability of water samples; zinc; Adriatic Sea; cadmium; copper; *SP422*, pp. 917-928 (Aug. 1976).

Electrochemical analysis; twin electrode balancing; anodic stripping voltammetry; background current compensation; differential anodic stripping voltammetry; *SP422*, pp. 881-897 (Aug. 1976).

Electrochemical calibration; internal calibration; iodine detection; potassium iodide; calibration cell; chlorine concentration; chlorine monitor; *U.S. Patent 3,966,413.*

Electrochemical equivalent; electrochemical equivalent of silver; Faraday; silver; coulometry; *15922.*

Electrochemical equivalent of silver; Faraday; silver; coulometry; electrochemical equivalent; *15922.*

Electrochemistry; electrode processes; nonmetals; photoelectrolysis; solid electrolytes; surfaces; catalysis; characterization; chemisorption; electrocatalysis; *SP455.*

Electrochemistry; electrodes; fuel cells; surface physics and chemistry; catalysis; electrocatalysis; *NBSIR 76-1049.*

Electrochemistry; inorganic bronze electrodes; metal electrodes; semiconductor electrodes; stability, surface layers; surface reactions; anodic decomposition; cathodic decomposition; *SP455*, pp. 267-280 (Nov. 1976).

Electrochemistry; molybdenum oxides; orientation effects; oxygen reduction; *SP455*, pp. 305-312 (Nov. 1976).

Electrochemistry; nonaqueous; semiconductor; silicon; titanium dioxide; acetonitrile; cyclic voltammetry; *SP455*, pp. 149-152 (Nov. 1976).

Electrode; error; extract; paper; pH; suspension; acidity; contact; decantate; *NBSIR 75-915.*

Electrode polarization; impedance measurements; interfaces; ionic conductivity; overpotential; solid electrolyte; *15819.*

Electrode processes; nonmetals; photoelectrolysis; solid electrolytes; surfaces; catalysis; characterization; chemisorption; electrocatalysis; electrochemistry; *SP455.*

Electrodeposition; government laboratories; plating; Blum, William; *16203.*

Electrodes; fuel cells; surface physics and chemistry; catalysis; electrocatalysis; electrochemistry; *NBSIR 76-1049.*

Electroless; electroless nickel, hardness of; nickel; nickel-phosphorus alloy, wear of; auto-catalytic; auto-catalytic nickel; *16391.*

Electroless nickel; electroless nickel, hardness of; electroless nickel, wear of; nickel, auto-catalytic; nickel, electroless; nickel-phosphorus alloy; wear resistant alloy; auto-catalytic nickel; auto-catalytic nickel, hardness of; *SP452*, pp. 45-55 (Sept. 1976).

Electroless nickel, hardness of; electroless nickel, wear of; nickel, auto-catalytic; nickel, electroless; nickel-phosphorus alloy; wear resistant alloy; auto-catalytic nickel; auto-catalytic nickel, hardness of; auto-catalytic nickel, wear of; *SP452*, pp. 45-55 (Sept. 1976).

Electroless nickel, hardness of; nickel; nickel-phosphorus alloy, wear of; auto-catalytic; auto-catalytic nickel; electroless; *16391.*

Electroless nickel, wear of; nickel, auto-catalytic; nickel, electroless; nickel-phosphorus alloy; wear resistant alloy; auto-catalytic nickel; auto-catalytic nickel, hardness of; auto-catalytic nickel, wear of; electroless nickel; *SP452*, pp. 45-55 (Sept. 1976).

Electrolysis; solution; calcium hydroxide; crystal growth; crystals, electrochemical; *16302.*

Electrolyte; isotope; mass spectrometry; serum; accurate; blood; concentrations; determination; dilution; *SP422*, pp. 951-960 (Aug. 1976).

Electrolyte electroreflectance; surface states; titanium dioxide; transition-metal oxides; defect states; *d*-electrons; *SP455*, pp. 125-131 (Nov. 1976).

Electrolytes; electromotive force; isopiestic method; osmotic coefficients; nonlinear least squares; thermodynamic proper-

ties; vapor pressure; activity coefficients; aqueous; computer programs; data evaluation; *TN928*.

Electrolytic iron; Lorenz ratio; thermal conductivity; austenitic steel; cryogenics; electrical resistivity; *16206*.

Electromagnetic compatability; EMC instrumentation; measurements; *16229*.

Electromagnetic compatibility; fiber optics; field strength measurement; isolated EMC antenna; sensitive isotropic probe; broadband antenna; *16210*.

Electromagnetic compatibility; fiber optics; field strength measurement; isolated EMC antenna; sensitive isotropic probe; *NBSIR 75-819*.

Electromagnetic compatibility; law enforcement; personal transmitter; portable transmitter; radio frequency carrier; transmitter; audiofrequency modulation; communications; *16285*.

Electromagnetic field hazards; electromagnetic field synthesizer; electromagnetic radiation-exposure testing (nonionizing); near-fields; rf biological hazards; *TN687*.

Electromagnetic field synthesizer; electromagnetic radiation-exposure testing (nonionizing); near-fields; rf biological hazards; electromagnetic field hazards; *TN687*.

Electromagnetic hazards; field meters; gain; microwave; near-field; calibrations; *NBSIR 75-805*.

Electromagnetic microwave fields; *16592*.

Electromagnetic properties; equation of state; ethane; hydrocarbon; liquefied natural gas; measurements; methane; mixtures; thermodynamic; density; dielectric constant; *16631*.

Electromagnetic quantities; end-use measurements; ionizing radiation; measurement activities; measurement institutions; mechanical quantities; National Measurement System; optical quantities; thermal quantities; time and frequency; acoustic quantities; *NBSIR 75-943*.

Electromagnetic radiation-exposure testing (nonionizing); near-fields; rf biological hazards; electromagnetic field hazards; electromagnetic field synthesizer; *TN687*.

Electromagnetic theory; Green's dyadic theory; *16562*.

Electromagnetic transducer; EMAT; transducer; ultrasonics; *16616*.

Electromanometer; large volume calibration; density measurement; *NBSIR 75-900*.

Electromechanical transducer; galvanometer; galvanometer amplifier; seismic system; seismometer; accelerometer; calibration; *NBSIR 76-1089*.

Electromigration; iron; nickel; palladium; platinum; rhodium; ruthenium; thermomigration; alloys; cobalt; copper; diffusion; *JPCRD* **5**, No. 1, 103-200 (1976).

Electromotive force; isopiestic method; osmotic coefficients; nonlinear least squares; thermodynamic properties; vapor pressure; activity coefficients; aqueous; computer programs; data evaluation; electrolytes; *TN928*.

Electron; energy exchange; ionization; threshold; atom; collision; Coulomb-interaction; *15884*.

Electron; excitation; fluorescence; ion; ionization; molecule; photon; positron; atom; collision cross section; detachment; dissociation; elastic scattering; *SP426*.

Electron; excitation; hydrogen; ionization; theoretical; collisions; *15893*.

Electron; experiment; LEED; multi-photon; photoionization; review; scattering; spin-polarization; *15900*.

Electron; inner-shell electrons; ionization; *K*-shell; *L*-shell; photoabsorption; Bethe theory; cross sections; *15812*.

Electron; low energy; review; scattering; theory; atom; collisions; *15883*.

Electron affinity; electron spin resonance spectroscopy; extrathermodynamic relationships; ionization potential; linear free-energy relationship; polarography; solvatochromic relationship; ultraviolet and visible spectroscopy; *J. Res.* **80A** No. 2, 173-187 (1976).

Electron avalanche; laser-induced gas breakdown; photoionization; *SP435*, pp. 347-355 (Apr. 1976).

Electron avalanche; picosecond pulses; refractory oxides; standing-wave fields; thin films; two-photon absorption; damage thresholds; *SP462*, pp. 292-300 (Dec. 1976).

Electron beam damage; electron beam energy deposition; integrated circuits; ionizing radiation effects; scanning electron microscope; surface effects; *15786*.

Electron beam damage; electron beam energy deposition; ionizing radiation; microelectronic devices; scanning electron microscopy; *15963*.

Electron beam energy deposition; integrated circuits; ionizing radiation effects; scanning electron microscope; surface effects; electron beam damage; *15786*.

Electron beam energy deposition; ionizing radiation; microelectronic devices; scanning electron microscopy; electron beam damage; *15963*.

Electron beam excitation; heat pipe oven; lasers; metal vapors; noble gas; spectroscopy; *16234*.

Electron beam induced current; electron beam induced damage; electronics; epitaxial layer thickness; four-probe method; hermeticity; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; *SP400-19*.

Electron beam induced damage; electronics; epitaxial layer thickness; four-probe method; hermeticity; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; *SP400-19*.

Electron beam induced imaging; ESCA; insulator films; interface characteristics; internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; photovoltaic imaging; Rutherford backscattering; SCANIIR; *SP400-23*.

Electron beam scanning; electron probe microanalysis; x-ray analysis; color composite technique; counting statistics; *15787*.

Electron beam welding; fatigue; fracture toughness; low temperature tests; mechanical properties; titanium alloy; *NBSIR 76-836*.

Electron beams; absorbed dose; calorimeter; calorimetric comparisons; *NBSIR 76-1023*.

Electron beams; gamma rays; physical measurements; quality control; radiation measurement; radiation processing; radiation sterilization; radiochromic dyes; Red Perspex; sterility control; dosimetry; *16648*.

Electron beams; holography; interferometry; water phantoms; absorbed dose; calorimetry; dose distributions; dosimetry; *15852*.

Electron channeling; electron microscope; metals; particle analysis; plastic deformation; surfaces; wear; wear debris; x-ray analysis; copper; *NBSIR 76-1141*.

Electron channeling; iron; metals; plastic deformation; surfaces; wear; *16523*.

Electron channeling; iron; metals; plastic deformation; surfaces; wear; *NBSIR 76-992*.

Electron configuration; atomic energy levels; atomic spectra; atomic theory; copper; doubly ionized copper; *J. Res.* **80A** No. 3, 465-476 (1976).

Electron cyclotron resonance; magnetic field; microwave discharge; photoemission; tungsten; ultraviolet photoemission; adsorption; chemisorption; CO; cyclotron resonance; *16016*.

Electron density; molecule; negative ion; O^-; O_3^-; photodetachment; photodissociation; CO_3^-; $CO_3^- \cdot H_2O$; *D* region; *15877*.

Electron density transient; free electron absorption; laser induced surface damage; optical probe technique; refractive

index variation; damage electron density; *SP435*, pp. 356-361 (Apr. 1976).
Electron dosimetry; pencil beam; therapeutic beam; dose profiles; *SP456*, pp. 313-326 (Nov. 1976).
Electron emission; electron imaging; ion emission; laser-induced damage; surface characterization; surface temperature; Al mirrors; Auger spectroscopy; damage morphology; *SP435*, pp. 207-215 (Apr. 1976).
Electron energy loss; electron impact; Freon 11; Freon 12; uv photoabsorption; *15755*.
Electron energy loss; electron impact; halocarbon 11, $CFCl_3$; halocarbon 12, CF_2Cl_2; uv photoabsorption; *15997*.
Electron energy loss; energy absorption; N_2O; nitrous oscillator strength; photoabsorption; *15751*.
Electron energy loss; forbidden transitions; ozone; triplet states; *15750*.
Electron energy loss; Landau electron deceleration theory; microanalysis; Monte Carlo electron trajectory calculations; scanning electron microscopy; x-ray microanalysis; *SP460*, pp. 61-96 (Dec. 1976).
Electron energy loss; N_2O; oscillator strengths; UV; *15998*.
Electron energy-loss; freons; uv photoabsorption; $CClF_3$; CCl_2F_2; *15995*.
Electron exchange; electron scattering; hydrogen atoms; indistinguishable particles; phase shifts; quantum mechanics; scattering theory; semiclassical approximation; *16122*.
Electron excitation; hydrogen; *15729*.
Electron excitation; magnesium; *15728*.
Electron gas; photoemission; relaxation energy; adsorption; *16421*.
Electron imaging; ion emission; laser-induced damage; surface characterization; surface temperature; Al mirrors; Auger spectroscopy; damage morphology; electron emission; *SP435*, pp. 207-215 (Apr. 1976).
Electron impact; excitation; barium; *16262*.
Electron impact; Freon 11; Freon 12; uv photoabsorption; electron energy loss; *15755*.
Electron impact; halocarbon 11, $CFCl_3$; halocarbon 12, CF_2Cl_2; uv photoabsorption; electron energy loss; *15997*.
Electron impact; ions; lifetime; molecule; N_2^+; radiative; transition probability; CO^+; CO_2^+; coincidence; *15912*.
Electron impact; mercury ions; 285-nm radiation; 480-nm radiation; absolute cross sections; *16588*.
Electron impact; strontium; *15860*.
Electron loss spectroscopy; ionic crystals; Madelung potential; Mg^+; Mg^{2+}; MgO; Stark spectrum; surface excitons; bulk excitons; *SP455*, pp. 59-65 (Nov. 1976).
Electron mean free path; exchange and correlatien; jellium; bulk; *15843*.
Electron microprobe analysis; ESCA; ion scattering; secondary ion mass spectrometry; surface analysis; Auger spectrometry; *SP422*, pp. 541-573 (Aug. 1976).
Electron microprobe correction procedure; energy-dispersive x-ray spectrometry; lithium-drifted silicon detector; background correction; continuous radiation; *16401*.
Electron microscope; metals; particle analysis; plastic deformation; surfaces; wear; wear debris; x-ray analysis; copper; electron channeling; *NBSIR 76-1141*.
Electron microscopes; health hazards; high voltage electron microscopes; x-ray leakage; *SP456*, pp. 223-224 (Nov. 1976).
Electron microscopy; electron probe microanalysis; electron-specimen interactions; Monte Carlo electron trajectory simulation; scanning electron microscopy; x-ray generation; *SP460*, pp. 45-60 (Dec. 1976).
Electron microscopy; Fe-Cr alloys; passive films; pitting corrosion; stainless steel; x-ray analysis; *16024*.
Electron microscopy; Fe_2O_3; Fe_3O_4; high-voltage electron microscopy; *in situ* hematite; magnetite; *16292*.
Electron microscopy; *in situ* experiments; ionic bombardment; microscope stages; rock-forming minerals; specimen preparation; *15895*.
Electron microscopy; iron-nickel; martensite; meteorite; Tishomingo; alloy; austenite; *15764*.
Electron microscopy; microstructure; oxidation; silicon nitride; slow crack growth enstatite; cristobalite; deformation; *NBSIR 76-1153*.
Electron optics; electron scattering; electrostatic lens; image; low energy; aberration; *15913*.
Electron optics; transition radiation; *15760*.
Electron paramagnetic resonance; microwave conductivity; tetrathiofulvalinium-tetracyano-quinodimethane; TTF-TCNQ; eddy currents; *15917*.
Electron polarization; electron scattering; low energy; nickel; single crystals; tungsten; *15747*.
Electron probe microanalysis; electron-solid interactions, magnetic domains; Monte Carlo electron trajectory calculations; particle analysis; scanning electron microscopy; thin film analysis; *SP460*.
Electron probe microanalysis; electron scattering; electron-specimen interactions; Monte Carlo electron trajectory calculations; scanning electron microscopy; x-ray microanalysis; *SP460*, pp. 5-14 (Dec. 1976).
Electron probe microanalysis; energy-dispersive x-ray analysis; lithium-drifted silicon detector; background; continuous x rays; *15715*.
Electron probe microanalysis; Monte Carlo electron trajectory simulation; scanning electron microscopy; secondary electrons; x rays; backscattered electrons; *SP460*, pp. 15-44 (Dec. 1976).
Electron probe microanalysis; electron-specimen interactions; Monte Carlo electron trajectory simulation; scanning electron microscopy; x-ray generation; electron microscopy; *SP460*, pp. 45-60 (Dec. 1976).
Electron probe microanalysis; Monte Carlo electron trajectory calculations; nuclear backscattering analysis; scanning electron microscopy; thin films; x-ray analysis; *SP460*, pp. 129-138 (Dec. 1976).
Electron probe microanalysis; x-ray analysis; color composite technique; counting statistics; electron beam scanning; *15787*.
Electron probe microanalysis; electrons; inner-shell; Auger-electron spectroscopy; cross sections; *15855*.
Electron probe microanalysis; semiconductor materials; thin films; x-ray fluorescence; x-ray microanalysis; distribution functions; *15967*.
Electron probe microanalysis; fluorescent excitation; accuracy; continuum radiation; *16392*.
Electron probe microanalysis; Monte Carlo calculations; particulates; quantitative analysis; thin films; x rays; *16410*.
Electron probe microanalyzer; glass standard; lithium drifted silicon detector; Monte Carlo; particle analysis; continuous radiation; *SP422*, pp. 1283-1291 (Aug. 1976).
Electron scattering; electron-specimen interactions; Monte Carlo electron trajectory calculations; scanning electron microscopy; x-ray microanalysis; electron probe microanalysis; *SP460*, pp. 5-14 (Dec. 1976).
Electron scattering; electrostatic lens; image; low energy; aberration; electron optics; *15913*.
Electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory; close-coupling calculations; cross sections; differential cross sections; elastic scattering; *16532*.
Electron scattering; hydrogen molecules; momentum transfer; rotational excitation; scattering theory; sudden approximation; differential cross sections; elastic scattering; *15761*.
Electron scattering; hydrogen atoms; indistinguishable particles;

phase shifts; quantum mechanics; scattering theory; semiclassical approximation; electron exchange; *16122*.
Electron scattering; inelastic scattering; nitrogen molecules; polarization potential; scattering; static potential; vibrational excitation; close-coupling calculations; crossed beams; cross sections; differential cross sections; *16533*.
Electron scattering; low energy; nickel; single crystals; tungsten; electron polarization; *15747*.
Electron scattering; moment theory; photoabsorption/ionization; spectral densities; *16359*.
Electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; sudden approximation; close coupling calculations; cross sections; differential cross sections; elastic scattering; *15951*.
Electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; close coupling calculations; cross sections; differential cross sections; elastic scattering; *16618*.
Electron scattering; phonons; reorientation effect; admixture; anharmonicities; branching ratios; *16508*.
Electron scattering; quadrupole phonons; vibrational nuclei; anharmonicities; branching ratio; charge distribution; *16507*.
Electron scattering; spectral-line formation; stellar atmospheres; early-type stars; *16613*.
Electron spectroscopy; ligand-field splitting; surface excitons; surface states; transition-metal oxides; adsorption; *SP455*, pp. 133-138 (Nov. 1976).
Electron spectroscopy; photoemission; angular distributions; chemisorption; *15759*.
Electron spectroscopy for chemical analysis; mean free path; quantitative analysis; *16079*.
Electron spin resonance spectroscopy; extrathermodynamic relationships; ionization potential; linear free-energy relationship; polarography; solvatochromic relationship; ultraviolet and visible spectroscopy; aromatic amine; *J. Res.* **80A** No. 2, 173-187 (1976).
Electron stimulated desorption; ion angular distribution; oxygen; tungsten; carbon monoxide; chemisorption; *16398*.
Electron temperature; helium metastables; helium plasma; pulse discharge; collision model; early afterglow; *15958*.
Electron trajectories; magnetic effects; Monte Carlo calculations; multiple scattering x-ray generation; particle analysis; quantitative x-ray microanalysis; thin films; x-ray emission; *SP460*, pp. 105-128 (Dec. 1976).
Electron transfer theory; multistep redox reactions; semiconductor surface states; chemisorption; electrocatalysis; *SP455*, pp. 1-19 (Nov. 1976).
Electron tunneling; electronic devices; far infrared; Josephson effect; strong electron-phonon coupling; superconductivity; *16478*.
Electron tunneling; Josephson effect; strong electron-phonon coupling; superconductivity; electronic devices; *16486*.
Electron-avalanche breakdown; dielectrics; frequency dependence; magnitude; *SP435*, pp. 331-346 (Apr. 1976).
Electron-beam-induced current; microelectronics; *p-n* junctions; scanning electron microscopy; semiconductor devices; device inspection; *16449*.
Electron-gun evaporation; picosecond pulses; rf sputtering; standing-wave patterns; damage thresholds; dielectric thin films; electric fields; *SP435*, pp. 254-271 (Apr. 1976).
Electronic; generator; motor; stepping; digital; drive; *16399*.
Electronic density of states; lanthanum; nickel; nuclear magnetic resonance; platinum; x-ray photoemission; alloys; copper; *15768*.
Electronic devices; electron tunneling; Josephson effect; strong electron-phonon coupling; superconductivity; *16486*.
Electronic devices; far infrared; Josephson effect; strong electron-phonon coupling; superconductivity; electron tunneling; *16478*.
Electronic flash; photoflash bulb; pressure; pressure measurement; pressure transducer; pressure transducer response; response; thermal transient; transducer; zero shift; calibration; dynamic; *NBSIR 76-1038*.
Electronic flash; photographic flashbulb; pressure; pressure measurement; pressure transducer; thermal transient; transducer; zero shift; calibration; dynamic; *TN905*.
Electronic properties of solids; molecules; surfaces; adsorption; chemisorption; *15758*.
Electronic properties of solids; energy band; distribution function; *16162*.
Electronic states; gas kinetics; laser enhanced reactions; O_3; PbO; chemiluminescence; *J. Res.* **80A** No. 2, 167-171 (1976).
Electronic states; hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; *16419*.
Electronic structure; energy bands; perovskites; surface states; transition metal oxides; catalysis; chemisorption; cluster states; *SP455*, pp. 21-52 (Nov. 1976).
Electronic structure; energy curve; N_2; predissociation; radiative recombination; $^5\Sigma_g^+$; *16442*.
Electronic structure; Fe; ferromagnetism; soft x-ray emission; soft x-ray spectra; transition metals; Co; Cr; *d*-band widths; *15780*.
Electronic structure; hydrogen peroxide; iron phthalocyanines; Mössbauer; optical spectra; oxygen; reaction mechanisms; ring-disk electrodes; electrocatalysis; *SP455*, pp. 241-251 (Nov. 1976).
Electronic structure; multiphoton ionization; benzene; *15941*.
Electronic structure; multiphoton ionization; trans-1,3-butadiene; *15981*.
Electronic structure; surface states; transition metal carbide; adsorption; catalysis; *SP455*, pp. 87-92 (Nov. 1976).
Electronic structure of molecules; Hartree-Fock; integrals, evaluation of; molecular structure; orbitals; potential energy curves; pseudopotentials; self-consistent field; valence electrons; basis functions; configuration mixing; dipole moments; *16611*.
Electronic surveillance; microphones; receiver; tape recorder; telephone; transmitter; wiretapping; body worn antenna; bugging; eavesdropping; *16237*.
Electronic tunneling; Josephson effect; superconductivity; cryogenics; *16200*.
Electronics; epitaxial layer thickness; four-probe method; hermeticity; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; resistivity; *SP400-19*.
Electronics; four-probe method; hermeticity; interface states; ion implantation; ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; *SP400-25*.
Electronics; integrated circuits; measurement technology; semiconductor devices; semiconductor process control; silicon; automation; *NBS-GCR-76-64*.
Electronics devices; high speed devices; Josephson effect; superconducting devices; superconductivity; tunneling; *16485*.
Electron-impact; ionization; ionization mechanisms; ions; review; *15942*.
Electron-probe microanalysis; electrons; inner-shell; ionization; cross sections; *SP460*, pp. 97-104 (Dec. 1976).
Electron-promotion model; ion-atom collisions; solar corona;

vacuum ultraviolet emission spectra; vacuum ultraviolet lasers; *16621.*
Electrons; excitation; infrared; rate coefficient; carbon dioxide; cross section; *16256.*
Electrons; excitation; optical spectroscopy; Stark effect; atomic hydrogen; Balmer alpha; beam foil; crossed beams; *15891.*
Electrons; free ions; ion yields; liquid; nonpolar systems; radiation chemistry; radiation physics; *NSRDS-NBS57.*
Electrons; heat defect in graphite; absorbed dose; calorimeter; *16473.*
Electrons; H_3O^+; ion trap; recombination; cross-section measurements; *15859.*
Electrons; impact; improvement; performance; radiation therapy; service; dosimetry; *SP456,* pp. 365-370 (Nov. 1976).
Electrons; inner-shell; Auger-electron spectroscopy; cross sections; electron probe microanalysis; *15855.*
Electrons; inner-shell; ionization; cross sections; electron-probe microanalysis; *SP460,* pp. 97-104 (Dec. 1976).
Electrons; ionization chamber; stopping-power ratios; calorimeter; dose/ionization conversion; dosimetry; *SP456,* pp. 307-312 (Nov. 1976).
Electron-solid interactions, magnetic domains; Monte Carlo electron trajectory calculations; particle analysis; scanning electron microscopy; thin film analysis; electron probe microanalysis; *SP460.*
Electron-specimen interactions; Monte Carlo electron trajectory calculations; scanning electron microscopy; x-ray microanalysis; electron probe microanalysis; electron scattering; *SP460,* pp. 5-14 (Dec. 1976).
Electron-specimen interactions; Monte Carlo electron trajectory simulation; scanning electron microscopy; x-ray generation; electron microscopy; electron probe microanalysis; *SP460,* pp. 45-60 (Dec. 1976).
Electron-stimulated desorption of ions (ESDIAD); field-ion microscopy (FIM); low energy electron diffraction (LEED); ultraviolet photoelectron spectroscopy (UPS); angle and energy distributions; charged particle spectroscopy; *16078.*
Electro-optic; high voltage measurement; Kerr coefficients; Kerr effect; space charge; Aroclor; chlorinated biphenyl; chlorinated naphthalene; electric field measurement; *16384.*
Electro-optics; frequency response; high voltage; Kerr effect; operational amplifier; pulses; radiation; safety; x-ray generators; x rays; calibration; electrical measurements; *NBSIR 75-775.*
Electrooptics; high voltage measurement; Kerr effect; optical coupling; pulse measurement; automation; electrical measurements; *15718.*
Electroplating; fast plating; fatigue strength; grinding; hardness; stress; tensile strength; wear; corrosion; crack-free chromium; *SP452,* pp. 56-63 (Sept. 1976).
Electroplating; laser damage resistance; stress relief; adherence; diamond machining; dielectric mirror; *SP435,* pp. 66-74 (Apr. 1976).
Electroplating industry, metrication of; metal finishing, metric system for; metrication, electrodeposition; metrication, electroplating; metrication, metal finishing; metric system, electroplating industry; *16353.*
Electropolated soft metal film coatings; metallurgical; metals; soft metals; solid lubricants; compatibility; *SP452,* pp. 72-83 (Sept. 1976).
Electrosorption; Langmuir; lead dioxide; pyrophosphate; Temkin; wax-bound electrode; amperometry; cyclic voltammetry; *SP455,* pp. 183-189 (Nov. 1976).
Electrostatic lens; image; low energy; aberration; electron optics; electron scattering; *15913.*
Electrostriction; electrostrictive coefficients; free energy; stress-optical constants; stress-optical effect; *15710.*
Electrostrictive coefficients; free energy; stress-optical constants; stress-optical effect; electrostriction; *15710.*
Electrotransport; ionic segregation; laser; momentum transfer; phototransport; scattering; vacancies; absorption; *SP462,* pp. 365-370 (Dec. 1976).
Elemental analysis; ion beam analysis; monitoring; particle sizing; time resolution; aerosol; California aerosol monitoring program; *SP422,* pp. 1119-1136 (Aug. 1976).
Elemental distribution; energy dispersive x-ray analysis; light element analysis; scanning electron microscopy; thin film x-ray analysis; x-ray continuum radiation; *15771.*
Elemental mercury; flameless atomic absorption spectroscopy; laser Raman spectroscopy; nuclear magnetic resonance spectroscopy; phenylmercuric acetate; volatilization; bacteria; *15897.*
Elemental sulfur; flameless atomic absorption; petroleum; plankton; sediments; total mercury; water; Chesapeake Bay; *15874.*
Elementary function evaluation; extended precision arithmetic; floating point arithmetic; Fortran extended data types; Fortran precompiler; *16461.*
Elements; thermal expansion; alloys; coefficients of thermal expansion; compilation; critical evaluation; *16005.*
Elevated temperature; energy; hold-time; hysteresis; low-cycle fatigue; plasticity; stainless steel; stress relaxation; thermodynamics; viscoelasticity; creep; dissipation; *16004.*
Elliot Richardson; energy conservation; engineering; fashion; flammability; laser measurement; science; air conditioners; attic fans; basic research; chemical thermodynamics; door security; *DIM/NBS* **60,** No. 6, 1-24 (1976).
Ellipsometric parameters; ellipsometric spectroscopy; iron base alloys; iron single crystal; *16017.*
Ellipsometric spectroscopy; iron base alloys; iron single crystal; ellipsometric parameters; *16017.*
Ellipsometry; implants; polymer adsorption; protein adsorption; synthetic implants; adsorption; blood protein; bound fraction; *NBSIR 75-667.*
Ellipsometry; implants; polymer adsorption; protein adsorption; synthetic implants; adsorption; blood protein; bound fraction; *NBSIR 76-1017.*
Ellipsometry; infrared bound fraction; protein adsorption; conformation adsorbed proteins; *16427.*
Ellipsometry; iron; kinetics; optical constants; passive; pitting; spectroscopy; *16216.*
Ellipsometry; iron; molybdenum; repassivation kinetics; stress corrosion; chemical breakdown of passivity; chloride; crevice corrosion; *NBSIR 75-916.*
Ellipsometry; optical constants; ruthenium; *16467.*
Ellipsometry; surface potential; blood protein adsorption; conformation adsorbed proteins; *16396.*
EMAT; transducer; ultrasonics; electromagnetic transducer; *16616.*
EMC instrumentation; measurements; electromagnetic compatability; *16229.*
EMC measurements; radiation resistance; rectangular coax; shielded strip line; TEM cell; *NBSIR 75-829.*
Emergent stem; liquid-in-glass thermometer; reference point; stirred liquid comparison bath; temperature scale; calibration; *Monogr. 150.*
Emission; monitors; standards; air pollution; analyzing; gas analysis; gases; *15982.*
Emission anisotropy; fluorescence; fluorescence decay; fluorescence quantum yields; polarization; spectrofluorimetry; viewing angle; *15754.*
Emission anisotropy; fluorescence; photodetectors; polarization; quantum counters; rhodamine B chloride; spectrofluorimetry; total internal reflection; *16430.*
Emission cross section; radiation trapping; airglow; atomic oxygen; cascade radiation; *15927.*

Emission gas; exhaust; fluorescence; nitric oxide; quenching; sulfur dioxide; *16444*.
Emission line; interstellar medium; laboratory measurement; methyl alcohol; population inversion; radio astronomy; *15994*.
Emission spectra; intersystem crossing; molecular oxygen in rare gas solids; O_2 excited states; *16612*.
Emission spectroscopy; environmental pollutants; intercomparisons; multi-element analysis; trace element analysis; x-ray fluorescence; accuracy; activation analysis; airborne particulates; air filter analysis; atomic absorption; *SP422*, pp. 173-188 (Aug. 1976).
Emission spectroscopy; nickel; nickel-base alloys; polarography; spectrophotometry; x-ray fluorescence spectroscopy; atomic absorption spectrophotometry; *SP422*, pp. 1005-1016 (Aug. 1976).
Emission spectroscopy; particulate analysis; particulate characterization; sampling methods; X-ray fluorescence; atmospheric particulates; direct analysis techniques; *SP422*, pp. 791-803 (Aug. 1976).
Emission spectrum; HAr_n^+; $HCCl_2^+$; $HCCl_2^-$; $HCCl_3$; infrared spectrum; matrix isolation; molecular rotation in solid Ar; photoinduced proton transfer; ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; *15757*.
Emissivity; evaporation coefficient; Langmuir vaporization; optical pyrometry; radiation heating; vapor pressures; AlO_2; Al_2O_3; *16540*.
Emittance; heat transfer; measurement techniques; periodic surfaces; polarization; random surfaces; reflectance; reflectance of coherent radiation; scattering; scattering theory; surface roughness; transmittance; bibliography; *J. Res.* **80A** No. 2, 207-220 (1976).
Emittance; high-speed measurements; high temperature; melting point; pyrometry; radiance temperature; tantalum; *16426*.
Empirical measurements; fracture stress; slow crack growth; analytical predictions; constant stress rate; *16034*.
Empirical relation; Franciscan Formation; geological character; ground shaking; intensity; earthquake; *SP444*, III-84—III-94 (Apr. 1976).
Employment; finance; productivity; services—state/local government; automation; computer utilization; dedicated computers; EDP expenditure; *16075*.
Encryption; evaluation criteria; key; password; personal identification; terminals; verification; ADP security; computer networks; controlled accessibility; *16013*.
Encryption; personal identification; privacy; record identification; risk analysis; security; data confidentiality; data integrity; *16390*.
End fitting; glass-reinforced-plastic rod end fitting; nondestructive examination; neutron radiography; ultrasonics; x-radiography; *NBSIR 76-1084*.
End fittings; GFRP rod and rope; structural guys; *15993*.
End fittings, rope; fatigue damage; rope, aramid-fiber; slings, cargo; terminations, rope; weathering, simulated; aramid fiber rope; breaking load, rope; cable, aramid-fiber; *NBSIR 76-1159*.
End-use measurements; ionizing radiation; measurement activities; measurement institutions; mechanical quantities; National Measurement System; optical quantities; thermal quantities; time and frequency; acoustic quantities; electrical quantities; *NBSIR 75-943*.
Energy; engineering; industry construction; measurement techniques; standards; building research; criteria; *SP439*.
Energy; engineer-scientist; environmental quality; materials; minerals; ceramics; educational priorities; *16156*.
Energy; environment; costs; economics; *SP403*, pp. 215-223 (June 1976).
Energy; environment; food; *SP403*, pp. 193-195 (June 1976).
Energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; *SP403*.
Energy; environmental; frequency standards; hearing aids; high-rise buildings; metals; radiation safety; standards laboratory; synchrotron; building collapse; corrosion; *DIM/NBS* **60**, No. 5, 1-24 (1976).
Energy; EPIC supplement; high winds; home security; nondestructive evaluation; research associate program; school systems; smoke detectors; teaching metric; cryogenic fluid; door locks; *DIM/NBS* **60**, No. 4, 1-24 (1976).
Energy; financial; resources; risk; costs; *SP403*, pp. 237-241 (June 1976).
Energy; fire; helmets; mobile homes; phase diagrams; tire pressure; air; building codes; computer tapes; *DIM/NBS* **60**, No. 12, 1-24 (1976).
Energy; forecast; industry; iron; steel; *SP403*, pp. 121-152 (June 1976).
Energy; fuel; graphite; hydrocarbons; metering; methane; natural gas; petroleum; physical properties; standard reference materials; coal; *SP434*.
Energy; fuel; imports; costs; economics; *SP403*, pp. 3-12 (June 1976).
Energy; heating; conservation; cooling; cost; *SP403*, pp. 163-191 (June 1976).
Energy; heating; manufacturing; marketing; costs; *SP403*, pp. 199-213 (June 1976).
Energy; heating systems; model; thermodynamics; *SP403*, pp. 57-64 (June 1976).
Energy; hold-time; hysteresis; low-cycle fatigue; plasticity; stainless steel; stress relaxation; thermodynamics; viscoelasticity; creep; dissipation; elevated temperature; *16004*.
Energy; imports; international; petroleum; correlation; economic; *SP403*, pp. 21-41 (June 1976).
Energy; industrial; break-even analysis; economics; *SP403*, pp. 77-93 (June 1976).
Energy; industrial; paper; *SP403*, pp. 153-161 (June 1976).
Energy; industrial; systems; attitudes; conservation; *SP403*, pp. 113-117 (June 1976).
Energy; input-output model; economic; *SP403*, pp. 43-56 (June 1976).
Energy; legal; regulatory; standards; *SP403*, pp. 225-235 (June 1976).
Energy; legislation; regulations; state; authority; building; *NBSIR 76-986*.
Energy; legislation; solar; State; architecture; buildings; design; *NBSIR 76-1082*.
Energy; management; manufacturing; conservation; economic; *SP403*, pp. 103-111 (June 1976).
Energy; microwave measurement; nondestructive testing; thickness of coal layer; automation; coal; coal mine safety; dielectric constant; *NBSIR 76-840*.
Energy; model; transform analysis; automobile; economic; *SP403*, pp. 65-74 (June 1976).
Energy; organization; conservation; *SP403*, pp. 13-18 (June 1976).
Energy; pollutants; standard reference materials; air and water quality; *16157*.
Energy; thermal; conservation; costs; economics; *SP403*, pp. 95-101 (June 1976).
Energy absorption; impact test; protection; protective equipment; *NBS-GCR-74-24*.
Energy absorption; N_2O; nitrous oscillator strength; photoabsorption; electron energy loss; *15751*.
Energy band; distribution function; electronic properties of solids; *16162*.
Energy bands; perovskites; surface states; transition metal ox-

ides; catalysis; chemisorption; cluster states; electronic structure; *SP455*, pp. 21-52 (Nov. 1976).

Energy calculation; heat transfer; heating and cooling loads; response factor; algorithm; ASHRAE; buildings; computer; *16630*.

Energy conservation; computers; data editing; *NBSIR 75-735*.

Energy conservation; energy conservation guide; energy conservation opportunities; energy conservation program; industrial energy conservation; *H120*.

Energy conservation; energy consumption prediction; experimental office building; *15741*.

Energy conservation; energy consumption; Manchester office building; National Bureau of Standards; New York State offices; office buildings; commercial buildings; *16547*.

Energy conservation; energy efficient design; life-cycle cost models; new housing; *16129*.

Energy conservation; energy standards for mechanical systems; heating and air-conditioning systems; state energy regulations; *15713*.

Energy conservation; energy surveys; infrared; nondestructive evaluation; thermographic surveys; thermography; *TN923*.

Energy conservation; engineering; fashion; flammability; laser measurement; science; air conditioners; attic fans; basic research; chemical thermodynamics; door security; Elliot Richardson; *DIM/NBS* **60**, No. 6, 1-24 (1976).

Energy conservation; estimation schemes; kinetics; modeling; oxidation; pyrolysis; combustion; data base; *NBSIR 75-910*.

Energy conservation; ETIP; government procurement policy; noise reduction; performance specification; technology incentives; *NBS-GCR-ETIP 73-05*.

Energy conservation; ETIP; government procurement policy; technology incentives; *NBS-GCR-ETIP 73-06*.

Energy conservation; fenestration; HVAC systems; illumination; insulation; lighting; performance standard; thermal performance; ventilation; water heating; air leakage; building design; *NBSIR 74-452*.

Energy conservation; fly ash; blast furnace slag; blended cements; *NBSIR 76-1008*.

Energy conservation; GSA/Manchester building; solar collector; solar heating and cooling; thermal storage; *NBSIR 76-1056*.

Energy conservation; heat transfer; insulation; thermal conductivity; thermal insulation; conduction; *15756*.

Energy conservation; heat transfer; buildings; *16446*.

Energy conservation; heating; incineration; integrated utility systems; resource conservation; utilities; utility services; water reuse; community services; cooling; electric power; *16153*.

Energy conservation; human factors; people in buildings; *BSS88*.

Energy conservation; lenses; light conduits; light control; reflectors; skylights; windows; daylight gathering; daylighting of buildings; *NBSIR 76-1098*.

Energy conservation; measurement techniques; ventilation of office buildings; air infiltration; *16342*.

Energy conservation; NBS programs; buildings energy; *16120*.

Energy conservation guide; energy conservation opportunities; energy conservation program; industrial energy conservation; energy conservation; *H120*.

Energy conservation opportunities; energy conservation program; industrial energy conservation; energy conservation; energy conservation guide; *H120*.

Energy conservation program; industrial energy conservation; energy conservation; energy conservation guide; energy conservation opportunities; *H120*.

Energy consumption; Manchester office building; National Bureau of Standards; New York State offices; office buildings; commercial buildings; energy conservation; *16547*.

Energy consumption in NYC schools; energy-saving opportunities; incentives—educational, persuasive, financial, regulatory; modular boiler study; NBS-campus energy retrofit; retrofitting existing buildings; *15882*.

Energy consumption prediction; experimental office building; energy conservation; *15741*.

Energy curve; N_2; predissociation; radiative recombination; $^5\Sigma_g^+$; electronic structure; *16442*.

Energy density; near-field energy density; electric energy density; *16563*.

Energy deposition spectra; fast neutrons; initial spectra; microdosimetric parameters; nuclear data; slowing-down spectra; *15950*.

Energy deposition spectra; microdosimetry; neutron interactions with tissue; neutrons; radiation quality; secondary particle spectra; theoretical dosimetry; *16182*.

Energy dispersive x-ray analysis; light element analysis; scanning electron microscopy; thin film x-ray analysis; x-ray continuum radiation; elemental distribution; *15771*.

Energy dissipation; finite element; seismic response; structural engineering; analytical model; dynamic analysis; dynamic loading; earthquake; *SP444*, pp. IV-70—IV-89 (Apr. 1976).

Energy efficient design; life-cycle cost models; new housing; energy conservation; *16129*.

Energy efficient products; Experimental Technology Incentives Program; gas ranges; life cycle costing; procurement experiments; *NBS-GCR-ETIP 76-15*.

Energy efficient products; Experimental Technology Incentives Program; life cycle costing; procurement experiments; electric ranges; *NBS-GCR-ETIP 76-09*.

Energy efficient products; Experimental Technology Incentives Program; life cycle costing; procurement experiments; refrigerators; *NBS-GCR-ETIP 76-10*.

Energy efficient products; Experimental Technology Incentives Program; life cycle costing; procurement experiments; room air conditioners; *NBS-GCR-ETIP 76-13*.

Energy efficient products; Experimental Technology Incentives Program; life cycle costing; procurement experiments; water heaters; *NBS-GCR-ETIP 76-14*.

Energy efficient products; Experimental Technology Incentives Program; life cycle costing; procurement experiments; window air conditioners; *NBS-GCR-ETIP 76-19*.

Energy exchange; ionization; threshold; atom; collision; Coulomb-interaction; electron; *15884*.

Energy filtering; low-loss electron image; magnetic contrast; Monte Carlo electron trajectory calculations; scanning electron microscopy; contrast calculations; *SP460*, pp. 139-150 (Dec. 1976).

Energy gap; inorganic compounds; melting point; structure; density; *16163*.

Energy generation; industrial technology; molecule; primary standards; properties; atom; *NBSIR 75-944*.

Energy impacts; mode choice; pollution reduction; bus transit; busways; carpools; *15724*.

Energy labeling; room air conditioners; water heaters; combination refrigerator-freezers; consumer information; efficiency; *15888*.

Energy levels; excess electrons; hydrocarbons; ion mobility; liquids; mobility; quasifree electrons; solvated electrons; conduction band; drift mobility; *NSRDS-NBS58*.

Energy levels; excitation potential; ground state potential; nickel; band structure; *15842*.

Energy levels; Fe I; iron; iron lifetimes; lifetimes in Fe I; atomic spectra; *J. Res.* **80A** Nos. 5 and 6, 787-797 (1976).

Energy levels; hyperfine interactions; methane; selection rules; symmetry species; tetrahedral; *16376*.

Energy levels; ionization energy; spectrum; terbium; *15924*.

Energy levels; ions; rare earths; spectroscopy; atoms; classifica-

tion; *16022*.
Energy levels; photocatalytic electrodes; photoelectrolytic cells; photogalvanic cells; quantum efficiency; solar energy; *SP455*, pp. 221-227 (Nov. 1976).
Energy levels; spectra; cesium; *15798*.
Energy levels; spectrum; wavelengths; ytterbium; *15920*.
Energy levels; thorium; Th I; wavelengths; Zeeman-effect of Th I; *J. Res.* **80A** No. 2, 221-358 (1976).
Energy levels, atomic; line shapes, atomic; molecular bands; molecular spectra; rotational constants; atomic energy levels; atomic line shapes; atomic spectra; atomic transition probabilities; bands, molecular; *15901*.
Energy loss; O_2; oscillator strengths; oxygen; transition probabilities; *15999*.
Energy measurement; EPIC; FIPS; kitchen ranges; mercury; metal fires; metric; safety; WWV/WWVH; computer; *DIM/NBS* **60**, No. 1, 1-24 (1976).
Energy options; explosive vapor detectors; firebug; impulse generators; MHD electrode materials; optical standards; safety wheels; bike regulations; bomb disarmament; computer auditing; *DIM/NBS* **60**, No. 7, 1-24 (1976).
Energy recovery; hydrogen; liquefaction energy; air separation; electrical power generation; *15878*.
Energy saving measures; performance at part load; seasonal efficiency; boilers; computer simulation; DEPAB (DEsign and Performance Analysis of Boilers); *16347*.
Energy standards for mechanical systems; heating and air-conditioning systems; state energy regulations; energy conservation; *15713*.
Energy storage; generators; instrumentation; MHD; superconductivity; cryogenics; CTR; electric power; *16465*.
Energy surveys; infrared; nondestructive evaluation; thermographic surveys; thermography; energy conservation; *TN923*.
Energy transfer, electronic; fluorescence; molecular dissociation; relativistic electrons, excitation; *16615*.
Energy transfer in collisions; hydrogen molecules; information theory; scattering theory; trajectories; vibrational energy; chemical reactions; classical probability matrix theory; classical scattering matrix theory; collision theory; *16607*.
Energy transmission economics; helium; hydrogen energy; liquid hydrogen; liquid nitrogen; power transmission cables; safety; slush hydrogen; superconducting; a.c. power; cryoresistive; *16629*.
Energy transport; heat pulse; interatomic potential; molecular dynamics; second sound; shock wave; stress wave; temperature wave; thermal diffusivity; thermal relaxation; anharmonic crystal; computer simulation; *16138*.
Energy transport; heat pulse; molecular dynamics; second sound; stress pulse; temperature wave; thermal diffusivity; thermal equilibrium; thermal relaxation; anharmonic crystal; computer simulation; *16589*.
Energy-absorption coefficient; gamma-ray; photon; x ray; attenuation coefficient; cross section; dosimetry; *SP456*, pp. 299-306 (Nov. 1976).
Energy-dispersive x-ray analysis; lithium-drifted silicon detector; background; continuous x rays; electron probe microanalysis; *15715*.
Energy-dispersive x-ray spectrometry; lithium-drifted silicon detector; background correction; continuous radiation; electron microprobe correction procedure; *16401*.
Energy-efficient products; Experimental Technology Incentives Program; gas and electric ranges; life-cycle costing; procurement experiments; *NBSIR 76-1027*.
Energy-efficient products; Experimental Technology Incentives Program; life-cycle costing; procurement experiments; refrigerator-freezers; *NBSIR 75-954*.
Energy-efficient products; Experimental Technology Incentives Program; life-cycle costing; procurement experiments; water heaters; *NBSIR 76-983*.
Energy-saving opportunities; incentives—educational, persuasive, financial, regulatory; modular boiler study; NBS-campus energy retrofit; retrofitting existing buildings; energy consumption in NYC schools; *15882*.
Enforcement; evaluation; information systems; microfilm; microform; state-of-the-art study; automatic data processing; building codes; building regulations; computer applications; computers; *NBS-GCR-74-26*.
Enforcement process; housing; hurricane Agnes; mobile home parks; mobile homes; performance data; regulatory process; standards; computer techniques; construction; *NBSIR 76-1058*.
Engine pumper; fire vehicle; ladder truck; maintenance; replacement; specifications; standards; *TN891*.
Engineering; environmental; interference abatement; laboratory environments; radiation; sound studies; *16009*.
Engineering; fashion; flammability; laser measurement; science; air conditioners; attic fans; basic research; chemical thermodynamics; door security; Elliot Richardson; energy conservation; *DIM/NBS* **60**, No. 6, 1-24 (1976).
Engineering; industry construction; measurement techniques; standards; building research; criteria; energy; *SP439*.
Engineering education; failure analysis; failure analysis case histories; failure prevention; reliability; safety; design; *SP433*.
Engineering, instrumentation and techniques; fluids; force; hydraulic equipment; mechanical power; noise; pressure; quality control; safety; testing; *16452*.
Engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; composites; copper alloys; cryogenic temperatures; elastic properties; *NBSIR 75-828*.
Engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; aluminum alloys; composites; cryogenic temperatures; elastic properties; *NBSIR 76-839*.
Engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; *NBSIR 76-848*.
Engineering seismology; ground layer; numerical solution; shear wave; elastic medium; *SP444*, pp. III-1—III-12 (Apr. 1976).
Engineer-scientist; environmental quality; materials; minerals; ceramics; educational priorities; energy; *16156*.
$E_n = 25$ keV; measured cross-section ratio; nuclear reactions; $^{186,187}Os(n\gamma)$; *16579*.
Enhancement factor; moist air; saturated air; *J. Res.* **80A** No. 1, 41-44 (1976).
Entanglements in rubber; gel point; modulus of rubber; molecular interpretation of rubber elasticity; rubber elasticity; statistical theory of rubber elasticity; swelling of rubber network; cross-linking of rubber; dicumyl peroxide; *J. Res.* **80A** No. 3, 451-463 (1976).
Enthalpies; entropies; equation of state; ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; *TN684*.
Enthalpies of formation; entropy; Gibbs energy of formation; selected thermodynamic values; thermodynamic properties; CODATA compatible values; *NBSIR 75-968*.
Enthalpies of formation; incinerators, industrial; thermodynamic data; waste disposal; combustion thermodynamics; *16032*.
Enthalpy; entropy; equilibrium constant of formation; Gibbs energy of formation; heat capacity; ideal gas thermodynamic properties; internal rotational barrier height; propanone (acetone); torsional frequencies; *JPCRD* **5**, No. 2, 319-328 (1976).

Enthalpy; entropy; Gibbs energy; heat capacity; potassium compounds; rubidium compounds; sodium compounds; standard reference data; thermochemical tables; *NBSIR 76-1034.*

Enthalpy data; entropy data; equilibrium data; Gibbs energy data; heat capacity data; partial molal properties; thermochemistry; thermodynamics; review articles; water pollution; aqueous systems; bibliography; biochemical systems; *SP454.*

Enthalpy measurements; high temperature calorimetry; specific heat; thermodynamic properties; beryllium aluminate; chrysoberyl; drop calorimetry; *J. Res.* **80A** No. 1, 65-73 (1976).

Enthalpy of formation; ionization potential; NH_2^+; OH^+; photoionization; predissociation; Rydberg states; ammonia; appearance potential; autoionization; deuterated species; *16539.*

Enthalpy of formation; ketene; methane; methyl; methylene; photoionization; rotational energy; *16060.*

Enthalpy of formation, fluorides; flame calorimetry of fluorine and fluorides; procedures, experimental for handling fluorine; bomb calorimetry with fluorine; *16100.*

Entropies; equation of state; ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; *TN684.*

Entropy; equilibrium constant of formation; Gibbs energy of formation; heat capacity; ideal gas thermodynamic properties; internal rotational barrier height; propanone (acetone); torsional frequencies; *JPCRD* **5,** No. 2, 319-328 (1976).

Entropy; Gibbs energy; heat capacity; potassium compounds; rubidium compounds; sodium compounds; standard reference data; thermochemical tables; enthalpy; *NBSIR 76-1034.*

Entropy; Gibbs energy of formation; selected thermodynamic values; thermodynamic properties; CODATA compatible values; enthalpies of formation; *NBSIR 75-968.*

Entropy; heat capacity; holes; polymer; poly(vinyl acetate); pressure; thermal; volume; compressibility; configuration; *16077.*

Entropy; heat capacity; molar heat capacity; *16168.*

Entropy data; equilibrium data; Gibbs energy data; heat capacity data; partial molal properties; thermochemistry; thermodynamics; review articles; water pollution; aqueous systems; bibliography; biochemical systems; enthalpy data; *SP454.*

Environment; neutron activation analysis; precision; x-ray fluorescence; accuracy; atomic absorption; *SP422,* pp. 239-245 (Aug. 1976).

Environment; costs; economics; energy; *SP403,* pp. 215-223 (June 1976).

Environment; equity; financing; grants; pollution abatement; user fees; wastewater; water pollution; water resources; cost sharing; economic efficiency; *16564.*

Environment; financing; grants; pollution abatement; wastewater; water pollution; water resources; cost sharing; efficiency; *15810.*

Environment; food; energy; *SP403,* pp. 193-195 (June 1976).

Environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; *SP403.*

Environment; gamma-ray measurements; Ge(Li) detectors; radioactivity; standards; *SP456,* pp. 173-179 (Nov. 1976).

Environment; health care; housing production; I-R 100 awards; NIKE missile; papers available; stereology; toy safety; x-ray units; computer power; computer standard; corrosion; *DIM/NBS* **60,** No. 11, 1-24 (1976).

Environment; kinetics; methylation; nucleophilic reactivity; onium salts; polar solvents; pollutants; quaternization; alkyl halides; antimony; arsenic; *16628A.*

Environment; measurements; medical; radiation; standards; calibrations; *SP456.*

Environment; purity; reagents; accuracy; analysts; apparatus; blank; contamination; *SP422,* pp. 509-539 (Aug. 1976).

Environmental; fire; glass door; lead nitrate; mercury thermometers; metric; nuclear power; police radars; solar energy; SRM's; computer systems; *DIM/NBS* **60,** No. 2, 1-25 (1976).

Environmental; frequency standards; hearing aids; high-rise buildings; metals; radiation safety; standards laboratory; synchrotron; building collapse; corrosion; energy; *DIM/NBS* **60,** No. 5, 1-24 (1976).

Environmental; interference abatement; laboratory environments; radiation; sound studies; engineering; *16009.*

Environmental analyses; interlaboratory tests; neutron activation analysis; plasma emission; round robin; x-ray fluorescence; accuracy; anodic stripping voltammetry; arc emission spectroscopy; atomic absorption; *SP422,* pp. 199-210 (Aug. 1976).

Environmental analysis; fresh water analysis; intercomparisons; precision; round-robin experiments; trace element analysis; accuracy; activation analysis; air filter analysis; analytical quality control; atomic absorption spectrometry; *SP422,* pp. 189-197 (Aug. 1976).

Environmental chamber; exterior exposure; latex paints; nonmercurial fungicides; accelerated testing; alkyd paints; *16416.*

Environmental chamber experiment; heating and cooling load computer program; heating load; masonry building; dynamic model; *16092.*

Environmental conditions; noise measurement; noise (sound); transportation noise; truck; acoustics; *NBSIR 76-1138.*

Environmental degradation; guys, nonmetallic; marine atmospheres; plastics, fiber-reinforced; pultrusions; stress-rupture testing; sunlight; ultraviolet radiation; weatherability; antenna-support materials; *NBSIR 76-1069.*

Environmental effects on crazing; fractional free volume; glass transition temperature; smectic polypropylene; spherulitic polypropylene; crazing; cryogenic temperatures; crystalline polymers; *15772.*

Environmental extremes; fail-safe operation; high strength materials; mechanical failure; potential service conditions; proliferation of specifications; *SP423,* pp. 193-197 (Apr. 1976).

Environmental gamma-ray measurements; environmental samples; gamma-ray measurements; Ge(Li) detectors; *SP456,* pp. 159-167 (Nov. 1976).

Environmental gamma-rays; field testing; instruments; source distributions; calibration; *SP456,* pp. 233-248 (Nov. 1976).

Environmental matrices; extraction yields; mercury; neutron activation analysis; organomercury; solvent extraction; *SP422,* pp. 1233-1240 (Aug. 1976).

Environmental pollutants; intercomparisons; multi-element analysis; trace element analysis; x-ray fluorescence; accuracy; activation analysis; airborne particulates; air filter analysis; atomic absorption; emission spectroscopy; *SP422,* pp. 173-188 (Aug. 1976).

Environmental protection; international cooperation; international standards; materials conservation; materials science; performance concept; building construction; building design; building materials; building research; *16027.*

Environmental quality; materials; minerals; ceramics; educational priorities; energy; engineer-scientist; *16156.*

Environmental radiation measurements; error; integrating detectors; TLD; *SP456,* pp. 187-198 (Nov. 1976).

Environmental radioactivity; internal gas counters; isotope separator; krypton-85; proportional counters; radioactivity standardization; xenon-133, 131m; argon-37; direct standardization; *15948.*

Environmental radioactivity; low-level counting statistics; radioactive rare gases; reduced activity; argon-37; atmospheric mixing; blank corrections; cosmic ray reactions; effectively zero background; *16345*.

Environmental samples; environmental standards; fly ash; instrumental neutron activation analysis (INAA); instrumental photon activation analysis (IPAA); natural radioactivity; standard reference materials; trace elements; analytical methods; *SP422*, pp. 211-223 (Aug. 1976).

Environmental samples; fluorine; isotope dilution; radionuclides; substoichiometry; absorption isotherm; *SP422*, pp. 961-982 (Aug. 1976).

Environmental samples; gamma-ray measurements; Ge(Li) detectors; environmental gamma-ray measurements; *SP456*, pp. 159-167 (Nov. 1976).

Environmental samples; long-term storage; microbiologicals; organics; pesticides; radionuclides; sample handling; sampling; trace elements; chemical analysis; *TN929*.

Environmental samples; mercury; preconcentration; trace elements; activation analysis; adsorption isotherm; *SP422*, pp. 669-699 (Aug. 1976).

Environmental samples, laboratories; quality assurance; radioactive effluents; radioanalytical data; regulations; *SP456*, pp. 249-261 (Nov. 1976).

Environmental Standard Reference Materials; isotope dilution; lead; molybdenum; rubidium; strontium; trace analyses; cadmium; *16221*.

Environmental standards; fly ash; instrumental neutron activation analysis (INAA); instrumental photon activation analysis (IPAA); natural radioactivity; standard reference materials; trace elements; analytical methods; coal; *SP422*, pp. 211-223 (Aug. 1976).

Environmental standards; friction measurement; lead poisoning; LNG data; optical; standard reference materials; thermophysical properties symposium; waste heat; computer; consumer; drugs; electrical pulses; *DIM/NBS* **60,** No. 9, 1-24 (1976).

Environments; glass standards; government intervention; heating/cooling; lead-paint; metric; pressure transducers; thermal comforts; weights and measures; building industry; calibration system; centigrade/celsius; computer; *DIM/NBS* **60,** No. 10, 1-24 (1976).

Enzyme analysis; storage of clinical samples; accuracy and precision; analysis of body fluids; clinical analysis; clinical chemistry; clinical sampling; *SP422*, pp. 353-361 (Aug. 1976).

Enzyme catalyzed reactions; glucose; heat measurement; hexokinase; magnesium; metabolic processes; microcalorimetry; thermochemistry; thermodynamics; adenosine 5'-triphosphate; biochemistry; coupled equilibrium; *16385*.

EPIC; FIPS; kitchen ranges; mercury; metal fires; metric; safety; WWV/WWVH; computer; energy measurement; *DIM/NBS* **60,** No. 1, 1-24 (1976).

EPIC supplement; high winds; home security; nondestructive evaluation; research associate program; school systems; smoke detectors; teaching metric; cryogenic fluid; door locks; energy; *DIM/NBS* **60,** No. 4, 1-24 (1976).

Epidimiology; laboratory research; methodology; naturalistic studies; safety; accident research; countermeasures; *NBS-GCR-76-75*.

Epidimiology hazards; home safety; methodology; safety; accidents; accident research; consumer accidents; *NBS-GCR-76-76*.

Epinephrine; linear sweep voltammetry; manganese; micrometer cell; thin layer electrochemistry; vanadium; automatic titrations; coulometric titrations; current integration; digital timing; *SP422*, pp. 861-869 (Aug. 1976).

Episodes; fires; home for the aged; hospital fires; human behavior; institutions; mapping; models; nursing homes; realms; building fires; case studies; critical events; decisions; *NBS-GCR-76-73*.

Epitaxial layer thickness; four-probe method; hermeticity; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; *SP400-19*.

Epitaxial microstructure; optical scattering; biaxial birefringence; *SP462*, pp. 239-245 (Dec. 1976).

Epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; *16274*.

Epitaxial semiconductor devices; Kramers-Kronig relation; multiple reflection; sapphire surfaces; silicon films; specular reflection; differential reflection; *NBS-GCR-76-61*.

Epitaxy; lattice misfit; pattern recognition; twinning; computer calculations; crystal structure; *TN893*.

Epoxy coatings; organic coatings; steel reinforcing bars; bridge decks; chloride ions; corrosion; deicing salts; *16189*.

Epoxy resin-copper seal; indium O-ring; cryogenic temperatures; *15854*.

EPR; iron 4+; optical absorption; perovskite; strontium titanate; transition metal; zero phonon line; charge transfer, color centers; crystal field; d^4 ions; *16201*.

Equation of state; ethane; hydrocarbon; liquefied natural gas; measurements; methane; mixtures; thermodynamic; density; dielectric constant; electromagnetic properties; *16631*.

Equation of state; ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; *TN684*.

Equation of state; excess function; hydrogen; interpolation methods; least squares; methane; thermodynamic properties; transport properties; correlation; *15731*.

Equation of state; high pressure; phase transitions; potassium chloride; ultrasonics; bulk modulus; *16029*.

Equation of state; interior ballistics; water; *16313*.

Equation of state; linear model; scaled equation; steam; critical density; critical exponents; critical pressure; critical region; critical temperature; *15730*.

Equation of state; SF_6; Xe; CO_2; critical exponents; critical point; *16081*.

Equation of state (PVT); ethane; Clausius-Mossotti function; dielectric constant; *16462*.

Equations; network analyzers; open circuit reflection coefficient; short circuit; standards; automatic; broad frequency; *16510*.

Equilibria; model; point defects; annealing; calcium fluoride; defect pairs; *15820*.

Equilibrium constant of formation; Gibbs energy of formation; heat capacity; ideal gas thermodynamic properties; internal rotational barrier height; propanone (acetone); torsional frequencies; 2-butanone (methyl ethyl ketone); *JPCRD* **5,** No. 2, 319-328 (1976).

Equilibrium data; Gibbs energy data; heat capacity data; partial molal properties; thermochemistry; thermodynamics; review articles; water pollution; aqueous systems; bibliography; biochemical systems; enthalpy data; entropy data; *SP454*.

Equipment design; fire fighters; fire fighting; fire fighting equipment; fire gases; open loop breathing apparatus; protective clothing; smoke inhalation; standards; breathing apparatus; closed loop breathing apparatus; *NBS-GCR-73-10*.

Equipment management software; fiscal administration software; grant/contract software; personnel management software; proposal/award software; research administration; software exchange; software summary; software survey; space management software; university systems; *TN916*.

Equity; financing; grants; pollution abatement; user fees; wastewater; water pollution; water resources; cost sharing; economic efficiency; environment; *16564*.

Equivalence; matric equation; partitioned matrix; Smith normal form; determinantal divisors; *J. Res.* **80B** No. 1, 89-98 (1976).

Equivalence principle; general relativity; gravitation; lunar orbit; moon; *15946*.

Erbium phosphate ground state; heat capacity; lattice sums; magnetic; susceptibility; antiferromagnetism; critical temperature; dipole-dipole interaction; *15866*.

Erosion; fracture; wear; castable refractories; coal gasification; deformation; *16600*.

Erosion; Hopkinson pressure bar apparatus; impedances; mismatching; stress wave interactions; substrates; tearing; vibratory apparatus; adhesion; cavitation; coatings; design charts; elastomers; *SP452*, pp. 120-123 (Sept. 1976).

Erosive wear; particle impingement; particle velocity measurement; wear; wear testing; *15778*.

$ErPO_4$; magnetic phase diagram; Néel temperature; spin-flop; antiferromagnetic transition; antiferromagnetism; dipolar interactions; *16436*.

Error; extract; paper; pH; suspension; acidity; contact; decantate; electrode; *NBSIR 75-915*.

Error; integrating detectors; TLD; environmental radiation measurements; *SP456*, pp. 187-198 (Nov. 1976).

Error analysis; circle fitting; *15834*.

Error analysis; failure prediction; failure prevention; fracture; statistics; strength; crack propagation; *16617*.

Error analysis; failure prediction; failure prevention; fracture; statistics; strength; crack propagation; *NBSIR 75-952*.

Error analysis; flux density; G/T (system gain/system noise temperature); ground station; radio star; accuracy; antenna; calibration; Cassiopeia A; *16499*.

Error analysis; flux loss; plastics; reflectance; scattering; spectrophotometry; translucency; transmittance; Vitrolite glass; blurring effect; edge loss; *TN594-12*.

Error analysis; friction, tire/pavement; kinetics, bicycle; measurements, bicycle braking; pitchover; standards, bicycle safety; test method, bicycle; bicycle brakes; brakes, bicycle; dynamics, bicycle; *NBSIR 75-786*.

Error analysis; G/T; precision measurements; radio star; satellite communications; *NBSIR 76-842*.

Error analysis; mathematical models; safety; separation; vertical separation; aircraft; air transportation; air traffic control models; altimetry; altitude; aviation; collision risk; *NBSIR 76-1067*.

Error bounds; parabolic cylinder functions; turning points; uniform asymptotic approximations; Weber's equation; *J. Res.* **80B** No. 4, 437-440 (1976).

Error evaluation; geological materials; instrumental-neutron activation analysis; comparative analyses; *SP422*, pp. 1241-1256 (Aug. 1976).

Errors; evaluation; program complexity; program measurement static; dynamic analysis; *16650*.

Errors; guarded-hot-plate apparatus; line-heat-source; thermal conductivity; ambient temperature index; edge-heat-loss; *16084*.

Errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; costs; data transmission systems; decisionmaking; economics; *NBS-GCR-74-29*.

Errors; natural water; sample storage; sampling; accuracy; analytical chemistry; contamination; *SP422*, pp. 805-836 (Aug. 1976).

Errors; probability plots; residuals; statistics; uncertainties; crystallographic data; *NBSIR 76-1102*.

Errors in lead analyses; lead; lead contamination evaluation and control; lead in animals and plants; pollution, lead; sampling techniques; trace analysis of lead; waters, lead in; accuracy of atomic absorption analytical techniques; *SP422*, pp. 321-351 (Aug. 1976).

Errors in spectrophotometry; interferences; multiple reflections; photometric linearity; polarization; sample characteristics; straylight; wavelength accuracy; bandwidth; calibration; *J. Res.* **80A** No. 4, 609-624 (1976).

Errors in spectrophotometry; photometric scale; slit width; spectral transmission; spectrophotometer standards; stray light; wavelength scale; *J. Res.* **80A** No. 4, 625-630 (1976).

Errors of analysis; homogenization; neutron activation analysis; sample preparation; standard materials; trace element analysis; *SP422*, pp. 1293-1304 (Aug. 1976).

Erythrocytes; hematocrit; scattering; ultrasound; angular dependence; blood; compressibility; density; distribution function; *SP453*, pp. 207-212 (Oct. 1976).

ESCA; extra-atomic relaxation; formaldehyde; oxygen; photoelectron spectroscopy; physisorption; tungsten; xenon; XPS; carbon monoxide; chemisorption; *16023*.

ESCA; field emission; photoemission; surfaces; x-ray photoemission; chemisorption; *16454*.

ESCA; insulator films; interface characteristics; internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; photovoltaic imaging; Rutherford backscattering; SCANIIR; secondary ion mass spectroscopy; semiconductor devices; *SP400-23*.

ESCA; ion scattering; secondary ion mass spectrometry; surface analysis; Auger spectrometry; electron microprobe analysis; *SP422*, pp. 541-573 (Aug. 1976).

Escape time; fire tests; heat detectors; residential fires; smoke detectors; detector sensitivity; detector siting; *NBSIR 76-1126*.

Esters; heat capacity; oligomers; sebacates; triglycerides; correlation; *16275*.

Estimating; fire; furniture; hazard; interior finish; smoke; building; *16123*.

Estimation schemes; kinetics; modeling; oxidation; pyrolysis; combustion; data base; energy conservation; *NBSIR 75-910*.

Etching; flame polishing; fused silica; hydroxyl; ion polishing; polishing; roughness; surface damage; thin films; threshold; damage threshold; *SP462*, pp. 310-314 (Dec. 1976).

Etching; grinding; sawing; silicon; standard; weighing; density; *NBSIR 76-1019*.

Etching; metals; neutron irradiation; recoil; surface effect; accuracy; activation analysis; charged particle irradiation; diffusion; *SP422*, pp. 1165-1171 (Aug. 1976).

Ethane; Clausius-Mossotti function; dielectric constant; equation of state (PVT); *16462*.

Ethane; heat capacity; heat of fusion; heat of transition; transition temperature; triple point; *16522*.

Ethane; heat capacity; liquid; saturated liquid; specific heat; vapor; constant volume; *J. Res.* **80A** Nos. 5 and 6, 739-759 (1976).

Ethane; hydrocarbon; liquefied natural gas; measurements; methane; mixtures; thermodynamic; density; dielectric constant; electromagnetic properties; equation of state; *16631*.

Ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; *TN684*.

Ethane; melting line; melting pressures; solid ethane; solid phase transition; *15805*.

Ethane; vapor pressure; *PVT; density; J. Res.* **80A** No. 1, 35-39 (1976).

Ethylene; flash photolysis resonance fluorescence; infrared laser; oxygen atoms; vibrationally excited reactant molecules; carbonyl sulfide; chemical kinetics; *16453*.

Ethylene; heavy noble gases; helium; linear model; methane; NBS equation; scaling laws; statistical analysis; steam; universality; air constituents; critical region parameters; *JPCRD* **5**, No. 1, 1-52 (1976).

Ethylene glycol dinitrate; explosives; generator; trinitrotoluene; vapors; calibration device; dinitrotoluene; *16402.*

ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; precondensates; radiation grafting; antimony oxide; *NBS-GCR-ETIP 76-22.*

ETIP; flame retardants; flammability; R&D contracting; radiation grafting; research consortia; cotton polyester blends; *NBS-GCR-ETIP 75-01.*

ETIP; government procurement; performance specifications; procurement mechanisms; technology incentives; *NBS-GCR-ETIP 73-02.*

ETIP; government procurement policy; noise reduction; performance specification; technology incentives; *NBS-GCR-ETIP 73-04.*

ETIP; government procurement policy; noise reduction; performance specification; technology incentives; energy conservation; *NBS-GCR-ETIP 73-05.*

ETIP; government procurement policy; technology incentives; energy conservation; *NBS-GCR-ETIP 73-06.*

ETIP; government-owned patents; patent screening; technology incentives; *NBS-GCR-ETIP 73-07, Vol. 1.*

ETIP; government-owned patents; patent screening; technology incentives; *NBS-GCR-ETIP 73-07, Vol. 2.*

ETIP; incentives; innovation; life cycle costing; medical products and standards; procurement policies; product testing; specifications; unsolicited proposals; VA; certification programs; *NBSIR 76-997.*

European; progressive collapse; regulatory process; abnormal loading; building regulations; design process; *NBS-GCR-75-48.*

Evaluated data; material properties; referral centers; sources of data; data centers; data tabulations; *16007.*

Evaluated data; nuclear electric hexadecapole moments; nuclear electric quadrupole moments; nuclear magnetic dipole moments; nuclear magnetic octupole moments; nuclear spins; *JPCRD* **5**, No. 4, 835-1092 (1976).

Evaluation; information systems; microfilm; microform; state-of-the-art study; automatic data processing; building codes; building regulations; computer applications; computers; enforcement; *NBS-GCR-74-26.*

Evaluation; inspection; manufactured building; model documents; NCSBCS; standards; state regulation; building codes; certification; compliance assurance; *BSS87.*

Evaluation; inter-calibration; quality control; standards; air pollution; calibration; *15978.*

Evaluation; organic coatings; pullout tests; bond strength; coated reinforcing bars; *15782.*

Evaluation; program complexity; program measurement static; dynamic analysis; errors; *16650.*

Evaluation criteria; key; password; personal identification; terminals; verification; ADP security; computer networks; controlled accessibility; encryption; *16013.*

Evaluation systems; Experimental Technology Incentives Program; procurement experiments; procurement procedures; proposal evaluation procedures; proposal preparation procedures; *NBSIR 76-1124.*

Evaporated metal-on-quartz; filters, transmittance; neutral filters; standard reference materials; transmittance characteristics; ultraviolet-visible filters; *J. Res.* **80A** No. 4, 637-641 (1976).

Evaporation coefficient; Langmuir vaporization; optical pyrometry; radiation heating; vapor pressures; AlO_2; Al_2O_3; emissivity; *16540.*

Evaporative rate; purification (evaporative); solutal-capillary; thermal capillary convection; vacuum vaporization; Al_2O_3; complex equilibria; convective diffusion; *15968.*

Excavation; foundations; geotechnical engineering; standards; buildings (codes); *16535.*

Excess electrons; hydrocarbons; ion mobility; liquids; mobility; quasifree electrons; solvated electrons; conduction band; drift mobility; energy levels; *NSRDS-NBS58.*

Excess function; hydrogen; interpolation methods; least squares; methane; thermodynamic properties; transport properties; correlation; equation of state; *15731.*

Excess Gibbs' energies; Henry's constants; liquid-vapor equilibria; methane-light hydrocarbon binary mixtures; critical loci; *16637.*

Exchange and correlation; jellium; bulk; electron mean free path; *15843.*

Exchange current; semiconductor; traps; zinc oxide; dislocation; electrochemical; *SP455*, pp. 139-148 (Nov. 1976).

Exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory; close-coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; *16532.*

Excitation; barium; electron impact; *16262.*

Excitation; fluorescence; ion; ionization; molecule; photon; positron; atom; collision cross section; detachment; dissociation; elastic scattering; electron; *SP426.*

Excitation; hydrogen; ionization; theoretical; collisions; electron; *15893.*

Excitation; infrared; rate coefficient; carbon dioxide; cross section; electrons; *16256.*

Excitation; optical spectroscopy; Stark effect; atomic hydrogen; Balmer alpha; beam foil; crossed beams; electrons; *15891.*

Excitation energy; *U; 5f* electron; actinium; *16581.*

Excitation exchange; radiative transfer; spectral line profiles; diffusion; *15714.*

Excitation functions; fast neutron activation analysis; fast particle activation analysis; interferences; primary interference reactions; systematic errors; trace analysis; accuracy; activation analysis; analytical chemistry; *SP422*, pp. 1189-1214 (Aug. 1976).

Excitation potential; ground state potential; nickel; band structure; energy levels; *15842.*

Excited states; NH; spin-orbit coupling; transition probability; comet; electric-dipole transition; *16502.*

Execution; execution monitoring; FORTRAN analysis; source code instrumenting; static analysis; transforms; *15918.*

Execution monitoring; FORTRAN analysis; source code instrumenting; static analysis; transforms; execution; *15918.*

Executive programs; information management; information processing; legislative programs; national policies; public concern; *16245.*

Exhaust; fluorescence; nitric oxide; quenching; sulfur dioxide; emission gas; *16444.*

Exotic mesons; meson classification; ψ and χ particles; 1^{--} states; e^+e^- annihilation; *15961.*

Expansion; paraffins; cryogenics; crystallinity; density; *16184.*

Experiment; LEED; multi-photon; photoionization; review; scattering; spin-polarization; electron; *15900.*

Experiment design, statistical; graphical diagnosis; interlaboratory tests; randomization, constrained; ruggedness test; statistical techniques; Youden plot; Youden squares; Youden, W. J.; calibration designs; chain blocks; collaborative tests; *16115.*

Experimental; floor systems; human response; random process; spectral analysis; vibration; analysis; *TN904.*

Experimental; floor systems; human response; random process; spectral analysis; vibration; analysis; *NBSIR 75-951.*

Experimental; ionized spectra; Stark broadening parameters; Stark shifts; Stark widths; critically evaluated data; *JPCRD* **5**, No. 2, 259-308 (1976).

Experimental; magnetic suspension; methane; nitrogen; saturated liquid; tables; apparatus; density; *16645*.

Experimental; magnetic suspension densimeter; normal butane; saturated liquid; table; density; *16646*.

Experimental; neutral atom; review; shift; Stark broadening; width; *JPCRD* **5**, No. 2, 209-258 (1976).

Experimental mechanics; fracture; fracture toughness; interferometry; model experiments; stress; stress intensity; cracks; *15742*.

Experimental office building; energy conservation; energy consumption prediction; *15741*.

Experimental relativity; laser spectroscopy; laser stabilization; saturated absorption; accelerated atom beam; *15905*.

Experimental Technology Incentives Program; life-cycle costing; procurement experiments; refrigerator-freezers; energy-efficient products; *NBSIR 75-954*.

Experimental Technology Incentives Program; life-cycle costing; procurement experiments; water heaters; energy-efficient products; *NBSIR 76-983*.

Experimental Technology Incentives Program; gas and electric ranges; life-cycle costing; procurement experiments; energy-efficient products; *NBSIR 76-1027*.

Experimental Technology Incentives Program; procurement experiments; procurement procedures; proposal evaluation procedures; proposal preparation procedures; evaluation systems; *NBSIR 76-1124*.

Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; policies; private sector; R&D; technological change; decisionmaking; *NBS-GCR-ETIP 76-03*.

Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; policies; private sector; R&D; technological change; decisionmaking; *NBS-GCR-ETIP 76-04*.

Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; policies; R&D; technological change; technology; demonstration projects; *NBS-GCR-ETIP 76-05*.

Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; policies; R&D; technological change; technology; demonstration projects; *NBS-GCR-ETIP 76-06*.

Experimental Technology Incentives Program; life cycle costing; procurement experiments; electric ranges; energy efficient products; *NBS-GCR-ETIP 76-09*.

Experimental Technology Incentives Program; life cycle costing; procurement experiments; refrigerators; energy efficient products; *NBS-GCR-ETIP 76-10*.

Experimental Technology Incentives Program; federal policies; innovation loans; R&D; small business; Small Business Administration; technological change; *NBS-GCR-ETIP 76-11*.

Experimental Technology Incentives Program; life cycle costing; procurement experiments; room air conditioners; energy efficient products; *NBS-GCR-ETIP 76-13*.

Experimental Technology Incentives Program; life cycle costing; procurement experiments; water heaters; energy efficient products; *NBS-GCR-ETIP 76-14*.

Experimental Technology Incentives Program; gas ranges; life cycle costing; procurement experiments; energy efficient products; *NBS-GCR-ETIP 76-15*.

Experimental Technology Incentives Program; Nuclear Regulatory Commission; standards development; technological change; administrative experiment; American National Standards Institute; *NBS-GCR-ETIP 76-16*.

Experimental Technology Incentives Program (ETIP); innovation; life cycle costing; local government; procurement policy; state government; bid evaluation; *NBS-GCR-ETIP 76-17*.

Experimental Technology Incentives Program (ETIP); Federal Supply Service; life cycle costing; procurement policy; specifications; value; *NBS-GCR-ETIP 76-18*.

Experimental Technology Incentives Program; life cycle costing; procurement experiments; window air conditioners; energy efficient products; *NBS-GCR-ETIP 76-19*.

Experimental Technology Incentives Program (ETIP); Federal Supply Service; life cycle costing; procurement policy; specifications; value incentives; computer air conditioning units; *NBS-GCR-ETIP 76-23*.

Explosion; fire; fuel; gasoline; hydrogen; methane; safety; *TN690*.

Explosion; fire; hydrogen; leakage; methane; safety; vents; automobile; detection; dispersion; *16634*.

Explosion test; ground strength; ground vibration; liquefaction; pore-water pressure; earthquake; *SP444*, pp. III-38—III-51 (Apr. 1976).

Explosions; gas; hazardous materials; loads; progressive collapse; sonic boom; vehicular collision; bombs; building codes; design criteria; *BSS89*.

Explosive; x-ray equipment; performance standard, EOD; bomb disarmament; *16346*.

Explosive sensitivity tests; heat of decomposition; oxygen balance; activation energy; bond dissociation energy; computer programs; *15957*.

Explosive vapor detectors; firebug; impulse generators; MHD electrode materials; optical standards; safety wheels; bike regulations; bomb disarmament; computer auditing; energy options; *DIM/NBS* **60**, No. 7, 1-24 (1976).

Explosives; generator; trinitrotoluene; vapors; calibration device; dinitrotoluene; ethylene glycol dinitrate; *16402*.

Explosives; single-crystal; triazine; x ray; diffractometer; direct methods; *15735*.

Exponential distribution; low-level counting; noble gas separation; on-line computer; pulse shape discrimination; tropospheric mixing; Ar-37; atmospheric radioactivity; cosmic-ray reactions; *15744*.

Exponential integral; FORTRAN program; hyperbolic sine and cosine integrals; key values; recurrence relations; continued fraction; cosine integral; *J. Res.* **80B** No. 2, 291-313 (1976).

Exponentially distributed points; facility location; location theory; normally distributed points; numerical analysis; optimization; stochastic Weber problem; always convergent algorithms; *J. Res.* **80B** No. 1, 53-73 (1976).

Exports; industrializing countries; labeling; seminar; South Asia trade; testing; certification; developing countries; *SP438*.

Exposure; phantoms; phototiming; radiographic examination; x-ray tube potential; attenuation; *SP456*, pp. 381-388 (Nov. 1976).

Exposure rate; geometry; instrument; ion chamber; roentgen; standard; γ radiation; γ response; calibration; *SP456*, pp. 59-63 (Nov. 1976).

Exposure standard; international intercomparison; cobalt-60; *16095*.

Extended precision arithmetic; floating point arithmetic; Fortran extended data types; Fortran precompiler; elementary function evaluation; *16461*.

Extended-range capacitance measurement; high-voltage C(V) measurements; modified MIS C(V) measurements; bias-isolation unit; capacitance measurements at high applied-bias voltage; capacitance-meter; *SP400-34*.

Extended-type objects; operating system structures; protection; reliable software; reliability; security; small protection domains; types; capability; capability-based addressing; computer security; *TN919*.

Exterior exposure; latex paints; nonmercurial fungicides; accelerated testing; alkyd paints; environmental chamber; *16416.*

Extinction coefficients; N_2O_4; NO_2; spectra; temperature effects; absorption; *J. Res.* **80A** No. 2, 143-166 (1976).

Extinguishability; flammability; polyester/cotton fabrics; cotton fabrics; *16149.*

Extinguishment; fabric flammability; fabrics; fibers; finishes; flame retardant treatments; nylon; wool; cotton; cotton/polyester; *NBS-GCR-76-71.*

Extra-atomic relaxation; formaldehyde; oxygen; photoelectron spectroscopy; physisorption; tungsten; xenon; XPS; carbon monoxide; chemisorption; ESCA; *16023.*

Extract; paper; pH; suspension; acidity; contact; decantate; electrode; error; *NBSIR 75-915.*

Extraction; gas chromatography; isolation and clean-up; mass spectrometry; organic trace analysis; qualitative accuracy; quality control; quantitative accuracy; reference materials; sampling; concentration; detectors; *SP422,* pp. 9-34 (Aug. 1976).

Extraction yields; mercury; neutron activation analysis; organomercury; solvent extraction; environmental matrices; *SP422,* pp. 1233-1240 (Aug. 1976).

Extrapolation; fields and antennas; antenna gain, polarization and pattern; deconvolution; *15827.*

Extrathermodynamic relationships; ionization potential; linear free-energy relationship; polarography; solvatochromic relationship; ultraviolet and visible spectroscopy; aromatic amine; benzene derivative; charge-transfer complex; *J. Res.* **80A** No. 2, 173-187 (1976).

Extreme wind; tornado; wind loads; building code; damage classification; *SP444,* pp. I-34—I-39 (Apr. 1976).

Extrinsic damage thresholds; high-power lasers; infrared materials; tensile stress; cadmium telluride; elastic compliance tensor; elastic moduli; *SP462,* pp. 119-125 (Dec. 1976).

Extrusion; hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; *16274.*

F

Fabric; fire hazard; flammability testing; thermal measurements; thermodynamic properties; apparel fabric; *NBS-GCR-73-8.*

Fabric, burn; flammability; burn, fabric; *NBS-GCR-73-15.*

Fabric construction; fabric flammability; fire spread; flame spread; flame spread rate; surfaces; textiles; edges; *NBS-GCR-75-34.*

Fabric fires; FFACTS; garments; ignition sources; space heaters; burns; *NBSIR 76-1014.*

Fabric fires; fire injuries; flammable fabrics; ignition hazards; ignition sources; lighters; matches; burns; *NBS-GCR-74-32.*

Fabric flammability; fabrics; ignition; heat energy; tests; *NBS-GCR-76-70.*

Fabric flammability; fabrics; fibers; finishes; flame retardant treatments; nylon; wool; cotton; cotton/polyester; extinguishment; *NBS-GCR-76-71.*

Fabric flammability; FFACTS; fire accidents; fire data systems; fire hazards; fires; hazard analysis; NEISS; plastics flammability; product safety; accident data; data systems; *16361.*

Fabric flammability; fire spread; flame spread; flame spread rate; surfaces; textiles; edges; fabric construction; *NBS-GCR-75-34.*

Fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; precondensates; radiation grafting; antimony oxide; bromine; *NBS-GCR-ETIP 76-22.*

Fabric flammability; flammability testing; heat transfer; smoldering fabrics; *NBS-GCR-73-2.*

Fabric related burn injuries; apparel, burn injuries; burn injuries, fabric related; burning apparel; *NBS-GCR-73-11.*

Fabrication; life cycle costing; materials policy; nondestructive evaluation; performance; processing; technical strategy; design; development; *15873.*

Fabrication variables; immersion testing; interim reference standard; longitudinal waves; metallurgical variables; nondestructive evaluation; pulse echo; steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; *NBSIR 76-984.*

Fabrics; fibers; finishes; flame retardant treatments; nylon; wool; cotton; cotton/polyester; extinguishment; fabric flammability; *NBS-GCR-76-71.*

Fabrics; fire; flammability tests; garments; heat transfer; standards; apparel; burn injury; ease of ignition; *NBSIR 76-1072.*

Fabrics; fire hazard; flammability testing; ignition; thermal burns; apparel fabrics; *NBS-GCR-73-7.*

Fabrics; fire hazard; flammability testing; skin; thermal burns; thermal measurements; apparel fabrics; *NBS-GCR-73-9.*

Fabrics; fire hazard; flammability testing; simulation; skin; thermal burns; apparel fabrics; *NBS-GCR-73-13.*

Fabrics; fire hazards; flammability testing; ignition; skin; thermal burns; thermal measurements; apparel fabrics; *NBS-GCR-73-6.*

Fabrics; fire hazards; flammability testing; ignition; thermal burns; thermal measurements; apparel fabrics; *NBS-GCR-73-12.*

Fabrics; flame retardants; flammability; phosphorus; polyester; rayon; treatments; cotton; *NBS-GCR-73-16.*

Fabrics; flammability; heat flux; standards; tents; tests; uniforms; upholstered furniture; apparel; burn injury; carpets; draperies; *16144.*

Fabrics; ignition; heat energy; tests; fabric flammability; *NBS-GCR-76-70.*

Faces; Jordan-equivalent; matrices; polyhedral; algebraic; cones; *16044.*

Facility location; location theory; normally distributed points; numerical analysis; optimization; stochastic Weber problem; always convergent algorithms; exponentially distributed points; *J. Res.* **80B** No. 1, 53-73 (1976).

Facsimile transmission extension; photocopying; reprography developments; bibliographic data files; communications technology developments; computer developments; COM systems extension; copyright protection; *16040.*

Factory-built housing; industrialized building; inspection; manufactured building; model codes; model documents; NCSBCS; on-site construction; prefabricated construction; standards; state-local relationship; state regulations; building codes; *NBS-GCR-74-27.*

Fail-safe operation; high strength materials; mechanical failure; potential service conditions; proliferation of specifications; environmental extremes; *SP423,* pp. 193-197 (Apr. 1976).

Failure; probability distribution functions; reliability; structural engineering; wind (meteorology); wind pressure; buildings (codes); *16544.*

Failure; probability theory; random process; safety; statistical analysis; structural engineering; *SP444,* pp. IV-1—IV-15 (Apr. 1976).

Failure analysis; failure analysis case histories; failure prevention; reliability; safety; design; engineering education; *SP433.*

Failure analysis; failure modes; hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; *SP400-28.*

Failure analysis; failure prevention; fracture; fractography; mechanical failure; crack propagation; *SP423,* pp. 3-11 (Apr. 1976).

229-317 O - 77 - 35

Failure analysis; fiberglass-reinforced plastics; flammability; guy insulators; high-voltage tests; insulators, tower guy; Loran C; pultruded rods; rods, insulator; breakdown, electrical; *NBSIR 76-1136.*

Failure analysis; hot spots; integrated circuits; laser scanner; measurement method; nondestructive test; nonlinear operation; optical scanner; reliability; transistors; *SP400-27.*

Failure analysis case histories; failure prevention; reliability; safety; design; engineering education; failure analysis; *SP433.*

Failure mechanisms; mechanical failure; microstructural effects on mechanical failure; continuum cracks; continuum mechanics; *SP423,* pp. 181-191 (Apr. 1976).

Failure modes; hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; *SP400-28.*

Failure predictability through small size; microencapsulated coated fuel particles; computer modeling on a microscale; elastoplastic micropressure vessels; *SP452,* pp. 31-42 (Sept. 1976).

Failure prediction; failure prevention; fracture; statistics; strength; crack propagation; error analysis; *16617.*

Failure prediction; failure prevention; fracture; statistics; strength; crack propagation; error analysis; *NBSIR 75-952.*

Failure prediction; film rupture-metal dissolution; hydrogen embrittlement; stress corrosion cracking; stress-sorption; corrosion; *SP423,* pp. 27-40 (Apr. 1976).

Failure prevention; fracture; fractography; mechanical failure; crack propagation; failure analysis; *SP423,* pp. 3-11 (Apr. 1976).

Failure prevention; fracture; statistics; strength; crack propagation; error analysis; failure prediction; *16617.*

Failure prevention; fracture; statistics; strength; crack propagation; error analysis; failure prediction; *NBSIR 75-952.*

Failure prevention; government action; mechanical failure; safety standards; transportation safety; effects of mechanical failure on environment; *SP423,* pp. 153-163 (Apr. 1976).

Failure prevention; government action; government responsibility; mechanical failure; safety standards; consumer product safety; *SP423,* pp. 215-219 (Apr. 1976).

Failure prevention; government action; mechanical failure; mechanical reliability; safety standards; conservation of material resources; *SP423,* pp. 221-225 (Apr. 1976).

Failure prevention; mechanical failure; mechanical malfunction; quality assurance; reactor systems and components; safety standards; *SP423,* pp. 143-151 (Apr. 1976).

Failure prevention; mechanical failure; metal coatings; plated coatings; polymer coatings; solid film lubricants; sputtered coatings; wear; barrier film; chemical coatings; *SP452.*

Failure prevention; reliability; safety; design; engineering education; failure analysis; failure analysis case histories; *SP433.*

Failure probabilities; lifetime assurance; proof testing; slow crack growth; unloading; *16039.*

Failure times; high temperatures; silicon nitride; slow crack growth; acoustic emission; crack propagation; cyclic conditions; *16064.*

Failures; progressive collapse; specific resistance; abnormal loading; alternate path; annotated bibliography; bibliography; building code; building regulations; collapse; *BSS67.*

Falls; flows; landslides; mechanisms; slides; avalanches; earthquakes; *SP444,* pp. III-52—III-71 (Apr. 1976).

Falsework; formwork; loads; reshoring; safety; shoring; standards; building; codes; concrete; construction; *BSS80.*

Far field intensity; laser windows; thermal distortion; thermal lensing; ZnSe; *SP435,* pp. 142-147 (Apr. 1976).

Far infrared; Josephson effect; strong electron-phonon coupling; superconductivity; electron tunneling; electronic devices; *16478.*

Far ultraviolet spectroscopy; ion absorption spectrum; ion photoionization; laser ionization; photoionization resonances; sodium; *16415.*

Faraday; silver; coulometry; electrochemical equivalent; electrochemical equivalent of silver; *15922.*

Faraday effect; ferromagnetic semiconductor; hot-pressed; infrared transmission; laser induced damage; optical isolation; $CdCr_2S_4$; chalcogenide spinel; *SP462,* pp. 126-135 (Dec. 1976).

Fashion; flammability; laser measurement; science; air conditioners; attic fans; basic research; chemical thermodynamics; door security; Elliot Richardson; energy conservation; engineering; *DIM/NBS* **60,** No. 6, 1-24 (1976).

Fast neutron; tissue equivalent; calorimeter; dosimetry; *SP456,* pp. 327-333 (Nov. 1976).

Fast neutron activation analysis; fast particle activation analysis; interferences; primary interference reactions; systematic errors; trace analysis; accuracy; activation analysis; analytical chemistry; charged particle activation analysis; *SP422,* pp. 1189-1214 (Aug. 1976).

Fast neutrons; initial spectra; microdosimetric parameters; nuclear data; slowing-down spectra; energy deposition spectra; *15950.*

Fast particle activation analysis; interferences; primary interference reactions; systematic errors; trace analysis; accuracy; activation analysis; analytical chemistry; charged particle activation analysis; cross sections; *SP422,* pp. 1189-1214 (Aug. 1976).

Fast plating; fatigue strength; grinding; hardness; stress; tensile strength; wear; corrosion; crack-free chromium; electroplating; *SP452,* pp. 56-63 (Sept. 1976).

Fast risetime; flat pulse baseline/topline; pulse generator; step waveform; tunnel diode; directional coupler; *U.S. Patent 3,967,140.*

Fatalities; fire fighter; occupational safety and health; *NBS-GCR-76-60.*

Fatigue; fiber composites; liquid helium; low temperature tests; mechanical properties; cryogenics; *16194.*

Fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; composites; copper alloys; cryogenic temperatures; elastic properties; engineering materials; *NBSIR 75-828.*

Fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; aluminum alloys; composites; cryogenic temperatures; elastic properties; engineering materials; *NBSIR 76-839.*

Fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; *NBSIR 76-848.*

Fatigue; fracture; laboratory automation; mechanical testing; plasticity; polyvinyl chloride; servo-hydraulic system; viscoelasticity; yield point; biaxial; *16626.*

Fatigue; fracture toughness; low temperature tests; mechanical properties; titanium alloy; electron beam welding; *NBSIR 76-836.*

Fatigue; Kaiser's effect; acoustic emission; amorphous polymer; crazing; *16417.*

Fatigue; lubricant film thickness; scuffing; wear; contact lubrication; elastohydrodynamic contacts; *SP423,* pp. 41-54 (Apr. 1976).

Fatigue crack growth; fatigue failure; metal fatigue; crack initiation; crack propagation; *SP423,* pp. 13-24 (Apr. 1976).

Fatigue crack propagation; fracture toughness; J-integral; low temperature tests; titanium alloys; *16531.*

Fatigue cracks; flat bottomed holes; standards; steel; titanium; transducer calibration; ultrasonic reference blocks; acoustic emission; aluminum; *16252.*

Fatigue damage; rope, aramid-fiber; slings, cargo; terminations, rope; weathering, simulated; aramid fiber rope; breaking load, rope; cable, aramid-fiber; end fittings, rope; *NBSIR 76-1159.*

Fatigue failure; mechanical failure; mechanical reliability; stress corrosion cracking; brittle fracture; economics of failure prevention; *SP423.*

Fatigue failure; metal fatigue; crack initiation; crack propagation; fatigue crack growth; *SP423,* pp. 13-24 (Apr. 1976).

Fatigue strength; grinding; hardness; stress; tensile strength; wear; corrosion; crack-free chromium; electroplating; fast plating; *SP452,* pp. 56-63 (Sept. 1976).

Fault-tree diagrams; generic safety standards; household appliances; operations research; thermal burn hazards; burn hazards, household appliances; *NBSIR 76-1097.*

Fe; ferromagnetism; soft x-ray emission; soft x-ray spectra; transition metals; Co; Cr; *d*-band widths; electronic structure; *15780.*

Fe I; iron; iron lifetimes; lifetimes in Fe I; atomic spectra; energy levels; *J. Res.* **80A** Nos. 5 and 6, 787-797 (1976).

Feature selection; multivariate analysis; optimization techniques; pattern recognition; signal processing; spectral resolution; statistics; analytical chemistry; curve fitting; data reduction; *15964.*

Fe-Cr alloys; passive films; pitting corrosion; stainless steel; x-ray analysis; electron microscopy; *16024.*

Federal ADP installations; Federal Standard COBOL; impact evaluation; sample; software management; survey; ADP; COBOL; *NBSIR 76-1100.*

Federal funding of civilian R&D; federal policies; policies; private sector; R&D; technological change; decisionmaking; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-03.*

Federal funding of civilian R&D; federal policies; policies; private sector; R&D; technological change; decisionmaking; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-04.*

Federal funding of civilian R&D; federal policies; guidelines; policies; R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-05.*

Federal funding of civilian R&D; federal policies; guidelines; policies; R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-06.*

Federal Information Processing Standards Publication; information processing; privacy; security; terms; vocabulary; computer; data processing; definitions; *FIPS PUB 39.*

Federal Information Processing Standard; Federal Standard COBOL; software; standards conformance; COBOL; COBOL coding form; *FIPS PUB 44.*

Federal Information Processing Standards; information interchange; information processing; information systems; American National Standards; American National Standards Institute; data; data base systems; data elements; data management; *NBSIR 76-1015.*

Federal libraries; library automation; survey report; *16076.*

Federal policies; guidelines; policies; R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; *NBS-GCR-ETIP 76-05.*

Federal policies; guidelines; policies; R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; *NBS-GCR-ETIP 76-06.*

Federal policies; innovation loans; R&D; small business; Small Business Administration; technological change; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-11.*

Federal policies; policies; private sector; R&D; technological change; decisionmaking; Experimental Technology Incentives Program; federal funding of civilian R&D; *NBS-GCR-ETIP 76-03.*

Federal policies; policies; private sector; R&D; technological change; decisionmaking; Experimental Technology Incentives Program; federal funding of civilian R&D; *NBS-GCR-ETIP 76-04.*

Federal regulating agency; Food and Drug Administration; radiation measurements; *SP456,* pp. 25-29 (Nov. 1976).

Federal Standard COBOL; impact evaluation; sample; software management; survey; ADP; COBOL; Federal ADP installations; *NBSIR 76-1100.*

Federal Standard COBOL; software; standards conformance; COBOL; COBOL coding form; Federal Information Processing Standard; *FIPS PUB 44.*

Federal Supply Service; life cycle costing; procurement policy; specifications; value; Experimental Technology Incentives Program (ETIP); *NBS-GCR-ETIP 76-18.*

Federal Supply Service; life cycle costing; procurement policy; specifications; value incentives; computer air conditioning units; Experimental Technology Incentives Program (ETIP); *NBS-GCR-ETIP 76-23.*

Federal technology policy; SBIC's; securities and tax regulation; small firm finances; technological change; technology subsidies; venture capital; capital market imperfections; *NBS-GCR-ETIP 76-08.*

Federal technology policy; SBIC's; securities and tax regulation; small firm finances; technological change; technology subsidies; venture capital; capital market imperfections; *NBS-GCR-ETIP 76-12.*

Feedback; teaching method; architectural-design teaching; assemblage; design critiques; *16020.*

Fenestration; HVAC systems; illumination; insulation; lighting; performance standard; thermal performance; ventilation; water heating; air leakage; building design; energy conservation; *NBSIR 74-452.*

Ferric phthalocyanine; kinetics; oxygen reduction; phthalocyanine catalysts; *SP455,* pp. 253-258 (Nov. 1976).

Ferroelectrics; KDP; PZT 65/35; thallium chloride; very low temperatures; barium titanate; dielectric properties; *16491.*

Ferrograph; lube oil analysis; magnetic drain plugs; oil filters; oil monitors; particle detectors; spectrograph; chip detectors; *NBS-GCR-74-23.*

Ferrographic analysis; lubricated rubbing contact; polymer formation; *SP452,* pp. 187-191 (Sept. 1976).

Ferromagnetic semiconductor; hot-pressed; infrared transmission; laser induced damage; optical isolation; $CdCr_2S_4$; chalcogenide spinel; Faraday effect; *SP462,* pp. 126-135 (Dec. 1976).

Ferromagnetism; soft x-ray emission; soft x-ray spectra; transition metals; Co; Cr; *d*-band widths; electronic structure; Fe; *15780.*

Ferrous alloys; localized corrosion; passivity; chemical breakdown; chloride ion; corrosion; *16018.*

FET; pi network; tank circuit; *16580.*

Fe^{2+}/Fe^{3+} reaction; formic acid oxidation; oxygen reduction; underpotential deposition; electrocatalysis; foreign metal monolayers; *SP455,* pp. 191-200 (Nov. 1976).

Fe_2O_3; Fe_3O_4; high-voltage electron microscopy; *in situ* hematite; magnetite; electron microscopy; *16292.*

Fe_3O_4; high-voltage electron microscopy; *in situ* hematite; magnetite; electron microscopy; Fe_2O_3; *16292.*

Fe-57 Mössbauer spectra; Mössbauer spectra; backscattering measurements; *16387.*

FFACTS; fire accidents; fire data systems; fire hazards; fires; hazard analysis; NEISS; plastics flammability; product safety; accident data; data systems; fabric flammability; *16361.*

FFACTS; garments; ignition sources; space heaters; burns; fabric fires; *NBSIR 76-1014.*

FFACTS system; fire; flammable fabrics; NFPA; curtains; draperies; *NBSIR 75-902.*
FFT; Fourier transform; Fourier transform frequency; mechanical shock; shock generator; accelerometer; calibration; *16128.*
Fiber composites; liquid helium; low temperature tests; mechanical properties; cryogenics; fatigue; *16194.*
Fiber optics; field strength measurement; isolated EMC antenna; sensitive isotropic probe; broadband antenna; electromagnetic compatibility; *16210.*
Fiber optics; field strength measurement; isolated EMC antenna; sensitive isotropic probe; electromagnetic compatibility; *NBSIR 75-819.*
Fiberglass cloth; mechanical properties; stress analysis; superconducting coil composite; superconducting wire; thermal properties; *NBSIR 76-837.*
Fiberglass-reinforced plastics; flammability; guy insulators; high-voltage tests; insulators, tower guy; Loran C; pultruded rods; rods, insulator; breakdown, electrical; failure analysis; *NBSIR 76-1136.*
Fibers; finishes; flame retardant treatments; nylon; wool; cotton; cotton/polyester; extinguishment; fabric flammability; fabrics; *NBS-GCR-76-71.*
Field data; ground response; seismic waves; seismometer; soil-structure interaction; earthquake; *SP444,* pp. III-13—III-23 (Apr. 1976).
Field data; gust response; model; specifications; structure; theory; wind; bridge; design; *SP444,* pp. I-1—I-20 (Apr. 1976).
Field emission; photoemission; surfaces; x-ray photoemission; chemisorption; ESCA; *16454.*
Field emission; surface density of states; transfer Hamiltonian; *16418.*
Field inspection; foam and beam; honeycomb; impact; lightweight structures; military; reliability; sandwich panel; shelter; durability; *NBSIR 76-1025.*
Field ion energy distribution; field ionization; surface density of states; tungsten; *15752.*
Field ion microscope; surface; adatom; binding energy; *16543.*
Field ionization; surface density of states; tungsten; field ion energy distribution; *15752.*
Field meters; gain; microwave; near-field; calibrations; electromagnetic hazards; *NBSIR 75-805.*
Field observation; Indonesia; Japan; technical aid; volcanoes; *SP444,* pp. VI-1—VI-15 (Apr. 1976).
Field of values; Gersgorin's theorem; nonnegative matrix; Perron-Frobenius eigenvalue; spectrum of a square complex matrix; *D*-stable matrix; *15770.*
Field strength measurement; isolated EMC antenna; sensitive isotropic probe; broadband antenna; electromagnetic compatibility; fiber optics; *16210.*
Field strength measurement; isolated EMC antenna; sensitive isotropic probe; electromagnetic compatibility; fiber optics; *NBSIR 75-819.*
Field test; gas explosion; leak detection; Annandale; *16101.*
Field testing; instruments; source distributions; calibration; environmental gamma-rays; *SP456,* pp. 233-248 (Nov. 1976).
Field tests; galvanic couples; soil environment; stainless steels; stress-corrosion behavior; coatings; corrosion behavior; *NBSIR 76-1081.*
Field-ion microscopy; hydrogen; titanium; *15773.*
Field-ion microscopy; image analysis; three-color superposition; color superposition photography; *16228.*
Field-ion microscopy; zirconium; *16466.*
Field-ion microscopy (FIM); low energy electron diffraction (LEED); ultraviolet photoelectron spectroscopy (UPS); angle and energy distributions; charged particle spectroscopy; electron-stimulated desorption of ions (ESDIAD); *16078.*
Fields and antennas; antenna gain, polarization and pattern; deconvolution; extrapolation; *15827.*
Fields, effects on magnetic media; magnetic fields, erasure of data; magnetic media, data erasure; magnetic media, data protection; data loss, magnetic media; devices, effects on magnetic media; *16056.*
Filled polymers; mechanical properties; particulate composites; Poisson's ratio; shear modulus; Young's modulus; bulk modulus; composite materials; elastic constants; *16264.*
Filled polymers; mechanical properties; particulate composites; Poisson's ratio; Young's modulus; composite materials; elastic constants; *J. Res.* **80A** No. 1, 45-49 (1976).
Fillers; porous glass; radiopacity; reinforcements; wear; composite resins; composites; dental materials; *16586.*
Fillers; porous glass; radiopacity; reinforcements; wear; composite resins; composites; dental materials; *16587.*
Film badges, TLD, HPS working group; personnel dosimeters; *SP456,* pp. 277-284 (Nov. 1976).
Film boiling; forced convection; helium I; helium II; mixed convection; nucleate boiling; subcritical; supercritical; transition; turbulent flow; buoyancy; channels; *TN675.*
Film rupture-metal dissolution; hydrogen embrittlement; stress corrosion cracking; stress-sorption; corrosion; failure prediction; *SP423,* pp. 27-40 (Apr. 1976).
Film thickness; film uniformity; fingerprint impressions; fingerprint readers; image quality; ink films; lubricity; *16019.*
Film uniformity; fingerprint impressions; fingerprint readers; image quality; ink films; lubricity; film thickness; *16019.*
Films; images; neutron radiography; nondestructive tests; real-time imaging; thermoluminescence; track-etch; *15796.*
Filtering water; river water; sampling water for trace elements; suspended particulates in water; Teflon water sampler; trace elements; trace elements in water; water; *SP422,* pp. 439-455 (Aug. 1976).
Filters; orchard leaves; reference sample; x-ray analysis; calibration; *15984.*
Filters; orchard leaves; standard reference sample; x-ray analysis; calibration; *16065.*
Filters, transmittance; neutral filters; standard reference materials; transmittance characteristics; ultraviolet-visible filters; evaporated metal-on-quartz; *J. Res.* **80A** No. 4, 637-641 (1976).
Filtration; pressurized water reactors; primary coolant; sampling; water; analysis; carbon; crud; *SP422,* pp. 429-438 (Aug. 1976).
Filtration losses; metallic ions; pollution monitoring; rainwater analysis; sample stability; surface water analysis; *SP422,* pp. 633-648 (Aug. 1976).
FIM analysis; core structure; dislocation core structure; *16383.*
Finance; productivity; services—state/local government; automation; computer utilization; dedicated computers; EDP expenditure; employment; *16075.*
Financial; resources; risk; costs; energy; *SP403,* pp. 237-241 (June 1976).
Financing; grants; pollution abatement; wastewater; water pollution; water resources; cost sharing; efficiency; environment; *15810.*
Financing; grants; pollution abatement; user fees; wastewater; water pollution; water resources; cost sharing; economic efficiency; environment; equity; *16564.*
Fine particle standards; particle concentration; particle counting; particle size; particulates; standard reference materials; *16337.*
Fine structure; inner shell excitation; rf spectroscopy; rubidium; Zeeman effect; atomic beam; autoionization; differential metastability; *16098.*
Fine structure constant; fundamental constants; gyromagnetic ratio of the proton; *15934.*
Fingerprint; identification; pattern recognition; scanner; classification; computer; *16030.*

Fingerprint impressions; fingerprint readers; image quality; ink films; lubricity; film thickness; film uniformity; *16019.*

Fingerprint readers; image quality; ink films; lubricity; film thickness; film uniformity; fingerprint impressions; *16019.*

Finishes; flame retardant treatments; nylon; wool; cotton; cotton/polyester; extinguishment; fabric flammability; fabrics; fibers; *NBS-GCR-76-71.*

Finite deformation; incompressible materials; permanent set; polymers; rubbers, viscoelasticity; anisotropy; chemorheology; degradation; elasticity; *16339.*

Finite element; guyed tower; structural analysis; structural engineering; vibration analysis; wind load; *SP444,* pp. IV-37—IV-54 (Apr. 1976).

Finite element; seismic response; structural engineering; analytical model; dynamic analysis; dynamic loading; earthquake; energy dissipation; *SP444,* pp. IV-70—IV-89 (Apr. 1976).

Finite element analysis; joining; joints; single-lap joint analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; adhesive-bonded joints; bonded joints; double-lap joint analysis; *NBSIR 75-957.*

Finite element analysis; joints; nonlinear analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; bonded joints; computer simulation; cyclic loading; debond analysis; *16147.*

Finite torsion; natural rubber; scaling law; simple materials assumption; elasticity; *16278.*

FIPS; kitchen ranges; mercury; metal fires; metric; safety; WWV/WWVH; computer; energy measurement; EPIC; *DIM/NBS* **60,** No. 1, 1-24 (1976).

FIPS guidelines; software; automated data systems; computer programs; documentation; documentation content guidelines; *FIPS PUB 38.*

Fire; fire plume gas flow; room fires; *16112.*

Fire; flammability; floor coverings; pad; underlayments; carpets; *NBSIR 76-1018.*

Fire; flammability tests; garments; heat transfer; standards; apparel; burn injury; ease of ignition; fabrics; *NBSIR 76-1072.*

Fire; flammable fabrics; NFPA; curtains; draperies; FFACTS system; *NBSIR 75-902.*

Fire; fuel; gasoline; hydrogen; methane; safety; explosion; *TN690.*

Fire; furniture; hazard; interior finish; smoke; building; estimating; *16123.*

Fire; glass door; lead nitrate; mercury thermometers; metric; nuclear power; police radars; solar energy; SRM's; computer systems; environmental; *DIM/NBS* **60,** No. 2, 1-25 (1976).

Fire; guardrail; high-capacity; mathematics; mercury; performance standard; pressure transducers; SRM; surgical implants; testing; thermal transients; architectural heritage; *DIM/NBS* **60,** No. 8, 1-24 (1976).

Fire; hazard assessment; toxicity; bioassay; combustion products; *16204.*

Fire; helmets; mobile homes; phase diagrams; tire pressure; air; building codes; computer tapes; energy; *DIM/NBS* **60,** No. 12, 1-24 (1976).

Fire; hydrogen; leakage; methane; safety; vents; automobile; detection; dispersion; explosion; *16634.*

Fire; hydrogen chloride; hydrogen cyanide; oxygen; rats; blood; carbon dioxide; carbon monoxide; cyanide; *NBSIR 75-966.*

Fire accidents; fire data systems; fire hazards; fires; hazard analysis; NEISS; plastics flammability; product safety; accident data; data systems; fabric flammability; FFACTS; *16361.*

Fire codes; fire research; fire safety; *16176.*

Fire control; fire detection; fire research; fire spread; flammability; building design; consumer protection; *SP416, 1976 Edition.*

Fire data; fire hazard; fire injuries; fire investigation; fire loss; fire reporting; fires; *16139.*

Fire data systems; fire hazards; fires; hazard analysis; NEISS; plastics flammability; product safety; accident data; data systems; fabric flammability; FFACTS; fire accidents; *16361.*

Fire departments; fire detection system; fire tests; flame detectors; flammability tests; hazard analysis; interior furnishings; toxicity; bibliographies; building fires; construction materials; *NBSIR 76-1120.*

Fire detection; fire extinguishment; flame detection; heat detection; smoke detection; automatic sprinklers; carbon dioxide; *NBSIR 76-1028.*

Fire detection; fire research; fire spread; flammability; building design; consumer protection; fire control; *SP416, 1976 Edition.*

Fire detection; flame detectors; heat detectors; hospitals; hotels; maintenance; nursing homes; reliability; schools; smoke detectors; atriums; *16179.*

Fire detection; light extinction; light scatter; light-scatter measurements; photoelectric smoke detectors; smoke detectors; *NBSIR 76-1087.*

Fire detection; regulations; smoke detectors; United States standards; *16187.*

Fire detection system; fire tests; flame detectors; flammability tests; hazard analysis; interior furnishings; toxicity; bibliographies; building fires; construction materials; fire departments; *NBSIR 76-1120.*

Fire detector; test methods; *NBSIR 76-1172.*

Fire detectors; flame detectors; heat detectors; infrared detectors; smoke detectors; testing; ultraviolet detectors; detection; *NBSIR 76-1040.*

Fire detectors; gas detectors; smoke detectors; Taguchi gas sensors; detectors; *NBSIR 76-990.*

Fire detectors; mobile homes; photoelectric smoke detectors; smoke detector installation; smoke detector placement; smoke detectors; detector sensitivity; *NBSIR 76-1016.*

Fire endurance; fire test; flame emissivity; heat transfer; pyrolysis; radiant heat; thermal inertia; ASTM Standard E119; building construction; charring; combustion; *NBS-GCR-75-50.*

Fire endurance; fire tests; reinforced concrete; sensitivity analysis; steel; structural mechanics; uncertainty; creep; *BSS76.*

Fire endurance; insulation; intumescent paint; potential heat; reinforced plastic; small furnace test; smoke; aluminum bulkhead; combustion gases; *NBSIR 76-1012.*

Fire endurance furnace; fire growth; heat release; smoke abatement; sprinkler system; construction; corridor test; *16150.*

Fire extinguishment; flame detection; heat detection; smoke detection; automatic sprinklers; carbon dioxide; fire detection; *NBSIR 76-1028.*

Fire fighter; occupational safety and health; fatalities; *NBS-GCR-76-60.*

Fire fighters; fire fighting; fire fighting equipment; fire gases; open loop breathing apparatus; protective clothing; smoke inhalation; standards; breathing apparatus; closed loop breathing apparatus; equipment design; *NBS-GCR-73-10.*

Fire fighting; fire fighting equipment; fire gases; open loop breathing apparatus; protective clothing; smoke inhalation; standards; breathing apparatus; closed loop breathing apparatus; equipment design; fire fighters; *NBS-GCR-73-10.*

Fire fighting equipment; fire gases; open loop breathing apparatus; protective clothing; smoke inhalation; standards; breathing apparatus; closed loop breathing apparatus; equipment design; fire fighters; fire fighting; *NBS-GCR-73-10.*

Fire gases; fire hazards; furniture; life hazard; oxygen; smoke; temperature; toxicity; upholstery; bedding; beds; carbon dioxide; carbon monoxide; combustion products; *NBS-GCR-73-1.*

Fire gases; open loop breathing apparatus; protective clothing; smoke inhalation; standards; breathing apparatus; closed loop breathing apparatus; equipment design; fire fighters; fire fighting; fire fighting equipment; *NBS-GCR-73-10.*

Fire growth; flame spread; heat release; interior finish; reduced scale modeling; room corner tests; smoke; buildings; *16183.*
Fire growth; heat release; smoke abatement; sprinkler system; construction; corridor test; fire endurance furnace; *16150.*
Fire hazard; fire injuries; fire investigation; fire loss; fire reporting; fires; fire data; *16139.*
Fire hazard; fire safety; flooring test; radiant panel; *16233.*
Fire hazard; fire safety; flooring test; radiant panel; *NBSIR 75-950.*
Fire hazard; flammability testing; ignition; thermal burns; apparel fabrics; fabrics; *NBS-GCR-73-7.*
Fire hazard; flammability testing; thermal measurements; thermodynamic properties; apparel fabric; fabric; *NBS-GCR-73-8.*
Fire hazard; flammability testing; skin; thermal burns; thermal measurements; apparel fabrics; fabrics; *NBS-GCR-73-9.*
Fire hazard; flammability testing; simulation; skin; thermal burns; apparel fabrics; fabrics; *NBS-GCR-73-13.*
Fire hazard; flammability testing; heat conductivity; simulation; skin; apparel fabrics; *NBS-GCR-73-14.*
Fire hazard; flash fire; polyurethane; pyrolysis; aircraft fires; *NBSIR 75-757.*
Fire hazard; glowing electrical connections; arcing/sparking; branch circuit; contact resistance; electrical connections; *NBSIR 76-1011.*
Fire hazard; participation; property; system; test method; ASTM; classification; *16124.*
Fire hazards; fire losses; fire reporting; fire safety; information systems; National Fire Data System; specifications; state governments; systems analysis; design criteria; *NBS-GCR-73-5.*
Fire hazards; fires; hazard analysis; NEISS; plastics flammability; product safety; accident data; data systems; fabric flammability; FFACTS; fire accidents; fire data systems; *16361.*
Fire hazards; flammability testing; ignition; skin; thermal burns; thermal measurements; apparel fabrics; fabrics; *NBS-GCR-73-6.*
Fire hazards; flammability testing; ignition; thermal burns; thermal measurements; apparel fabrics; fabrics; *NBS-GCR-73-12.*
Fire hazards; furniture; life hazard; oxygen; smoke; temperature; toxicity; upholstery; bedding; beds; carbon dioxide; carbon monoxide; combustion products; fire gases; *NBS-GCR-73-1.*
Fire injuries; fire investigation; fire loss; fire reporting; fires; fire data; fire hazard; *16139.*
Fire injuries; flammable fabrics; ignition hazards; ignition sources; lighters; matches; burns; fabric fires; *NBS-GCR-74-32.*
Fire investigation; fire loss; fire reporting; fires; fire data; fire hazard; fire injuries; *16139.*
Fire loads; load surveys; buildings; computers; data processing; *NBSIR 76-982.*
Fire loads; load surveys; occupancy live loads; structural engineering; buildings; *16072.*
Fire loads; load surveys; occupancy live loads; structural engineering; buildings; *BSS85.*
Fire loss; fire reporting; fires; fire data; fire hazard; fire injuries; fire investigation; *16139.*
Fire losses; fire reporting; fire safety; information systems; National Fire Data System; specifications; state governments; systems analysis; design criteria; fire hazards; *NBS-GCR-73-5.*
Fire performance; horizontal and vertical smoke measurements; smoke; smoke density chamber; smoke suppressants; *16178.*
Fire performance tests; flame spread; heat input; heat release rate; limiting oxygen index; radiant panel; smoke density; time to ignition; *16136.*
Fire plume gas flow; room fires; fire; *16112.*
Fire propagation test; fire tests; smoke density chamber; smoke tests; test comparison; UK; USA; *16125.*
Fire protection; future trends; professional qualifications; *16198.*
Fire reporting; fire safety; information systems; National Fire Data System; specifications; state governments; systems analysis; design criteria; fire hazards; fire losses; *NBS-GCR-73-5.*
Fire reporting; fires; fire data; fire hazard; fire injuries; fire investigation; fire loss; *16139.*
Fire research; fire safety; fire codes; *16176.*
Fire research; fire spread; flammability; building design; consumer protection; fire control; fire detection; *SP416, 1976 Edition.*
Fire retardant; furniture; glowing; inhibitor; oxidative pyrolysis; oxygen index; rayon; smoke; smoldering; upholstery fabric; cotton; cushioning; *16224.*
Fire retardant mechanisms; fire retardant polymers; fire retardants; mass transfer number; opposed flow diffusion flame; oxygen index; *NBS-GCR-75-40.*
Fire retardant polymers; fire retardants; mass transfer number; opposed flow diffusion flame; oxygen index; fire retardant mechanisms; *NBS-GCR-75-40.*
Fire retardants; mass transfer number; opposed flow diffusion flame; oxygen index; fire retardant mechanisms; fire retardant polymers; *NBS-GCR-75-40.*
Fire safety; fire codes; fire research; *16176.*
Fire safety; flame spread; floor coverings; flooring radiant panel test; ignition sources; pill test; room fires; carpet systems; carpets; *NBSIR 76-1013.*
Fire safety; flooring test; radiant panel; fire hazard; *16233.*
Fire safety; flooring test; radiant panel; fire hazard; *NBSIR 75-950.*
Fire safety; information systems; National Fire Data System; specifications; state governments; systems analysis; design criteria; fire hazards; fire losses; fire reporting; *NBS-GCR-73-5.*
Fire spread; flame spread; flame spread rate; surfaces; textiles; edges; fabric construction; fabric flammability; *NBS-GCR-75-34.*
Fire spread; flammability; building design; consumer protection; fire control; fire detection; fire research; *SP416, 1976 Edition.*
Fire suppression; spray nozzles; spray patterns; test methods; water distribution; water spray; automatic sprinklers; bibliography; droplet size; *NBS-GCR-76-72.*
Fire test; flame emissivity; heat transfer; pyrolysis; radiant heat; thermal inertia; ASTM Standard E119; building construction; charring; combustion; fire endurance; *NBS-GCR-75-50.*
Fire test; flame spread; kitchen cabinets; kitchen range; kitchen range hood; limited combustibility; mobile home; *NBSIR 75-788.*
Fire test; heat release; limiting thermal index; pyrolysis; radiant heat; thermal sensitivity index; calorimeter; combustion; *NBS-GCR-76-54.*
Fire testing; flammability; glass fiber; carpet; corridor test; *NBSIR 75-782.*
Fire tests; flame detectors; flammability tests; hazard analysis; interior furnishings; toxicity; bibliographies; building fires; construction materials; fire departments; fire detection system; *NBSIR 76-1120.*
Fire tests; flame spread; heat release rate; ignition; reduced scale models; room fires; *NBSIR 76-1052.*
Fire tests; heat detectors; residential fires; smoke detectors; detector sensitivity; detector siting; escape time; *NBSIR 76-1126.*
Fire tests; regulatory tests; simulation tests; *16113.*
Fire tests; reinforced concrete; sensitivity analysis; steel; structural mechanics; uncertainty; creep; fire endurance; *BSS76.*

Fire tests; smoke density chamber; smoke tests; test comparison; UK; USA; fire propagation test; *16125.*

Fire vehicle; ladder truck; maintenance; replacement; specifications; standards; engine pumper; *TN891.*

Firebug; impulse generators; MHD electrode materials; optical standards; safety wheels; bike regulations; bomb disarmament; computer auditing; energy options; explosive vapor detectors; *DIM/NBS* **60,** No. 7, 1-24 (1976).

Firemen's turnout coats; use type tests for comfort and effectiveness; clothing; *NBS-GCR-74-25.*

Fires; fire data; fire hazard; fire injuries; fire investigation; fire loss; fire reporting; *16139.*

Fires; hazard analysis; NEISS; plastics flammability; product safety; accident data; data systems; fabric flammability; FFACTS; fire accidents; fire data systems; fire hazards; *16361.*

Fires; home for the aged; hospital fires; human behavior; institutions; mapping; models; nursing homes; realms; building fires; case studies; critical events; decisions; episodes; *NBS-GCR-76-73.*

Fires; loads; safety; surveys; buildings; *16087.*

Fires; optical density; room furnishings; smoke production; smoke tests; building materials; *16557.*

Firesetting; psychopathic personality; arson; *15837.*

Fiscal administration software; grant/contract software; personnel management software; proposal/award software; research administration; software exchange; software summary; software survey; space management software; university systems; directory; *TN916.*

Fish; heavy metal; tissue; trace element analysis; water pollution; atomic absorption; bluegills; cadmium; *SP422,* pp. 1063-1072 (Aug. 1976).

Fish; mini-computer; sample preparation; toxic metals; trace determination; aquatic insects; atomic absorption; clean room; *SP422,* pp. 627-632 (Aug. 1976).

Fish analysis; sample size variations; trace analysis; trace metals; atomic absorption spectroscopy; *SP422,* pp. 163-172 (Aug. 1976).

Fission radiography; solid dielectric track recorders; ^{239}Pu track; alpha particle tracks; *SP422,* pp. 1132-1142 (Aug. 1976).

Fixed transmitter; FM transmitter; law enforcement; transmitter; base station transmitter; communications; *16286.*

Flame calorimetry of fluorine and fluorides; procedures, experimental for handling fluorine; bomb calorimetry with fluorine; enthalpy of formation, fluorides; *16100.*

Flame detection; heat detection; smoke detection; automatic sprinklers; carbon dioxide; fire detection; fire extinguishment; *NBSIR 76-1028.*

Flame detectors; flammability tests; hazard analysis; interior furnishings; toxicity; bibliographies; building fires; construction materials; fire departments; fire detection system; fire tests; *NBSIR 76-1120.*

Flame detectors; heat detectors; hospitals; hotels; maintenance; nursing homes; reliability; schools; smoke detectors; atriums; fire detection; *16179.*

Flame detectors; heat detectors; infrared detectors; smoke detectors; testing; ultraviolet detectors; detection; fire detectors; *NBSIR 76-1040.*

Flame emissivity; heat transfer; pyrolysis; radiant heat; thermal inertia; ASTM Standard E119; building construction; charring; combustion; fire endurance; fire test; *NBS-GCR-75-50.*

Flame extinction; flame temperature; flame velocity; flammability; flammability limits; oxygen index test; thermodynamics; chemical kinetics; diffusion flames; *NBSIR 76-1076.*

Flame polishing; fused silica; hydroxyl; ion polishing; polishing; roughness; surface damage; thin films; threshold; damage threshold; etching; *SP462,* pp. 310-314 (Dec. 1976).

Flame retardancy; mass spectrometry; optical spectroscopy; phosphorus; polyester; *16037.*

Flame retardant; oxidation rate; stibinic acid; trimethylarsine; trimethylstibine; antimony; antimony oxide; arsenic; arsenic acid; biomethylation; cacodylic acid; diffusion; *16628.*

Flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; precondensates; radiation grafting; antimony oxide; bromine; *NBS-GCR-ETIP 76-22.*

Flame retardant monomers; flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; precondensates; radiation grafting; antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; *NBS-GCR-ETIP 76-22.*

Flame retardant treatments; nylon; wool; cotton; cotton/polyester; extinguishment; fabric flammability; fabrics; fibers; finishes; *NBS-GCR-76-71.*

Flame retardant treatments; phosphorous acids; pyrolysis; ramie; rayon; sulfur; cellulosic fibers; combustion; cotton fibers; *NBS-GCR-73-4.*

Flame retardants; flammability; phosphorus; polyester; rayon; treatments; cotton; fabrics; *NBS-GCR-73-16.*

Flame retardants; flammability; R&D contracting; radiation grafting; research consortia; cotton polyester blends; ETIP; *NBS-GCR-ETIP 75-01.*

Flame retardants; hand modifiers; inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; precondensates; radiation grafting; antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; *NBS-GCR-ETIP 76-22.*

Flame spread; flame spread rate; surfaces; textiles; edges; fabric construction; fabric flammability; fire spread; *NBS-GCR-75-34.*

Flame spread; flammability; full-scale fire tests; laboratory fire tests; Metrorail cars; neoprene; smoke; transportation; urethane; *NBSIR 75-971.*

Flame spread; floor coverings; flooring radiant panel test; ignition sources; pill test; room fires; carpet systems; carpets; fire safety; *NBSIR 76-1013.*

Flame spread; fluid flow; laser doppler velocimetry; liquid fuels; solid fuels; surface tension; combustion models; *NBS-GCR-76-79.*

Flame spread; heat input; heat release rate; limiting oxygen index; radiant panel; smoke density; time to ignition; fire performance tests; *16136.*

Flame spread; heat release; interior finish; reduced scale modeling; room corner tests; smoke; buildings; fire growth; *16183.*

Flame spread; heat release rate; ignition; reduced scale models; room fires; fire tests; *NBSIR 76-1052.*

Flame spread; instability; radiant flux; α-cellulose; *16107.*

Flame spread; kitchen cabinets; kitchen range; kitchen range hood; limited combustibility; mobile home; fire test; *NBSIR 75-788.*

Flame spread rate; surfaces; textiles; edges; fabric construction; fabric flammability; fire spread; flame spread; *NBS-GCR-75-34.*

Flame temperature; flame velocity; flammability; flammability limits; oxygen index test; thermodynamics; chemical kinetics; diffusion flames; flame extinction; *NBSIR 76-1076.*

Flame velocity; flammability; flammability limits; oxygen index test; thermodynamics; chemical kinetics; diffusion flames; flame extinction; flame temperature; *NBSIR 76-1076.*

Flameless atomic absorption; freshwater; interlaboratory comparison; method evaluation; trace metal analysis; accuracy; *SP422,* pp. 247-265 (Aug. 1976).

Flameless atomic absorption; interstitial water; Lake Superior chemical analysis; trace element water analysis; water filtra-

tion; water sampling apparatus; anodic stripping voltammetry; *SP422*, pp. 1073-1088 (Aug. 1976).

Flameless atomic absorption; petroleum; plankton; sediments; total mercury; water; Chesapeake Bay; elemental sulfur; *15874*.

Flameless atomic absorption; volatile chromium compounds; biological materials; biological standards; chromium; *SP422*, pp. 605-610 (Aug. 1976).

Flameless atomic absorption spectroscopy; laser Raman spectroscopy; nuclear magnetic resonance spectroscopy; phenylmercuric acetate; volatilization; bacteria; elemental mercury; *15897*.

Flameless atomic spectrophotometry; gas chromatography; graphite furnace; methylation of metals; microbial transformation; speciation; volatile metal compounds; detection; *16409*.

Flameless methods; lead; lead blood analyses; methodology; trace element analyses; atomic absorption spectrometry; blood analyses; contaminations; *SP422*, pp. 715-719 (Aug. 1976).

Flammability; building design; consumer protection; fire control; fire detection; fire research; fire spread; *SP416, 1976 Edition*.

Flammability; burn, fabric; fabric, burn; *NBS-GCR-73-15*.

Flammability; flammability limits; oxygen index test; thermodynamics; chemical kinetics; diffusion flames; flame extinction; flame temperature; flame velocity; *NBSIR 76-1076*.

Flammability; floor coverings; pad; underlayments; carpets; fire; *NBSIR 76-1018*.

Flammability; full-scale fire tests; laboratory fire tests; Metrorail cars; neoprene; smoke; transportation; urethane; flame spread; *NBSIR 75-971*.

Flammability; glass fiber; carpet; corridor test; fire testing; *NBSIR 75-782*.

Flammability; guy insulators; high-voltage tests; insulators, tower guy; Loran C; pultruded rods; rods, insulator; breakdown, electrical; failure analysis; fiberglass-reinforced plastics; *NBSIR 76-1136*.

Flammability; heat flux; standards; tents; tests; uniforms; upholstered furniture; apparel; burn injury; carpets; draperies; fabrics; *16144*.

Flammability; heat release rate; potential heat; self heating; building materials; calorimetry; combustibility; *16111*.

Flammability; laser measurement; science; air conditioners; attic fans; basic research; chemical thermodynamics; door security; Elliot Richardson; energy conservation; engineering; fashion; *DIM/NBS* **60**, No. 6, 1-24 (1976).

Flammability; phosphorus; polyester; rayon; treatments; cotton; fabrics; flame retardants; *NBS-GCR-73-16*.

Flammability; polyester/cotton fabrics; cotton fabrics; extinguishability; *16149*.

Flammability; R&D contracting; radiation grafting; research consortia; cotton polyester blends; ETIP; flame retardants; *NBS-GCR-ETIP 75-01*.

Flammability limits; oxygen index test; thermodynamics; chemical kinetics; diffusion flames; flame extinction; flame temperature; flame velocity; flammability; *NBSIR 76-1076*.

Flammability testing; heat conductivity; simulation; skin; apparel fabrics; fire hazard; *NBS-GCR-73-14*.

Flammability testing; heat transfer; smoldering fabrics; fabric flammability; *NBS-GCR-73-2*.

Flammability testing; ignition; skin; thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazards; *NBS-GCR-73-6*.

Flammability testing; ignition; thermal burns; apparel fabrics; fabrics; fire hazard; *NBS-GCR-73-7*.

Flammability testing; ignition; thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazards; *NBS-GCR-73-12*.

Flammability testing; simulation; skin; thermal burns; apparel fabrics; fabrics; fire hazard; *NBS-GCR-73-13*.

Flammability testing; skin; thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazard; *NBS-GCR-73-9*.

Flammability testing; thermal measurements; thermodynamic properties; apparel fabric; fabric; fire hazard; *NBS-GCR-73-8*.

Flammability tests; garments; heat transfer; standards; apparel; burn injury; ease of ignition; fabrics; fire; *NBSIR 76-1072*.

Flammability tests; hazard analysis; interior furnishings; toxicity; bibliographies; building fires; construction materials; fire departments; fire detection system; fire tests; flame detectors; *NBSIR 76-1120*.

Flammable fabrics; ignition hazards; ignition sources; lighters; matches; burns; fabric fires; fire injuries; *NBS-GCR-74-32*.

Flammable fabrics; NFPA; curtains; draperies; FFACTS system; fire; *NBSIR 75-902*.

Flare; image intensifier tubes; infrared searchlights; infrared viewers; light equivalent background; light induced background; optical gain; contrast transfer function; distortion; *16238*.

Flare; image intensifiers; law enforcement; light equivalent background; light induced; optical gain; night vision; contrast transfer function; *16239*.

Flare; image quality; light induced background; limiting resolution; night vision devices; optical transfer function; resolution charts; veiling glare; blooming; contrast transfer function; distortion; *16599*.

Flash desorption spectroscopy; gold; reflectance; silver; sputter deposition; aluminum; copper; *SP462*, pp. 195-202 (Dec. 1976).

Flash fire; polyurethane; pyrolysis; aircraft fires; fire hazard; *NBSIR 75-757*.

Flash photolysis; intermittent illumination; photochemical principles; photochemical reaction of atoms and molecules; photochemistry in the atmosphere; photochemistry of air pollution; primary and secondary photochemical processes; bond energy; chain reaction; *16515*.

Flash photolysis resonance fluorescence; infrared laser; oxygen atoms; vibrationally excited reactant molecules; carbonyl sulfide; chemical kinetics; ethylene; *16453*.

Flat band potential; hydrogen evolution; oxide electrode; perovskite surface composition; rotating electrode voltammetry; semiconductor electrode; *SP455*, pp. 229-240 (Nov. 1976).

Flat bottomed holes; standards; steel; titanium; transducer calibration; ultrasonic reference blocks; acoustic emission; aluminum; fatigue cracks; *16252*.

Flat pulse baseline/topline; pulse generator; step waveform; tunnel diode; directional coupler; fast risetime; *U.S. Patent 3,967,140*.

Flat-end; kern; loading rate; pin-end; test method; wall panels; walls; compression; eccentric loading; *NBSIR 75-779*.

Flaw detection; flaw distribution; forging; grain boundary mobility; subgrains; CaF_2; crack coalescence; *SP462*, pp. 69-81 (Dec. 1976).

Flaw detection; nondestructive inspection; acoustic emission; acoustics; *16269*.

Flaw distribution; forging; grain boundary mobility; subgrains; CaF_2; crack coalescence; flaw detection; *SP462*, pp. 69-81 (Dec. 1976).

Fleet management; life cycle costing; patrol cars; police fleets; vehicle leasing; vehicle management; *NBSIR 75-961*.

Flexibility; hydrophone; impedance match; low-cost transducers; piezoelectric polymers; *16291*.

Flexural strength; fracture mechanics; polymer impregnated cement; polymer impregnated mortar; porosity; scanning electron microscopy; cement; compressive strength; *BSS83*.

Flexural strength; masonry; masonry walls; mortar; slenderness

ratio; standards; stiffness; structural stability; walls; brick; buckling; composite walls; compressive strength; concrete block; constitutive relations; *BSS73*.
Flicker noise; frequency; frequency stability; oscillators; phase noise; stationary models; *TN683*.
Floating point arithmetic; Fortran extended data types; Fortran precompiler; elementary function evaluation; extended precision arithmetic; *16461*.
Floor covering; heat flux; radiant panel test method; *NBSIR 75-706*.
Floor coverings; flooring radiant panel test; ignition sources; pill test; room fires; carpet systems; carpets; fire safety; flame spread; *NBSIR 76-1013*.
Floor coverings; horizontal; ignition; ignition time; pilot ignition; radiant heat flux; carpets; *NBSIR 75-967*.
Floor coverings; pad; underlayments; carpets; fire; flammability; *NBSIR 76-1018*.
Floor slipperiness; slipperiness tester; static coefficient of friction measurement; *U.S. Patent 3,975,940*.
Floor surface friction; occupancy safety; slip-resistance; slip-resistance testers; walking friction; building safety; *TN895*.
Floor systems; human response; random process; spectral analysis; vibration; analysis; experimental; *TN904*.
Floor systems; human response; random process; spectral analysis; vibration; analysis; experimental; *NBSIR 75-951*.
Floor systems; human responses; performance criteria; serviceability; static; vibration; deflection; dynamic; *TN900*.
Flooring radiant panel test; ignition sources; pill test; room fires; carpet systems; carpets; fire safety; flame spread; floor coverings; *NBSIR 76-1013*.
Flooring test; radiant panel; fire hazard; fire safety; *16233*.
Flooring test; radiant panel; fire hazard; fire safety; *NBSIR 75-950*.
Floquet theory; laser-induced reactions; multiphoton processes; numerical calculations; relaxation phenomena; vibrational populations; *16242*.
Flow cell; ion-selective electrode; seawater analysis; adsorption; copper; cupric ion; *SP422*, pp. 899-915 (Aug. 1976).
Flow measurement; fluid flow; fluid metering; hydraulics; aerodynamics; air flow; *NBSIR 75-930*.
Flow measurement, water; flumes, measuring; open channel flow measurement; Palmer-Bowlus flumes; sewage flow measurement; *15738*.
Flow resistance; helium; Ledinegg instability; negative flow resistance; supercritical helium; *16232*.
Flow stability; helium; oscillations; superconductors; theory; computations; cooling system; cryogenics; electric power transmission; *15809*.
Flow surface; multiaxial stresses; plasticity; proportional limit; *15802*.
Flow with longitudinal gradient; flow with transverse gradient; optical anemometry; optical birefringence; optical excess tensor; optical mapping of flow; stress excess tensor; two-dimensional flow; *15775*.
Flow with transverse gradient; optical anemometry; optical birefringence; optical excess tensor; optical mapping of flow; stress excess tensor; two-dimensional flow; flow with longitudinal gradient; *15775*.
Flowmeter; instrumentation; measurements; National Measurement System; cryogenics; data; *NBSIR 75-825*.
Flows; landslides; mechanisms; slides; avalanches; earthquakes; falls; *SP444*, pp. III-52—III-71 (Apr. 1976).
Fluctuations; inhomogeneous superconductor; intermediate state; superconducting-normal transition; superconductor; surface energy type I superconductors; cadmium; condensation energy; demagnetization coefficient; *16450*.
Fluid critical point; history; Kamerlingh Onnes collection; surface tension; Van der Waals collection; Verschaffelt; coexistence curves; critical exponents; *16372*.
Fluid dynamics; fundamental solution, intitial value problem; partial differential equations; stratified flow, internal waves, buoyant flows; *J. Res.* **80B** No. 1, 79-88 (1976).
Fluid dynamics; pressure drop; superfluid helium; two phase flow; compressibility flow; cryogenics; *16642*.
Fluid flow; fluid metering; hydraulics; aerodynamics; air flow; flow measurement; *NBSIR 75-930*.
Fluid flow; interface; solidification; stability; alloy; boundary layer; *15766*.
Fluid flow; laser doppler velocimetry; liquid fuels; solid fuels; surface tension; combustion models; flame spread; *NBS-GCR-76-79*.
Fluid interactions; geology; minerals; Raman spectroscopy; chemical analysis; *15930*.
Fluid mechanics; hydraulic engineering; hydraulic research; hydraulics; hydrodynamics; model studies; research summaries; *SP443*.
Fluid metering; hydraulics; aerodynamics; air flow; flow measurement; fluid flow; *NBSIR 75-930*.
Fluidic device; hot wire anemometer; ion deflection device; laser Doppler anemometer; Reynolds number; angular insensitivity; *16108*.
Fluids; force; hydraulic equipment; mechanical power; noise; pressure; quality control; safety; testing; engineering, instrumentation and techniques; *16452*.
Flumes, measuring; open channel flow measurement; Palmer-Bowlus flumes; sewage flow measurement; flow measurement, water; *15738*.
Fluorapatite; hydroxyapatite; morphology; nonstoichiometry; octacalcium phosphate; solubility; surface; amorphous calcium phosphate; bone mineral; *16307*.
Fluorescence; fluorescence decay; fluorescence quantum yields; polarization; spectrofluorimetry; viewing angle; emission anisotropy; *15754*.
Fluorescence; ion; ionization; molecule; photon; positron; atom; collision cross section; detachment; dissociation; elastic scattering; electron; excitation; *SP426*.
Fluorescence; linear dichroism; liquid crystals; polarization; spectrofluorimetry; 1,6-diphenyl-1,3,5-hexatriene; *J. Res.* **80A** No. 1, 15-33 (1976).
Fluorescence; molecular dissociation; relativistic electrons, excitation; energy transfer, electronic; *16615*.
Fluorescence; nitric oxide; quenching; sulfur dioxide; emission gas; exhaust; *16444*.
Fluorescence; OH-18-cm radiation; optical pumping; polarization; comets; *16513*.
Fluorescence; photodetectors; polarization; quantum counters; rhodamine B chloride; spectrofluorimetry; total internal reflection; emission anisotropy; *16430*.
Fluorescence; polycyclic aromatic hydrocarbons; quantum yields; water; absorption; carcinogenic; *15831*.
Fluorescence decay; fluorescence quantum yields; polarization; spectrofluorimetry; viewing angle; emission anisotropy; fluorescence; *15754*.
Fluorescence lifetime; fluorescence quantum efficiency; fluorescence quantum yields; fluorescence spectrum; fluorescence standards; molecular fluorescence parameters; observed (technical) fluorescence parameters; polarization; *J. Res.* **80A** No. 3, 389-399 (1976).
Fluorescence method analysis; rare earths, as an internal reference; rare earths, determination of trace amounts; *SP422*, pp. 1103-1107 (Aug. 1976).
Fluorescence quantum efficiency; fluorescence quantum yields; fluorescence spectrum; fluorescence standards; molecular fluorescence parameters; observed (technical) fluorescence parameters; polarization; *J. Res.* **80A** No. 3, 389-399 (1976).
Fluorescence quantum yield; laser dyes; molecular structure;

oxazine dyes; quenching; xanthene dyes; aminocoumarins; carbazine dyes; deuterium effect; *J. Res.* **80A** No. 3, 421-428 (1976).
Fluorescence quantum yields; fluorescence spectrum; fluorescence standards; molecular fluorescence parameters; observed (technical) fluorescence parameters; polarization; radiative and nonradiative transition probabilities; *J. Res.* **80A** No. 3, 389-399 (1976).
Fluorescence quantum yields; polarization; spectrofluorimetry; viewing angle; emission anisotropy; fluorescence; fluorescence decay; *15754.*
Fluorescence spectrum; fluorescence standards; molecular fluorescence parameters; observed (technical) fluorescence parameters; polarization; radiative and nonradiative transition probabilities; real fluorescence parameters; *J. Res.* **80A** No. 3, 389-399 (1976).
Fluorescence spectrum; matrix isolation; absorption spectrum; band experiment; CF_2; CH_2F_2 photolysis; *15908.*
Fluorescence standards; molecular fluorescence parameters; observed (technical) fluorescence parameters; polarization; radiative and nonradiative transition probabilities; real fluorescence parameters; fluorescence lifetime; *J. Res.* **80A** No. 3, 389-399 (1976).
Fluorescence x-ray sources; K x-ray sources; pulsed x rays; radiographic imaging; steady-state x rays; detector calibrations; *SP456,* pp. 41-45 (Nov. 1976).
Fluorescent excitation; accuracy; continuum radiation; electron probe microanalysis; *16392.*
Fluorescent wavelength converter; photometry; spectrophotometry; ultraviolet; visible; averaging sphere; diffusing effectiveness; efficiency; *16333.*
Fluoride films; gears; molybdenum disulfide; solid lubricants; wear; *SP452,* pp. 132-148 (Sept. 1976).
Fluorinated polymers; lubricant migration; lubricants; spreading prevention; barrier films; bearings; *SP452,* pp. 170-176 (Sept. 1976).
Fluorine; fluoroalkylsilanes; NMR; relative signs; silicon; coupling constants; *16432.*
Fluorine; isotope dilution; radionuclides; substoichiometry; absorption isotherm; environmental samples; *SP422,* pp. 961-982 (Aug. 1976).
Fluoroalkanes; molecular dynamics; NMR; relaxation; chemical shift; *16327.*
Fluoroalkylsilanes; NMR; relative signs; silicon; coupling constants; fluorine; *16432.*
Fluorocarbons; hydroxyl radical; reaction rate constants; *16202.*
Fluorodisilane; pentafluorodisilane; physical properties; pyrolysis; silicon difluoride; base catalyzed decomposition; *16014.*
Flux density; G/T (system gain/system noise temperature); ground station; radio star; accuracy; antenna; calibration; Cassiopeia A; error analysis; *16499.*
Flux loss; plastics; reflectance; scattering; spectrophotometry; translucency; transmittance; Vitrolite glass; blurring effect; edge loss; error analysis; *TN594-12.*
Flux-monitor; water analysis; water pollution; amperometry; chlorine monitoring; chlorine residuals; coulometry; *16082.*
Fly ash; blast furnace slag; blended cements; energy conservation; *NBSIR 76-1008.*
Fly ash; instrumental neutron activation analysis (INAA); instrumental photon activation analysis (IPAA); natural radioactivity; standard reference materials; trace elements; analytical methods; coal; environmental samples; *SP422,* pp. 211-223 (Aug. 1976).
Fly ash; materials and energy conservation; blast furnace slag; blended cement; *16408.*
FM receivers; law enforcement equipment; minimum performance requirements; NILECJ Standard; receiver definitions; receiver measurement techniques; *16293.*
FM receivers; law enforcement equipment; minimum performance requirements; NILECJ Standard; receiver definitions; receiver measurement techniques; *16297.*
FM receivers; law enforcement equipment; minimum performance requirements; NILECJ Standard; receiver definitions; receiver measurement techniques; *16303.*
FM transmitter; law enforcement; transmitter; base station transmitter; communications; fixed transmitter; *16286.*
FMVSS 105a; LAPD brake tests; NBS survey; patrolcar brakes; patrolcar survey; police brake requirements; *16148.*
Foam and beam; honeycomb; impact; lightweight structures; military; reliability; sandwich panel; shelter; durability; field inspection; *NBSIR 76-1025.*
Focal spot diameter; inclusion damage; interference ripples; pulsed DF laser damage; sapphire; scattering; waveform distortion; alkali-halides; alkaline-earth fluorides; bulk damage; *SP462,* pp. 136-144 (Dec. 1976).
Food; energy; environment; *SP403,* pp. 193-195 (June 1976).
Food; nitrosamines; trace analysis; carcinogens; *SP422,* pp. 727-736 (Aug. 1976).
Food and Drug Administration; radiation measurements; federal regulating agency; *SP456,* pp. 25-29 (Nov. 1976).
Food composition; gamma spectrometry; inorganic separators; isotopic exchange; multielement determination; neutron activation; radiochemical separation; trace elements; biological material; biological standards; data evaluation; distillation; *SP422,* pp. 1173-1180 (Aug. 1976).
Foods; regulation; regulatory agency; accuracy; drugs; *SP422,* pp. 3-8 (Aug. 1976).
Forbidden transitions; ozone; triplet states; electron energy loss; *15750.*
Force; hydraulic equipment; mechanical power; noise; pressure; quality control; safety; testing; engineering, instrumentation and techniques; fluids; *16452.*
Force; kilogram; mass; pound; weight; *16394.*
Force; metrication; national measurement system; standards; dynamic force; economic; *NBSIR 75-929.*
Force; NMS; *16438.*
Forced convection; helium I; helium II; mixed convection; nucleate boiling; subcritical; supercritical; transition; turbulent flow; buoyancy; channels; film boiling; *TN675.*
Forecast; industry; iron; steel; energy; *SP403,* pp. 121-152 (June 1976).
Foreign metal monolayers; Fe^{2+}/Fe^{3+} reaction; formic acid oxidation; oxygen reduction; underpotential deposition; electrocatalysis; *SP455,* pp. 191-200 (Nov. 1976).
Foreign relations; international agreement; lectures; OMNITAB II computing system; technology transfer; terminals; acceptance tests; AID; Bolivia; CENACO; computing using Spanish; *NBSIR 76-1176.*
Forging; grain boundary mobility; subgrains; CaF_2; crack coalescence; flaw detection; flaw distribution; *SP462,* pp. 69-81 (Dec. 1976).
Forging; isostatic; polishing; quartz; shaping; closed die; *SP462,* pp. 95-99 (Dec. 1976).
Formal language; programming language standards; ADP standards; BASIC; compilers; compiler validation; computer programming; *NBS-GCR-73-17.*
Formal power series; Jordan canonical form; permutation congruence; polynomials; direct sums; *15965.*
Formaldehyde; gas chromatography; hydrogen chloride; hydrogen cyanide; pollution; pyrolysis; reactive gas generator; sulfur dioxide; acetaldehyde; acrolein; *NBSIR 76-1000.*
Formaldehyde; oxygen; photoelectron spectroscopy; physisorption; tungsten; xenon; XPS; carbon monoxide; chemisorption; ESCA; extra-atomic relaxation; *16023.*
Formaldehyde; oxygen; physisorption; surface chemistry; tungsten; x-ray photoelectron spectroscopy; carbon dioxide; car-

bon monoxide; chemisorption; *16085.*

Formic acid oxidation; oxygen reduction; underpotential deposition; electrocatalysis; foreign metal monolayers; Fe^{2+}/Fe^{3+} reaction; *SP455*, pp. 191-200 (Nov. 1976).

Formwork; loads; reshoring; safety; shoring; standards; building; codes; concrete; construction; falsework; *BSS80.*

Formyl ion; interstellar molecules; microwave emission; molecular structure; radio astronomy; rotational spectrum; *16560.*

FORTRAN; logic design; networks; specifications; standards; systems engineering; building codes; computer program; decision theory; *NBS-GCR-76-57.*

FORTRAN analysis; source code instrumenting; static analysis; transforms; execution; execution monitoring; *15918.*

Fortran extended data types; Fortran precompiler; elementary function evaluation; extended precision arithmetic; floating point arithmetic; *16461.*

FORTRAN IV; operating system; overhead; resource allocation; simulator; strategies; workload; *16062.*

Fortran precompiler; elementary function evaluation; extended precision arithmetic; floating point arithmetic; Fortran extended data types; *16461.*

FORTRAN program; hyperbolic sine and cosine integrals; key values; recurrence relations; continued fraction; cosine integral; exponential integral; *J. Res.* **80B** No. 2, 291-313 (1976).

FORTRAN programs; program analysis; software verification; automatic testing; computer program testing; *NBS-GCR-75-46.*

FORTRAN programs; program analysis; software verification; automatic testing; computer program testing; *NBS-GCR-75-47.*

FORTRAN programs; program analysis; software correctness; software verification; symbolic program evaluation; automatic testing; computer program testing; *NBS-GCR-76-69.*

Foundations; geotechnical engineering; standards; buildings (codes); excavation; *16535.*

Four-center reactions; ion molecule reactions; proton affinity; proton transfer; rate coefficients; CCl_2, CF_2; CCl_2H^+, CF_2H^+; displacement reactions; *16598.*

Fourier amplitudes; gas pressure; heat transfer; phase shifts; photoacoustic; surface absorption coefficients; transparent materials; bulk absorption coefficients; *16558.*

Fourier transform; Fourier transform frequency; mechanical shock; shock generator; accelerometer; calibration; FFT; *16128.*

Fourier transform; impulse generator; pulse measurement; spectrum; spectrum amplitude; calibration; *16463.*

Fourier transform; scattering; tissue characterization; ultrasound; diffraction; *SP453*, pp. 213-228 (Oct. 1976).

Fourier transform; spectral analysis; tissue structure; ultrasound; color-coded B-scan; *SP453*, pp. 97-107 (Oct. 1976).

Fourier transform frequency; mechanical shock; shock generator; accelerometer; calibration; FFT; Fourier transform; *16128.*

Fourier transform NMR; homonuclear lock; phase adjustment; phase correction algorithm; quadrature; computer program; *15970.*

Four-probe; planar test structure; resistivity; semiconductor characterization; semiconductor device; silicon; square array; bulk resistivity; collector resistivity; *16424.*

Four-probe method; hermeticity; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; *SP400-19.*

Four-probe method; hermeticity; interface states; ion implantation; ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; *SP400-25.*

Four-wave numbering; HORSES; nonlinear optics; Raman spectroscopy; CARS; diphenyloctatetraene (dilute solution); *15716.*

Fractional crystallization; geochemistry; isotope dilution; partial melting; rare earth elements; trace element models; volcanic rocks; analytical techniques; *SP422*, pp. 937-949 (Aug. 1976).

Fractional free volume; glass transition temperature; smectic polypropylene; spherulitic polypropylene; crazing; cryogenic temperatures; crystalline polymers; environmental effects on crazing; *15772.*

Fractional frequency fluctuations; frequency stability; phase fluctuations; power law noise processes; spectral density; spectrum analysis; *TN679.*

Fractography; mechanical failure; crack propagation; failure analysis; failure prevention; fracture; *SP423*, pp. 3-11 (Apr. 1976).

Fracture; fractography; mechanical failure; crack propagation; failure analysis; failure prevention; *SP423*, pp. 3-11 (Apr. 1976).

Fracture; fracture mechanics; glass; static fatigue; strength; crack growth; *15821.*

Fracture; fracture toughness; interferometry; model experiments; stress; stress intensity; cracks; experimental mechanics; *15742.*

Fracture; glass; impact; ophthalmic lenses; stress distributions; *15769.*

Fracture; Hertzian; indentation; strength; brittle solids; ceramic surfaces; crack; degradation; *15856.*

Fracture; impact; ophthalmic lenses; shape; drop-ball test; edge; *16311.*

Fracture; indentation; residual stress; stress analysis; brittle solids; chipping; *16306.*

Fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; *NBSIR 76-848.*

Fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; composites; copper alloys; cryogenic temperatures; elastic properties; engineering materials; fatigue; *NBSIR 75-828.*

Fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; aluminum alloys; composites; cryogenic temperatures; elastic properties; engineering materials; fatigue; *NBSIR 76-839.*

Fracture; laboratory automation; mechanical testing; plasticity; polyvinyl chloride; servo-hydraulic system; viscoelasticity; yield point; biaxial; fatigue; *16626.*

Fracture; lattice trapping; slow-crack growth; stress corrosion; *16155.*

Fracture; statistics; strength; crack propagation; error analysis; failure prediction; failure prevention; *16617.*

Fracture; statistics; strength; crack propagation; error analysis; failure prediction; failure prevention; *NBSIR 75-952.*

Fracture; vaporization; ceramics; coal conversion; coal gasification; corrosion; *16243.*

Fracture; wear; castable refractories; coal gasification; deformation; erosion; *16600.*

Fracture control; fracture mechanics; mechanical properties; nondestructive evaluation (NDE); radiography; welding; *NBSIR 76-1154, Vol. 1.*

Fracture control; fracture mechanics; mechanical properties; nondestructive evaluation (NDE); radiography; welding; *NBSIR 76-1154, Vol. 2.*

Fracture energy (γ_c); isostatic forging; kinking; microstructures; recrystallization temperature; veiling; annealing; *SP462*, pp.

87-94 (Dec. 1976).
Fracture mechanics; glass; static fatigue; strength; crack growth; fracture; *15821.*
Fracture mechanics; mechanical properties; nondestructive evaluation (NDE); radiography; welding; fracture control; *NBSIR 76-1154, Vol. 1.*
Fracture mechanics; mechanical properties; nondestructive evaluation (NDE); radiography; welding; fracture control; *NBSIR 76-1154, Vol. 2.*
Fracture mechanics; mortars; polymer impregnated mortars; slow crack growth; acoustical emission; *16360.*
Fracture mechanics; polymer impregnated cement; polymer impregnated mortar; porosity; scanning electron microscopy; cement; compressive strength; flexural strength; *BSS83.*
Fracture stress; slow crack growth; analytical predictions; constant stress rate; empirical measurements; *16034.*
Fracture tests; low temperature tests; mechanical tests; titanium alloys; crack propagation; cryostats; *16640.*
Fracture toughness; interferometry; model experiments; stress; stress intensity; cracks; experimental mechanics; fracture; *15742.*
Fracture toughness; J-integral; low temperature tests; titanium alloys; fatigue crack propagation; *16531.*
Fracture toughness; low temperature tests; mechanical properties; titanium alloy; electron beam welding; fatigue; *NBSIR 76-836.*
Frames; long columns; reinforced concrete; slenderness ratio; strength; structural analysis; structural design; ultimate strength; bending moments; building codes; column (supports); *16412.*
Franciscan Formation; geological character; ground shaking; intensity; earthquake; empirical relation; *SP444,* III-84—III-94 (Apr. 1976).
Free electron absorption; laser induced surface damage; optical probe technique; refractive index variation; damage electron density; electron density transient; *SP435,* pp. 356-361 (Apr. 1976).
Free energy; stress-optical constants; stress-optical effect; electrostriction; electrostrictive coefficients; *15710.*
Free ions; ion yields; liquid; nonpolar systems; radiation chemistry; radiation physics; electrons; *NSRDS-NBS57.*
Free radicals; gas phase; hydrocarbons; oxidation; oxygen; oxygenated organic compounds; ozone; bibliography; chemical kinetics; combustion; *SP449.*
Free radicals; measurement; stratosphere; chemical kinetics; *16130.*
Free-field measurements; hearing aid tests; orthotelephonic response; anthropometric manikin; *16033.*
Freon 11; Freon 12; uv photoabsorption; electron energy loss; electron impact; *15755.*
Freon 12; uv photoabsorption; electron energy loss; electron impact; Freon 11; *15755.*
Freons; uv photoabsorption; $CClF_3$; CCl_2F_2; electron energy-loss; *15995.*
Frequency; frequency stability; frequency stability analysis; models of frequency stability; picosecond time difference measurements; accurate frequency measurement; accurate time measurement; *15740.*
Frequency; frequency stability; oscillators; phase noise; stationary models; flicker noise; *TN683.*
Frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; *SP453.*
Frequency; ratio; synchronization; time; broadcast; communication; *16496.*
Frequency accuracy; frequency stability; frequency standards; hydrogen standards; ion storage; laser stabilization; rubidium standards; saturated absorption; time standards; application of standards; basic standards; cesium standards; *15736.*
Frequency accuracy; frequency standards; general relativity; gravitational redshift; primary frequency standards; proper time; UTC; atomic clocks; clock acceleration effect; definition of the second; *16236.*
Frequency accuracy; frequency stability; frequency standards; infrared frequency multiplication; noise; time scale; time standards; clocks; *16488.*
Frequency accuracy; international atomic time; primary frequency standard; atomic beams; atomic clock; atomic time; cesium beam tube; definition of the second; *16487.*
Frequency and time; measurement of time and frequency; time and frequency; clocks; *16569.*
Frequency calibration; frequency comparator; frequency measurements; oscillator calibration; phase comparison; television receiver; color subcarrier; *U.S. Patent 3,958,269.*
Frequency calibration; high frequency; low frequency; standard frequencies; television color subcarrier; time calibration; time signals; broadcast of standard frequencies; *SP432.*
Frequency comparator; frequency measurements; oscillator calibration; phase comparison; television receiver; color subcarrier; frequency calibration; *U.S. Patent 3,958,269.*
Frequency control; laser wavelength determination; scanning interferometer; cw dye laser; *16649.*
Frequency dependence; impedance; microstructural analysis; tissue; ultrasound; velocity; acoustic imaging; acoustic microscopy; attenuation; *SP453,* pp. 261-267 (Oct. 1976).
Frequency dependence; laser damage; spot size dependence; time dependence; *SP462,* pp. 338-345 (Dec. 1976).
Frequency dependence; magnitude; electron-avalanche breakdown; dielectrics; *SP435,* pp. 331-346 (Apr. 1976).
Frequency dependence; orientation dependence; scattering; tissue characterization; ultrasound; Bragg diffraction; diagnosis; *SP453,* pp. 197-206 (Oct. 1976).
Frequency distribution; hurricanes; typhoon; wind; wind intensities; cloud seeding; *SP444,* pp. I-21—I-33 (Apr. 1976).
Frequency measurement; frequency mixing; global positioning system; isolation amplifiers; low-noise amplifiers; precision frequency measurements; precision time measurements; time difference measurements; time-domain frequency stability; time interval; *NBSIR 75-827.*
Frequency measurements; oscillator calibration; phase comparison; television receiver; color subcarrier; frequency calibration; frequency comparator; *U.S. Patent 3,958,269.*
Frequency measurements on tunable lasers; IFS with a tunable laser; infrared frequency synthesis; SFRL frequency measurement; spin flip Raman laser; *TN680.*
Frequency mixing; global positioning system; isolation amplifiers; low-noise amplifiers; precision frequency measurements; precision time measurements; time difference measurements; time-domain frequency stability; time interval; frequency measurement; *NBSIR 75-827.*
Frequency modulation; modulation index; multipath; path delay; phase vs. time; σ vs. τ, 19 kHz pilot; *16492.*
Frequency multiplication; frequency stability; frequency synthesis; Gunn oscillator; infrared; injection stabilization; klystron; *X* band; cavity stabilization; *16520.*
Frequency multiplication; fundamental constants; laser stability; metrology; second-order Doppler shift; speed of light; *15980.*
Frequency of failure; government action; life-cycle costing; marginal analysis; quality control; safety standards; economic cost of failure prevention; *SP423,* pp. 107-116 (Apr. 1976).
Frequency response; high voltage; Kerr effect; operational amplifier; pulses; radiation; safety; x-ray generators; x rays; calibration; electrical measurements; electro-optics; *NBSIR 75-775.*

Frequency stability; frequency standards; hydrogen standards; ion storage; laser stabilization; rubidium standards; saturated absorption; time standards; application of standards; basic standards; cesium standards; frequency accuracy; *15736.*

Frequency stability; frequency stability analysis; models of frequency stability; picosecond time difference measurements; accurate frequency measurement; accurate time measurement; frequency; *15740.*

Frequency stability; frequency standards; infrared frequency multiplication; noise; time scale; time standards; clocks; frequency accuracy; *16488.*

Frequency stability; frequency synthesis; Gunn oscillator; infrared; injection stabilization; klystron; *X* band; cavity stabilization; frequency multiplication; *16520.*

Frequency stability; international atomic time; models; simulation; time scale simulation; *TN689.*

Frequency stability; oscillators; phase noise; stationary models; flicker noise; frequency; *TN683.*

Frequency stability; phase fluctuations; power law noise processes; spectral density; spectrum analysis; fractional frequency fluctuations; *TN679.*

Frequency stability; portable clocks; rubidium frequency standard; time comparison; atomic clocks; *16489.*

Frequency stability analysis; models of frequency stability; picosecond time difference measurements; accurate frequency measurement; accurate time measurement; frequency; frequency stability; *15740.*

Frequency standards; general relativity; gravitational redshift; primary frequency standards; proper time; UTC; atomic clocks; clock acceleration effect; definition of the second; frequency accuracy; *16236.*

Frequency standards; hearing aids; high-rise buildings; metals; radiation safety; standards laboratory; synchrotron; building collapse; corrosion; energy; environmental; *DIM/NBS* **60,** No. 5, 1-24 (1976).

Frequency standards; hydrogen standards; ion storage; laser stabilization; rubidium standards; saturated absorption; time standards; application of standards; basic standards; cesium standards; frequency accuracy; frequency stability; *15736.*

Frequency standards; infrared frequency multiplication; noise; time scale; time standards; clocks; frequency accuracy; frequency stability; *16488.*

Frequency standards; stability; survey of clocks; accuracy; atomic clocks; clocks; crystal oscillator; *15719.*

Frequency synthesis; Gunn oscillator; infrared; injection stabilization; klystron; *X* band; cavity stabilization; frequency multiplication; frequency stability; *16520.*

Frequency-dependent attenuation; internal scattering; myocardial infarction; scattering; surface scattering; tissue characterization; ultrasonic spectroscopy; ultrasound diagnosis; acoustic impedance; Bragg diffraction; computer processing; *SP453,* pp. 167-196 (Oct. 1976).

Frequency-stability measurement; instrumentation; laboratory technique; time measurement; chronograph; *TN691.*

Fresh water analysis; intercomparisons; precision; round-robin experiments; trace element analysis; accuracy; activation analysis; air filter analysis; analytical quality control; atomic absorption spectrometry; environmental analysis; *SP422,* pp. 189-197 (Aug. 1976).

Freshwater; interlaboratory comparison; method evaluation; trace metal analysis; accuracy; flameless atomic absorption; *SP422,* pp. 247-265 (Aug. 1976).

Fretting; silicone resin; solid lubricants; titanium; wear; curing agent; *SP452,* pp. 124-131 (Sept. 1976).

Friction; lubrication; mechanical failure; tribology; wear; economic savings of failure prevention; *SP423,* pp. 117-139 (Apr. 1976).

Friction; marine environment; powder coating; salt water; solid lubrication; abrasion; corrosion protection; *SP452,* pp. 25-30 (Sept. 1976).

Friction; metal; polymers; wear; adhesion; coatings; *SP452,* pp. 3-13 (Sept. 1976).

Friction; molybdenum disulfide; spin axis gas bearings; sputtered coatings; surface characterization; wear life; antimony trioxide; *SP452,* pp. 177-186 (Sept. 1976).

Friction measurement; lead poisoning; LNG data; optical; standard reference materials; thermophysical properties symposium; waste heat; computer; consumer; drugs; electrical pulses; environmental standards; *DIM/NBS* **60,** No. 9, 1-24 (1976).

Friction, tire/pavement; kinetics, bicycle; measurements, bicycle braking; pitchover; standards, bicycle safety; test method, bicycle; bicycle brakes; brakes, bicycle; dynamics, bicycle; error analysis; *NBSIR 75-786.*

f-sum rule; *f*-values; lithium sequence; oscillator strength distribution; oscillator strengths; relativistic effects; spectral series; systematic trends; continuum; discrete spectrum; *15817.*

Fuel; gasoline; hydrogen; methane; safety; explosion; fire; *TN690.*

Fuel; graphite; hydrocarbons; metering; methane; natural gas; petroleum; physical properties; standard reference materials; coal; energy; *SP434.*

Fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; *SP403.*

Fuel; imports; costs; economics; energy; *SP403,* pp. 3-12 (June 1976).

Fuel; materials accountability; measurements; nuclear; safeguards; standards; *16481.*

Fuel cells; mixed oxides; oxygen reduction; phosphoric acid; ternary metal-sulfur arrays; transition elements; triphenylphosphine; tungsten bronze; electrocatalysis; *NBSIR 75-742.*

Fuel cells; refractory hard metal; solid electrolytes; cerium dioxide; degradation; electrocatalysis; *NBSIR 76-1091.*

Fuel cells; surface physics and chemistry; catalysis; electrocatalysis; electrochemistry; electrodes; *NBSIR 76-1049.*

Full-scale fire tests; laboratory fire tests; Metrorail cars; neoprene; smoke; transportation; urethane; flame spread; flammability; *NBSIR 75-971.*

Functional requirements; patrol cars; performance of patrol cars; police patrol cars; problems with patrol cars; state of the art survey; *15826.*

Functional requirements; patrol cars; performance of patrol cars; police patrol cars; problems with patrol cars; state of the art survey; *NBSIR 75-960.*

Fundamental constant; gravitational attraction; gravitational constant; rotating reference frame; acceleration measurement; *16222.*

Fundamental constants; gyromagnetic ratio of the proton; fine structure constant; *15934.*

Fundamental constants; Josephson effect; absolute ampere; *15979.*

Fundamental constants; laser stability; metrology; second-order Doppler shift; speed of light; frequency multiplication; *15980.*

Fundamental constants; least-squares adjustments; quantum electrodynamics; data analysis; *15947.*

Fundamental solution, intitial value problem; partial differential equations; stratified flow, internal waves, buoyant flows; fluid dynamics; *J. Res.* **80B** No. 1, 79-88 (1976).

Furnace atmosphere sodium contamination; furnace qualification; resonance fluorescence; sodium trace detection; dye laser use for resonance fluorescence; *16574.*

Furnace qualification; resonance fluorescence; sodium trace detection; dye laser use for resonance fluorescence; furnace atmosphere sodium contamination; *16574.*

Furniture; glowing; inhibitor; oxidative pyrolysis; oxygen index; rayon; smoke; smoldering; upholstery fabric; cotton; cushioning; fire retardant; *16224*.
Furniture; hazard; interior finish; smoke; building; estimating; fire; *16123*.
Furniture; life hazard; oxygen; smoke; temperature; toxicity; upholstery; bedding; beds; carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; *NBS-GCR-73-1*.
Fused silica; hydroxyl; ion polishing; polishing; roughness; surface damage; thin films; threshold; damage threshold; etching; flame polishing; *SP462*, pp. 310-314 (Dec. 1976).
Fused silica; interferometry; photoelasticity; piezo-optic constants; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; *SP462*, pp. 58-63 (Dec. 1976).
Fused silica; interferometry; photoelasticity; piezo-optic constants; refractive index; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; *NBSIR 76-1115*.
Fused silica; ion polishing; surface damage; surface roughness; surface structure; thin films; ultrasonic cleaning; damage thresholds; *SP435*, pp. 305-320 (Apr. 1976).
Fusion dissolution; radiochemical analyses; ashing (wet and dry); chemical errors; contamination; dissolution techniques; *SP422*, pp. 463-490 (Aug. 1976).
Fusion plasma research; plasma radiative losses; sodium isoelectronic sequence; Tokamak plasmas; atomic oscillator strengths; beam-foil spectroscopy; *16320*.
Future trends; professional qualifications; fire protection; *16198*.
f-values; isoelectronic sequence; lithium sequence; oscillator strengths; relativistic effects; spectral series; systematic trends; *JPCRD* **5**, No. 3, 537-570 (1976).
f-values; lithium sequence; oscillator strength distribution; oscillator strengths; relativistic effects; spectral series; systematic trends; continuum; discrete spectrum; *f*-sum rule; *15817*.

G

γ radiation; γ response; calibration; exposure rate; geometry; instrument; ion chamber; roentgen; standard; *SP456*, pp. 59-63 (Nov. 1976).
γ response; calibration; exposure rate; geometry; instrument; ion chamber; roentgen; standard; γ radiation; *SP456*, pp. 59-63 (Nov. 1976).
GaAs; laser; optical; oscilloscope; photoconductor; picosecond; sampling; sampling oscilloscope; strobe; *15835*.
Gadolinium sulphate; germanium resistance thermometers; IPTS-68; low temperature scales, 1-83 K; magnetic thermometer; manganous ammonium sulphate; paramagnetic salts; platinum resistance thermometers; ac-dc resistance thermometry; ac susceptibility; *15903*.
Gadolinium-148; polonium-210; self absorption; uranium-oxide; alpha particles; backscattering; *15807*.
Gage; instrument; laser; length; machine; measurements; standard; dimensional; *NBSIR 75-926*.
Gage blocks; length; measurement process; calibration; comparator; *NBSIR 76-979*.
Gain; microwave; near-field; calibrations; electromagnetic hazards; field meters; *NBSIR 75-805*.
Gain; radiation pattern; reflector; Yagi; antenna; director; driven element; *TN688*.
Gallium arsenide; germanium; laser flash method; laser windows; thermal diffusivity; cadmium telluride; *SP435*, pp. 98-106 (Apr. 1976).
Galvanic; hydrogen embrittlement; soil; stainless steel; stress; stress-corrosion; underground; corrosion; *16354*.
Galvanic corrosion; soil corrosion; stainless steel; underground corrosion; copper; corrosion; *16355*.
Galvanic couples; soil environment; stainless steels; stress-corrosion behavior; coatings; corrosion behavior; field tests; *NBSIR 76-1081*.
Galvanometer; galvanometer amplifier; seismic system; seismometer; accelerometer; calibration; electromechanical transducer; *NBSIR 76-1089*.
Galvanometer amplifier; seismic system; seismometer; accelerometer; calibration; electromechanical transducer; galvanometer; *NBSIR 76-1089*.
Gamma; intercomparison; neutron; personnel; reactor; dosimetry; *SP456*, pp. 225-232 (Nov. 1976).
Gamma; radioactivity; standardization; ^{129}I; beta; coincidence counting; *16259*.
Gamma camera; nuclear medicine; quality assurance; radiopharmaceuticals; ^{99m} Technetium; *SP456*, pp. 131-138 (Nov. 1976).
Gamma counting efficiency; germanium detectors; instrumental neutron activation analysis; particulate sample geometry; trace elements in polyethylene powder; *SP422*, pp. 1275-1281 (Aug. 1976).
Gamma intensity attenuation; neutron flux depression; organic liquid sample irradiation; palladium distribution ratios; platinum distribution ratios; chlorine effect; counting corrections; *SP422*, pp. 1181-1187 (Aug. 1976).
Gamma rays; ground state decay; radioactivity; selenium-75; standardization; coincidence counting; *15846*.
Gamma rays; hardness assurance; microwave mixer diodes; mixers; neutrons; radiation hardness; receivers; Schottky-barrier diodes; semiconductors; solid-state devices; x-band measurements; diodes; *SP400-7*.
Gamma rays; photoelectric effect; photons; x rays; attenuation coefficients; cross sections; *TN901*.
Gamma rays; physical measurements; quality control; radiation measurement; radiation processing; radiation sterilization; radiochromic dyes; Red Perspex; sterility control; dosimetry; electron beams; *16648*.
Gamma spectrometry; inorganic separators; isotopic exchange; multielement determination; neutron activation; radiochemical separation; trace elements; biological material; biological standards; data evaluation; distillation; food composition; *SP422*, pp. 1173-1180 (Aug. 1976).
Gamma-gamma correlations; quark models; symmetries; ψ particles; χ particles; angular distributions; *15962*.
Gamma-ray; photon; x ray; attenuation coefficient; cross section; dosimetry; energy-absorption coefficient; *SP456*, pp. 299-306 (Nov. 1976).
Gamma-ray; radioactivity; sediment; standard; x ray; alpha particle; beta particle; *15933*.
Gamma-ray astronomy; induced radioactivity; Monte Carlo calculation; response; scintillation detector; background; *16431*.
Gamma-ray measurements; Ge(Li) detectors; environmental gamma-ray measurements; environmental samples; *SP456*, pp. 159-167 (Nov. 1976).
Gamma-ray measurements; Ge(Li) detectors; radioactivity; standards; environment; *SP456*, pp. 173-179 (Nov. 1976).
Gamma-ray wavelength; gold 198; goniometer; x-ray interferometry; crystal diffraction; *16227*.
Gammas; neutrons; plutonium; x rays; betas; calibrations; dosimetry; *SP456*, pp. 267-276 (Nov. 1976).
Garments; heat transfer; standards; apparel; burn injury; ease of ignition; fabrics; fire; flammability tests; *NBSIR 76-1072*.
Garments; ignition sources; space heaters; burns; fabric fires; FFACTS; *NBSIR 76-1014*.

Garnet; large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; cells; charge-coupled device (CCD); chevron; *16647.*

Gas; hazardous materials; loads; progressive collapse; sonic boom; vehicular collision; bombs; building codes; design criteria; explosions; *BSS89.*

Gas analysis; gas standards; nitric oxide; nitrogen dioxide; sulfur dioxide; air pollution; carbon monoxide; *15972.*

Gas analysis; gases; emission; monitors; standards; air pollution; analyzing; *15982.*

Gas analysis; high purity; materials analysis; neutron activation analysis; contamination; *SP422,* pp. 759-772 (Aug. 1976).

Gas analysis; hydrogen cyanide; industrial hygiene; ion selective electrode; sodium hydroxide; work atmosphere; air analysis; air sampling; *NBSIR 76-998.*

Gas analysis; industrial hygiene; phosphine; sorber; work atmosphere; air analysis; air sampling; *NBSIR 75-977.*

Gas and electric ranges; life-cycle costing; procurement experiments; energy-efficient products; Experimental Technology Incentives Program; *NBSIR 76-1027.*

Gas chromatography; gas chromatography-mass spectrometry; hydrocarbons; liquid chromatography; petroleum analysis; trace analysis; baseline studies; *TN889.*

Gas chromatography; graphite furnace; methylation of metals; microbial transformation; speciation; volatile metal compounds; detection; flameless atomic spectrophotometry; *16409.*

Gas chromatography; high speed plasma; plasma; chromatography; coupling of high speed plasma; *16340.*

Gas chromatography; hydrogen chloride; hydrogen cyanide; pollution; pyrolysis; reactive gas generator; sulfur dioxide; acetaldehyde; acrolein; formaldehyde; *NBSIR 76-1000.*

Gas chromatography; isolation and clean-up; mass spectrometry; organic trace analysis; qualitative accuracy; quality control; quantitative accuracy; reference materials; sampling; concentration; detectors; extraction; *SP422,* pp. 9-34 (Aug. 1976).

Gas chromatography; liquid chromatography; oil spill; petroleum; quantitation; *16423.*

Gas chromatography; ocean biota analysis; phthalate trace analysis; air analysis; analytical blank; *SP422,* pp. 701-708 (Aug. 1976).

Gas chromatography; potatoes; residues, dissipation of; residues, in potatoes; residues, metabolic; residues, total; residues, volatilization; storage effects; 2,4-dichlorophenol; 2,4-dichlorophenoxyacetic acid; *SP422,* pp. 737-745 (Aug. 1976).

Gas chromatography; theory of chromatography; column materials; detectors; *15926.*

Gas chromatography; trace analysis; triclosan; 2-hydroxy-2′,4′,4-trichlorodiphenyl ether; bacteriostats; blood analysis; *SP422,* pp. 851-859 (Aug. 1976).

Gas chromatography-mass spectrometry; hydrocarbons; petroleum; water pollution; *16344.*

Gas chromatography-mass spectrometry; hydrocarbons; liquid chromatography; petroleum analysis; trace analysis; baseline studies; gas chromatography; *TN889.*

Gas detectors; smoke detectors; Taguchi gas sensors; detectors; fire detectors; *NBSIR 76-990.*

Gas discharge; helium; ionized gas; numerical solutions; constrictions; *16000.*

Gas explosion; leak detection; Annandale; field test; *16101.*

Gas kinetics; laser enhanced reactions; O_3; PbO; chemiluminescence; electronic states; *J. Res.* **80A** No. 2, 167-171 (1976).

Gas main pipe; impact; low carbon steel; stress corrosion cracking; brittle fracture; *NBSIR 74-625.*

Gas main pipe; welded steel pipe; brittle fracture; *NBSIR 73-299.*

Gas phase; hydrocarbons; ion-molecule reactions; mass spectrometry; rate coefficients; chemical kinetics; data evaluation; *JPCRD* **5,** No. 4, 1123-1146 (1976).

Gas phase; hydrocarbons; kinetics; mass spectrometry; photoionization; rate constants; *15850.*

Gas phase; hydrocarbons; oxidation; oxygen; oxygenated organic compounds; ozone; bibliography; chemical kinetics; combustion; free radicals; *SP449.*

Gas phase; photoabsorption cross section; photochemistry; quantum yield; rate constant; atmospheric chemistry; chemical kinetics; data evaluation; *16067.*

Gas pipe; black iron pipe; dimpled rupture; ductile fracture; *NBSIR 73-264.*

Gas pressure; heat diffusion; heat transfer; optical absorption coefficients; transparent materials; barothermal; *15916.*

Gas pressure; heat transfer; photoacoustic; transparent materials; absorption coefficients; cylindrical configurations; *15936.*

Gas pressure; heat transfer; phase shifts; photoacoustic; surface absorption coefficients; transparent materials; bulk absorption coefficients; Fourier amplitudes; *16558.*

Gas pressure; highly transparent solids; thermal conduction; absorption coefficients; barothermal gas cell; *15914.*

Gas ranges; life cycle costing; procurement experiments; energy efficient products; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-15.*

Gas reactions; hydroxyl radical; kinetics; *15743.*

Gas standards; nitric oxide; nitrogen dioxide; sulfur dioxide; air pollution; carbon monoxide; gas analysis; *15972.*

Gas thermometry; International Practical Temperature Scale of 1968; temperature scale differences; thermodynamic temperatures; *J. Res.* **80A** Nos. 5 and 6, 703-738 (1976).

Gas vapors; metal-noble gas vapors; vapors, gas; alkali metal-noble gas vapors; *16217.*

Gaseous pollutants; sampling air; accuracy and precision; air; air particulates; air pollution; analysis of air; atmosphere; *SP422,* pp. 311-320 (Aug. 1976).

Gaseous positive ions; heat of formation; ionization potential; measurement; appearance potential; *16205.*

Gases; conduction; electrical conduction in gases; *16165.*

Gases; emission; monitors; standards; air pollution; analyzing; gas analysis; *15982.*

Gases; high density; mixtures; thermodynamic properties; air; *16455.*

Gas-fired boiler; dynamic boiler efficiency; efficiency vs cycling rate; efficiency vs heating load; *16338.*

Gas-liquid; nonspherical molecules; Ornstein-Zernike theory; thermal conductivity; correlation length; critical point; *16484.*

Gasoline; hydrogen; methane; safety; explosion; fire; fuel; *TN690.*

Gear failure; machine component failure; mechanical failure; surface pitting; abrasive wear; adhesive wear; *SP423,* pp. 55-66 (Apr. 1976).

Gears; looseness; signature analysis; unbalance; vibration; diesel-electric sets; *NBS-GCR-74-22.*

Gears; molybdenum disulfide; solid lubricants; wear; fluoride films; *SP452,* pp. 132-148 (Sept. 1976).

Gel point; modulus of rubber; molecular interpretation of rubber elasticity; rubber elasticity; statistical theory of rubber elasticity; swelling of rubber network; cross-linking of rubber; dicumyl peroxide; *J. Res.* **80A** No. 3, 451-463 (1976).

Ge(Li) detectors; environmental gamma-ray measurements; environmental samples; gamma-ray measurements; *SP456,* pp. 159-167 (Nov. 1976).

Ge(Li) detectors; radioactivity; standards; environment;

gamma-ray measurements; *SP456*, pp. 173-179 (Nov. 1976).

General assembly; open symposium; *16582*.

General relativity; gravitation; lunar orbit; moon; equivalence principle; *15946*.

General relativity; gravitational redshift; primary frequency standards; proper time; UTC; atomic clocks; clock acceleration effect; definition of the second; frequency accuracy; frequency standards; *16236*.

Generalization of silicon; lattice, parameter of; lattice parameters; precision; Bond method; *15945*.

Generalized permutations; *p*th roots; symplectic matrices; *15790*.

Generalized processing; data base; data-base machines; data-base management; data definition; data dictionary; data independence; data manipulation; data model; distributed data base; *16330*.

Generator; motor; stepping; digital; drive; electronic; *16399*.

Generator; trinitrotoluene; vapors; calibration device; dinitrotoluene; ethylene glycol dinitrate; explosives; *16402*.

Generators; instrumentation; MHD; superconductivity; cryogenics; CTR; electric power; energy storage; *16465*.

Generic safety standards; household appliances; operations research; thermal burn hazards; burn hazards, household appliances; fault-tree diagrams; *NBSIR 76-1097*.

Geochemical standards; geochronological standards; K-Ar dating; sampling a biotite; sampling constants; standard biotite; biotite stoichiometry; *SP422*, pp. 401-419 (Aug. 1976).

Geochemical variance; particle size distribution; particle size errors; sampling errors; trace analysis; analytical error; *SP422*, pp. 421-427 (Aug. 1976).

Geochemistry; isotope dilution; partial melting; rare earth elements; trace element models; volcanic rocks; analytical techniques; fractional crystallization; *SP422*, pp. 937-949 (Aug. 1976).

Geochemistry; medicine; pattern recognition; trace elements; air particulates; blood; chemistry; computer graphics; *SP422*, pp. 151-162 (Aug. 1976).

Geochronological standards; K-Ar dating; sampling a biotite; sampling constants; standard biotite; biotite stoichiometry; geochemical standards; *SP422*, pp. 401-419 (Aug. 1976).

Geodesy; geodynamics; geophysics; laser distance measurements; moon; earth rotation; *16448*.

Geodesy; geodynamics; lasers; metrology; moon; tectonics; *15794*.

Geodesy; geodynamics; lasers; tectonics; VLBI; coordinate systems; *15801*.

Geodesy; geodynamics; lasers; tectonics; VLBI; coordinate systems; *15806*.

Geodynamics; geophysics; laser distance measurements; moon; earth rotation; geodesy; *16448*.

Geodynamics; lasers; metrology; moon; tectonics; geodesy; *15794*.

Geodynamics; lasers; tectonics; VLBI; coordinate systems; geodesy; *15801*.

Geodynamics; lasers; tectonics; VLBI; coordinate systems; geodesy; *15806*.

Geodynamics; lunar distance; microwave interferometry; plate tectonics; satellite geodesy; crustal moments; earth rotation; *15799*.

Geologic faults; mining; tectonics; acoustics; coal; earthquakes; *NBS-GCR-73-18*.

Geological character; ground shaking; intensity; earthquake; empirical relation; Franciscan Formation; *SP444*, III-84—III-94 (Apr. 1976).

Geological materials; instrumental-neutron activation analysis; comparative analyses; error evaluation; *SP422*, pp. 1241-1256 (Aug. 1976).

Geological sample; rocks and minerals; sample preparation; sampling; trace analysis; water sampling; contamination; *SP422*, pp. 285-297 (Aug. 1976).

Geology; minerals; Raman spectroscopy; chemical analysis; fluid interactions; *15930*.

Geometrical model; optical square; pentaprism; reflection; refraction; standard deviation; uncertainty; autocollimator; calibration; constant deviation prism; *NBSIR 76-993*.

Geometry; instrument; ion chamber; roentgen; standard; γ radiation; γ response; calibration; exposure rate; *SP456*, pp. 59-63 (Nov. 1976).

Geometry effects; half-value layer; photon attenuation; chamber energy response; *SP456*, pp. 389-394 (Nov. 1976).

Geophysical fluid flows; inertial waves; internal waves; rotating fluids; stratified fluids; waves in fluids; buoyant flows; *J. Res.* **80B** No. 3, 353-402 (1976).

Geophysics; laser distance measurements; moon; earth rotation; geodesy; geodynamics; *16448*.

Geotechnical engineering; standards; buildings (codes); excavation; foundations; *16535*.

Germanium; ion chamber; liquid scintillation; sodium iodide; standard; detectors; *SP456*, pp. 77-82 (Nov. 1976).

Germanium; KCl; refractive index; single crystal; stress optic constants; birefringence; *SP435*, pp. 164-169 (Apr. 1976).

Germanium; laser flash method; laser windows; thermal diffusivity; cadmium telluride; gallium arsenide; *SP435*, pp. 98-106 (Apr. 1976).

Germanium detectors; instrumental neutron activation analysis; particulate sample geometry; trace elements in polyethylene powder; gamma counting efficiency; *SP422*, pp. 1275-1281 (Aug. 1976).

Germanium resistance thermometers; IPTS-68; low temperature scales, 1-83 K; magnetic thermometer; manganous ammonium sulphate; paramagnetic salts; platinum resistance thermometers; ac-dc resistance thermometry; ac susceptibility; gadolinium sulphate; *15903*.

Germanium selenide; infrared laser windows; absorption; antireflection coatings; *SP462*, pp. 279-282 (Dec. 1976).

Gersgorin's theorem; nonnegative matrix; Perron-Frobenius eigenvalue; spectrum of a square complex matrix; *D*-stable matrix; field of values; *15770*.

g-factors; ground state energy; Luttinger-Tisza method; translation vectors; cerous magnesium nitrate; crystal structure; *16512*.

GFRP rod and rope; structural guys; end fittings; *15993*.

Gibbs energy; heat capacity; potassium compounds; rubidium compounds; sodium compounds; standard reference data; thermochemical tables; enthalpy; entropy; *NBSIR 76-1034*.

Gibbs energy data; heat capacity data; partial molal properties; thermochemistry; thermodynamics; review articles; water pollution; aqueous systems; bibliography; biochemical systems; enthalpy data; entropy data; equilibrium data; *SP454*.

Gibbs energy of formation; heat capacity; ideal gas thermodynamic properties; internal rotational barrier height; propanone (acetone); torsional frequencies; 2-butanone (methyl ethyl ketone); enthalpy; entropy; *JPCRD* **5**, No. 2, 319-328 (1976).

Gibbs energy of formation; selected thermodynamic values; thermodynamic properties; CODATA compatible values; enthalpies of formation; entropy; *NBSIR 75-968*.

Ginzburg-Landau theory; glass; inhomogeneous system; subcritical region; viscosity; correlation length; *16258*.

Glare; lighting; perceptual/motor; psychomotor; safety; *NBS-GCR-75-45*.

Glass; glass strengthening; ion exchange; Rayleigh waves; surface waves; *16282*.

Glass; graphite; literature review; PRD-49; reinforced aluminum; reinforced plastics; structural composites; tensile

moduli; tensile strength; thermal conductivity; thermal contraction; boron; cryogenics; *15745.*
Glass; homogeneity; melting; vaporization; diffusion; *15989.*
Glass; impact; ophthalmic lenses; stress distributions; fracture; *15769.*
Glass; incongruent vaporization; transpiration; vapor density; *16524.*
Glass; infrared; interferometry; lasers; photoelasticity; polarimetry; crystals; damage; *15969.*
Glass; inhomogeneous system; subcritical region; viscosity; correlation length; Ginzburg-Landau theory; *16258.*
Glass; piezoelectric; polarization; polyvinyl chloride; pyroelectric; dipoles; electret; *16277.*
Glass; plastics; radiation; radiochromic dyes; spectrophotometry; colour dosimeters; dosimetry; dyes; *15960.*
Glass; static fatigue; strength; crack growth; fracture; fracture mechanics; *15821.*
Glass door; lead nitrate; mercury thermometers; metric; nuclear power; police radars; solar energy; SRM's; computer systems; environmental; fire; *DIM/NBS* **60,** No. 2, 1-25 (1976).
Glass fiber; carpet; corridor test; fire testing; flammability; *NBSIR 75-782.*
Glass standard; lithium drifted silicon detector; Monte Carlo; particle analysis; continuous radiation; electron probe microanalyzer; *SP422,* pp. 1283-1291 (Aug. 1976).
Glass standards; government intervention; heating/cooling; lead-paint; metric; pressure transducers; thermal comforts; weights and measures; building industry; calibration system; centigrade/celsius; computer; electrical industries; *DIM/NBS* **60,** No. 10, 1-24 (1976).
Glass strengthening; ion exchange; Rayleigh waves; surface waves; glass; *16282.*
Glass transition; heat capacity; high molecular weight linear polyethylene; polyethylene; temperature drift; thermodynamic properties; *J. Res.* **80A** No. 1, 51-57 (1976).
Glass transition; heat capacity; polymer; specific heat; strain energy; supercooled liquid; thermal relaxation; glassy state; *16309.*
Glass transition temperature; smectic polypropylene; spherulitic polypropylene; crazing; cryogenic temperatures; crystalline polymers; environmental effects on crazing; fractional free volume; *15772.*
Glass-reinforced-plastic rod end fitting; nondestructive examination; neutron radiography; ultrasonics; x-radiography; end fitting; *NBSIR 76-1084.*
Glassy state; glass transition; heat capacity; polymer; specific heat; strain energy; supercooled liquid; thermal relaxation; *16309.*
Glassy state; Lennard-Jones system; Monte Carlo simulation; nucleation; overcompression; supercooling; *J. Res.* **80A** No. 1, 59-64 (1976).
Glassy state; order-parameters; polymer thermodynamics; Ehrenfest relation; *16283.*
Glazing; impact tests; safety glazing; standards; state law; architectural glazing; codes; Consumer Product Safety Committee; Consumer Safety Glazing Committee; *NBSIR 76-1109.*
Global positioning system; isolation amplifiers; low-noise amplifiers; precision frequency measurements; precision time measurements; time difference measurements; time-domain frequency stability; time interval; frequency measurement; frequency mixing; *NBSIR 75-827.*
Global Positioning System; phase-locked loop; phase noise measurement system; spectral density of phase; *NBSIR 76-846.*
Glowing; inhibitor; oxidative pyrolysis; oxygen index; rayon; smoke; smoldering; upholstery fabric; cotton; cushioning; fire retardant; furniture; *16224.*
Glowing electrical connections; arcing/sparking; branch circuit; contact resistance; electrical connections; fire hazard; *NBSIR 76-1011.*
Glucose; heat measurement; hexokinase; magnesium; metabolic processes; microcalorimetry; thermochemistry; thermodynamics; adenosine 5′-triphosphate; biochemistry; coupled equilibrium; enzyme catalyzed reactions; *16385.*
Glucose in serum; isotope dilution-mass spectrometry; serum glucose; clinical reference method; definitive glucose method; *16343.*
Gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; *16420.*
Gold; hafnium; palladium; platinum; precision; radiochemical separations; silver; accuracy; activation analysis; copper; *SP422,* pp. 1157-1164 (Aug. 1976).
Gold; reflectance; silver; sputter deposition; aluminum; copper; flash desorption spectroscopy; *SP462,* pp. 195-202 (Dec. 1976).
Gold plate; palladium; polymer in gold; porosity in gold; solder plate; tin-nickel alloy; tin plate; underplatings for gold; wear of gold; contact lubrication; corrosion inhibitors; electrical contacts; *SP452,* pp. 64-71 (Sept. 1976).
Gold plating; heat switch; He temperature; high conductivity; *16208.*
Gold surfaces; Lifshitz theory; Van der Waals forces; alkali atoms; atomic beam deflection; atom surface potential; *15953.*
Gold 198; goniometer; x-ray interferometry; crystal diffraction; gamma-ray wavelength; *16227.*
Gold-black; piezoelectric; pulse laser power; electrically calibrated pyroelectric detector; *16135.*
Gold-doped silicon; measurement methods; MOS capacitor; *p-n* junction; semiconductor defects; silicon; thermally stimulated capacitance; thermally stimulated current; *16363.*
Gold-doped silicon; measurement methods; microelectronics; MOS capacitor; *p-n* junctions; semiconductors; silicon; thermally stimulated capacitance; thermally stimulated current; cryostat; defects; *SP400-26.*
Goniometer; x-ray interferometry; crystal diffraction; gamma-ray wavelength; gold 198; *16227.*
Gonioreflectometer; magnesium oxide; mu sulphur; reflectance; reflectometer; sodium chloride; barium sulphate; bidirectional reflectance; bidirectional reflectometer; black coating; *J. Res.* **80A** No. 2, 189-205 (1976).
Government action; government responsibility; mechanical failure; safety standards; consumer product safety; failure prevention; *SP423,* pp. 215-219 (Apr. 1976).
Government action; life-cycle costing; marginal analysis; quality control; safety standards; economic cost of failure prevention; frequency of failure; *SP423,* pp. 107-116 (Apr. 1976).
Government action; mechanical failure; safety standards; transportation safety; effects of mechanical failure on environment; failure prevention; *SP423,* pp. 153-163 (Apr. 1976).
Government action; mechanical failure; mechanical reliability; safety standards; conservation of material resources; failure prevention; *SP423,* pp. 221-225 (Apr. 1976).
Government intervention; heating/cooling; lead-paint; metric; pressure transducers; thermal comforts; weights and measures; building industry; calibration system; centigrade/celsius; computer; electrical industries; environments; *DIM/NBS* **60,** No. 10, 1-24 (1976).
Government laboratories; plating; Blum, William; electrodeposition; *16203.*
Government metrication; metrication; metric system; SI; timetable for metrication; conversion to metric; *16231.*
Government participation; refrigeration safety standards; safety of appliances; standards for safety; *15890.*
Government procurement; performance specifications; procure-

ment mechanisms; technology incentives; ETIP; *NBS-GCR-ETIP 73-02.*

Government procurement policy; noise reduction; performance specification; technology incentives; ETIP; *NBS-GCR-ETIP 73-04.*

Government procurement policy; noise reduction; performance specification; technology incentives; energy conservation; ETIP; *NBS-GCR-ETIP 73-05.*

Government procurement policy; technology incentives; energy conservation; ETIP; *NBS-GCR-ETIP 73-06.*

Government regulation; management objectives; privacy; security; standards; technology assessment; user experience; auditing; cost/benefit analysis; data base; data base management; DBMS; *SP451.*

Government responsibility; mechanical failure; safety standards; consumer product safety; failure prevention; government action; *SP423,* pp. 215-219 (Apr. 1976).

Government-owned patents; patent screening; technology incentives; ETIP; *NBS-GCR-ETIP 73-07, Vol. 1.*

Government-owned patents; patent screening; technology incentives; ETIP; *NBS-GCR-ETIP 73-07, Vol. 2.*

Governments; management information systems; public services; security; standards; user groups; computers; data base management; *15923.*

Gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; *16158.*

Grafting; investments; polymer; resin; wear; adhesion; adsorption; alloys; composites; dental; *NBSIR 76-1095.*

Grain boundary; morphology; solidification; stability; *15844.*

Grain boundary mobility; subgrains; CaF_2; crack coalescence; flaw detection; flaw distribution; forging; *SP462,* pp. 69-81 (Dec. 1976).

Grain boundary stability; hot forging; KCl; mechanical strength; microstructure; optical absorption; RbCl; $SrCl_2$; double-doped KCl laser windows; *SP462,* pp. 82-86 (Dec. 1976).

Grain moisture measurement; laws and regulations; measurement; metric; packaging and labeling; police radar equipment; standards; supermarket automation; weights and measures; calibration; communication; consumers; *SP442.*

Grant; RANN; sponsorship; structural engineering; earthquake engineering; *SP444,* pp. V-66—V-79 (Apr. 1976).

Grant/contract software; personnel management software; proposal/award software; research administration; software exchange; software summary; software survey; space management software; university systems; directory; equipment management software; *TN916.*

Grants; pollution abatement; user fees; wastewater; water pollution; water resources; cost sharing; economic efficiency; environment; equity; financing; *16564.*

Grants; pollution abatement; wastewater; water pollution; water resources; cost sharing; efficiency; environment; financing; *15810.*

Graph; inversion; partitioning; sparse matrix; tree; block Gaussian elimination; *J. Res.* **80B** No. 2, 245-257 (1976).

Graph; matroid; network; operations research; algorithm; *J. Res.* **80B** No. 3, 337-342 (1976).

Graph; tree; 2-connected; block-cutpoint tree; *16154.*

Graph isomorphism; labels; modified adjacency matrix; spectrum; *J. Res.* **80B** No. 4, 447-483 (1976).

Graphical diagnosis; interlaboratory tests; randomization, constrained; ruggedness test; statistical techniques; Youden plot; Youden squares; Youden, W. J.; calibration designs; chain blocks; collaborative tests; diagnostic tests, index for rating; *16115.*

Graphics; Hershey character set; plotting; type fonts; typesetting; vectorized characters; alphabets; COM; computerized typesetting; digital plotting; *SP424.*

Graphite; hydrocarbons; metering; methane; natural gas; petroleum; physical properties; standard reference materials; coal; energy; fuel; *SP434.*

Graphite; literature review; PRD-49; reinforced aluminum; reinforced plastics; structural composites; tensile moduli; tensile strength; thermal conductivity; thermal contraction; boron; cryogenics; glass; *15745.*

Graphite chamber; ionization chamber; absorbed dose; calibration; cavity chamber; *SP456,* pp. 37-39 (Nov. 1976).

Graphite furnace; methylation of metals; microbial transformation; speciation; volatile metal compounds; detection; flameless atomic spectrophotometry; gas chromatography; *16409.*

Graphite furnace atomic emission spectrometry; repetitive wavelength scanning; wavelength modulation; *15954.*

Grating; infrared windows; KCl; mirror; Mo; NaCl; window; ZnSe; CO_2 laser radiation; Cu; CW laser damage; *SP435,* pp. 189-201 (Apr. 1976).

Gratings; illuminating engineering; lighting; modulation transfer function; suprathreshold visibility; visibility; vision; *16008.*

Gratings; illuminating engineering; lighting; modulation transfer function; suprathreshold visibility; visibility; vision; *BSS82.*

Gravitation; lunar orbit; moon; equivalence principle; general relativity; *15946.*

Gravitational attraction; gravitational constant; rotating reference frame; acceleration measurement: fundamental constant; *16222.*

Gravitational bending; interferometry; least squares line; linear model; optical flat; profile; standard deviation; uncertainty; calibration; diameter; *NBSIR 75-975.*

Gravitational constant; rotating reference frame; acceleration measurement: fundamental constant; gravitational attraction; *16222.*

Gravitational redshift; primary frequency standards; proper time; UTC; atomic clocks; clock acceleration effect; definition of the second; frequency accuracy; frequency standards; general relativity; *16236.*

Gravity drainage evaluation; plumbing research; *16083.*

Gravity effects; phase transitions; critical point; *TN925.*

Green's dyadic theory; electromagnetic theory; *16562.*

Grey-scale ultrasound; spleen; splenomegaly; A-scan analysis; digital; *SP453,* pp. 71-78 (Oct. 1976).

Grinding; hardness; stress; tensile strength; wear; corrosion; crack-free chromium; electroplating; fast plating; fatigue strength; *SP452,* pp. 56-63 (Sept. 1976).

Grinding; metal polishing; optical fabrication; chamfering; continuous polishing; *SP435,* pp. 3-9 (Apr. 1976).

Grinding; sawing; silicon; standard; weighing; density; etching; *NBSIR 76-1019.*

Grit; sand transport; sewage sand; sewer self-cleansing; *16374.*

Ground cover; humidity; instrumentation; microphones; sound level meters; statistical control processes; temperature; acoustic calibrators; A-weighting; barometric pressure; crest factor; *TN931.*

Ground fault; leakage current; prevention of electrocution; branch circuit protection; electrical safety; electric shock; *BSS81.*

Ground layer; numerical solution; shear wave; elastic medium; engineering seismology; *SP444,* pp. III-1—III-12 (Apr. 1976).

Ground response; seismic waves; seismometer; soil-structure interaction; earthquake; field data; *SP444,* pp. III-13—III-23 (Apr. 1976).

Ground shaking; intensity; earthquake; empirical relation; Franciscan Formation; geological character; *SP444,* III-84—III-94 (Apr. 1976).

Ground shaking; liquefaction; soil density; stability; earthfill dams; earthquakes; *SP444,* pp. III-24—III-37 (Apr. 1976).

Ground state decay; radioactivity; selenium-75; standardization; coincidence counting; gamma rays; *15846.*

Ground state energy; Luttinger-Tisza method; translation vectors; cerous magnesium nitrate; crystal structure; *g*-factors; *16512.*

Ground state potential; nickel; band structure; energy levels; excitation potential; *15842.*

Ground station; radio star; accuracy; antenna; calibration; Cassiopeia A; error analysis; flux density; G/T (system gain/system noise temperature); *16499.*

Ground strength; ground vibration; liquefaction; pore-water pressure; earthquake; explosion test; *SP444,* pp. III-38—III-51 (Apr. 1976).

Ground vibration; liquefaction; pore-water pressure; earthquake; explosion test; ground strength; *SP444,* pp. III-38—III-51 (Apr. 1976).

Growth kinetics; mechanical properties; microstructure; stoichiometry; transmission electron microscopy; vapor deposition; cadmium telluride; *SP462,* pp. 100-118 (Dec. 1976).

GSA/Manchester building; solar collector; solar heating and cooling; thermal storage; energy conservation; *NBSIR 76-1056.*

G/T; precision measurements; radio star; satellite communications; error analysis; *NBSIR 76-842.*

G/T (system gain/system noise temperature); ground station; radio star; accuracy; antenna; calibration; Cassiopeia A; error analysis; flux density; *16499.*

Guarded-hot-plate apparatus; line-heat-source; thermal conductivity; ambient temperature index; edge-heat-loss; errors; *16084.*

Guardrail; high-capacity; mathematics; mercury; performance standard; pressure transducers; SRM; surgical implants; testing; thermal transients; architectural heritage; fire; *DIM/NBS* **60,** No. 8, 1-24 (1976).

Guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; static loads; stiffness; structural safety; design; dynamic loads; *NBSIR 76-1131.*

Guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; structural safety; anthropometric measurements; *NBSIR 76-1132.*

Guide criteria; potable water protection; plumbing guide criteria; backflow; backflow prevention devices; back pressure; backsiphonage; *NBSIR 76-1020.*

Guideline; law enforcement equipment report, Law Enforcement Standards Laboratory; mobile digital equipment; National Institute of Law Enforcement and Criminal Justice; communications; digital communications; *16190.*

Guidelines; industrial robots; manipulator; performance evaluation; programmable robots; specifications; *SP459.*

Guidelines; policies; R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; *NBS-GCR-ETIP 76-05.*

Guidelines; policies; R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; *NBS-GCR-ETIP 76-06.*

Gunfire noise; hearing damage; hearing protectors; law enforcement equipment; earmuffs; earplugs; *16368.*

Gunn oscillator; infrared; injection stabilization; klystron; *X* band; cavity stabilization; frequency multiplication; frequency stability; frequency synthesis; *16520.*

Gust; meteorological data; topographical model; wind load; wind profile; wind tunnel; bridge; *SP444,* pp. II-1—II-20 (Apr. 1976).

Gust factors; structural engineering; wind engineering; wind loads; accelerations; building codes; buildings; deflections; dynamic response; *15871.*

Gust factors; structural engineering; wind loads; building codes; buildings; deflections; dynamic response; *SP444,* pp. IV-127—IV-144 (Apr. 1976).

Gust response; model; specifications; structure; theory; wind; bridge; design; field data; *SP444,* pp. I-1—I-20 (Apr. 1976).

Guy insulators; high-voltage tests; insulators, tower guy; Loran C; pultruded rods; rods, insulator; breakdown, electrical; failure analysis; fiberglass-reinforced plastics; flammability; *NBSIR 76-1136.*

Guyed tower; structural analysis; structural engineering; vibration analysis; wind load; finite element; *SP444,* pp. IV-37—IV-54 (Apr. 1976).

Guys, nonmetallic; marine atmospheres; plastics, fiber-reinforced; pultrusions; stress-rupture testing; sunlight; ultraviolet radiation; weatherability; antenna-support materials; environmental degradation; *NBSIR 76-1069.*

Gyromagnetic ratio; measurement units; physical constants; SI units; *16395.*

Gyromagnetic ratio of the proton; fine structure constant; fundamental constants; *15934.*

H

Hadamard product; positive semidefinite; real function; *15876.*

Hadamard's inequality; Hermitian component; positive definite; determinant; *15861.*

Hafnium; high-speed measurement; high temperature; melting point; pyrometry; radiance temperature; *J. Res.* **80A** No. 4, 659-662 (1976).

Hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; *16420.*

Hafnium; palladium; platinum; precision; radiochemical separations; silver; accuracy; activation analysis; copper; gold; *SP422,* pp. 1157-1164 (Aug. 1976).

Hafnium, analysis of first spectrum; spectrum, Hf I; Zeeman effect, Hf I; analysis, Hf I spectrum; *Monogr. 153.*

Hair dryer/stylers; heat flux; safety; technical analysis; temperature; air flow rate; electrical, mechanical and thermal hazards; *NBSIR 76-1112.*

Half-value layer; photon attenuation; chamber energy response; geometry effects; *SP456,* pp. 389-394 (Nov. 1976).

Halocarbon ions; hydrocarbons; ion-molecule reactions; kinetics; rate constants; collision processes; *15811.*

Halocarbon 11, $CFCl_3$; halocarbon 12, CF_2Cl_2; uv photoabsorption; electron energy loss; electron impact; *15997.*

Halocarbon 12, CF_2Cl_2; uv photoabsorption; electron energy loss; electron impact; halocarbon 11, $CFCl_3$; *15997.*

Halogen emission; intrinsic damage; multi-photon absorption; alkali halides; collision chains; *SP435,* pp. 366-368 (Apr. 1976).

Halon; integrating spheres; deuterium, arc lamps; *16058.*

Hand modifiers; inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; precondensates; radiation grafting; antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; *NBS-GCR-ETIP 76-22.*

Handbrake; safety; testing; bicycles; braking; consumer safety; *NBSIR 75-755.*

Handbrakes; testing; bicycles; braking; consumer safety; *NBSIR 75-953.*

Handgun ammunition; law enforcement; relative incapacitation

index; relative stopping power; bullets; cartridges; *16305*.

Hankel matrix; Toeplitz matrix; *J. Res.* **80B** No. 2, 269-272 (1976).

Hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; *16274*.

Hardened integrated circuits; integrated circuits; radiation effects; radiation hardening; test patterns; test structures; *NBSIR 76-1093*.

Hardness; stress; tensile strength; wear; corrosion; crack-free chromium; electroplating; fast plating; fatigue strength; grinding; *SP452*, pp. 56-63 (Sept. 1976).

Hardness; wear rate; abrasion; brittle surfaces; chipping fracture; *16335*.

Hardness assurance; microwave mixer diodes; mixers; neutrons; radiation hardness; receivers; Schottky-barrier diodes; semiconductors; solid-state devices; x-band measurements; diodes; gamma rays; *SP400-7*.

HAr_n^+; $HCCl_2^+$; $HCCl_2^-$; $HCCl_3$; infrared spectrum; matrix isolation; molecular rotation in solid Ar; photoinduced proton transfer; ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; emission spectrum; *15757*.

Hartree-Fock; integrals, evaluation of; molecular structure; orbitals; potential energy curves; pseudopotentials; self-consistent field; valence electrons; basis functions; configuration mixing; dipole moments; electronic structure of molecules; *16611*.

Hartree-Fock methods; oscillator strength; photoionization; single electron; *16378*.

H-atom transfer reactions; hydrogen halides; ion molecule reactions; ion cyclotron spectrometry; rate coefficients; charge transfer; *16362*.

Hazard; interior finish; smoke; building; estimating; fire; furniture; *16123*.

Hazard analysis; interior furnishings; toxicity; bibliographies; building fires; construction materials; fire departments; fire detection system; fire tests; flame detectors; flammability tests; *NBSIR 76-1120*.

Hazard analysis; NEISS; plastics flammability; product safety; accident data; data systems; fabric flammability; FFACTS; fire accidents; fire data systems; fire hazards; fires; *16361*.

Hazard assessment; toxicity; bioassay; combustion products; fire; *16204*.

Hazardous materials; loads; progressive collapse; sonic boom; vehicular collision; bombs; building codes; design criteria; explosions; gas; *BSS89*.

Hazardous microwave fields; *16622*.

Hazards; legal problem packaging; shipping; stability; standard reference materials; accelerated testing; clinical; *16110*.

$HCCl_2^+$; $HCCl_2^-$; $HCCl_3$; infrared spectrum; matrix isolation; molecular rotation in solid Ar; photoinduced proton transfer; ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; emission spectrum; HAr_n^+; *15757*.

$HCCl_2^-$; $HCCl_3$; infrared spectrum; matrix isolation; molecular rotation in solid Ar; photoinduced proton transfer; ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; emission spectrum; HAr_n^+; $HCCl_2^+$; *15757*.

$HCCl_3$; infrared spectrum; matrix isolation; molecular rotation in solid Ar; photoinduced proton transfer; ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; emission spectrum; HAr_n^+; $HCCl_2^+$; $HCCl_2^-$; *15757*.

HCl, CO, CO_2 with He, Ar; rotation-vibration spectra; semiclassical *S*-matrix; spectral line broadening; *ab initio* potentials; atom-molecule interactions; curved classical trajectories; *16528*.

He temperature; high conductivity; gold plating; heat switch; *16208*.

Head diffraction; hearing aids; instruments for hearing; manikin; audiometry; diffraction; *NBSIR 76-1110*.

Head injury; helmets; math model; protective headgear; safety; test methods; *NBSIR 76-1107*.

He-Ag and Ne-Ag mixtures; laser action; ultraviolet laser action; *16511*.

Health; precision; accuracy; clinical analysis; clinical chemistry; *SP422*, pp. 837-850 (Aug. 1976).

Health and hearing hazards; household noise; legal and community action; loudness; noise control and abatement; traffic noise; airborne and structure-borne sounds; aircraft noise intrusion; annoyance; appliance noise; *H119*.

Health and safety; historic preservation; states; building codes; cities; *TN918*.

Health care; housing production; I-R 100 awards; NIKE missile; papers available; stereology; toy safety; x-ray units; computer power; computer standard; corrosion; environment; *DIM/NBS* **60**, No. 11, 1-24 (1976).

Health hazard; potable water; vacuum breaker; water supply; backflow; backflow preventers; back pressure; backsiphonage; cross connections; *NBSIR 76-1070*.

Health hazards; high voltage electron microscopes; x-ray leakage; electron microscopes; *SP456*, pp. 223-224 (Nov. 1976).

Health records; information policy; management principles; medical records; privacy; recordkeeping practices; security; citizen rights; computers; confidentiality; data systems; *Monogr. 157*.

Hearing; loudness functions; masking; sirens; speech recognition; traffic noise; alarm signals; *16573*.

Hearing aid tests; orthotelephonic response; anthropometric manikin; free-field measurements; *16033*.

Hearing aids; high-rise buildings; metals; radiation safety; standards laboratory; synchrotron; building collapse; corrosion; energy; environmental; frequency standards; *DIM/NBS* **60**, No. 5, 1-24 (1976).

Hearing aids; instruments for hearing; manikin; audiometry; diffraction; head diffraction; *NBSIR 76-1110*.

Hearing damage; hearing protectors; law enforcement equipment; earmuffs; earplugs; gunfire noise; *16368*.

Hearing protectors; law enforcement equipment; earmuffs; earplugs; gunfire noise; hearing damage; *16368*.

Heart; reconstruction; refractive index; synthetic focus; tissues; ultrasound; acoustic attenuation; acoustic velocity; breast tumor; computerized tomography; *SP453*, pp. 109-119 (Oct. 1976).

Heat absorption; pool fires; residential sprinkler protection; sprinkler operation; automatic sprinklers; bedroom fires; droplet size; *NBS-GCR-76-58*.

Heat capacity; heat of fusion; heat of transition; transition temperature; triple point; ethane; *16522*.

Heat capacity; high molecular weight linear polyethylene; polyethylene; temperature drift; thermodynamic properties; glass transition; *J. Res.* **80A** No. 1, 51-57 (1976).

Heat capacity; high pressures; thermal conductivity; thermal diffusivity; thermal properties; transient techniques; *15709*.

Heat capacity; holes; polymer; poly(vinyl acetate); pressure; thermal; volume; compressibility; configuration; entropy; *16077*.

Heat capacity; ideal gas thermodynamic properties; internal rotational barrier height; propanone (acetone); torsional frequencies; 2-butanone (methyl ethyl ketone); enthalpy; entropy; equilibrium constant of formation; *JPCRD* **5**, No. 2, 319-328 (1976).

Heat capacity; lattice dynamics; low temperature, polyglycine; polypeptides; vibrational states; *16304*.

Heat capacity; lattice sums; magnetic; susceptibility; antifer-

romagnetism; critical temperature; dipole-dipole interaction; erbium phosphate ground state; *15866.*

Heat capacity; lead pyroniobate; low temperature; polarization; antiferroelectric; dielectric constant; *16527.*

Heat capacity; liquid; saturated liquid; specific heat; vapor; constant volume; ethane; *J. Res.* **80A** Nos. 5 and 6, 739-759 (1976).

Heat capacity; molar heat capacity; entropy; *16168.*

Heat capacity; oligomers; sebacates; triglycerides; correlation; esters; *16275.*

Heat capacity; polymer; specific heat; strain energy; supercooled liquid; thermal relaxation; glassy state; glass transition; *16309.*

Heat capacity; potassium compounds; rubidium compounds; sodium compounds; standard reference data; thermochemical tables; enthalpy; entropy; Gibbs energy; *NBSIR 76-1034.*

Heat capacity data; partial molal properties; thermochemistry; thermodynamics; review articles; water pollution; aqueous systems; bibliography; biochemical systems; enthalpy data; entropy data; equilibrium data; Gibbs energy data; *SP454.*

Heat conduction; laser damage; multiphoton absorption; rf sputtering; damage threshold; dielectric films; *SP435,* pp. 272-283 (Apr. 1976).

Heat conductivity; heat transfer; Lorenz function; thermal conductivity; conductivity; electrical; *15986.*

Heat conductivity; simulation; skin; apparel fabrics; fire hazard; flammability testing; *NBS-GCR-73-14.*

Heat defect in graphite; absorbed dose; calorimeter; electrons; *16473.*

Heat detection; smoke detection; automatic sprinklers; carbon dioxide; fire detection; fire extinguishment; flame detection; *NBSIR 76-1028.*

Heat detectors; hospitals; hotels; maintenance; nursing homes; reliability; schools; smoke detectors; atriums; fire detection; flame detectors; *16179.*

Heat detectors; infrared detectors; smoke detectors; testing; ultraviolet detectors; detection; fire detectors; flame detectors; *NBSIR 76-1040.*

Heat detectors; ionization smoke detectors; photoelectric smoke detectors; residential fires; smoke detectors; tenability levels; detector sensitivity; detector siting; *NBS-GCR-75-51.*

Heat detectors; residential fires; smoke detectors; detector sensitivity; detector siting; escape time; fire tests; *NBSIR 76-1126.*

Heat diffusion; heat transfer; optical absorption coefficients; transparent materials; barothermal; gas pressure; *15916.*

Heat diffusion equations; highly transparent solids; hydrodynamic equations; optical materials; photoacoustic method; absorption coefficients; *15971.*

Heat energy; tests; fabric flammability; fabrics; ignition; *NBS-GCR-76-70.*

Heat exchanger losses; hydrogen liquefier; pressure drop losses; compressor efficiency; cycle efficiency; *15879.*

Heat flow analysis; heating and cooling loads; thermal analysis; transient heat flows; building heat transfer; computer programs; dynamic thermal performance; *15762.*

Heat flux; radiant panel test method; floor covering; *NBSIR 75-706.*

Heat flux; safety; technical analysis; temperature; air flow rate; electrical, mechanical and thermal hazards; hair dryer/stylers; *NBSIR 76-1112.*

Heat flux; standards; tents; tests; uniforms; upholstered furniture; apparel; burn injury; carpets; draperies; fabrics; flammability; *16144.*

Heat input; heat release rate; limiting oxygen index; radiant panel; smoke density; time to ignition; fire performance tests; flame spread; *16136.*

Heat measurement; hexokinase; magnesium; metabolic processes; microcalorimetry; thermochemistry; thermodynamics; adenosine 5′-triphosphate; biochemistry; coupled equilibrium; enzyme catalyzed reactions; glucose; *16385.*

Heat of decomposition; oxygen balance; activation energy; bond dissociation energy; computer programs; explosive sensitivity tests; *15957.*

Heat of formation; ionization potential; measurement; appearance potential; gaseous positive ions; *16205.*

Heat of formation; ion-molecule equilibrium; proton affinity; proton transfer; basicity; bibliography, appearance potential; *NBSIR 76-1061.*

Heat of fusion; heat of transition; transition temperature; triple point; ethane; heat capacity; *16522.*

Heat of transition; transition temperature; triple point; ethane; heat capacity; heat of fusion; *16522.*

Heat pipe oven; lasers; metal vapors; noble gas; spectroscopy; electron beam excitation; *16234.*

Heat pulse; interatomic potential; molecular dynamics; second sound; shock wave; stress wave; temperature wave; thermal diffusivity; thermal relaxation; anharmonic crystal; computer simulation; energy transport; *16138.*

Heat pulse; molecular dynamics; second sound; stress pulse; temperature wave; thermal diffusivity; thermal equilibrium; thermal relaxation; anharmonic crystal; computer simulation; energy transport; *16589.*

Heat release; interior finish; reduced scale modeling; room corner tests; smoke; buildings; fire growth; flame spread; *16183.*

Heat release; limiting thermal index; pyrolysis; radiant heat; thermal sensitivity index; calorimeter; combustion; fire test; *NBS-GCR-76-54.*

Heat release; smoke abatement; sprinkler system; construction; corridor test; fire endurance furnace; fire growth; *16150.*

Heat release rate; ignition; reduced scale models; room fires; fire tests; flame spread; *NBSIR 76-1052.*

Heat release rate; limiting oxygen index; radiant panel; smoke density; time to ignition; fire performance tests; flame spread; heat input; *16136.*

Heat release rate; potential heat; self heating; building materials; calorimetry; combustibility; flammability; *16111.*

Heat standards; phase-change calorimeter; plutonium dioxide; plutonium isotopes; radionuclide calorimetry; radionuclide decay power; standards; Bunsen ice calorimeter; calorimetric standards; calorimetry; *16443.*

Heat switch; He temperature; high conductivity; gold plating; *16208.*

Heat transfer; buildings; energy conservation; *16446.*

Heat transfer; heating and cooling loads; response factor; algorithm; ASHRAE; buildings; computer; energy calculation; *16630.*

Heat transfer; hemisphere; horizontal cylinder; liquid deuterium, liquid hydrogen, liquid nitrogen; natural convection; sphere; vertical cylinder; cryogenics; *16207.*

Heat transfer; insulation; thermal conductivity; thermal insulation; conduction; energy conservation; *15756.*

Heat transfer; liquid helium; packed bed heat exchangers; balloon; cryogenic balloon inflation; *NBSIR 76-834.*

Heat transfer; Lorenz function; thermal conductivity; conductivity; electrical; heat conductivity; *15986.*

Heat transfer; measurement techniques; periodic surfaces; polarization; random surfaces; reflectance; reflectance of coherent radiation; scattering; scattering theory; surface roughness; transmittance; bibliography; emittance; *J. Res.* **80A** No. 2, 207-220 (1976).

Heat transfer; optical absorption coefficients; transparent materials; barothermal; gas pressure; heat diffusion; *15916.*

Heat transfer; phase shifts; photoacoustic; surface absorption coefficients; transparent materials; bulk absorption coefficients; Fourier amplitudes; gas pressure; *16558.*

Heat transfer; photoacoustic; transparent materials; absorption coefficients; cylindrical configurations; gas pressure; *15936.*
Heat transfer; pyrolysis; radiant heat; thermal inertia; ASTM Standard E119; building construction; charring; combustion; fire endurance; fire test; flame emissivity; *NBS-GCR-75-50.*
Heat transfer; smoldering fabrics; fabric flammability; flammability testing; *NBS-GCR-73-2.*
Heat transfer; standards; apparel; burn injury; ease of ignition; fabrics; fire; flammability tests; garments; *NBSIR 76-1072.*
Heat transfer to helium II; interfacial thermal resistance; Kapitza conductance; Kapitza conductance of copper; x-ray diffraction examination of single crystal lattice damage; (100) surface of copper; *15737.*
Heating; air-conditioning; *16336.*
Heating; conservation; cooling; cost; energy; *SP403,* pp. 163-191 (June 1976).
Heating; hot water; performance criteria; solar energy; standards; buildings; cooling; *NBSIR 76-1187.*
Heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; *SP403.*
Heating; incineration; integrated utility systems; resource conservation; utilities; utility services; water reuse; community services; cooling; electric power; energy conservation; *16153.*
Heating; manufacturing; marketing; costs; energy; *SP403,* pp. 199-213 (June 1976).
Heating and air-conditioning systems; state energy regulations; energy conservation; energy standards for mechanical systems; *15713.*
Heating and cooling; military family housing; specification; unitary heat pump; *NBSIR 76-1029.*
Heating and cooling load; National Bureau of Standards load determination procedure; computer program for buildings; conduction transfer functions; *16118.*
Heating and cooling load; National Bureau of Standards heating and cooling load computer program; ASHRAE task group on energy requirements; conduction transfer functions; *BSS69.*
Heating and cooling load computer program; heating load; masonry building; dynamic model; environmental chamber experiment; *16092.*
Heating and cooling loads; response factor; algorithm; ASHRAE; buildings; computer; energy calculation; heat transfer; *16630.*
Heating and cooling loads; thermal analysis; transient heat flows; building heat transfer; computer programs; dynamic thermal performance; heat flow analysis; *15762.*
Heating load; masonry building; dynamic model; environmental chamber experiment; heating and cooling load computer program; *16092.*
Heating systems; model; thermodynamics; energy; *SP403,* pp. 57-64 (June 1976).
Heating/cooling; lead-paint; metric; pressure transducers; thermal comforts; weights and measures; building industry; calibration system; centigrade/celsius; computer; electrical industries; environments; glass standards; *DIM/NBS* **60,** No. 10, 1-24 (1976).
Heats of formation; hydroxy-alkyl radicals; shock tube; thermal decomposition; 2,3-dimethylbutanol-2; 3,3-dimethylbutanol-2; alcohols; *15904.*
Heavy metal; tissue; trace element analysis; water pollution; atomic absorption; bluegills; cadmium; fish; *SP422,* pp. 1063-1072 (Aug. 1976).
Heavy metals; lead; seawater analysis; speciation; stability of water samples; zinc; Adriatic Sea; cadmium; copper; electrochemical analysis; *SP422,* pp. 917-928 (Aug. 1976).
Heavy noble gases; helium; linear model; methane; NBS equation; scaling laws; statistical analysis; steam; universality; air constituents; critical region parameters; ethylene; *JPCRD* **5,** No. 1, 1-52 (1976).
Helium; hydrogen; lithium; magnesium; nitrogen; oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; beryllium; boron; carbon; chlorine; *16164.*
Helium; hydrogen energy; liquid hydrogen; liquid nitrogen; power transmission cables; safety; slush hydrogen; superconducting; a.c. power; cryoresistive; energy transmission economics; *16629.*
Helium; ionized gas; numerical solutions; constrictions; gas discharge; *16000.*
Helium; lambda point; lattice model; phase transition; Bogoliubov transformation; bosons; *15870.*
Helium; Ledinegg instability; negative flow resistance; supercritical helium; flow resistance; *16232.*
Helium; linear model; methane; NBS equation; scaling laws; statistical analysis; steam; universality; air constituents; critical region parameters; ethylene; heavy noble gases; *JPCRD* **5,** No. 1, 1-52 (1976).
Helium; meeting summary; refrigeration; superconductivity; cryogenic; *15832.*
Helium; oscillations; superconductors; theory; computations; cooling system; cryogenics; electric power transmission; flow stability; *15809.*
Helium; radiative transfer; solar chromosphere; spectral line formation; *16609.*
Helium I; helium II; mixed convection; nucleate boiling; subcritical; supercritical; transition; turbulent flow; buoyancy; channels; film boiling; forced convection; *TN675.*
Helium II; mixed convection; nucleate boiling; subcritical; supercritical; transition; turbulent flow; buoyancy; channels; film boiling; forced convection; helium I; *TN675.*
Helium metastables; helium plasma; pulse discharge; collision model; early afterglow; electron temperature; *15958.*
Helium plasma; pulse discharge; collision model; early afterglow; electron temperature; helium metastables; *15958.*
Helium 3; helium 4; liquid helium; mixtures; refrigeration; demagnetization; dilution refrigerator; *16655.*
Helium 4; liquid helium; mixtures; refrigeration; demagnetization; dilution refrigerator; helium 3; *16655.*
Helix-coil transition; phase transitions in biopolymers; self-assembly; structural transformations; surface adsorption; biopolymers; *15721.*
Helmet; impact attenuation; penetration; retention system strength; visual clearance; crash; *16287.*
Helmets; impact attenuation; penetration; retention system strength; riot; visual clearance; *16265.*
Helmets; math model; protective headgear; safety; test methods; head injury; *NBSIR 76-1107.*
Helmets; mobile homes; phase diagrams; tire pressure; air; building codes; computer tapes; energy; fire; *DIM/NBS* **60,** No. 12, 1-24 (1976).
Hematocrit; scattering; ultrasound; angular dependence; blood; compressibility; density; distribution function; erythrocytes; *SP453,* pp. 207-212 (Oct. 1976).
Hemisphere; horizontal cylinder; liquid deuterium, liquid hydrogen, liquid nitrogen; natural convection; sphere; vertical cylinder; cryogenics; heat transfer; *16207.*
Henry's constants; liquid-vapor equilibria; methane-light hydrocarbon binary mixtures; critical loci; excess Gibbs' energies; *16637.*
Hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; *SP400-28.*
Hermeticity; interface states; ion implantation; ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; pas-

sivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; *SP400-25.*

Hermeticity; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; *SP400-19.*

Hermitian component; positive definite; determinant; Hadamard's inequality; *15861.*

Hershey character set; plotting; type fonts; typesetting; vectorized characters; alphabets; COM; computerized typesetting; digital plotting; graphics; *SP424.*

Hertzian; indentation; strength; brittle solids; ceramic surfaces; crack; degradation; fracture; *15856.*

Hertzian cracks; indentation fracture; median vents; penny crack; contact fracture; degradation; *15822.*

Heterogeneous; manganese; organic; oxidation; active; chemistry; dioxide; *15902.*

Heterogeneous catalysis; surface coordinative unsaturation; catalytic hydrogenation; catalytic oxidation; chemisorption; cus; *SP455,* pp. 155-166 (Nov. 1976).

Heteropolyanions; phosphotungstate complex ions; "spillover" effect; transition metal carbides; transition metal oxides; tungsten bronze; tungsten carbide; electrocatalysis; *SP455,* pp. 167-174 (Nov. 1976).

Hexagonal crystals; hexagonal lattices; crystallography, elementary; crystals, hexagonal; *16086.*

Hexagonal lattices; crystallography, elementary; crystals, hexagonal; hexagonal crystals; *16086.*

Hexamethylbenzene; hindered rotation; phase transition; torsional oscillation; λ-point; barrier to rotation; crystal; crystal structure; *16137.*

Hexokinase; intermethod comparison; *16428.*

Hexokinase; magnesium; metabolic processes; microcalorimetry; thermochemistry; thermodynamics; adenosine 5′-triphosphate; biochemistry; coupled equilibrium; enzyme catalyzed reactions; glucose; heat measurement; *16385.*

HF laser; infrared laser window materials; multiphonon absorption; surface absorption; bulk absorption; CO laser; *SP462,* pp. 50-57 (Dec. 1976).

Hf time dissemination services; navigation system; satellite time and frequency dissemination services; communication satellite; communication system; *16644.*

Hierarchical control; man-machine communication and automation; adaptive control; computer control; control theory; *16175.*

Hierarchical control of manipulators; position servos; trajectory control; computer control of automation systems; computer interface; computer software for robot control; *NBSIR 75-973.*

High accuracy transmittance; light averaging devices; linearity; photometric precision; reference spectrophotometer; ultraviolet; wavelength calibration; averaging spheres; *TN913.*

High conductivity; gold plating; heat switch; He temperature; *16208.*

High density; mixtures; thermodynamic properties; air; gases; *16455.*

High frequency; infrared; Josephson effect; measurements; superconductivity; *16498.*

High frequency; low frequency; standard frequencies; television color subcarrier; time calibration; time signals; broadcast of standard frequencies; frequency calibration; *SP432.*

High frequency; plasticity; ceramic materials; cyclic crack propagation; *16445.*

High latitude; ionosphere; ionospheric scattering; irregularity; satellite; scintillation; spread-F; topside; absorption; *16641.*

High molecular weight linear polyethylene; polyethylene; temperature drift; thermodynamic properties; glass transition; heat capacity; *J. Res.* **80A** No. 1, 51-57 (1976).

High power ruby laser damage; multilayer reflectors; single layer coatings; spark detection; thin films immersed in liquids; *SP462,* pp. 315-330 (Dec. 1976).

High pressure; liquid medium; pogo pressure; pressure source; pressure transducer; sinusoidal; space shuttle; transducer; bias pressure; calibration; dynamic calibration; dynamic pressure; *TN927.*

High pressure; nuclear decay; pressure calibrations; spectroscopy; x-ray diffraction; diamond cell; electrical resistance; *16375.*

High pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; *TN894.*

High pressure; phase transitions; potassium chloride; ultrasonics; bulk modulus; equation of state; *16029.*

High pressure facilities; high temperature facilities; spectroscopy facilities; accelerators; acoustic facilities; calorimeters; electrical measurements facilities; *SP413, 1976 Edition.*

High pressures; thermal conductivity; thermal diffusivity; thermal properties; transient techniques; heat capacity; *15709.*

High purity; materials analysis; neutron activation analysis; contamination; gas analysis; *SP422,* pp. 759-772 (Aug. 1976).

High purity metals; inhomogeneity; microsegregation; sampling; surface contamination; *SP422,* pp. 747-755 (Aug. 1976).

High resolution; imaging; large aperture; pathology; pellicle; phase-contrast; transmission; ultrasound; velocity; attenuation; breast tissue; broadband; *SP453,* pp. 121-133 (Oct. 1976).

High resolution molecular spectroscopy; lasers; meeting report; Novosibirsk; pressure-broadened line shapes; Soviet Union; submillimeter waves; *16010.*

High resolution spectroscopy; methyl halides; optical heterodyne spectroscopy; quadrupole hyperfine interactions; saturated absorption spectroscopy; *16407.*

High resolution spectroscopy; laser spectroscopy; line shape; optical frequency standards; recoil effect; relativity; CH_4 hyperfine structure; *16603.*

High speed devices; Josephson effect; superconducting devices; superconductivity; tunneling; electronics devices; *16485.*

High speed plasma; plasma; chromatography; coupling of high speed plasma; gas chromatography; *16340.*

High spin fields; inhomogeneous Lorentz group; relativistic fields; wave equations; causality; *Monogr. 154.*

High strength materials; mechanical failure; potential service conditions; proliferation of specifications; environmental extremes; fail-safe operation; *SP423,* pp. 193-197 (Apr. 1976).

High temperature; low temperature; standard reference materials; thermal conductivity; austenitic stainless steel; electrical resistivity; *16494.*

High temperature; melting point; pyrometry; radiance temperature; tantalum; emittance; high-speed measurements; *16426.*

High temperature; melting point; pyrometry; radiance temperature; hafnium; high-speed measurement; *J. Res.* **80A** No. 4, 659-662 (1976).

High temperature; MHD-power generation; spinel structure; durability; electrical conductivity; *15943.*

High temperature; PbO; thermophysical measurements; chemiluminescent; diatomic molecules; dissociation energies; *NBSIR 75-751.*

High temperature ashing; trace elements; air sampling; atomic absorption spectrophotometry; *SP422,* pp. 1053-1061 (Aug. 1976).

High temperature calorimetry; specific heat; thermodynamic properties; beryllium aluminate; chrysoberyl; drop calorimetry; enthalpy measurements; *J. Res.* **80A** No. 1, 65-73

(1976).
High temperature facilities; spectroscopy facilities; accelerators; acoustic facilities; calorimeters; electrical measurements facilities; high pressure facilities; *SP413, 1976 Edition.*
High temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; *16158.*
High temperatures; materials evaluation, MHD-materials; test procedures; *16174.*
High temperatures; silicon nitride; slow crack growth; acoustic emission; crack propagation; cyclic conditions; failure times; *16064.*
High voltage; Kerr effect; operational amplifier; pulses; radiation; safety; x-ray generators; x rays; calibration; electrical measurements; electro-optics; frequency response; *NBSIR 75-775.*
High voltage bridges; high voltage capacitors; high voltage measurements; impedance bridges; capacitance measurements; current comparators; current transformers; *15720.*
High voltage capacitors; high voltage measurements; impedance bridges; capacitance measurements; current comparators; current transformers; high voltage bridges; *15720.*
High voltage electron microscopes; x-ray leakage; electron microscopes; health hazards; *SP456,* pp. 223-224 (Nov. 1976).
High voltage measurement; Kerr effect; optical coupling; pulse measurement; automation; electrical measurements; electrooptics; *15718.*
High voltage measurement; Kerr coefficients; Kerr effect; space charge; Aroclor; chlorinated biphenyl; chlorinated naphthalene; electric field measurement; electro-optic; *16384.*
High voltage measurements; impedance bridges; capacitance measurements; current comparators; current transformers; high voltage bridges; high voltage capacitors; *15720.*
High voltage transformer protection; overcurrent; overcurrent protection; solid-state overcurrent protection circuit; transformer; transformer overcurrent protection; *16381.*
High winds; home security; nondestructive evaluation; research associate program; school systems; smoke detectors; teaching metric; cryogenic fluid; door locks; energy; EPIC supplement; *DIM/NBS* **60,** No. 4, 1-24 (1976).
High-capacity; mathematics; mercury; performance standard; pressure transducers; SRM; surgical implants; testing; thermal transients; architectural heritage; fire; guardrail; *DIM/NBS* **60,** No. 8, 1-24 (1976).
Highly transparent solids; hydrodynamic equations; optical materials; photoacoustic method; absorption coefficients; heat diffusion equations; *15971.*
Highly transparent solids; thermal conduction; absorption coefficients; barothermal gas cell; gas pressure; *15914.*
High-power lasers; infrared materials; tensile stress; cadmium telluride; elastic compliance tensor; elastic moduli; extrinsic damage thresholds; *SP462,* pp. 119-125 (Dec. 1976).
High-purity reagents; membrane filtration; mercury cathode electrolysis; prepurification; purity definition; reagent contamination; ultrapurification; analytical blanks; analytical reagents; contamination control; *SP422,* pp. 363-375 (Aug. 1976).
High-resistance leads; radio frequency heating; temperature measurements; thermistor probe; *15803.*
High-rise buildings; metals; radiation safety; standards laboratory; synchrotron; building collapse; corrosion; energy; environmental; frequency standards; hearing aids; *DIM/NBS* **60,** No. 5, 1-24 (1976).
High-speed measurement; high temperature; melting point; pyrometry; radiance temperature; hafnium; *J. Res.* **80A** No. 4, 659-662 (1976).
High-speed measurements; high temperature; melting point; pyrometry; radiance temperature; tantalum; emittance; *16426.*
High-temperature alloys; intergranular segregation; macrosegregation; sampling problems; trace elements; *SP422,* pp. 1017-1022 (Aug. 1976).
High-voltage C(V) measurements; modified MIS C(V) measurements; bias-isolation unit; capacitance measurements at high applied-bias voltage; capacitance-meter; extended-range capacitance measurement; *SP400-34.*
High-voltage electron microscopy; *in situ* hematite; magnetite; electron microscopy; Fe_2O_3; Fe_3O_4; *16292.*
High-voltage tests; insulators, tower guy; Loran C; pultruded rods; rods, insulator; breakdown, electrical; failure analysis; fiberglass-reinforced plastics; flammability; guy insulators; *NBSIR 76-1136.*
Highway bridges; lateral loads; pile head; piles; structural engineering; design; earthquake; *SP444,* pp. IV-90—IV-112 (Apr. 1976).
Highway bridges; retrofitting; soil-structure interaction; structural engineering; design; earthquakes; *SP444,* pp. V-1—V-24 (Apr. 1976).
Highway safety; measurement, skid resistance; pavement, skid resistance; pavement wetting system; tire-pavement interface forces; wet pavement; accident reduction, skidding; correlation, skid resistance; *NBSIR 76-1133.*
Highway safety; pavement, skid resistance; pavement wetting system, tire-pavement interface forces; wet pavement; accident reduction, skidding; correlation, skid resistance; *NBSIR 75-972.*
Highway signs; photoelectric tristimus colorimeters; photometry of retroreflective materials; retroreflective sign materials; colorimetry; *NBSIR 74-518.*
Hilbert problem for two unknowns; singular integral equation; wave-guide boundary problem; analytic function; Cauchy principle value; *J. Res.* **80B** No. 3, 403-414 (1976).
Hilbert space; separation of variables; spectral measure; tensor products; convolution; *J. Res.* **80B** No. 3, 347-351 (1976).
Hindered rotation; phase transition; torsional oscillation; λ-point; barrier to rotation; crystal; crystal structure; hexamethylbenzene; *16137.*
Historic preservation; states; building codes; cities; health and safety; *TN918.*
History; Kamerlingh Onnes collection; surface tension; Van der Waals collection; Verschaffelt; coexistence curves; critical exponents; fluid critical point; *16372.*
History; photonuclear experiments; photonuclear interaction; photonuclear reactions; photonuclear theory; reprint collection; *16270.*
History of measurement; metric conversion; metric roll call; metrology; Public Law 93-380; Public Law 94-168; anthropomorphic units; bicentennial; *16195.*
History of measurement standards; measures; metric system; standards; units of measurement; weights; *SP447.*
Hold-time; hysteresis; low-cycle fatigue; plasticity; stainless steel; stress relaxation; thermodynamics; viscoelasticity; creep; dissipation; elevated temperature; energy; *16004.*
Holes; polymer; poly(vinyl acetate); pressure; thermal; volume; compressibility; configuration; entropy; heat capacity; *16077.*
Hollow cathode; spectroscopy; trace detection; tunable lasers; discharge; discharge tubes; *16604.*
Holographic techniques; pulsed laser holograms; stress corrosion cracking; ultrasonic inspection; aircraft component failure; continuous wave holograms; crack detection; *SP423,* pp. 93-103 (Apr. 1976).
Holography; interferometry; water phantoms; absorbed dose; calorimetry; dose distributions; dosimetry; electron beams; *15852.*

Home for the aged; hospital fires; human behavior; institutions; mapping; models; nursing homes; realms; building fires; case studies; critical events; decisions; episodes; fires; *NBS-GCR-76-73.*

Home playground equipment, safety of; jungle gyms, safety of; playground equipment, safety of; safety of home playground equipment; slides, safety of; swing sets, safety of; *PS66-75.*

Home safety; methodology; safety; accidents; accident research; consumer accidents; epidimiology hazards; *NBS-GCR-76-76.*

Home security; nondestructive evaluation; research associate program; school systems; smoke detectors; teaching metric; cryogenic fluid; door locks; energy; EPIC supplement; high winds; *DIM/NBS* **60,** No. 4, 1-24 (1976).

Homogeneity; melting; vaporization; diffusion; glass; *15989.*

Homogeneity; polar fluids; scaling; steam; universality; critical exponents; critical region; *15733.*

Homogeneity of lead content; isotope dilution mass spectrometry; lead analysis; accurate and precise analysis; biological and environmental samples; blanks; *SP422,* pp. 929-935 (Aug. 1976).

Homogeneous anionic polymerization; monodisperse polymers; unsaturated monomers; block copolymers; *16057.*

Homogenization; neutron activation analysis; sample preparation; standard materials; trace element analysis; errors of analysis; *SP422,* pp. 1293-1304 (Aug. 1976).

Homogenization; lyophilization; noncontaminating; sample preparation; biological materials; *SP422,* pp. 721-726 (Aug. 1976).

Homomorphic deconvolution; time domain measurements; time domain reflectometry; *16518.*

Homonuclear lock; phase adjustment; phase correction algorithm; quadrature; computer program; Fourier transform NMR; *15970.*

Honeycomb; impact; lightweight structures; military; reliability; sandwich panel; shelter; durability; field inspection; foam and beam; *NBSIR 76-1025.*

Hopkinson pressure bar apparatus; impedances; mismatching; stress wave interactions; substrates; tearing; vibratory apparatus; adhesion; cavitation; coatings; design charts; elastomers; erosion; *SP452,* pp. 120-123 (Sept. 1976).

Horizontal; ignition; ignition time; pilot ignition; radiant heat flux; carpets; floor coverings; *NBSIR 75-967.*

Horizontal and vertical smoke measurements; smoke; smoke density chamber; smoke suppressants; fire performance; *16178.*

Horizontal cylinder; liquid deuterium, liquid hydrogen, liquid nitrogen; natural convection; sphere; vertical cylinder; cryogenics; heat transfer; hemisphere; *16207.*

HORSES; nonlinear optics; Raman spectroscopy; CARS; diphenyloctatetraene (dilute solution); four-wave numbering; *15716.*

Hospital fires; human behavior; institutions; mapping; models; nursing homes; realms; building fires; case studies; critical events; decisions; episodes; fires; home for the aged; *NBS-GCR-76-73.*

Hospitals; hotels; maintenance; nursing homes; reliability; schools; smoke detectors; atriums; fire detection; flame detectors; heat detectors; *16179.*

Hot atoms; isotope effects; kinetics; molecular beams; quantum mechanics; rate coefficients; recombinations; scattering theory; chemical reactions; collision theory; cross sections; dissociation; *16591.*

Hot forging; KCl; mechanical strength; microstructure; optical absorption; RbCl; $SrCl_2$; double-doped KCl laser windows; grain boundary stability; *SP462,* pp. 82-86 (Dec. 1976).

Hot pressed; sputtered; absorption damage levels; coatings; CVD; *SP462,* pp. 253-263 (Dec. 1976).

Hot spots; integrated circuits; laser scanner; measurement method; nondestructive test; nonlinear operation; optical scanner; reliability; transistors; failure analysis; *SP400-27.*

Hot spots; laser scanning; logic flow observation; LSI testing; nondestructive test; nonlinearity measurement; UHF transistor measurement; active devices; *15781.*

Hot spots; power transistors; safe operating area; second breakdown; thermal instability; base widening; current crowding; *16451.*

Hot spots; reliability; safe operating area limits; second breakdown; semiconductor devices; thermal resistance; transistor, power; current crowding; *16328.*

Hot spots, transistor; laser scanning; nondestructive tests; semiconductor devices; UHF transistor measurements; device nonlinearity measurements; *16571.*

Hot water; performance criteria; solar energy; standards; buildings; cooling; heating; *NBSIR 76-1187.*

Hot wire anemometer; ion deflection device; laser Doppler anemometer; Reynolds number; angular insensitivity; fluidic device; *16108.*

Hotels; maintenance; nursing homes; reliability; schools; smoke detectors; atriums; fire detection; flame detectors; heat detectors; hospitals; *16179.*

Hot-pressed; infrared transmission; laser induced damage; optical isolation; $CdCr_2S_4$; chalcogenide spinel; Faraday effect; ferromagnetic semiconductor; *SP462,* pp. 126-135 (Dec. 1976).

Hot-spot behavior; laser scanning; nondestructive testing; silicon optical absorption coefficient; temperature mapping; active devices; *16577.*

Household appliances; operations research; thermal burn hazards; burn hazards, household appliances; fault-tree diagrams; generic safety standards; *NBSIR 76-1097.*

Household noise; legal and community action; loudness; noise control and abatement; traffic noise; airborne and structure-borne sounds; aircraft noise intrusion; annoyance; appliance noise; health and hearing hazards; *H119.*

Houses; residential dwelling; building codes; construction practices; damage; earthquake; *SP444,* pp. V-63—V-65 (Apr. 1976).

Housing; housing demand, supply, needs; housing rehabilitation; land economics; market adjustments; optimization and feasibility; rehabilitation, conservation; *NBSIR 76-1043.*

Housing; hurricane Agnes; mobile home parks; mobile homes; performance data; regulatory process; standards; computer techniques; construction; enforcement process; *NBSIR 76-1058.*

Housing; hurricanes; low-rise buildings; natural disaster; structural connections; typhoons; wind loads; buildings; codes and standards; *NBSIR 75-790.*

Housing; lead paint; lead poisoning; surveys; blood; blood lead; children; *NBSIR 76-1024.*

Housing; lead-based paint; lead poisoning; abatement; building economics; building materials; economic analysis; *TN922.*

Housing; lead-based paint; lead poisoning; paint removal; abatement; barrier materials; building materials; children; *NBSIR 75-974.*

Housing; low-cost housing; low-rise buildings; wind; Bangladesh; *NBS-GCR-76-74.*

Housing; performance specification; prefabricated dwelling; standards; structural design; earthquake; *SP444,* pp. IV-55—IV-69 (Apr. 1976).

Housing; Peru; technical aid; adobe; cane; earthquake; *SP444,* pp. VI-16—VI-24 (Apr. 1976).

Housing demand, supply, needs; housing rehabilitation; land economics; market adjustments; optimization and feasibility; rehabilitation, conservation; housing; *NBSIR 76-1043.*

Housing production; I-R 100 awards; NIKE missile; papers

available; stereology; toy safety; x-ray units; computer power; computer standard; corrosion; environment; health care; *DIM/NBS* **60**, No. 11, 1-24 (1976).

Housing rehabilitation; land economics; market adjustments; optimization and feasibility; rehabilitation, conservation; housing; housing demand, supply, needs; *NBSIR 76-1043.*

Housing systems; industrialized housing; mass per unit area; Operation BREAKTHROUGH; U-value; building classification; building thermal mass; building thermal performance; building thermal time constant; *NBSIR 75-678.*

Human behavior; institutions; mapping; models; nursing homes; realms; building fires; case studies; critical events; decisions; episodes; fires; home for the aged; hospital fires; *NBS-GCR-76-73.*

Human comfort; physiological indices; predicted indoor habitability index (PIHI); weather building human systems; air conditioning criteria; *16152.*

Human factor considerations; universal symbol diagram approach; automotive repair; automotive repair effectiveness; automotive service; customer-mechanic relationship; *SP423,* pp. 171-178 (Apr. 1976).

Human factors; people in buildings; energy conservation; *BSS88.*

Human factors; product safety; safety; safety research; appliances; behavioral science; *16215.*

Human factors ergonomics; product performance; product safety; standards; *16089.*

Human response; random process; spectral analysis; vibration; analysis; experimental; floor systems; *TN904.*

Human response; random process; spectral analysis; vibration; analysis; experimental; floor systems; *NBSIR 75-951.*

Human responses; performance criteria; serviceability; static; vibration; deflection; dynamic; floor systems; *TN900.*

Human systems; measuring instruments; research assistants; test device evaluation; criteria; decision making; *16091.*

Humidity; humidity measurement system; measurement of humidity; measurement of moisture; moisture; moisture measurement system; water vapor; *NBSIR 75-933.*

Humidity; instrumentation; microphones; sound level meters; statistical control processes; temperature; acoustic calibrators; A-weighting; barometric pressure; crest factor; ground cover; *TN931.*

Humidity; microphones; reciprocity; sensitivity; temperature; calibration; ceramic; condenser; electret; *NBSIR 76-1090.*

Humidity measurement system; measurement of humidity; measurement of moisture; moisture; moisture measurement system; water vapor; humidity; *NBSIR 75-933.*

Hurricane Agnes; mobile home parks; mobile homes; performance data; regulatory process; standards; computer techniques; construction; enforcement process; housing; *NBSIR 76-1058.*

Hurricane protection; shoreline management; shoreline protection; beach erosion control; Corps of Engineers; cost sharing; efficiency; *16059.*

Hurricanes; loads (forces); natural analysis; tall buildings; wind profiles; boundary layer; *15899.*

Hurricanes; low-rise buildings; natural disaster; structural connections; typhoons; wind loads; buildings; codes and standards; housing; *NBSIR 75-790.*

Hurricanes; natural hazards; structural engineering; tornadoes, wind; buildings; damage; disaster; dynamic analysis; earthquakes; *SP444,* pp. V-35—V-49 (Apr. 1976).

Hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; *NBS-GCR-75-36.*

Hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; *NBS-GCR-75-37.*

Hurricanes; natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; *NBS-GCR-75-38.*

Hurricanes; probability distribution functions; reliability; risk; statistical analysis; storms; structural engineering; wind pressure; wind speed; buildings (codes); *16545.*

Hurricanes; typhoon; wind; wind intensities; cloud seeding; frequency distribution; *SP444,* pp. I-21—I-33 (Apr. 1976).

HVAC systems; illumination; insulation; lighting; performance standard; thermal performance; ventilation; water heating; air leakage; building design; energy conservation; fenestration; *NBSIR 74-452.*

Hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; *SP400-28.*

Hydraulic engineering; hydraulic research; hydraulics; hydrodynamics; model studies; research summaries; fluid mechanics; *SP443.*

Hydraulic equipment; mechanical power; noise; pressure; quality control; safety; testing; engineering, instrumentation and techniques; fluids; force; *16452.*

Hydraulic research; hydraulics; hydrodynamics; model studies; research summaries; fluid mechanics; hydraulic engineering; *SP443.*

Hydraulics; aerodynamics; air flow; flow measurement; fluid flow; fluid metering; *NBSIR 75-930.*

Hydraulics; hydrodynamics; model studies; research summaries; fluid mechanics; hydraulic engineering; hydraulic research; *SP443.*

Hydride transfer; ion clustering; ion-molecule reactions; proton transfer; radiation chemistry; *15816.*

Hydrocarbon; liquefied natural gas; measurements; methane; mixtures; thermodynamic; density; dielectric constant; electromagnetic properties; equation of state; ethane; *16631.*

Hydrocarbon crystals; internal friction; molecular defects; pair potentials; site model; calculations; *16074.*

Hydrocarbons; ion mobility; liquids; mobility; quasifree electrons; solvated electrons; conduction band; drift mobility; energy levels; excess electrons; *NSRDS-NBS58.*

Hydrocarbons; ion-molecule reactions; kinetics; rate constants; collision processes; halocarbon ions; *15811.*

Hydrocarbons; ion-molecule reactions; mass spectrometry; rate coefficients; chemical kinetics; data evaluation; gas phase; *JPCRD* **5**, No. 4, 1123-1146 (1976).

Hydrocarbons; kinetics; mass spectrometry; photoionization; rate constants; gas phase; *15850.*

Hydrocarbons; liquid chromatography; petroleum analysis; trace analysis; baseline studies; gas chromatography; gas chromatography-mass spectrometry; *TN889.*

Hydrocarbons; measurement; nitrogen dioxide; particulate matter; photochemical oxidants; standards; sulfur dioxide; carbon monoxide; *16121.*

Hydrocarbons; metering; methane; natural gas; petroleum; physical properties; standard reference materials; coal; energy; fuel; graphite; *SP434.*

Hydrocarbons; oxidation; oxygen; oxygenated organic compounds; ozone; bibliography; chemical kinetics; combustion; free radicals; gas phase; *SP449.*

Hydrocarbons; petroleum; water pollution; gas chromatography-mass spectrometry; *16344.*

Hydrodynamic equations; optical materials; photoacoustic method; absorption coefficients; heat diffusion equations; highly transparent solids; *15971.*

Hydrodynamic interaction; matrix algebra; necklace model; polymer physics; bead/spring model; dilute polymer solutions; eigenvalue; *J. Res.* **80B** No. 2, 273-284 (1976).

Hydrodynamic regime; ideal gas memory function; limit of stability; metastable fluid states; nonhydrodynamic regime; relaxation time; transport coefficients; Zwanzig-Mori formalism; *16601*.
Hydrodynamics; model studies; research summaries; fluid mechanics; hydraulic engineering; hydraulic research; hydraulics; *SP443*.
Hydrogen; electron excitation; *15729*.
Hydrogen; interpolation methods; least squares; methane; thermodynamic properties; transport properties; correlation; equation of state; excess function; *15731*.
Hydrogen; ionization; theoretical; collisions; electron; excitation; *15893*.
Hydrogen; ionized gases; nitrogen; oxygen; thermodynamic properties; air; argon; *16167*.
Hydrogen; leakage; methane; safety; vents; automobile; detection; dispersion; explosion; fire; *16634*.
Hydrogen; liquefaction energy; air separation; electrical power generation; energy recovery; *15878*.
Hydrogen; lithium; magnesium; nitrogen; oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; beryllium; boron; carbon; chlorine; helium; *16164*.
Hydrogen; methane; safety; explosion; fire; fuel; gasoline; *TN690*.
Hydrogen; molecular cross section; photoeffect; *16132*.
Hydrogen; monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; *16419*.
Hydrogen; titanium; field-ion microscopy; *15773*.
Hydrogen atoms; hydrogen molecules; scattering theory; trajectories; uniform approximation; chemical reactions; classical scattering matrix theory; collision theory; *16054*.
Hydrogen atoms; hydrogen molecules; indistinguishable particles; nuclear spin; rate coefficients; transition-state theory; chemical reactions; collision theory; *16214*.
Hydrogen atoms; indistinguishable particles; phase shifts; quantum mechanics; scattering theory; semiclassical approximation; electron exchange; electron scattering; *16122*.
Hydrogen atoms; rate coefficients; scattering theory; trajectories; transition-state theory; chemical reactions; chlorine molecules; classical scattering matrix theory; collision theory; cross sections; *16627*.
Hydrogen bonding; single crystal; structure determination; *S*-carboxymethyl-L-cysteine sulfone; x-ray, zwitterion; *16565*.
Hydrogen chloride; hydrogen cyanide; oxygen; rats; blood; carbon dioxide; carbon monoxide; cyanide; fire; *NBSIR 75-966*.
Hydrogen chloride; hydrogen cyanide; pollution; pyrolysis; reactive gas generator; sulfur dioxide; acetaldehyde; acrolein; formaldehyde; gas chromatography; *NBSIR 76-1000*.
Hydrogen cyanide; industrial hygiene; ion selective electrode; sodium hydroxide; work atmosphere; air analysis; air sampling; gas analysis; *NBSIR 76-998*.
Hydrogen cyanide; infrared; molecular spectroscopy; spectroscopy; vibrational fundamentals; *15925*.
Hydrogen cyanide; oxygen; rats; blood; carbon dioxide; carbon monoxide; cyanide; fire; hydrogen chloride; *NBSIR 75-966*.
Hydrogen cyanide; pollution; pyrolysis; reactive gas generator; sulfur dioxide; acetaldehyde; acrolein; formaldehyde; gas chromatography; hydrogen chloride; *NBSIR 76-1000*.
Hydrogen embrittlement; soil; stainless steel; stress; stress-corrosion; underground; corrosion; galvanic; *16354*.
Hydrogen embrittlement; stress corrosion cracking; stress-sorption; corrosion; failure prediction; film rupture-metal dissolution; *SP423*, pp. 27-40 (Apr. 1976).
Hydrogen energy; liquid hydrogen; liquid nitrogen; power transmission cables; safety; slush hydrogen; superconducting; a.c. power; cryoresistive; energy transmission economics; helium; *16629*.
Hydrogen evolution; lanthanum titanate; oxygen electrode; photo-assisted electrolysis; rutile; electrocatalyst; *SP455*, pp. 313-321 (Nov. 1976).
Hydrogen evolution; oxide electrode; perovskite surface composition; rotating electrode voltammetry; semiconductor electrode; flat band potential; *SP455*, pp. 229-240 (Nov. 1976).
Hydrogen halides; ion molecule reactions; ion cyclotron spectrometry; rate coefficients; charge transfer; H-atom transfer reactions; *16362*.
Hydrogen liquefier; pressure drop losses; compressor efficiency; cycle efficiency; heat exchanger losses; *15879*.
Hydrogen molecules; indistinguishable particles; nuclear spin; rate coefficients; transition-state theory; chemical reactions; collision theory; hydrogen atoms; *16214*.
Hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory; close-coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; exchange (of electrons); *16532*.
Hydrogen molecules; information theory; scattering theory; trajectories; vibrational energy; chemical reactions; classical probability matrix theory; classical scattering matrix theory; collision theory; energy transfer in collisions; *16607*.
Hydrogen molecules; momentum transfer; rotational excitation; scattering theory; sudden approximation; differential cross sections; elastic scattering; electron scattering; *15761*.
Hydrogen molecules; scattering theory; trajectories; uniform approximation; chemical reactions; classical scattering matrix theory; collision theory; hydrogen atoms; *16054*.
Hydrogen peroxide; iron phthalocyanines; Mössbauer; optical spectra; oxygen; reaction mechanisms; ring-disk electrodes; electrocatalysis; electronic structure; *SP455*, pp. 241-251 (Nov. 1976).
Hydrogen standards; ion storage; laser stabilization; rubidium standards; saturated absorption; time standards; application of standards; basic standards; cesium standards; frequency accuracy; frequency stability; frequency standards; *15736*.
Hydrogenation; iron; Mössbauer spectra; zinc; alloys; aluminum; catalysis; *16537*.
Hydroperoxyl; microwave; chemical structure; *15849*.
Hydrophone; impedance match; low-cost transducers; piezoelectric polymers; flexibility; *16291*.
Hydroxy-alkyl radicals; shock tube; thermal decomposition; 2,3-dimethylbutanol-2; 3,3-dimethylbutanol-2; alcohols; heats of formation; *15904*.
Hydroxyapatite; morphology; nonstoichiometry; octacalcium phosphate; solubility; surface; amorphous calcium phosphate; bone mineral; fluorapatite; *16307*.
Hydroxybenzoic acids; pit and fissure sealants; preventive dental materials; acrylic resins; chemistry; composite resins; dental materials; *15939*.
Hydroxyl; ion polishing; polishing; roughness; surface damage; thin films; threshold; damage threshold; etching; flame polishing; fused silica; *SP462*, pp. 310-314 (Dec. 1976).
Hydroxyl radical; kinetics; gas reactions; *15743*.
Hydroxyl radical; reaction rate constants; fluorocarbons; *16202*.
Hygrometer, digital microwave; microwave, digital, hygrometer; digital microwave hygrometer; *16199*.
Hyperbilirubinemia; neonatal hyperbilirubinemia; phototherapy; bilirubin; brain damage; *16366*.
Hyperbolic sine and cosine integrals; key values; recurrence relations; continued fraction; cosine integral; exponential integral; FORTRAN program; *J. Res.* **80B** No. 2, 291-313 (1976).
Hyperfine interactions; methane; selection rules; symmetry species; tetrahedral; energy levels; *16376*.

Hypergeometric differential equation; interfacial force; liquid-vapor interface; Markov Stochastic model; self-diffusion; continuous interface profile; diffusion equation; *15726*.
Hypergeometric functions; incomplete gamma function; Legendre functions; ordinary differential equations; saddle points; special functions; turning points; Whittaker functions; asymptotic analysis; Darboux's method; definite integrals; *15818*.
Hysteresis; low-cycle fatigue; plasticity; stainless steel; stress relaxation; thermodynamics; viscoelasticity; creep; dissipation; elevated temperature; energy; hold-time; *16004*.
H_2CO; inelastic electron scattering; infrared transitions; N_2O; relative intensities; *16578*.
H_3O^+; ion trap; recombination; cross-section measurements; electrons; *15859*.

I

IBM OS/360; operating system security; security flaws; software security; taxonomy of integrity flaws; UNIVAC 1100 Series OS; BBN-TENEX; *NBSIR 76-1041*.
Ideal gas memory function; limit of stability; metastable fluid states; nonhydrodynamic regime; relaxation time; transport coefficients; Zwanzig-Mori formalism; hydrodynamic regime; *16601*.
Ideal gas thermodynamic functions; principal moments of inertia; standard enthalpy of formation; vibrational fundamentals; chlorofluoromethanes; *JPCRD* **5**, No. 3, 571-580 (1976).
Ideal gas thermodynamic properties; internal rotational barrier height; propanone (acetone); torsional frequencies; 2-butanone (methyl ethyl ketone); enthalpy; entropy; equilibrium constant of formation; Gibbs energy of formation; *JPCRD* **5**, No. 2, 319-328 (1976).
Identification; pattern recognition; scanner; classification; computer; fingerprint; *16030*.
Identification atlas; nitric oxide; Rydberg series; absorption spectrum; *JPCRD* **5**, No. 2, 309-318 (1976).
IFS with a tunable laser; infrared frequency synthesis; SFRL frequency measurement; spin flip Raman laser; frequency measurements on tunable lasers; *TN680*.
Ignition; heat energy; tests; fabric flammability; fabrics; *NBS-GCR-76-70*.
Ignition; ignition time; pilot ignition; radiant heat flux; carpets; floor coverings; horizontal; *NBSIR 75-967*.
Ignition; reduced scale models; room fires; fire tests; flame spread; heat release rate; *NBSIR 76-1052*.
Ignition; skin; thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazards; flammability testing; *NBS-GCR-73-6*.
Ignition; thermal burns; apparel fabrics; fabrics; fire hazard; flammability testing; *NBS-GCR-73-7*.
Ignition; thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazards; flammability testing; *NBS-GCR-73-12*.
Ignition hazards; ignition sources; lighters; matches; burns; fabric fires; fire injuries; flammable fabrics; *NBS-GCR-74-32*.
Ignition sources; lighters; matches; burns; fabric fires; fire injuries; flammable fabrics; ignition hazards; *NBS-GCR-74-32*.
Ignition sources; pill test; room fires; carpet systems; carpets; fire safety; flame spread; floor coverings; flooring radiant panel test; *NBSIR 76-1013*.
Ignition sources; space heaters; burns; fabric fires; FFACTS; garments; *NBSIR 76-1014*.
Ignition time; pilot ignition; radiant heat flux; carpets; floor coverings; horizontal; ignition; *NBSIR 75-967*.
I/I_c; microabsorption effects; quantitative phase analysis; quantitative powder diffraction; reference intensity ratios; systematic errors in powder diffraction; calculated powder patterns; *15929*.
Illuminating engineering; lighting; modulation transfer function; suprathreshold visibility; visibility; vision; gratings; *16008*.
Illuminating engineering; lighting; modulation transfer function; suprathreshold visibility; visibility; vision; gratings; *BSS82*.
Illumination; insulation; lighting; performance standard; thermal performance; ventilation; water heating; air leakage; building design; energy conservation; fenestration; HVAC systems; *NBSIR 74-452*.
Image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; *SP453*.
Image; low energy; aberration; electron optics; electron scattering; electrostatic lens; *15913*.
Image analysis; three-color superposition; color superposition photography; field-ion microscopy; *16228*.
Image intensifier tubes; infrared searchlights; infrared viewers; light equivalent background; light induced background; optical gain; contrast transfer function; distortion; flare; *16238*.
Image intensifiers; law enforcement; light equivalent background; light induced; optical gain; night vision; contrast transfer function; flare; *16239*.
Image quality; ink films; lubricity; film thickness; film uniformity; fingerprint impressions; fingerprint readers; *16019*.
Image quality; light equivalent background; light induced background; limit resolution; line spread function; optical transfer function; point spread function; acutance; contrast transfer function; edge gradient; *16197*.
Image quality; light induced background; limiting resolution; night vision devices; optical transfer function; resolution charts; veiling glare; blooming; contrast transfer function; distortion; flare; *16599*.
Image space off-axis; line scanner; optical; defocusing; *16288*.
Images; neutron radiography; nondestructive tests; real-time imaging; thermoluminescence; track-etch; films; *15796*.
Imaging; instrumentation technology; medical ultrasonics; NSF; RANN; R & D incentives; tissue characterization; tissue signature; ultrasonic diagnosis; ultrasound; applied research; *SP453*, pp. 7-10 (Oct. 1976).
Imaging; large aperture; pathology; pellicle; phase-contrast; transmission; ultrasound; velocity; attenuation; breast tissue; broadband; high resolution; *SP453*, pp. 121-133 (Oct. 1976).
Imaging optics; lens testing; microcopy resolution charts; National Measurement System; photographic density; technology assessment; *NBSIR 75-942*.
Immersion testing; interim reference standard; longitudinal waves; metallurgical variables; nondestructive evaluation; pulse echo; steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; ASTM-type reference standards; *NBSIR 76-984*.
Immobile dislocations; Lomer locks; sessile dislocations; x-ray dynamical diffraction; x-ray topography; contrast conditions; dynamical images; *16373*.
Immunochemical analysis; light scattering; polymers; proteins; solid standards; antibodies; antigens; biological polymers; *J. Res.* **80A** No. 4, 605-608 (1976).
Impact; improvement; performance; radiation therapy; service; dosimetry; electrons; *SP456*, pp. 365-370 (Nov. 1976).
Impact; lens; ophthalmic lens; quasi-static theory; strain gage measurements; drop-ball test; *16310*.
Impact; lightweight structures; military; reliability; sandwich panel; shelter; durability; field inspection; foam and beam; honeycomb; *NBSIR 76-1025*.
Impact; low carbon steel; stress corrosion cracking; brittle fracture; gas main pipe; *NBSIR 74-625*.
Impact; ophthalmic lenses; shape; drop-ball test; edge; fracture; *16311*.

Impact; ophthalmic lenses; stress distributions; fracture; glass; *15769.*

Impact attenuation; penetration; retention system strength; riot; visual clearance; helmets; *16265.*

Impact attenuation; penetration; retention system strength; visual clearance; crash; helmet; *16287.*

Impact evaluation; sample; software management; survey; ADP; COBOL; Federal ADP installations; Federal Standard COBOL; *NBSIR 76-1100.*

Impact noise; noise; reverberation rooms; room acoustics; sound power; acoustic modelling; acoustics; *16433.*

Impact noise; noise; structural vibration; acoustics; building acoustics; *NBS-GCR-75-33.*

Impact resistance; ophthalmic lens; proof testing; research associate program; sampling test; drop ball test; *NBSIR 76-996.*

Impact test; protection; protective equipment; energy absorption; *NBS-GCR-74-24.*

Impact tests; safety glazing; standards; state law; architectural glazing; codes; Consumer Product Safety Committee; Consumer Safety Glazing Committee; glazing; *NBSIR 76-1109.*

Impedance; impulse response; layer model; lucite; ultrasound; attenuation; computer; deconvolution; *SP453,* pp. 231-251 (Oct. 1976).

Impedance; liver cirrhosis; ultrasonics; A-scan; attenuation; computer analysis; *SP453,* pp. 61-70 (Oct. 1976).

Impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; *SP453.*

Impedance; microstructural analysis; tissue; ultrasound; velocity; acoustic imaging; acoustic microscopy; attenuation; frequency dependence; *SP453,* pp. 261-267 (Oct. 1976).

Impedance; phase angles; power; reflection coefficient; six-port; voltage; admittance; current; *15800.*

Impedance bridges; capacitance measurements; current comparators; current transformers; high voltage bridges; high voltage capacitors; high voltage measurements; *15720.*

Impedance gradient; transient thermal gradients; ultrasonics; velocity; absorption; attenuation; *SP453,* pp. 143-151 (Oct. 1976).

Impedance match; low-cost transducers; piezoelectric polymers; flexibility; hydrophone; *16291.*

Impedance measurements; interfaces; ionic conductivity; overpotential; solid electrolyte; electrode polarization; *15819.*

Impedance profiling; impediography; impulse response; time-domain deconvolution; deconvolution; *SP453,* pp. 253-258 (Oct. 1976).

Impedances; mismatching; stress wave interactions; substrates; tearing; vibratory apparatus; adhesion; cavitation; coatings; design charts; elastomers; erosion; Hopkinson pressure bar apparatus; *SP452,* pp. 120-123 (Sept. 1976).

Impediography; impulse response; time-domain deconvolution; deconvolution; impedance profiling; *SP453,* pp. 253-258 (Oct. 1976).

Imperfect continua; internal stress; nondestructive evaluation; residual stress; dislocation theory; *16411.*

Imperfect crystals; scattering matrix theory; dynamical diffraction equation; *15779.*

Implant; noble metals; rare gas; shift; core level; *16080.*

Implantation; ion; nondestructive testing; Raman scattering; sample characterization; semiconductor; cuprous oxide; *15915.*

Implants; polymer adsorption; protein adsorption; synthetic implants; adsorption; blood protein; bound fraction; ellipsometry; *NBSIR 75-667.*

Implants; polymer adsorption; protein adsorption; synthetic implants; adsorption; blood protein; bound fraction; ellipsometry; *NBSIR 76-1017.*

Implementation; modelling; technology; terminology; data base; data integration; *16329.*

Imports; costs; economics; energy; fuel; *SP403,* pp. 3-12 (June 1976).

Imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; *SP403.*

Imports; international; petroleum; correlation; economic; energy; *SP403,* pp. 21-41 (June 1976).

Imprisonment; lifetime; mean life; resonance radiation; transition probability; U I; uranium; atomic beam; delayed coincidence; *16322.*

Improved resolution spectroscopy; infrared frequency measurements; infrared spectrometer; spin flip laser; tunable IR laser; air quality measurements; *TN670.*

Improvement; performance; radiation therapy; service; dosimetry; electrons; impact; *SP456,* pp. 365-370 (Nov. 1976).

Impulse bandwidth; receiver bandwidth calibration; rf burst generator; spectral intensity; broadband signal generator; *NBSIR 74-371.*

Impulse generator; pulse measurement; spectrum; spectrum amplitude; calibration; Fourier transform; *16463.*

Impulse generators; MHD electrode materials; optical standards; safety wheels; bike regulations; bomb disarmament; computer auditing; energy options; explosive vapor detectors; firebug; *DIM/NBS* **60,** No. 7, 1-24 (1976).

Impulse response; layer model; lucite; ultrasound; attenuation; computer; deconvolution; impedance; *SP453,* pp. 231-251 (Oct. 1976).

Impulse response; time-domain deconvolution; deconvolution; impedance profiling; impediography; *SP453,* pp. 253-258 (Oct. 1976).

Impurities in NADH preparations; NADH stability; preparative chromatography on DEAE-cellulose; spectrophotometric properties of pure NADH; ADP; ADP-ribose; chromatography; *16316.*

Impurity; ordering transition; polarization; remanent; strontium titanate; dielectric relaxation; electret state; *16639.*

Impurity compensation; luminescence; magnesium oxide; MgO; optical properties; polarized luminescence; symmetry; transition metal ions; chromium 3+; crystal vacancies; cubic crystals; depolarization; *16521.*

In situ experiments; ionic bombardment; microscope stages; rock-forming minerals; specimen preparation; electron microscopy; *15895.*

In situ hematite; magnetite; electron microscopy; Fe_2O_3; Fe_3O_4; high-voltage electron microscopy; *16292.*

Incentives; innovation; life cycle costing; medical products and standards; procurement policies; product testing; specifications; unsolicited proposals; VA; certification programs; ETIP; *NBSIR 76-997.*

Incentives—educational, persuasive, financial, regulatory; modular boiler study; NBS-campus energy retrofit; retrofitting existing buildings; energy consumption in NYC schools; energy-saving opportunities; *15882.*

Incineration; integrated utility systems; resource conservation; utilities; utility services; water reuse; community services; cooling; electric power; energy conservation; heating; *16153.*

Incinerators, industrial; thermodynamic data; waste disposal; combustion thermodynamics; enthalpies of formation; *16032.*

Inclusion damage; interference ripples; pulsed DF laser damage; sapphire; scattering; waveform distortion; alkali-halides; alkaline-earth fluorides; bulk damage; focal spot diameter; *SP462,* pp. 136-144 (Dec. 1976).

Inclusions; laser damage threshold; morphology; nonlinear

refractive index; picosecond laser pulses; avalanche ionization; dielectric breakdown; *SP435*, pp. 321-330 (Apr. 1976).

Inclusions; low temperature; rolling; ships; steel; welding; alloying; *16145*.

Income distribution effects; policy alternatives; applied microeconomic framework; commodity supply crisis; econometric analysis; economic impacts; efficiency impacts; *NBS-GCR-ETIP 76-24*.

Incomplete gamma function; Legendre functions; ordinary differential equations; saddle points; special functions; turning points; Whittaker functions; asymptotic analysis; Darboux's method; definite integrals; hypergeometric functions; *15818*.

Incompressible materials; permanent set; polymers; rubbers, viscoelasticity; anisotropy; chemorheology; degradation; elasticity; finite deformation; *16339*.

Incongruent vaporization; transpiration; vapor density; glass; *16524*.

Indentation; residual stress; stress analysis; brittle solids; chipping; fracture; *16306*.

Indentation; strength; brittle solids; ceramic surfaces; crack; degradation; fracture; Hertzian; *15856*.

Indentation fracture; median vents; penny crack; contact fracture; degradation; Hertzian cracks; *15822*.

Independence; quadratic form; random variable; singular value decomposition; eigenvalues; *J. Res.* **80B** No. 3, 333-335 (1976).

Index of refraction; laser windows; surface composition; 10.6 μm; As_2S_3; coating deposition; *SP435*, pp. 244-247 (Apr. 1976).

Index of refraction; nuclear matter; optical properties; photon; plasma frequency; absorption cross section; *J. Res.* **80A** No. 1, 9-13 (1976).

Indexes; mathematics bibliography; bibliography; *16173*.

Indexing table; least squares estimation; partial closure design; standard deviation; subdivision; variance-covariance matrix; angle standard; autocollimator; calibration; complete closure design; *NBSIR 75-750*.

Indirect costs; subsidized costs; blood banking; cost analysis; economics; *16070*.

Indistinguishable particles; nuclear spin; rate coefficients; transition-state theory; chemical reactions; collision theory; hydrogen atoms; hydrogen molecules; *16214*.

Indistinguishable particles; phase shifts; quantum mechanics; scattering theory; semiclassical approximation; electron exchange; electron scattering; hydrogen atoms; *16122*.

Indium O-ring; cryogenic temperatures; epoxy resin-copper seal; *15854*.

Indonesia; Japan; technical aid; volcanoes; field observation; *SP444*, pp. VI-1 – VI-15 (Apr. 1976).

Indophenol blue reaction; Kjeldahl digestion technique; limit of detection; nitrogen in steel; atmospheric contamination; blank value; *SP422*, pp. 983-1003 (Aug. 1976).

Induced matrices; Kronecker powers; roots of unity; Schur matrix; compounds; *15955*.

Induced radioactivity; Monte Carlo calculation; response; scintillation detector; background; gamma-ray astronomy; *16431*.

Induced radioactivity; secondary neutrons; sodium iodide detector; Apollo 17; background; cosmic-ray proton; *15727*.

Industrial; break-even analysis; economics; energy; *SP403*, pp. 77-93 (June 1976).

Industrial; paper; energy; *SP403*, pp. 153-161 (June 1976).

Industrial; systems; attitudes; conservation; energy; *SP403*, pp. 113-117 (June 1976).

Industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; static loads; stiffness; structural safety; design; dynamic loads; guardrails; *NBSIR 76-1131*.

Industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; structural safety; anthropometric measurements; guardrails; *NBSIR 76-1132*.

Industrial atmosphere; round robin tests; seacoast atmosphere; standard; stress-corrosion; 3.5 percent NaCl; 7XXX aluminum alloys; Aluminum Association; ASTM; *16656*.

Industrial chemical analysis; interlaboratory comparisons; sampling error; analytical data; analytical work; critical evaluation of an analytical procedure; *16001*.

Industrial energy conservation; energy conservation; energy conservation guide; energy conservation opportunities; energy conservation program; *H120*.

Industrial hygiene; ion selective electrode; sodium hydroxide; work atmosphere; air analysis; air sampling; gas analysis; hydrogen cyanide; *NBSIR 76-998*.

Industrial hygiene; phosphine; sorber; work atmosphere; air analysis; air sampling; gas analysis; *NBSIR 75-977*.

Industrial lead hygiene; interlaboratory correlations; lead hygiene control; occupational exposure standard criteria; occupational health control; precision; trace element analyses; accuracy; blood lead analyses; clinical chemistry; *SP422*, pp. 275-282 (Aug. 1976).

Industrial process data; project summaries; quantitative numerical data; *NBSIR 76-1002*.

Industrial robots; manipulator; performance evaluation; programmable robots; specifications; guidelines; *SP459*.

Industrial technology; molecule; primary standards; properties; atom; energy generation; *NBSIR 75-944*.

Industrialization; less-developed country; SASO; Saudi Arabia; standardization; tentative standards; building codes; *NBSIR 75-976*.

Industrialized building; inspection; manufactured building; model codes; model documents; NCSBCS; on-site construction; prefabricated construction; standards; state-local relationship; state regulations; building codes; factory-built housing; *NBS-GCR-74-27*.

Industrialized housing; mass per unit area; Operation BREAKTHROUGH; U-value; building classification; building thermal mass; building thermal performance; building thermal time constant; housing systems; *NBSIR 75-678*.

Industrialized housing; mobile homes; modular construction; prefabrication; zoning; building codes; building laws and regulations; building materials – testing and evaluation; building systems; *NBS-GCR-73-19*.

Industrializing countries; labeling; seminar; South Asia trade; testing; certification; developing countries; exports; *SP438*.

Industrializing nations; LDC's; metrology; AID; assistance; certification programs; education of metrologists; *NBSIR 76-988*.

Industry; integrated utilities system; mass spectrometry; motorized criminal; ozone puzzle; portable transceiver batteries; RF power meter; utilities system; batteries; dental materials; *DIM/NBS* **60**, No. 3, 1-24 (1976)

Industry; iron; steel; energy; forecast; *SP403*, pp. 121-152 (June 1976).

Industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; *SP403*.

Industry construction; measurement techniques; standards; building research; criteria; energy; engineering; *SP439*.

Ineffectiveness; measurements; radiation; regulations; states; abstract; compromise; *SP456*, pp. 31-36 (Nov. 1976).

Inelastic electron scattering; infrared transitions; N_2O; relative intensities; H_2CO; *16578*.

Inelastic neutron scattering; magnetic structures; magnetism; neutron diffraction; rare earth alloys; amorphous magnetism;

direct current sputtering; *16555.*
Inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory; close-coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; *16532.*
Inelastic scattering; nitrogen molecules; polarization potential; scattering; static potential; vibrational excitation; close-coupling calculations; crossed beams; cross sections; differential cross sections; electron scattering; *16533.*
Inertial waves; internal waves; rotating fluids; stratified fluids; waves in fluids; buoyant flows; geophysical fluid flows; *J. Res.* **80B** No. 3, 353-402 (1976).
Information; information processing; International Standards; U.S. Government; American National Standards; computers; data; data elements; data processing; *FIPS PUB 45.*
Information; information retrieval system; architectural indexing systems; architecture; building; construction; design; *NBSIR 76-1064.*
Information analysis center; photochemistry; stratospheric chemistry; chemical kinetics; data center operation; *16364.*
Information exchange; international building research; international organization memberships; special foreign currency programs; building research; cooperative programs; *NBSIR 76-1162.*
Information flows; nuclear material information systems; nuclear materials safeguards; safeguards; decision makers; decision structure; *16526.*
Information handling; measurement services; Philippines; standardization; testing facilities; building technology; *NBSIR 76-1083.*
Information handling; privacy; safeguards for security and privacy; technology for security and privacy; computer security; *16439.*

Infrared; injection stabilization; klystron; *X* band; cavity stabilization; frequency multiplication; frequency stability; frequency synthesis; Gunn oscillator; *16520.*
Infrared; inorganic; minerals; ores; organic; polymers; spectroscopy; bibliography; data; *SP428. Parts 1, 2, and 3.*
Infrared; interferometry; lasers; photoelasticity; polarimetry; crystals; damage; glass; *15969.*
Infrared; Josephson effect; measurements; superconductivity; high frequency; *16498.*
Infrared; Josephson junctions; lasers; radiation detectors; superconductors; cryogenics; *16458.*
Infrared; lasers; spectra; spectroscopy; Stark effect; carbonyl sulfide; dipole moments; *16181.*
Infrared; mercurous chloride; polarizer material; visible; *NBSIR 74-507.*
Infrared; molecular spectroscopy; spectroscopy; vibrational fundamentals; hydrogen cyanide; *15925.*
Infrared; nondestructive evaluation; thermographic surveys; thermography; energy conservation; energy surveys; *TN923.*
Infrared; pyroelectric; spectral response; detector; *16472.*
Infrared; rate coefficient; carbon dioxide; cross section; electrons; excitation; *16256.*
Infrared bound fraction; protein adsorption; protein conformation; blood proteins; *15707.*
Infrared bound fraction; protein adsorption; conformation adsorbed proteins; ellipsometry; *16427.*

Infrared detection; laser magnetic resonance; modulated absorption; nitrogen dioxide; NO_x detection; quantitative detection; *16623.*

Infrared detectors; polymers; pyroelectrics; radiometry; *16471.*

Infrared detectors; smoke detectors; testing; ultraviolet detectors; detection; fire detectors; flame detectors; heat detectors; *NBSIR 76-1040.*

Infrared frequency measurements; infrared spectrometer; spin flip laser; tunable IR laser; air quality measurements; improved resolution spectroscopy; *TN670.*

Infrared frequency multiplication; noise; time scale; time standards; clocks; frequency accuracy; frequency stability; frequency standards; *16488.*

Infrared frequency synthesis; SFRL frequency measurement; spin flip Raman laser; frequency measurements on tunable lasers; IFS with a tunable laser; *TN680.*

Infrared laser; oxygen atoms; vibrationally excited reactant molecules; carbonyl sulfide; chemical kinetics; ethylene; flash photolysis resonance fluorescence; *16453.*

Infrared laser mirrors; metal mirrors; reflectance; absorptance; CO laser calorimetry; CO laser mirrors; dielectric-enhanced mirrors; *SP462*, pp. 189-194 (Dec. 1976).

Infrared laser window materials; multiphonon absorption; surface absorption; bulk absorption; CO laser; HF laser; *SP462*, pp. 50-57 (Dec. 1976).

Infrared laser windows; absorption; antireflection coatings; germanium selenide; *SP462*, pp. 279-282 (Dec. 1976).

Infrared laser windows; laser heating of metal surfaces; laser mirrors; pulsed CO_2 laser damage; surface damage; 10.6 μm absorption; 10.6 μm optical components; dielectric coatings; *SP462*, pp. 181-188 (Dec. 1976).

Infrared lasers; interferometry; stress birefringence; thermal distortion; windows; *SP435*, pp. 126-141 (Apr. 1976).

Infrared lasers; laser damage; thin films; attenuated total reflection spectroscopy; dielectric coatings; *SP462*, pp. 203-213 (Dec. 1976).

Infrared lasers; magnetic resonance; molecular spectroscopy; NO, NO_2, pollutant detection; apparatus and methods; *16456.*

Infrared materials; KCl; laser windows; photoelasticity; piezo-optical constants; refractive index; elasto-optical constants; *15937.*

Infrared materials; laser windows; multiphonon absorption; optical absorption; water repellent coatings; chemical lasers; *SP462*, pp. 45-49 (Dec. 1976).

Infrared materials; tensile stress; cadmium telluride; elastic compliance tensor; elastic moduli; extrinsic damage thresholds; high-power lasers; *SP462*, pp. 119-125 (Dec. 1976).

Infrared optical properties; laser damage; optical absorption; optical scattering; thin-film coating; alkali halides; antireflectance coating; chalcogenide glasses; *SP462*, pp. 214-220 (Dec. 1976).

Infrared searchlights; infrared viewers; light equivalent background; light induced background; optical gain; contrast transfer function; distortion; flare; image intensifier tubes; *16238.*

Infrared spectrometer; spin flip laser; tunable IR laser; air quality measurements; improved resolution spectroscopy; infrared frequency measurements; *TN670.*

Infrared spectroscopy; metal carbonyl; molybdenum carbonyl; NMR spectroscopy; 1,3-dithiolene-2-thione; chromium carbonyl; *15985.*

Infrared spectrum; matrix isolation; molecular rotation in solid Ar; photoinduced proton transfer; ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; emission spectrum; HAr_n^+; $HCCl_2^+$; $HCCl_2^-$; $HCCl_3$; *15757.*

Infrared spectrum; nitrogen dioxide, ν_3 band; nitrogen dioxide, $\nu_3 + \nu_2 - \nu_2$ band; rotational constants; spectroscopic constants; spin-rotation constants; *15753.*

Infrared transitions; N_2O; relative intensities; H_2CO; inelastic electron scattering; *16578.*

Infrared transmission; laser induced damage; optical isolation; $CdCr_2S_4$; chalcogenide spinel; Faraday effect; ferromagnetic semiconductor; hot-pressed; *SP462*, pp. 126-135 (Dec. 1976).

Infrared viewers; light equivalent background; light induced background; optical gain; contrast transfer function; distortion; flare; image intensifier tubes; infrared searchlights; *16238.*

Infrared window laser absorption; KCl absorption; laser induced damage; surface absorption; acoustic probe techniques; *SP435*, pp. 157-163 (Apr. 1976).

Infrared windows; KCl; mirror; Mo; NaCl; window; ZnSe; CO_2 laser radiation; Cu; CW laser damage; grating; *SP435*, pp. 189-201 (Apr. 1976).

Infrared windows; laser damage; metal mirrors; optical fabrication; optical materials; thin films; avalanche ionization; *SP462.*

Infrared-laser window materials; interferometry; KCl; photoelasticity; piezo-optic constants; refractive index; stress-optical constants; thermal coefficient of refractive index; birefringence; elastooptic constants; *NBSIR 76-1010.*

Inherently flame retardant polyester; phosphazenes; phosphorus flame retardants; polyester; precondensates; radiation grafting; antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; *NBS-GCR-ETIP 76-22.*

Inhibitor; oxidative pyrolysis; oxygen index; rayon; smoke; smoldering; upholstery fabric; cotton; cushioning; fire retardant; furniture; glowing; *16224.*

Inhibitor additives; LOX compatible greases; nonreactive lubricants; rust inhibited perfluoro greases; surface chemistry lubrication; chemisorption; corrosion preventives; *SP452*, pp. 106-119 (Sept. 1976).

Inhomogeneity; microsegregation; sampling; surface contamination; high purity metals; *SP422*, pp. 747-755 (Aug. 1976).

Inhomogeneous Lorentz group; relativistic fields; wave equations; causality; high spin fields; *Monogr. 154.*

Inhomogeneous superconductor; intermediate state; superconducting-normal transition; superconductor; surface energy type I superconductors; cadmium; condensation energy; demagnetization coefficient; fluctuations; *16450.*

Inhomogeneous system; subcritical region; viscosity; correlation length; Ginzburg-Landau theory; glass; *16258.*

Initial spectra; microdosimetric parameters; nuclear data; slowing-down spectra; energy deposition spectra; fast neutrons; *15950.*

Injection stabilization; klystron; *X* band; cavity stabilization; frequency multiplication; frequency stability; frequency synthesis; Gunn oscillator; infrared; *16520.*

Ink films; lubricity; film thickness; film uniformity; fingerprint impressions; fingerprint readers; image quality; *16019.*

Inks for art education; paints and inks; schools, paints and inks; art education; *PS65-75.*

Inner shell excitation; rf spectroscopy; rubidium; Zeeman effect; atomic beam; autoionization; differential metastability; fine structure; *16098.*

Inner shells; ionization; photoionization; charged particle excitation; *16299.*

Inner-shell; Auger-electron spectroscopy; cross sections; electron probe microanalysis; electrons; *15855.*

Inner-shell; ionization; cross sections; electron-probe microanalysis; electrons; *SP460*, pp. 97-104 (Dec. 1976).

Inner-shell electrons; ionization; *K*-shell; *L*-shell; photoabsorption; Bethe theory; cross sections; electron; *15812.*

Inner-shell excitation; krypton; photoionization; vacuum ultraviolet; xenon; cross section; *16541.*

Innovation; institutional barriers; productivity; service sector; automation; consumers; *16319*.
Innovation; life cycle costing; medical products and standards; procurement policies; product testing; specifications; unsolicited proposals; VA; certification programs; ETIP; incentives; *NBSIR 76-997*.
Innovation; life cycle costing; local government; procurement policy; state government; bid evaluation; Experimental Technology Incentives Program (ETIP); *NBS-GCR-ETIP 76-17*.
Innovation loans; R&D; small business; Small Business Administration; technological change; Experimental Technology Incentives Program; federal policies; *NBS-GCR-ETIP 76-11*.
Innovation, technological; technological innovation; bibliography, technological innovation; *NBS-GCR-ETIP 73-03*.
Inorganic; minerals; ores; organic; polymers; spectroscopy; bibliography; data; infrared; *SP428. Parts 1, 2, and 3*.
Inorganic bronze electrodes; metal electrodes; semiconductor electrodes; stability, surface layers; surface reactions; anodic decomposition; cathodic decomposition; electrochemistry; *SP455*, pp. 267-280 (Nov. 1976).
Inorganic compounds; melting point; structure; density; energy gap; *16163*.
Inorganic separators; isotopic exchange; multielement determination; neutron activation; radiochemical separation; trace elements; biological material; biological standards; data evaluation; distillation; food composition; gamma spectrometry; *SP422*, pp. 1173-1180 (Aug. 1976).
Input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; costs; data transmission systems; decisionmaking; economics; errors; information theory; *NBS-GCR-74-29*.
Input-output model; economic; energy; *SP403*, pp. 43-56 (June 1976).
Insertion loss; microwave; reflection coefficient magnitude; repeatability; coaxial connectors; *16495*.
Insertion loss; mobile antenna; mobile transceiver; transmission; cable assembly; coaxial cable; *16294*.
Inspection; manufactured building; model documents; NCSBCS; standards; state regulation; building codes; certification; compliance assurance; evaluation; *BSS87*.
Inspection; manufactured building; model codes; model documents; NCSBCS; on-site construction; prefabricated construction; standards; state-local relationship; state regulations; building codes; factory-built housing; industrialized building; *NBS-GCR-74-27*.
Inspection; mathematical model; regulation; strategy; theory of games; *J. Res.* **80B** No. 2, 189-236 (1976).
Instability; radiant flux; α-cellulose; flame spread; *16107*.
Institutional barriers; productivity; service sector; automation; consumers; innovation; *16319*.
Institutions; mapping; models; nursing homes; realms; building fires; case studies; critical events; decisions; episodes; fires; home for the aged; hospital fires; human behavior; *NBS-GCR-76-73*.
Instrument; ion chamber; roentgen; standard; γ radiation; γ response; calibration; exposure rate; geometry; *SP456*, pp. 59-63 (Nov. 1976).
Instrument; laser; length; machine; measurements; standard; dimensional; gage; *NBSIR 75-926*.
Instrument landing system; modulation measurements; modulation meter; percent modulation; amplitude modulation; *16516*.
Instrumental neutron activation analysis (INAA); instrumental photon activation analysis (IPAA); natural radioactivity; standard reference materials; trace elements; analytical methods; coal; environmental samples; environmental standards; *SP422*, pp. 211-223 (Aug. 1976).
Instrumental neutron activation analysis; particulate sample geometry; trace elements in polyethylene powder; gamma counting efficiency; germanium detectors; *SP422*, pp. 1275-1281 (Aug. 1976).
Instrumental photon activation analysis (IPAA); natural radioactivity; standard reference materials; trace elements; analytical methods; coal; environmental samples; environmental standards; fly ash; *SP422*, pp. 211-223 (Aug. 1976).
Instrumental-neutron activation analysis; comparative analyses; error evaluation; geological materials; *SP422*, pp. 1241-1256 (Aug. 1976).
Instrumentation; laboratory technique; time measurement; chronograph; frequency-stability measurement; *TN691*.
Instrumentation; measurements; National Measurement System; cryogenics; data; flowmeter; *NBSIR 75-825*.
Instrumentation; MHD; superconductivity; cryogenics; CTR; electric power; energy storage; generators; *16465*.
Instrumentation; microphones; sound level meters; statistical control processes; temperature; acoustic calibrators; A-weighting; barometric pressure; crest factor; ground cover; humidity; *TN931*.
Instrumentation; minicomputer; noise; community noise; computer interface; *NBSIR 75-692*.
Instrumentation; Mössbauer spectrometry; nuclear parameters; recent advances; tables; theory; chemical applications; *16332*.
Instrumentation; stress rupture; testing machine; creep; *NBSIR 76-1074*.
Instrumentation technology; medical ultrasonics; NSF; RANN; R & D incentives; tissue characterization; tissue signature; ultrasonic diagnosis; ultrasound; applied research; imaging; *SP453*, pp. 7-10 (Oct. 1976).
Instruments; source distributions; calibration; environmental gamma-rays; field testing; *SP456*, pp. 233-248 (Nov. 1976).
Instruments, clinical; temperature measurements; clinical instruments; *16021*.
Instruments for hearing; manikin; audiometry; diffraction; head diffraction; hearing aids; *NBSIR 76-1110*.
Insulating films; insulators; metal oxidation; metals; MOM devices; oxidation; oxidation theory; parabolic law for metal oxidation; semiconductors; conductivity; electric field effects; *16260*.
Insulating fluids; liquid insulators; polychlorinated biphenyls; transformers; askarel; capacitors; *NBSIR 76-1054*.
Insulation; intumescent paint; potential heat; reinforced plastic; small furnace test; smoke; aluminum bulkhead; combustion gases; fire endurance; *NBSIR 76-1012*.
Insulation; lighting; performance standard; thermal performance; ventilation; water heating; air leakage; building design; energy conservation; fenestration; HVAC systems; illumination; *NBSIR 74-452*.
Insulation; performance; radiative cooling; roofing; solar heating; surface temperature; built-up roofing; *NBSIR 76-987*.
Insulation; thermal conductivity; thermal insulation; conduction; energy conservation; heat transfer; *15756*.
Insulator films; interface characteristics; internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; photovoltaic imaging; Rutherford backscattering; SCANIIR; secondary ion mass spectroscopy; semiconductor devices; silicon; *SP400-23*.
Insulators; metal oxidation; metals; MOM devices; oxidation; oxidation theory; parabolic law for metal oxidation; semiconductors; conductivity; electric field effects; insulating films; *16260*.
Insulators, tower guy; Loran C; pultruded rods; rods, insulator; breakdown, electrical; failure analysis; fiberglass-reinforced plastics; flammability; guy insulators; high-voltage tests; *NBSIR 76-1136*.
Integral manifold; Liapunov functions; stability; averaging; dif-

229-317 O - 77 - 37

ferential equations; domains of stability; *15940*.
Integrals, evaluation of; molecular structure; orbitals; potential energy curves; pseudopotentials; self-consistent field; valence electrons; basis functions; configuration mixing; dipole moments; electronic structure of molecules; Hartree-Fock; *16611*.
Integrated circuits; ionizing radiation effects; scanning electron microscope; surface effects; electron beam damage; electron beam energy deposition; *15786*.
Integrated circuits; laser scanner; measurement method; nondestructive test; nonlinear operation; optical scanner; reliability; transistors; failure analysis; hot spots; *SP400-27*.
Integrated circuits; line-width measurements; microelectronics; optical microscope; photomasks; scanning electron microscope; dimensional metrology; *15864*.
Integrated circuits; measurement technology; microelectronics; process control; reliability; semiconductors; silicon; test patterns; data acquisition; data display; *SP 400-15*.
Integrated circuits; measurement technology; semiconductor devices; semiconductor process control; silicon; automation; electronics; *NBS-GCR-76-64*.
Integrated circuits; measurements; microelectronics; process control; reliability; semiconductor; automation; *16116*.
Integrated circuits; radiation effects; radiation hardening; test patterns; test structures; hardened integrated circuits; *NBSIR 76-1093*.
Integrated injection logic; radiation damage; radiation effects; digital bipolar circuits; *16180*.
Integrated intensities; lattice constants; peak intensities; powder patterns; reference intensities; standard; x-ray diffraction; crystal structure; *Monogr. 25, Section 13*.
Integrated utilities system; mass spectrometry; motorized criminal; ozone puzzle; portable transceiver batteries; RF power meter; utilities system; batteries; dental materials; industry; *DIM/NBS* **60**, No. 3, 1-24 (1976)
Integrated utility systems; resource conservation; utilities; utility services; water reuse; community services; cooling; electric power; energy conservation; heating; incineration; *16153*.
Integrating detectors; TLD; environmental radiation measurements; error; *SP456*, pp. 187-198 (Nov. 1976).
Integrating spheres; deuterium, arc lamps; Halon; *16058*.
Integration; transducer; electroacoustic; *15804*.
Intensifier; topography; x ray; asymmetric; diffraction; *16356*.
Intensities; laser magnetic resonance; nitrogen dioxide; rotational assignment; spin-rotation splittings; band center; *15788*.
Intensity; earthquake; empirical relation; Franciscan Formation; geological character; ground shaking; *SP444*, III-84—III-94 (Apr. 1976).
Interactive; measurement; procurement; response; service; computer; *16247*.
Interactive; network service; performance evaluation; performance measurement; service; computer networks; data analysis; *TN897*.
Interactive cable television; nonentertainment television; two-way television; wired city; wired nation; broadband interactive terminals; cable television uses; checkless society; computer/communications networks; computer/communications services; *NBS-GCR-75-44*.
Interactive service; measurement; measures; performance; usability; communications networks; computer networks; cost; *TN908*.
Interactive systems; online services; online systems; bibliographic information systems; computer technology; information storage and retrieval; *16548*.
Interatomic potential; molecular dynamics; second sound; shock wave; stress wave; temperature wave; thermal diffusivity; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; *16138*.
Inter-calibration; quality control; standards; air pollution; calibration; evaluation; *15978*.
Intercomparison; neutron; personnel; reactor; dosimetry; gamma; *SP456*, pp. 225-232 (Nov. 1976).
Intercomparison studies; quality assurance; quality control; radioactivity; reference methods; calibration; *SP456*, pp. 263-265 (Nov. 1976).
Intercomparisons; multi-element analysis; trace element analysis; x-ray fluorescence; accuracy; activation analysis; airborne particulates; air filter analysis; atomic absorption; emission spectroscopy; environmental pollutants; *SP422*, pp. 173-188 (Aug. 1976).
Intercomparisons; precision; round-robin experiment; trace element analysis; accuracy; activation analysis; air filter analysis; analytical quality control; atomic absorption spectrometry; environmental analysis; fresh water analysis; *SP422*, pp. 189-197 (Aug. 1976).
Intercomparisons; radiation; supervoltage; therapy; dosimetry; *SP456*, pp. 359-363 (Nov. 1976).
Interface; solid electrolyte; water; beta alumina; blocking electrode; *SP455*, pp. 341-349 (Nov. 1976).
Interface; solidification; stability; alloy; boundary layer; fluid flow; *15766*.
Interface characteristics; internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; photovoltaic imaging; Rutherford backscattering; SCANIIR; secondary ion mass spectroscopy; semiconductor devices; silicon; surface analysis; *SP400-23*.
Interface electrical characteristics; interface functional characteristics; removable disk packs; computer disk controllers; computer disk drives; computer disk interface; disk controllers; disk drive characteristics; disk pack interchangeability; disk track format; *NBS-GCR-76-63*.
Interface functional characteristics; removable disk packs; computer disk controllers; computer disk drives; computer disk interface; disk controllers; disk drive characteristics; disk pack interchangeability; disk track format; interface electrical characteristics; *NBS-GCR-76-63*.
Interface kinetics; solidification; stability; surface tension; alloys; anisotropy; *16213*.
Interface standards; memory technology; protocols; automated reading technology; circuitry; computer applications; computer engineering; distributed systems; *16553*.
Interface states; ion implantation; ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; *SP400-25*.
Interfaces; ionic conductivity; overpotential; solid electrolyte; electrode polarization; impedance measurements; *15819*.
Interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; costs; data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; *NBS-GCR-74-29*.
Interfaces; modems; signal processing; standards; teletypewriters; coding; *NBS-GCR-74-30*.
Interfaces; modems; telecommunication; common carriers; computer networks; *NBS-GCR-74-31*.
Interfaces; motivation for standardization; standards; automation; computer aided manufacturing systems; computer integrated manufacturing systems; *16350*.
Interfacial force; liquid-vapor interface; Markov Stochastic model; self-diffusion; continuous interface profile; diffusion equation; hypergeometric differential equation; *15726*.
Interfacial phenomena; solid electrolyte; charge transfer processes; conduction mechanisms; *SP455*, pp. 323-340 (Nov. 1976).

Interfacial resistance; metal-metal oxide electrodes; oxygen transport; steady-state overvoltages; copper electrodes; *SP455*, pp. 351-358 (Nov. 1976).

Interfacial thermal resistance; Kapitza conductance; Kapitza conductance of copper; x-ray diffraction examination of single crystal lattice damage; (100) surface of copper; heat transfer to helium II; *15737*.

Interfacing; interlibrary communication; man-machine interaction; network protocols; common practices; communication; compatibility; convertibility; information interchange; information networks; *16053*.

Interference abatement; laboratory environments; radiation; sound studies; engineering; environmental; *16009*.

Interference ripples; pulsed DF laser damage; sapphire; scattering; waveform distortion; alkali-halides; alkaline-earth fluorides; bulk damage; focal spot diameter; inclusion damage; *SP462*, pp. 136-144 (Dec. 1976).

Interferences; losses; mercury; trace metal; analysis; ashing; blood lead; contamination; dairy products; digestion; *SP422*, pp. 661-668 (Aug. 1976).

Interferences; multiple reflections; photometric linearity; polarization; sample characteristics; straylight; wavelength accuracy; bandwidth; calibration; errors in spectrophotometry; *J. Res.* **80A** No. 4, 609-624 (1976).

Interferences; primary interference reactions; systematic errors; trace analysis; accuracy; activation analysis; analytical chemistry; charged particle activation analysis; cross sections; excitation functions; fast neutron activation analysis; *SP422*, pp. 1189-1214 (Aug. 1976).

Interferometer; laser; optical frequency; optical heterodyne; wavelength comparison; *15887*.

Interferometer; polarization; step height; *16382*.

Interferometer, fringe counting; real-time display; *16380*.

Interferometric control; laser damage threshold; optical absorption; optical components; optical scattering; diamond single point turning; *SP462*, pp. 145-148 (Dec. 1976).

Interferometry; KCl; photoelasticity; piezo-optic constants; refractive index; stress-optical constants; thermal coefficient of refractive index; birefringence; elastooptic constants; infrared-laser window materials; *NBSIR 76-1010*.

Interferometry; laser windows; optical materials; thermal distortion; *SP462*, pp. 36-44 (Dec. 1976).

Interferometry; lasers; photoelasticity; polarimetry; crystals; damage; glass; infrared; *15969*.

Interferometry; least squares line; linear model; optical flat; profile; standard deviation; uncertainty; calibration; diameter; gravitational bending; *NBSIR 75-975*.

Interferometry; model experiments; stress; stress intensity; cracks; experimental mechanics; fracture; fracture toughness; *15742*.

Interferometry; photoelasticity; piezo-optic constants; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; *SP462*, pp. 58-63 (Dec. 1976).

Interferometry; photoelasticity; piezo-optic constants; refractive index; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; *NBSIR 76-1115*.

Interferometry; stress birefringence; thermal distortion; windows; infrared lasers; *SP435*, pp. 126-141 (Apr. 1976).

Interferometry; water phantoms; absorbed dose; calorimetry; dose distributions; dosimetry; electron beams; holography; *15852*.

Intergranular segregation; macro-segregation; sampling problems; trace elements; high-temperature alloys; *SP422*, pp. 1017-1022 (Aug. 1976).

Interim reference standard; longitudinal beam; measurement system; nondestructive evaluation; pulse-echo; ultrasonics; aluminum ultrasonic reference standards; ASTM-type reference standards; calibration; *TN924*.

Interim reference standard; longitudinal waves; metallurgical variables; nondestructive evaluation; pulse echo; steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; ASTM-type reference standards; calibration; *NBSIR 76-984*.

Interior ballistics; water; equation of state; *16313*.

Interior finish; reduced scale modeling; room corner tests; smoke; buildings; fire growth; flame spread; heat release; *16183*.

Interior finish; smoke; building; estimating; fire; furniture; hazard; *16123*.

Interior finish material; intumescent coating; life safety; mobile home; smoke detector; surface flame spread; corridor fire test; *NBSIR 76-1021*.

Interior furnishings; toxicity; bibliographies; building fires; construction materials; fire departments; fire detection system; fire tests; flame detectors; flammability tests; hazard analysis; *NBSIR 76-1120*.

Interlaboratory comparison; method evaluation; trace metal analysis; accuracy; flameless atomic absorption; freshwater; *SP422*, pp. 247-265 (Aug. 1976).

Interlaboratory comparisons; invariance; models; precision; precision of measurement; repeatability; reproducibility; test methods; transformations; weighting; *15909*.

Interlaboratory comparisons; sampling error; analytical data; analytical work; critical evaluation of an analytical procedure; industrial chemical analysis; *16001*.

Interlaboratory correlations; lead hygiene control; occupational exposure standard criteria; occupational health control; precision; trace element analyses; accuracy; blood lead analyses; clinical chemistry; industrial lead hygiene; *SP422*, pp. 275-282 (Aug. 1976).

Interlaboratory standards; bolometer mount; connector compatibility; directional coupler; *16554*.

Interlaboratory tests; neutron activation analysis; plasma emission; round robin; x-ray fluorescence; accuracy; anodic stripping voltammetry; arc emission spectroscopy; atomic absorption; environmental analyses; *SP422*, pp. 199-210 (Aug. 1976).

Interlaboratory tests; randomization, constrained; ruggedness test; statistical techniques; Youden plot; Youden squares; Youden, W. J; calibration designs; chain blocks; collaborative tests; diagnostic tests, index for rating; experiment design, statistical; *16115*.

Interlibrary communication; man-machine interaction; network protocols; common practices; communication; compatibility; convertibility; information interchange; information networks; interfacing; *16053*.

Intermediate state; superconducting-normal transition; superconductor; surface energy type I superconductors; cadmium; condensation energy; demagnetization coefficient; fluctuations; inhomogeneous superconductor; *16450*.

Intermetallic compounds; nonstoichiometry; phase composition; phase stability; atomic ordering; A15 compounds; *15848*.

Intermethod comparison; hexokinase; *16428*.

Intermittent illumination; photochemical principles; photochemical reaction of atoms and molecules; photochemistry in the atmosphere; photochemistry of air pollution; primary and secondary photochemical processes; bond energy; chain reaction; *16515*.

Intermittent operation; maximum allowable concentration of CO_2; New York City schools; ventilation; air quality; *16550*.

Internal calibration; iodine detection; potassium iodide; calibration cell; chlorine concentration; chlorine monitor; electrochemical calibration; *U.S. Patent 3,966,413*.

Internal control system characterization; nuclear material safeguards; safeguards; analysis; diversion of nuclear materi-

als; diversion path analysis; *16536.*
Internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; ethane; *TN684.*
Internal friction; molecular defects; pair potentials; site model; calculations; hydrocarbon crystals; *16074.*
Internal gas counters; isotope separator; krypton-85; proportional counters; radioactivity standardization; xenon-133, 131m; argon-37; direct standardization; environmental radioactivity; *15948.*
Internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; photovoltaic imaging; Rutherford backscattering; SCANIIR; secondary ion mass spectroscopy; semiconductor devices; silicon; surface analysis; *SP400-23.*
Internal rotation; interstellar molecules; microwave spectrum; radio astronomy; rotational transitions; acetaldehyde; *JPCRD* **5,** No. 1, 53-78 (1976).
Internal rotational barrier height; propanone (acetone); torsional frequencies; 2-butanone (methyl ethyl ketone); enthalpy; entropy; equilibrium constant of formation; Gibbs energy of formation; heat capacity; *JPCRD* **5,** No. 2, 319-328 (1976).
Internal scattering; myocardial infarction; scattering; surface scattering; tissue characterization; ultrasonic spectroscopy; ultrasound diagnosis; acoustic impedance; Bragg diffraction; computer processing; frequency-dependent attenuation; *SP453,* pp. 167-196 (Oct. 1976).
Internal stress; nondestructive evaluation; residual stress; dislocation theory; imperfect continua; *16411.*
Internal waves; rotating fluids; stratified fluids; waves in fluids; buoyant flows; geophysical fluid flows; inertial waves; *J. Res.* **80B** No. 3, 353-402 (1976).
International; petroleum; correlation; economic; energy; imports; *SP403,* pp. 21-41 (June 1976).
International agreement; lectures; OMNITAB II computing system; technology transfer; terminals; acceptance tests; AID; Bolivia; CENACO; computing using Spanish; foreign relations; *NBSIR 76-1176.*
International atomic time; models; simulation; time scale simulation; frequency stability; *TN689.*
International atomic time; primary frequency standard; atomic beams; atomic clock; atomic time; cesium beam tube; definition of the second; frequency accuracy; *16487.*
International building research; international organization memberships; special foreign currency programs; building research; cooperative programs; information exchange; *NBSIR 76-1162.*
International cooperation; international standards; materials conservation; materials science; performance concept; building construction; building design; building materials; building research; environmental protection; *16027.*
International intercomparison; neutron dosimetry; *15907.*
International intercomparison; cobalt-60; exposure standard; *16095.*
International organization memberships; special foreign currency programs; building research; cooperative programs; information exchange; international building research; *NBSIR 76-1162.*
International Practical Temperature Scale of 1968; IPTS-68; oxygen point; platinum resistance thermometer; temperature standard; tin point; triple point of water; zinc point; comparator; *J. Res.* **80A** No. 3, 477-504 (1976).
International Practical Temperature Scale of 1968; temperature scale differences; thermodynamic temperatures; gas thermometry; *J. Res.* **80A** Nos. 5 and 6, 703-738 (1976).
International Practical Temperature Scale; measurements; National Measurement System; standards; thermometry; data; *NBSIR 75-932.*
International standards; materials conservation; materials science; performance concept; building construction; building design; building materials; building research; environmental protection; international cooperation; *16027.*
International Standards; U.S. Government; American National Standards; computers; data; data elements; data processing; information; information processing; *FIPS PUB 45.*
International System of Units; metrication; metric education; metric system; training; Treaty of the Meter; education; *SP441.*
Interply thickness; roofing membranes; viscosity; application temperature; asphalt; built-up roofing; *BSS92.*
Interpolation methods; least squares; methane; thermodynamic properties; transport properties; correlation; equation of state; excess function; hydrogen; *15731.*
Intersection graph; pseudointersection graph; set covering; clique; clique graph; *J. Res.* **80B** No. 4, 441-445 (1976).
Interstellar; microwave spectra; molecules; Orion; radio astronomy; sulfur dioxide; *16434.*
Interstellar laboratory spectra; interstellar line identifications; interstellar molecular processes; interstellar transition probabilities; interstellar molecules; *16429.*
Interstellar line identifications; interstellar molecular processes; interstellar transition probabilities; interstellar molecules; interstellar laboratory spectra; *16429.*
Interstellar matter; line profiles; stars, late type; *15911.*
Interstellar medium; laboratory measurement; methyl alcohol; population inversion; radio astronomy; emission line; *15994.*
Interstellar molecular processes; interstellar transition probabilities; interstellar molecules; interstellar laboratory spectra; interstellar line identifications; *16429.*
Interstellar molecules; interstellar laboratory spectra; interstellar line identifications; interstellar molecular processes; interstellar transition probabilities; *16429.*
Interstellar molecules; microwave emission; molecular structure; radio astronomy; rotational spectrum; formyl ion; *16560.*
Interstellar molecules; microwave spectrum; radio astronomy; rotational transitions; acetaldehyde; internal rotation; *JPCRD* **5,** No. 1, 53-78 (1976).
Interstellar molecules; microwave spectra; molecular parameters; rotational transitions; radio astronomy; isocyanic acid; *JPCRD* **5,** No. 1, 79-102 (1976).
Interstellar molecules; microwave spectra; radio astronomy; rotational transitions; silicon sulfide; spectra; *JPCRD* **5,** No. 4, 1147-1156 (1976).
Interstellar transition probabilities; interstellar molecules; interstellar laboratory spectra; interstellar line identifications; interstellar molecular processes; *16429.*
Interstitial solute vacancy pairs; kinetic theory; pair association method; thermomigration; diffusion; dilute alloys; *15847.*
Interstitial water; Lake Superior chemical analysis; trace element water analysis; water filtration; water sampling apparatus; anodic stripping voltammetry; flameless atomic absorption; *SP422,* pp. 1073-1088 (Aug. 1976).
Intersystem crossing; molecular oxygen in rare gas solids; O_2 excited states; emission spectra; *16612.*
Intracavity; laser; low density; absorption; *16559.*
Intramolecular exchange; magnetic susceptibility; mixed valence; Mössbauer spectra; optical; biferrocenylene; delocalization; *16049.*
Intrinsic damage; multi-photon absorption; alkali halides; collision chains; halogen emission; *SP435,* pp. 366-368 (Apr. 1976).
Intrusion alarm; intrusion detector; sound sensing; standard; alarm; audio alarm; burglar alarm; *16367.*
Intrusion detector; sound sensing; standard; alarm; audio alarm;

burglar alarm; intrusion alarm; *16367.*
Intumescent coating; life safety; mobile home; smoke detector; surface flame spread; corridor fire test; interior finish material; *NBSIR 76-1021.*
Intumescent paint; potential heat; reinforced plastic; small furnace test; smoke; aluminum bulkhead; combustion gases; fire endurance; insulation; *NBSIR 76-1012.*
Invar; iron alloys; nickel alloys; stacking fault energy; x-ray diffraction; *16191.*
Invariance; models; precision; precision of measurement; repeatability; reproducibility; test methods; transformations; weighting; interlaboratory comparisons; *15909.*
Inversion; partitioning; sparse matrix; tree; block Gaussian elimination; graph; *J. Res.* **80B** No. 2, 245-257 (1976).
Investigations; law enforcement; resources; security; shoplifting; theft; burglary; consultants; crimes of opportunity; directory, (security); *16369.*
Investments; polymer; resin; wear; adhesion; adsorption; alloys; composites; dental; grafting; *NBSIR 76-1095.*
Iodine detection; potassium iodide; calibration cell; chlorine concentration; chlorine monitor; electrochemical calibration; internal calibration; *U.S. Patent 3,966,413.*
Ion; ionization; molecule; photon; positron; atom; collision cross section; detachment; dissociation; elastic scattering; electron; excitation; fluorescence; *SP426.*
Ion; nondestructive testing; Raman scattering; sample characterization; semiconductor; cuprous oxide; implantation; *15915.*
Ion absorption spectrum; ion photoionization; laser ionization; photoionization resonances; sodium; far ultraviolet spectroscopy; *16415.*
Ion angular distribution; oxygen; tungsten; carbon monoxide; chemisorption; electron stimulated desorption; *16398.*
Ion beam analysis; monitoring; particle sizing; time resolution; aerosol; California aerosol monitoring program; elemental analysis; *SP422,* pp. 1119-1136 (Aug. 1976).
Ion chamber; liquid scintillation; sodium iodide; standard; detectors; germanium; *SP456,* pp. 77-82 (Nov. 1976).
Ion chamber; patient; precision; therapy; TLD; dosimetry; *SP456,* pp. 343-350 (Nov. 1976).
Ion chamber; roentgen; standard; γ radiation; γ response; calibration; exposure rate; geometry; instrument; *SP456,* pp. 59-63 (Nov. 1976).
Ion chambers; n-γ dosimetry; neutrons; scattering; albedo; collimation; dosimetry; *SP456,* pp. 335-341 (Nov. 1976).
Ion clustering; ion-molecule reactions; proton transfer; radiation chemistry; hydride transfer; *15816.*
Ion cyclotron spectrometry; rate coefficients; charge transfer; H-atom transfer reactions; hydrogen halides; ion molecule reactions; *16362.*
Ion deflection device; laser Doppler anemometer; Reynolds number; angular insensitivity; fluidic device; hot wire anemometer; *16108.*
Ion emission; laser-induced damage; surface characterization; surface temperature; Al mirrors; Auger spectroscopy; damage morphology; electron emission; electron imaging; *SP435,* pp. 207-215 (Apr. 1976).
Ion exchange; Rayleigh waves; surface waves; glass; glass strengthening; *16282.*
Ion exchange; sampling; x-ray fluorescence; *SP422,* pp. 649-658 (Aug. 1976).
Ion implantation; ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; scanning electron microscope; *SP400-25.*
Ion implantation; ion sputtering; microelectronic materials; Rutherford backscattering; secondary ion mass spectroscopy; silicon; silicon dioxide; surface analysis; x-ray photoelectron spectroscopy; Auger electron spectroscopy; depth impurity profiling; *15739.*
Ion microprobe mass analysis; leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; scanning electron microscope; *SP400-25.*
Ion microprobe mass analysis; local thermodynamic equilibrium model; quantitative analysis; secondary ion mass spectrometry; surface analysis; CARISMA program; *15862.*
Ion microprobe mass analyzer; nuclear track technique; standard reference material; steel; alpha particles; boron; *15789.*
Ion mobility; liquids; mobility; quasifree electrons; solvated electrons; conduction band; drift mobility; energy levels; excess electrons; hydrocarbons; *NSRDS-NBS58.*
Ion molecule reactions; ion cyclotron spectrometry; rate coefficients; charge transfer; H-atom transfer reactions; hydrogen halides; *16362.*
Ion molecule reactions; proton affinity; proton transfer; rate coefficients; CCl_2, CF_2; CCl_2H^+, CF_2H^+; displacement reactions; four-center reactions; *16598.*
Ion photoionization; laser ionization; photoionization resonances; sodium; far ultraviolet spectroscopy; ion absorption spectrum; *16415.*
Ion planing; protective films; moisture resistance; sodium chloride; arsenic trisulphide; *SP435,* pp. 14-19 (Apr. 1976).
Ion polishing; polishing; roughness; surface damage; thin films; threshold; damage threshold; etching; flame polishing; fused silica; hydroxyl; *SP462,* pp. 310-314 (Dec. 1976).
Ion polishing; surface damage; surface roughness; surface structure; thin films; ultrasonic cleaning; damage thresholds; fused silica; *SP435,* pp. 305-320 (Apr. 1976).
Ion scattering; secondary ion mass spectrometry; surface analysis; Auger spectrometry; electron microprobe analysis; ESCA; *SP422,* pp. 541-573 (Aug. 1976).
Ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; photovoltaic imaging; Rutherford backscattering; SCANIIR; secondary ion mass spectroscopy; semiconductor devices; silicon; surface analysis; x-ray photoelectron spectroscopy; *SP400-23.*
Ion selective electrode; sodium hydroxide; work atmosphere; air analysis; air sampling; gas analysis; hydrogen cyanide; industrial hygiene; *NBSIR 76-998.*
Ion sputtering; microelectronic materials; Rutherford backscattering; secondary ion mass spectroscopy; silicon; silicon dioxide; surface analysis; x-ray photoelectron spectroscopy; Auger electron spectroscopy; depth impurity profiling; ion implantation; *15739.*
Ion storage; laser stabilization; rubidium standards; saturated absorption; time standards; application of standards; basic standards; cesium standards; frequency accuracy; frequency stability; frequency standards; hydrogen standards; *15736.*
Ion trap; recombination; cross-section measurements; electrons; H_3O^+; *15859.*
Ion yields; liquid; nonpolar systems; radiation chemistry; radiation physics; electrons; free ions; *NSRDS-NBS57.*
Ion-atom collisions; rare-gas ions; uranium; alkali ions; calcium; charge exchange; charge transfer; cross section calculations; *16126.*
Ion-atom collisions; solar corona; vacuum ultraviolet emission spectra; vacuum ultraviolet lasers; electron-promotion model; *16621.*
Ion-cyclotron resonance; ion-molecule reactions; ionization potentials; rate constants; alkane ions; alkanes; charge transfer; *16506.*
Ionic bombardment; microscope stages; rock-forming minerals; specimen preparation; electron microscopy; *in situ*

experiments; *15895*.
Ionic conductivity; ionic crystals; properties of ionic crystals; crystals; *16160*.
Ionic conductivity; overpotential; solid electrolyte; electrode polarization; impedance measurements; interfaces; *15819*.
Ionic conductors; potassium antimonate; sodium antimonate; sodium antimony oxyfluoride; alkali antimonates; crystal growth; *J. Res.* **80A** Nos. 5 and 6, 761-774 (1976).
Ionic crystal; KN_3 structure; low temperature study; monovalent metal azides; NaN_3 structure; neutron diffraction; RbN_3 structure; thermal motion; TlN_3 structure; *15973*.
Ionic crystals; Madelung potential; Mg^+; Mg^{2+}; MgO; Stark spectrum; surface excitons; bulk excitons; electron loss spectroscopy; *SP455*, pp. 59-65 (Nov. 1976).
Ionic crystals; properties of ionic crystals; crystals; ionic conductivity; *16160*.
Ionic segregation; laser; momentum transfer; phototransport; scattering; vacancies; absorption; electrotransport; *SP462*, pp. 365-370 (Dec. 1976).
Ionization; cross sections; electron-probe microanalysis; electrons; inner-shell; *SP460*, pp. 97-104 (Dec. 1976).
Ionization; ionization mechanisms; ions; review; electron-impact; *15942*.
Ionization; *K*-shell; *L*-shell; photoabsorption; Bethe theory; cross sections; electron; inner-shell electrons; *15812*.
Ionization; molecule; photon; positron; atom; collision cross section; detachment; dissociation; elastic scattering; electron; excitation; fluorescence; ion; *SP426*.
Ionization; photoionization; charged particle excitation; inner shells; *16299*.
Ionization; theoretical; collisions; electron; excitation; hydrogen; *15893*.
Ionization; threshold; atom; collision; Coulomb-interaction; electron; energy exchange; *15884*.
Ionization chamber; absorbed dose; calibration; cavity chamber; graphite chamber; *SP456*, pp. 37-39 (Nov. 1976).
Ionization chamber; calorimetry; cobalt-60; *16435*.
Ionization chamber; secondary standardization; calibration; dosimetry; *SP456*, pp. 65-69 (Nov. 1976).
Ionization chamber; sodium-22; standard reference materials; argon; calibration; detector, radioactive argon; *16325*.
Ionization chamber; stopping-power ratios; calorimeter; dose/ionization conversion; dosimetry; electrons; *SP456*, pp. 307-312 (Nov. 1976).
Ionization chambers; light attenuation; scattered light; smoke detectors; test methods; aerosols; *NBSIR 76-1037*.
Ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; *16420*.
Ionization energy; spectrum; terbium; energy levels; *15924*.
Ionization mechanisms; ions; review; electron-impact; ionization; *15942*.
Ionization potential; linear free-energy relationship; polarography; solvatochromic relationship; ultraviolet and visible spectroscopy; aromatic amine; benzene derivative; charge-transfer complex; dental materials; electron affinity; *J. Res.* **80A** No. 2, 173-187 (1976).
Ionization potential; measurement; appearance potential; gaseous positive ions; heat of formation; *16205*.
Ionization potential; NH_2^+; OH^+; photoionization; predissociation; Rydberg states; ammonia; appearance potential; autoionization; deuterated species; enthalpy of formation; *16539*.
Ionization potentials; rate constants; alkane ions; alkanes; charge transfer; ion-cyclotron resonance; ion-molecule reactions; *16506*.
Ionization smoke detectors; photoelectric smoke detectors; residential fires; smoke detectors; tenability levels; detector sensitivity; detector siting; heat detectors; *NBS-GCR-75-51*.
Ionized gas; numerical solutions; constrictions; gas discharge; helium; *16000*.
Ionized gases; nitrogen; oxygen; thermodynamic properties; air; argon; hydrogen; *16167*.
Ionized spectra; Stark broadening parameters; Stark shifts; Stark widths; critically evaluated data; experimental; *JPCRD* **5**, No. 2, 259-308 (1976).
Ionizing radiation; measurements; standards, uses of radiation; *SP456*, pp. 13-24 (Nov. 1976).
Ionizing radiation; measurement assurance; radiation users; standards; *SP456*, pp. 403-416 (Nov. 1976).
Ionizing radiation; measurement activities; measurement institutions; mechanical quantities; National Measurement System; optical quantities; thermal quantities; time and frequency; acoustic quantities; electrical quantities; electromagnetic quantities; *NBSIR 75-943*.
Ionizing radiation; mechanical quantities; national measurement system; optical quantities; surface properties; thermal quantities; time and frequency; acoustics; atomic properties; economics; electrical quantities; *NBSIR 75-947*.
Ionizing radiation; microelectronic devices; scanning electron microscopy; electron beam damage; electron beam energy deposition; *15963*.
Ionizing radiation effects; scanning electron microscope; surface effects; electron beam damage; electron beam energy deposition; integrated circuits; *15786*.
Ion-molecule equilibrium; proton affinity; proton transfer; basicity; bibliography, appearance potential; heat of formation; *NBSIR 76-1061*.
Ion-molecule reactions; ionization potentials; rate constants; alkane ions; alkanes; charge transfer; ion-cyclotron resonance; *16506*.
Ion-molecule reactions; kinetics; rate constants; collision processes; halocarbon ions; hydrocarbons; *15811*.
Ion-molecule reactions; mass spectrometry; rate coefficients; chemical kinetics; data evaluation; gas phase; hydrocarbons; *JPCRD* **5**, No. 4, 1123-1146 (1976).
Ion-molecule reactions; proton transfer; radiation chemistry; hydride transfer; ion clustering; *15816*.
Ionosphere; ionospheric scattering; irregularity; satellite; scintillation; spread-F; topside; absorption; high latitude; *16641*.
Ionospheric scattering; irregularity; satellite; scintillation; spread-F; topside; absorption; high latitude; ionosphere; *16641*.
Ions; lifetime; molecule; N_2^+; radiative; transition probability; CO^+; CO_2^+; coincidence; electron impact; *15912*.
Ions; oscillator strengths; quantum mechanics; spectroscopy; transition probabilities; wave functions; *16209*.
Ions; rare earths; spectroscopy; atoms; classification; energy levels; *16022*.
Ions; review; electron-impact; ionization; ionization mechanisms; *15942*.
Ion-selective electrode; seawater analysis; adsorption; copper; cupric ion; flow cell; *SP422*, pp. 899-915 (Aug. 1976).
IPTS-68; low temperature scales, 1-83 K; magnetic thermometer; manganous ammonium sulphate; paramagnetic salts; platinum resistance thermometers; ac-dc resistance thermometry; ac susceptibility; gadolinium sulphate; germanium resistance thermometers; *15903*.
IPTS-68; oxygen point; platinum resistance thermometer; temperature standard; tin point; triple point of water; zinc point; comparator; International Practical Temperature Scale of 1968; *J. Res.* **80A** No. 3, 477-504 (1976).
IR optics; laser damage; multiphoton processes; uv; electroabsorption; *SP435*, pp. 389-394 (Apr. 1976).
IR windows and mirrors; laser damage; laser materials; multiphoton processes; self-focusing; thin films; avalanche ioniza-

tion; *SP435*.
I-R 100 awards; NIKE missile; papers available; stereology; toy safety; x-ray units; computer power; computer standard; corrosion; environment; health care; housing production; *DIM/NBS* **60,** No. 11, 1-24 (1976).
Iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; calibration change; gradient; *16158*.
Iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; *16420*.
Iridium; maleonitriledithiolate; metalloboranes; nuclear magnetic resonance; oxidative addition; palladium; boron hydrides; deuterium; *16566*.
Iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; calibration change; gradient; *16158*.
Iron; iron lifetimes; lifetimes in Fe I; atomic spectra; energy levels; Fe I; *J. Res.* **80A** Nos. 5 and 6, 787-797 (1976).
Iron; kinetics; optical constants; passive; pitting; spectroscopy; ellipsometry; *16216*.
Iron; metals; plastic deformation; surfaces; wear; electron channeling; *16523*.
Iron; metals; plastic deformation; surfaces; wear; electron channeling; *NBSIR 76-992*.
Iron; Mössbauer spectra; zinc; alloys; aluminum; catalysis; hydrogenation; *16537*.
Iron; molybdenum; repassivation kinetics; stress corrosion; chemical breakdown of passivity; chloride; crevice corrosion; ellipsometry; *NBSIR 75-916*.
Iron; nickel; palladium; platinum; rhodium; ruthenium; thermomigration; alloys; cobalt; copper; diffusion; electromigration; *JPCRD* **5,** No. 1, 103-200 (1976).
Iron; oxide; resistivity; remanance; susceptibility; alloy; copper; cryogenic; *16632*.
Iron; spectra; ultraviolet; wavelengths; *16133*.
Iron; steel; energy; forecast; industry; *SP403*, pp. 121-152 (June 1976).
Iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; *NBSIR 76-848*.
Iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; composites; copper alloys; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; *NBSIR 75-828*.
Iron alloys; mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; aluminum alloys; composites; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; *NBSIR 76-839*.
Iron alloys; nickel alloys; stacking fault energy; x-ray diffraction; invar; *16191*.
Iron base alloys; iron single crystal; ellipsometric parameters; ellipsometric spectroscopy; *16017*.
Iron lifetimes; lifetimes in Fe I; atomic spectra; energy levels; Fe I; iron; *J. Res.* **80A** Nos. 5 and 6, 787-797 (1976).
Iron phthalocyanines; Mössbauer; optical spectra; oxygen; reaction mechanisms; ring-disk electrodes; electrocatalysis; electronic structure; hydrogen peroxide; *SP455*, pp. 241-251 (Nov. 1976).
Iron single crystal; ellipsometric parameters; ellipsometric spectroscopy; iron base alloys; *16017*.
Iron 4+; optical absorption; perovskite; strontium titanate; transition metal; zero phonon line; charge transfer, color centers; crystal field; d^4 ions; EPR; *16201*.
Iron-nickel; martensite; meteorite; Tishomingo; alloy; austenite; electron microscopy; *15764*.
Iron-silicon transformer steel; magnetic contrast; magnetic domain images; magnetic domains; Monte Carlo electron trajectory calculations; scanning electron microscope; *SP460*, pp. 151-164 (Dec. 1976).
Irradiation procedures; radioactivity detection systems; radiochemical separations; sampling and sample handling; accuracy and precision; activation analysis; analytical design; *SP422*, pp. 1143-1155 (Aug. 1976).
Irreducible character; matrix functions; multiple transitivity; permutation group; Stirling numbers; bell numbers; branching theorem; Clebsch-Gordon series; *J. Res.* **80B** No. 2, 265-268 (1976).
Irreducible complex character; orthogonality relations; permutation group; decomposable (or pure) tensor products; *J. Res.* **80B** No. 2, 259-264 (1976).
Irregularities; metallic thin films; microirregularities; overcoating; plasmons; scatter; absorption; dielectric layers; *J. Res.* **80A** No. 4, 643-658 (1976).
Irregularity; satellite; scintillation; spread-F; topside; absorption; high latitude; ionosphere; ionospheric scattering; *16641*.
Ising spin; Monte Carlo method; spin system; triangular lattice; conditional probability; *15865*.
Isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; ethane; internal energies; *TN684*.
Isobutyric acid; magnetic densimeter; phase equilibria, carbon disulfide, nitromethane; water; binary mixture; coexistence curve; critical phenomena; density; *16480*.
Isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; ethane; internal energies; isobars; *TN684*.
Isocyanic acid; interstellar molecules; microwave spectra; molecular parameters; rotational transitions; radio astronomy; *JPCRD* **5,** No. 1, 79-102 (1976).
Isoelectronic sequence; lithium sequence; oscillator strengths; relativistic effects; spectral series; systematic trends; *f*-values; *JPCRD* **5,** No. 3, 537-570 (1976).
Isoelectronic sequence; protactinium; rare earth; sliding spark discharge lamp; spectrum; uranium; actinide; atomic energy levels; *15990*.
Isoelectronic systems; TlBr; *16393*.
Isolated EMC antenna; sensitive isotropic probe; broadband antenna; electromagnetic compatibility; fiber optics; field strength measurement; *16210*.
Isolated EMC antenna; sensitive isotropic probe; electromagnetic compatibility; fiber optics; field strength measurement; *NBSIR 75-819*.
Isolation amplifiers; low-noise amplifiers; precision frequency measurements; precision time measurements; time difference measurements; time-domain frequency stability; time interval; frequency measurement; frequency mixing; global positioning system; *NBSIR 75-827*.
Isolation and clean-up; mass spectrometry; organic trace analysis; qualitative accuracy; quality control; quantitative accuracy; reference materials; sampling; concentration; detectors; extraction; gas chromatography; *SP422*, pp. 9-34 (Aug. 1976).
Isomer; Mössbauer; phase diagram; $TiFeH_x$ alloys; volume effects; charge flow; *16597*.
Isopiestic method; osmotic coefficients; nonlinear least squares; thermodynamic properties; vapor pressure; activity coefficients; aqueous; computer programs; data evaluation; electrolytes; electromotive force; *TN928*.

Isopropanol; particulate filtration; sulfate; sulfur dioxide; sulfur trioxide; sulfur trioxide condensation; automobile exhaust; catalytic oxidation converter; dilution tunnel; *SP422*, pp. 389-400 (Aug. 1976).
Isostatic; polishing; quartz; shaping; closed die; forging; *SP462*, pp. 95-99 (Dec. 1976).
Isostatic forging; kinking; microstructures; recrystallization temperature; veiling; annealing; fracture energy (γ_c); *SP462*, pp. 87-94 (Dec. 1976).
Isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; ethane; internal energies; isobars; isochores; *TN684*.
Isotope; mass spectrometry; serum; accurate; blood; concentrations; determination; dilution; electrolyte; *SP422*, pp. 951-960 (Aug. 1976).
Isotope dilution; lead; molybdenum; rubidium; strontium; trace analyses; cadmium; environmental Standard Reference Materials; *16221*.
Isotope dilution; NBS Standard Reference Material; preconcentration; spark source mass spectrometry; steel; trace elements; *15889*.
Isotope dilution; partial melting; rare earth elements; trace element models; volcanic rocks; analytical techniques; fractional crystallization; geochemistry; *SP422*, pp. 937-949 (Aug. 1976).
Isotope dilution; radionuclides; substoichiometry; absorption isotherm; environmental samples; fluorine; *SP422*, pp. 961-982 (Aug. 1976).
Isotope dilution analysis; mercury in water, trace analysis; mercury in water, stabilization of; neutron activation analysis; spark source mass spectrometry; atomic absorption spectrometry; *SP422*, pp. 267-273 (Aug. 1976).
Isotope dilution mass spectrometry; lead analysis; accurate and precise analysis; biological and environmental samples; blanks; homogeneity of lead content; *SP422*, pp. 929-935 (Aug. 1976).
Isotope dilution-mass spectrometry; serum glucose; clinical reference method; definitive glucose method; glucose in serum; *16343*.
Isotope effects; kinetics; molecular beams; quantum mechanics; rate coefficients; recombinations; scattering theory; chemical reactions; collision theory; cross sections; dissociation; hot atoms; *16591*.
Isotope enrichment; laser isotope separation; photochemical enrichment; boron isotope separation; boron trichloride; *U.S. Patent 3,996,120*.
Isotope ratio; nitric oxide; oxygen; tetrafluoroethylene; transverse excitation laser; 2-methyl propene; carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; *16657*.
Isotope separation; kinetics; lasers; photochemistry; *16538*.
Isotope separation; laser-induced reaction; laser irradiation; photochemical reaction; thiophosgene; chlorine isotope; *15959*.
Isotope separator; krypton-85; proportional counters; radioactivity standardization; xenon-133, 131m; argon-37; direct standardization; environmental radioactivity; internal gas counters; *15948*.
Isotopes; molecular dynamics; neutron; nuclear reactor; radiation; activation analysis; crystal structure; diffraction; *TN896*.
Isotopic; lithium; potassium; relative; rocks; rubidium; soils; absolute; Apollo; composition; *15869*.
Isotopic enrichment; ^{37}Ar; atmospheric mixing; atmospheric radioactivity; cosmic ray reactions; *16388*.
Isotopic exchange; multielement determination; neutron activation; radiochemical separation; trace elements; biological material; biological standards; data evaluation; distillation; food composition; gamma spectrometry; inorganic separators; *SP422*, pp. 1173-1180 (Aug. 1976).
Iterative methods; k best paths; linear equations; network algorithms; networks; shortest paths; *16389*.
I-125 uptake; thyroid monitoring; bioassay; *SP456*, pp. 371-379 (Nov. 1976).

Lanthanum; nickel; nuclear magnetic resonance; platinum; x-ray photoemission; alloys; copper; electronic density of states; *15768.*

Lanthanum; spectra; ultraviolet; wavelengths; barium; cesium; *16035.*

Lanthanum titanate; oxygen electrode; photo-assisted electrolysis; rutile; electrocatalyst; hydrogen evolution; *SP455*, pp. 313-321 (Nov. 1976).

LAPD brake tests; NBS survey; patrolcar brakes; patrolcar survey; police brake requirements; FMVSS 105a; *16148.*

Large aperture; pathology; pellicle; phase-contrast; transmission; ultrasound; velocity; attenuation; breast tissue; broadband; high resolution; imaging; *SP453*, pp. 121-133 (Oct. 1976).

Large volume calibration; density measurement; electromanometer; *NBSIR 75-900.*

Large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; *SP400-18.*

Large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; cells; charge-coupled device (CCD); chevron; garnet; *16647.*

Laser; laser frequency measurement; length standard saturated absorption stabilization; speed of light; c; *15898.*

Laser; laser materials; optical absorption; calorimetry; *15935.*

Laser; length; machine; measurements; standard; dimensional; gage; instrument; *NBSIR 75-926.*

Laser; low density; absorption; intracavity; *16559.*

Laser; membrane filters; microphotometer; particulate deposits; *15966.*

Laser; momentum transfer; phototransport; scattering; vacancies; absorption; electrotransport; ionic segregation; *SP462*, pp. 365-370 (Dec. 1976).

Laser; optical; oscilloscope; photoconductor; picosecond; sampling; sampling oscilloscope; strobe; GaAs; *15835.*

Laser; optical frequency; optical heterodyne; wavelength comparison; interferometer; *15887.*

Laser; optical pulse; oscilloscope; photoconductor; pulse measurements; sampling; *16193.*

Laser; potassium pentaborate; u.v. generation; doubling; *15932.*

Laser action; ultraviolet laser action; He-Ag and Ne-Ag mixtures; *16511.*

Laser antireflective coatings; materials purification requirements; pulsed laser damage; rare earth fluorides; zinc selenide coatings; *SP462*, pp. 271-278 (Dec. 1976).
Laser attenuation; neutral density filter; beam splitter; *TN677*.
Laser calorimeters; measurement assurance programs; nonionizing EM radiation hazards; RF and microwave measurements; standards; calibrations; *SP456*, pp. 417-425 (Nov. 1976).
Laser damage; alkali halides; antireflection coatings; coatings; KCl; *SP462*, pp. 283-291 (Dec. 1976).
Laser damage; laser fusion; metal mirrors; reflecting optics; *SP462*, pp. 331-337 (Dec. 1976).
Laser damage; laser materials; multiphoton processes; self-focusing; thin films; avalanche ionization; IR windows and mirrors; *SP435*.
Laser damage; laser windows; 10.6 μm lasers; coatings; *SP462*, pp. 264-278 (Dec. 1976).
Laser damage; light scattering; optical absorption; surface roughness; Auger analysis; diamond-turned metal mirrors; *SP462*, pp. 158-164 (Dec. 1976).
Laser damage; metal mirrors; micromachining; optical figure; scattered light; diamond turning; *SP435*, pp. 49-56 (Apr. 1976).
Laser damage; metal mirrors; optical fabrication; optical materials; thin films; avalanche ionization; infrared windows; *SP462*.
Laser damage; metal mirrors; subsurface structure; ultrasonic cleaning; *SP435*, pp. 90-97 (Apr. 1976).
Laser damage; mirrors; multilayer dielectric coatings; polarizers; coating damage; *SP435*, pp. 298-304 (Apr. 1976).
Laser damage; multiphoton absorption; rf sputtering; damage threshold; dielectric films; heat conduction; *SP435*, pp. 272-283 (Apr. 1976).
Laser damage; multiphoton processes; uv; electroabsorption; IR optics; *SP435*, pp. 389-394 (Apr. 1976).
Laser damage; oblique incidence; standing waves; electric fields; *SP462*, pp. 25-28 (Dec. 1976).
Laser damage; optical absorption; optical scattering; thin-film coating; alkali halides; antireflectance coating; chalcogenide glasses; infrared optical properties; *SP462*, pp. 214-220 (Dec. 1976).
Laser damage; optical coatings; standing-waves; dielectric films; electric fields; *SP462*, pp. 301-309 (Dec. 1976).
Laser damage; reflectors; ThF_4; thin film; ZnSe; 10.6 μm; absorbing inclusions; damage statistics; *SP435*, pp. 216-229 (Apr. 1976).
Laser damage; refractive index; surface damage; surface roughness; thin films; damage thresholds; *SP435*, pp. 289-295 (Apr. 1976).
Laser damage; spot size dependence; time dependence; frequency dependence; *SP462*, pp. 338-345 (Dec. 1976).
Laser damage; thin films; attenuated total reflection spectroscopy; dielectric coatings; infrared lasers; *SP462*, pp. 203-213 (Dec. 1976).
Laser damage; 10.6 μm laser; damage theory; *SP462*, pp. 371-378 (Dec. 1976).
Laser damage; 10.6 μm laser; diamond turning; KCl laser windows; *SP462*, pp. 149-157 (Dec. 1976).
Laser damage of semiconductors; parametric plasma instability; photon induced excitation; carrier mobility; damping rates; *SP462*, pp. 357-364 (Dec. 1976).
Laser damage resistance; stress relief; adherence; diamond machining; dielectric mirror; electroplating; *SP435*, pp. 66-74 (Apr. 1976).
Laser damage threshold; morphology; nonlinear refractive index; picosecond laser pulses; avalanche ionization; dielectric breakdown; inclusions; *SP435*, pp. 321-330 (Apr. 1976).
Laser damage threshold; optical absorption; optical components; optical scattering; diamond single point turning; interferometric control; *SP462*, pp. 145-148 (Dec. 1976).
Laser distance measurements; moon; earth rotation; geodesy; geodynamics; geophysics; *16448*.
Laser Doppler anemometer; Reynolds number; angular insensitivity; fluidic device; hot wire anemometer; ion deflection device; *16108*.
Laser doppler velocimetry; liquid fuels; solid fuels; surface tension; combustion models; flame spread; fluid flow; *NBS-GCR-76-79*.
Laser dyes; molecular structure; oxazine dyes; quenching; xanthene dyes; aminocoumarins; carbazine dyes; deuterium effect; fluorescence quantum yield; *J. Res.* **80A** No. 3, 421-428 (1976).
Laser enhanced reactions; O_3; PbO; chemiluminescence; electronic states; gas kinetics; *J. Res.* **80A** No. 2, 167-171 (1976).
Laser flash method; laser windows; thermal diffusivity; cadmium telluride; gallium arsenide; germanium; *SP435*, pp. 98-106 (Apr. 1976).
Laser frequency measurement; length standard saturated absorption stabilization; speed of light; c; laser; *15898*.
Laser fusion; metal mirrors; reflecting optics; laser damage; *SP462*, pp. 331-337 (Dec. 1976).
Laser heating of metal surfaces; laser mirrors; pulsed CO_2 laser damage; surface damage; 10.6 μm absorption; 10.6 μm optical components; dielectric coatings; infrared laser windows; *SP462*, pp. 181-188 (Dec. 1976).
Laser induced damage; optical probe technique; thin film; time resolved damage; adhesion effect; *SP435*, pp. 284-288 (Apr. 1976).
Laser induced damage; optical isolation; $CdCr_2S_4$; chalcogenide spinel; Faraday effect; ferromagnetic semiconductor; hot-pressed; infrared transmission; *SP462*, pp. 126-135 (Dec. 1976).
Laser induced damage; RAP grown materials; alkali halide crystals; *SP462*, pp. 346-349 (Dec. 1976).
Laser induced damage; surface absorption; acoustic probe techniques; infrared window laser absorption; KCl absorption; *SP435*, pp. 157-163 (Apr. 1976).
Laser induced stresses; stress analysis; thermal analysis; zinc selenide window; computer analysis; *SP462*, pp. 29-35 (Dec. 1976).
Laser induced surface damage; optical probe technique; refractive index variation; damage electron density; electron density transient; free electron absorption; *SP435*, pp. 356-361 (Apr. 1976).
Laser ionization; photoionization resonances; sodium; far ultraviolet spectroscopy; ion absorption spectrum; ion photoionization; *16415*.
Laser irradiation; photochemical reaction; thiophosgene; chlorine isotope; isotope separation; laser-induced reaction; *15959*.
Laser isotope separation; photochemical enrichment; boron isotope separation; boron trichloride; isotope enrichment; *U.S. Patent 3,996,120*.
Laser line; laser magnetic resonance spectrum; magnetic resonance spectrum; resonance spectrum; rotational frequency; *15988*.
Laser magnetic resonance; modulated absorption; nitrogen dioxide; NO_x detection; quantitative detection; infrared detection; *16623*.
Laser magnetic resonance; nitrogen dioxide; rotational assignment; spin-rotation splittings; band center; intensities; *15788*.
Laser magnetic resonance spectrum; magnetic resonance spectrum; resonance spectrum; rotational frequency; laser line; *15988*.
Laser magnetic resonance technique; stack emissions; ambient air; automotive emissions; *16109*.
Laser materials; multiphoton processes; self-focusing; thin films;

avalanche ionization; IR windows and mirrors; laser damage; *SP435*.

Laser materials; optical absorption; calorimetry; laser; *15935*.

Laser measurement; science; air conditioners; attic fans; basic research; chemical thermodynamics; door security; Elliot Richardson; energy conservation; engineering; fashion; flammability; *DIM/NBS* **60**, No. 6, 1-24 (1976).

Laser mirrors; pulsed CO_2 laser damage; surface damage; 10.6 μm absorption; 10.6 μm optical components; dielectric coatings; infrared laser windows; laser heating of metal surfaces; *SP462*, pp. 181-188 (Dec. 1976).

Laser power and energy measurements; spatial response; temporal development; *16561*.

Laser Raman spectroscopy; nuclear magnetic resonance spectroscopy; phenylmercuric acetate; volatilization; bacteria; elemental mercury; flameless atomic absorption spectroscopy; *15897*.

Laser scanner; measurement method; nondestructive test; nonlinear operation; optical scanner; reliability; transistors; failure analysis; hot spots; integrated circuits; *SP400-27*.

Laser scanning; logic flow observation; LSI testing; nondestructive test; nonlinearity measurement; UHF transistor measurement; active devices; hot spots; *15781*.

Laser scanning; logic flow observation; LSI testing; measurement of operating margins; nondestructive tests; P-MOS shift register; active devices; *15833*.

Laser scanning; nondestructive tests; semiconductor devices; UHF transistor measurements; device nonlinearity measurements; hot spots, transistor; *16571*.

Laser scanning; nondestructive testing; silicon optical absorption coefficient; temperature mapping; active devices; hot-spot behavior; *16577*.

Laser spectroscopy; laser stabilization; saturated absorption; accelerated atom beam; experimental relativity; *15905*.

Laser spectroscopy; line shape; optical frequency standards; recoil effect; relativity; CH_4 hyperfine structure; high resolution spectroscopy; *16603*.

Laser stability; metrology; second-order Doppler shift; speed of light; frequency multiplication; fundamental constants; *15980*.

Laser stabilization; rubidium standards; saturated absorption; time standards; application of standards; basic standards; cesium standards; frequency accuracy; frequency stability; frequency standards; hydrogen standards; ion storage; *15736*.

Laser stabilization; saturated absorption; accelerated atom beam; experimental relativity; laser spectroscopy; *15905*.

Laser wavelength determination; scanning interferometer; cw dye laser; frequency control; *16649*.

Laser window coating; plasma polymerized; *SP462*, pp. 230-238 (Dec. 1976).

Laser window coatings; ZnS; CeF_3; CO_2 pulsed laser damage; coating topography; KCl; *SP435*, pp. 236-243 (Apr. 1976).

Laser window heating; laser window testing; Type II diamond windows; diamond absorption coefficient; *SP435*, pp. 175-188 (Apr. 1976).

Laser window testing; Type II diamond windows; diamond absorption coefficient; laser window heating; *SP435*, pp. 175-188 (Apr. 1976).

Laser windows; multiphonon absorption; optical absorption; water repellent coatings; chemical lasers; infrared materials; *SP462*, pp. 45-49 (Dec. 1976).

Laser windows; optical figure; polishing; scattered light; surface absorption; alkali-halide; KCl; *SP435*, pp. 20-28 (Apr. 1976).

Laser windows; optical materials; thermal distortion; interferometry; *SP462*, pp. 36-44 (Dec. 1976).

Laser windows; photoelasticity; piezo-optical constants; refractive index; elasto-optical constants; infrared materials; KCl; *15937*.

Laser windows; spectroscopic; absorption; antireflection coatings; attenuated total reflection; *SP462*, pp. 246-252 (Dec. 1976).

Laser windows; surface composition; 10.6 μm; As_2S_3; coating deposition; index of refraction; *SP435*, pp. 244-247 (Apr. 1976).

Laser windows; thermal diffusivity; cadmium telluride; gallium arsenide; germanium; laser flash method; *SP435*, pp. 98-106 (Apr. 1976).

Laser windows; thermal distortion; thermal lensing; ZnSe; far field intensity; *SP435*, pp. 142-147 (Apr. 1976).

Laser windows; 10.6 μm lasers; coatings; laser damage; *SP462*, pp. 264-278 (Dec. 1976).

Laser windows and mirrors; optical figure; pulsed laser; thermal distortion; *SP462*, pp. 11-24 (Dec. 1976).

Laser-excited fluorescence; Rayleigh scattering; collisions; *15910*.

Laser-induced damage; surface characterization; surface temperature; Al mirrors; Auger spectroscopy; damage morphology; electron emission; electron imaging; ion emission; *SP435*, pp. 207-215 (Apr. 1976).

Laser-induced gas breakdown; photoionization; electron avalanche; *SP435*, pp. 347-355 (Apr. 1976).

Laser-induced reaction; laser irradiation; photochemical reaction; thiophosgene; chlorine isotope; isotope separation; *15959*.

Laser-induced reactions; multiphoton processes; numerical calculations; relaxation phenomena; vibrational populations; floquet theory; *16242*.

Laser-induced stress; plastic deformation; single-crystal aluminum; slip bands; vaporization; *SP462*, pp. 165-180 (Dec. 1976).

Lasers; meeting report; Novosibirsk; pressure-broadened line shapes; Soviet Union; submillimeter waves; high resolution molecular spectroscopy; *16010*.

Lasers; metal vapors; noble gas; spectroscopy; electron beam excitation; heat pipe oven; *16234*.

Lasers; metrology; moon; tectonics; geodesy; geodynamics; *15794*.

Lasers; nonlinear spectroscopy; saturated absorption; *16093*.

Lasers; photochemistry; isotope separation; kinetics; *16538*.

Lasers; photoelasticity; polarimetry; crystals; damage; glass; infrared; interferometry; *15969*.

Lasers; radiation detectors; superconductors; cryogenics; infrared; Josephson junctions; *16458*.

Lasers; radiometry; calibrations; calorimeters; detectors; *SP456*, pp. 215-221 (Nov. 1976).

Lasers; spectra; spectroscopy; Stark effect; carbonyl sulfide; dipole moments; infrared; *16181*.

Lasers; sputtering; visible; charge transfer; *16497*.

Lasers; tectonics; VLBI; coordinate systems; geodesy; geodynamics; *15801*.

Lasers; tectonics; VLBI; coordinate systems; geodesy; geodynamics; *15806*.

Latent heats of vaporization; melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; *TN684*.

Lateral loads; loading rate; racking; test method; vertical loads; wall panels; walls; *BSS91*.

Lateral loads; pile head; piles; structural engineering; design; earthquake; highway bridges; *SP444*, pp. IV-90–IV-112 (Apr. 1976).

Latex paints; nonmercurial fungicides; accelerated testing; alkyd paints; environmental chamber; exterior exposure; *16416*.

Lattice constants; peak intensities; powder patterns; reference intensities; standard; x-ray diffraction; crystal structure; integrated intensities; *Monogr. 25, Section 13*.

Lattice dynamics; low temperature, polyglycine; polypeptides; vibrational states; heat capacity; *16304.*
Lattice misfit; pattern recognition; twinning; computer calculations; crystal structure; epitaxy; *TN893.*
Lattice model; phase transition; Bogoliubov transformation; bosons; helium; lambda point; *15870.*
Lattice parameter; Avogadro constant; crystals; *16255.*
Lattice, parameter of; lattice parameters; precision; Bond method; generalization of silicon; *15945.*
Lattice parameters; precision; Bond method; generalization of silicon; lattice, parameter of; *15945.*
Lattice sums; magnetic; susceptibility; antiferromagnetism; critical temperature; dipole-dipole interaction; erbium phosphate ground state; heat capacity; *15866.*
Lattice trapping; slow-crack growth; stress corrosion; fracture; *16155.*
Law enforcement; automatic vehicle locator; car locators; *16266.*
Law enforcement; light equivalent background; light induced; optical gain; night vision; contrast transfer function; flare; image intensifiers; *16239.*
Law enforcement; personal transmitter; portable transmitter; radio frequency carrier; transmitter; audiofrequency modulation; communications; electromagnetic compatibility; *16285.*
Law enforcement; relative incapacitation index; relative stopping power; bullets; cartridges; handgun ammunition; *16305.*
Law enforcement; resources; security; shoplifting; theft; burglary; consultants; crimes of opportunity; directory, (security); investigations; *16369.*
Law enforcement; transmitter; base station transmitter; communications; fixed transmitter; FM transmitter; *16286.*
Law enforcement communications, Law Enforcement Standards Laboratory; personal/portable transceivers; primary battery; secondary battery; transceiver; battery performance standard; *16296.*
Law enforcement equipment; earmuffs; earplugs; gunfire noise; hearing damage; hearing protectors; *16368.*
Law enforcement equipment; law enforcement equipment standards; product performance; product safety; bibliographies; consumer product safety; consumer product standards; consumer product technology; *NBSIR 76-1066.*
Law enforcement equipment; minimum performance requirements; NILECJ Standard; receiver definitions; receiver measurement techniques; FM receivers; *16293.*
Law enforcement equipment; minimum performance requirements; NILECJ Standard; receiver definitions; receiver measurement techniques; FM receivers; *16297.*
Law enforcement equipment; minimum performance requirements; NILECJ Standard; receiver definitions; receiver measurement techniques; FM receivers; *16303.*
Law enforcement equipment report, Law Enforcement Standards Laboratory; mobile digital equipment; National Institute of Law Enforcement and Criminal Justice; communications; digital communications; guideline; *16190.*
Law enforcement equipment standards; product performance; product safety; bibliographies; consumer product safety; consumer product standards; consumer product technology; law enforcement equipment; *NBSIR 76-1066.*
Lawn mowers; penetration tests; power lawn mowers; safety standard; thrown objects tests; dispersion tests; *NBSIR 76-1022.*
Laws and regulations; measurement; metric; packaging and labeling; police radar equipment; standards; supermarket automation; weights and measures; calibration; communication; consumers; grain moisture measurement; *SP442.*
Layer model; lucite; ultrasound; attenuation; computer; deconvolution; impedance; impulse response; *SP453,* pp. 231-251 (Oct. 1976).
LDC's; metrology; AID; assistance; certification programs; education of metrologists; industrializing nations; *NBSIR 76-988.*
LDH-1; Michaelis constants for NADH and LDH-5; *16493.*
Lead; lead blood analyses; methodology; trace element analyses; atomic absorption spectrometry; blood analyses; contaminations; flameless methods; *SP422,* pp. 715-719 (Aug. 1976).
Lead; lead contamination evaluation and control; lead in animals and plants; pollution, lead; sampling techniques; trace analysis of lead; waters, lead in; accuracy of atomic absorption analytical techniques; *SP422,* pp. 321-351 (Aug. 1976).
Lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; *16420.*
Lead; manganese; sensitivity; spectrophotometry; statistical methods; zinc; atomic absorption; cadmium; copper; *SP422,* pp. 1023-1033 (Aug. 1976).
Lead; molybdenum; rubidium; strontium; trace analyses; cadmium; environmental Standard Reference Materials; isotope dilution; *16221.*
Lead; paint; wire loop; atomic absorption; determination; *16334.*
Lead; seawater analysis; speciation; stability of water samples; zinc; Adriatic Sea; cadmium; copper; electrochemical analysis; heavy metals; *SP422,* pp. 917-928 (Aug. 1976).
Lead; spectrophotometry; atomic absorption; background correction; Delves Cup; *SP422,* pp. 1035-1043 (Aug. 1976).
Lead analysis; accurate and precise analysis; biological and environmental samples; blanks; homogeneity of lead content; isotope dilution mass spectrometry; *SP422,* pp. 929-935 (Aug. 1976).
Lead blood analyses; methodology; trace element analyses; atomic absorption spectrometry; blood analyses; contaminations; flameless methods; lead; *SP422,* pp. 715-719 (Aug. 1976).
Lead contamination evaluation and control; lead in animals and plants; pollution, lead; sampling techniques; trace analysis of lead; waters, lead in; accuracy of atomic absorption analytical techniques; *SP422,* pp. 321-351 (Aug. 1976).
Lead dioxide; pyrophosphate; Temkin; wax-bound electrode; amperometry; cyclic voltammetry; electrosorption; Langmuir; *SP455,* pp. 183-189 (Nov. 1976).
Lead hygiene control; occupational exposure standard criteria; occupational health control; precision; trace element analyses; accuracy; blood lead analyses; clinical chemistry; industrial lead hygiene; interlaboratory correlations; *SP422,* pp. 275-282 (Aug. 1976).
Lead in animals and plants; pollution, lead; sampling techniques; trace analysis of lead; waters, lead in; accuracy of atomic absorption analytical techniques; accuracy of isotope dilution analytical techniques; errors in lead analyses; lead; *SP422,* pp. 321-351 (Aug. 1976).
Lead nitrate; mercury thermometers; metric; nuclear power; police radars; solar energy; SRM's; computer systems; environmental; fire; glass door; *DIM/NBS* **60,** No. 2, 1-25 (1976).
Lead paint; lead paint detection; lead paint programs; lead poisoning; portable x-ray fluorescence; random sampling; x-ray fluorescence; *TN921.*
Lead paint; lead poisoning; surveys; blood; blood lead; children; housing; *NBSIR 76-1024.*
Lead paint detection; lead paint programs; lead poisoning; portable x-ray fluorescence; random sampling; x-ray fluorescence; lead paint; *TN921.*
Lead paint programs; lead poisoning; portable x-ray

fluorescence; random sampling; x-ray fluorescence; lead paint; lead paint detection; *TN921.*

Lead poisoning; abatement; building economics; building materials; economic analysis; housing; lead-based paint; *TN922.*

Lead poisoning; LNG data; optical; standard reference materials; thermophysical properties symposium; waste heat; computer; consumer; drugs; electrical pulses; environmental standards; friction measurement; *DIM/NBS* **60,** No. 9, 1-24 (1976).

Lead poisoning; paint removal; abatement; barrier materials; building materials; children; housing; lead-based paint; *NBSIR 75-974.*

Lead poisoning; portable x-ray fluorescence; random sampling; x-ray fluorescence; lead paint; lead paint detection; lead paint programs; *TN921.*

Lead poisoning; surveys; blood; blood lead; children; housing; lead paint; *NBSIR 76-1024.*

Lead pyroniobate; low temperature; polarization; antiferroelectric; dielectric constant; heat capacity; *16527.*

Lead-based paint; lead poisoning; abatement; building economics; building materials; economic analysis; housing; *TN922.*

Lead-based paint; lead poisoning; paint removal; abatement; barrier materials; building materials; children; housing; *NBSIR 75-974.*

Lead-paint; metric; pressure transducers; thermal comforts; weights and measures; building industry; calibration system; centigrade/celsius; computer; electrical industries; environments; glass standards; government intervention; *DIM/NBS* **60,** No. 10, 1-24 (1976).

Leak detection; Annandale; field test; gas explosion; *16101.*

Leak testing; measurement technology; microelectronics; MOS devices; process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; hybrid devices; *SP400-28.*

Leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; *SP400-19.*

Leak tests; measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; *SP400-25.*

Leakage; methane; safety; vents; automobile; detection; dispersion; explosion; fire; hydrogen; *16634.*

Leakage current; prevention of electrocution; branch circuit protection; electrical safety; electric shock; ground fault; *BSS81.*

Least squares; methane; thermodynamic properties; transport properties; correlation; equation of state; excess function; hydrogen; interpolation methods; *15731.*

Least squares estimation; partial closure design; standard deviation; subdivision; variance-covariance matrix; angle standard; autocollimator; calibration; complete closure design; indexing table; *NBSIR 75-750.*

Least squares line; linear model; optical flat; profile; standard deviation; uncertainty; calibration; diameter; gravitational bending; interferometry; *NBSIR 75-975.*

Least squares (L2); least sums (L1); thermochemistry; thermodynamic data networks; computerized data analysis; data evaluation; *NBSIR 76-1147.*

Least sums (L1); thermochemistry; thermodynamic data networks; computerized data analysis; data evaluation; least squares (L2); *NBSIR 76-1147.*

Least-squares adjustments; quantum electrodynamics; data analysis; fundamental constants; *15947.*

Lectures; OMNITAB II computing system; technology transfer; terminals; acceptance tests; AID; Bolivia; CENACO; computing using Spanish; foreign relations; international agreement; *NBSIR 76-1176.*

Ledinegg instability; negative flow resistance; supercritical helium; flow resistance; helium; *16232.*

LEED; multi-photon; photoionization; review; scattering; spin-polarization; electron; experiment; *15900.*

Legal; regulatory; standards; energy; *SP403,* pp. 225-235 (June 1976).

Legal and community action; loudness; noise control and abatement; traffic noise; airborne and structure-borne sounds; aircraft noise intrusion; annoyance; appliance noise; health and hearing hazards; household noise; *H119.*

Legal problem packaging; shipping; stability; standard reference materials; accelerated testing; clinical; hazards; *16110.*

Legendre functions; ordinary differential equations; saddle points; special functions; turning points; Whittaker functions; asymptotic analysis; Darboux's method; definite integrals; hypergeometric functions; incomplete gamma function; *15818.*

Legibility of signs; visual signaling; colorimetry of signals; effective intensity of flashing lights; *16003.*

Legislation; regulations; state; authority; building; energy; *NBSIR 76-986.*

Legislation; solar; State; architecture; buildings; design; energy; *NBSIR 76-1082.*

Legislative programs; national policies; public concern; executive programs; information management; information processing; *16245.*

Length; machine; measurements; standard; dimensional; gage; instrument; laser; *NBSIR 75-926.*

Length; measurement process; calibration; comparator; gage blocks; *NBSIR 76-979.*

Length measurements; National Measurement System; dimensional measurements; *16042.*

Length standard saturated absorption stabilization; speed of light; c; laser; laser frequency measurement; *15898.*

Lennard-Jones system; Monte Carlo simulation; nucleation; overcompression; supercooling; glassy state; *J. Res.* **80A** No. 1, 59-64 (1976).

Lens; ophthalmic lens; quasi-static theory; strain gage measurements; drop-ball test; impact; *16310.*

Lens aberrations; lens characteristics; lens distortion; lens resolving power; *16066.*

Lens characteristics; lens distortion; lens resolving power; lens aberrations; *16066.*

Lens distortion; lens resolving power; lens aberrations; lens characteristics; *16066.*

Lens resolving power; lens aberrations; lens characteristics; lens distortion; *16066.*

Lens testing; microcopy resolution charts; National Measurement System; photographic density; technology assessment; imaging optics; *NBSIR 75-942.*

Lenses; light conduits; light control; reflectors; skylights; windows; daylight gathering; daylighting of buildings; energy conservation; *NBSIR 76-1098.*

Less-developed countries; technology transfer; U.S. foreign assistance; computer education and training; computer technology; *NBSIR 73-423.*

Less-developed country; SASO; Saudi Arabia; standardization; tentative standards; building codes; industrialization; *NBSIR 75-976.*

Less-than level; minimum detectable activity; statistical; background; critical level; detection limit; determination limit; *SP456,* pp. 169-172 (Nov. 1976).

Liapunov functions; stability; averaging; differential equations; domains of stability; integral manifold; *15940.*

Libraries; microfilm; microforms; micrographics; computer out-

put microforms; information storage and retrieval; *16038*.
Library automation; survey report; federal libraries; *16076*.
Life cycle costing; local government; procurement policy; state government; bid evaluation; Experimental Technology Incentives Program (ETIP); innovation; *NBS-GCR-ETIP 76-17*.
Life cycle costing; materials policy; nondestructive evaluation; performance; processing; technical strategy; design; development; fabrication; *15873*.
Life cycle costing; medical products and standards; procurement policies; product testing; specifications; unsolicited proposals; VA; certification programs; ETIP; incentives; innovation; *NBSIR 76-997*.
Life cycle costing; patrol cars; police fleets; vehicle leasing; vehicle management; fleet management; *NBSIR 75-961*.
Life cycle costing; procurement experiments; electric ranges; energy efficient products; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-09*.
Life cycle costing; procurement experiments; refrigerators; energy efficient products; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-10*.
Life cycle costing; procurement experiments; room air conditioners; energy efficient products; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-13*.
Life cycle costing; procurement experiments; water heaters; energy efficient products; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-14*.
Life cycle costing; procurement experiments; energy efficient products; Experimental Technology Incentives Program; gas ranges; *NBS-GCR-ETIP 76-15*.
Life cycle costing; procurement policy; specifications; value; Experimental Technology Incentives Program (ETIP); Federal Supply Service; *NBS-GCR-ETIP 76-18*.
Life cycle costing; procurement experiments; window air conditioners; energy efficient products; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-19*.
Life cycle costing; procurement policy; specifications; value incentives; computer air conditioning units; Experimental Technology Incentives Program (ETIP); Federal Supply Service; *NBS-GCR-ETIP 76-23*.
Life hazard; oxygen; smoke; temperature; toxicity; upholstery; bedding; beds; carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; furniture; *NBS-GCR-73-1*.
Life safety; mobile home; smoke detector; surface flame spread; corridor fire test; interior finish material; intumescent coating; *NBSIR 76-1021*.
Life-cycle cost models; new housing; energy conservation; energy efficient design; *16129*.
Life-cycle costing; marginal analysis; quality control; safety standards; economic cost of failure prevention; frequency of failure; government action; *SP423*, pp. 107-116 (Apr. 1976).
Life-cycle costing; procurement experiments; refrigerator-freezers; energy-efficient products; Experimental Technology Incentives Program; *NBSIR 75-954*.
Life-cycle costing; procurement experiments; water heaters; energy-efficient products; Experimental Technology Incentives Program; *NBSIR 76-983*.
Life-cycle costing; procurement experiments; energy-efficient products; Experimental Technology Incentives Program; gas and electric ranges; *NBSIR 76-1027*.
Lifetime; mean life; resonance radiation; transition probability; U I; uranium; atomic beam; delayed coincidence; imprisonment; *16322*.
Lifetime; molecule; N_2^+; radiative; transition probability; CO^+; CO_2^+; coincidence; electron impact; ions; *15912*.
Lifetime assurance; proof testing; slow crack growth; unloading; failure probabilities; *16039*.
Lifetime measurement; low pressure; resonance trapping; *15885*.
Lifetimes in Fe I; atomic spectra; energy levels; Fe I; iron; iron lifetimes; *J. Res.* **80A** Nos. 5 and 6, 787-797 (1976).
Lifetimes in U I; oscillator strengths for U I; transition probabilities for U I; uranium spectrum; *J. Res.* **80A** No. 1, 1-7 (1976).
Lifshitz theory; Van der Waals forces; alkali atoms; atomic beam deflection; atom surface potential; gold surfaces; *15953*.
Ligand-field splitting; surface excitons; surface states; transition-metal oxides; adsorption; electron spectroscopy; *SP455*, pp. 133-138 (Nov. 1976).
Light attenuation; scattered light; smoke detectors; test methods; aerosols; ionization chambers; *NBSIR 76-1037*.
Light averaging devices; linearity; photometric precision; reference spectrophotometer; ultraviolet; wavelength calibration; averaging spheres; high accuracy transmittance; *TN913*.
Light conduits; light control; reflectors; skylights; windows; daylight gathering; daylighting of buildings; energy conservation; lenses; *NBSIR 76-1098*.
Light control; reflectors; skylights; windows; daylight gathering; daylighting of buildings; energy conservation; lenses; light conduits; *NBSIR 76-1098*.
Light element analysis; scanning electron microscopy; thin film x-ray analysis; x-ray continuum radiation; elemental distribution; energy dispersive x-ray analysis; *15771*.
Light emitting diode; spectral irradiance; calibration; *16437*.
Light equivalent background; light induced background; limit resolution; line spread function; optical transfer function; point spread function; acutance; contrast transfer function; edge gradient; image quality; *16197*.
Light equivalent background; light induced background; optical gain; contrast transfer function; distortion; flare; image intensifier tubes; infrared searchlights; infrared viewers; *16238*.
Light equivalent background; light induced; optical gain; night vision; contrast transfer function; flare; image intensifiers; law enforcement; *16239*.
Light extinction; light scatter; light-scatter measurements; photoelectric smoke detectors; smoke detectors; fire detection; *NBSIR 76-1087*.
Light induced; optical gain; night vision; contrast transfer function; flare; image intensifiers; law enforcement; light equivalent background; *16239*.
Light induced background; limit resolution; line spread function; optical transfer function; point spread function; acutance; contrast transfer function; edge gradient; image quality; light equivalent background; *16197*.
Light induced background; limiting resolution; night vision devices; optical transfer function; resolution charts; veiling glare; blooming; contrast transfer function; distortion; flare; image quality; *16599*.
Light induced background; optical gain; contrast transfer function; distortion; flare; image intensifier tubes; infrared searchlights; infrared viewers; light equivalent background; *16238*.
Light scatter; light-scatter measurements; photoelectric smoke detectors; smoke detectors; fire detection; light extinction; *NBSIR 76-1087*.
Light scattering; molecular diffusion; organic molecule; superconductor; susceptibility; diamagnetism; *16529*.
Light scattering; optical absorption; surface roughness; Auger analysis; diamond-turned metal mirrors; laser damage; *SP462*, pp. 158-164 (Dec. 1976).
Light scattering; polymers; proteins; solid standards; antibodies; antigens; biological polymers; immunochemical analysis; *J. Res.* **80A** No. 4, 605-608 (1976).
Light sources; national standard; radiation source; radioactive; radioluminous products; self-luminous sources; test procedures; classification; containment; designation; *H116*.
Lighters; matches; burns; fabric fires; fire injuries; flammable fabrics; ignition hazards; ignition sources; *NBS-GCR-74-32*.

Lighting; modulation transfer function; suprathreshold visibility; visibility; vision; gratings; illuminating engineering; *16008.*

Lighting; modulation transfer function; suprathreshold visibility; visibility; vision; gratings; illuminating engineering; *BSS82.*

Lighting; perceptual/motor; psychomotor; safety; glare; *NBS-GCR-75-45.*

Lighting; performance standard; thermal performance; ventilation; water heating; air leakage; building design; energy conservation; fenestration; HVAC systems; illumination; insulation; *NBSIR 74-452.*

Light-scatter measurements; photoelectric smoke detectors; smoke detectors; fire detection; light extinction; light scatter; *NBSIR 76-1087.*

Light-scattering; Mie theory; particles; Rayleigh scattering; aerosols; dusts; *NBSIR 76-1031.*

Lightweight structures; military; reliability; sandwich panel; shelter; durability; field inspection; foam and beam; honeycomb; impact; *NBSIR 76-1025.*

Lime (dolomitic); masonry; mortars (materials); portland cement; testing; walls; *15992.*

Limit of detection; nitrogen in steel; atmospheric contamination; blank value; indophenol blue reaction; Kjeldahl digestion technique; *SP422,* pp. 983-1003 (Aug. 1976).

Limit of stability; mean field theory; metastability; perturbation scheme; reference system; structure factor; *16595.*

Limit of stability; metastable fluid states; nonhydrodynamic regime; relaxation time; transport coefficients; Zwanzig-Mori formalism; hydrodynamic regime; ideal gas memory function; *16601.*

Limit resolution; line spread function; optical transfer function; point spread function; acutance; contrast transfer function; edge gradient; image quality; light equivalent background; light induced background; *16197.*

Limited combustibility; mobile home; fire test; flame spread; kitchen cabinets; kitchen range; kitchen range hood; *NBSIR 75-788.*

Limiting oxygen index; radiant panel; smoke density; time to ignition; fire performance tests; flame spread; heat input; heat release rate; *16136.*

Limiting resolution; night vision devices; optical transfer function; resolution charts; veiling glare; blooming; contrast transfer function; distortion; flare; image quality; light induced background; *16599.*

Limiting thermal index; pyrolysis; radiant heat; thermal sensitivity index; calorimeter; combustion; fire test; heat release; *NBS-GCR-76-54.*

Limiting viscosity number; Mandelkern-Flory-Scheraga equation; molecular weight determination; sedimentation coefficient; translational diffusion coefficient; Zimm theory; bead-spring model; block copolymers; dilute polymer solutions; *16026.*

Limiting viscosity numbers; long-chain branching; nuclear magnetic resonance; polyethylene; short-chain branching; branching; *16244.*

Line formation; polarization; quantum mechanics; atomic and molecular processes; comets; *15746.*

Line formation; radiative transfer; atmospheres, stellar; atomic and molecular processes; *15723.*

Line formation; radiative transfer; stars: chromospheres; *16052.*

Line profiles; stars, late type; interstellar matter; *15911.*

Line scanner; optical; defocusing; image space off-axis; *16288.*

Line shape; optical frequency standards; recoil effect; relativity; CH_4 hyperfine structure; high resolution spectroscopy; laser spectroscopy; *16603.*

Line shapes, atomic; molecular bands; molecular spectra; rotational constants; atomic energy levels; atomic line shapes; atomic spectra; atomic transition probabilities; bands, molecular; energy levels, atomic; *15901.*

Line spread function; optical transfer function; point spread function; acutance; contrast transfer function; edge gradient; image quality; light equivalent background; light induced background; limit resolution; *16197.*

Line width; lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; cells; charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); *16647.*

Linear sweep voltammetry; manganese; micrometer cell; thin layer electrochemistry; vanadium; automatic titrations; coulometric titrations; current integration; digital timing; epinephrine; *SP422,* pp. 861-869 (Aug. 1976).

Linear dichroism; liquid crystals; polarization; spectrofluorimetry; 1,6-diphenyl-1,3,5-hexatriene; fluorescence; *J. Res.* **80A** No. 1, 15-33 (1976).

Linear equations; network algorithms; networks; shortest paths; iterative methods; k best paths; *16389.*

Linear free-energy relationship; polarography; solvatochromic relationship; ultraviolet and visible spectroscopy; aromatic amine; benzene derivative; charge-transfer complex; dental materials; electron affinity; *J. Res.* **80A** No. 2, 173-187 (1976).

Linear inequalities; linear programs; pivot operations; skewsymmetry; combinatorial equivalence; *16127.*

Linear least-squares fit; machine language; minicomputer software; surface texture measurement; amplitude density function; arithmetic average; autocorrelation function; *NBSIR 75-924.*

Linear model; methane; NBS equation; scaling laws; statistical analysis; steam; universality; air constituents; critical region parameters; ethylene; heavy noble gases; helium; *JPCRD* **5,** No. 1, 1-52 (1976).

Linear model; optical flat; profile; standard deviation; uncertainty; calibration; diameter; gravitational bending; interferometry; least squares line; *NBSIR 75-975.*

Linear model; scaled equation; steam; critical density; critical exponents; critical pressure; critical region; critical temperature; equation of state; *15730.*

Linear polyethylene fractions; low angle x ray; mechanical relaxation; tetranonacontane; chain folds; differential scanning calorimetry; *16289.*

Linear programs; pivot operations; skewsymmetry; combinatorial equivalence; linear inequalities; *16127.*

Linearity; photometric precision; reference spectrophotometer; ultraviolet; wavelength calibration; averaging spheres; high accuracy transmittance; light averaging devices; *TN913.*

Linearity; square-law; detectors; diodes; *16490.*

Line-heat-source; thermal conductivity; ambient temperature index; edge-heat-loss; errors; guarded-hot-plate apparatus; *16084.*

Lineshape theory; optical frequency standards; saturated absorption spectroscopy; *16610.*

Line-width measurements; microelectronics; optical microscope; photomasks; scanning electron microscope; dimensional metrology; integrated circuits; *15864.*

Linked-cluster theorem; many-body theory; diagrammatic perturbation theory; *16614.*

Liquefaction; pore-water pressure; earthquake; explosion test; ground strength; ground vibration; *SP444,* pp. III-38 – III-51 (Apr. 1976).

Liquefaction; soil density; stability; earthfill dams; earthquakes; ground shaking; *SP444,* pp. III-24 – III-37 (Apr. 1976).

Liquefaction energy; air separation; electrical power generation; energy recovery; hydrogen; *15878.*

Liquefaction processes; aromatic asphaltenes; caking; coal gasification; *16365.*

Liquefied natural gas; measurements; methane; mixtures; thermodynamic; density; dielectric constant; electromagnetic pro-

perties; equation of state; ethane; hydrocarbon; *16631.*

Liquid; nonpolar systems; radiation chemistry; radiation physics; electrons; free ions; ion yields; *NSRDS-NBS57.*

Liquid; saturated liquid; specific heat; vapor; constant volume; ethane; heat capacity; *J. Res.* **80A** Nos. 5 and 6, 739-759 (1976).

Liquid chromatography; oil spill; petroleum; quantitation; gas chromatography; *16423.*

Liquid chromatography; petroleum analysis; trace analysis; baseline studies; gas chromatography; gas chromatography-mass spectrometry; hydrocarbons; *TN889.*

Liquid column; pressure; pressure source; pressure transducer; sinusoidal pressure; transducer; calibration; dynamic; dynamic calibration; dynamic pressure; dynamic pressure source; *TN914.*

Liquid compressibility; liquid density; compressibility; density; *16171.*

Liquid crystals; polarization; spectrofluorimetry; 1,6-diphenyl-1,3,5-hexatriene; fluorescence; linear dichroism; *J. Res.* **80A** No. 1, 15-33 (1976).

Liquid density; compressibility; density; liquid compressibility; *16171.*

Liquid deuterium, liquid hydrogen, liquid nitrogen; natural convection; sphere; vertical cylinder; cryogenics; heat transfer; hemisphere; horizontal cylinder; *16207.*

Liquid filters; transfer standards; ultraviolet absorbance standards; absorbance linearity; accuracy; acidic potassium dichromate solutions; calibration of ultraviolet spectrophotometers; *J. Res.* **80A** No. 4, 631-636 (1976).

Liquid fuels; solid fuels; surface tension; combustion models; flame spread; fluid flow; laser doppler velocimetry; *NBS-GCR-76-79.*

Liquid helium; low temperature tests; mechanical properties; cryogenics; fatigue; fiber composites; *16194.*

Liquid helium; mixtures; refrigeration; demagnetization; dilution refrigerator; helium 3; helium 4; *16655.*

Liquid helium; packed bed heat exchangers; balloon; cryogenic balloon inflation; heat transfer; *NBSIR 76-834.*

Liquid hydrogen; liquid nitrogen; power transmission cables; safety; slush hydrogen; superconducting; a.c. power; cryoresistive; energy transmission economics; helium; hydrogen energy; *16629.*

Liquid insulators; polychlorinated biphenyls; transformers; askarel; capacitors; insulating fluids; *NBSIR 76-1054.*

Liquid medium; pogo pressure; pressure source; pressure transducer; sinusoidal; space shuttle; transducer; bias pressure; calibration; dynamic calibration; dynamic pressure; high pressure; *TN927.*

Liquid nitrogen; power transmission cables; safety; slush hydrogen; superconducting; a.c. power; cryoresistive; energy transmission economics; helium; hydrogen energy; liquid hydrogen; *16629.*

Liquid scintillation; sodium iodide; standard; detectors; germanium; ion chamber; *SP456,* pp. 77-82 (Nov. 1976).

Liquid-in-glass thermometer; reference point; stirred liquid comparison bath; temperature scale; calibration; emergent stem; *Monogr. 150.*

Liquids; mobility; quasifree electrons; solvated electrons; conduction band; drift mobility; energy levels; excess electrons; hydrocarbons; ion mobility; *NSRDS-NBS58.*

Liquid-vapor equilibria; methane-light hydrocarbon binary mixtures; critical loci; excess Gibbs' energies; Henry's constants; *16637.*

Liquid-vapor interface; Markov Stochastic model; self-diffusion; continuous interface profile; diffusion equation; hypergeometric differential equation; interfacial force; *15726.*

Literature review; PRD-49; reinforced aluminum; reinforced plastics; structural composites; tensile moduli; tensile strength; thermal conductivity; thermal contraction; boron; cryogenics; glass; graphite; *15745.*

Lithium; magnesium; nitrogen; oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; beryllium; boron; carbon; chlorine; helium; hydrogen; *16164.*

Lithium; potassium; relative; rocks; rubidium; soils; absolute; Apollo; composition; isotopic; *15869.*

Lithium drifted silicon detector; Monte Carlo; particle analysis; continuous radiation; electron probe microanalyzer; glass standard; *SP422,* pp. 1283-1291 (Aug. 1976).

Lithium sequence; oscillator strength distribution; oscillator strengths; relativistic effects; spectral series; systematic trends; continuum; discrete spectrum; *f*-sum rule; *f*-values; *15817.*

Lithium sequence; oscillator strengths; relativistic effects; spectral series; systematic trends; *f*-values; isoelectronic sequence; *JPCRD* **5,** No. 3, 537-570 (1976).

Lithium tantalate; *M*-$LiTa_3O_8$; wodginite; crystal structure; *15974.*

Lithium-drifted silicon detector; background; continuous x rays; electron probe microanalysis; energy-dispersive x-ray analysis; *15715.*

Lithium-drifted silicon detector; background correction; continuous radiation; electron microprobe correction procedure; energy-dispersive x-ray spectrometry; *16401.*

Lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; cells; charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); line width; *16647.*

Liver cirrhosis; ultrasonics; A-scan; attenuation; computer analysis; impedance; *SP453,* pp. 61-70 (Oct. 1976).

Ll_2; metastable phase; ordering reaction; satellites; spinodal decomposition; superlattice reflections; transmission electron microscopy; δ'; *15840.*

LNG data; optical; standard reference materials; thermophysical properties symposium; waste heat; computer; consumer; drugs; electrical pulses; environmental standards; friction measurement; lead poisoning; *DIM/NBS* **60,** No. 9, 1-24 (1976).

Load leveling; resource sharing; scheduling; computer networking; *16570.*

Load surveys; buildings; computers; data processing; fire loads; *NBSIR 76-982.*

Load surveys; occupancy live loads; structural engineering; buildings; fire loads; *16072.*

Load surveys; occupancy live loads; structural engineering; buildings; fire loads; *BSS85.*

Loading rate; pin-end; test method; wall panels; walls; compression; eccentric loading; flat-end; kern; *NBSIR 75-779.*

Loading rate; racking; test method; vertical loads; wall panels; walls; lateral loads; *BSS91.*

Loads; progressive collapse; sonic boom; vehicular collision; bombs; building codes; design criteria; explosions; gas; hazardous materials; *BSS89.*

Loads; reshoring; safety; shoring; standards; building; codes; concrete; construction; falsework; formwork; *BSS80.*

Loads; safety; surveys; buildings; fires; *16087.*

Loads (forces); natural analysis; tall buildings; wind profiles; boundary layer; hurricanes; *15899.*

Local government; procurement policy; state government; bid evaluation; Experimental Technology Incentives Program (ETIP); innovation; life cycle costing; *NBS-GCR-ETIP 76-17.*

Local thermodynamic equilibrium model; quantitative analysis; secondary ion mass spectrometry; surface analysis; CARISMA program; ion microprobe mass analysis; *15862.*

Localized corrosion; passivity; chemical breakdown; chloride

229-317 O - 77 - 38

ion; corrosion; ferrous alloys; *16018.*

Localized defects; *n*-alkanes; polyethylene; Raman-active longitudinal acoustic mode; *16219.*

Location theory; normally distributed points; numerical analysis; optimization; stochastic Weber problem; always convergent algorithms; exponentially distributed points; facility location; *J. Res.* **80B** No. 1, 53-73 (1976).

Logic design; networks; specifications; standards; systems engineering; building codes; computer program; decision theory; FORTRAN; *NBS-GCR-76-57.*

Logic flow observation; LSI testing; nondestructive test; nonlinearity measurement; UHF transistor measurement; active devices; hot spots; laser scanning; *15781.*

Logic flow observation; LSI testing; measurement of operating margins; nondestructive tests; P-MOS shift register; active devices; laser scanning; *15833.*

Lomer locks; sessile dislocations; x-ray dynamical diffraction; x-ray topography; contrast conditions; dynamical images; immobile dislocations; *16373.*

Long columns; reinforced concrete; slenderness ratio; strength; structural analysis; structural design; ultimate strength; bending moments; building codes; column (supports); frames; *16412.*

Long-chain branching; nuclear magnetic resonance; polyethylene; short-chain branching; branching; limiting viscosity numbers; *16244.*

Longitudinal acoustical mode; methyl group branches; polyethylene; Raman spectroscopy; alkanes; *16279.*

Longitudinal beam; measurement system; nondestructive evaluation; pulse-echo; ultrasonics; aluminum ultrasonic reference standards; ASTM-type reference standards; calibration; interim reference standard; *TN924.*

Longitudinal mode control; pulsed 10.6 μm laser damage; RAP materials; transmitted pulse cutoff; variable pulse duration; alkali halides; bulk damage; *SP435*, pp. 118-125 (Apr. 1976).

Longitudinal waves; metallurgical variables; nondestructive evaluation; pulse echo; steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; ASTM-type reference standards; calibration; fabrication variables; *NBSIR 76-984.*

Long-term storage; microbiologicals; organics; pesticides; radionuclides; sample handling; sampling; trace elements; chemical analysis; environmental samples; *TN929.*

Loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; *SP400-18.*

Looseness; signature analysis; unbalance; vibration; diesel-electric sets; gears; *NBS-GCR-74-22.*

Loran C; pultruded rods; rods, insulator; breakdown, electrical; failure analysis; fiberglass-reinforced plastics; flammability; guy insulators; high-voltage tests; insulators, tower guy; *NBSIR 76-1136.*

Lorenz function; thermal conductivity; conductivity; electrical; heat conductivity; heat transfer; *15986.*

Lorenz ratio; thermal conductivity; austenitic steel; cryogenics; electrical resistivity; electrolytic iron; *16206.*

Losses; mercury; trace metal; analysis; ashing; blood lead; contamination; dairy products; digestion; interferences; *SP422*, pp. 661-668 (Aug. 1976).

Loudness; noise control and abatement; traffic noise; airborne and structure-borne sounds; aircraft noise intrusion; annoyance; appliance noise; health and hearing hazards; household noise; legal and community action; *H119.*

Loudness functions; masking; sirens; speech recognition; traffic noise; alarm signals; hearing; *16573.*

Low angle x ray; mechanical relaxation; tetranonacontane; chain folds; differential scanning calorimetry; linear polyethylene fractions; *16289.*

Low carbon steel; stress corrosion cracking; brittle fracture; gas main pipe; impact; *NBSIR 74-625.*

Low density; absorption; intracavity; laser; *16559.*

Low energy; aberration; electron optics; electron scattering; electrostatic lens; image; *15913.*

Low energy; nickel; single crystals; tungsten; electron polarization; electron scattering; *15747.*

Low energy; review; scattering; theory; atom; collisions; electron; *15883.*

Low energy electron diffraction (LEED); ultraviolet photoelectron spectroscopy (UPS); angle and energy distributions; charged particle spectroscopy; electron-stimulated desorption of ions (ESDIAD); field-ion microscopy (FIM); *16078.*

Low flow rates; automotive environment; calibration; *16267.*

Low frequency; standard frequencies; television color subcarrier; time calibration; time signals; broadcast of standard frequencies; frequency calibration; high frequency; *SP432.*

Low level environmental radioactivity measurements scintillation detector; *SP456*, pp. 153-157 (Nov. 1976).

Low pressure; resonance trapping; lifetime measurement; *15885.*

Low temperature; polarization; antiferroelectric; dielectric constant; heat capacity; lead pyroniobate; *16527.*

Low temperature; rolling; ships; steel; welding; alloying; inclusions; *16145.*

Low temperature; standard reference materials; thermal conductivity; austenitic stainless steel; electrical resistivity; high temperature; *16494.*

Low temperature; superconductive materials; superconductivity; bibliography; composition; critical fields; critical temperature; crystallographic data; *JPCRD* **5**, No. 3, 581-822 (1976).

Low temperature; thermal expansion; barium ferrite; *16196.*

Low temperature, polyglycine; polypeptides; vibrational states; heat capacity; lattice dynamics; *16304.*

Low temperature scales, 1-83 K; magnetic thermometer; manganous ammonium sulphate; paramagnetic salts; platinum resistance thermometers; ac-dc resistance thermometry; ac susceptibility; gadolinium sulphate; germanium resistance thermometers; IPTS-68; *15903.*

Low temperature study; monovalent metal azides; NaN_3 structure; neutron diffraction; RbN_3 structure; thermal motion; TlN_3 structure; ionic crystal; KN_3 structure; *15973.*

Low temperature tests; mechanical properties; cryogenics; fatigue; fiber composites; liquid helium; *16194.*

Low temperature tests; mechanical properties; titanium alloy; electron beam welding; fatigue; fracture toughness; *NBSIR 76-836.*

Low temperature tests; mechanical tests; titanium alloys; crack propagation; cryostats; fracture tests; *16640.*

Low temperature tests; titanium alloys; fatigue crack propagation; fracture toughness; J-integral; *16531.*

Low-cost housing; low-rise buildings; wind; Bangladesh; housing; *NBS-GCR-76-74.*

Low-cost housing; natural disasters; Philippines; socioeconomic aspects; typhoons; construction; design; developing countries; earthquakes; *NBS-GCR-73-21.*

Low-cost transducers; piezoelectric polymers; flexibility; hydrophone; impedance match; *16291.*

Low-cycle fatigue; plasticity; stainless steel; stress relaxation; thermodynamics; viscoelasticity; creep; dissipation; elevated temperature; energy; hold-time; hysteresis; *16004.*

Low-level counting; noble gas separation; on-line computer; pulse shape discrimination; tropospheric mixing; Ar-37; atmospheric radioactivity; cosmic-ray reactions; exponential distribution; *15744.*

Low-level counting statistics; radioactive rare gases; reduced ac-

tivity; argon-37; atmospheric mixing; blank corrections; cosmic ray reactions; effectively zero background; environmental radioactivity; *16345*.

Low-level voltage measurements; MIDAS; programmable desk calculator; standard cell comparator; automated; calculator; calibration; crossbar switch; *15906*.

Low-loss electron image; magnetic contrast; Monte Carlo electron trajectory calculations; scanning electron microscopy; contrast calculations; energy filtering; *SP460*, pp. 139-150 (Dec. 1976).

Low-noise amplifiers; precision frequency measurements; precision time measurements; time difference measurements; time-domain frequency stability; time interval; frequency measurement; frequency mixing; global positioning system; isolation amplifiers; *NBSIR 75-827*.

Low-rise buildings; natural disaster; structural connections; typhoons; wind loads; buildings; codes and standards; housing; hurricanes; *NBSIR 75-790*.

Low-rise buildings; wind; Bangladesh; housing; low-cost housing; *NBS-GCR-76-74*.

Low-temperature voltage divider; superconducting tunnel junctions; voltage standard; ac Josephson effect; *16251*.

LOX compatible greases; nonreactive lubricants; rust inhibited perfluoro greases; surface chemistry lubrication; chemisorption; corrosion preventives; inhibitor additives; *SP452*, pp. 106-119 (Sept. 1976).

λ-point; barrier to rotation; crystal; crystal structure; hexamethylbenzene; hindered rotation; phase transition; torsional oscillation; *16137*.

L-shell; photoabsorption; Bethe theory; cross sections; electron; inner-shell electrons; ionization; *K*-shell; *15812*.

LSI; microelectronics; parameter control; process uniformity; random faults; reliability; test patterns; TTL; vendor qualification; circuit procurement; component screening; custom circuits; *16620*.

LSI testing; measurement of operating margins; nondestructive tests; P-MOS shift register; active devices; laser scanning; logic flow observation; *15833*.

LSI testing; nondestructive test; nonlinearity measurement; UHF transistor measurement; active devices; hot spots; laser scanning; logic flow observation; *15781*.

Lube oil analysis; magnetic drain plugs; oil filters; oil monitors; particle detectors; spectrograph; chip detectors; ferrograph; *NBS-GCR-74-23*.

Lubricant film thickness; scuffing; wear; contact lubrication; elastohydrodynamic contacts; fatigue; *SP423*, pp. 41-54 (Apr. 1976).

Lubricant migration; lubricants; spreading prevention; barrier films; bearings; fluorinated polymers; *SP452*, pp. 170-176 (Sept. 1976).

Lubricants; salt-spray; corrosion; electrochemical; *SP452*, pp. 97-105 (Sept. 1976).

Lubricants; spreading prevention; barrier films; bearings; fluorinated polymers; lubricant migration; *SP452*, pp. 170-176 (Sept. 1976).

Lubricated rubbing contact; polymer formation; ferrographic analysis; *SP452*, pp. 187-191 (Sept. 1976).

Lubrication; mechanical failure; tribology; wear; economic savings of failure prevention; friction; *SP423*, pp. 117-139 (Apr. 1976).

Lubricity; film thickness; film uniformity; fingerprint impressions; fingerprint readers; image quality; ink films; *16019*.

Lucite; ultrasound; attenuation; computer; deconvolution; impedance; impulse response; layer model; *SP453*, pp. 231-251 (Oct. 1976).

Lumen; luminous flux; luminous intensity; photometry; SI basic unit; candela; *16397*.

Luminescence; luminescence standards; phosphors; quantum efficiencies; radiant efficiencies; UV excitation; x-ray excitation; cathode-ray excitation; *J. Res.* **80A** No. 3, 401-407 (1976).

Luminescence; magnesium oxide; MgO; optical properties; polarized luminescence; symmetry; transition metal ions; chromium 3+; crystal vacancies; cubic crystals; depolarization; impurity compensation; *16521*.

Luminescence; photoacoustic spectrometer; piezocalorimeter; transducers; triplet formation; absolute quantum efficiency; absolute quantum yield; calorimetry; *J. Res.* **80A** No. 3, 413-419 (1976).

Luminescence; quantum-flat actinometer; quantum yield; absolute yield; chemical actinometry; correction factors; *J. Res.* **80A** No. 3, 409-412 (1976).

Luminescence standards; phosphors; quantum efficiencies; radiant efficiencies; UV excitation; x-ray excitation; cathode-ray excitation; luminescence; *J. Res.* **80A** No. 3, 401-407 (1976).

Luminous flux; luminous intensity; photometry; SI basic unit; candela; lumen; *16397*.

Luminous intensity; photometry; SI basic unit; candela; lumen; luminous flux; *16397*.

Lunar distance; microwave interferometry; plate tectonics; satellite geodesy; crustal moments; earth rotation; geodynamics; *15799*.

Lunar orbit; moon; equivalence principle; general relativity; gravitation; *15946*.

Lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; *16420*.

Luttinger-Tisza method; translation vectors; cerous magnesium nitrate; crystal structure; *g*-factors; ground state energy; *16512*.

Lyapunov's theorem; stable matrix; cone; *15763*.

Lyophilization; noncontaminating; sample preparation; biological materials; homogenization; *SP422*, pp. 721-726 (Aug. 1976).

M

MAC project; alphanumeric symbols; AUTODIN (Automatic Digital Network); JOSS; keyboards; *NBS-GCR-74-28*.

Machine; measurements; standard; dimensional; gage; instrument; laser; length; *NBSIR 75-926*.

Machine component failure; mechanical failure; surface pitting; abrasive wear; adhesive wear; gear failure; *SP423*, pp. 55-66 (Apr. 1976).

Machine cusp; scattered light; surface figure; blur circle; circular diffraction grating; diamond-turned mirrors; diffraction pattern; *SP435*, pp. 57-65 (Apr. 1976).

Machine language; minicomputer software; surface texture measurement; amplitude density function; arithmetic average; autocorrelation function; linear least-squares fit; *NBSIR 75-924*.

Machined optics; nondistortion part support; position errors; quality and compatible part material; quality diamond tools; controlled environment; diamond machining; *SP435*, pp. 75-89 (Apr. 1976).

Macrocracking; porcelain insulators; proof testing; residual strain; acoustic emission; *16069*.

Macros; minicomputers; access procedures; computer networks; *16177*.

Macros; minicomputers; protocols; teleprocessing; access procedures; command language; computer networks; job control language; *TN917*.

Macro-segregation; sampling problems; trace elements; high-temperature alloys; intergranular segregation; *SP422*, pp. 1017-1022 (Aug. 1976).

Madelung potential; Mg^{+}; Mg^{2+}; MgO; Stark spectrum; surface

excitons; bulk excitons; electron loss spectroscopy; ionic crystals; *SP455*, pp. 59-65 (Nov. 1976).
Magic tee; microwave measurement methods; multiple probe devices; reflectometers; rotating probe devices; slotted lines; survey of automatic techniques; swept frequency measurements; Wheatstone Bridge; automatic network analyzers; computer-controlled measurement; *Monogr. 151.*
Magnesium; electron excitation; *15728.*
Magnesium; metabolic processes; microcalorimetry; thermochemistry; thermodynamics; adenosine 5′-triphosphate; biochemistry; coupled equilibrium; enzyme catalyzed reactions; glucose; heat measurement; hexokinase; *16385.*
Magnesium; nitrogen; oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; beryllium; boron; carbon; chlorine; helium; hydrogen; lithium; *16164.*
Magnesium; potassium; serum minerals; serum storage effects; sodium; temperature effects; trace elements; zinc; atomic absorption spectrophotometry; calcium; container effects; copper; *SP422*, pp. 575-591 (Aug. 1976).
Magnesium oxide; MgO; optical properties; polarized luminescence; symmetry; transition metal ions; chromium 3+; crystal vacancies; cubic crystals; depolarization; impurity compensation; luminescence; *16521.*
Magnesium oxide; molecular structure; nickel hydride; adsorption; catalysis; copper hydride; *SP455*, pp. 53-58 (Nov. 1976).
Magnesium oxide; mu sulphur; reflectance; reflectometer; sodium chloride; barium sulphate; bidirectional reflectance; bidirectional reflectometer; black coating; gonioreflectometer; *J. Res.* **80A** No. 2, 189-205 (1976).
Magnesium oxide; opal glass; radiant flux; reflectance standards; standards calibration; barium sulfate; diffuse reflectance spectra; *J. Res.* **80A** No. 4, 585-595 (1976).
Magnet; magnetization; torque; *16546.*
Magnet wire; Nb_3Sn; Nb_3Sn magnets; Nb_3Sn multifilamentary wires; strain; stress; superconducting magnets; critical currents; magnets; *16474.*
Magnetic; susceptibility; antiferromagnetism; critical temperature; dipole-dipole interaction; erbium phosphate ground state; heat capacity; lattice sums; *15866.*
Magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; cells; charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); line width; lithography; *16647.*
Magnetic contrast; magnetic domain images; magnetic domains; Monte Carlo electron trajectory calculations; scanning electron microscope; iron-silicon transformer steel; *SP460,* pp. 151-164 (Dec. 1976).
Magnetic contrast; Monte Carlo electron trajectory calculations; scanning electron microscopy; contrast calculations; energy filtering; low-loss electron image; *SP460,* pp. 139-150 (Dec. 1976).
Magnetic densimeter; phase equilibria, carbon disulfide, nitromethane; water; binary mixture; coexistence curve; critical phenomena; density; isobutyric acid; *16480.*
Magnetic domain images; magnetic domains; Monte Carlo electron trajectory calculations; scanning electron microscope; iron-silicon transformer steel; magnetic contrast; *SP460,* pp. 151-164 (Dec. 1976).
Magnetic domains; Monte Carlo electron trajectory calculations; scanning electron microscope; iron-silicon transformer steel; magnetic contrast; magnetic domain images; *SP460,* pp. 151-164 (Dec. 1976).
Magnetic domains; nickel single crystals; surface reflection topography; transmission topography; x-ray diffraction topography; crystal perfection; Czochralski growth; domain walls; *16503.*
Magnetic domains; scanning electron microscope; silicon steel; transformer steel; backscattered electrons; domain walls; *15921.*
Magnetic drain plugs; oil filters; oil monitors; particle detectors; spectrograph; chip detectors; ferrograph; lube oil analysis; *NBS-GCR-74-23.*
Magnetic effects; Monte Carlo calculations; multiple scattering x-ray generation; particle analysis; quantitative x-ray microanalysis; thin films; x-ray emission; electron trajectories; *SP460*, pp. 105-128 (Dec. 1976).
Magnetic evoked response; magnetoencephalography; *16517.*
Magnetic field; microwave discharge; photoemission; tungsten; ultraviolet photoemission; adsorption; chemisorption; CO; cyclotron resonance; electron cyclotron resonance; *16016.*
Magnetic fields, erasure of data; magnetic media, data erasure; magnetic media, data protection; data loss, magnetic media; devices, effects on magnetic media; fields, effects on magnetic media; *16056.*
Magnetic media, data erasure; magnetic media, data protection; data loss, magnetic media; devices, effects on magnetic media; fields, effects on magnetic media; magnetic fields, erasure of data; *16056.*
Magnetic media, data protection; data loss, magnetic media; devices, effects on magnetic media; fields, effects on magnetic media; magnetic fields, erasure of data; magnetic media, data erasure; *16056.*
Magnetic phase diagram; Néel temperature; spin-flop; antiferromagnetic transition; antiferromagnetism; dipolar interactions; $ErPO_4$; *16436.*
Magnetic properties; metals; commercial alloys; data sources; electrical properties; *SP396-4.*
Magnetic resonance; molecular spectroscopy; NO, NO_2, pollutant detection; apparatus and methods; infrared lasers; *16456.*
Magnetic resonance spectrum; resonance spectrum; rotational frequency; laser line; laser magnetic resonance spectrum; *15988.*
Magnetic structures; magnetism; neutron diffraction; rare earth alloys; amorphous magnetism; direct current sputtering; inelastic neutron scattering; *16555.*
Magnetic susceptibility; mixed valence; Mössbauer spectra; optical; biferrocenylene; delocalization; intramolecular exchange; *16049.*
Magnetic suspension; methane; nitrogen; saturated liquid; tables; apparatus; density; experimental; *16645.*
Magnetic suspension densimeter; normal butane; saturated liquid; table; density; experimental; *16646.*
Magnetic thermometer; manganous ammonium sulphate; paramagnetic salts; platinum resistance thermometers; ac-dc resistance thermometry; ac susceptibility; gadolinium sulphate; germanium resistance thermometers; IPTS-68; low temperature scales, 1-83 K; *15903.*
Magnetism; neutron diffraction; rare earth alloys; amorphous magnetism; direct current sputtering; inelastic neutron scattering; magnetic structures; *16555.*
Magnetism; nickel; pulsed NMR; spin lattice relaxation; Knight shift; *16357.*
Magnetism; units; *16240.*
Magnetite; electron microscopy; Fe_2O_3; Fe_3O_4; high-voltage electron microscopy; *in situ* hematite; *16292.*
Magnetization; metal; Mössbauer; ^{57}Fe; ^{161}Dy; amorphous; *16403.*
Magnetization; torque; magnet; *16546.*
Magnetization measurement; neutron diffraction; amorphous Tb_xFe_{1-x}; Curie temperatues; *16405.*
Magnetoencephalography; magnetic evoked response; *16517.*
Magnetohydrodynamics; potassium activity; synthetic coal slags; system K_2O-CaO-Al_2O_3-SiO_2; vaporization; crystallization; *16457.*
Magnetohydrodynamics; system K_2O-ZrO_2-cerium oxide; ther-

mal microbalance; x-ray diffraction; cerium oxide; *16440.*

Magnetohydrodynamics (MHD); phase equilibria; transport properties; vaporization; viscosity; diffusion; electrical conductivity; *16321.*

Magnetophonon effect; semiconductors; transport theory; *16643.*

Magnets; magnet wire; Nb_3Sn; Nb_3Sn magnets; Nb_3Sn multifilamentary wires; strain; stress; superconducting magnets; critical currents; *16474.*

Magnitude; electron-avalanche breakdown; dielectrics; frequency dependence; *SP435,* pp. 331-346 (Apr. 1976).

Mahoning River; neutron activation analysis; pollution; sediment; trace elements; water; wet chemical analysis; atomic absorption analysis; Californium-252; *SP422,* pp. 225-230 (Aug. 1976).

Mailings; results; therapy departments; thermoluminescence dosimeters; uncertainty; water phantom; absorbed dose; cobalt-60 gamma radiation; computation check; dose interpretation; *J. Res.* **80A** No. 4, 663-668 (1976).

Maintenance; nursing homes; reliability; schools; smoke detectors; atriums; fire detection; flame detectors; heat detectors; hospitals; hotels; *16179.*

Maintenance; replacement; specifications; standards; engine pumper; fire vehicle; ladder truck; *TN891.*

Maintenance; research accidents; safety; accidents; buildings; construction; *16315.*

Maintenance costs; monitoring systems; diagnostic systems; diesel engines; *NBS-GCR-75-43.*

Maintenance of safety; public safety; safety responsibility; construction safety; construction surety; degradation of safety with age and use; *SP423,* pp. 165-170 (Apr. 1976).

Maleonitriledithiolate; metalloboranes; nuclear magnetic resonance; oxidative addition; palladium; boron hydrides; deuterium; iridium; *16566.*

Malfunctions; man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; costs; data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; interfaces; *NBS-GCR-74-29.*

Mammalian tissues; tissue parameters; ultrasound; velocity; absorption; attenuation; *SP453,* pp. 21-28 (Oct. 1976).

Management; manufacturing; conservation; economic; energy; *SP403,* pp. 103-111 (June 1976).

Management; manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; *SP403.*

Management information systems; public services; security; standards; user groups; computers; data base management; governments; *15923.*

Management need; operations research—NS; *NBSIR 76-1096.*

Management objectives; privacy; security; standards; technology assessment; user experience; auditing; cost/benefit analysis; data base; data base management; DBMS; government regulation; *SP451.*

Management principles; medical records; privacy; recordkeeping practices; security; citizen rights; computers; confidentiality; data systems; health records; information policy; *Monogr. 157.*

Manchester office building; National Bureau of Standards; New York State offices; office buildings; commercial buildings; energy conservation; energy consumption; *16547.*

Mandelkern-Flory-Scheraga equation; molecular weight determination; sedimentation coefficient; translational diffusion coefficient; Zimm theory; bead-spring model; block copolymers; dilute polymer solutions; limiting viscosity number; *16026.*

Manganese; micrometer cell; thin layer electrochemistry; vanadium; automatic titrations; coulometric titrations; current integration; digital timing; epinephrine; linear sweep voltammetry; *SP422,* pp. 861-869 (Aug. 1976).

Manganese; organic; oxidation; active; chemistry; dioxide; heterogeneous; *15902.*

Manganese; sampling; serum; biological materials; chromium; cobalt; contamination; *SP422,* pp. 299-310 (Aug. 1976).

Manganese; sensitivity; spectrophotometry; statistical methods; zinc; atomic absorption; cadmium; copper; lead; *SP422,* pp. 1023-1033 (Aug. 1976).

Manganese dioxide; organic chemistry; oxidation; reagent; review; active; *15880.*

Manganous ammonium sulphate; paramagnetic salts; platinum resistance thermometers; ac-dc resistance thermometry; ac susceptibility; gadolinium sulphate; germanium resistance thermometers; IPTS-68; low temperature scales, 1-83 K; magnetic thermometer; *15903.*

Manganous sulfate; neutron source; radiation instruments; calibration; *SP456,* pp. 87-89 (Nov. 1976).

Manikin; audiometry; diffraction; head diffraction; hearing aids; instruments for hearing; *NBSIR 76-1110.*

Manipulator; performance evaluation; programmable robots; specifications; guidelines; industrial robots; *SP459.*

Manipulators; robots; robot systems; artificial intelligence; automation; computer control; *16047.*

Man-machine communication and automation; adaptive control; computer control; control theory; hierarchical control; *16175.*

Man-machine interaction; minicomputer; network measurement; performance measurement; computer networks; data acquisition; *TN912.*

Man-machine interaction; network protocols; common practices; communication; compatibility; convertibility; information interchange; information networks; interfacing; interlibrary communication; *16053.*

Man-machine systems; remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; costs; data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; interfaces; malfunctions; *NBS-GCR-74-29.*

Manpower problems; astronomy; *15886.*

Manufactured building; model codes; model documents; NCSBCS; on-site construction; prefabricated construction; standards; state-local relationship; state regulations; building codes; factory-built housing; industrialized building; inspection; *NBS-GCR-74-27.*

Manufactured building; model documents; NCSBCS; standards; state regulation; building codes; certification; compliance assurance; evaluation; inspection; *BSS87.*

Manufacturing; CAD; CAD/CAM; computer-aided design; *16146.*

Manufacturing; conservation; economic; energy; management; *SP403,* pp. 103-111 (June 1976).

Manufacturing; marketing; costs; energy; heating; *SP403,* pp. 199-213 (June 1976).

Manufacturing; paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; *SP403.*

Many-body theory; diagrammatic perturbation theory; linked-cluster theorem; *16614.*

Mapping; models; nursing homes; realms; building fires; case studies; critical events; decisions; episodes; fires; home for the aged; hospital fires; human behavior; institutions; *NBS-GCR-76-73.*

Maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; fatigue; frac-

ture; iron alloys; *NBSIR 76-848.*
Marangoni effect; surface tension; thermocapillarity; convection; drops; *16341.*
Marginal analysis; quality control; safety standards; economic cost of failure prevention; frequency of failure; government action; life-cycle costing; *SP423,* pp. 107-116 (Apr. 1976).
Marine atmospheres; plastics, fiber-reinforced; pultrusions; stress-rupture testing; sunlight; ultraviolet radiation; weatherability; antenna-support materials; environmental degradation; guys, nonmetallic; *NBSIR 76-1069.*
Marine environment; powder coating; salt water; solid lubrication; abrasion; corrosion protection; friction; *SP452,* pp. 25-30 (Sept. 1976).
Market adjustments; optimization and feasibility; rehabilitation, conservation; housing; housing demand, supply, needs; housing rehabilitation; land economics; *NBSIR 76-1043.*
Market aggregation; tool, market; aggregation, market; *NBS-GCR-ETIP 73-01.*
Marketing; costs; energy; heating; manufacturing; *SP403,* pp. 199-213 (June 1976).
Marketing; mechanical failure; product performance; product reliability; product testing; consumer products; *SP423,* pp. 209-212 (Apr. 1976).
Markov Stochastic model; self-diffusion; continuous interface profile; diffusion equation; hypergeometric differential equation; interfacial force; liquid-vapor interface; *15726.*
Martensite; meteorite; Tishomingo; alloy; austenite; electron microscopy; iron-nickel; *15764.*
Masers; circumstellar shells; *16103.*
Masking; sirens; speech recognition; traffic noise; alarm signals; hearing; loudness functions; *16573.*
Masonry; masonry walls; mortar; slenderness ratio; standards; stiffness; structural stability; walls; brick; buckling; composite walls; compressive strength; concrete block; constitutive relations; flexural strength; *BSS73.*
Masonry; mortars (materials); portland cement; testing; walls; lime (dolomitic); *15992.*
Masonry building; dynamic model; environmental chamber experiment; heating and cooling load computer program; heating load; *16092.*
Masonry construction; roofs; siding; structural engineering; wind; wind damage; wind engineering; building codes; design standards; *TN909.*
Masonry walls; mortar; slenderness ratio; standards; stiffness; structural stability; walls; brick; buckling; composite walls; compressive strength; concrete block; constitutive relations; flexural strength; masonry; *BSS73.*
Mass; pound; weight; force; kilogram; *16394.*
Mass per unit area; Operation BREAKTHROUGH; U-value; building classification; building thermal mass; building thermal performance; building thermal time constant; housing systems; industrialized housing; *NBSIR 75-678.*
Mass spectrometry; motorized criminal; ozone puzzle; portable transceiver batteries; RF power meter; utilities system; batteries; dental materials; industry; integrated utilities system; *DIM/NBS* **60,** No. 3, 1-24 (1976)
Mass spectrometry; optical spectroscopy; phosphorus; polyester; flame retardancy; *16037.*
Mass spectrometry; organic trace analysis; qualitative accuracy; quality control; quantitative accuracy; reference materials; sampling; concentration; detectors; extraction; gas chromatography; isolation and clean-up; *SP422,* pp. 9-34 (Aug. 1976).
Mass spectrometry; photoionization; rate constants; gas phase; hydrocarbons; kinetics; *15850.*
Mass spectrometry; photoionization; propane; propane-d_2; propane-d_6; propane-d_8; threshold photoelectron spectroscopy; coincidence; *16590.*
Mass spectrometry; rate coefficients; chemical kinetics; data evaluation; gas phase; hydrocarbons; ion-molecule reactions; *JPCRD* **5,** No. 4, 1123-1146 (1976).
Mass spectrometry; semiconductor grade silicon; trichlorosilane; boron measurements; *SP422,* pp. 709-714 (Aug. 1976).
Mass spectrometry; serum; accurate; blood; concentrations; determination; dilution; electrolyte; isotope; *SP422,* pp. 951-960 (Aug. 1976).
Mass spectrometry; sulfur nitride; tetracyanoquinodimethane; tetrasulfur tetranitride; tetrathiafulvalene; vaporization; chemical ionization mass spectrometry; *16422.*
Mass storage; NIRA; Photonuclear Data Center; central computer; computer programs; data manipulation; digital data; *TN903.*
Mass transfer number; opposed flow diffusion flame; oxygen index; fire retardant mechanisms; fire retardant polymers; fire retardants; *NBS-GCR-75-40.*
Matches; burns; fabric fires; fire injuries; flammable fabrics; ignition hazards; ignition sources; lighters; *NBS-GCR-74-32.*
Material balance accounting; nuclear materials safeguards; process losses; *16263.*
Material deterioration; mechanical failure; mechanical integrity; mechanical reliability; performance envelope; predicting product reliability; design engineering; *SP423,* pp. 199-208 (Apr. 1976).
Material properties; referral centers; sources of data; data centers; data tabulations; evaluated data; *16007.*
Materials; mechanical properties; review, thermal properties; cryogenics; *15838.*
Materials; minerals; ceramics; educational priorities; energy; engineer-scientist; environmental quality; *16156.*
Materials accountability; measurements; nuclear; safeguards; standards; fuel; *16481.*
Materials analysis; neutron activation analysis; contamination; gas analysis; high purity; *SP422,* pp. 759-772 (Aug. 1976).
Materials and energy conservation; blast furnace slag; blended cement; fly ash; *16408.*
Materials conservation; materials science; performance concept; building construction; building design; building materials; building research; environmental protection; international cooperation; international standards; *16027.*
Materials evaluation, MHD-materials; test procedures; high temperatures; *16174.*
Materials policy; nondestructive evaluation; performance; processing; technical strategy; design; development; fabrication; life cycle costing; *15873.*
Materials purification requirements; pulsed laser damage; rare earth fluorides; zinc selenide coatings; laser antireflective coatings; *SP462,* pp. 271-278 (Dec. 1976).
Materials research; measurement challenge; science and technology; sea of data; standard reference data system; computer age; data system; *DIM/NBS* **60/Suppl.,** Anniversary Issue, 1-32 (1976).
Materials research; measurements-standards; NBS-industry; transfer; benefits, industry-society; *16280.*
Materials science; performance concept; building construction; building design; building materials; building research; environmental protection; international cooperation; international standards; materials conservation; *16027.*
Math model; protective headgear; safety; test methods; head injury; helmets; *NBSIR 76-1107.*
Mathematical model; regulation; strategy; theory of games; inspection; *J. Res.* **80B** No. 2, 189-236 (1976).
Mathematical models; safety; separation; vertical separation; aircraft; air transportation; air traffic control models; altimetry; altitude; aviation; collision risk; error analysis; *NBSIR 76-1067.*

Mathematical statistics; multivariate analysis; order statistics; social sciences, services to; statistical education in the United States; statistical tolerance limits; U.S. Army programs in statistics; U.S. Government, services to; Wilks award; *16114*.
Mathematics; mercury; performance standard; pressure transducers; SRM; surgical implants; testing; thermal transients; architectural heritage; fire; guardrail; high-capacity; *DIM/NBS* **60**, No. 8, 1-24 (1976).
Mathematics bibliography; bibliography; indexes; *16173*.
Matric equation; partitioned matrix; Smith normal form; determinantal divisors; equivalence; *J. Res.* **80B** No. 1, 89-98 (1976).
Matrices; polyhedral; algebraic; cones; faces; Jordan-equivalent; *16044*.
Matrix algebra; necklace model; polymer physics; bead/spring model; dilute polymer solutions; eigenvalue; hydrodynamic interaction; *J. Res.* **80B** No. 2, 273-284 (1976).
Matrix calculation; Monte Carlo calculation; theory of diffusion; vacancy diffusion; computer simulation; correlation factor for diffusion; diffusion; *16073*.
Matrix effects; standard reference materials; x-ray fluorescence; corrections; *15983*.
Matrix equations; nonrandom walk equation; atom migration; correlation factor; crystal defect; diffusion coefficient; *15776*.
Matrix functions; multiple transitivity; permutation group; Stirling numbers; bell numbers; branching theorem; Clebsch-Gordon series; irreducible character; *J. Res.* **80B** No. 2, 265-268 (1976).
Matrix isolation; absorption spectrum; band experiment; CF_2; CH_2F_2 photolysis; fluorescence spectrum; *15908*.
Matrix isolation; molecular rotation in solid Ar; photoinduced proton transfer; ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; emission spectrum; HAr_n^+; $HCCl_2^+$; $HCCl_2^-$; $HCCl_3$; infrared spectrum; *15757*.
Matrix reference materials; pure reference materials; reference methods; routine methods; secondary reference materials; Standard Reference Materials; definitive method; *16104*.
Matroid; network; operations research; algorithm; graph; *J. Res.* **80B** No. 3, 337-342 (1976).
Matter, line profiles; atomic processes, interstellar; *16012*.
Maturity; mechanical properties; nondestructive evaluation; pull-out strength; splitting tensile strength; compressive strength; concrete; *TN932*.
Maximum allowable concentration of CO_2; New York City schools; ventilation; air quality; intermittent operation; *16550*.
Maxwell-Wagner polarization; piezoelectric *d* constant; piezoelectricity; relative humidity; temperature; bone; dispersion phenomena; *16314*.
Mean field theory; metastability; perturbation scheme; reference system; structure factor; limit of stability; *16595*.
Mean free path; quantitative analysis; electron spectroscopy for chemical analysis; *16079*.
Mean life; resonance radiation; transition probability; U I; uranium; atomic beam; delayed coincidence; imprisonment; lifetime; *16322*.
Measure theory; minimax; combinatorial analysis; combinatorial probability; *J. Res.* **80B** No. 2, 237-243 (1976).
Measured cross-section ratio; nuclear reactions; $^{186, 187}Os(n,\gamma)$; $E_n = 25$ keV; *16579*.
Measurement; appearance potential; gaseous positive ions; heat of formation; ionization potential; *16205*.
Measurement; measurement assurance; uncertainty; *15976*.
Measurement; measurement compatibility; National Bureau of Standards; reference materials; standard reference materials; Standard Reference Materials program; accuracy; *16549*.
Measurement; measures; performance; usability; communications networks; computer networks; cost; interactive service; *TN908*.
Measurement; mechanical tests; plastic deformation; proportional limit; crack propagation; determination of stress; *16468*.
Measurement; metric; packaging and labeling; police radar equipment; standards; supermarket automation; weights and measures; calibration; communication; consumers; grain moisture measurement; laws and regulations; *SP442*.
Measurement; nitrogen dioxide; particulate matter; photochemical oxidants; standards; sulfur dioxide; carbon monoxide; hydrocarbons; *16121*.
Measurement; nondestructive assay; nuclear; safeguards; traceability; calibration; *16414*..
Measurement; procurement; response; service; computer; interactive; *16247*.
Measurement; radioactivity; radiopharmaceutical; standards; traceability; assurance; *SP456*, pp. 71-76 (Nov. 1976).
Measurement; stratosphere; chemical kinetics; free radicals; *16130*.
Measurement; surface; surface finish; surface roughness; technology assessment; economic factors; *NBSIR 75-927*.
Measurement; traceability; uncertainty; *15975*.
Measurement accuracy; medical facilities; regulatory; therapy; traceability; diagnosis; *SP456*, pp. 139-146 (Nov. 1976).
Measurement activities; measurement institutions; mechanical quantities; National Measurement System; optical quantities; thermal quantities; time and frequency; acoustic quantities; electrical quantities; electromagnetic quantities; end-use measurements; *NBSIR 75-943*.
Measurement assurance; radiation users; standards; ionizing radiation; *SP456*, pp. 403-416 (Nov. 1976).
Measurement assurance; transport standard; watthour meter; electric energy; electricity; electric power; *TN930*.
Measurement assurance; uncertainty; measurement; *15976*.
Measurement assurance programs; non-ionizing EM radiation hazards; RF and microwave measurements; standards; calibrations; laser calorimeters; *SP456*, pp. 417-425 (Nov. 1976).
Measurement challenge; science and technology; sea of data; standard reference data system; computer age; data system; materials research; *DIM/NBS* **60/Suppl.**, Anniversary Issue, 1-32 (1976).
Measurement compatibility; National Bureau of Standards; reference materials; standard reference materials; Standard Reference Materials program; accuracy; measurement; *16549*.
Measurement institutions; mechanical quantities; National Measurement System; optical quantities; thermal quantities; time and frequency; acoustic quantities; electrical quantities; electromagnetic quantities; end-use measurements; ionizing radiation; *NBSIR 75-943*.
Measurement method; nondestructive test; nonlinear operation; optical scanner; reliability; transistors; failure analysis; hot spots; integrated circuits; laser scanner; *SP400-27*.
Measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; *SP400-19*.
Measurement methods; microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; semiconductor devices; *SP400-25*.
Measurement methods; microelectronics; MOS capacitor; *p-n* junctions; semiconductors; silicon; thermally stimulated capacitance; thermally stimulated current; cryostat; defects; gold-doped silicon; *SP400-26*.
Measurement methods; MOS capacitor; *p-n* junction; semiconductor defects; silicon; thermally stimulated capacitance; ther-

mally stimulated current; gold-doped silicon; *16363*.
Measurement of humidity; measurement of moisture; moisture; moisture measurement system; water vapor; humidity; humidity measurement system; *NBSIR 75-933*.
Measurement of moisture; moisture; moisture measurement system; water vapor; humidity; humidity measurement system; measurement of humidity; *NBSIR 75-933*.
Measurement of operating margins; nondestructive tests; P-MOS shift register; active devices; laser scanning; logic flow observation; LSI testing; *15833*.
Measurement of time and frequency; time and frequency; clocks; frequency and time; *16569*.
Measurement process; calibration; comparator; gage blocks; length; *NBSIR 76-979*.
Measurement services; Philippines; standardization; testing facilities; building technology; information handling; *NBSIR 76-1083*.
Measurement, skid resistance; pavement, skid resistance; pavement wetting system; tire-pavement interface forces; wet pavement; accident reduction, skidding; correlation, skid resistance; highway safety; *NBSIR 76-1133*.
Measurement standards; self-calibration; directional coupler; *15828*.
Measurement system; nondestructive evaluation; pulse-echo; ultrasonics; aluminum ultrasonic reference standards; ASTM-type reference standards; calibration; interim reference standard; longitudinal beam; *TN924*.
Measurement techniques; periodic surfaces; polarization; random surfaces; reflectance; reflectance of coherent radiation; scattering; scattering theory; surface roughness; transmittance; bibliography; emittance; heat transfer; *J. Res.* **80A** No. 2, 207-220 (1976).
Measurement techniques; standards; building research; criteria; energy; engineering; industry construction; *SP439*.
Measurement techniques; ventilation of office buildings; air infiltration; energy conservation; *16342*.
Measurement technology; microelectronics; process control; reliability; semiconductors; silicon; test patterns; data acquisition; data display; integrated circuits; *SP 400-15*.
Measurement technology; microelectronics; MOS devices; process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; hybrid devices; leak testing; *SP400-28*.
Measurement technology; reverberation rooms; sound measurement; sound power; sound power levels; *NBS-GCR-76-59*.
Measurement technology; semiconductor devices; semiconductor process control; silicon; automation; electronics; integrated circuits; *NBS-GCR-76-64*.
Measurement temperature; medicine temperature; microwave diathermy fields; temperature measurement; *16441*.
Measurement uncertainty; solar energy systems evaluation; thermal performance; data requirements; *NBSIR 76-1137*.
Measurement units; physical constants; SI units; gyromagnetic ratio; *16395*.
Measurements; electromagnetic compatability; EMC instrumentation; *16229*.
Measurements; medical; radiation; standards; calibrations; environment; *SP456*.
Measurements; methane; mixtures; thermodynamic; density; dielectric constant; electromagnetic properties; equation of state; ethane; hydrocarbon; liquefied natural gas; *16631*.
Measurements; microelectronics; process control; reliability; semiconductor; automation; integrated circuits; *16116*.
Measurements; National Measurement System; cryogenics; data; flowmeter; instrumentation; *NBSIR 75-825*.
Measurements; National Measurement System; standards; thermometry; data; International Practical Temperature Scale; *NBSIR 75-932*.
Measurements; network analyzer; phase; reflection coefficient; attenuation; automated; bolometer mount efficiency; *16509*.
Measurements; nondestructive evaluation; productivity; reliability; reproducibility; safety; accuracy; conservation; *16301*.
Measurements; nuclear; safeguards; standards; fuel; materials accountability; *16481*.
Measurements; quality control; standardization; testing facilities; Bolivia; *NBSIR 76-1099*.
Measurements; radiated emission; radiation resistance; TEM cells; *16469*.
Measurements; radiation; regulations; states; abstract; compromise; ineffectiveness; *SP456*, pp. 31-36 (Nov. 1976).
Measurements; standard; dimensional; gage; instrument; laser; length; machine; *NBSIR 75-926*.
Measurements; standards, uses of radiation; ionizing radiation; *SP456*, pp. 13-24 (Nov. 1976).
Measurements; superconductivity; high frequency; infrared; Josephson effect; *16498*.
Measurements, bicycle braking; pitchover; standards, bicycle safety; test method, bicycle; bicycle brakes; brakes, bicycle; dynamics, bicycle; error analysis; friction, tire/pavement; kinetics, bicycle; *NBSIR 75-786*.
Measurements system; radioisotopes; radiopharmaceuticals; reference sources; standards; SRM's; biomedical; clinical; *16151*.
Measurements-standards; NBS-industry; transfer; benefits, industry-society; materials research; *16280*.
Measures; metric system; standards; units of measurement; weights; history of measurement standards; *SP447*.
Measures; performance; usability; communications networks; computer networks; cost; interactive service; measurement; *TN908*.
Measuring instruments; research assistants; test device evaluation; criteria; decision making; human systems; *16091*.
Mechanical and structural components; polymer processed mechanical and structural components; structural and mechanical components; components, structural; dry powder painting; *SP452*, pp. 14-24 (Sept. 1976).
Mechanical failure; bearing failure; bearing loading; bearing lubrication; bearing misalignment; bearing temperature; *SP423*, pp. 67-84 (Apr. 1976).
Mechanical failure; crack propagation; failure analysis; failure prevention; fracture; fractography; *SP423*, pp. 3-11 (Apr. 1976).
Mechanical failure; mechanical reliability; stress corrosion cracking; brittle fracture; economics of failure prevention; fatigue failure; *SP423*.
Mechanical failure; mechanical malfunction; quality assurance; reactor systems and components; safety standards; failure prevention; *SP423*, pp. 143-151 (Apr. 1976).
Mechanical failure; mechanical integrity; mechanical reliability; performance envelope; predicting product reliability; design engineering; material deterioration; *SP423*, pp. 199-208 (Apr. 1976).
Mechanical failure; mechanical reliability; safety standards; conservation of material resources; failure prevention; government action; *SP423*, pp. 221-225 (Apr. 1976).
Mechanical failure; metal coatings; plated coatings; polymer coatings; solid film lubricants; sputtered coatings; wear; barrier film; chemical coatings; failure prevention; *SP452*.
Mechanical failure; microstructural effects on mechanical failure; continuum cracks; continuum mechanics; failure mechanisms; *SP423*, pp. 181-191 (Apr. 1976).
Mechanical failure; potential service conditions; proliferation of specifications; environmental extremes; fail-safe operation; high strength materials; *SP423*, pp. 193-197 (Apr. 1976).
Mechanical failure; product performance; product reliability;

product testing; consumer products; marketing; *SP423*, pp. 209-212 (Apr. 1976).
Mechanical failure; safety standards; transportation safety; effects of mechanical failure on environment; failure prevention; government action; *SP423*, pp. 153-163 (Apr. 1976).
Mechanical failure; safety standards; consumer product safety; failure prevention; government action; government responsibility; *SP423*, pp. 215-219 (Apr. 1976).
Mechanical failure; surface pitting; abrasive wear; adhesive wear; gear failure; machine component failure; *SP423*, pp. 55-66 (Apr. 1976).
Mechanical failure; tribology; wear; economic savings of failure prevention; friction; lubrication; *SP423*, pp. 117-139 (Apr. 1976).
Mechanical integrity; mechanical reliability; performance envelope; predicting product reliability; design engineering; material deterioration; mechanical failure; *SP423*, pp. 199-208 (Apr. 1976).
Mechanical malfunction; quality assurance; reactor systems and components; safety standards; failure prevention; mechanical failure; *SP423*, pp. 143-151 (Apr. 1976).
Mechanical power; noise; pressure; quality control; safety; testing; engineering, instrumentation and techniques; fluids; force; hydraulic equipment; *16452*.
Mechanical properties; cryogenics; fatigue; fiber composites; liquid helium; low temperature tests; *16194*.
Mechanical properties; microstructure; stoichiometry; transmission electron microscopy; vapor deposition; cadmium telluride; growth kinetics; *SP462*, pp. 100-118 (Dec. 1976).
Mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; composites; copper alloys; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; *NBSIR 75-828*.
Mechanical properties; nickel alloys; superconducting machinery; thermal conductivity; aluminum alloys; composites; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; *NBSIR 76-839*.
Mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; *NBSIR 76-848*.
Mechanical properties; nondestructive evaluation; pull-out strength; splitting tensile strength; compressive strength; concrete; maturity; *TN932*.
Mechanical properties; nondestructive evaluation (NDE); radiography; welding; fracture control; fracture mechanics; *NBSIR 76-1154, Vol. 1*.
Mechanical properties; nondestructive evaluation (NDE); radiography; welding; fracture control; fracture mechanics; *NBSIR 76-1154, Vol. 2*.
Mechanical properties; particulate composites; Poisson's ratio; shear modulus; Young's modulus; bulk modulus; composite materials; elastic constants; filled polymers; *16264*.
Mechanical properties; particulate composites; Poisson's ratio; Young's modulus; composite materials; elastic constants; filled polymers; *J. Res.* **80A** No. 1, 45-49 (1976).
Mechanical properties; review, thermal properties; cryogenics; materials; *15838*.
Mechanical properties; stress analysis; superconducting coil composite; superconducting wire; thermal properties; fiberglass cloth; *NBSIR 76-837*.
Mechanical properties; stress effects; superconductors; symposium; critical current; *16636*.
Mechanical properties; titanium alloy; electron beam welding; fatigue; fracture toughness; low temperature tests; *NBSIR 76-836*.
Mechanical quantities; National Measurement System; optical quantities; thermal quantities; time and frequency; acoustic quantities; electrical quantities; electromagnetic quantities; end-use measurements; ionizing radiation; measurement activities; *NBSIR 75-943*.
Mechanical quantities; national measurement system; optical quantities; surface properties; thermal quantities; time and frequency; acoustics; atomic properties; economics; electrical quantities; ionizing radiation; *NBSIR 75-947*.
Mechanical relaxation; tetranonacontane; chain folds; differential scanning calorimetry; linear polyethylene fractions; low angle x ray; *16289*.
Mechanical reliability; performance envelope; predicting product reliability; design engineering; material deterioration; mechanical failure; mechanical integrity; *SP423*, pp. 199-208 (Apr. 1976).
Mechanical reliability; safety standards; conservation of material resources; failure prevention; government action; mechanical failure; *SP423*, pp. 221-225 (Apr. 1976).
Mechanical reliability; stress corrosion cracking; brittle fracture; economics of failure prevention; fatigue failure; mechanical failure; *SP423*.
Mechanical shock; shock generator; accelerometer; calibration; FFT; Fourier transform; Fourier transform frequency; *16128*.
Mechanical strength; microstructure; optical absorption; RbCl; $SrCl_2$; double-doped KCl laser windows; grain boundary stability; hot forging; KCl; *SP462*, pp. 82-86 (Dec. 1976).
Mechanical testing; plasticity; polyvinyl chloride; servo-hydraulic system; viscoelasticity; yield point; biaxial; fatigue; fracture; laboratory automation; *16626*.
Mechanical tests; plastic deformation; proportional limit; crack propagation; determination of stress; measurement; *16468*.
Mechanical tests; titanium alloys; crack propagation; cryostats; fracture tests; low temperature tests; *16640*.
Mechanisms; slides; avalanches; earthquakes; falls; flows; landslides; *SP444*, pp. III-52 – III-71 (Apr. 1976).
Median vents; penny crack; contact fracture; degradation; Hertzian cracks; indentation fracture; *15822*.
Medical; radiation; standards; calibrations; environment; measurements; *SP456*.
Medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; *SP453*.
Medical diagnostics; radiation safety; radiation therapy (ultrasonic); ultrasonics; electroacoustics; *NBSIR 75-937*.
Medical facilities; regulatory; therapy; traceability; diagnosis; measurement accuracy; *SP456*, pp. 139-146 (Nov. 1976).
Medical physicist; radiation measurement; radiation therapy; tumor dose; quality control; *SP456*, pp. 111-118 (Nov. 1976).
Medical products and standards; procurement policies; product testing; specifications; unsolicited proposals; VA; certification programs; ETIP; incentives; innovation; life cycle costing; *NBSIR 76-997*.
Medical records; privacy; recordkeeping practices; security; citizen rights; computers; confidentiality; data systems; health records; information policy; management principles; *Monogr. 157*.
Medical ultrasonics; NSF; RANN; R & D incentives; tissue characterization; tissue signature; ultrasonic diagnosis; ultrasound; applied research; imaging; instrumentation technology; *SP453*, pp. 7-10 (Oct. 1976).
Medicine; pattern recognition; trace elements; air particulates; blood; chemistry; computer graphics; geochemistry; *SP422*, pp. 151-162 (Aug. 1976).
Medicine bottles; poison packaging; bottle caps; child protection; closure testing; containers; *NBSIR 75-722*.
Medicine temperature; microwave diathermy fields; temperature measurement; measurement temperature; *16441*.

Meeting report; Novosibirsk; pressure-broadened line shapes; Soviet Union; submillimeter waves; high resolution molecular spectroscopy; lasers; *16010.*

Meeting summary; refrigeration; superconductivity; cryogenic; helium; *15832.*

Megavoltage radiotherapy; quality assurance; calibration; *SP456*, pp. 351-358 (Nov. 1976).

Melting; vaporization; diffusion; glass; homogeneity; *15989.*

Melting line; melting pressures; solid ethane; solid phase transition; ethane; *15805.*

Melting line; orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; *TN684.*

Melting point; pyrometry; radiance temperature; tantalum; emittance; high-speed measurements; high temperature; *16426.*

Melting point; pyrometry; radiance temperature; hafnium; high-speed measurement; high temperature; *J. Res.* **80A** No. 4, 659-662 (1976).

Melting point; structure; density; energy gap; inorganic compounds; *16163.*

Melting pressures; solid ethane; solid phase transition; ethane; melting line; *15805.*

Membrane filters; microphotometer; particulate deposits; laser; *15966.*

Membrane filtration; mercury cathode electrolysis; prepurification; purity definition; reagent contamination; ultrapurification; analytical blanks; analytical reagents; contamination control; high-purity reagents; *SP422*, pp. 363-375 (Aug. 1976).

Membranes; tension; vibrating membranes; air impedance; compliant surface; drag reduction; *16625.*

Memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; cells; charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); *16647.*

Memory technology; protocols; automated reading technology; circuitry; computer applications; computer engineering; distributed systems; interface standards; *16553.*

Mercurous chloride; polarizer material; visible; infrared; *NBSIR 74-507.*

Mercury; metal fires; metric; safety; WWV/WWVH; computer; energy measurement; EPIC; FIPS; kitchen ranges; *DIM/NBS* **60,** No. 1, 1-24 (1976).

Mercury; neutron activation analysis; organomercury; solvent extraction; environmental matrices; extraction yields; *SP422*, pp. 1233-1240 (Aug. 1976).

Mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; *16420.*

Mercury; performance standard; pressure transducers; SRM; surgical implants; testing; thermal transients; architectural heritage; fire; guardrail; high-capacity; mathematics; *DIM/NBS* **60,** No. 8, 1-24 (1976).

Mercury; preconcentration; trace elements; activation analysis; adsorption isotherm; environmental samples; *SP422*, pp. 669-699 (Aug. 1976).

Mercury; trace metal; analysis; ashing; blood lead; contamination; dairy products; digestion; interferences; losses; *SP422*, pp. 661-668 (Aug. 1976).

Mercury cathode electrolysis; prepurification; purity definition; reagent contamination; ultrapurification; analytical blanks; analytical reagents; contamination control; high-purity reagents; membrane filtration; *SP422*, pp. 363-375 (Aug. 1976).

Mercury in water, stabilization of; neutron activation analysis; spark source mass spectrometry; atomic absorption spectrometry; isotope dilution analysis; mercury in water, trace analysis; *SP422*, pp. 267-273 (Aug. 1976).

Mercury in water, trace analysis; mercury in water, stabilization of; neutron activation analysis; spark source mass spectrometry; atomic absorption spectrometry; isotope dilution analysis; *SP422*, pp. 267-273 (Aug. 1976).

Mercury ions; 285-nm radiation; 480-nm radiation; absolute cross sections; electron impact; *16588.*

Mercury manometer; triple point of water; vapor pressure; *15732.*

Mercury thermometers; metric; nuclear power; police radars; solar energy; SRM's; computer systems; environmental; fire; glass door; lead nitrate; *DIM/NBS* **60,** No. 2, 1-25 (1976).

Meson classification; ψ and χ particles; 1^{--} states; e^+e^- annihilation; exotic mesons; *15961.*

Metabolic processes; microcalorimetry; thermochemistry; thermodynamics; adenosine 5′-triphosphate; biochemistry; coupled equilibrium; enzyme catalyzed reactions; glucose; heat measurement; hexokinase; magnesium; *16385.*

Metal; Mössbauer; ^{57}Fe; ^{161}Dy; amorphous; magnetization; *16403.*

Metal; polymers; wear; adhesion; coatings; friction; *SP452*, pp. 3-13 (Sept. 1976).

Metal and plastic composites; metal composites, metals; soil corrosion, telephone cable shields; underground corrosion; *16351.*

Metal carbonyl; molybdenum carbonyl; NMR spectroscopy; 1,3-dithiolene-2-thione; chromium carbonyl; infrared spectroscopy; *15985.*

Metal carbonyl; thiocarbonyl; 1,3-dithiolane-2-thione; 1,3-dithiolene-2-thione; carbon-13 NMR; coordination compounds; *16585.*

Metal clusters; molecular orbitals; quantum chemistry; transition metal complexes; catalysis; chemisorption theory; *SP455*, pp. 67-86 (Nov. 1976).

Metal coatings; plated coatings; polymer coatings; solid film lubricants; sputtered coatings; wear; barrier film; chemical coatings; failure prevention; mechanical failure; *SP452.*

Metal composites, metals; soil corrosion, telephone cable shields; underground corrosion; metal and plastic composites; *16351.*

Metal electrodes; semiconductor electrodes; stability, surface layers; surface reactions; anodic decomposition; cathodic decomposition; electrochemistry; inorganic bronze electrodes; *SP455*, pp. 267-280 (Nov. 1976).

Metal fatigue; crack initiation; crack propagation; fatigue crack growth; fatigue failure; *SP423*, pp. 13-24 (Apr. 1976).

Metal finishing, metric system for; metrication, electrodeposition; metrication, electroplating; metrication, metal finishing; metric system, electroplating industry; electroplating industry, metrication of; *16353.*

Metal fires; metric; safety; WWV/WWVH; computer; energy measurement; EPIC; FIPS; kitchen ranges; mercury; *DIM/NBS* **60,** No. 1, 1-24 (1976).

Metal mirrors; micromachining; optical figure; scattered light; diamond turning; laser damage; *SP435*, pp. 49-56 (Apr. 1976).

Metal mirrors; optical fabrication; optical materials; thin films; avalanche ionization; infrared windows; laser damage; *SP462.*

Metal mirrors; reflectance; absorptance; CO laser calorimetry; CO laser mirrors; dielectric-enhanced mirrors; infrared laser mirrors; *SP462*, pp. 189-194 (Dec. 1976).

Metal mirrors; reflecting optics; laser damage; laser fusion; *SP462*, pp. 331-337 (Dec. 1976).

Metal mirrors; subsurface structure; ultrasonic cleaning; laser damage; *SP435*, pp. 90-97 (Apr. 1976).

Metal oxidation; metals; MOM devices; oxidation; oxidation theory; parabolic law for metal oxidation; semiconductors; conductivity; electric field effects; insulating films; insulators; *16260.*

Metal polishing; optical fabrication; chamfering; continuous polishing; grinding; *SP435*, pp. 3-9 (Apr. 1976).
Metal sulfides; sulfides; tungsten; x-ray crystallography; clusters; metal-metal bonding; *16071*.
Metal vapors; noble gas; spectroscopy; electron beam excitation; heat pipe oven; lasers; *16234*.
Metallic coatings; sliding wear; coatings, metallic; *SP452*, pp. 84-93 (Sept. 1976).
Metallic ions; pollution monitoring; rainwater analysis; sample stability; surface water analysis; filtration losses; *SP422*, pp. 633-648 (Aug. 1976).
Metallic piping; nondestructive evaluation; survey; water hardness; corrosion; corrosion control; *NBSIR 75-923*.
Metallic thin films; microirregularities; overcoating; plasmons; scatter; absorption; dielectric layers; irregularities; *J. Res.* **80A** No. 4, 643-658 (1976).
Metallic-line stars; stellar structure; A-type stars; convection theory; convection zones; *16606*.
Metalloboranes; nuclear magnetic resonance; oxidative addition; palladium; boron hydrides; deuterium; iridium; maleonitriledithiolate; *16566*.
Metallurgical; metals; soft metals; solid lubricants; compatibility; electropolated soft metal film coatings; *SP452*, pp. 72-83 (Sept. 1976).
Metallurgical variables; nondestructive evaluation; pulse echo; steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; ASTM-type reference standards; calibration; fabrication variables; immersion testing; *NBSIR 76-984*.
Metallurgically-bonded; metals; plastic-bonded; soils; telephone cables; underground; alloys; corrosion; *16352*.
Metallurgy; phase diagram; alloy; *16312*.
Metal-metal bonding; metal sulfides; sulfides; tungsten; x-ray crystallography; clusters; *16071*.
Metal-metal oxide electrodes; oxygen transport; steady-state overvoltages; copper electrodes; interfacial resistance; *SP455*, pp. 351-358 (Nov. 1976).
Metal-noble gas vapors; vapors, gas; alkali metal-noble gas vapors; gas vapors; *16217*.
Metals; commercial alloys; corrosion; data sources; *SP396-3*.
Metals; commercial alloys; data sources; electrical properties; magnetic properties; *SP396-4*.
Metals; MOM devices; oxidation; oxidation theory; parabolic law for metal oxidation; semiconductors; conductivity; electric field effects; insulating films; insulators; metal oxidation; *16260*.
Metals; neutron irradiation; recoil; surface effect; accuracy; activation analysis; charged particle irradiation; diffusion; etching; *SP422*, pp. 1165-1171 (Aug. 1976).
Metals; particle analysis; plastic deformation; surfaces; wear; wear debris; x-ray analysis; copper; electron channeling; electron microscope; *NBSIR 76-1141*.
Metals; plastic deformation; surfaces; wear; electron channeling; iron; *16523*.
Metals; plastic deformation; surfaces; wear; electron channeling; iron; *NBSIR 76-992*.
Metals; plastic-bonded; soils; telephone cables; underground; alloys; corrosion; metallurgically-bonded; *16352*.
Metals; radiation safety; standards laboratory; synchrotron; building collapse; corrosion; energy; environmental; frequency standards; hearing aids; high-rise buildings; *DIM/NBS* **60**, No. 5, 1-24 (1976).
Metals; soft metals; solid lubricants; compatibility; electropolated soft metal film coatings; metallurgical; *SP452*, pp. 72-83 (Sept. 1976).
Metastability; perturbation scheme; reference system; structure factor; limit of stability; mean field theory; *16595*.
Metastable fluid states; nonhydrodynamic regime; relaxation time; transport coefficients; Zwanzig-Mori formalism; hydrodynamic regime; ideal gas memory function; limit of stability; *16601*.
Metastable phase; ordering reaction; satellites; spinodal decomposition; superlattice reflections; transmission electron microscopy; δ'; Ll_2; *15840*.
Meteorite; Tishomingo; alloy; austenite; electron microscopy; iron-nickel; martensite; *15764*.
Meteorological data; topographical model; wind load; wind profile; wind tunnel; bridge; gust; *SP444*, pp. II-1 – II-20 (Apr. 1976).
Metering; methane; natural gas; petroleum; physical properties; standard reference materials; coal; energy; fuel; graphite; hydrocarbons; *SP434*.
Methane; methyl; methylene; photoionization; rotational energy; enthalpy of formation; ketene; *16060*.
Methane; mixtures; thermodynamic; density; dielectric constant; electromagnetic properties; equation of state; ethane; hydrocarbon; liquefied natural gas; measurements; *16631*.
Methane; modified Enskog theory; molecular correlations; nitrogen; sound absorption; argon; bulk viscosity; density expansion; *16483*.
Methane; natural gas; petroleum; physical properties; standard reference materials; coal; energy; fuel; graphite; hydrocarbons; metering; *SP434*.
Methane; NBS equation; scaling laws; statistical analysis; steam; universality; air constituents; critical region parameters; ethylene; heavy noble gases; helium; linear model; *JPCRD* **5**, No. 1, 1-52 (1976).
Methane; nitrogen; saturated liquid; tables; apparatus; density; experimental; magnetic suspension; *16645*.
Methane; safety; explosion; fire; fuel; gasoline; hydrogen; *TN690*.
Methane; safety; vents; automobile; detection; dispersion; explosion; fire; hydrogen; leakage; *16634*.
Methane; selection rules; symmetry species; tetrahedral; energy levels; hyperfine interactions; *16376*.
Methane; thermodynamic properties; transport properties; correlation; equation of state; excess function; hydrogen; interpolation methods; least squares; *15731*.
Methane-light hydrocarbon binary mixtures; critical loci; excess Gibbs' energies; Henry's constants; liquid-vapor equilibria; *16637*.
Method evaluation; multielemental analysis; activation analysis; charged particle; cyclotron; *SP422*, pp. 1215-1232 (Aug. 1976).
Method evaluation; trace metal analysis; accuracy; flameless atomic absorption; freshwater; interlaboratory comparison; *SP422*, pp. 247-265 (Aug. 1976).
Methodology; naturalistic studies; safety; accident research; countermeasures; epidimiology; laboratory research; *NBS-GCR-76-75*.
Methodology; safety; accidents; accident research; consumer accidents; epidimiology hazards; home safety; *NBS-GCR-76-76*.
Methodology; trace element analyses; atomic absorption spectrometry; blood analyses; contaminations; flameless methods; lead; lead blood analyses; *SP422*, pp. 715-719 (Aug. 1976).
Methyl; methylene; photoionization; rotational energy; enthalpy of formation; ketene; methane; *16060*.
Methyl alcohol; population inversion; radio astronomy; emission line; interstellar medium; laboratory measurement; *15994*.
Methyl group branches; polyethylene; Raman spectroscopy; alkanes; longitudinal acoustical mode; *16279*.
Methyl halides; optical heterodyne spectroscopy; quadrupole hyperfine interactions; saturated absorption spectroscopy; high resolution spectroscopy; *16407*.
Methylation; nucleophilic reactivity; onium salts; polar solvents;

pollutants; quaternization; alkyl halides; antimony; arsenic; environment; kinetics; *16628A*.
Methylation of metals; microbial transformation; speciation; volatile metal compounds; detection; flameless atomic spectrophotometry; gas chromatography; graphite furnace; *16409*.
Methylene; NMR; ^{13}C; alkane; chemical shift tensor; *16041*.
Methylene; photoionization; rotational energy; enthalpy of formation; ketene; methane; methyl; *16060*.
Metric; nuclear power; police radars; solar energy; SRM's; computer systems; environmental; fire; glass door; lead nitrate; mercury thermometers; *DIM/NBS* **60,** No. 2, 1-25 (1976).
Metric; packaging and labeling; police radar equipment; standards; supermarket automation; weights and measures; calibration; communication; consumers; grain moisture measurement; laws and regulations; measurement; *SP442*.
Metric; pressure transducers; thermal comforts; weights and measures; building industry; calibration system; centigade/celsius; computer; electrical industries; environments; glass standards; government intervention; heating/cooling; *DIM/NBS* **60,** No. 10, 1-24 (1976).
Metric; safety; WWV/WWVH; computer; energy measurement; EPIC; FIPS; kitchen ranges; mercury; metal fires; *DIM/NBS* **60,** No. 1, 1-24 (1976).
Metric; SI symbols; SI units; *16172*.
Metric conversion; metric roll call; metrology; Public Law 93-380; Public Law 94-168; anthropomorphic units; bicentennial; history of measurement; *16195*.
Metric conversion; planning and scheduling; building regulations; dimensional coordination; *16556*.
Metric conversion; planning and scheduling; building regulations; dimensional coordination; *TN915*.
Metric education; metric system; training; Treaty of the Meter; education; International System of Units; metrication; *SP441*.
Metric roll call; metrology; Public Law 93-380; Public Law 94-168; anthropomorphic units; bicentennial; history of measurement; metric conversion; *16195*.
Metric system; SI; timetable for metrication; conversion to metric; government metrication; metrication; *16231*.
Metric system; standards; units of measurement; weights; history of measurement standards; measures; *SP447*.
Metric system; training; Treaty of the Meter; education; International System of Units; metrication; metric education; *SP441*.
Metric system, electroplating industry; electroplating industry, metrication of; metal finishing, metric system for; metrication, electrodeposition; metrication, electroplating; metrication, metal finishing; *16353*.
Metrication; metric education; metric system; training; Treaty of the Meter; education; International System of Units; *SP441*.
Metrication; metric system; SI; timetable for metrication; conversion to metric; government metrication; *16231*.
Metrication; national measurement system; standards; dynamic force; economic; force; *NBSIR 75-929*.
Metrication, electrodeposition; metrication, electroplating; metrication, metal finishing; metric system, electroplating industry; electroplating industry, metrication of; metal finishing, metric system for; *16353*.
Metrication, electroplating; metrication, metal finishing; metric system, electroplating industry; electroplating industry, metrication of; metal finishing, metric system for; metrication, electrodeposition; *16353*.
Metrication, metal finishing; metric system, electroplating industry; electroplating industry, metrication of; metal finishing, metric system for; metrication, electrodeposition; metrication, electroplating; *16353*.
Metrology; AID; assistance; certification programs; education of metrologists; industrializing nations; LDC's; *NBSIR 76-988*.
Metrology; moon; tectonics; geodesy; geodynamics; lasers; *15794*.
Metrology; Public Law 93-380; Public Law 94-168; anthropomorphic units; bicentennial; history of measurement; metric conversion; metric roll call; *16195*.
Metrology; second-order Doppler shift; speed of light; frequency multiplication; fundamental constants; laser stability; *15980*.
Metrorail cars; neoprene; smoke; transportation; urethane; flame spread; flammability; full-scale fire tests; laboratory fire tests; *NBSIR 75-971*.
Mg^{+}; Mg^{2+}; MgO; Stark spectrum; surface excitons; bulk excitons; electron loss spectroscopy; ionic crystals; Madelung potential; *SP455*, pp. 59-65 (Nov. 1976).
MgO; optical properties; polarized luminescence; symmetry; transition metal ions; chromium 3+; crystal vacancies; cubic crystals; depolarization; impurity compensation; luminescence; magnesium oxide; *16521*.
MgO; Stark spectrum; surface excitons; bulk excitons; electron loss spectroscopy; ionic crystals; Madelung potential; Mg^{+}; Mg^{2+}; *SP455*, pp. 59-65 (Nov. 1976).
Mg^{2+}; MgO; Stark spectrum; surface excitons; bulk excitons; electron loss spectroscopy; ionic crystals; Madelung potential; Mg^{+}; *SP455*, pp. 59-65 (Nov. 1976).
MHD; superconductivity; cryogenics; CTR; electric power; energy storage; generators; instrumentation; *16465*.
MHD electrode materials; optical standards; safety wheels; bike regulations; bomb disarmament; computer auditing; energy options; explosive vapor detectors; firebug; impulse generators; *DIM/NBS* **60,** No. 7, 1-24 (1976).
MHD-power generation; spinel structure; durability; electrical conductivity; high temperature; *15943*.
Mice; NMR; spin-lattice relaxation; spin-spin relaxation; cancer; *J. Res.* **80A** No. 3, 439-450 (1976).
Michaelis constants for NADH and LDH-5; LDH-1; *16493*.
Microabsorption effects; quantitative phase analysis; quantitative powder diffraction; reference intensity ratios; systematic errors in powder diffraction; calculated powder patterns; I/I_c; *15929*.
Microanalysis; Monte Carlo electron trajectory calculations; scanning electron microscopy; x-ray microanalysis; electron energy loss; Landau electron deceleration theory; *SP460*, pp. 61-96 (Dec. 1976).
Microbial transformation; speciation; volatile metal compounds; detection; flameless atomic spectrophotometry; gas chromatography; graphite furnace; methylation of metals; *16409*.
Microbiologicals; organics; pesticides; radionuclides; sample handling; sampling; trace elements; chemical analysis; environmental samples; long-term storage; *TN929*.
Microcalorimetry; thermochemistry; thermodynamics; adenosine 5′-triphosphate; biochemistry; coupled equilibrium; enzyme catalyzed reactions; glucose; heat measurement; hexokinase; magnesium; metabolic processes; *16385*.
Microcopy resolution charts; National Measurement System; photographic density; technology assessment; imaging optics; lens testing; *NBSIR 75-942*.
Microdosimetric parameters; nuclear data; slowing-down spectra; energy deposition spectra; fast neutrons; initial spectra; *15950*.
Microdosimetry; neutron interactions with tissue; neutrons; radiation quality; secondary particle spectra; theoretical dosimetry; energy deposition spectra; *16182*.
Microelectronic devices; scanning electron microscopy; electron beam damage; electron beam energy deposition; ionizing radiation; *15963*.
Microelectronic materials; Rutherford backscattering; secondary ion mass spectroscopy; silicon; silicon dioxide; surface analysis; x-ray photoelectron spectroscopy; Auger electron

spectroscopy; depth impurity profiling; ion implantation; ion sputtering; *15739*.

Microelectronics; moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; semiconductor devices; *SP400-19*.

Microelectronics; moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; *SP400-25*.

Microelectronics; MOS capacitors; *n-p-n* transistor fabrication; *p-n* junctions; resistivity; semiconductor electronics; sheet resistors; silicon; test pattern; test structures; dopant density; *SP400-22*.

Microelectronics; MOS capacitor; *p-n* junctions; semiconductors; silicon; thermally stimulated capacitance; thermally stimulated current; cryostat; defects; gold-doped silicon; measurement methods; *SP400-26*.

Microelectronics; MOS devices; process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; hybrid devices; leak testing; measurement technology; *SP400-28*.

Microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; *SP400-18*.

Microelectronics; optical microscope; photomasks; scanning electron microscope; dimensional metrology; integrated circuits; line-width measurements; *15864*.

Microelectronics; parameter control; process uniformity; random faults; reliability; test patterns; TTL; vendor qualification; circuit procurement; component screening; custom circuits; LSI; *16620*.

Microelectronics; *p-n* junctions; scanning electron microscopy; semiconductor devices; device inspection; electron-beam-induced current; *16449*.

Microelectronics; process control; reliability; semiconductor; automation; integrated circuits; measurements; *16116*.

Microelectronics; process control; reliability; semiconductors; silicon; test patterns; data acquisition; data display; integrated circuits; measurement technology; *SP 400-15*.

Microencapsulated coated fuel particles; computer modeling on a microscale; elastoplastic micropressure vessels; failure predictability through small size; *SP452*, pp. 31-42 (Sept. 1976).

Microfilm; microform; state-of-the-art study; automatic data processing; building codes; building regulations; computer applications; computers; enforcement; evaluation; information systems; *NBS-GCR-74-26*.

Microfilm; microforms; micrographics; computer output microforms; information storage and retrieval; libraries; *16038*.

Microform; state-of-the-art study; automatic data processing; building codes; building regulations; computer applications; computers; enforcement; evaluation; information systems; microfilm; *NBS-GCR-74-26*.

Microforms; micrographics; computer output microforms; information storage and retrieval; libraries; microfilm; *16038*.

Microforms; transparent electrophotographic material; add-on films; information storage; *NBSIR 76-991*.

Micrographics; computer output microforms; information storage and retrieval; libraries; microfilm; microforms; *16038*.

Microgravity; purification; space processing; convection; crystal growth; crystal perfection; *NBSIR 76-980*.

Microhardness; plastic deformation; slip; transmission electron microscopy; twinning; aluminum oxide; *15825*.

Microirregularities; overcoating; plasmons; scatter; absorption; dielectric layers; irregularities; metallic thin films; *J. Res.* **80A** No. 4, 643-658 (1976).

Micromachining; optical figure; scattered light; diamond turning; laser damage; metal mirrors; *SP435*, pp. 49-56 (Apr. 1976).

Micrometer cell; thin layer electrochemistry; vanadium; automatic titrations; coulometric titrations; current integration; digital timing; epinephrine; linear sweep voltammetry; manganese; *SP422*, pp. 861-869 (Aug. 1976).

Microphones; receiver; tape recorder; telephone; transmitter; wiretapping; body worn antenna; bugging; eavesdropping; electronic surveillance; *16237*.

Microphones; reciprocity; sensitivity; temperature; calibration; ceramic; condenser; electret; humidity; *NBSIR 76-1090*.

Microphones; sound level meters; statistical control processes; temperature; acoustic calibrators; A-weighting; barometric pressure; crest factor; ground cover; humidity; instrumentation; *TN931*.

Microphotometer; particulate deposits; laser; membrane filters; *15966*.

Microprocessor; satellite; time; time code; clock; *TN681*.

Microscope stages; rock-forming minerals; specimen preparation; electron microscopy; *in situ* experiments; ionic bombardment; *15895*.

Microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; *SP453*.

Microsegregation; sampling; surface contamination; high purity metals; inhomogeneity; *SP422*, pp. 747-755 (Aug. 1976).

Microstructural analysis; tissue; ultrasound; velocity; acoustic imaging; acoustic microscopy; attenuation; frequency dependence; impedance; *SP453*, pp. 261-267 (Oct. 1976).

Microstructural effects on mechanical failure; continuum cracks; continuum mechanics; failure mechanisms; mechanical failure; *SP423*, pp. 181-191 (Apr. 1976).

Microstructure; optical absorption; RbCl; $SrCl_2$; double-doped KCl laser windows; grain boundary stability; hot forging; KCl; mechanical strength; *SP462*, pp. 82-86 (Dec. 1976).

Microstructure; oxidation; silicon nitride; slow crack growth enstatite; cristobalite; deformation; electron microscopy; *NBSIR 76-1153*.

Microstructure; stoichiometry; transmission electron microscopy; vapor deposition; cadmium telluride; growth kinetics; mechanical properties; *SP462*, pp. 100-118 (Dec. 1976).

Microstructures; recrystallization temperature; veiling; annealing; fracture energy (γ_c); isostatic forging; kinking; *SP462*, pp. 87-94 (Dec. 1976).

Microstructures; titanium; corrosion; *15765*.

Microstructures; titanium; transmission electron microscopy; *15777*.

Microwave; chemical structure; hydroperoxyl; *15849*.

Microwave; microwave measurement; six-port; automatic network analyzer; *16475*.

Microwave; minicomputer; radiofrequency; RF exposure; spectrum analyzer; antenna; *SP456*, pp. 203-213 (Nov. 1976).

Microwave; near-field; calibrations; electromagnetic hazards; field meters; gain; *NBSIR 75-805*.

Microwave; power measurement; bolometer; *16504*.

Microwave; reflection coefficient magnitude; repeatability; coaxial connectors; insertion loss; *16495*.

Microwave conductivity; organic conductors; thermal expansion; TTF–TCNQ; d.c. conductivity; *16050*.

Microwave conductivity; tetrathiofulvalinium-tetracyano-quinodimethane; TTF-TCNQ; eddy currents; electron paramagnetic resonance; *15917*.

Microwave diathermy fields; temperature measurement; mea-

surement temperature; medicine temperature; *16441.*

Microwave, digital, hygrometer; digital microwave hygrometer; hygrometer, digital microwave; *16199.*

Microwave discharge; photoemission; tungsten; ultraviolet photoemission; adsorption; chemisorption; CO; cyclotron resonance; electron cyclotron resonance; magnetic field; *16016.*

Microwave emission; molecular structure; radio astronomy; rotational spectrum; formyl ion; interstellar molecules; *16560.*

Microwave hazard meters; microwave radiation; *16464.*

Microwave instrumentation; microwave spectroscopy; radio astronomy; short-lived molecules; chemical monitoring and analysis; double resonance; *16400.*

Microwave interferometry; plate tectonics; satellite geodesy; crustal moments; earth rotation; geodynamics; lunar distance; *15799.*

Microwave measurement; nondestructive testing; thickness of coal layer; automation; coal; coal mine safety; dielectric constant; energy; *NBSIR 76-840.*

Microwave measurement; six-port; automatic network analyzer; microwave; *16475.*

Microwave measurement methods; multiple probe devices; reflectometers; rotating probe devices; slotted lines; survey of automatic techniques; swept frequency measurements; Wheatstone Bridge; automatic network analyzers; computer-controlled measurement; magic tee; *Monogr. 151.*

Microwave measurements; microwave power measurements; one-port parameters; six-port junction; application of six-port junction concept; automated measurements; broadband measurements; *16501.*

Microwave measurements; phase angle; self-calibration; seven-port junction; vector voltmeter; amplitude; computer controlled; diode detectors; *NBSIR 76-844.*

Microwave mixer diodes; mixers; neutrons; radiation hardness; receivers; Schottky-barrier diodes; semiconductors; solid-state devices; x-band measurements; diodes; gamma rays; hardness assurance; *SP400-7.*

Microwave power density; microwave radiation measurement; *SP456,* pp. 99-105 (Nov. 1976).

Microwave power measurements; one-port parameters; six-port junction; application of six-port junction concept; automated measurements; broadband measurements; microwave measurements; *16501.*

Microwave radiation; microwave hazard meters; *16464.*

Microwave radiation measurement; microwave power density; *SP456,* pp. 99-105 (Nov. 1976).

Microwave spectra; molecular parameters; rotational transitions; radio astronomy; isocyanic acid; interstellar molecules; *JPCRD* **5,** No. 1, 79-102 (1976).

Microwave spectra; molecules; Orion; radio astronomy; sulfur dioxide; interstellar; *16434.*

Microwave spectra; radio astronomy; rotational transitions; silicon sulfide; spectra; interstellar molecules; *JPCRD* **5,** No. 4, 1147-1156 (1976).

Microwave spectroscopy; radio astronomy; short-lived molecules; chemical monitoring and analysis; double resonance; microwave instrumentation; *16400.*

Microwave spectrum; molecular structure; silacyclopentane; small-ring molecule; Stark effect; dipole moment; *16046.*

Microwave spectrum; ozone depletion; rotational constants; stratospheric chemistry; atmospheric pollution; chlorine nitrate; dipole moment; *16584.*

Microwave spectrum; radio astronomy; rotational transitions; acetaldehyde; internal rotation; interstellar molecules; *JPCRD* **5,** No. 1, 53-78 (1976).

MIDAS; programmable desk calculator; standard cell comparator; automated; calculator; calibration; crossbar switch; low-level voltage measurements; *15906.*

Mie theory; particles; Rayleigh scattering; aerosols; dusts; light-scattering; *NBSIR 76-1031.*

Military; reliability; sandwich panel; shelter; durability; field inspection; foam and beam; honeycomb; impact; lightweight structures; *NBSIR 76-1025.*

Military family housing; specification; unitary heat pump; heating and cooling; *NBSIR 76-1029.*

Mineral analysis; trace analysis; x-ray fluorescence; *SP422,* pp. 1109-1118 (Aug. 1976).

Minerals; ceramics; educational priorities; energy; engineer-scientist; environmental quality; materials; *16156.*

Minerals; ores; organic; polymers; spectroscopy; bibliography; data; infrared; inorganic; *SP428. Parts 1, 2, and 3.*

Minerals; Raman spectroscopy; chemical analysis; fluid interactions; geology; *15930.*

Minicomputer; network measurement; performance measurement; computer networks; data acquisition; man-machine interaction; *TN912.*

Minicomputer; noise; community noise; computer interface; instrumentation; *NBSIR 75-692.*

Minicomputer; radiofrequency; RF exposure; spectrum analyzer; antenna; microwave; *SP456,* pp. 203-213 (Nov. 1976).

Mini-computer; sample preparation; toxic metals; trace determination; aquatic insects; atomic absorption; clean room; fish; *SP422,* pp. 627-632 (Aug. 1976).

Minicomputer software; random error; skewness; surface microtopography; surface roughness; surface texture; systematic error; amplitude density function; arithmetic average; autocorrelation function; average wavelength; kurtosis; *TN902.*

Minicomputer software; surface texture measurement; amplitude density function; arithmetic average; autocorrelation function; linear least-squares fit; machine language; *NBSIR 75-924.*

Minicomputers; access procedures; computer networks; macros; *16177.*

Minicomputers; computer security; *16447.*

Minicomputers; Network Access Machine; network services; response time; response time predictions; computer networks; *16326.*

Minicomputers; protocols; teleprocessing; access procedures; command language; computer networks; job control language; macros; *TN917.*

Minimax; combinatorial analysis; combinatorial probability; measure theory; *J. Res.* **80B** No. 2, 237-243 (1976).

Minimum detectable activity; statistical; background; critical level; detection limit; determination limit; less-than level; *SP456,* pp. 169-172 (Nov. 1976).

Minimum performance requirements; NILECJ Standard; receiver definitions; receiver measurement techniques; FM receivers; law enforcement equipment; *16293.*

Minimum performance requirements; NILECJ Standard; receiver definitions; receiver measurement techniques; FM receivers; law enforcement equipment; *16297.*

Minimum performance requirements; NILECJ Standard; receiver definitions; receiver measurement techniques; FM receivers; law enforcement equipment; *16303.*

Mining; tectonics; acoustics; coal; earthquakes; geologic faults; *NBS-GCR-73-18.*

Mirror; Mo; NaCl; window; ZnSe; CO_2 laser radiation; Cu; CW laser damage; grating; infrared windows; KCl; *SP435,* pp. 189-201 (Apr. 1976).

Mirror damage; pulsed lasers; window damage; *SP435,* pp. 202-206 (Apr. 1976).

Mirrors; multilayer dielectric coatings; polarizers; coating damage; laser damage; *SP435,* pp. 298-304 (Apr. 1976).

Mismatch considerations; amplifier noise performance; *15836.*

Mismatching; stress wave interactions; substrates; tearing; vibratory apparatus; adhesion; cavitation; coatings; design

charts; elastomers; erosion; Hopkinson pressure bar apparatus; impedances; *SP452*, pp. 120-123 (Sept. 1976).

Missiles; nuclear engineering; structural engineering; tornadoes; wind; *NBSIR 76-1050*.

Mixed convection; nucleate boiling; subcritical; supercritical; transition; turbulent flow; buoyancy; channels; film boiling; forced convection; helium I; helium II; *TN675*.

Mixed oxides; oxygen reduction; phosphoric acid; ternary metal-sulfur arrays; transition elements; triphenylphosphine; tungsten bronze; electrocatalysis; fuel cells; *NBSIR 75-742*.

Mixed valence; Mössbauer spectra; optical; biferrocenylene; delocalization; intramolecular exchange; magnetic susceptibility; *16049*.

Mixers; neutrons; radiation hardness; receivers; Schottky-barrier diodes; semiconductors; solid-state devices; x-band measurements; diodes; gamma rays; hardness assurance; microwave mixer diodes; *SP400-7*.

Mixtures; refrigeration; demagnetization; dilution refrigerator; helium 3; helium 4; liquid helium; *16655*.

Mixtures; thermodynamic; density; dielectric constant; electromagnetic properties; equation of state; ethane; hydrocarbon; liquefied natural gas; measurements; methane; *16631*.

Mixtures; thermodynamic properties; air; gases; high density; *16455*.

M-$LiTa_3O_8$; wodginite; crystal structure; lithium tantalate; *15974*.

Mössbauer; nuclear electric quadrupole moments; nuclear magnetic dipole moments; *JPCRD* **5**, No. 4, 1093-1122 (1976).

Mössbauer; optical spectra; oxygen; reaction mechanisms; ring-disk electrodes; electrocatalysis; electronic structure; hydrogen peroxide; iron phthalocyanines; *SP455*, pp. 241-251 (Nov. 1976).

Mössbauer; phase diagram; $TiFeH_x$ alloys; volume effects; charge flow; isomer; *16597*.

Mössbauer; ^{57}Fe; ^{161}Dy; amorphous; magnetization; metal; *16403*.

Mössbauer effect; Raney-iron-activation; catalysis; *16273*.

Mössbauer* spectra; backscattering measurements; Fe-57 Mössbauer spectra; *16387*.

Mössbauer spectra; optical; biferrocenylene; delocalization; intramolecular exchange; magnetic susceptibility; mixed valence; *16049*.

Mössbauer spectra; zinc; alloys; aluminum; catalysis; hydrogenation; iron; *16537*.

Mössbauer spectrometry; nuclear parameters; recent advances; tables; theory; chemical applications; instrumentation; *16332*.

Mo; NaCl; window; ZnSe; CO_2 laser radiation; Cu; CW laser damage; grating; infrared windows; KCl; mirror; *SP435*, pp. 189-201 (Apr. 1976).

Mobile antenna; mobile transceiver; transmission; cable assembly; coaxial cable; insertion loss; *16294*.

Mobile digital equipment; National Institute of Law Enforcement and Criminal Justice; communications; digital communications; guideline; law enforcement equipment report, Law Enforcement Standards Laboratory; *16190*.

Mobile home; fire test; flame spread; kitchen cabinets; kitchen range; kitchen range hood; limited combustibility; *NBSIR 75-788*.

Mobile home; smoke detector; surface flame spread; corridor fire test; interior finish material; intumescent coating; life safety; *NBSIR 76-1021*.

Mobile home parks; mobile homes; performance data; regulatory process; standards; computer techniques; construction; enforcement process; housing; hurricane Agnes; *NBSIR 76-1058*.

Mobile home tightness; sulfur hexafluoride tracer measurement; air infiltration measurement; air leakage measurement; *NBSIR 76-1063*.

Mobile homes; modular construction; prefabrication; zoning; building codes; building laws and regulations; building materials—testing and evaluation; building systems; industrialized housing; *NBS-GCR-73-19*.

Mobile homes; performance data; regulatory process; standards; computer techniques; construction; enforcement process; housing; hurricane Agnes; mobile home parks; *NBSIR 76-1058*.

Mobile homes; phase diagrams; tire pressure; air; building codes; computer tapes; energy; fire; helmets; *DIM/NBS* **60**, No. 12, 1-24 (1976).

Mobile homes; photoelectric smoke detectors; smoke detector installation; smoke detector placement; smoke detectors; detector sensitivity; fire detectors; *NBSIR 76-1016*.

Mobile laboratory; radiation calibrations; radiation control; radiation measurement assurance; radiation standards; *SP456*, pp. 47-51 (Nov. 1976).

Mobile telecommunication transmitters; RF radiation; antenna specifications; *SP456*, pp. 199-202 (Nov. 1976).

Mobile transceiver; transmission; cable assembly; coaxial cable; insertion loss; mobile antenna; *16294*.

Mobility; quasifree electrons; solvated electrons; conduction band; drift mobility; energy levels; excess electrons; hydrocarbons; ion mobility; liquids; *NSRDS-NBS58*.

Mode choice; pollution reduction; bus transit; busways; carpools; energy impacts; *15724*.

Model; point defects; annealing; calcium fluoride; defect pairs; equilibria; *15820*.

Model; specifications; structure; theory; wind; bridge; design; field data; gust response; *SP444*, pp. I-1—I-20 (Apr. 1976).

Model; thermodynamics; energy; heating systems; *SP403*, pp. 57-64 (June 1976).

Model; transform analysis; automobile; economic; energy; *SP403*, pp. 65-74 (June 1976).

Model codes; model documents; NCSBCS; on-site construction; prefabricated construction; standards; state-local relationship; state regulations; building codes; factory-built housing; industrialized building; inspection; manufactured building; *NBS-GCR-74-27*.

Model documents; NCSBCS; on-site construction; prefabricated construction; standards; state-local relationship; state regulations; building codes; factory-built housing; industrialized building; inspection; manufactured building; model codes; *NBS-GCR-74-27*.

Model documents; NCSBCS; standards; state regulation; building codes; certification; compliance assurance; evaluation; inspection; manufactured building; *BSS87*.

Model experiments; stress; stress intensity; cracks; experimental mechanics; fracture; fracture toughness; interferometry; *15742*.

Model potential theory; Be energy levels; *16608*.

Model studies; research summaries; fluid mechanics; hydraulic engineering; hydraulic research; hydraulics; hydrodynamics; *SP443*.

Modeling; oxidation; pyrolysis; combustion; data base; energy conservation; estimation schemes; kinetics; *NBSIR 75-910*.

Modeling; soils; structural response; volcanoes; wind; bridges; buildings; codes; disaster; dynamic analysis; earthquakes; *SP444*.

Modelling; technology; terminology; data base; data integration; implementation; *16329*.

Mode-locked pulse trains; avalanche breakdown, intrinsic damage; *SP435*, pp. 362-365 (Apr. 1976).

Models; nursing homes; realms; building fires; case studies; critical events; decisions; episodes; fires; home for the aged; hospital fires; human behavior; institutions; mapping; *NBS-GCR-76-73*.

Models; precision; precision of measurement; repeatability;

reproducibility; test methods; transformations; weighting; interlaboratory comparisons; invariance; *15909*.
Models; simulation; time scale simulation; frequency stability; international atomic time; *TN689*.
Models of frequency stability; picosecond time difference measurements; accurate frequency measurement; accurate time measurement; frequency; frequency stability; frequency stability analysis; *15740*.
Modems; signal processing; standards; teletypewriters; coding; interfaces; *NBS-GCR-74-30*.
Modems; telecommunication; common carriers; computer networks; interfaces; *NBS-GCR-74-31*.
Modified adjacency matrix; spectrum; graph isomorphism; labels; *J.Res.* **80B** No. 4, 447–483 (1976).
Modified Enskog theory; molecular correlations; nitrogen; sound absorption; argon; bulk viscosity; density expansion; methane; *16483*.
Modified MIS C(V) measurements; bias-isolation unit; capacitance measurements at high applied-bias voltage; capacitance-meter; extended-range capacitance measurement; high-voltage C(V) measurements; *SP400-34*.
Modular boiler study; NBS-campus energy retrofit; retrofitting existing buildings; energy consumption in NYC schools; energy-saving opportunities; incentives—educational, persuasive, financial, regulatory; *15882*.
Modular boilers; modular concept; seasonal efficiency; boiler oversizing; efficiency vs. heating load; *15712*.
Modular computation; Stirling numbers; binomial coefficients; *J. Res.* **80B** No. 1, 99-171 (1976).
Modular concept; seasonal efficiency; boiler oversizing; efficiency vs. heating load; modular boilers; *15712*.
Modular construction; prefabrication; zoning; building codes; building laws and regulations; building materials—testing and evaluation; building systems; industrialized housing; mobile homes; *NBS-GCR-73-19*.
Modulated absorption; nitrogen dioxide; NO_x detection; quantitative detection; infrared detection; laser magnetic resonance; *16623*.
Modulation index; multipath; path delay; phase vs. time; σ vs. τ, 19 kHz pilot; frequency modulation; *16492*.
Modulation measurements; modulation meter; percent modulation; amplitude modulation; instrument landing system; *16516*.
Modulation meter; percent modulation; amplitude modulation; instrument landing system; modulation measurements; *16516*.
Modulation transfer function; suprathreshold visibility; visibility; vision; gratings; illuminating engineering; lighting; *16008*.
Modulation transfer function; suprathreshold visibility; visibility; vision; gratings; illuminating engineering; lighting; *BSS82*.
Modulation transfer function; vision; visual acuity; visual capacities; nondestructive testing; *NBSIR 76-1142*.
Module; programming methods; program modifications; type; abstract data types; class; cluster; data abstraction; data type; *16246*.
Modulus of rubber; molecular interpretation of rubber elasticity; rubber elasticity; statistical theory of rubber elasticity; swelling of rubber network; cross-linking of rubber; dicumyl peroxide; elasticity theory of rubber; *J. Res.* **80A** No. 3, 451-463 (1976).
Moist air; saturated air; enhancement factor; *J. Res.* **80A** No. 1, 41-44 (1976).
Moisture; moisture measurement system; water vapor; humidity; humidity measurement system; measurement of humidity; measurement of moisture; *NBSIR 75-933*.
Moisture infusion; optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; *SP400-19*.
Moisture infusion; optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; *SP400-25*.
Moisture measurement system; water vapor; humidity; humidity measurement system; measurement of humidity; measurement of moisture; moisture; *NBSIR 75-933*.
Moisture resistance; sodium chloride; arsenic trisulphide; ion planing; protective films; *SP435*, pp. 14-19 (Apr. 1976).
Molar heat capacity; entropy; heat capacity; *16168*.
Molecular bands; molecular spectra; rotational constants; atomic energy levels; atomic line shapes; atomic spectra; atomic transition probabilities; bands, molecular; energy levels, atomic; line shapes, atomic; *15901*.
Molecular beams; quantum mechanics; rate coefficients; recombinations; scattering theory; chemical reactions; collision theory; cross sections; dissociation; hot atoms; isotope effects; kinetics; *16591*.
Molecular correlations; nitrogen; sound absorption; argon; bulk viscosity; density expansion; methane; modified Enskog theory; *16483*.
Molecular cross section; photoeffect; hydrogen; *16132*.
Molecular defects; pair potentials; site model; calculations; hydrocarbon crystals; internal friction; *16074*.
Molecular diffusion; organic molecule; superconductor; susceptibility; diamagnetism; light scattering; *16529*.
Molecular dissociation; relativistic electrons, excitation; energy transfer, electronic; fluorescence; *16615*.
Molecular dynamics; neutron; nuclear reactor; radiation; activation analysis; crystal structure; diffraction; isotopes; *TN896*.
Molecular dynamics; NMR; relaxation; chemical shift; fluoroalkanes; *16327*.
Molecular dynamics; numerical error; perfect lattice; thermal conductivity; thermal diffusivity; thermo-elastic coupling; continuum theory of diffusion; density; kinetic temperature; *16281*.
Molecular dynamics; second sound; shock wave; stress wave; temperature wave; thermal diffusivity; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; interatomic potential; *16138*.
Molecular dynamics; second sound; stress pulse; temperature wave; thermal diffusivity; thermal equilibrium; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; *16589*.
Molecular fluorescence parameters; observed (technical) fluorescence parameters; polarization; radiative and nonradiative transition probabilities; real fluorescence parameters; fluorescence lifetime; *J. Res.* **80A** No. 3, 389-399 (1976).
Molecular hydrogen; photoelectron spectroscopy; polarization energy; relaxation energy; screening energy; *15749*.
Molecular interpretation of rubber elasticity; rubber elasticity; statistical theory of rubber elasticity; swelling of rubber network; cross-linking of rubber; dicumyl peroxide; elasticity theory of rubber; entanglements in rubber; *J. Res.* **80A** No. 3, 451-463 (1976).
Molecular orbitals; quantum chemistry; transition metal complexes; catalysis; chemisorption theory; metal clusters; *SP455*, pp. 67-86 (Nov. 1976).
Molecular oxygen; predissociation; Schumann-Runge bands; spin-orbit mixing; *16596*.
Molecular oxygen in rare gas solids; O_2 excited states; emission spectra; intersystem crossing; *16612*.
Molecular parameters; rotational transitions; radio astronomy; isocyanic acid; interstellar molecules; microwave spectra; *JPCRD* **5**, No. 1, 79-102 (1976).
Molecular rotation in solid Ar; photoinduced proton transfer; ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; emission spectrum; HAr_n^+; $HCCl_2^+$; $HCCl_2^-$; $HCCl_3$; infrared

spectrum; matrix isolation; *15757.*
Molecular spectra; rotational constants; atomic energy levels; atomic line shapes; atomic spectra; atomic transition probabilities; bands, molecular; energy levels, atomic; line shapes, atomic; molecular bands; *15901.*
Molecular spectroscopy; NO, NO_2, pollutant detection; apparatus and methods; infrared lasers; magnetic resonance; *16456.*
Molecular spectroscopy; spectroscopy; vibrational fundamentals; hydrogen cyanide; infrared; *15925.*
Molecular structure; nickel hydride; adsorption; catalysis; copper hydride; magnesium oxide; *SP455,* pp. 53-58 (Nov. 1976).
Molecular structure; orbitals; potential energy curves; pseudopotentials; self-consistent field; valence electrons; basis functions; configuration mixing; dipole moments; electronic structure of molecules; Hartree-Fock; integrals, evaluation of; *16611.*
Molecular structure; oxazine dyes; quenching; xanthene dyes; aminocoumarins; carbazine dyes; deuterium effect; fluorescence quantum yield; laser dyes; *J. Res.* **80A** No. 3, 421-428 (1976).
Molecular structure; pseudopotentials; *15815.*
Molecular structure; radio astronomy; rotational spectrum; formyl ion; interstellar molecules; microwave emission; *16560.*
Molecular structure; silacyclopentane; small-ring molecule; Stark effect; dipole moment; microwave spectrum; *16046.*
Molecular weight determination; sedimentation coefficient; translational diffusion coefficient; Zimm theory; bead-spring model; block copolymers; dilute polymer solutions; limiting viscosity number; Mandelkern-Flory-Scheraga equation; *16026.*
Molecule; negative ion; O^-; O_3^-; photodetachment; photodissociation; CO_3^-; $CO_3^- \cdot H_2O$; *D* region; electron density; *15877.*
Molecule; N_2^+; radiative; transition probability; CO^+; CO_2^+; coincidence; electron impact; ions; lifetime; *15912.*
Molecule; photon; positron; atom; collision cross section; detachment; dissociation; elastic scattering; electron; excitation; fluorescence; ion; ionization; *SP426.*
Molecule; primary standards; properties; atom; energy generation; industrial technology; *NBSIR 75-944.*
Molecules; Orion; radio astronomy; sulfur dioxide; interstellar; microwave spectra; *16434.*
Molecules; radiation; thalium; *16094.*
Molecules; surfaces; adsorption; chemisorption; electronic properties of solids; *15758.*
Molybdenum; niobium; spectra; ultraviolet; wavelength; zirconium; *16425.*
Molybdenum; optician; polishing; surfaces; zinc selenide; copper; *SP435,* pp. 10-13 (Apr. 1976).
Molybdenum; repassivation kinetics; stress corrosion; chemical breakdown of passivity; chloride; crevice corrosion; ellipsometry; iron; *NBSIR 75-916.*
Molybdenum; rubidium; strontium; trace analyses; cadmium; environmental Standard Reference Materials; isotope dilution; lead; *16221.*
Molybdenum carbonyl; NMR spectroscopy; 1,3-dithiolene-2-thione; chromium carbonyl; infrared spectroscopy; metal carbonyl; *15985.*
Molybdenum disulfide; solid lubricants; wear; fluoride films; gears; *SP452,* pp. 132—148 (Sept. 1976).
Molybdenum disulfide; spin axis gas bearings; sputtered coatings; surface characterization; wear life; antimony trioxide; friction; *SP452,* pp. 177-186 (Sept. 1976).
Molybdenum oxides; orientation effects; oxygen reduction; electrochemistry; *SP455,* pp. 305-312 (Nov. 1976).
MOM devices; oxidation; oxidation theory; parabolic law for metal oxidation; semiconductors; conductivity; electric field effects; insulating films; insulators; metal oxidation; metals; *16260.*
Moment theory; photoabsorption/ionization; spectral densities; electron scattering; *16359.*
Momentum transfer; nitrogen molecules; rotational excitation; scattering theory; sudden approximation; close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; *15951.*
Momentum transfer; nitrogen molecules; rotational excitation; scattering theory; close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; *16618.*
Momentum transfer; phototransport; scattering; vacancies; absorption; electrotransport; ionic segregation; laser; *SP462,* pp. 365-370 (Dec. 1976).
Momentum transfer; polarization (of charge clouds); rotational excitation; scattering theory; close-coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; *16532.*
Momentum transfer; rotational excitation; scattering theory; sudden approximation; differential cross sections; elastic scattering; electron scattering; hydrogen molecules; *15761.*
Monitoring; particle sizing; time resolution; aerosol; California aerosol monitoring program; elemental analysis; ion beam analysis; *SP422,* pp. 1119-1136 (Aug. 1976).
Monitoring; water; water quality; accuracy; data interpretation; *SP422,* pp. 91-107 (Aug. 1976).
Monitoring systems; diagnostic systems; diesel engines; maintenance costs; *NBS-GCR-75-43.*
Monitors; standards; air pollution; analyzing; gas analysis; gases; emission; *15982.*
Monodisperse polymers; unsaturated monomers; block copolymers; homogeneous anionic polymerization; *16057.*
Monoenergetic neutrons; neutron beams; neutron filters; neutrons; reactors; resonant scatterer; *SP456,* pp. 83-85 (Nov. 1976).
Monolayers; nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; *16419.*
Monolayers; surface processes; atomic layers; chemisorption; cyclic-voltammetry; electrochemical adsorption; *SP455,* pp. 107-124 (Nov. 1976).
Monovalent metal azides; NaN_3 structure; neutron diffraction; RbN_3 structure; thermal motion; TlN_3 structure; ionic crystal; KN_3 structure; low temperature study; *15973.*
Monte Carlo; particle analysis; continuous radiation; electron probe microanalyzer; glass standard; lithium drifted silicon detector; *SP422,* pp. 1283-1291 (Aug. 1976).
Monte Carlo; reflection; Albedo; angular distribution; backscatter; charged particles; *16097.*
Monte Carlo calculation; response; scintillation detector; background; gamma-ray astronomy; induced radioactivity; *16431.*
Monte Carlo calculation; theory of diffusion; vacancy diffusion; computer simulation; correlation factor for diffusion; diffusion; matrix calculation; *16073.*
Monte Carlo calculations; multiple scattering x-ray generation; particle analysis; quantitative x-ray microanalysis; thin films; x-ray emission; electron trajectories; magnetic effects; *SP460,* pp. 105-128 (Dec. 1976).
Monte Carlo calculations; particulates; quantitative analysis; thin films; x rays; electron probe microanalysis; *16410.*
Monte Carlo electron trajectory calculations; particle analysis; scanning electron microscopy; thin film analysis; electron probe microanalysis; electron-solid interactions, magnetic domains; *SP460.*

229-317 O - 77 - 39

Monte Carlo electron trajectory calculations; scanning electron microscopy; x-ray microanalysis; electron probe microanalysis; electron scattering; electron-specimen interactions; *SP460*, pp. 5-14 (Dec. 1976).

Monte Carlo electron trajectory simulation; scanning electron microscopy; secondary electrons; x rays; backscattered electrons; electron probe microanalysis; *SP460*, pp. 15-44 (Dec. 1976).

Monte Carlo electron trajectory simulation; scanning electron microscopy; x-ray generation; electron microscopy; electron probe microanalysis; electron-specimen interactions; *SP460*, pp. 45-60 (Dec. 1976).

Monte Carlo electron trajectory calculations; scanning electron microscopy; x-ray microanalysis; electron energy loss; Landau electron deceleration theory; microanalysis; *SP460*, pp. 61-96 (Dec. 1976).

Monte Carlo electron trajectory calculations; nuclear backscattering analysis; scanning electron microscopy; thin films; x-ray analysis; electron probe microanalysis; *SP460*, pp. 129-138 (Dec. 1976).

Monte Carlo electron trajectory calculations; scanning electron microscopy; contrast calculations; energy filtering; low-loss electron image; magnetic contrast; *SP460*, pp. 139-150 (Dec. 1976).

Monte Carlo electron trajectory calculations; scanning electron microscope; iron-silicon transformer steel; magnetic contrast; magnetic domain images; magnetic domains; *SP460*, pp. 151-164 (Dec. 1976).

Monte Carlo method; spin system; triangular lattice; conditional probability; Ising spin; *15865*.

Monte Carlo simulation; nucleation; overcompression; supercooling; glassy state; Lennard-Jones system; *J. Res.* **80A** No. 1, 59-64 (1976).

Moon; earth rotation; geodesy; geodynamics; geophysics; laser distance measurements; *16448*.

Moon; equivalence principle; general relativity; gravitation; lunar orbit; *15946*.

Moon; tectonics; geodesy; geodynamics; lasers; metrology; *15794*.

Morphology; nonlinear refractive index; picosecond laser pulses; avalanche ionization; dielectric breakdown; inclusions; laser damage threshold; *SP435*, pp. 321-330 (Apr. 1976).

Morphology; nonstoichiometry; octacalcium phosphate; solubility; surface; amorphous calcium phosphate; bone mineral; fluorapatite; hydroxyapatite; *16307*.

Morphology; solidification; stability; grain boundary; *15844*.

Mortar; slenderness ratio; standards; stiffness; structural stability; walls; brick; buckling; composite walls; compressive strength; concrete block; constitutive relations; flexural strength; masonry; masonry walls; *BSS73*.

Mortars; polymer impregnated mortars; slow crack growth; acoustical emission; fracture mechanics; *16360*.

Mortars (materials); portland cement; testing; walls; lime (dolomitic); masonry; *15992*.

MOS capacitor; *p-n* junction; semiconductor defects; silicon; thermally stimulated capacitance; thermally stimulated current; gold-doped silicon; measurement methods; *16363*.

MOS capacitor; *p-n* junctions; semiconductors; silicon; thermally stimulated capacitance; thermally stimulated current; cryostat; defects; gold-doped silicon; measurement methods; microelectronics; *SP400-26*.

MOS capacitors; *n-p-n* transistor fabrication; *p-n* junctions; resistivity; semiconductor electronics; sheet resistors; silicon; test pattern; test structures; dopant density; microelectronics; *SP400-22*.

MOS capacitors; *p-n* junctions; resistivity of silicon; semiconductor devices; semiconductor process control; sheet resistors; test patterns; thermally stimulated currents; *SP400-21*.

MOS devices; process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; *SP400-28*.

Motivation for standardization; standards; automation; computer aided manufacturing systems; computer integrated manufacturing systems; interfaces; *16350*.

Motor; stepping; digital; drive; electronic; generator; *16399*.

Motorized criminal; ozone puzzle; portable transceiver batteries; RF power meter; utilities system; batteries; dental materials; industry; integrated utilities system; mass spectrometry; *DIM/NBS* **60**, No. 3, 1-24 (1976)

Mu sulphur; reflectance; reflectometer; sodium chloride; barium sulphate; bidirectional reflectance; bidirectional reflectometer; black coating; gonioreflectometer; magnesium oxide; *J. Res.* **80A** No. 2, 189-205 (1976).

Multiaxial stresses; plasticity; proportional limit; flow surface; *15802*.

Multi-element analysis; trace element analysis; x-ray fluorescence; accuracy; activation analysis; airborne particulates; air filter analysis; atomic absorption; emission spectroscopy; environmental pollutants; intercomparisons; *SP422*, pp. 173-188 (Aug. 1976).

Multielement determination; neutron activation; radiochemical separation; trace elements; biological material; biological standards; data evaluation; distillation; food composition; gamma spectrometry; inorganic separators; isotopic exchange; *SP422*, pp. 1173-1180 (Aug. 1976).

Multielemental analysis; activation analysis; charged particle; cyclotron; method evaluation; *SP422*, pp. 1215-1232 (Aug. 1976).

Multilayer coating; absorptance; antireflectance coating; bandwidth; coating design; *SP462*, pp. 221-229 (Dec. 1976).

Multilayer dielectric coatings; polarizers; coating damage; laser damage; mirrors; *SP435*, pp. 298-304 (Apr. 1976).

Multilayer dielectric mirror; optical absorptance; reflectance; scattering; temperature dependence; wavelength dependence; *SP435*, pp. 230-235 (Apr. 1976).

Multilayer reflectors; single layer coatings; spark detection; thin films immersed in liquids; high power ruby laser damage; *SP462*, pp. 315-330 (Dec. 1976).

Multipath; path delay; phase vs. time; σ vs. τ, 19 kHz pilot; frequency modulation; modulation index; *16492*.

Multiphonon absorption; optical absorption; water repellent coatings; chemical lasers; infrared materials; laser windows; *SP462*, pp. 45-49 (Dec. 1976).

Multiphonon absorption; surface absorption; bulk absorption; CO laser; HF laser; infrared laser window materials; *SP462*, pp. 50-57 (Dec. 1976).

Multi-photon; photoionization; review; scattering; spin-polarization; electron; experiment; LEED; *15900*.

Multi-photon absorption; alkali halides; collision chains; halogen emission; intrinsic damage; *SP435*, pp. 366-368 (Apr. 1976).

Multiphoton absorption; rf sputtering; damage threshold; dielectric films; heat conduction; laser damage; *SP435*, pp. 272-283 (Apr. 1976).

Multiphoton ionization; benzene; electronic structure; *15941*.

Multiphoton ionization; sodium; spontaneous Raman scattering in free atoms; atomic beams; *16572*.

Multiphoton ionization; trans-1,3-butadiene; electronic structure; *15981*.

Multiphoton processes; nonlinear absorption; nonlinear optical properties; semiconductor optical properties; two-photon absorption coefficients; *SP435*, pp. 369-388 (Apr. 1976).

Multiphoton processes; numerical calculations; relaxation phenomena; vibrational populations; floquet theory; laser-induced reactions; *16242*.

Multiphoton processes; photoionization; cesium; *16298*.

Multiphoton processes; self-focusing; thin films; avalanche ionization; IR windows and mirrors; laser damage; laser materials; *SP435*.
Multiphoton processes; uv; electroabsorption; IR optics; laser damage; *SP435*, pp. 389-394 (Apr. 1976).
Multiple integrals; transportation problem; average distance; distance; *16088*.
Multiple probe devices; reflectometers; rotating probe devices; slotted lines; survey of automatic techniques; swept frequency measurements; Wheatstone Bridge; automatic network analyzers; computer-controlled measurement; magic tee; microwave measurement methods; *Monogr. 151*.
Multiple reflection; sapphire surfaces; silicon films; specular reflection; differential reflection; epitaxial semiconductor devices; Kramers-Kronig relation; *NBS-GCR-76-61*.
Multiple reflections; photometric linearity; polarization; sample characteristics; straylight; wavelength accuracy; bandwidth; calibration; errors in spectrophotometry; interferences; *J. Res.* **80A** No. 4, 609-624 (1976).
Multiple scattering x-ray generation; particle analysis; quantitative x-ray microanalysis; thin films; x-ray emission; electron trajectories; magnetic effects; Monte Carlo calculations; *SP460*, pp. 105-128 (Dec. 1976).
Multiple transitivity; permutation group; Stirling numbers; bell numbers; branching theorem; Clebsch-Gordon series; irreducible character; matrix functions; *J. Res.* **80B** No. 2, 265-268 (1976).
Multiple-film; radiographic inspection; thermal neutrons; three-dimensional; complex object; laminagraphy; *16371*.
Multiplet table, O I; oxygen, first spectrum; spectrum O I; wavelengths, O I; atomic energy levels, O I; atomic spectra, O I; *NSRDS-NBS3, Section 7*.
Multistep redox reactions; semiconductor surface states; chemisorption; electrocatalysis; electron transfer theory; *SP455*, pp. 1-19 (Nov. 1976).
Multivariate analysis; optimization techniques; pattern recognition; signal processing; spectral resolution; statistics; analytical chemistry; curve fitting; data reduction; feature selection; *15964*.
Multivariate analysis; order statistics; social sciences, services to; statistical education in the United States; statistical tolerance limits; U.S. Army programs in statistics; U.S. Government, services to; Wilks award; Wilks, S.S.; *16114*.
Myocardial infarction; scattering; surface scattering; tissue characterization; ultrasonic spectroscopy; ultrasound diagnosis; acoustic impedance; Bragg diffraction; computer processing; frequency-dependent attenuation; internal scattering; *SP453*, pp. 167-196 (Oct. 1976).

N

NaCl; pulsed CO_2 TEA laser damage; transmitted pulse; waveform distortion; ZnSe; KCl; *SP435*, pp. 107-117 (Apr. 1976).
NaCl; window; ZnSe; CO_2 laser radiation; Cu; CW laser damage; grating; infrared windows; KCl; mirror; Mo; *SP435*, pp. 189-201 (Apr. 1976).
NADH stability; preparative chromatography on DEAE-cellulose; spectrophotometric properties of pure NADH; ADP; ADP-ribose; chromatography; impurities in NADH preparations; *16316*.
n-alkanes; polyethylene; Raman spectroscopy; rotatory lattice modes; *16218*.
n-alkanes; polyethylene; Raman-active longitudinal acoustic mode; localized defects; *16219*.
NaN_3 structure; neutron diffraction; RbN_3 structure; thermal motion; TlN_3 structure; ionic crystal; KN_3 structure; low temperature study; monovalent metal azides; *15973*.
National Bureau of Standards; New York State offices; office buildings; commercial buildings; energy conservation; energy consumption; Manchester office building; *16547*.
National Bureau of Standards; reference materials; standard reference materials; Standard Reference Materials program; accuracy; measurement; measurement compatibility; *16549*.
National Bureau of Standards heating and cooling load computer program; ASHRAE task group on energy requirements; conduction transfer functions; heating and cooling load; *BSS69*.
National Bureau of Standards load determination procedure; computer program for buildings; conduction transfer functions; heating and cooling load; *16118*.
National Fire Data System; specifications; state governments; systems analysis; design criteria; fire hazards; fire losses; fire reporting; fire safety; information systems; *NBS-GCR-73-5*.
National Institute of Law Enforcement and Criminal Justice; communications; digital communications; guideline; law enforcement equipment report, Law Enforcement Standards Laboratory; mobile digital equipment; *16190*.
National Measurement System; cryogenics; data; flowmeter; instrumentation; measurements; *NBSIR 75-825*.
National Measurement System; dimensional measurements; length measurements; *16042*.
National Measurement System; optical quantities; thermal quantities; time and frequency; acoustic quantities; electrical quantities; electromagnetic quantities; end-use measurements; ionizing radiation; measurement activities; measurement institutions; *NBSIR 75-943*.
National measurement system; optical quantities; surface properties; thermal quantities; time and frequency; acoustics; atomic properties; economics; electrical quantities; ionizing radiation; mechanical quantities; *NBSIR 75-947*.
National Measurement System; photographic density; technology assessment; imaging optics; lens testing; microcopy resolution charts; *NBSIR 75-942*.
National measurement system; standards; dynamic force; economic; force; metrication; *NBSIR 75-929*.
National Measurement System; standards; thermometry; data; International Practical Temperature Scale; measurements; *NBSIR 75-932*.
National Measurement System, position location; shipping and boating industries; Standards laboratories; telephone industry and specialized carriers; time and frequency; time scales; users of NBS radio broadcasts; atomic frequency standards; aviation industry; *SP445-1*.
National Network Simulation system; commodity flow analysis; economic analysis; *NBSIR 75-918*.
National policies; public concern; executive programs; information management; information processing; legislative programs; *16245*.
National standard; radiation source; radioactive; radioluminous products; self-luminous sources; test procedures; classification; containment; designation; light sources; *H116*.
National standards; precision audiofrequency signal generation; precision FM signal generation; precision phase angle generation; radio navigation; VOR; aircraft navigation systems; digital frequency synthesis; *16530*.
Nationwide evaluation; physician; technologist; x-ray departments; x-ray trends; diagnostic; *SP456*, pp. 147-152 (Nov. 1976).
Natural analysis; tall buildings; wind profiles; boundary layer; hurricanes; loads (forces); *15899*.
Natural and synthetic beryls; neutron activation analysis; cesium and scandium content; *SP422*, pp. 1257-1274 (Aug. 1976).
Natural convection; sphere; vertical cylinder; cryogenics; heat transfer; hemisphere; horizontal cylinder; liquid deuterium, liquid hydrogen, liquid nitrogen; *16207*.
Natural disaster; storm; structural engineering; technological

aid; earthquake; Japan; *SP444*, pp. VI-25—VI-31 (Apr. 1976).

Natural disaster; structural connections; typhoons; wind loads; buildings; codes and standards; housing; hurricanes; low-rise buildings; *NBSIR 75-790*.

Natural disasters; Philippines; socioeconomic aspects; typhoons; construction; design; developing countries; earthquakes; low-cost housing; *NBS-GCR-73-21*.

Natural gas; petroleum; physical properties; standard reference materials; coal; energy; fuel; graphite; hydrocarbons; metering; methane; *SP434*.

Natural hazards; structural engineering; tornadoes, wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; *SP444*, pp. V-35—V-49 (Apr. 1976).

Natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; *NBS-GCR-75-36*.

Natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; *NBS-GCR-75-37*.

Natural hazards; structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; *NBS-GCR-75-38*.

Natural radioactivity; standard reference materials; trace elements; analytical methods; coal; environmental samples; environmental standards; fly ash; instrumental neutron activation analysis (INAA); *SP422*, pp. 211-223 (Aug. 1976).

Natural rubber; scaling law; simple materials assumption; elasticity; finite torsion; *16278*.

Natural water; sample storage; sampling; accuracy; analytical chemistry; contamination; errors; *SP422*, pp. 805-836 (Aug. 1976).

Naturalistic studies; safety; accident research; countermeasures; epidimiology; laboratory research; methodology; *NBS-GCR-76-75*.

Navigation system; satellite time and frequency dissemination services; communication satellite; communication system; hf time dissemination services; *16644*.

NBS; radiometry; sources; standards; survey; ultraviolet; detectors; *SP456*, pp. 107-110 (Nov. 1976).

NBS equation; scaling laws; statistical analysis; steam; universality; air constituents; critical region parameters; ethylene; heavy noble gases; helium; linear model; methane; *JPCRD* **5**, No. 1, 1-52 (1976).

NBS programs; buildings energy; energy conservation; *16120*.

NBS publications; key words; publications; abstracts; *SP305*. *Supplement 7*.

NBS Standard Reference Material; preconcentration; spark source mass spectrometry; steel; trace elements; isotope dilution; *15889*.

NBS survey; patrolcar brakes; patrolcar survey; police brake requirements; FMVSS 105a; LAPD brake tests; *16148*.

NBS-campus energy retrofit; retrofitting existing buildings; energy consumption in NYC schools; energy-saving opportunities; incentives—educational, persuasive, financial, regulatory; modular boiler study; *15882*.

NBS-industry; transfer; benefits, industry-society; materials research; measurements-standards; *16280*.

Nb_3Sn; Nb_3Sn magnets; Nb_3Sn multifilamentary wires; strain; stress; superconducting magnets; critical currents; magnets; magnet wire; *16474*.

Nb_3Sn magnets; Nb_3Sn multifilamentary wires; strain; stress; superconducting magnets; critical currents; magnets; magnet wire; Nb_3Sn; *16474*.

Nb_3Sn multifilamentary wires; strain; stress; superconducting magnets; critical currents; magnets; magnet wire; Nb_3Sn; Nb_3Sn magnets; *16474*.

N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); silicon; cells; charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); memory storage density; *16647*.

NCSBCS; on-site construction; prefabricated construction; standards; state-local relationship; state regulations; building codes; factory-built housing; industrialized building; inspection; manufactured building; model codes; model documents; *NBS-GCR-74-27*.

NCSBCS; standards; state regulation; building codes; certification; compliance assurance; evaluation; inspection; manufactured building; model documents; *BSS87*.

Néel temperature; spin-flop; antiferromagnetic transition; antiferromagnetism; dipolar interactions; $ErPO_4$; magnetic phase diagram; *16436*.

Near-field; calibrations; electromagnetic hazards; field meters; gain; microwave; *NBSIR 75-805*.

Near-field energy density; electric energy density; energy density; *16563*.

Near-fields; rf biological hazards; electromagnetic field hazards; electromagnetic field synthesizer; electromagnetic radiation-exposure testing (nonionizing); *TN687*.

Near-resonant scattering; redistribution; strontium; collisions; *16261*.

Necklace model; polymer physics; bead/spring model; dilute polymer solutions; eigenvalue; hydrodynamic interaction; matrix algebra; *J. Res.* **80B** No. 2, 273-284 (1976).

Negative flow resistance; supercritical helium; flow resistance; helium; Ledinegg instability; *16232*.

Negative ion; O^-; O_3^-; photodetachment; photodissociation; CO_3^-; $CO_3^- \cdot H_2O$; *D* region; electron density; molecule; *15877*.

Negative ions; photoelectron spectroscopy; polar molecules; alkali-halide; *15791*.

NEISS; plastics flammability; product safety; accident data; data systems; fabric flammability; FFACTS; fire accidents; fire data systems; fire hazards; fires; hazard analysis; *16361*.

Neonatal hyperbilirubinemia; phototherapy; bilirubin; brain damage; hyperbilirubinemia; *16366*.

Neoplasm; TAST; thermal effects; tissue; tumor; ultrasonic; velocity; absorption; attenuation; brain; *SP453*, pp. 153-163 (Oct. 1976).

Neoprene; smoke; transportation; urethane; flame spread; flammability; full-scale fire tests; laboratory fire tests; Metrorail cars; *NBSIR 75-971*.

Neturon flux monitor; neutron standards; neutrons; $T(p,n)^3He$ reaction; associated particle technique; neutron detector; *16159*.

Network; operations research; algorithm; graph; matroid; *J. Res.* **80B** No. 3, 337-342 (1976).

Network Access Machine; network services; response time; response time predictions; computer networks; minicomputers; *16326*.

Network access techniques; communication; computer networks; *16063*.

Network algorithms; networks; shortest paths; iterative methods; k best paths; linear equations; *16389*.

Network analyzer; phase; reflection coefficient; attenuation; automated; bolometer mount efficiency; measurements; *16509*.

Network analyzers; open circuit reflection coefficient; short circuit; standards; automatic; broad frequency; equations; *16510*.

Network measurement; performance measurement; computer networks; data acquisition; man-machine interaction; minicomputer; *TN912*.

Network protocols; common practices; communication; compatibility; convertibility; information interchange; information networks; interfacing; interlibrary communication; man-machine interaction; *16053*.

Network service; computer networking; distributed networks; *16045*.
Network service; performance evaluation; performance measurement; service; computer networks; data analysis; interactive; *TN897*.
Network services; response time; response time predictions; computer networks; minicomputers; Network Access Machine; *16326*.
Networks; packet switching; protocol; standards; computer networks; data communications; data networks; *16576*.
Networks; packet-switching; standards; computer networks; data communications; *16025*.
Networks; performance requirements; telecommunications; computer communications; computer networking; data communications; *16551*.
Networks; shortest paths; iterative methods; k best paths; linear equations; network algorithms; *16389*.
Networks; six-port; circuit parameters; *16575*.
Networks; specifications; standards; system engineering; building codes; computer model; decision theory; *NBS-GCR-76-55*.
Networks; specifications; standards; systems engineering; building codes; computer program; decision theory; *NBS-GCR-76-56*.
Networks; specifications; standards; systems engineering; building codes; computer program; decision theory; FORTRAN; logic design; *NBS-GCR-76-57*.
Neutral atom; review; shift; Stark broadening; width; experimental; *JPCRD* **5**, No. 2, 209-258 (1976).
Neutral density filter; beam splitter; laser attenuation; *TN677*.
Neutral filters; standard reference materials; transmittance characteristics; ultraviolet-visible filters; evaporated metal-on-quartz; filters, transmittance; *J. Res.* **80A** No. 4, 637-641 (1976).
Neutron; nuclear reactor; radiation; activation analysis; crystal structure; diffraction; isotopes; molecular dynamics; *TN896*.
Neutron; personnel; reactor; dosimetry; gamma; intercomparison; *SP456*, pp. 225-232 (Nov. 1976).
Neutron activation analysis; wet-ashing blank; biological analysis; container blank; *SP422*, pp. 593-604 (Aug. 1976).
Neutron activation; radiochemical separation; trace elements; biological material; biological standards; data evaluation; distillation; food composition; gamma spectrometry; inorganic separators; isotopic exchange; multielement determination; *SP422*, pp. 1173-1180 (Aug. 1976).
Neutron activation analysis; contamination; gas analysis; high purity; materials analysis; *SP422*, pp. 759-772 (Aug. 1976).
Neutron activation analysis; cesium and scandium content; natural and synthetic beryls; *SP422*, pp. 1257-1274 (Aug. 1976).
Neutron activation analysis; neutron gaging; neutron radiography; nondestructive evaluation; nuclear; radioactive tracers; *15956*.
Neutron activation analysis; organomercury; solvent extraction; environmental matrices; extraction yields; mercury; *SP422*, pp. 1233-1240 (Aug. 1976).
Neutron activation analysis; particulates; sampling; species; trace element concentrations; *15783*.
Neutron activation analysis; plasma emission; round robin; x-ray fluorescence; accuracy; anodic stripping voltammetry; arc emission spectroscopy; atomic absorption; environmental analyses; interlaboratory tests; *SP422*, pp. 199-210 (Aug. 1976).
Neutron activation analysis; pollution; sediment; trace elements; water; wet chemical analysis; atomic absorption analysis; Californium-252; Mahoning River; *SP422*, pp. 225-230 (Aug. 1976).
Neutron activation analysis; percision; x-ray fluorescence; accuracy; atomic absorption; environment; *SP422*, pp. 239-245 (Aug. 1976).
Neutron activation analysis; sample preparation; standard materials; trace element analysis; errors of analysis; homogenization; *SP422*, pp. 1293-1304 (Aug. 1976).
Neutron activation analysis; spark source mass spectrometry; atomic absorption spectrometry; isotope dilution analysis; mercury in water, trace analysis; mercury in water, stabilization of; *SP422*, pp. 267-273 (Aug. 1976).
Neutron activation analysis (NAA); time of analysis in NAA and AAS; trace element content in liver biopsies; trace element content in tumor bearing animals; Wilson's disease; atomic absorption spectroscopy (AAS); *SP422*, pp. 231-238 (Aug. 1976).
Neutron beams; neutron filters; neutrons; reactors; resonant scatterer; monoenergetic neutrons; *SP456*, pp. 83-85 (Nov. 1976).
Neutron detector; neturon flux monitor; neutron standards; neutrons; $T(p,n)^3He$ reaction; associated particle technique; *16159*.
Neutron diffraction; amorphous Tb_xFe_{1-x}; Curie temperatues; magnetization measurement; *16405*.
Neutron diffraction; rare earth alloys; amorphous magnetism; direct current sputtering; inelastic neutron scattering; magnetic structures; magnetism; *16555*.
Neutron diffraction; RbN_3 structure; thermal motion; TlN_3 structure; ionic crystal; KN_3 structure; low temperature study; monovalent metal azides; NaN_3 structure; *15973*.
Neutron dosimetry; international intercomparison; *15907*.
Neutron filters; neutrons; reactors; resonant scatterer; monoenergetic neutrons; neutron beams; *SP456*, pp. 83-85 (Nov. 1976).
Neutron flux depression; organic liquid sample irradiation; palladium distribution ratios; platinum distribution ratios; chlorine effect; counting corrections; gamma intensity attenuation; *SP422*, pp. 1181-1187 (Aug. 1976).
Neutron gaging; neutron radiography; nondestructive evaluation; nuclear; radioactive tracers; neutron activation analysis; *15956*.
Neutron interactions with tissue; neutrons; radiation quality; secondary particle spectra; theoretical dosimetry; energy deposition spectra; microdosimetry; *16182*.
Neutron irradiation; recoil; surface effect; accuracy; activation analysis; charged particle irradiation; diffusion; etching; metals; *SP422*, pp. 1165-1171 (Aug. 1976).
Neutron radiography; nondestructive tests; real-time imaging; thermoluminescence; track-etch; films; images; *15796*.
Neutron radiography; nondestructive evaluation; nuclear; radioactive tracers; neutron activation analysis; neutron gaging; *15956*.
Neutron radiography; ultrasonics; x-radiography; end fitting; glass-reinforced-plastic rod end fitting; nondestructive examination; *NBSIR 76-1084*.
Neutron source; radiation instruments; calibration; manganous sulfate; *SP456*, pp. 87-89 (Nov. 1976).
Neutron standards; neutrons; $T(p,n)^3He$ reaction; associated particle technique; neutron detector; neturon flux monitor; *16159*.
Neutrons; plutonium; x rays; betas; calibrations; dosimetry; gammas; *SP456*, pp. 267-276 (Nov. 1976).
Neutrons; radiation hardness; receivers; Schottky-barrier diodes; semiconductors; solid-state devices; x-band measurements; diodes; gamma rays; hardness assurance; microwave mixer diodes; mixers; *SP400-7*.
Neutrons; radiation quality; secondary particle spectra; theoretical dosimetry; energy deposition spectra; microdosimetry; neutron interactions with tissue; *16182*.
Neutrons; reactors; resonant scatterer; monoenergetic neutrons; neutron beams; neutron filters; *SP456*, pp. 83-85 (Nov. 1976).
Neutrons; scattering; albedo; collimation; dosimetry; ion chambers; n-γ dosimetry; *SP456*, pp. 335-341 (Nov. 1976).
Neutrons; $T(p,n)^3He$ reaction; associated particle technique;

neutron detector; neturon flux monitor; neutron standards; *16159*.

New housing; energy conservation; energy efficient design; life-cycle cost models; *16129*.

New York City schools; ventilation; air quality; intermittent operation; maximum allowable concentration of CO_2; *16550*.

New York State offices; office buildings; commercial buildings; energy conservation; energy consumption; Manchester office building; National Bureau of Standards; *16547*.

NFPA; curtains; draperies; FFACTS system; fire; flammable fabrics; *NBSIR 75-902*.

N-γ dosimetry; neutrons; scattering; albedo; collimation; dosimetry; ion chambers; *SP456*, pp. 335-341 (Nov. 1976).

NH; spin-orbit coupling; transition probability; comet; electric-dipole transition; excited states; *16502*.

NH_2^+; OH^+; photoionization; predissociation; Rydberg states; ammonia; appearance potential; autoionization; deuterated species; enthalpy of formation; ionization potential; *16539*.

Nickel; band structure; energy levels; excitation potential; ground state potential; *15842*.

Nickel; nickel-base alloys; polarography; spectrophotometry; x-ray fluorescence spectroscopy; atomic absorption spectrophotometry; emission spectroscopy; *SP422*, pp. 1005-1016 (Aug. 1976).

Nickel; nickel-phosphorus alloy, wear of; auto-catalytic; auto-catalytic nickel; electroless; electroless nickel, hardness of; *16391*.

Nickel; nuclear magnetic resonance; platinum; x-ray photoemission; alloys; copper; electronic density of states; lanthanum; *15768*.

Nickel; palladium; platinum; rhodium; ruthenium; thermomigration; alloys; cobalt; copper; diffusion; electromigration; iron; *JPCRD* **5**, No. 1, 103-200 (1976).

Nickel; pulsed NMR; spin lattice relaxation; Knight shift; magnetism; *16357*.

Nickel; single crystals; tungsten; electron polarization; electron scattering; low energy; *15747*.

Nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; *NBSIR 76-848*.

Nickel alloys; stacking fault energy; x-ray diffraction; invar; iron alloys; *16191*.

Nickel alloys; superconducting machinery; thermal conductivity; composites; copper alloys; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; *NBSIR 75-828*.

Nickel alloys; superconducting machinery; thermal conductivity; aluminum alloys; composites; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; *NBSIR 76-839*.

Nickel, auto-catalytic; nickel, electroless; nickel-phosphorus alloy; wear resistant alloy; auto-catalytic nickel; auto-catalytic nickel, hardness of; auto-catalytic nickel, wear of; electroless nickel; electroless nickel, hardness of; *SP452*, pp. 45-55 (Sept. 1976).

Nickel cobalt oxides; oxygen evolution, Pourbaix diagram; semiconducting oxides; spinels; teflon bonded electrodes; *SP455*, pp. 281-288 (Nov. 1976).

Nickel, electroless; nickel-phosphorus alloy; wear resistant alloy; auto-catalytic nickel; auto-catalytic nickel, hardness of; auto-catalytic nickel, wear of; electroless nickel; electroless nickel, hardness of; electroless nickel, wear of; *SP452*, pp. 45-55 (Sept. 1976).

Nickel hydride; adsorption; catalysis; copper hydride; magnesium oxide; molecular structure; *SP455*, pp. 53-58 (Nov. 1976).

Nickel oxide; oxide electrodes; oxygen electrochemistry; semiconductor electrodes; carbon; electrocatalysis; *SP455*, pp. 203-219 (Nov. 1976).

Nickel oxide; oxide electrodes; oxygen electrode reaction; ruthenium dioxide/titanium dioxide; spinel; electrocatalysis; nickel-cobalt oxide; *SP455*, pp. 289-296 (Nov. 1976).

Nickel single crystals; surface reflection topography; transmission topography; x-ray diffraction topography; crystal perfection; Czochralski growth; domain walls; magnetic domains; *16503*.

Nickel-base alloys; polarography; spectrophotometry; x-ray fluorescence spectroscopy; atomic absorption spectrophotometry; emission spectroscopy; nickel; *SP422*, pp. 1005-1016 (Aug. 1976).

Nickel-cobalt oxide; nickel oxide; oxide electrodes; oxygen electrode reaction; ruthenium dioxide/titanium dioxide; spinel; electrocatalysis; *SP455*, pp. 289-296 (Nov. 1976).

Nickel-phosphorus alloy; wear resistant alloy; auto-catalytic nickel; auto-catalytic nickel, hardness of; auto-catalytic nickel, wear of; electroless nickel; electroless nickel, hardness of; electroless nickel, wear of; nickel, auto-catalytic; *SP452*, pp. 45-55 (Sept. 1976).

Nickel-phosphorus alloy, wear of; auto-catalytic; auto-catalytic nickel; electroless; electroless nickel, hardness of; nickel; *16391*.

Night vision; contrast transfer function; flare; image intensifiers; law enforcement; light equivalent background; light induced; optical gain; *16239*.

Night vision devices; optical transfer function; resolution charts; veiling glare; blooming; contrast transfer function; distortion; flare; image quality; light induced background; limiting resolution; *16599*.

NIKE missile; papers available; stereology; toy safety; x-ray units; computer power; computer standard; corrosion; environment; health care; housing production; I-R 100 awards; *DIM/NBS* **60**, No. 11, 1-24 (1976).

NILECJ Standard; receiver definitions; receiver measurement techniques; FM receivers; law enforcement equipment; minimum performance requirements; *16293*.

NILECJ Standard; receiver definitions; receiver measurement techniques; FM receivers; law enforcement equipment; minimum performance requirements; *16297*.

NILECJ Standard; receiver definitions; receiver measurement techniques; FM receivers; law enforcement equipment; minimum performance requirements; *16303*.

Niobium; spectra; ultraviolet; wavelength; zirconium; molybdenum; *16425*.

NIRA; Photonuclear Data Center; central computer; computer programs; data manipulation; digital data; mass storage; *TN903*.

Nitric oxide; nitrogen dioxide; sulfur dioxide; air pollution; carbon monoxide; gas analysis; gas standards; *15972*.

Nitric oxide; oxygen; tetrafluoroethylene; transverse excitation laser; 2-methyl propene; carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; isotope ratio; *16657*.

Nitric oxide; quenching; sulfur dioxide; emission gas; exhaust; fluorescence; *16444*.

Nitric oxide; Rydberg series; absorption spectrum; identification atlas; *JPCRD* **5**, No. 2, 309-318 (1976).

Nitrogen; oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; *16419*.

Nitrogen; oxygen; thermodynamic properties; air; argon; hydrogen; ionized gases; *16167*.

Nitrogen; oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; beryllium; boron; carbon; chlorine;

helium; hydrogen; lithium; magnesium; *16164.*

Nitrogen; physical adsorption; tungsten; work function; adsorption; *16460.*

Nitrogen; plasma line broadening; spectral lines; Stark broadening; Stark shifts; Stark widths; *16406.*

Nitrogen; saturated liquid; tables; apparatus; density; experimental; magnetic suspension; methane; *16645.*

Nitrogen; sound absorption; argon; bulk viscosity; density expansion; methane; modified Enskog theory; molecular correlations; *16483.*

Nitrogen dioxide; NO_x detection; quantitative detection; infrared detection; laser magnetic resonance; modulated absorption; *16623.*

Nitrogen dioxide; particulate matter; photochemical oxidants; standards; sulfur dioxide; carbon monoxide; hydrocarbons; measurement; *16121.*

Nitrogen dioxide; rotational assignment; spin-rotation splittings; band center; intensities; laser magnetic resonance; *15788.*

Nitrogen dioxide; sulfur dioxide; air pollution; carbon monoxide; gas analysis; gas standards; nitric oxide; *15972.*

Nitrogen dioxide, ν_3 band; nitrogen dioxide, $\nu_3+\nu_2-\nu_2$ band; rotational constants; spectroscopic constants; spin-rotation constants; infrared spectrum; *15753.*

Nitrogen dioxide, $\nu_3+\nu_2-\nu_2$ band; rotational constants; spectroscopic constants; spin-rotation constants; infrared spectrum; nitrogen dioxide, ν_3 band; *15753.*

Nitrogen in steel; atmospheric contamination; blank value; indophenol blue reaction; Kjeldahl digestion technique; limit of detection; *SP422*, pp. 983-1003 (Aug. 1976).

Nitrogen molecules; polarization potential; scattering; static potential; vibrational excitation; close-coupling calculations; crossed beams; cross sections; differential cross sections; electron scattering; inelastic scattering; *16533.*

Nitrogen molecules; rotational excitation; scattering theory; sudden approximation; close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; *15951.*

Nitrogen molecules; rotational excitation; scattering theory; close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; *16618.*

Nitrosamines; trace analysis; carcinogens; food; *SP422*, pp. 727-736 (Aug. 1976).

Nitrous oxide; oscillator strength; photoabsorption; electron energy loss; energy absorption; N_2O; *15751.*

N_{IV} edges; spectroscopy; vacuum ultraviolet; 4*d* photoabsorption; atomic structure; barium; *15845.*

NMR; relative signs; silicon; coupling constants; fluorine; fluoroalkylsilanes; *16432.*

NMR; relaxation; chemical shift; fluoroalkanes; molecular dynamics; *16327.*

NMR; spin-lattice relaxation; spin-spin relaxation; cancer; mice; *J. Res.* **80A** No. 3, 439-450 (1976).

NMR; ^{13}C; alkane; chemical shift tensor; methylene; *16041.*

NMR spectroscopy; 1,3-dithiolene-2-thione; chromium carbonyl; infrared spectroscopy; metal carbonyl; molybdenum carbonyl; *15985.*

NMS; force; *16438.*

NO, NO_2, pollutant detection; apparatus and methods; infrared lasers; magnetic resonance; molecular spectroscopy; *16456.*

Noble gas; spectroscopy; electron beam excitation; heat pipe oven; lasers; metal vapors; *16234.*

Noble gas separation; on-line computer; pulse shape discrimination; tropospheric mixing; Ar-37; atmospheric radioactivity; cosmic-ray reactions; exponential distribution; low-level counting; *15744.*

Noble metals; rare gas; shift; core level; implant; *16080.*

Noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; *16158.*

Noise; community noise; computer interface; instrumentation; minicomputer; *NBSIR 75-692.*

Noise; pavement macrotexture; profile tracer; tires; *NBS-GCR-75-35.*

Noise; pressure; quality control; safety; testing; engineering, instrumentation and techniques; fluids; force; hydraulic equipment; mechanical power; *16452.*

Noise; rating scheme; sound; standards organization; acoustics; *SP386, 1976 Edition.*

Noise; reverberation rooms; room acoustics; sound power; acoustic modelling; acoustics; impact noise; *16433.*

Noise; structural vibration; acoustics; building acoustics; impact noise; *NBS-GCR-75-33.*

Noise; time scale; time standards; clocks; frequency accuracy; frequency stability; frequency standards; infrared frequency multiplication; *16488.*

Noise control and abatement; traffic noise; airborne and structure-borne sounds; aircraft noise intrusion; annoyance; appliance noise; health and hearing hazards; household noise; legal and community action; loudness; *H119.*

Noise measurement; noise (sound); tire noise; transportation noise; truck; acoustics; *15792.*

Noise measurement; noise (sound); tire noise; transportation noise; truck; acoustics; *16370.*

Noise measurement; noise (sound); transportation noise; truck; acoustics; environmental conditions; *NBSIR 76-1138.*

Noise reduction; performance specification; technology incentives; ETIP; government procurement policy; *NBS-GCR-ETIP 73-04.*

Noise reduction; performance specification; technology incentives; energy conservation; ETIP; government procurement policy; *NBS-GCR-ETIP 73-05.*

Noise (sound); tire noise; transportation noise; truck; acoustics; noise measurement; *15792.*

Noise (sound); tire noise; transportation noise; truck; acoustics; noise measurement; *16370.*

Noise (sound); transportation noise; truck; acoustics; environmental conditions; noise measurement; *NBSIR 76-1138.*

Nomenclature; photochemistry; photometry; physical optics; radiometry; spectrometry; spectroradiometry; analytical chemistry; *16331.*

Nonaqueous; semiconductor; silicon; titanium dioxide; acetonitrile; cyclic voltammetry; electrochemistry; *SP455*, pp. 149-152 (Nov. 1976).

Nonbiological transformation; nonbiological transport; pollutant photochemistry; pollutants; soil pollution; solar spectrum; water pollution; adsorption; *NBSIR 76-1130.*

Nonbiological transport; pollutant photochemistry; pollutants; soil pollution; solar spectrum; water pollution; adsorption; nonbiological transformation; *NBSIR 76-1130.*

Noncentral *t*-distribution; normal distribution; statistics; tolerance limits; *J. Res.* **80B** No. 3, 343-346 (1976).

Noncontaminating; sample preparation; biological materials; homogenization; lyophilization; *SP422*, pp. 721-726 (Aug. 1976).

Nondestructive assay; nuclear; safeguards; traceability; calibration; measurement; *16414..*

Nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; *SP400-18.*

Nondestructive evaluation; nuclear; radioactive tracers; neutron activation analysis; neutron gaging; neutron radiography; *15956.*

Nondestructive evaluation; performance; processing; technical strategy; design; development; fabrication; life cycle costing; materials policy; *15873*.
Nondestructive evaluation; productivity; reliability; reproducibility; safety; accuracy; conservation; measurements; *16301*.
Nondestructive evaluation; pulse-echo; ultrasonics; aluminum ultrasonic reference standards; ASTM-type reference standards; calibration; interim reference standard; longitudinal beam; measurement system; *TN924*.
Nondestructive evaluation; pull-out strength; splitting tensile strength; compressive strength; concrete; maturity; mechanical properties; *TN932*.
Nondestructive evaluation; pulse echo; steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; ASTM-type reference standards; calibration; fabrication variables; immersion testing; interim reference standard; *NBSIR 76-984*.
Nondestructive evaluation; research associate program; school systems; smoke detectors; teaching metric; cryogenic fluid; door locks; energy; EPIC supplement; high winds; home security; *DIM/NBS* **60**, No. 4, 1-24 (1976).
Nondestructive evaluation; residual stress; dislocation theory; imperfect continua; internal stress; *16411*.
Nondestructive evaluation; spectral analysis; acoustic emission; dislocations; *16602*.
Nondestructive evaluation; survey; water hardness; corrosion; corrosion control; metallic piping; *NBSIR 75-923*.
Nondestructive evaluation; thermographic surveys; thermography; energy conservation; energy surveys; infrared; *TN923*.
Nondestructive evaluation (NDE); radiography; welding; fracture control; fracture mechanics; mechanical properties; *NBSIR 76-1154, Vol. 1*.
Nondestructive evaluation (NDE); radiography; welding; fracture control; fracture mechanics; mechanical properties; *NBSIR 76-1154, Vol. 2*.
Nondestructive examination; neutron radiography; ultrasonics; x-radiography; end fitting; glass-reinforced-plastic rod end fitting; *NBSIR 76-1084*.
Nondestructive inspection; acoustic emission; acoustics; flaw detection; *16269*.
Nondestructive test; nonlinear operation; optical scanner; reliability; transistors; failure analysis; hot spots; integrated circuits; laser scanner; measurement method; *SP400-27*.
Nondestructive test; nonlinearity measurement; UHF transistor measurement; active devices; hot spots; laser scanning; logic flow observation; LSI testing; *15781*.
Nondestructive testing; modulation transfer function; vision; visual acuity; visual capacities; *NBSIR 76-1142*.
Nondestructive testing; Raman scattering; sample characterization; semiconductor; cuprous oxide; implantation; ion; *15915*.
Nondestructive testing; silicon optical absorption coefficient; temperature mapping; active devices; hot-spot behavior; laser scanning; *16577*.
Nondestructive testing; thickness of coal layer; automation; coal; coal mine safety; dielectric constant; energy; microwave measurement; *NBSIR 76-840*.
Nondestructive tests; P-MOS shift register; active devices; laser scanning; logic flow observation; LSI testing; measurement of operating margins; *15833*.
Nondestructive tests; real-time imaging; thermoluminescence; track-etch; films; images; neutron radiography; *15796*.
Nondestructive tests; semiconductor devices; UHF transistor measurements; device nonlinearity measurements; hot spots, transistor; laser scanning; *16571*.
Nondispersive x-ray analysis; overheated receptacle; scanning electron microscope; aluminum wire; *16317*.
Nondistortion part support; position errors; quality and compatible part material; quality diamond tools; controlled environment; diamond machining; machined optics; *SP435*, pp. 75-89 (Apr. 1976).
Nonentertainment television; two-way television; wired city; wired nation; broadband interactive terminals; cable television uses; checkless society; computer/communications networks; computer/communications services; computer/communications standards; *NBS-GCR-75-44*.
Nonequilibrium; oxygen atoms; RRKM; thermal decomposition; alcohols; chemical activation; *15881*.
Nonflame, atomization; stray light; xenon-mercury, arc lamp; arsenic; atomic absorption; atomic spectrometry; background, correction; *15894*.
Nonflame graphite furnace; sensitivity *vs.* precision and accuracy; Standard Reference Materials; atomic absorption spectrometry; *SP422*, pp. 1045-1051 (Aug. 1976).
Nonhydrodynamic regime; relaxation time; transport coefficients; Zwanzig-Mori formalism; hydrodynamic regime; ideal gas memory function; limit of stability; metastable fluid states; *16601*.
Non-ionizing EM radiation hazards; RF and microwave measurements; standards; calibrations; laser calorimeters; measurement assurance programs; *SP456*, pp. 417-425 (Nov. 1976).
Nonionizing fields; probes; radiation; *16534*.
Nonisothermal diffusion; silver-aluminum; thermomigration; vacancies; alloys; aluminum; copper-aluminum; *15774*.
Nonlinear absorption; nonlinear optical properties; semiconductor optical properties; two-photon absorption coefficients; multiphoton processes; *SP435*, pp. 369-388 (Apr. 1976).
Nonlinear analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; bonded joints; computer simulation; cyclic loading; debond analysis; finite element analysis; joints; *16147*.
Nonlinear index of refraction; optical distortion; thermal fracture; two-photon absorption; *SP435*, pp. 395-405 (Apr. 1976).
Nonlinear least squares; thermodynamic properties; vapor pressure; activity coefficients; aqueous; computer programs; data evaluation; electrolytes; electromotive force; isopiestic method; osmotic coefficients; *TN928*.
Nonlinear operation; optical scanner; reliability; transistors; failure analysis; hot spots; integrated circuits; laser scanner; measurement method; nondestructive test; *SP400-27*.
Nonlinear optical properties; semiconductor optical properties; two-photon absorption coefficients; multiphoton processes; nonlinear absorption; *SP435*, pp. 369-388 (Apr. 1976).
Nonlinear optics; Raman spectroscopy; CARS; diphenylo tatetraene (dilute solution); four-wave numbering; HORSES; *15716*.
Nonlinear refractive index; picosecond laser pulses; avalanche ionization; dielectric breakdown; inclusions; laser damage threshold; morphology; *SP435*, pp. 321-330 (Apr. 1976).
Nonlinear spectroscopy; saturated absorption; lasers; *16093*.
Nonlinearity measurement; UHF transistor measurement; active devices; hot spots; laser scanning; logic flow observation; LSI testing; nondestructive test; *15781*.
Nonmercurial fungicides; accelerated testing; alkyd paints; environmental chamber; exterior exposure; latex paints; *16416*.
Nonmetals; photoelectrolysis; solid electrolytes; surfaces; catalysis; characterization; chemisorption; electrocatalysis; electrochemistry; electrode processes; *SP455*.
Nonnegative matrix; Perron-Frobenius eigenvalue; spectrum of a square complex matrix; *D*-stable matrix; field of values; Gersgorin's theorem; *15770*.
Nonpolar systems; radiation chemistry; radiation physics; electrons; free ions; ion yields; liquid; *NSRDS-NBS57*.
Nonpolymeric constituents in plastics; plastics testing; polymer analysis; properties; test methods; *16225*.
Nonrandom walk equation; atom migration; correlation factor;

crystal defect; diffusion coefficient; matrix equations; *15776*.
Nonreactive lubricants; rust inhibited perfluoro greases; surface chemistry lubrication; chemisorption; corrosion preventives; inhibitor additives; LOX compatible greases; *SP452*, pp. 106-119 (Sept. 1976).
Nonresonant; potential curves; resonant; spin exchange; adiabatic collisions; charge transfer; *15875*.
Nonspherical molecules; Ornstein-Zernike theory; thermal conductivity; correlation length; critical point; gas-liquid; *16484*.
Nonstoichiometry; octacalcium phosphate; solubility; surface; amorphous calcium phosphate; bone mineral; fluorapatite; hydroxyapatite; morphology; *16307*.
Nonstoichiometry; phase composition; phase stability; atomic ordering; A15 compounds; intermetallic compounds; *15848*.
Nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; static loads; stiffness; structural safety; design; dynamic loads; guardrails; industrial accidents; *NBSIR 76-1131*.
Nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; structural safety; anthropometric measurements; guardrails; industrial accidents; *NBSIR 76-1132*.
Normal butane; saturated liquid; table; density; experimental; magnetic suspension densimeter; *16646*.
Normal distribution; statistics; tolerance limits; noncentral *t*-distribution; *J. Res.* **80B** No. 3, 343-346 (1976).
Normal liquids; sound; acoustic properties of liquids; acoustics; Knester liquids; *16170*.
Normal matrix; numerical range; orthogonal; spectrum; eigenvector; *16348*.
Normally distributed points; numerical analysis; optimization; stochastic Weber problem; always convergent algorithms; exponentially distributed points; facility location; location theory; *J. Res.* **80B** No. 1, 53-73 (1976).
Notch wattmeter; pulse-CW equalization; pulse modulated carrier systems; rf peak pulse power; *TN682*.
Novosibirsk; pressure-broadened line shapes; Soviet Union; submillimeter waves; high resolution molecular spectroscopy; lasers; meeting report; *16010*.
NO_x detection; quantitative detection; infrared detection; laser magnetic resonance; modulated absorption; nitrogen dioxide; *16623*.
NO_2; spectra; temperature effects; absorption: extinction coefficients; N_2O_4; *J. Res.* **80A** No. 2, 143-166 (1976).
n-p-n transistor fabrication; *p-n* junctions; resistivity; semiconductor electronics; sheet resistors; silicon; test pattern; test structures; dopant density; microelectronics; MOS capacitors; *SP400-22*.
NSF; RANN; R & D incentives; tissue characterization; tissue signature; ultrasonic diagnosis; ultrasound; applied research; imaging; instrumentation technology; medical ultrasonics; *SP453*, pp. 7-10 (Oct. 1976).
Nuclear; radioactive tracers; neutron activation analysis; neutron gaging; neutron radiography; nondestructive evaluation; *15956*.
Nuclear; safeguards; standards; fuel; materials accountability; measurements; *16481*.
Nuclear; safeguards; traceability; calibration; measurement; nondestructive assay; *16414*..
Nuclear backscattering analysis; scanning electron microscopy; thin films; x-ray analysis; electron probe microanalysis; Monte Carlo electron trajectory calculations; *SP460*, pp. 129-138 (Dec. 1976).
Nuclear data; slowing-down spectra; energy deposition spectra; fast neutrons; initial spectra; microdosimetric parameters; *15950*.
Nuclear decay; pressure calibrations; spectroscopy; x-ray diffraction; diamond cell; electrical resistance; high pressure; *16375*.
Nuclear electric hexadecapole moments; nuclear electric quadrupole moments; nuclear magnetic dipole moments; nuclear magnetic octupole moments; nuclear spins; evaluated data; *JPCRD* **5**, No. 4, 835-1092 (1976).
Nuclear electric quadrupole moments; nuclear magnetic dipole moments; nuclear magnetic octupole moments; nuclear spins; evaluated data; nuclear electric hexadecapole moments; *JPCRD* **5**, No. 4, 835-1092 (1976).
Nuclear electric quadrupole moments; nuclear magnetic dipole moments; Mössbauer; *JPCRD* **5**, No. 4, 1093-1122 (1976).
Nuclear engineering; structural engineering; tornadoes; wind; missiles; *NBSIR 76-1050*.
Nuclear magnetic dipole moments; nuclear magnetic octupole moments; nuclear spins; evaluated data; nuclear electric hexadecapole moments; nuclear electric quadrupole moments; *JPCRD* **5**, No. 4, 835-1092 (1976).
Nuclear magnetic dipole moments; Mössbauer; nuclear electric quadrupole moments; *JPCRD* **5**, No. 4, 1093-1122 (1976).
Nuclear magnetic octupole moments; nuclear spins; evaluated data; nuclear electric hexadecapole moments; nuclear electric quadrupole moments; nuclear magnetic dipole moments; *JPCRD* **5**, No. 4, 835-1092 (1976).
Nuclear magnetic resonance; oxidative addition; palladium; boron hydrides; deuterium; iridium; maleonitriledithiolate; metalloboranes; *16566*.
Nuclear magnetic resonance; platinum; x-ray photoemission; alloys; copper; electronic density of states; lanthanum; nickel; *15768*.
Nuclear magnetic resonance; polyethylene; short-chain branching; branching; limiting viscosity numbers; long-chain branching; *16244*.
Nuclear magnetic resonance spectroscopy; phenylmercuric acetate; volatilization; bacteria; elemental mercury; flameless atomic absorption spectroscopy; laser Raman spectroscopy; *15897*.
Nuclear material diversion; nuclear materials; safeguards; safeguards information system; decision structure; information system; *16525*.
Nuclear material information systems; nuclear materials safeguards; safeguards; decision makers; decision structure; information flows; *16526*.
Nuclear material safeguards; safeguards; analysis; diversion of nuclear materials; diversion path analysis; internal control system characterization; *16536*.
Nuclear materials; safeguards; safeguards information system; decision structure; information system; nuclear material diversion; *16525*.
Nuclear materials safeguards; process losses; material balance accounting; *16263*.
Nuclear materials safeguards; safeguards evaluation; safeguards system design; societal risk; *16514*.
Nuclear materials safeguards; safeguards; decision makers; decision structure; information flows; nuclear material information systems; *16526*.
Nuclear matter; optical properties; photon; plasma frequency; absorption cross section; index of refraction; *J. Res.* **80A** No. 1, 9-13 (1976).
Nuclear medicine; quality assurance; radiopharmaceuticals; ^{99m}Technetium; gamma camera; *SP456*, pp. 131-138 (Nov. 1976).
Nuclear medicine; radionuclide; radiopharmaceutical; absorbed dose; calculation; dosimetry; *15977*.
Nuclear parameters; recent advances; tables; theory; chemical applications; instrumentation; Mössbauer spectrometry; *16332*.
Nuclear power; police radars; solar energy; SRM's; computer systems; environmental; fire; glass door; lead nitrate; mercury thermometers; metric; *DIM/NBS* **60**, No. 2, 1-25 (1976).
Nuclear reactions; $^{186, 187}$Os(n,γ); $E_n = 25$ keV; measured cross-

section ratio; *16579.*

Nuclear reactor; radiation; activation analysis; crystal structure; diffraction; isotopes; molecular dynamics; neutron; *TN896.*

Nuclear Regulatory Commission; standards development; technological change; administrative experiment; American National Standards Institute; Experimental Technology Incentives Program; *NBS-GCR-ETIP 76-16.*

Nuclear resonance profiling; photodepopulation; photovoltaic imaging; Rutherford backscattering; SCANIIR; secondary ion mass spectroscopy; semiconductor devices; silicon; surface analysis; x-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; *SP400-23.*

Nuclear spin; rate coefficients; transition-state theory; chemical reactions; collision theory; hydrogen atoms; hydrogen molecules; indistinguishable particles; *16214.*

Nuclear spins; evaluated data; nuclear electric hexadecapole moments; nuclear electric quadrupole moments; nuclear magnetic dipole moments; nuclear magnetic octupole moments; *JPCRD* **5,** No. 4, 835-1092 (1976).

Nuclear track analysis; sample homogeneity; detector techniques; *SP422,* pp. 457-459 (Aug. 1976).

Nuclear track technique; standard reference material; steel; alpha particles; boron; ion microprobe mass analyzer; *15789.*

Nuclear weapon theft; perceptual processes; psychological deterrence; security systems; sensory processes; threat analysis; behavioral impact; cognitive processes; *NBSIR 76-1007.*

Nucleate boiling; subcritical; supercritical; transition; turbulent flow; buoyancy; channels; film boiling; forced convection; helium I; helium II; mixed convection; *TN675.*

Nucleation; oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; *16274.*

Nucleation; overcompression; supercooling; glassy state; Lennard-Jones system; Monte Carlo simulation; *J. Res.* **80A** No. 1, 59-64 (1976).

Nucleophilic reactivity; onium salts; polar solvents; pollutants; quaternization; alkyl halides; antimony; arsenic; environment; kinetics; methylation; *16628A.*

Numerical analysis; optimization; stochastic Weber problem; always convergent algorithms; exponentially distributed points; facility location; location theory; normally distributed points; *J. Res.* **80B** No. 1, 53-73 (1976).

Numerical calculations; relaxation phenomena; vibrational populations; floquet theory; laser-induced reactions; multiphoton processes; *16242.*

Numerical error; perfect lattice; thermal conductivity; thermal diffusivity; thermo-elastic coupling; continuum theory of diffusion; density; kinetic temperature; molecular dynamics; *16281.*

Numerical range; orthogonal; spectrum; eigenvector; normal matrix; *16348.*

Numerical solution; shear wave; elastic medium; engineering seismology; ground layer; *SP444,* pp. III-1—III-12 (Apr. 1976).

Numerical solutions; constrictions; gas discharge; helium; ionized gas; *16000.*

Nursing homes; realms; building fires; case studies; critical events; decisions; episodes; fires; home for the aged; hospital fires; human behavior; institutions; mapping; models; *NBS-GCR-76-73.*

Nursing homes; reliability; schools; smoke detectors; atriums; fire detection; flame detectors; heat detectors; hospitals; hotels; maintenance; *16179.*

Nylon; wool; cotton; cotton/polyester; extinguishment; fabric flammability; fabrics; fibers; finishes; flame retardant treatments; *NBS-GCR-76-71.*

N_2^+; radiative; transition probability; CO^+; CO_2^+; coincidence; electron impact; ions; lifetime; molecule; *15912.*

N_2; predissociation; radiative recombination; $^5\Sigma_g^+$; electronic structure; energy curve; *16442.*

N_2O; nitrous oscillator strength; photoabsorption; electron energy loss; energy absorption; *15751.*

N_2O; oscillator strengths; UV; electron energy loss; *15998.*

N_2O; relative intensities; H_2CO; inelastic electron scattering; infrared transitions; *16578.*

N_2O_4; NO_2; spectra; temperature effects; absorption: extinction coefficients; *J. Res.* **80A** No. 2, 143-166 (1976).

O

O^-; O_3^-; photodetachment; photodissociation; CO_3^-; $CO_3^- \cdot H_2O$; *D* region; electron density; molecule; negative ion; *15877.*

Oblique incidence; standing waves; electric fields; laser damage; *SP462,* pp. 25-28 (Dec. 1976).

Observed (technical) fluorescence parameters; polarization; radiative and nonradiative transition probabilities; real fluorescence parameters; fluorescence lifetime; fluorescence quantum efficiency; fluorescence quantum yields; *J. Res.* **80A** No. 3, 389-399 (1976).

Occupancy live loads; structural engineering; buildings; fire loads; load surveys; *16072.*

Occupancy live loads; structural engineering; buildings; fire loads; load surveys; *BSS85.*

Occupancy safety; slip-resistance; slip-resistance testers; walking friction; building safety; floor surface friction; *TN895.*

Occupational exposure standard criteria; occupational health control; precision; trace element analyses; accuracy; blood lead analyses; clinical chemistry; industrial lead hygiene; interlaboratory correlations; lead hygiene control; *SP422,* pp. 275-282 (Aug. 1976).

Occupational hazards; performance standard; personnel railings; personnel safety; static loads; stiffness; structural safety; design; dynamic loads; guardrails; industrial accidents; nonstructural safety; *NBSIR 76-1131.*

Occupational hazards; performance standard; personnel railings; personnel safety; structural safety; anthropometric measurements; guardrails; industrial accidents; nonstructural safety; *NBSIR 76-1132.*

Occupational health control; precision; trace element analyses; accuracy; blood lead analyses; clinical chemistry; industrial lead hygiene; interlaboratory correlations; lead hygiene control; occupational exposure standard criteria; *SP422,* pp. 275-282 (Aug. 1976).

Occupational safety and health; fatalities; fire fighter; *NBS-GCR-76-60.*

Ocean biota analysis; phthalate trace analysis; air analysis; analytical blank; gas chromatography; *SP422,* pp. 701-708 (Aug. 1976).

Oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; *TN894.*

OCR; OCR forms; optical character recognition; standards; business forms; computers; data entry systems; information processing systems; information processing standards; *FIPS PUB 40.*

OCR forms; optical character recognition; standards; business forms; computers; data entry systems; information processing systems; information processing standards; OCR; *FIPS PUB 40.*

Octacalcium phosphate; pyrolysis; pyrophosphate; stoichiometry; whitlockite; β-tricalcium; calcification; calcium; dicalcium phosphate; *15996.*

Octacalcium phosphate; solubility; surface; amorphous calcium

phosphate; bone mineral; fluorapatite; hydroxyapatite; morphology; nonstoichiometry; *16307*.
Office buildings; commercial buildings; energy conservation; energy consumption; Manchester office building; National Bureau of Standards; New York State offices; *16547*.
Offshore zone; oscillatory water tunnel; permeability effect on sand transport; ripples, sand; sand motion under waves; beach accretion; coastal processes; *15793*.
OH^+; photoionization; predissociation; Rydberg states; ammonia; appearance potential; autoionization; deuterated species; enthalpy of formation; ionization potential; NH_2^+; *16539*.
OH-18-cm radiation; optical pumping; polarization; comets; fluorescence; *16513*.
Oil filters; oil monitors; particle detectors; spectrograph; chip detectors; ferrograph; lube oil analysis; magnetic drain plugs; *NBS-GCR-74-23*.
Oil monitors; particle detectors; spectrograph; chip detectors; ferrograph; lube oil analysis; magnetic drain plugs; oil filters; *NBS-GCR-74-23*.
Oil spill; petroleum; quantitation; gas chromatography; liquid chromatography; *16423*.
Oligomers; sebacates; triglycerides; correlation; esters; heat capacity; *16275*.
Omnidirectional pressure probe; pressure probe shroud; static pressure; weatherproof pressure probe; wind field pressure measurements; ambient pressure probe; *U.S. Patent 3,950,995*.
OMNITAB II computing system; technology transfer; terminals; acceptance tests; AID; Bolivia; CENACO; computing using Spanish; foreign relations; international agreement; lectures; *NBSIR 76-1176*.
One-port parameters; six-port junction; application of six-port junction concept; automated measurements; broadband measurements; microwave measurements; microwave power measurements; *16501*.
Onium salts; polar solvents; pollutants; quaternization; alkyl halides; antimony; arsenic; environment; kinetics; methylation; nucleophilic reactivity; *16628A*.
On-line computer; pulse shape discrimination; tropospheric mixing; Ar-37; atmospheric radioactivity; cosmic-ray reactions; exponential distribution; low-level counting; noble gas separation; *15744*.
Online services; online systems; bibliographic information systems; computer technology; information storage and retrieval; interactive systems; *16548*.
On-line simulation of temperature controls; thermal response factors; *16220*.
Online systems; bibliographic information systems; computer technology; information storage and retrieval; interactive systems; online services; *16548*.
On-site construction; prefabricated construction; standards; state-local relationship; state regulations; building codes; factory-built housing; industrialized building; inspection; manufactured building; model codes; model documents; NCSBCS; *NBS-GCR-74-27*.
Opal glass; radiant flux; reflectance standards; standards calibration; barium sulfate; diffuse reflectance spectra; magnesium oxide; *J. Res.* **80A** No. 4, 585-595 (1976).
Open channel flow measurement; Palmer-Bowlus flumes; sewage flow measurement; flow measurement, water; flumes, measuring; *15738*.
Open circuit reflection coefficient; short circuit; standards; automatic; broad frequency; equations; network analyzers; *16510*.
Open loop breathing apparatus; protective clothing; smoke inhalation; standards; breathing apparatus; closed loop breathing apparatus; equipment design; fire fighters; fire fighting; fire fighting equipment; fire gases; *NBS-GCR-73-10*.
Open symposium; general assembly; *16582*.
Operating system; overhead; resource allocation; simulator; strategies; workload; FORTRAN IV; *16062*.
Operating system security; security flaws; software security; taxonomy of integrity flaws; UNIVAC 1100 Series OS; BBN-TENEX; IBM OS/360; *NBSIR 76-1041*.
Operating system structures; protection; reliable software; reliability; security; small protection domains; types; capability; capability-based addressing; computer security; extended-type objects; *TN919*.
Operation BREAKTHROUGH; U-value; building classification; building thermal mass; building thermal performance; building thermal time constant; housing systems; industrialized housing; mass per unit area; *NBSIR 75-678*.
Operational amplifier; pulses; radiation; safety; x-ray generators; x rays; calibration; electrical measurements; electro-optics; frequency response; high voltage; Kerr effect; *NBSIR 75-775*.
Operations research; algorithm; graph; matroid; network; *J. Res.* **80B** No. 3, 337-342 (1976).
Operations research; systems analysis; urban problems; *16119*.
Operations research; thermal burn hazards; burn hazards, household appliances; fault-tree diagrams; generic safety standards; household appliances; *NBSIR 76-1097*.
Operations research—NS; management need; *NBSIR 76-1096*.
Ophthalmic lens; proof testing; research associate program; sampling test; drop ball test; impact resistance; *NBSIR 76-996*.
Ophthalmic lens; quasi-static theory; strain gage measurements; drop-ball test; impact; lens; *16310*.
Ophthalmic lenses; shape; drop-ball test; edge; fracture; impact; *16311*.
Ophthalmic lenses; stress distributions; fracture; glass; impact; *15769*.
Opposed flow diffusion flame; oxygen index; fire retardant mechanisms; fire retardant polymers; fire retardants; mass transfer number; *NBS-GCR-75-40*.
Optical; biferrocenylene; delocalization; intramolecular exchange; magnetic susceptibility; mixed valence; Mössbauer spectra; *16049*.
Optical; defocusing; image space off-axis; line scanner; *16288*.
Optical; oscilloscope; photoconductor; picosecond; sampling; sampling oscilloscope; strobe; GaAs; laser; *15835*.
Optical; standard reference materials; thermophysical properties symposium; waste heat; computer; consumer; drugs; electrical pulses; environmental standards; friction measurement; lead poisoning; LNG data; *DIM/NBS* **60**, No. 9, 1-24 (1976).
Optical absorptance; reflectance; scattering; temperature dependence; wavelength dependence; multilayer dielectric mirror; *SP435*, pp. 230-235 (Apr. 1976).
Optical absorption; calorimetry; laser; laser materials; *15935*.
Optical absorption; optical components; optical scattering; diamond single point turning; interferometric control; laser damage threshold; *SP462*, pp. 145-148 (Dec. 1976).
Optical absorption; optical scattering; thin-film coating; alkali halides; antireflectance coating; chalcogenide glasses; infrared optical properties; laser damage; *SP462*, pp. 214-220 (Dec. 1976).
Optical absorption; perovskite; strontium titanate; transition metal; zero phonon line; charge transfer, color centers; crystal field; d^4 ions; EPR; iron 4+; *16201*.
Optical absorption; RbCl; $SrCl_2$; double-doped KCl laser windows; grain boundary stability; hot forging; KCl; mechanical strength; microstructure; *SP462*, pp. 82-86 (Dec. 1976).
Optical absorption; surface roughness; Auger analysis; diamond-turned metal mirrors; laser damage; light scattering; *SP462*, pp. 158-164 (Dec. 1976).
Optical absorption; water repellent coatings; chemical lasers; infrared materials; laser windows; multiphonon absorption; *SP462*, pp. 45-49 (Dec. 1976).

Optical absorption coefficients; transparent materials; barothermal; gas pressure; heat diffusion; heat transfer; *15916.*
Optical anemometry; optical birefringence; optical excess tensor; optical mapping of flow; stress excess tensor; two-dimensional flow; flow with longitudinal gradient; flow with transverse gradient; *15775.*
Optical birefringence; optical excess tensor; optical mapping of flow; stress excess tensor; two-dimensional flow; flow with longitudinal gradient; flow with transverse gradient; optical anemometry; *15775.*
Optical character recognition; standards; business forms; computers; data entry systems; information processing systems; information processing standards; OCR; OCR forms; *FIPS PUB 40.*
Optical coatings; standing-waves; dielectric films; electric fields; laser damage; *SP462,* pp. 301-309 (Dec. 1976).
Optical coatings; thin films; damage threshold; *SP435,* pp. 248-253 (Apr. 1976).
Optical components; optical scattering; diamond single point turning; interferometric control; laser damage threshold; optical absorption; *SP462,* pp. 145-148 (Dec. 1976).
Optical constants; passive; pitting; spectroscopy; ellipsometry; iron; kinetics; *16216.*
Optical constants; refractive index; temperature coefficient of refractive index; alkali halides; *JPCRD* **5,** No. 2, 329-528 (1976).
Optical constants; ruthenium; ellipsometry; *16467.*
Optical coupling; pulse measurement; automation; electrical measurements; electrooptics; high voltage measurement; Kerr effect; *15718.*
Optical density; room furnishings; smoke production; smoke tests; building materials; fires; *16557.*
Optical distortion; thermal fracture; two-photon absorption; nonlinear index of refraction; *SP435,* pp. 395-405 (Apr. 1976).
Optical excess tensor; optical mapping of flow; stress excess tensor; two-dimensional flow; flow with longitudinal gradient; flow with transverse gradient; optical anemometry; optical birefringence; *15775.*
Optical fabrication; chamfering; continuous polishing; grinding; metal polishing; *SP435,* pp. 3-9 (Apr. 1976).
Optical fabrication; optical materials; thin films; avalanche ionization; infrared windows; laser damage; metal mirrors; *SP462.*
Optical figure; polishing; scattered light; surface absorption; alkali-halide; KCl; laser windows; *SP435,* pp. 20-28 (Apr. 1976).
Optical figure; pulsed laser; thermal distortion; laser windows and mirrors; *SP462,* pp. 11-24 (Dec. 1976).
Optical figure; scattered light; diamond turning; laser damage; metal mirrors; micromachining; *SP435,* pp. 49-56 (Apr. 1976).
Optical flat; profile; standard deviation; uncertainty; calibration; diameter; gravitational bending; interferometry; least squares line; linear model; *NBSIR 75-975.*
Optical flying-spot scanner; oxide films; passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; *SP400-19.*
Optical flying-spot scanner; passivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; silicon; *SP400-25.*
Optical frequency; optical heterodyne; wavelength comparison; interferometer; laser; *15887.*
Optical frequency standards; recoil effect; relativity; CH_4 hyperfine structure; high resolution spectroscopy; laser spectroscopy; line shape; *16603.*
Optical frequency standards; saturated absorption spectroscopy; lineshape theory; *16610.*
Optical gain; contrast transfer function; distortion; flare; image intensifier tubes; infrared searchlights; infrared viewers; light equivalent background; light induced background; *16238.*
Optical gain; night vision; contrast transfer function; flare; image intensifiers; law enforcement; light equivalent background; light induced; *16239.*
Optical heterodyne; wavelength comparison; interferometer; laser; optical frequency; *15887.*
Optical heterodyne spectroscopy; quadrupole hyperfine interactions; saturated absorption spectroscopy; high resolution spectroscopy; methyl halides; *16407.*
Optical interferometric measurements; ultrasonic medicine; ultrasonic radiation; *SP456,* pp. 285-297 (Nov. 1976).
Optical isolation; $CdCr_2S_4$; chalcogenide spinel; Faraday effect; ferromagnetic semiconductor; hot-pressed; infrared transmission; laser induced damage; *SP462,* pp. 126-135 (Dec. 1976).
Optical mapping of flow; stress excess tensor; two-dimensional flow; flow with longitudinal gradient; flow with transverse gradient; optical anemometry; optical birefringence; optical excess tensor; *15775.*
Optical materials; photoacoustic method; absorption coefficients; heat diffusion equations; highly transparent solids; hydrodynamic equations; *15971.*
Optical materials; thermal distortion; interferometry; laser windows; *SP462,* pp. 36-44 (Dec. 1976).
Optical materials; thin films; avalanche ionization; infrared windows; laser damage; metal mirrors; optical fabrication; *SP462.*
Optical microscope; photomasks; scanning electron microscope; dimensional metrology; integrated circuits; line-width measurements; microelectronics; *15864.*
Optical probe technique; refractive index variation; damage electron density; electron density transient; free electron absorption; laser induced surface damage; *SP435,* pp. 356-361 (Apr. 1976).
Optical probe technique; thin film; time resolved damage; adhesion effect; laser induced damage; *SP435,* pp. 284-288 (Apr. 1976).
Optical properties; photon; plasma frequency; absorption cross section; index of refraction; nuclear matter; *J. Res.* **80A** No. 1, 9-13 (1976).
Optical properties; polarized luminescence; symmetry; transition metal ions; chromium 3+; crystal vacancies; cubic crystals; depolarization; impurity compensation; luminescence; magnesium oxide; MgO; *16521.*
Optical pulse; oscilloscope; photoconductor; pulse measurements; sampling; laser; *16193.*
Optical pumping; polarization; comets; fluorescence; OH-18-cm radiation; *16513.*
Optical pyrometry; radiation heating; vapor pressures; AlO_2; Al_2O_3; emissivity; evaporation coefficient; Langmuir vaporization; *16540.*
Optical quantities; surface properties; thermal quantities; time and frequency; acoustics; atomic properties; economics; electrical quantities; ionizing radiation; mechanical quantities; national measurement system; *NBSIR 75-947.*
Optical quantities; thermal quantities; time and frequency; acoustic quantities; electrical quantities; electromagnetic quantities; end-use measurements; ionizing radiation; measurement activities; measurement institutions; mechanical quantities; *NBSIR 75-943.*
Optical radiation; pyroelectrics; radiometers; *15830.*
Optical radiation measurement; photometry; radiometry; spectroradiometry; *TN910-1.*
Optical radiation measurement; radiometry; systematic errors; uncertainties; accuracy; *16583.*
Optical scanner; reliability; transistors; failure analysis; hot spots; integrated circuits; laser scanner; measurement method; nondestructive test; nonlinear operation; *SP400-27.*

Optical scattering; biaxial birefringence; epitaxial microstructure; *SP462*, pp. 239-245 (Dec. 1976).
Optical scattering; diamond single point turning; interferometric control; laser damage threshold; optical absorption; optical components; *SP462*, pp. 145-148 (Dec. 1976).
Optical scattering; thin-film coating; alkali halides; antireflectance coating; chalcogenide glasses; infrared optical properties; laser damage; optical absorption; *SP462*, pp. 214-220 (Dec. 1976).
Optical spectra; oxygen; reaction mechanisms; ring-disk electrodes; electrocatalysis; electronic structure; hydrogen peroxide; iron phthalocyanines; Mössbauer; *SP455*, pp. 241-251 (Nov. 1976).
Optical spectroscopy; phosphorus; polyester; flame retardancy; mass spectrometry; *16037*.
Optical spectroscopy; Stark effect; atomic hydrogen; Balmer alpha; beam foil; crossed beams; electrons; excitation; *15891*.
Optical square; pentaprism; reflection; refraction; standard deviation; uncertainty; autocollimator; calibration; constant deviation prism; geometrical model; *NBSIR 76-993*.
Optical standards; safety wheels; bike regulations; bomb disarmament; computer auditing; energy options; explosive vapor detectors; firebug; impulse generators; MHD electrode materials; *DIM/NBS* **60**, No. 7, 1-24 (1976).
Optical transfer function; point spread function; acutance; contrast transfer function; edge gradient; image quality; light equivalent background; light induced background; limit resolution; line spread function; *16197*.
Optical transfer function; resolution charts; veiling glare; blooming; contrast transfer function; distortion; flare; image quality; light induced background; limiting resolution; night vision devices; *16599*.
Optician; polishing; surfaces; zinc selenide; copper; molybdenum; *SP435*, pp. 10-13 (Apr. 1976).
Optics; research at NBS; *16658*.
Optimization; resonance; scattering; tissue characterization; tissue parameters; tumor detection; ultrasound; diagnosis; Doppler effect; *SP453*, pp. 11-17 (Oct. 1976).
Optimization; stochastic Weber problem; always convergent algorithms; exponentially distributed points; facility location; location theory; normally distributed points; numerical analysis; *J. Res.* **80B** No. 1, 53-73 (1976).
Optimization and feasibility; rehabilitation, conservation; housing; housing demand, supply, needs; housing rehabilitation; land economics; market adjustments; *NBSIR 76-1043*.
Optimization techniques; pattern recognition; signal processing; spectral resolution; statistics; analytical chemistry; curve fitting; data reduction; feature selection; multivariate analysis; *15964*.
Orbitals; potential energy curves; pseudopotentials; self-consistent field; valence electrons; basis functions; configuration mixing; dipole moments; electronic structure of molecules; Hartree-Fock; integrals, evaluation of; molecular structure; *16611*.
Orchard leaves; reference sample; x-ray analysis; calibration; filters; *15984*.
Orchard leaves; standard reference sample; x-ray analysis; calibration; filters; *16065*.
Order statistics; social sciences, services to; statistical education in the United States; statistical tolerance limits; U.S. Army programs in statistics; U.S. Government, services to; Wilks award; Wilks, S. S.; *Annals of Mathematical Statistics; 16114*.
Ordered spans; random walks; stable distributions; Abelian summation; *16011*.
Ordering reaction; satellites; spinodal decomposition; superlattice reflections; transmission electron microscopy; δ'; Ll_2 metastable phase; *15840*.
Ordering transition; polarization; remanent; strontium titanate; dielectric relaxation; electret state; impurity; *16639*.
Order-parameters; polymer thermodynamics; Ehrenfest relation; glassy state; *16283*.
Ordinary differential equations; saddle points; special functions; turning points; Whittaker functions; asymptotic analysis; Darboux's method; definite integrals; hypergeometric functions; incomplete gamma function; Legendre functions; *15818*.
Ores; organic; polymers; spectroscopy; bibliography; data; infrared; inorganic; minerals; *SP428. Parts 1, 2, and 3*.
Organic; oxidation; active; chemistry; dioxide; heterogeneous; manganese; *15902*.
Organic; polymers; spectroscopy; bibliography; data; infrared; inorganic; minerals; ores; *SP428. Parts 1, 2, and 3*.
Organic chemistry; oxidation; reagent; review; active; manganese dioxide; *15880*.
Organic coatings; pullout tests; bond strength; coated reinforcing bars; evaluation; *15782*.
Organic coatings; steel reinforcing bars; bridge decks; chloride ions; corrosion; deicing salts; epoxy coatings; *16189*.
Organic conductors; tetrathiafulvalenium-tetracyanoquinodimethanide; TTF-TCNQ; electrical conductivity; *16061*.
Organic conductors; thermal expansion; TTF–TCNQ; d.c. conductivity; microwave conductivity; *16050*.
Organic liquid sample irradiation; palladium distribution ratios; platinum distribution ratios; chlorine effect; counting corrections; gamma intensity attenuation; neutron flux depression; *SP422*, pp. 1181-1187 (Aug. 1976).
Organic materials analysis; trace element analysis; wet ashing; ashing techniques; dissolution; dry ashing; *SP422*, pp. 491-507 (Aug. 1976).
Organic molecule; superconductor; susceptibility; diamagnetism; light scattering; molecular diffusion; *16529*.
Organic trace analysis; qualitative accuracy; quality control; quantitative accuracy; reference materials; sampling; concentration; detectors; extraction; gas chromatography; isolation and clean-up; mass spectrometry; *SP422*, pp. 9-34 (Aug. 1976).
Organics; pesticides; radionuclides; sample handling; sampling; trace elements; chemical analysis; environmental samples; long-term storage; microbiologicals; *TN929*.
Organization; conservation; energy; *SP403*, pp. 13-18 (June 1976).
Organomercury; solvent extraction; environmental matrices; extraction yields; mercury; neutron activation analysis; *SP422*, pp. 1233-1240 (Aug. 1976).
Orientation dependence; scattering; tissue characterization; ultrasound; Bragg diffraction; diagnosis; frequency dependence; *SP453*, pp. 197-206 (Oct. 1976).
Orientation effects; oxygen reduction; electrochemistry; molybdenum oxides; *SP455*, pp. 305-312 (Nov. 1976).
Oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; *16274*.
Orion; radio astronomy; sulfur dioxide; interstellar; microwave spectra; molecules; *16434*.
Ornstein-Zernike theory; thermal conductivity; correlation length; critical point; gas-liquid; nonspherical molecules; *16484*.
Orthobaric densities; specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; *TN684*.
Orthogonal; spectrum; eigenvector; normal matrix; numerical range; *16348*.
Orthogonality relations; permutation group; decomposable (or pure) tensor products; irreducible complex character; *J. Res.* **80B** No. 2, 259-264 (1976).

Orthotelephonic response; anthropometric manikin; free-field measurements; hearing aid tests; *16033*.

Oscillations; Pomeranchuk; shrinkage; theorem; asymptotics; elastic; *16249*.

Oscillations; superconductors; theory; computations; cooling system; cryogenics; electric power transmission; flow stability; helium; *15809*.

Oscillator calibration; phase comparison; television receiver; color subcarrier; frequency calibration; frequency comparator; frequency measurements; *U.S. Patent 3,958,269*.

Oscillator strength; photoionization; single electron; Hartree-Fock methods; *16378*.

Oscillator strength; transition moment; ab initio calculation; O_2 absorption; *15872*.

Oscillator strength distribution; oscillator strengths; relativistic effects; spectral series; systematic trends; continuum; discrete spectrum; *f*-sum rule; *f*-values; lithium sequence; *15817*.

Oscillator strengths; oxygen; transition probabilities; energy loss; O_2; *15999*.

Oscillator strengths; quantum mechanics; spectroscopy; transition probabilities; wave functions; ions; *16209*.

Oscillator strengths; relativistic effects; spectral series; systematic trends; continuum; discrete spectrum; *f*-sum rule; *f*-values; lithium sequence; oscillator strength distribution; *15817*.

Oscillator strengths; relativistic effects; spectral series; systematic trends; *f*-values; isoelectronic sequence; lithium sequence; *JPCRD* **5**, No. 3, 537-570 (1976).

Oscillator strengths; UV; electron energy loss; N_2O; *15998*.

Oscillator strengths for U I; transition probabilities for U I; uranium spectrum; lifetimes in U I; *J. Res.* **80A** No. 1, 1-7 (1976).

Oscillator strengths for U II; transition probabilities for U II; uranium spectrum; *J. Res.* **80A** No. 3, 429-438 (1976).

Oscillators; phase noise; stationary models; flicker noise; frequency; frequency stability; *TN683*.

Oscillatory water tunnel; permeability effect on sand transport; ripples, sand; sand motion under waves; beach accretion; coastal processes; offshore zone; *15793*.

Oscilloscope; photoconductor; picosecond; sampling; sampling oscilloscope; strobe; GaAs; laser; optical; *15835*.

Oscilloscope; photoconductor; pulse measurements; sampling; laser; optical pulse; *16193*.

Osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; *16420*.

Osmotic coefficients; nonlinear least squares; thermodynamic properties; vapor pressure; activity coefficients; aqueous; computer programs; data evaluation; electrolytes; electromotive force; isopiestic method; *TN928*.

O-stars; Si IV; spectra; stellar; ultraviolet; absorption; B-stars; C IV; *16271*.

Overcoating; plasmons; scatter; absorption; dielectric layers; irregularities; metallic thin films; microirregularities; *J. Res.* **80A** No. 4, 643-658 (1976).

Overcompression; supercooling; glassy state; Lennard-Jones system; Monte Carlo simulation; nucleation; *J. Res.* **80A** No. 1, 59-64 (1976).

Overcurrent; overcurrent protection; solid-state overcurrent protection circuit; transformer; transformer overcurrent protection; high voltage transformer protection; *16381*.

Overcurrent protection; solid-state overcurrent protection circuit; transformer; transformer overcurrent protection; high voltage transformer protection; overcurrent; *16381*.

Overhead; resource allocation; simulator; strategies; workload; FORTRAN IV; operating system; *16062*.

Overheated receptacle; scanning electron microscope; aluminum wire; nondispersive x-ray analysis; *16317*.

Overpotential; solid electrolyte; electrode polarization; impedance measurements; interfaces; ionic conductivity; *15819*.

Oxazine dyes; quenching; xanthene dyes; aminocoumarins; carbazine dyes; deuterium effect; fluorescence quantum yield; laser dyes; molecular structure; *J. Res.* **80A** No. 3, 421-428 (1976).

Oxidation; active; chemistry; dioxide; heterogeneous; manganese; organic; *15902*.

Oxidation; oxidation theory; parabolic law for metal oxidation; semiconductors; conductivity; electric field effects; insulating films; insulators; metal oxidation; metals; MOM devices; *16260*.

Oxidation; oxygen; oxygenated organic compounds; ozone; bibliography; chemical kinetics; combustion; free radicals; gas phase; hydrocarbons; *SP449*.

Oxidation; parameter jump method; polystyrene; relaxation methods; thermogravimetry; weight-loss; degradation; kinetics; *15858*.

Oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; *16158*.

Oxidation; pyrolysis; combustion; data base; energy conservation; estimation schemes; kinetics; modeling; *NBSIR 75-910*.

Oxidation; reagent; review; active; manganese dioxide; organic chemistry; *15880*.

Oxidation; silicon nitride; slow crack growth enstatite; cristobalite; deformation; electron microscopy; microstructure; *NBSIR 76-1153*.

Oxidation rate; stibinic acid; trimethylarsine; trimethylstibine; antimony; antimony oxide; arsenic; arsenic acid; biomethylation; cacodylic acid; diffusion; flame retardant; *16628*.

Oxidation theory; parabolic law for metal oxidation; semiconductors; conductivity; electric field effects; insulating films; insulators; metal oxidation; metals; MOM devices; oxidation; *16260*.

Oxidative addition; palladium; boron hydrides; deuterium; iridium; maleonitriledithiolate; metalloboranes; nuclear magnetic resonance; *16566*.

Oxidative pyrolysis; oxygen index; rayon; smoke; smoldering; upholstery fabric; cotton; cushioning; fire retardant; furniture; glowing; inhibitor; *16224*.

Oxide; resistivity; remanance; susceptibility; alloy; copper; cryogenic; iron; *16632*.

Oxide electrode; perovskite surface composition; rotating electrode voltammetry; semiconductor electrode; flat band potential; hydrogen evolution; *SP455*, pp. 229-240 (Nov. 1976).

Oxide electrodes; oxygen electrochemistry; semiconductor electrodes; carbon; electrocatalysis; nickel oxide; *SP455*, pp. 203-219 (Nov. 1976).

Oxide electrodes; oxygen electrode reaction; ruthenium dioxide/titanium dioxide; spinel; electrocatalysis; nickel-cobalt oxide; nickel oxide; *SP455*, pp. 289-296 (Nov. 1976).

Oxide films; passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; shear test; *SP400-19*.

Oxygen; oxygenated organic compounds; ozone; bibliography; chemical kinetics; combustion; free radicals; gas phase; hydrocarbons; oxidation; *SP449*.

Oxygen; photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; *16419*.

Oxygen; photoelectron spectroscopy; physisorption; tungsten; xenon; XPS; carbon monoxide; chemisorption; ESCA; extra-

atomic relaxation; formaldehyde; *16023*.
Oxygen; physisorption; surface chemistry; tungsten; x-ray photoelectron spectroscopy; carbon dioxide; carbon monoxide; chemisorption; formaldehyde; *16085*.
Oxygen; rats; blood; carbon dioxide; carbon monoxide; cyanide; fire; hydrogen chloride; hydrogen cyanide; *NBSIR 75-966*.
Oxygen; reaction mechanisms; ring-disk electrodes; electrocatalysis; electronic structure; hydrogen peroxide; iron phthalocyanines; Mössbauer; optical spectra; *SP455*, pp. 241-251 (Nov. 1976).
Oxygen; smoke; temperature; toxicity; upholstery; bedding; beds; carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; furniture; life hazard; *NBS-GCR-73-1*.
Oxygen; tetrafluoroethylene; transverse excitation laser; 2-methyl propene; carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; isotope ratio; nitric oxide; *16657*.
Oxygen; thermodynamic properties; air; argon; hydrogen; ionized gases; nitrogen; *16167*.
Oxygen; transition probabilities; energy loss; O_2; oscillator strengths; *15999*.
Oxygen; tungsten; carbon monoxide; chemisorption; electron stimulated desorption; ion angular distribution; *16398*.
Oxygen atoms; RRKM; thermal decomposition; alcohols; chemical activation; nonequilibrium; *15881*.
Oxygen atoms; vibrationally excited reactant molecules; carbonyl sulfide; chemical kinetics; ethylene; flash photolysis resonance fluorescence; infrared laser; *16453*.
Oxygen balance; activation energy; bond dissociation energy; computer programs; explosive sensitivity tests; heat of decomposition; *15957*.
Oxygen electrochemistry; semiconductor electrodes; carbon; electrocatalysis; nickel oxide; oxide electrodes; *SP455*, pp. 203-219 (Nov. 1976).
Oxygen electrode; photo-assisted electrolysis; rutile; electrocatalyst; hydrogen evolution; lanthanum titanate; *SP455*, pp. 313-321 (Nov. 1976).
Oxygen electrode reaction; ruthenium dioxide/titanium dioxide; spinel; electrocatalysis; nickel-cobalt oxide; nickel oxide; oxide electrodes; *SP455*, pp. 289-296 (Nov. 1976).
Oxygen evolution; platinum anodes; reaction mechanism; anodic films; dual barrier, electrocatalysis; *SP455*, pp. 259-266 (Nov. 1976).
Oxygen evolution, Pourbaix diagram; semiconducting oxides; spinels; teflon bonded electrodes; nickel cobalt oxides; *SP455*, pp. 281-288 (Nov. 1976).
Oxygen, first spectrum; spectrum O I; wavelengths, O I; atomic energy levels, O I; atomic spectra, O I; multiplet table, O I; *NSRDS-NBS3, Section 7*.
Oxygen index; fire retardant mechanisms; fire retardant polymers; fire retardants; mass transfer number; opposed flow diffusion flame; *NBS-GCR-75-40*.
Oxygen index; rayon; smoke; smoldering; upholstery fabric; cotton; cushioning; fire retardant; furniture; glowing; inhibitor; oxidative pyrolysis; *16224*.
Oxygen index test; thermodynamics; chemical kinetics; diffusion flames; flame extinction; flame temperature; flame velocity; flammability; flammability limits; *NBSIR 76-1076*.
Oxygen point; platinum resistance thermometer; temperature standard; tin point; triple point of water; zinc point; comparator; International Practical Temperature Scale of 1968; IPTS-68; *J. Res.* **80A** No. 3, 477-504 (1976).
Oxygen potassium; sodium; aluminum; argon; atomic transition probabilities; beryllium; boron; carbon; chlorine; helium; hydrogen; lithium; magnesium; nitrogen; *16164*.
Oxygen reduction; electrochemistry; molybdenum oxides; orientation effects; *SP455*, pp. 305-312 (Nov. 1976).
Oxygen reduction; phosphoric acid; ternary metal-sulfur arrays; transition elements; triphenylphosphine; tungsten bronze; electrocatalysis; fuel cells; mixed oxides; *NBSIR 75-742*.
Oxygen reduction; phthalocyanine catalysts; ferric phthalocyanine; kinetics; *SP455*, pp. 253-258 (Nov. 1976).
Oxygen reduction; sodium depletion; Tafel plots; tungsten bronzes; Auger electron spectroscopy; electrocatalyst; *SP455*, pp. 297-303 (Nov. 1976).
Oxygen reduction; underpotential deposition; electrocatalysis; foreign metal monolayers; Fe^{2+}/Fe^{3+} reaction; formic acid oxidation; *SP455*, pp. 191-200 (Nov. 1976).
Oxygen transport; steady-state overvoltages; copper electrodes; interfacial resistance; metal-metal oxide electrodes; *SP455*, pp. 351-358 (Nov. 1976).
Oxygenated organic compounds; ozone; bibliography; chemical kinetics; combustion; free radicals; gas phase; hydrocarbons; oxidation; oxygen; *SP449*.
Ozone; bibliography; chemical kinetics; combustion; free radicals; gas phase; hydrocarbons; oxidation; oxygen; oxygenated organic compounds; *SP449*.
Ozone; resonance fluorescence; stratosphere; chlorine atoms; kinetics; *15949*.
Ozone; triplet states; electron energy loss; forbidden transitions; *15750*.
Ozone depletion; rotational constants; stratospheric chemistry; atmospheric pollution; chlorine nitrate; dipole moment; microwave spectrum; *16584*.
Ozone puzzle; portable transceiver batteries; RF power meter; utilities system; batteries; dental materials; industry; integrated utilities system; mass spectrometry; motorized criminal; *DIM/NBS* **60**, No. 3, 1-24 (1976)
O_2; oscillator strengths; oxygen; transition probabilities; energy loss; *15999*.
O_2 absorption; oscillator strength; transition moment; ab initio calculation; *15872*.
O_2 excited states; emission spectra; intersystem crossing; molecular oxygen in rare gas solids; *16612*.
O_3; PbO; chemiluminescence; electronic states; gas kinetics; laser enhanced reactions; *J. Res.* **80A** No. 2, 167-171 (1976).
O_3^-; photodetachment; photodissociation; CO_3^-; $CO_3^- \cdot H_2O$; *D* region; electron density; molecule; negative ion; O^-; *15877*.

P

Packaging and labeling; police radar equipment; standards; supermarket automation; weights and measures; calibration; communication; consumers; grain moisture measurement; laws and regulations; measurement; metric; *SP442*.
Packed bed heat exchangers; balloon; cryogenic balloon inflation; heat transfer; liquid helium; *NBSIR 76-834*.
Packet switching; protocol; standards; computer networks; data communications; data networks; networks; *16576*.
Packet-switching; standards; computer networks; data communications; networks; *16025*.
Pad; underlayments; carpets; fire; flammability; floor coverings; *NBSIR 76-1018*.
Paint; wire loop; atomic absorption; determination; lead; *16334*.
Paint removal; abatement; barrier materials; building materials; children; housing; lead-based paint; lead poisoning; *NBSIR 75-974*.
Paints and inks; schools, paints and inks; art education; inks for art education; *PS65-75*.
Pair association method; thermomigration; diffusion; dilute alloys; interstitial solute vacancy pairs; kinetic theory; *15847*.
Pair potentials; site model; calculations; hydrocarbon crystals; internal friction; molecular defects; *16074*.
Palladium; boron hydrides; deuterium; iridium; maleonitrile dithiolate; metalloboranes; nuclear magnetic resonance; oxidative addition; *16566*.
Palladium; platinum; precision; radiochemical separations;

silver; accuracy; activation analysis; copper; gold; hafnium; *SP422*, pp. 1157-1164 (Aug. 1976).

Palladium; platinum; rhodium; ruthenium; thermomigration; alloys; cobalt; copper; diffusion; electromigration; iron; nickel; *JPCRD* **5**, No. 1, 103-200 (1976).

Palladium; polymer in gold; porosity in gold; solder plate; tin-nickel alloy; tin plate; underplatings for gold; wear of gold; contact lubrication; corrosion inhibitors; electrical contacts; gold plate; *SP452*, pp. 64-71 (Sept. 1976).

Palladium distribution ratios; platinum distribution ratios; chlorine effect; counting corrections; gamma intensity attenuation; neutron flux depression; organic liquid sample irradiation; *SP422*, pp. 1181-1187 (Aug. 1976).

Palmer-Bowlus flumes; sewage flow measurement; flow measurement, water; flumes, measuring; open channel flow measurement; *15738*.

Panoramic x ray; silicate cement; turbine handpiece; amalgam; composite materials; dental gold alloys; dental research; *16212*.

Paper; energy; industrial; *SP403*, pp. 153-161 (June 1976).

Paper; petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; *SP403*.

Paper; pH; suspension; acidity; contact; decantate; electrode; error; extract; *NBSIR 75-915*.

Papers available; stereology; toy safety; x-ray units; computer power; computer standard; corrosion; environment; health care; housing production; I-R 100 awards; NIKE missile; *DIM/NBS* **60**, No. 11, 1-24 (1976).

Parabolic cylinder functions; resonance; rotating disks; singular perturbations; turning-point; viscous flow; Weber's equation; boundary-value problem; eigenvalues; *16459*.

Parabolic cylinder functions; turning points; uniform asymptotic approximations; Weber's equation; error bounds; *J. Res.* **80B** No. 4, 437-440 (1976).

Parabolic law for metal oxidation; semiconductors; conductivity; electric field effects; insulating films; insulators; metal oxidation; metals; MOM devices; oxidation; oxidation theory; *16260*.

Paraffins; cryogenics; crystallinity; density; expansion; *16184*.

Paramagnetic resonance; CdF_2; Dy^3; *16051*.

Paramagnetic salts; platinum resistance thermometers; ac-dc resistance thermometry; ac susceptibility; gadolinium sulphate; germanium resistance thermometers; IPTS-68; low temperature scales, 1-83 K; magnetic thermometer; manganous ammonium sulphate; *15903*.

Parameter control; process uniformity; random faults; reliability; test patterns; TTL; vendor qualification; circuit procurement; component screening; custom circuits; LSI; microelectronics; *16620*.

Parameter jump method; polystyrene; relaxation methods; thermogravimetry; weight-loss; degradation; kinetics; oxidation; *15858*.

Parametric plasma instability; photon induced excitation; carrier mobility; damping rates; laser damage of semiconductors; *SP462*, pp. 357-364 (Dec. 1976).

Partial closure design; standard deviation; subdivision; variance-covariance matrix; angle standard; autocollimator; calibration; complete closure design; indexing table; least squares estimation; *NBSIR 75-750*.

Partial differential equations; stratified flow, internal waves, buoyant flows; fluid dynamics; fundamental solution, intitial value problem; *J. Res.* **80B** No. 1, 79-88 (1976).

Partial melting; rare earth elements; trace element models; volcanic rocks; analytical techniques; fractional crystallization; geochemistry; isotope dilution; *SP422*, pp. 937-949 (Aug. 1976).

Partial molal properties; thermochemistry; thermodynamics; review articles; water pollution; aqueous systems; bibliography; biochemical systems; enthalpy data; entropy data; equilibrium data; Gibbs energy data; heat capacity data; *SP454*.

Participation; property; system; test method; ASTM; classification; fire hazard; *16124*.

Particle analysis; continuous radiation; electron probe microanalyzer; glass standard; lithium drifted silicon detector; Monte Carlo; *SP422*, pp. 1283-1291 (Aug. 1976).

Particle analysis; plastic deformation; surfaces; wear; wear debris; x-ray analysis; copper; electron channeling; electron microscope; metals; *NBSIR 76-1141*.

Particle analysis; quantitative x-ray microanalysis; thin films; x-ray emission; electron trajectories; magnetic effects; Monte Carlo calculations; multiple scattering x-ray generation; *SP460*, pp. 105-128 (Dec. 1976).

Particle analysis; scanning electron microscopy; thin film analysis; electron probe microanalysis; electron-solid interactions, magnetic domains; Monte Carlo electron trajectory calculations; *SP460*.

Particle concentration; particle counting; particle size; particulates; standard reference materials; fine particle standards; *16337*.

Particle counting; particle size; particulates; standard reference materials; fine particle standards; particle concentration; *16337*.

Particle detectors; spectrograph; chip detectors; ferrograph; lube oil analysis; magnetic drain plugs; oil filters; oil monitors; *NBS-GCR-74-23*.

Particle impingement; particle velocity measurement; wear; wear testing; erosive wear; *15778*.

Particle size; particulates; standard reference materials; fine particle standards; particle concentration; particle counting; *16337*.

Particle size distribution; particle size errors; sampling errors; trace analysis; analytical error; geochemical variance; *SP422*, pp. 421-427 (Aug. 1976).

Particle size errors; sampling errors; trace analysis; analytical error; geochemical variance; particle size distribution; *SP422*, pp. 421-427 (Aug. 1976).

Particle sizing; time resolution; aerosol; California aerosol monitoring program; elemental analysis; ion beam analysis; monitoring; *SP422*, pp. 1119-1136 (Aug. 1976).

Particle velocity measurement; wear; wear testing; erosive wear; particle impingement; *15778*.

Particles; Rayleigh scattering; aerosols; dusts; light-scattering; Mie theory; *NBSIR 76-1031*.

Particulate analysis; particulate characterization; sampling methods; X-ray fluorescence; atmospheric particulates; direct analysis techniques; emission spectroscopy; *SP422*, pp. 791-803 (Aug. 1976).

Particulate characterization; sampling methods; X-ray fluorescence; atmospheric particulates; direct analysis techniques; emission spectroscopy; particulate analysis; *SP422*, pp. 791-803 (Aug. 1976).

Particulate composites; Poisson's ratio; shear modulus; Young's modulus; bulk modulus; composite materials; elastic constants; filled polymers; mechanical properties; *16264*.

Particulate composites; Poisson's ratio; Young's modulus; composite materials; elastic constants; filled polymers; mechanical properties; *J. Res.* **80A** No. 1, 45-49 (1976).

Particulate deposits; laser; membrane filters; microphotometer; *15966*.

Particulate filtration; sulfate; sulfur dioxide; sulfur trioxide; sulfur trioxide condensation; automobile exhaust; catalytic oxidation converter; dilution tunnel; isopropanol; *SP422*, pp. 389-400 (Aug. 1976).

Particulate matter; photochemical oxidants; standards; sulfur dioxide; carbon monoxide; hydrocarbons; measurement; nitrogen dioxide; *16121.*

Particulate sample geometry; trace elements in polyethylene powder; gamma counting efficiency; germanium detectors; instrumental neutron activation analysis; *SP422*, pp. 1275-1281 (Aug. 1976).

Particulates; quantitative analysis; thin films; x rays; electron probe microanalysis; Monte Carlo calculations; *16410.*

Particulates; sampling; species; trace element concentrations; neutron activation analysis; *15783.*

Particulates; standard reference materials; fine particle standards; particle concentration; particle counting; particle size; *16337.*

Partition coefficient; photon counting; polycyclic aromatics; spectrofluorimetry; water; carcinogenic compounds; *15839.*

Partition coefficient; sea water; solubility; dimethylmercury; *15944.*

Partitioned matrix; Smith normal form; determinantal divisors; equivalence; matric equation; *J. Res.* **80B** No. 1, 89-98 (1976).

Partitioning; sparse matrix; tree; block Gaussian elimination; graph; inversion; *J. Res.* **80B** No. 2, 245-257 (1976).

Pass-fail tests; quality assurance measurements; x-ray quality control; diagnostic radiology; *SP456*, pp. 119-130 (Nov. 1976).

Passivation overcoats; photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; shear test; sheet resistors; *SP400-19.*

Passivation overcoats; photoresist; pull test; resistivity; scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; *SP400-25.*

Passive; pitting; spectroscopy; ellipsometry; iron; kinetics; optical constants; *16216.*

Passive films; pitting corrosion; stainless steel; x-ray analysis; electron microscopy; Fe-Cr alloys; *16024.*

Passivity; chemical breakdown; chloride ion; corrosion; ferrous alloys; localized corrosion; *16018.*

Password; personal identification; terminals; verification; ADP security; computer networks; controlled accessibility; encryption; evaluation criteria; key; *16013.*

Paste, water-based, semi-liquid; school paste; *PS64-75.*

Patent screening; technology incentives; ETIP; government-owned patents; *NBS-GCR-ETIP 73-07, Vol. 1.*

Patent screening; technology incentives; ETIP; government-owned patents; *NBS-GCR-ETIP 73-07, Vol. 2.*

Path delay; phase vs. time; σ vs. τ, 19 kHz pilot; frequency modulation; modulation index; multipath; *16492.*

Pathology; pellicle; phase-contrast; transmission; ultrasound; velocity; attenuation; breast tissue; broadband; high resolution; imaging; large aperture; *SP453*, pp. 121-133 (Oct. 1976).

Patient; precision; therapy; TLD; dosimetry; ion chamber; *SP456*, pp. 343-350 (Nov. 1976).

Patrol cars; performance of patrol cars; police patrol cars; problems with patrol cars; state of the art survey; functional requirements; *15826.*

Patrol cars; performance of patrol cars; police patrol cars; problems with patrol cars; state of the art survey; functional requirements; *NBSIR 75-960.*

Patrol cars; police fleets; vehicle leasing; vehicle management; fleet management; life cycle costing; *NBSIR 75-961.*

Patrolcar brakes; patrolcar survey; police brake requirements; FMVSS 105a; LAPD brake tests; NBS survey; *16148.*

Patrolcar survey; police brake requirements; FMVSS 105a; LAPD brake tests; NBS survey; patrolcar brakes; *16148.*

Pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; *SP453.*

Pattern recognition; scanner; classification; computer; fingerprint; identification; *16030.*

Pattern recognition; signal processing; spectral resolution; statistics; analytical chemistry; curve fitting; data reduction; feature selection; multivariate analysis; optimization techniques; *15964.*

Pattern recognition; speech spectrogram; ultrasound; analog-digital converter; A-scan; digitization; *SP453*, pp. 51-59 (Oct. 1976).

Pattern recognition; trace elements; air particulates; blood; chemistry; computer graphics; geochemistry; medicine; *SP422*, pp. 151-162 (Aug. 1976).

Pattern recognition; twinning; computer calculations; crystal structure; epitaxy; lattice misfit; *TN893.*

Pavement macrotexture; profile tracer; tires; noise; *NBS-GCR-75-35.*

Pavement, skid resistance; pavement wetting system, tire-pavement interface forces; wet pavement; accident reduction, skidding; correlation, skid resistance; highway safety; *NBSIR 75-972.*

Pavement, skid resistance; pavement wetting system; tire-pavement interface forces; wet pavement; accident reduction, skidding; correlation, skid resistance; highway safety; measurement, skid resistance; *NBSIR 76-1133.*

Pavement wetting system; tire-pavement interface forces; wet pavement; accident reduction, skidding; correlation, skid resistance; highway safety; measurement, skid resistance; pavement, skid resistance; *NBSIR 76-1133.*

Pavement wetting system, tire-pavement interface forces; wet pavement; accident reduction, skidding; correlation, skid resistance; highway safety; pavement, skid resistance; *NBSIR 75-972.*

PbO; chemiluminescence; electronic states; gas kinetics; laser enhanced reactions; O_3; *J. Res.* **80A** No. 2, 167-171 (1976).

PbO; thermophysical measurements; chemiluminescent; diatomic molecules; dissociation energies; high temperature; *NBSIR 75-751.*

Peak intensities; powder patterns; reference intensities; standard; x-ray diffraction; crystal structure; integrated intensities; lattice constants; *Monogr. 25, Section 13.*

Pellicle; phase-contrast; transmission; ultrasound; velocity; attenuation; breast tissue; broadband; high resolution; imaging; large aperture; pathology; *SP453*, pp. 121-133 (Oct. 1976).

Pencil beam; therapeutic beam; dose profiles; electron dosimetry; *SP456*, pp. 313-326 (Nov. 1976).

Penetration; retention system strength; riot; visual clearance; helmets; impact attenuation; *16265.*

Penetration; retention system strength; visual clearance; crash; helmet; impact attenuation; *16287.*

Penetration tests; power lawn mowers; safety standard; thrown objects tests; dispersion tests; lawn mowers; *NBSIR 76-1022.*

Penny crack; contact fracture; degradation; Hertzian cracks; indentation fracture; median vents; *15822.*

Pentafluorodisilane; physical properties; pyrolysis; silicon difluoride; base catalyzed decomposition; fluorodisilane; *16014.*

Pentaprism; reflection; refraction; standard deviation; uncertainty; autocollimator; calibration; constant deviation prism; geometrical model; optical square; *NBSIR 76-993.*

People in buildings; energy conservation; human factors; *BSS88.*

Peptides; proline; ring conformation; substituent effects; amides; carbon-13 magnetic resonance; chemical shifts; cis

229-317 O - 77 -

and trans isomers; *16235.*
Percent modulation; amplitude modulation; instrument landing system; modulation measurements; modulation meter; *16516.*
Perception; stair safety research; architectural psychology; architectural research; building research; building safety; *NBSIR 76-1046.*
Perceptual processes; psychological deterrence; security systems; sensory processes; threat analysis; behavioral impact; cognitive processes; nuclear weapon theft; *NBSIR 76-1007.*
Perceptual/motor; psychomotor; safety; glare; lighting; *NBS-GCR-75-45.*
Perfect lattice; thermal conductivity; thermal diffusivity; thermo-elastic coupling; continuum theory of diffusion; density; kinetic temperature; molecular dynamics; numerical error; *16281.*
Performance; processing; technical strategy; design; development; fabrication; life cycle costing; materials policy; nondestructive evaluation; *15873.*
Performance; radiation therapy; service; dosimetry; electrons; impact; improvement; *SP456,* pp. 365-370 (Nov. 1976).
Performance; radiative cooling; roofing; solar heating; surface temperature; built-up roofing; insulation; *NBSIR 76-987.*
Performance; usability; communications networks; computer networks; cost; interactive service; measurement; measures; *TN908.*
Performance approach; performance-based plumbing standard; performance statement; plumbing performance criteria; plumbing performance evaluation; plumbing performance; acceptance protocol; *16654.*
Performance at part load; seasonal efficiency; boilers; computer simulation; DEPAB (DEsign and Performance Analysis of Boilers); energy saving measures; *16347.*
Performance concept; building code provisions; building codes; building component classification; building specifications; building standards; *BSS90.*
Performance concept; building construction; building design; building materials; building research; environmental protection; international cooperation; international standards; materials conservation; materials science; *16027.*
Performance criteria; serviceability; static; vibration; deflection; dynamic; floor systems; human responses; *TN900.*
Performance criteria; solar energy; standards; buildings; cooling; heating; hot water; *NBSIR 76-1187.*
Performance data; regulatory process; standards; computer techniques; construction; enforcement process; housing; hurricane Agnes; mobile home parks; mobile homes; *NBSIR 76-1058.*
Performance envelope; predicting product reliability; design engineering; material deterioration; mechanical failure; mechanical integrity; mechanical reliability; *SP423,* pp. 199-208 (Apr. 1976).
Performance evaluation; performance measurement; service; computer networks; data analysis; interactive; network service; *TN897.*
Performance evaluation; programmable robots; specifications; guidelines; industrial robots; manipulator; *SP459.*
Performance measurement; computer networks; data acquisition; man-machine interaction; minicomputer; network measurement; *TN912.*
Performance measurement; service; computer networks; data analysis; interactive; network service; performance evaluation; *TN897.*
Performance of patrol cars; police patrol cars; problems with patrol cars; state of the art survey; functional requirements; patrol cars; *15826.*
Performance of patrol cars; police patrol cars; problems with patrol cars; state of the art survey; functional requirements; patrol cars; *NBSIR 75-960.*
Performance requirements; physical security; standards; building codes; door assemblies; *16142.*
Performance requirements; standards; test methods; watthour meters; code; definitions; demand meters; electricity metering; *15829.*
Performance requirements; telecommunications; computer communications; computer networking; data communications; networks; *16551.*
Performance specification; prefabricated dwelling; standards; structural design; earthquake; housing; *SP444,* pp. IV-55—IV-69 (Apr. 1976).
Performance specification; technology incentives; ETIP; government procurement policy; noise reduction; *NBS-GCR-ETIP 73-04.*
Performance specification; technology incentives; energy conservation; ETIP; government procurement policy; noise reduction; *NBS-GCR-ETIP 73-05.*
Performance specifications; procurement mechanisms; technology incentives; ETIP; government procurement; *NBS-GCR-ETIP 73-02.*
Performance standard; personnel railings; personnel safety; static loads; stiffness; structural safety; design; dynamic loads; guardrails; industrial accidents; nonstructural safety; occupational hazards; *NBSIR 76-1131.*
Performance standard; personnel railings; personnel safety; structural safety; anthropometric measurements; guardrails; industrial accidents; nonstructural safety; occupational hazards; *NBSIR 76-1132.*
Performance standard; pressure transducers; SRM; surgical implants; testing; thermal transients; architectural heritage; fire; guardrail; high-capacity; mathematics; mercury; *DIM/NBS* **60,** No. 8, 1-24 (1976).
Performance standard; thermal performance; ventilation; water heating; air leakage; building design; energy conservation; fenestration; HVAC systems; illumination; insulation; lighting; *NBSIR 74-452.*
Performance standard, EOD; bomb disarmament; explosive; x-ray equipment; *16346.*
Performance statement; plumbing performance criteria; plumbing performance evaluation; plumbing performance; acceptance protocol; performance approach; performance-based plumbing standard; *16654.*
Performance testing; qualified products lists; testing; acceptance testing; compliance testing; laboratory evaluation; *NBSIR 75-719.*
Performance-based plumbing standard; performance statement; plumbing performance criteria; plumbing performance evaluation; plumbing performance; acceptance protocol; performance approach; *16654.*
Periodic surfaces; polarization; random surfaces; reflectance; reflectance of coherent radiation; scattering; scattering theory; surface roughness; transmittance; bibliography; emittance; heat transfer; measurement techniques; *J. Res.* **80A** No. 2, 207-220 (1976).
Permanent set; polymers; rubbers, viscoelasticity; anisotropy; chemorheology; degradation; elasticity; finite deformation; incompressible materials; *16339.*
Permeability effect on sand transport; ripples, sand; sand motion under waves; beach accretion; coastal processes; offshore zone; oscillatory water tunnel; *15793.*
Permeability of polymers; Cole-Cole plots; dielectric constants of polymers; dielectrics; electric dispersion; *16290.*
Permutation congruence; polynomials; direct sums; formal power series; Jordan canonical form; *15965.*
Permutation group; decomposable (or pure) tensor products; ir-

reducible complex character; orthogonality relations; *J. Res.* **80B** No. 2, 259-264 (1976).
Permutation group; Stirling numbers; bell numbers; branching theorem; Clebsch-Gordon series; irreducible character; matrix functions; multiple transitivity; *J. Res.* **80B** No. 2, 265-268 (1976).
Perovskite; strontium titanate; transition metal; zero phonon line; charge transfer, color centers; crystal field; d^4 ions; EPR; iron 4+; optical absorption; *16201.*
Perovskite surface composition; rotating electrode voltammetry; semiconductor electrode; flat band potential; hydrogen evolution; oxide electrode; *SP455*, pp. 229-240 (Nov. 1976).
Perovskites; surface states; transition metal oxides; catalysis; chemisorption; cluster states; electronic structure; energy bands; *SP455*, pp. 21-52 (Nov. 1976).
Perron-Frobenius eigenvalue; diagonal scaling; doubly stochastic matrix; *J. Res.* **80B** No. 4, 433-436 (1976).
Perron-Frobenius eigenvalue; spectrum of a square complex matrix; *D*-stable matrix; field of values; Gersgorin's theorem; nonnegative matrix; *15770.*
Personal identification; privacy; record identification; risk analysis; security; data confidentiality; data integrity; encryption; *16390.*
Personal identification; terminals; verification; ADP security; computer networks; controlled accessibility; encryption; evaluation criteria; key; password; *16013.*
Personal transmitter; portable transmitter; radio frequency carrier; transmitter; audiofrequency modulation; communications; electromagnetic compatibility; law enforcement; *16285.*
Personal/portable transceivers; primary battery; secondary battery; transceiver; battery performance standard; law enforcement communications, Law Enforcement Standards Laboratory; *16296.*
Personnel; reactor; dosimetry; gamma; intercomparison; neutron; *SP456*, pp. 225-232 (Nov. 1976).
Personnel dosimeters; film badges, TLD, HPS working group; *SP456*, pp. 277-284 (Nov. 1976).
Personnel management software; proposal/award software; research administration; software exchange; software summary; software survey; space management software; university systems; directory; equipment management software; fiscal administration software; *TN916.*
Personnel railings; personnel safety; static loads; stiffness; structural safety; design; dynamic loads; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; *NBSIR 76-1131.*
Personnel railings; personnel safety; structural safety; anthropometric measurements; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; *NBSIR 76-1132.*
Personnel safety; static loads; stiffness; structural safety; design; dynamic loads; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; *NBSIR 76-1131.*
Personnel safety; structural safety; anthropometric measurements; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; *NBSIR 76-1132.*
Perturbation scheme; reference system; structure factor; limit of stability; mean field theory; metastability; *16595.*
Peru; technical aid; adobe; cane; earthquake; housing; *SP444*, pp. VI-16 – VI-24 (Apr. 1976).
Pesticides; radionuclides; sample handling; sampling; trace elements; chemical analysis; environmental samples; long-term storage; microbiologicals; organics; *TN929.*
Petroleum; correlation; economic; energy; imports; international; *SP403*, pp. 21-41 (June 1976).
Petroleum; physical properties; standard reference materials; coal; energy; fuel; graphite; hydrocarbons; metering; methane; natural gas; *SP434.*
Petroleum; plankton; sediments; total mercury; water; Chesapeake Bay; elemental sulfur; flameless atomic absorption; *15874.*
Petroleum; quantitation; gas chromatography; liquid chromatography; oil spill; *16423.*
Petroleum; resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; *SP403.*
Petroleum; water pollution; gas chromatography-mass spectrometry; hydrocarbons; *16344.*
Petroleum analysis; trace analysis; baseline studies; gas chromatography; gas chromatography-mass spectrometry; hydrocarbons; liquid chromatography; *TN889.*
pH; suspension; acidity; contact; decantate; electrode; error; extract; paper; *NBSIR 75-915.*
Phantoms; phototiming; radiographic examination; x-ray tube potential; attenuation; exposure; *SP456*, pp. 381-388 (Nov. 1976).
Phase; reflection coefficient; attenuation; automated; bolometer mount efficiency; measurements; network analyzer; *16509.*
Phase; swept frequency; time delay spectrometry; tissue; transmission; velocity; attenuation; *SP453*, pp. 81-95 (Oct. 1976).
Phase adjustment; phase correction algorithm; quadrature; computer program; Fourier transform NMR; homonuclear lock; *15970.*
Phase angle; self-calibration; seven-port junction; vector voltmeter; amplitude; computer controlled; diode detectors; microwave measurements; *NBSIR 76-844.*
Phase angles; power; reflection coefficient; six-port; voltage; admittance; current; impedance; *15800.*
Phase comparison; television receiver; color subcarrier; frequency calibration; frequency comparator; frequency measurements; oscillator calibration; *U.S. Patent 3,958,269.*
Phase composition; phase stability; atomic ordering; A15 compounds; intermetallic compounds; nonstoichiometry; *15848.*
Phase correction algorithm; quadrature; computer program; Fourier transform NMR; homonuclear lock; phase adjustment; *15970.*
Phase diagram; alloy; metallurgy; *16312.*
Phase diagram; $TiFeH_x$ alloys; volume effects; charge flow; isomer; Mössbauer; *16597.*
Phase diagrams; tire pressure; air; building codes; computer tapes; energy; fire; helmets; mobile homes; *DIM/NBS* **60**, No. 12, 1-24 (1976).
Phase equilibria; transport properties; vaporization; viscosity; diffusion; electrical conductivity; magnetohydrodynamics (MHD); *16321.*
Phase equilibria, carbon disulfide, nitromethane; water; binary mixture; coexistence curve; critical phenomena; density; isobutyric acid; magnetic densimeter; *16480.*
Phase fluctuations; power law noise processes; spectral density; spectrum analysis; fractional frequency fluctuations; frequency stability; *TN679.*
Phase noise; stationary models; flicker noise; frequency; frequency stability; oscillators; *TN683.*
Phase noise measurement system; spectral density of phase; Global Positioning System; phase-locked loop; *NBSIR 76-846.*
Phase shift; silicon; density standard; *NBSIR 75-768.*
Phase shifts; photoacoustic; surface absorption coefficients; transparent materials; bulk absorption coefficients; Fourier amplitudes; gas pressure; heat transfer; *16558.*
Phase shifts; quantum mechanics; scattering theory; semiclassical approximation; electron exchange; electron scattering; hydrogen atoms; indistinguishable particles; *16122.*

Phase stability; atomic ordering; A15 compounds; intermetallic compounds; nonstoichiometry; phase composition; *15848.*

Phase transition; Bogoliubov transformation; bosons; helium; lambda point; lattice model; *15870.*

Phase transition; torsional oscillation; λ-point; barrier to rotation; crystal; crystal structure; hexamethylbenzene; hindered rotation; *16137.*

Phase transitions; critical point; gravity effects; *TN925.*

Phase transitions; potassium chloride; ultrasonics; bulk modulus; equation of state; high pressure; *16029.*

Phase transitions in biopolymers; self-assembly; structural transformations; surface adsorption; biopolymers; helix-coil transition; *15721.*

Phase vs. time; σ vs. τ, 19 kHz pilot; frequency modulation; modulation index; multipath; path delay; *16492.*

Phase-change calorimeter; plutonium dioxide; plutonium isotopes; radionuclide calorimetry; radionuclide decay power; standards; Bunsen ice calorimeter; calorimetric standards; calorimetry; heat standards; *16443.*

Phase-contrast; transmission; ultrasound; velocity; attenuation; breast tissue; broadband; high resolution; imaging; large aperture; pathology; pellicle; *SP453,* pp. 121-133 (Oct. 1976).

Phase-locked loop; phase noise measurement system; spectral density of phase; Global Positioning System; *NBSIR 76-846.*

Phenolformaldehyde; stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; *NBSIR 76-848.*

Phenylmercuric acetate; volatilization; bacteria; elemental mercury; flameless atomic absorption spectroscopy; laser Raman spectroscopy; nuclear magnetic resonance spectroscopy; *15897.*

Philippines; socioeconomic aspects; typhoons; construction; design; developing countries; earthquakes; low-cost housing; natural disasters; *NBS-GCR-73-21.*

Philippines; standardization; testing facilities; building technology; information handling; measurement services; *NBSIR 76-1083.*

Phonons; reorientation effect; admixture; anharmonicities; branching ratios; electron scattering; *16508.*

Phosphazenes; phosphorus flame retardants; polyester; precondensates; radiation grafting; antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; *NBS-GCR-ETIP 76-22.*

Phosphine; sorber; work atmosphere; air analysis; air sampling; gas analysis; industrial hygiene; *NBSIR 75-977.*

Phosphines; tetracyanotetrathiafulvalene; tetracyanotetrathiafulvalene-triphenylphosphine; $\Delta^{2,2'}$-bis-14.5-dicyano-1,3-dithiodene; 1,3-dithiolenes; ^{31}P NMR; 4,5-dicyano-1,3-dithiolene-2-thione; aryl phosphines; cyclic voltammetry; *15991.*

Phosphoric acid; ternary metal-sulfur arrays; transition elements; triphenylphosphine; tungsten bronze; electrocatalysis; fuel cells; mixed oxides; oxygen reduction; *NBSIR 75-742.*

Phosphorous acids; pyrolysis; ramie; rayon; sulfur; cellulosic fibers; combustion; cotton fibers; flame retardant treatments; *NBS-GCR-73-4.*

Phosphors; quantum efficiencies; radiant efficiencies; UV excitation; x-ray excitation; cathode-ray excitation; luminescence; luminescence standards; *J. Res.* **80A** No. 3, 401-407 (1976).

Phosphorus; polyester; flame retardancy; mass spectrometry; optical spectroscopy; *16037.*

Phosphorus; polyester; rayon; treatments; cotton; fabrics; flame retardants; flammability; *NBS-GCR-73-16.*

Phosphorus flame retardants; polyester; precondensates; radiation grafting; antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; *NBS-GCR-ETIP 76-22.*

Phosphotungstate complex ions; "spillover" effect; transition metal carbides; transition metal oxides; tungsten bronze; tungsten carbide; electrocatalysis; heteropolyanions; *SP455,* pp. 167-174 (Nov. 1976).

Photoabsorption; atomic spectroscopy; *16253.*

Photoabsorption; Bethe theory; cross sections; electron; inner-shell electrons; ionization; *K*-shell; *L*-shell; *15812.*

Photoabsorption; electron energy loss; energy absorption; N_2O; nitrous oscillator strength; *15751.*

Photoabsorption; refractive index; atomic spectroscopy; dispersion; *16379.*

Photoabsorption; soft x rays; subshell structure; angular distribution; *16386.*

Photoabsorption cross section; photochemistry; quantum yield; rate constant; atmospheric chemistry; chemical kinetics; data evaluation; gas phase; *16067.*

Photoabsorption/ionization; spectral densities; electron scattering; moment theory; *16359.*

Photoacoustic; surface absorption coefficients; transparent materials; bulk absorption coefficients; Fourier amplitudes; gas pressure; heat transfer; phase shifts; *16558.*

Photoacoustic; transparent materials; absorption coefficients; cylindrical configurations; gas pressure; heat transfer; *15936.*

Photoacoustic method; absorption coefficients; heat diffusion equations; highly transparent solids; hydrodynamic equations; optical materials; *15971.*

Photoacoustic spectrometer; piezocalorimeter; transducers; triplet formation; absolute quantum efficiency; absolute quantum yield; calorimetry; luminescence; *J. Res.* **80A** No. 3, 413-419 (1976).

Photo-assisted electrolysis; rutile; electrocatalyst; hydrogen evolution; lanthanum titanate; oxygen electrode; *SP455,* pp. 313-321 (Nov. 1976).

Photocatalytic electrodes; photoelectrolytic cells; photogalvanic cells; quantum efficiency; solar energy; energy levels; *SP455,* pp. 221-227 (Nov. 1976).

Photochemical enrichment; boron isotope separation; boron trichloride; isotope enrichment; laser isotope separation; *U.S. Patent 3,996,120.*

Photochemical oxidants; standards; sulfur dioxide; carbon monoxide; hydrocarbons; measurement; nitrogen dioxide; particulate matter; *16121.*

Photochemical principles; photochemical reaction of atoms and molecules; photochemistry in the atmosphere; photochemistry of air pollution; primary and secondary photochemical processes; bond energy; chain reaction; determination of photochemical mechanism; flash photolysis; *16515.*

Photochemical reaction; thiophosgene; chlorine isotope; isotope separation; laser-induced reaction; laser irradiation; *15959.*

Photochemical reaction of atoms and molecules; photochemistry in the atmosphere; photochemistry of air pollution; primary and secondary photochemical processes; bond energy; chain reaction; determination of photochemical mechanism; flash photolysis; intermittent illumination; *16515.*

Photochemistry; isotope separation; kinetics; lasers; *16538.*

Photochemistry; photometry; physical optics; radiometry; spectrometry; spectroradiometry; analytical chemistry; nomenclature; *16331.*

Photochemistry; quantum yield; rate constant; atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; *16067.*

Photochemistry; stratospheric chemistry; chemical kinetics; data center operation; information analysis center; *16364.*

Photochemistry in the atmosphere; photochemistry of air pollu-

tion; primary and secondary photochemical processes; bond energy; chain reaction; determination of photochemical mechanism; flash photolysis; intermittent illumination; photochemical principles; *16515.*

Photochemistry of air pollution; primary and secondary photochemical processes; bond energy; chain reaction; determination of photochemical mechanism; flash photolysis; intermittent illumination; photochemical principles; photochemical reaction of atoms and molecules; *16515.*

Photoconductor; picosecond; sampling; sampling oscilloscope; strobe; GaAs; laser; optical; oscilloscope; *15835.*

Photoconductor; pulse measurements; sampling; laser; optical pulse; oscilloscope; *16193.*

Photocopying; reprography developments; bibliographic data files; communications technology developments; computer developments; COM systems extension; copyright protection; facsimile transmission extension; *16040.*

Photodepopulation; photovoltaic imaging; Rutherford backscattering; SCANIIR; secondary ion mass spectroscopy; semiconductor devices; silicon; surface analysis; x-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; *SP400-23.*

Photodetachment; photodissociation; CO_3^-; $CO_3^- \cdot H_2O$; *D* region; electron density; molecule; negative ion; O^-; O_3^-; *15877.*

Photodetectors; polarization; quantum counters; rhodamine B chloride; spectrofluorimetry; total internal reflection; emission anisotropy; fluorescence; *16430.*

Photodiode; silicon; ultraviolet; uniformity of response; detector; *16413.*

Photodissociation; CO_3^-; $CO_3^- \cdot H_2O$; *D* region; electron density; molecule; negative ion; O^-; O_3^-; photodetachment; *15877.*

Photoeffect; hydrogen; molecular cross section; *16132.*

Photoelasticity; piezo-optic constants; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; interferometry; *SP462,* pp. 58-63 (Dec. 1976).

Photoelasticity; piezo-optic constants; refractive index; stress-optical constants; thermal coefficient of refractive index; birefringence; elastooptic constants; infrared-laser window materials; interferometry; KCl; *NBSIR 76-1010.*

Photoelasticity; piezo-optic constants; refractive index; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; interferometry; *NBSIR 76-1115.*

Photoelasticity; piezo-optical constants; refractive index; elasto-optical constants; infrared materials; KCl; laser windows; *15937.*

Photoelasticity; polarimetry; crystals; damage; glass; infrared; interferometry; lasers; *15969.*

Photoelasticity; polycrystalline ZnSe; stress optical constants; elastic constants; elasto-optic; *15931.*

Photoelasticity; stressing apparatus; *15928.*

Photoelectric effect; photons; x rays; attenuation coefficients; cross sections; gamma rays; *TN901.*

Photoelectric smoke detectors; smoke detector installation; smoke detector placement; smoke detectors; detector sensitivity; fire detectors; mobile homes; *NBSIR 76-1016.*

Photoelectric smoke detectors; smoke detectors; fire detection; light extinction; light scatter; light-scatter measurements; *NBSIR 76-1087.*

Photoelectric smoke detectors; residential fires; smoke detectors; tenability levels; detector sensitivity; detector siting; heat detectors; ionization smoke detectors; *NBS-GCR-75-51.*

Photoelectric tristimus colorimeters; photometry of retroreflective materials; retroreflective sign materials; colorimetry; highway signs; *NBSIR 74-518.*

Photoelectrolysis; solid electrolytes; surfaces; catalysis; characterization; chemisorption; electrocatalysis; electrochemistry; electrode processes; nonmetals; *SP455.*

Photoelectrolytic cells; photogalvanic cells; quantum efficiency; solar energy; energy levels; photocatalytic electrodes; *SP455,* pp. 221-227 (Nov. 1976).

Photoelectron spectra; relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; *16419.*

Photoelectron spectroscopy; photoemission; single crystal; tungsten; ultraviolet photoelectron spectroscopy; virgin CO; adsorption; carbon monoxide; chemisorption; desorption; *15851.*

Photoelectron spectroscopy; physisorption; tungsten; xenon; XPS; carbon monoxide; chemisorption; ESCA; extra-atomic relaxation; formaldehyde; oxygen; *16023.*

Photoelectron spectroscopy; polarization energy; relaxation energy; screening energy; molecular hydrogen; *15749.*

Photoelectron spectroscopy; polar molecules; alkali-halide; negative ions; *15791.*

Photoelectron spectroscopy; rare earth metals; 4*f* electron excitations; *15841.*

Photoemission; angular distributions; chemisorption; electron spectroscopy; *15759.*

Photoemission; photoionization; adsorption; angular distributions; *15748.*

Photoemission; physisorption; tungsten (100); xenon; crystal field; *15813.*

Photoemission; relaxation energy; surface plasmons; chemisorption; *15857.*

Photoemission; relaxation energy; adsorption; electron gas; *16421.*

Photoemission; single crystal; tungsten; ultraviolet photoelectron spectroscopy; virgin CO; adsorption; carbon monoxide; chemisorption; desorption; photoelectron spectroscopy; *15851.*

Photoemission; surfaces; x-ray photoemission; chemisorption; ESCA; field emission; *16454.*

Photoemission; tungsten; ultraviolet photoemission; adsorption; chemisorption; CO; cyclotron resonance; electron cyclotron resonance; magnetic field; microwave discharge; *16016.*

Photoflash bulb; pressure; pressure measurement; pressure transducer; pressure transducer response; response; thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; *NBSIR 76-1038.*

Photoflash bulb; pressure transducer; protective coatings; thermal radiant-energy response; thermal transient response; transducer; coatings; *NBSIR 76-1060.*

Photogalvanic cells; quantum efficiency; solar energy; energy levels; photocatalytic electrodes; photoelectrolytic cells; *SP455,* pp. 221-227 (Nov. 1976).

Photographic density; technology assessment; imaging optics; lens testing; microcopy resolution charts; National Measurement System; *NBSIR 75-942.*

Photographic flashbulb; pressure; pressure measurement; pressure transducer; thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; *TN905.*

Photoinduced proton transfer; ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; emission spectrum; HAr_n^+; $HCCl_2^+$; $HCCl_2^-$; $HCCl_3$; infrared spectrum; matrix isolation; molecular rotation in solid Ar; *15757.*

Photoionization; absorption; avalanche ionization; damage morphology; damage statistics; distribution of damage times; *SP462,* pp. 350-356 (Dec. 1976).

Photoionization; adsorption; angular distributions; photoemission; *15748.*

Photoionization; cesium; multiphoton processes; *16298.*

Photoionization; charged particle excitation; inner shells; ionization; *16299.*

Photoionization; electron avalanche; laser-induced gas breakdown; *SP435,* pp. 347-355 (Apr. 1976).

Photoionization; predissociation; Rydberg states; ammonia; appearance potential; autoionization; deuterated species; enthalpy of formation; ionization potential; NH_2^+; OH^+; *16539.*

Photoionization; propane; propane-d_2; propane-d_6; propane-d_8; threshold photoelectron spectroscopy; coincidence; mass spectrometry; *16590.*

Photoionization; rate constants; gas phase; hydrocarbons; kinetics; mass spectrometry; *15850.*

Photoionization; review; scattering; spin-polarization; electron; experiment; LEED; multi-photon; *15900.*

Photoionization; rotational energy; enthalpy of formation; ketene; methane; methyl; methylene; *16060.*

Photoionization; single electron; Hartree-Fock methods; oscillator strength; *16378.*

Photoionization; vacuum ultraviolet; xenon; cross section; inner-shell excitation; krypton; *16541.*

Photoionization resonances; sodium; far ultraviolet spectroscopy; ion absorption spectrum; ion photoionization; laser ionization; *16415.*

Photomask metrology; pull test; resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; shear test; sheet resistors; silicon; *SP400-19.*

Photomasks; scanning electron microscope; dimensional metrology; integrated circuits; line-width measurements; microelectronics; optical microscope; *15864.*

Photometric linearity; polarization; sample characteristics; straylight; wavelength accuracy; bandwidth; calibration; errors in spectrophotometry; interferences; multiple reflections; *J. Res.* **80A** No. 4, 609-624 (1976).

Photometric precision; reference spectrophotometer; ultraviolet; wavelength calibration; averaging spheres; high accuracy transmittance; light averaging devices; linearity; *TN913.*

Photometric scale; slit width; spectral transmission; spectrophotometer standards; stray light; wavelength scale; errors in spectrophotometry; *J. Res.* **80A** No. 4, 625-630 (1976).

Photometry; physical optics; radiometry; spectrometry; spectroradiometry; analytical chemistry; nomenclature; photochemistry; *16331.*

Photometry; radiometry; reflectance; reflectometry; *15863.*

Photometry; radiometry; spectroradiometry; optical radiation measurement; *TN910-1.*

Photometry; SI basic unit; candela; lumen; luminous flux; luminous intensity; *16397.*

Photometry; spectrophotometry; ultraviolet; visible; averaging sphere; diffusing effectiveness; efficiency; fluorescent wavelength converter; *16333.*

Photometry, heterochromic; radiometric measurements; CIE photometric model; *16002.*

Photometry of retroreflective materials; retroreflective sign materials; colorimetry; highway signs; photoelectric tristimus colorimeters; *NBSIR 74-518.*

Photon; plasma frequency; absorption cross section; index of refraction; nuclear matter; optical properties; *J. Res.* **80A** No. 1, 9-13 (1976).

Photon; positron; atom; collision cross section; detachment; dissociation; elastic scattering; electron; excitation; fluorescence; ion; ionization; molecule; *SP426.*

Photon; x ray; attenuation coefficient; cross section; dosimetry; energy-absorption coefficient; gamma-ray; *SP456,* pp. 299-306 (Nov. 1976).

Photon attenuation; chamber energy response; geometry effects; half-value layer; *SP456,* pp. 389-394 (Nov. 1976).

Photon counting; polycyclic aromatics; spectrofluorimetry; water; carcinogenic compounds; partition coefficient; *15839.*

Photon induced excitation; carrier mobility; damping rates; laser damage of semiconductors; parametric plasma instability; *SP462,* pp. 357-364 (Dec. 1976).

Photons; x rays; attenuation coefficients; cross sections; gamma rays; photoelectric effect; *TN901.*

Photonuclear Data Center; central computer; computer programs; data manipulation; digital data; mass storage; NIRA; *TN903.*

Photonuclear experiments; photonuclear interaction; photonuclear reactions; photonuclear theory; reprint collection; history; *16270.*

Photonuclear interaction; photonuclear reactions; photonuclear theory; reprint collection; history; photonuclear experiments; *16270.*

Photonuclear reactions; photonuclear theory; reprint collection; history; photonuclear experiments; photonuclear interaction; *16270.*

Photonuclear theory; reprint collection; history; photonuclear experiments; photonuclear interaction; photonuclear reactions; *16270.*

Photoresist; pull test; resistivity; scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; silicon on sapphire; *SP400-25.*

Phototherapy; bilirubin; brain damage; hyperbilirubinemia; neonatal hyperbilirubinemia; *16366.*

Phototiming; radiographic examination; x-ray tube potential; attenuation; exposure; phantoms; *SP456,* pp. 381-388 (Nov. 1976).

Phototransport; scattering; vacancies; absorption; electrotransport; ionic segregation; laser; momentum transfer; *SP462,* pp. 365-370 (Dec. 1976).

Photovoltaic imaging; Rutherford backscattering; SCANIIR; secondary ion mass spectroscopy; semiconductor devices; silicon; surface analysis; x-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; insulator films; *SP400-23.*

Phthalate trace analysis; air analysis; analytical blank; gas chromatography; ocean biota analysis; *SP422,* pp. 701-708 (Aug. 1976).

Phthalocyanine catalysts; ferric phthalocyanine; kinetics; oxygen reduction; *SP455,* pp. 253-258 (Nov. 1976).

Physical adsorption; tungsten; work function; adsorption; nitrogen; *16460.*

Physical constant; x ray; Avogadro; crystal; *16223.*

Physical constants; SI units; gyromagnetic ratio; measurement units; *16395.*

Physical measurements; quality control; radiation measurement; radiation processing; radiation sterilization; radiochromic dyes; Red Perspex; sterility control; dosimetry; electron beams; gamma rays; *16648.*

Physical optics; radiometry; spectrometry; spectroradiometry; analytical chemistry; nomenclature; photochemistry; photometry; *16331.*

Physical properties; pyrolysis; silicon difluoride; base catalyzed decomposition; fluorodisilane; pentafluorodisilane; *16014.*

Physical properties; standard reference materials; coal; energy; fuel; graphite; hydrocarbons; metering; methane; natural gas; petroleum; *SP434.*

Physical security; standards; building codes; door assemblies; performance requirements; *16142.*

Physician; technologist; x-ray departments; x-ray trends; diag-

nostic; nationwide evaluation; *SP456*, pp. 147-152 (Nov. 1976).
Physiological indices; predicted indoor habitability index (PIHI); weather building human systems; air conditioning criteria; human comfort; *16152*.
Physisorption; surface chemistry; tungsten; x-ray photoelectron spectroscopy; carbon dioxide; carbon monoxide; chemisorption; formaldehyde; oxygen; *16085*.
Physisorption; tungsten; xenon; XPS; carbon monoxide; chemisorption; ESCA; extra-atomic relaxation; formaldehyde; oxygen; photoelectron spectroscopy; *16023*.
Physisorption; tungsten (100); xenon; crystal field; photoemission; *15813*.
Pi network; tank circuit; FET; *16580*.
Picosecond; sampling; sampling oscilloscope; strobe; GaAs; laser; optical; oscilloscope; photoconductor; *15835*.
Picosecond laser pulses; avalanche ionization; dielectric breakdown; inclusions; laser damage threshold; morphology; nonlinear refractive index; *SP435*, pp. 321-330 (Apr. 1976).
Picosecond pulses; refractory oxides; standing-wave fields; thin films; two-photon absorption; damage thresholds; electron avalanche; *SP462*, pp. 292-300 (Dec. 1976).
Picosecond pulses; rf sputtering; standing-wave patterns; damage thresholds; dielectric thin films; electric fields; electron-gun evaporation; *SP435*, pp. 254-271 (Apr. 1976).
Picosecond time difference measurements; accurate frequency measurement; accurate time measurement; frequency; frequency stability; frequency stability analysis; models of frequency stability; *15740*.
Piezocalorimeter; transducers; triplet formation; absolute quantum efficiency; absolute quantum yield; calorimetry; luminescence; photoacoustic spectrometer; *J. Res.* **80A** No. 3, 413-419 (1976).
Piezoelectric; polarization; polyvinyl chloride; pyroelectric; dipoles; electret; glass; *16277*.
Piezoelectric; polymeric transducer; polymers; polyvinyl fluoride; polyvinylidene fluoride; stress gages; transducers; *16141*.
Piezoelectric; pulse laser power; electrically calibrated pyroelectric detector; gold-black; *16135*.
Piezoelectric *d* constant; piezoelectricity; relative humidity; temperature; bone; dispersion phenomena; Maxwell-Wagner polarization; *16314*.
Piezoelectric polymers; flexibility; hydrophone; impedance match; low-cost transducers; *16291*.
Piezoelectricity; polarization electrostriction; polymer; pyroelectricity; electret; *16284*.
Piezoelectricity; relative humidity; temperature; bone; dispersion phenomena; Maxwell-Wagner polarization; piezoelectric *d* constant; *16314*.
Piezo-optic constants; refractive index; stress-optical constants; thermal coefficient of refractive index; birefringence; elastooptic constants; infrared-laser window materials; interferometry; KCl; photoelasticity; *NBSIR 76-1010*.
Piezo-optic constants; refractive index; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; interferometry; photoelasticity; *NBSIR 76-1115*.
Piezo-optic constants; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; interferometry; photoelasticity; *SP462*, pp. 58-63 (Dec. 1976).
Piezo-optical constants; refractive index; elasto-optical constants; infrared materials; KCl; laser windows; photoelasticity; *15937*.
Pile head; piles; structural engineering; design; earthquake; highway bridges; lateral loads; *SP444*, pp. IV-90–IV-112 (Apr. 1976).
Piles; structural engineering; design; earthquake; highway bridges; lateral loads; pile head; *SP444*, pp. IV-90–IV-112 (Apr. 1976).
Pill test; room fires; carpet systems; carpets; fire safety; flame spread; floor coverings; flooring radiant panel test; ignition sources; *NBSIR 76-1013*.
Pilot ignition; radiant heat flux; carpets; floor coverings; horizontal; ignition; ignition time; *NBSIR 75-967*.
Pin-end; test method; wall panels; walls; compression; eccentric loading; flat-end; kern; loading rate; *NBSIR 75-779*.
Piston; precision attenuator; sensor; waveguide-below-cutoff; absolute (unambiguous) readout; *NBSIR 76-833*.
Pit and fissure sealants; preventive dental materials; acrylic resins; chemistry; composite resins; dental materials; hydroxybenzoic acids; *15939*.
Pitchover; standards, bicycle safety; test method, bicycle; bicycle brakes; brakes, bicycle; dynamics, bicycle; error analysis; friction, tire/pavement; kinetics, bicycle; measurements, bicycle braking; *NBSIR 75-786*.
Pitting; spectroscopy; ellipsometry; iron; kinetics; optical constants; passive; *16216*.
Pitting corrosion; stainless steel; x-ray analysis; electron microscopy; Fe-Cr alloys; passive films; *16024*.
Pivot operations; skewsymmetry; combinatorial equivalence; linear inequalities; linear programs; *16127*.
PL 93-597; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer security; confidentiality; cost model; data security costs; *TN906*.
Planar near field measurements; broadbeam antennas; *16470*.
Planar test structure; resistivity; semiconductor characterization; semiconductor device; silicon; square array; bulk resistivity; collector resistivity; four-probe; *16424*.
Plankton; sediments; total mercury; water; Chesapeake Bay; elemental sulfur; flameless atomic absorption; petroleum; *15874*.
Planning and scheduling; building regulations; dimensional coordination; metric conversion; *16556*.
Planning and scheduling; building regulations; dimensional coordination; metric conversion; *TN915*.
Plasma; chromatography; coupling of high speed plasma; gas chromatography; high speed plasma; *16340*.
Plasma emission; round robin; x-ray fluorescence; accuracy; anodic stripping voltammetry; arc emission spectroscopy; atomic absorption; environmental analyses; interlaboratory tests; neutron activation analysis; *SP422*, pp. 199-210 (Aug. 1976).
Plasma frequency; absorption cross section; index of refraction; nuclear matter; optical properties; photon; *J. Res.* **80A** No. 1, 9-13 (1976).
Plasma line broadening; spectral lines; Stark broadening; Stark shifts; Stark widths; nitrogen; *16406*.
Plasma polymerized; laser window coating; *SP462*, pp. 230-238 (Dec. 1976).
Plasma radiative losses; sodium isoelectronic sequence; Tokamak plasmas; atomic oscillator strengths; beam-foil spectroscopy; fusion plasma research; *16320*.
Plasma spectrometry; preliminary analysis; specimen decomposition; specimen evaporation; *SP422*, pp. 621-625 (Aug. 1976).
Plasmons; scatter; absorption; dielectric layers; irregularities; metallic thin films; microirregularities; overcoating; *J. Res.* **80A** No. 4, 643-658 (1976).
Plastic deformation; proportional limit; crack propagation; determination of stress; measurement; mechanical tests; *16468*.
Plastic deformation; single-crystal aluminum; slip bands; vaporization; laser-induced stress; *SP462*, pp. 165-180 (Dec. 1976).

Plastic deformation; slip; transmission electron microscopy; twinning; aluminum oxide; microhardness; *15825*.
Plastic deformation; surfaces; wear; electron channeling; iron; metals; *16523*.
Plastic deformation; surfaces; wear; electron channeling; iron; metals; *NBSIR 76-992*.
Plastic deformation; surfaces; wear; wear debris; x-ray analysis; copper; electron channeling; electron microscope; metals; particle analysis; *NBSIR 76-1141*.
Plastic-bonded; soils; telephone cables; underground; alloys; corrosion; metallurgically-bonded; metals; *16352*.
Plasticity; ceramic materials; cyclic crack propagation; high frequency; *16445*.
Plasticity; polyvinyl chloride; servo-hydraulic system; viscoelasticity; yield point; biaxial; fatigue; fracture; laboratory automation; mechanical testing; *16626*.
Plasticity; proportional limit; flow surface; multiaxial stresses; *15802*.
Plasticity; stainless steel; stress relaxation; thermodynamics; viscoelasticity; creep; dissipation; elevated temperature; energy; hold-time; hysteresis; low-cycle fatigue; *16004*.
Plastics; radiation; radiochromic dyes; spectrophotometry; colour dosimeters; dosimetry; dyes; glass; *15960*.
Plastics; reflectance; scattering; spectrophotometry; translucency; transmittance; Vitrolite glass; blurring effect; edge loss; error analysis; flux loss; *TN594-12*.
Plastics, fiber-reinforced; pultrusions; stress-rupture testing; sunlight; ultraviolet radiation; weatherability; antenna-support materials; environmental degradation; guys, nonmetallic; marine atmospheres; *NBSIR 76-1069*.
Plastics flammability; product safety; accident data; data systems; fabric flammability; FFACTS; fire accidents; fire data systems; fire hazards; fires; hazard analysis; NEISS; *16361*.
Plastics standardization; specifications; standards; standards organization; test methods; *16106*.
Plastics testing; polymer analysis; properties; test methods; nonpolymeric constituents in plastics; *16225*.
Plate tectonics; satellite geodesy; crustal moments; earth rotation; geodynamics; lunar distance; microwave interferometry; *15799*.
Plated coatings; polymer coatings; solid film lubricants; sputtered coatings; wear; barrier film; chemical coatings; failure prevention; mechanical failure; metal coatings; *SP452*.
Plating; Blum, William; electrodeposition; government laboratories; *16203*.
Platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; *16158*.
Platinum; precision; radiochemical separations; silver; accuracy; activation analysis; copper; gold; hafnium; palladium; *SP422*, pp. 1157-1164 (Aug. 1976).
Platinum; rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; *16420*.
Platinum; rhodium; ruthenium; thermomigration; alloys; cobalt; copper; diffusion; electromigration; iron; nickel; palladium; *JPCRD* **5**, No. 1, 103-200 (1976).
Platinum; x-ray photoemission; alloys; copper; electronic density of states; lanthanum; nickel; nuclear magnetic resonance; *15768*.
Platinum anodes; reaction mechanism; anodic films; dual barrier, electrocatalysis; oxygen evolution; *SP455*, pp. 259-266 (Nov. 1976).
Platinum distribution ratios; chlorine effect; counting corrections; gamma intensity attenuation; neutron flux depression; organic liquid sample irradiation; palladium distribution ratios; *SP422*, pp. 1181-1187 (Aug. 1976).
Platinum resistance thermometer; temperature standard; tin point; triple point of water; zinc point; comparator; International Practical Temperature Scale of 1968; IPTS-68; oxygen point; *J. Res.* **80A** No. 3, 477-504 (1976).
Platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; *TN894*.
Platinum resistance thermometers; ac-dc resistance thermometry; ac susceptibility; gadolinium sulphate; germanium resistance thermometers; IPTS-68; low temperature scales, 1-83 K; magnetic thermometer; manganous ammonium sulphate; paramagnetic salts; *15903*.
Platinum thermometers; resistance measurements; thermometry; two-stage transformers; ac bridges; bridges; *16404*.
Platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; *16158*.
Playground equipment, safety of; safety of home playground equipment; slides, safety of; swing sets, safety of; home playground equipment, safety of; jungle gyms, safety of; *PS66-75*.
Plotting; type fonts; typesetting; vectorized characters; alphabets; COM; computerized typesetting; digital plotting; graphics; Hershey character set; *SP424*.
Plumbing; plumbing research; water demand in buildings; water distributing systems; *16226*.
Plumbing guide criteria; backflow; backflow prevention devices; back pressure; backsiphonage; guide criteria; potable water protection; *NBSIR 76-1020*.
Plumbing performance; acceptance protocol; performance approach; performance-based plumbing standard; performance statement; plumbing performance criteria; plumbing performance evaluation; *16654*.
Plumbing performance criteria; plumbing performance evaluation; plumbing performance; acceptance protocol; performance approach; performance-based plumbing standard; performance statement; *16654*.
Plumbing performance evaluation; plumbing performance; acceptance protocol; performance approach; performance-based plumbing standard; performance statement; plumbing performance criteria; *16654*.
Plumbing research; gravity drainage evaluation; *16083*.
Plumbing research; water demand in buildings; water distributing systems; plumbing; *16226*.
Plutonium; plutonium alloy; Poisson ratio; shear modulus; sound velocity; Young modulus; bulk modulus; compressibility; Debye temperature; elastic constants; *16635*.
Plutonium; x rays; betas; calibrations; dosimetry; gammas; neutrons; *SP456*, pp. 267-276 (Nov. 1976).
Plutonium alloy; Poisson ratio; shear modulus; sound velocity; Young modulus; bulk modulus; compressibility; Debye temperature; elastic constants; plutonium; *16635*.
Plutonium dioxide; plutonium isotopes; radionuclide calorimetry; radionuclide decay power; standards; Bunsen ice calorimeter; calorimetric standards; calorimetry; heat standards; phase-change calorimeter; *16443*.
Plutonium isotopes; radionuclide calorimetry; radionuclide decay power; standards; Bunsen ice calorimeter; calorimetric standards; calorimetry; heat standards; phase-change calorimeter; plutonium dioxide; *16443*.
PL-93-579; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; com-

puter model; computer security; confidentiality; cost model; data security costs; *NBSIR 76-985.*

P-MOS shift register; active devices; laser scanning; logic flow observation; LSI testing; measurement of operating margins; nondestructive tests; *15833.*

p-n junction; semiconductor defects; silicon; thermally stimulated capacitance; thermally stimulated current; gold-doped silicon; measurement methods; MOS capacitor; *16363.*

p-n junctions; resistivity; semiconductor electronics; sheet resistors; silicon; test pattern; test structures; dopant density; microelectronics; MOS capacitors; *n-p-n* transistor fabrication; *SP400-22.*

p-n junctions; resistivity of silicon; semiconductor devices; semiconductor process control; sheet resistors; test patterns; thermally stimulated currents; MOS capacitors; *SP400-21.*

p-n junctions; scanning electron microscopy; semiconductor devices; device inspection; electron-beam-induced current; microelectronics; *16449.*

p-n junctions; semiconductors; silicon; thermally stimulated capacitance; thermally stimulated current; cryostat; defects; gold-doped silicon; measurement methods; microelectronics; MOS capacitor; *SP400-26.*

Pogo pressure; pressure source; pressure transducer; sinusoidal; space shuttle; transducer; bias pressure; calibration; dynamic calibration; dynamic pressure; high pressure; liquid medium; *TN927.*

Point defects; annealing; calcium fluoride; defect pairs; equilibria; model; *15820.*

Point spread function; acutance; contrast transfer function; edge gradient; image quality; light equivalent background; light induced background; limit resolution; line spread function; optical transfer function; *16197.*

Poison packaging; bottle caps; child protection; closure testing; containers; medicine bottles; *NBSIR 75-722.*

Poisson ratio; pulse-echo method; resonance method; shear modulus; sound velocity; Young's modulus; bulk modulus; compressibility; copper; copper alloys; elastic constants; *16505.*

Poisson ratio; shear modulus; sound velocity; Young modulus; bulk modulus; compressibility; Debye temperature; elastic constants; plutonium; plutonium alloy; *16635.*

Poisson's ratio; shear modulus; Young's modulus; bulk modulus; composite materials; elastic constants; filled polymers; mechanical properties; particulate composites; *16264.*

Poisson's ratio; Young's modulus; composite materials; elastic constants; filled polymers; mechanical properties; particulate composites; *J. Res.* **80A** No. 1, 45-49 (1976).

Polar fluids; scaling; steam; universality; critical exponents; critical region; homogeneity; *15733.*

Polar molecules; alkali-halide; negative ions; photoelectron spectroscopy; *15791.*

Polar solvents; pollutants; quaternization; alkyl halides; antimony; arsenic; environment; kinetics; methylation; nucleophilic reactivity; onium salts; *16628A.*

Polarimetry; crystals; damage; glass; infrared; interferometry; lasers; photoelasticity; *15969.*

Polarization; antiferroelectric; dielectric constant; heat capacity; lead pyroniobate; low temperature; *16527.*

Polarization; comets; fluorescence; OH-18-cm radiation; optical pumping; *16513.*

Polarization; polyvinyl chloride; pyroelectric; dipoles; electret; glass; piezoelectric; *16277.*

Polarization; potassium tantalate; dielectric constant; dielectric relaxation; electret; *16638.*

Polarization; pulsed laser damage; thermal model; angle of incidence; *SP435*, pp. 41-48 (Apr. 1976).

Polarization; quantum counters; rhodamine B chloride; spectrofluorimetry; total internal reflection; emission anisotropy; fluorescence; photodetectors; *16430.*

Polarization; quantum mechanics; atomic and molecular processes; comets; line formation; *15746.*

Polarization; radiative and nonradiative transition probabilities; real fluorescence parameters; fluorescence lifetime; fluorescence quantum efficiency; fluorescence quantum yields; fluorescence spectrum; fluorescence standards; *J. Res.* **80A** No. 3, 389-399 (1976).

Polarization; random surfaces; reflectance; reflectance of coherent radiation; scattering; scattering theory; surface roughness; transmittance; bibliography; emittance; heat transfer; measurement techniques; periodic surfaces; *J. Res.* **80A** No. 2, 207-220 (1976).

Polarization; remanent; strontium titanate; dielectric relaxation; electret state; impurity; ordering transition; *16639.*

Polarization; sample characteristics; straylight; wavelength accuracy; bandwidth; calibration; errors in spectrophotometry; interferences; multiple reflections; photometric linearity; *J. Res.* **80A** No. 4, 609-624 (1976).

Polarization; spectrofluorimetry; viewing angle; emission anisotropy; fluorescence; fluorescence decay; fluorescence quantum yields; *15754.*

Polarization; spectrofluorimetry; 1,6-diphenyl-1,3,5-hexatriene; fluorescence; linear dichroism; liquid crystals; *J. Res.* **80A** No. 1, 15-33 (1976).

Polarization; step height; interferometer; *16382.*

Polarization electrostriction; polymer; pyroelectricity; electret; piezoelectricity; *16284.*

Polarization energy; relaxation energy; screening energy; molecular hydrogen; photoelectron spectroscopy; *15749.*

Polarization (of charge clouds); rotational excitation; scattering theory; close-coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; *16532.*

Polarization potential; scattering; static potential; vibrational excitation; close-coupling calculations; crossed beams; cross sections; differential cross sections; electron scattering; inelastic scattering; nitrogen molecules; *16533.*

Polarized luminescence; symmetry; transition metal ions; chromium 3+; crystal vacancies; cubic crystals; depolarization; impurity compensation; luminescence; magnesium oxide; MgO; optical properties; *16521.*

Polarizer material; visible; infrared; mercurous chloride; *NBSIR 74-507.*

Polarizers; coating damage; laser damage; mirrors; multilayer dielectric coatings; *SP435*, pp. 298-304 (Apr. 1976).

Polarography; solvatochromic relationship; ultraviolet and visible spectroscopy; aromatic amine; benzene derivative; charge-transfer complex; dental materials; electron affinity; electron spin resonance spectroscopy; *J. Res.* **80A** No. 2, 173-187 (1976).

Polarography; spectrophotometry; x-ray fluorescence spectroscopy; atomic absorption spectrophotometry; emission spectroscopy; nickel; nickel-base alloys; *SP422*, pp. 1005-1016 (Aug. 1976).

Police brake requirements; FMVSS 105a; LAPD brake tests; NBS survey; patrolcar brakes; patrolcar survey; *16148.*

Police fleets; vehicle leasing; vehicle management; fleet management; life cycle costing; patrol cars; *NBSIR 75-961.*

Police patrol cars; problems with patrol cars; state of the art survey; functional requirements; patrol cars; performance of patrol cars; *15826.*

Police patrol cars; problems with patrol cars; state of the art survey; functional requirements; patrol cars; performance of patrol cars; *NBSIR 75-960.*

Police radar equipment; standards; supermarket automation; weights and measures; calibration; communication; consumers; grain moisture measurement; laws and regulations; measurement; metric; packaging and labeling; *SP442.*

Police radars; solar energy; SRM's; computer systems; environmental; fire; glass door; lead nitrate; mercury thermometers; metric; nuclear power; *DIM/NBS* **60,** No. 2, 1-25 (1976).

Policies; private sector; R&D; technological change; decision-making; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; *NBS-GCR-ETIP 76-03.*

Policies; private sector; R&D; technological change; decision-making; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; *NBS-GCR-ETIP 76-04.*

Policies; R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; *NBS-GCR-ETIP 76-05.*

Policies; R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; *NBS-GCR-ETIP 76-06.*

Policy alternatives; applied microeconomic framework; commodity supply crisis; econometric analysis; economic impacts; efficiency impacts; income distribution effects; *NBS-GCR-ETIP 76-24.*

Polishing; quartz; shaping; closed die; forging; isostatic; *SP462,* pp. 95-99 (Dec. 1976).

Polishing; roughness; surface damage; thin films; threshold; damage threshold; etching; flame polishing; fused silica; hydroxyl; ion polishing; *SP462,* pp. 310-314 (Dec. 1976).

Polishing; scattered light; surface absorption; alkali-halide; KCl; laser windows; optical figure; *SP435,* pp. 20-28 (Apr. 1976).

Polishing; surfaces; zinc selenide; copper; molybdenum; optician; *SP435,* pp. 10-13 (Apr. 1976).

Pollutant photochemistry; pollutants; soil pollution; solar spectrum; water pollution; adsorption; nonbiological transformation; nonbiological transport; *NBSIR 76-1130.*

Pollutants; quaternization; alkyl halides; antimony; arsenic; environment; kinetics; methylation; nucleophilic reactivity; onium salts; polar solvents; *16628A.*

Pollutants; soil pollution; solar spectrum; water pollution; adsorption; nonbiological transformation; nonbiological transport; pollutant photochemistry; *NBSIR 76-1130.*

Pollutants; standard reference materials; air and water quality; energy; *16157.*

Pollution; pyrolysis; reactive gas generator; sulfur dioxide; acetaldehyde; acrolein; formaldehyde; gas chromatography; hydrogen chloride; hydrogen cyanide; *NBSIR 76-1000.*

Pollution; sediment; trace elements; water; wet chemical analysis; atomic absorption analysis; Californium-252; Mahoning River; neutron activation analysis; *SP422,* pp. 225-230 (Aug. 1976).

Pollution monitoring; rainwater analysis; sample stability; surface water analysis; filtration losses; metallic ions; *SP422,* pp. 633-648 (Aug. 1976).

Pollution abatement; user fees; wastewater; water pollution; water resources; cost sharing; economic efficiency; environment; equity; financing; grants; *16564.*

Pollution abatement; wastewater; water pollution; water resources; cost sharing; efficiency; environment; financing; grants; *15810.*

Pollution, lead; sampling techniques; trace analysis of lead; waters, lead in; accuracy of atomic absorption analytical techniques; accuracy of isotope dilution analytical techniques; errors in lead analyses; lead; *SP422,* pp. 321-351 (Aug. 1976).

Pollution reduction; bus transit; busways; carpools; energy impacts; mode choice; *15724.*

Polonium-210; self absorption; uranium-oxide; alpha particles; backscattering; gadolinium-148; *15807.*

Polychlorinated biphenyls; transformers; askarel; capacitors; insulating fluids; liquid insulators; *NBSIR 76-1054.*

Polycrystalline ZnSe; refractive index; stress-optic constants; temperature coefficient of index; thermal expansion; ZnSe; chemical vapor deposited ZnSe; elastic compliance; elastic constants; *15938.*

Polycrystalline ZnSe; stress optical constants; elastic constants; elasto-optic; photoelasticity; *15931.*

Polycyclic aromatic hydrocarbons; quantum yields; water; absorption; carcinogenic; fluorescence; *15831.*

Polycyclic aromatics; spectrofluorimetry; water; carcinogenic compounds; partition coefficient; photon counting; *15839.*

Polyester; flame retardancy; mass spectrometry; optical spectroscopy; phosphorus; *16037.*

Polyester; precondensates; radiation grafting; antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; *NBS-GCR-ETIP 76-22.*

Polyester; rayon; treatments; cotton; fabrics; flame retardants; flammability; phosphorus; *NBS-GCR-73-16.*

Polyester/cotton fabrics; cotton fabrics; extinguishability; flammability; *16149.*

Polyethylene; Raman spectroscopy; rotatory lattice modes; *n*-alkanes; *16218.*

Polyethylene; Raman spectroscopy; alkanes; longitudinal acoustical mode; methyl group branches; *16279.*

Polyethylene; Raman-active longitudinal acoustic mode; localized defects; *n*-alkanes; *16219.*

Polyethylene; short-chain branching; branching; limiting viscosity numbers; long-chain branching; nuclear magnetic resonance; *16244.*

Polyethylene; temperature drift; thermodynamic properties; glass transition; heat capacity; high molecular weight linear polyethylene; *J. Res.* **80A** No. 1, 51-57 (1976).

Polyhedral; algebraic; cones; faces; Jordan-equivalent; matrices; *16044.*

Polymer; poly(vinyl acetate); pressure; thermal; volume; compressibility; configuration; entropy; heat capacity; holes; *16077.*

Polymer; pyroelectricity; electret; piezoelectricity; polarization electrostriction; *16284.*

Polymer; resin; wear; adhesion; adsorption; alloys; composites; dental; grafting; investments; *NBSIR 76-1095.*

Polymer; specific heat; strain energy; supercooled liquid; thermal relaxation; glassy state; glass transition; heat capacity; *16309.*

Polymer adsorption; protein adsorption; synthetic implants; adsorption; blood protein; bound fraction; ellipsometry; implants; *NBSIR 75-667.*

Polymer adsorption; protein adsorption; synthetic implants; adsorption; blood protein; bound fraction; ellipsometry; implants; *NBSIR 76-1017.*

Polymer analysis; properties; test methods; nonpolymeric constituents in plastics; plastics testing; *16225.*

Polymer coatings; solid film lubricants; sputtered coatings; wear; barrier film; chemical coatings; failure prevention; mechanical failure; metal coatings; plated coatings; *SP452.*

Polymer formation; ferrographic analysis; lubricated rubbing contact; *SP452,* pp. 187-191 (Sept. 1976).

Polymer impregnated cement; polymer impregnated mortar; porosity; scanning electron microscopy; cement; compressive strength; flexural strength; fracture mechanics; *BSS83.*

Polymer impregnated mortar; porosity; scanning electron microscopy; cement; compressive strength; flexural strength; fracture mechanics; polymer impregnated cement; *BSS83.*

Polymer impregnated mortars; slow crack growth; acoustical emission; fracture mechanics; mortars; *16360.*

Polymer in gold; porosity in gold; solder plate; tin-nickel alloy; tin plate; underplatings for gold; wear of gold; contact lubrication; corrosion inhibitors; electrical contacts; gold plate; palladium; *SP452,* pp. 64-71 (Sept. 1976).
Polymer physics; bead/spring model; dilute polymer solutions; eigenvalue; hydrodynamic interaction; matrix algebra; necklace model; *J. Res.* **80B** No. 2, 273-284 (1976).
Polymer processed mechanical and structural components; structural and mechanical components; components, structural; dry powder painting; mechanical and structural components; *SP452*, pp. 14-24 (Sept. 1976).
Polymer thermodynamics; Ehrenfest relation; glassy state; order-parameters; *16283.*
Polymeric film transducer; sandwiched polymeric films; vibration transducer; dynamic pressure transducer; *U.S. Patent 3,970,862.*
Polymeric transducer; polymers; polyvinyl fluoride; polyvinylidene fluoride; stress gages; transducers; piezoelectric; *16141.*
Polymer-impregnated concrete; sulfur-impregnated concrete; concrete; concrete-polymer systems; polymers; *16349.*
Polymers; polymer-impregnated concrete; sulfur-impregnated concrete; concrete; concrete-polymer systems; *16349.*
Polymers; polystyrene; radiotracer measurements; rates of adsorption; surfaces; adsorption; adsorption on mercury; desorption; *15853.*
Polymers; polyvinyl fluoride; polyvinylidene fluoride; stress gages; transducers; piezoelectric; polymeric transducer; *16141.*
Polymers; proteins; solid standards; antibodies; antigens; biological polymers; immunochemical analysis; light scattering; *J. Res.* **80A** No. 4, 605-608 (1976).
Polymers; pyroelectrics; radiometry; infrared detectors; *16471.*
Polymers; rubbers, viscoelasticity; anisotropy; chemorheology; degradation; elasticity; finite deformation; incompressible materials; permanent set; *16339.*
Polymers; spectroscopy; bibliography; data; infrared; inorganic; minerals; ores; organic; *SP428. Parts 1, 2, and 3.*
Polymers; wear; adhesion; coatings; friction; metal; *SP452*, pp. 3-13 (Sept. 1976).
Polynomials; direct sums; formal power series; Jordan canonical form; permutation congruence; *15965.*
Polypeptides; relaxation times; rotational diffusion; ^{13}C magnetic resonance; collagen; conformation; correlation times; cyanogen bromide peptides; *16211.*
Polypeptides; vibrational states; heat capacity; lattice dynamics; low temperature, polyglycine; *16304.*
Polystyrene; radiotracer measurements; rates of adsorption; surfaces; adsorption; adsorption on mercury; desorption; polymers; *15853.*
Polystyrene; relaxation methods; thermogravimetry; weight-loss; degradation; kinetics; oxidation; parameter jump method; *15858.*
Polyurethane; pyrolysis; aircraft fires; fire hazard; flash fire; *NBSIR 75-757.*
Poly(vinyl acetate); pressure; thermal; volume; compressibility; configuration; entropy; heat capacity; holes; polymer; *16077.*
Polyvinyl chloride; pyroelectric; dipoles; electret; glass; piezoelectric; polarization; *16277.*
Polyvinyl chloride; servo-hydraulic system; viscoelasticity; yield point; biaxial; fatigue; fracture; laboratory automation; mechanical testing; plasticity; *16626.*
Polyvinyl fluoride; polyvinylidene fluoride; stress gages; transducers; piezoelectric; polymeric transducer; polymers; *16141.*
Polyvinylidene fluoride; stress gages; transducers; piezoelectric; polymeric transducer; polymers; polyvinyl fluoride; *16141.*
Pomeranchuk; shrinkage; theorem; asymptotics; elastic; oscillations; *16249.*
Pool fires; residential sprinkler protection; sprinkler operation; automatic sprinklers; bedroom fires; droplet size; heat absorption; *NBS-GCR-76-58.*
Population inversion; radio astronomy; emission line; interstellar medium; laboratory measurement; methyl alcohol; *15994.*
Porcelain balling reduction; ammonium stabilized silica and alumina sols; colloidal alumina and silica for dental porcelain; dental porcelain; *U.S. Patent 3,973,970.*
Porcelain insulators; proof testing; residual strain; acoustic emission; macrocracking; *16069.*
Pore-water pressure; earthquake; explosion test; ground strength; ground vibration; liquefaction; *SP444*, pp. III-38 – III-51 (Apr. 1976).
Porosity; scanning electron microscopy; cement; compressive strength; flexural strength; fracture mechanics; polymer impregnated cement; polymer impregnated mortar; *BSS83.*
Porosity in gold; solder plate; tin-nickel alloy; tin plate; underplatings for gold; wear of gold; contact lubrication; corrosion inhibitors; electrical contacts; gold plate; palladium; polymer in gold; *SP452,* pp. 64-71 (Sept. 1976).
Porous glass; radiopacity; reinforcements; wear; composite resins; composites; dental materials; fillers; *16586.*
Porous glass; radiopacity; reinforcements; wear; composite resins; composites; dental materials; fillers; *16587.*
Portable clocks; rubidium frequency standard; time comparison; atomic clocks; frequency stability; *16489.*
Portable transceiver batteries; RF power meter; utilities system; batteries; dental materials; industry; integrated utilities system; mass spectrometry; motorized criminal; ozone puzzle; *DIM/NBS* **60**, No. 3, 1-24 (1976)
Portable transmitter; radio frequency carrier; transmitter; audiofrequency modulation; communications; electromagnetic compatibility; law enforcement; personal transmitter; *16285.*
Portable x-ray fluorescence; random sampling; x-ray fluorescence; lead paint; lead paint detection; lead paint programs; lead poisoning; *TN921.*
Portland cement; testing; walls; lime (dolomitic); masonry; mortars (materials); *15992.*
Position errors; quality and compatible part material; quality diamond tools; controlled environment; diamond machining; machined optics; nondistortion part support; *SP435*, pp. 75-89 (Apr. 1976).
Position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; *SP400-18.*
Position sensors; RF interferometer; agriculture; computer control; *16143.*
Position servos; trajectory control; computer control of automation systems; computer interface; computer software for robot control; hierarchical control of manipulators; *NBSIR 75-973.*
Positive definite; determinant; Hadamard's inequality; Hermitian component; *15861.*
Positive semidefinite; real function; Hadamard product; *15876.*
Positive stable matrix; arc-connectedness; Carlson-Johnson conjecture; *D*-stable; *J. Res.* **80B** No. 1, 75-77 (1976).
Positron; atom; collision cross section; detachment; dissociation; elastic scattering; electron; excitation; fluorescence; ion; ionization; molecule; photon; *SP426.*
Potable water; vacuum breaker; water supply; backflow; backflow preventers; back pressure; back-siphonage; cross connections; health hazard; *NBSIR 76-1070.*
Potable water protection; plumbing guide criteria; backflow; backflow prevention devices; back pressure; backsiphonage; guide criteria; *NBSIR 76-1020.*
Potassium; relative; rocks; rubidium; soils; absolute; Apollo; composition; isotopic; lithium; *15869.*

Potassium; serum minerals; serum storage effects; sodium; temperature effects; trace elements; zinc; atomic absorption spectrophotometry; calcium; container effects; copper; magnesium; *SP422*, pp. 575-591 (Aug. 1976).

Potassium activity; synthetic coal slags; system K_2O-CaO-Al_2O_3-SiO_2; vaporization; crystallization; magnetohydrodynamics; *16457*.

Potassium antimonate; sodium antimonate; sodium antimony oxyfluoride; alkali antimonates; crystal growth; ionic conductors; *J. Res.* **80A** Nos. 5 and 6, 761-774 (1976).

Potassium chloride; ultrasonics; bulk modulus; equation of state; high pressure; phase transitions; *16029*.

Potassium compounds; rubidium compounds; sodium compounds; standard reference data; thermochemical tables; enthalpy; entropy; Gibbs energy; heat capacity; *NBSIR 76-1034*.

Potassium iodide; calibration cell; chlorine concentration; chlorine monitor; electrochemical calibration; internal calibration; iodine detection; *U.S. Patent 3,966,413*.

Potassium pentaborate; u.v. generation; doubling; laser; *15932*.

Potassium tantalate; dielectric constant; dielectric relaxation; electret; polarization; *16638*.

Potatoes; residues, dissipation of; residues, in potatoes; residues, metabolic; residues, total; residues, volatilization; storage effects; 2,4-dichlorophenol; 2,4-dichlorophenoxyacetic acid; gas chromatography; *SP422*, pp. 737-745 (Aug. 1976).

Potential curves; resonant; spin exchange; adiabatic collisions; charge transfer; nonresonant; *15875*.

Potential energy curves; pseudopotentials; self-consistent field; valence electrons; basis functions; configuration mixing; dipole moments; electronic structure of molecules; Hartree-Fock; integrals, evaluation of; molecular structure; orbitals; *16611*.

Potential heat; reinforced plastic; small furnace test; smoke; aluminum bulkhead; combustion gases; fire endurance; insulation; intumescent paint; *NBSIR 76-1012*.

Potential heat; self heating; building materials; calorimetry; combustibility; flammability; heat release rate; *16111*.

Potential service conditions; proliferation of specifications; environmental extremes; fail-safe operation; high strength materials; mechanical failure; *SP423*, pp. 193-197 (Apr. 1976).

Potentiometer; programmable potentiometer; self-balancing potentiometers; thermometry; automatic potentiometry; automation; calorimetry; Diesselhorst ring; *J. Res.* **80A** No. 4, 669-675 (July-Aug. 1976).

Pound; weight; force; kilogram; mass; *16394*.

Powder coating; salt water; solid lubrication; abrasion; corrosion protection; friction; marine environment; *SP452*, pp. 25-30 (Sept. 1976).

Powder patterns; reference intensities; standard; x-ray diffraction; crystal structure; integrated intensities; lattice constants; peak intensities; *Monogr. 25, Section 13*.

Power; reflection coefficient; six-port; voltage; admittance; current; impedance; phase angles; *15800*.

Power detectors; sidearm power detector; directional coupler; *16567*.

Power equation concepts; reflectometers; *16552*.

Power law noise processes; spectral density; spectrum analysis; fractional frequency fluctuations; frequency stability; phase fluctuations; *TN679*.

Power lawn mowers; safety standard; thrown objects tests; dispersion tests; lawn mowers; penetration tests; *NBSIR 76-1022*.

Power measurement; bolometer; microwave; *16504*.

Power meter; 6-port junction; *16568*.

Power transistors; safe operating area; second breakdown; thermal instability; base widening; current crowding; hot spots; *16451*.

Power transmission cables; safety; slush hydrogen; superconducting; a.c. power; cryoresistive; energy transmission economics; helium; hydrogen energy; liquid hydrogen; liquid nitrogen; *16629*.

PRD-49; reinforced aluminum; reinforced plastics; structural composites; tensile moduli; tensile strength; thermal conductivity; thermal contraction; boron; cryogenics; glass; graphite; literature review; *15745*.

Precision; accuracy; clinical analysis; clinical chemistry; health; *SP422*, pp. 837-850 (Aug. 1976).

Precision; Bond method; generalization of silicon; lattice, parameter of; lattice parameters; *15945*.

Precision; precision of analytical method; ultratrace level; accuracy; analysis of precision; *a priori* error; *a priori* precision; *a posteriori* precision; chi-square test; *SP422*, pp. 127-139 (Aug. 1976).

Precision; precision of measurement; repeatability; reproducibility; test methods; transformations; weighting; interlaboratory comparisons; invariance; models; *15909*.

Precision; Puerto Rico; replicates; sediments; standard; trace elements; accuracy; Atomic Absorption Spectrometry; Caribbean; *SP422*, pp. 1089-1102 (Aug. 1976).

Precision; quality control; systematic error; Youden plot; analytical performance; between-run; calibration; *SP422*, pp. 141-150 (Aug. 1976).

Precision; radiochemical separations; silver; accuracy; activation analysis; copper; gold; hafnium; palladium; platinum; *SP422*, pp. 1157-1164 (Aug. 1976).

Precision; reference methods; standard reference material; systematic errors; accuracy; accurate measurement system; *SP422*, pp. 41-63 (Aug. 1976).

Precision; round-robin experiments; trace element analysis; accuracy; activation analysis; air filter analysis; analytical quality control; atomic absorption spectrometry; environmental analysis; fresh water analysis; intercomparisons; *SP422*, pp. 189-197 (Aug. 1976).

Precision; therapy; TLD; dosimetry; ion chamber; patient; *SP456*, pp. 343-350 (Nov. 1976).

Precision; trace element analyses; accuracy; blood lead analyses; clinical chemistry; industrial lead hygiene; interlaboratory correlations; lead hygiene control; occupational exposure standard criteria; occupational health control; *SP422*, pp. 275-282 (Aug. 1976).

Precision; x-ray fluorescence; accuracy; atomic absorption; environment; neutron activation analysis; *SP422*, pp. 239-245 (Aug. 1976).

Precision attenuator; sensor; waveguide-below-cutoff; absolute (unambiguous) readout; piston; *NBSIR 76-833*.

Precision audiofrequency signal generation; precision FM signal generation; precision phase angle generation; radio navigation; VOR; aircraft navigation systems; digital frequency synthesis; national standards; *16530*.

Precision FM signal generation; precision phase angle generation; radio navigation; VOR; aircraft navigation systems; digital frequency synthesis; national standards; precision audiofrequency signal generation; *16530*.

Precision frequency measurements; precision time measurements; time difference measurements; time-domain frequency stability; time interval; frequency measurement; frequency mixing; global positioning system; isolation amplifiers; low-noise amplifiers; *NBSIR 75-827*.

Precision measurements; radio star; satellite communications; error analysis; G/T; *NBSIR 76-842*.

Precision mercury manometer; triple point of water; vapor pressure of water; *16096*.

Precision mercury manometer; triple point of water; vapor pressure of water; *J. Res.* **80A** No. 3, 505-521 (1976).

Precision of analytical method; ultratrace level; accuracy; analysis of precision; *a priori* error; *a priori* precision; *a posteriori* precision; chi-square test; precision; *SP422*, pp. 127-139 (Aug. 1976).

Precision of measurement; repeatability; reproducibility; test methods; transformations; weighting; interlaboratory comparisons; invariance; models; precision; *15909*.

Precision phase angle generation; radio navigation; VOR; aircraft navigation systems; digital frequency synthesis; national standards; precision audiofrequency signal generation; precision FM signal generation; *16530*.

Precision time measurements; time difference measurements; time-domain frequency stability; time interval; frequency measurement; frequency mixing; global positioning system; isolation amplifiers; low-noise amplifiers; precision frequency measurements; *NBSIR 75-827*.

Precision transfer standards; coaxial thermistor mounts; *16651*.

Preconcentration; spark source mass spectrometry; steel; trace elements; isotope dilution; NBS Standard Reference Material; *15889*.

Preconcentration; trace elements; activation analysis; adsorption isotherm; environmental samples; mercury; *SP422*, pp. 669-699 (Aug. 1976).

Precondensates; radiation grafting; antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; *NBS-GCR-ETIP 76-22*.

Predicted indoor habitability index (PIHI); weather building human systems; air conditioning criteria; human comfort; physiological indices; *16152*.

Predicting product reliability; design engineering; material deterioration; mechanical failure; mechanical integrity; mechanical reliability; performance envelope; *SP423*, pp. 199-208 (Apr. 1976).

Predissociation; radiative recombination; $^5\Sigma_g^+$; electronic structure; energy curve; N_2; *16442*.

Predissociation; Rydberg states; ammonia; appearance potential; autoionization; deuterated species; enthalpy of formation; ionization potential; NH_2^+; OH^+; photoionization; *16539*.

Predissociation; Schumann-Runge bands; spin-orbit mixing; molecular oxygen; *16596*.

Prefabricated construction; standards; state-local relationship; state regulations; building codes; factory-built housing; industrialized building; inspection; manufactured building; model codes; model documents; NCSBCS; on-site construction; *NBS-GCR-74-27*.

Prefabricated dwelling; standards; structural design; earthquake; housing; performance specification; *SP444*, pp. IV-55 – IV-69 (Apr. 1976).

Prefabrication; zoning; building codes; building laws and regulations; building materials – testing and evaluation; building systems; industrialized housing; mobile homes; modular construction; *NBS-GCR-73-19*.

Preferential oxidation; temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; *16158*.

Preliminary analysis; specimen decomposition; specimen evaporation; plasma spectrometry; *SP422*, pp. 621-625 (Aug. 1976).

Preparative chromatography on DEAE-cellulose; spectrophotometric properties of pure NADH; ADP; ADP-ribose; chromatography; impurities in NADH preparations; NADH stability; *16316*.

Prepurification; purity definition; reagent contamination; ultrapurification; analytical blanks; analytical reagents; contamination control; high-purity reagents; membrane filtration; mercury cathode electrolysis; *SP422*, pp. 363-375 (Aug. 1976).

Pressure; pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; *TN894*.

Pressure; pressure measurement; pressure transducer; thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; photographic flashbulb; *TN905*.

Pressure; pressure measurement; calibration; calibration chain; *NBSIR 75-931*.

Pressure; pressure measurement; pressure transducer; pressure transducer response; response; thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; photoflash bulb; *NBSIR 76-1038*.

Pressure; pressure source; pressure transducer; sinusoidal pressure; transducer; calibration; dynamic; dynamic calibration; dynamic pressure; dynamic pressure source; liquid column; *TN914*.

Pressure; quality control; safety; testing; engineering, instrumentation and techniques; fluids; force; hydraulic equipment; mechanical power; noise; *16452*.

Pressure; thermal; volume; compressibility; configuration; entropy; heat capacity; holes; polymer; poly(vinyl acetate); *16077*.

Pressure calibrations; spectroscopy; x-ray diffraction; diamond cell; electrical resistance; high pressure; nuclear decay; *16375*.

Pressure drop; superfluid helium; two phase flow; compressibility flow; cryogenics; fluid dynamics; *16642*.

Pressure drop losses; compressor efficiency; cycle efficiency; heat exchanger losses; hydrogen liquefier; *15879*.

Pressure generation; 10^{-3} to 10^{-4} torr range; *16028*.

Pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; *TN894*.

Pressure measurement; calibration; calibration chain; pressure; *NBSIR 75-931*.

Pressure measurement; pressure transducer; thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; photographic flashbulb; pressure; *TN905*.

Pressure measurement; pressure transducer; pressure transducer response; response; thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; photoflash bulb; pressure; *NBSIR 76-1038*.

Pressure probe shroud; static pressure; weatherproof pressure probe; wind field pressure measurements; ambient pressure probe; omnidirectional pressure probe; *U.S. Patent 3,950,995*.

Pressure seal; pressure vessel; resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; *TN894*.

Pressure source; pressure transducer; sinusoidal pressure; transducer; calibration; dynamic; dynamic calibration; dynamic pressure; dynamic pressure source; liquid column; pressure; *TN914*.

Pressure source; pressure transducer; sinusoidal; space shuttle; transducer; bias pressure; calibration; dynamic calibration; dynamic pressure; high pressure; liquid medium; pogo pressure; *TN927*.

Pressure transducer; pressure transducer response; response; thermal transient; transducer; zero shift; calibration; dynamic;

electronic flash; photoflash bulb; pressure; pressure measurement; *NBSIR 76-1038.*

Pressure transducer; protective coatings; thermal radiant-energy response; thermal transient response; transducer; coatings; photoflash bulb; *NBSIR 76-1060.*

Pressure transducer; protective coatings; shock tube; tape; thermal radiant-energy response; thermal transient response; transducers; zero shift; coatings; dynamic; dynamic response; *NBSIR 76-1144.*

Pressure transducer; sinusoidal pressure; transducer; calibration; dynamic; dynamic calibration; dynamic pressure; dynamic pressure source; liquid column; pressure; pressure source; *TN914.*

Pressure transducer; sinusoidal; space shuttle; transducer; bias pressure; calibration; dynamic calibration; dynamic pressure; high pressure; liquid medium; pogo pressure; pressure source; *TN927.*

Pressure transducer; thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; photographic flashbulb; pressure; pressure measurement; *TN905.*

Pressure transducer response; response; thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; photoflash bulb; pressure; pressure measurement; pressure transducer; *NBSIR 76-1038.*

Pressure transducers; SRM; surgical implants; testing; thermal transients; architectural heritage; fire; guardrail; high-capacity; mathematics; mercury; performance standard; *DIM/NBS* **60,** No. 8, 1-24 (1976).

Pressure transducers; thermal comforts; weights and measures; building industry; calibration system; centigrade/celsius; computer; electrical industries; environments; glass standards; government intervention; heating/cooling; *DIM/NBS* **60,** No. 10, 1-24 (1976).

Pressure vessel; resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; *TN894.*

Pressure-broadened line shapes; Soviet Union; submillimeter waves; high resolution molecular spectroscopy; lasers; meeting report; Novosibirsk; *16010.*

Pressurized water reactors; primary coolant; sampling; water; analysis; carbon; crud; filtration; *SP422,* pp. 429-438 (Aug. 1976).

Prevention of electrocution; branch circuit protection; electrical safety; electric shock; ground fault; leakage current; *BSS81.*

Preventive dental materials; acrylic resins; chemistry; composite resins; dental materials; hydroxybenzoic acids; pit and fissure sealants; *15939.*

Preventive technology; scientific ills; society and science; technology and civilization; *16300.*

Primary and secondary photochemical processes; bond energy; chain reaction; determination of photochemical mechanism; flash photolysis; intermittent illumination; photochemical principles; photochemical reaction of atoms and molecules; photochemistry in the atmosphere; *16515.*

Primary batteries; primary cells; batteries; cells, primary; dry cells; *16043.*

Primary battery; secondary battery; transceiver; battery performance standard; law enforcement communications, Law Enforcement Standards Laboratory; personal/portable transceivers; *16296.*

Primary cells; batteries; cells, primary; dry cells; primary batteries; *16043.*

Primary coolant; sampling; water; analysis; carbon; crud; filtration; pressurized water reactors; *SP422,* pp. 429-438 (Aug. 1976).

Primary emission; quantitative electron probe analysis; x-ray absorption factor; absorption correction; *15722.*

Primary frequency standard; atomic beams; atomic clock; atomic time; cesium beam tube; definition of the second; frequency accuracy; international atomic time; *16487.*

Primary frequency standards; proper time; UTC; atomic clocks; clock acceleration effect; definition of the second; frequency accuracy; frequency standards; general relativity; gravitational redshift; *16236.*

Primary interference reactions; systematic errors; trace analysis; accuracy; activation analysis; analytical chemistry; charged particle activation analysis; cross sections; excitation functions; fast neutron activation analysis; *SP422,* pp. 1189-1214 (Aug. 1976).

Primary standards; properties; atom; energy generation; industrial technology; molecule; *NBSIR 75-944.*

Principal moments of inertia; standard enthalpy of formation; vibrational fundamentals; chlorofluoromethanes; ideal gas thermodynamic functions; *JPCRD* **5,** No. 3, 571-580 (1976).

Privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer security; confidentiality; cost model; data security costs; PL 93-597; *TN906.*

Privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer model; computer security; confidentiality; cost model; data security costs; PL-93-579; *NBSIR 76-985.*

Privacy; record identification; risk analysis; security; data confidentiality; data integrity; encryption; personal identification; *16390.*

Privacy; recordkeeping practices; security; citizen rights; computers; confidentiality; data systems; health records; information policy; management principles; medical records; *Monogr. 157.*

Privacy; safeguards for security and privacy; technology for security and privacy; computer security; information handling; *16439.*

Privacy; security; standards; technology assessment; user experience; auditing; cost/benefit analysis; data base; data base management; DBMS; government regulation; management objectives; *SP451.*

Privacy; security; terms; vocabulary; computer; data processing; definitions; Federal Information Processing Standards Publication; information processing; *FIPS PUB 39.*

Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer security; confidentiality; cost model; data security costs; PL 93-597; privacy; *TN906.*

Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; security costs; computer model; computer security; confidentiality; cost model; data security costs; PL-93-579; privacy; *NBSIR 76-985.*

Privacy compliance techniques; privacy costs; privacy model; security costs; computer security; confidentiality; cost model; data security costs; PL 93-597; privacy; Privacy Act of 1974; *TN906.*

Private sector; R&D; technological change; decisionmaking; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; policies; *NBS-GCR-ETIP 76-03.*

Private sector; R&D; technological change; decisionmaking; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; policies; *NBS-GCR-ETIP 76-04.*

Probability distribution functions; reliability; structural engineering; wind (meteorology); wind pressure; buildings (codes); failure; *16544.*

Probability distribution functions; reliability; risk; statistical analysis; storms; structural engineering; wind pressure; wind speed; buildings (codes); hurricanes; *16545.*

Probability plots; residuals; statistics; uncertainties; crystallographic data; errors; *NBSIR 76-1102.*

Probability theory; random process; safety; statistical analysis; structural engineering; failure; *SP444,* pp. IV-1 – IV-15 (Apr. 1976).

Probes; radiation; nonionizing fields; *16534.*

Problems with patrol cars; state of the art survey; functional requirements; patrol cars; performance of patrol cars; police patrol cars; *15826.*

Problems with patrol cars; state of the art survey; functional requirements; patrol cars; performance of patrol cars; police patrol cars; *NBSIR 75-960.*

Procedures, experimental for handling fluorine; bomb calorimetry with fluorine; enthalpy of formation, fluorides; flame calorimetry of fluorine and fluorides; *16100.*

Process control; reliability; semiconductor; automation; integrated circuits; measurements; microelectronics; *16116.*

Process control; reliability; semiconductors; silicon; test patterns; data acquisition; data display; integrated circuits; measurement technology; microelectronics; *SP 400-15.*

Process control; reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; *SP400-28.*

Process losses; material balance accounting; nuclear materials safeguards; *16263.*

Process uniformity; random faults; reliability; test patterns; TTL; vendor qualification; circuit procurement; component screening; custom circuits; LSI; microelectronics; parameter control; *16620.*

Processing; technical strategy; design; development; fabrication; life cycle costing; materials policy; nondestructive evaluation; performance; *15873.*

Procurement; response; service; computer; interactive; measurement; *16247.*

Procurement experiments; electric ranges; energy efficient products; Experimental Technology Incentives Program; life cycle costing; *NBS-GCR-ETIP 76-09.*

Procurement experiments; energy-efficient products; Experimental Technology Incentives Program; gas and electric ranges; life-cycle costing; *NBSIR 76-1027.*

Procurement experiments; energy efficient products; Experimental Technology Incentives Program; gas ranges; life cycle costing; *NBS-GCR-ETIP 76-15.*

Procurement experiments; procurement procedures; proposal evaluation procedures; proposal preparation procedures; evaluation systems; Experimental Technology Incentives Program; *NBSIR 76-1124.*

Procurement experiments; refrigerator-freezers; energy-efficient products; Experimental Technology Incentives Program; life-cycle costing; *NBSIR 75-954.*

Procurement experiments; refrigerators; energy efficient products; Experimental Technology Incentives Program; life cycle costing; *NBS-GCR-ETIP 76-10.*

Procurement experiments; room air conditioners; energy efficient products; Experimental Technology Incentives Program; life cycle costing; *NBS-GCR-ETIP 76-13.*

Procurement experiments; water heaters; energy-efficient products; Experimental Technology Incentives Program; life-cycle costing; *NBSIR 76-983.*

Procurement experiments; water heaters; energy efficient products; Experimental Technology Incentives Program; life cycle costing; *NBS-GCR-ETIP 76-14.*

Procurement experiments; window air conditioners; energy efficient products; Experimental Technology Incentives Program; life cycle costing; *NBS-GCR-ETIP 76-19.*

Procurement mechanisms; technology incentives; ETIP; government procurement; performance specifications; *NBS-GCR-ETIP 73-02.*

Procurement policies; product testing; specifications; unsolicited proposals; VA; certification programs; ETIP; incentives; innovation; life cycle costing; medical products and standards; *NBSIR 76-997.*

Procurement policy; specifications; value; Experimental Technology Incentives Program (ETIP); Federal Supply Service; life cycle costing; *NBS-GCR-ETIP 76-18.*

Procurement policy; specifications; value incentives; computer air conditioning units; Experimental Technology Incentives Program (ETIP); Federal Supply Service; life cycle costing; *NBS-GCR-ETIP 76-23.*

Procurement policy; state government; bid evaluation; Experimental Technology Incentives Program (ETIP); innovation; life cycle costing; local government; *NBS-GCR-ETIP 76-17.*

Procurement procedures; proposal evaluation procedures; proposal preparation procedures; evaluation systems; Experimental Technology Incentives Program; procurement experiments; *NBSIR 76-1124.*

Product performance; product reliability; product testing; consumer products; marketing; mechanical failure; *SP423,* pp. 209-212 (Apr. 1976).

Product performance; product safety; standards; human factors ergonomics; *16089.*

Product performance; product safety; bibliographies; consumer product safety; consumer product standards; consumer product technology; law enforcement equipment; law enforcement equipment standards; *NBSIR 76-1066.*

Product reliability; product testing; consumer products; marketing; mechanical failure; product performance; *SP423,* pp. 209-212 (Apr. 1976).

Product safety; accident data; data systems; fabric flammability; FFACTS; fire accidents; fire data systems; fire hazards; fires; hazard analysis; NEISS; plastics flammability; *16361.*

Product safety; bibliographies; consumer product safety; consumer product standards; consumer product technology; law enforcement equipment; law enforcement equipment standards; product performance; *NBSIR 76-1066.*

Product safety; refrigerator standards; risk measurement; safety standard; unreasonable hazards; consumer products; *16131.*

Product safety; safety; safety research; appliances; behavioral science; human factors; *16215.*

Product safety; standards; human factors ergonomics; product performance; *16089.*

Product testing; consumer products; marketing; mechanical failure; product performance; product reliability; *SP423,* pp. 209-212 (Apr. 1976).

Product testing; specifications; unsolicited proposals; VA; certification programs; ETIP; incentives; innovation; life cycle costing; medical products and standards; procurement policies; *NBSIR 76-997.*

Productivity; reliability; reproducibility; safety; accuracy; conservation; measurements; nondestructive evaluation; *16301.*

Productivity; service sector; automation; consumers; innovation; institutional barriers; *16319.*

Productivity; services—state/local government; automation; computer utilization; dedicated computers; EDP expenditure; employment; finance; *16075.*

Productivity improvement; public services; social impact of automation; automation technology; economic impact of automation; *SP448.*

Professional qualifications; fire protection; future trends; *16198.*

Professional societies; publications; reference data; journal; *15734.*

Profile; standard deviation; uncertainty; calibration; diameter; gravitational bending; interferometry; least squares line; linear model; optical flat; *NBSIR 75-975.*

Profile tracer; tires; noise; pavement macrotexture; *NBS-GCR-75-35.*

Program analysis; software correctness; software verification; symbolic program evaluation; automatic testing; computer program testing; FORTRAN programs; *NBS-GCR-76-69.*

Program analysis; software verification; automatic testing; computer program testing; FORTRAN programs; *NBS-GCR-75-46.*

Program analysis; software verification; automatic testing; computer program testing; FORTRAN programs; *NBS-GCR-75-47.*

Program complexity; program measurement static; dynamic analysis; errors; evaluation; *16650.*

Program measurement static; dynamic analysis; errors; evaluation; program complexity; *16650.*

Program modifications; type; abstract data types; class; cluster; data abstraction; data type; module; programming methods; *16246.*

Programmable desk calculator; standard cell comparator; automated; calculator; calibration; crossbar switch; low-level voltage measurements; MIDAS; *15906.*

Programmable potentiometer; self-balancing potentiometers; thermometry; automatic potentiometry; automation; calorimetry; Disselhorst ring; potentiometer; *J. Res.* **80A** No. 4, 669-675 (July-Aug. 1976).

Programmable robots; specifications; guidelines; industrial robots; manipulator; performance evaluation; *SP459.*

Programmer's documentation; short line mileage; waybill file; *16241.*

Programming language standards; ADP standards; BASIC; compilers; compiler validation; computer programming; formal language; *NBS-GCR-73-17.*

Programming methods; program modifications; type; abstract data types; class; cluster; data abstraction; data type; module; *16246.*

Progressive collapse; regulatory process; abnormal loading; building regulations; design process; European; *NBS-GCR-75-48.*

Progressive collapse; sonic boom; vehicular collision; bombs; building codes; design criteria; explosions; gas; hazardous materials; loads; *BSS89.*

Progressive collapse; specific resistance; abnormal loading; alternate path; annotated bibliography; bibliography; building code; building regulations; collapse; failures; *BSS67.*

Project summaries; quantitative numerical data; industrial process data; *NBSIR 76-1002.*

Project summaries; standards; technical bases; building research; building technology; codes; criteria; *SP446.*

Proliferation of specifications; environmental extremes; fail-safe operation; high strength materials; mechanical failure; potential service conditions; *SP423*, pp. 193-197 (Apr. 1976).

Proline; ring conformation; substituent effects; amides; carbon-13 magnetic resonance; chemical shifts; cis and trans isomers; peptides; *16235.*

Proof testing; research associate program; sampling test; drop ball test; impact resistance; ophthalmic lens; *NBSIR 76-996.*

Proof testing; residual strain; acoustic emission; macrocracking; porcelain insulators; *16069.*

Proof testing; slow crack growth; unloading; failure probabilities; lifetime assurance; *16039.*

Propane; propane-d_2; propane-d_6; propane-d_8; threshold photoelectron spectroscopy; coincidence; mass spectrometry; photoionization; *16590.*

Propane-d_2; propane-d_6; propane-d_8; threshold photoelectron spectroscopy; coincidence; mass spectrometry; photoionization; propane; *16590.*

Propane-d_6; propane-d_8; threshold photoelectron spectroscopy; coincidence; mass spectrometry; photoionization; propane; propane-d_2; *16590.*

Propane-d_8; threshold photoelectron spectroscopy; coincidence; mass spectrometry; photoionization; propane; propane-d_2; propane-d_6; *16590.*

Propanone (acetone); torsional frequencies; 2-butanone (methyl ethyl ketone); enthalpy; entropy; equilibrium constant of formation; Gibbs energy of formation; heat capacity; ideal gas thermodynamic properties; *JPCRD* **5**, No. 2, 319-328 (1976).

Proper time; UTC; atomic clocks; clock acceleration effect; definition of the second; frequency accuracy; frequency standards; general relativity; gravitational redshift; primary frequency standards; *16236.*

Properties; atom; energy generation; industrial technology; molecule; primary standards; *NBSIR 75-944.*

Properties; test methods; nonpolymeric constituents in plastics; plastics testing; polymer analysis; *16225.*

Properties of ionic crystals; crystals; ionic conductivity; ionic crystals; *16160.*

Properties of semiconductors; semiconductors; thermoelectric power; band structure; *16161.*

Property; system; test method; ASTM; classification; fire hazard; participation; *16124.*

Property measurement test; standard test methods; aging test; building elements and materials; degradation factors; durability; *NBSIR 75-955.*

Proportional counters; radioactivity standardization; xenon-133, 131m; argon-37; direct standardization; environmental radioactivity; internal gas counters; isotope separator; krypton-85; *15948.*

Proportional limit; crack propagation; determination of stress; measurement; mechanical tests; plastic deformation; *16468.*

Proportional limit; flow surface; multiaxial stresses; plasticity; *15802.*

Proposal evaluation procedures; proposal preparation procedures; evaluation systems; Experimental Technology Incentives Program; procurement experiments; procurement procedures; *NBSIR 76-1124.*

Proposal preparation procedures; evaluation systems; Experimental Technology Incentives Program; procurement experiments; procurement procedures; proposal evaluation procedures; *NBSIR 76-1124.*

Proposal/award software; research administration; software exchange; software summary; software survey; space management software; university systems; directory; equipment management software; fiscal administration software; grant/contract software; *TN916.*

Protactinium; rare earth; sliding spark discharge lamp; spec-

trum; uranium; actinide; atomic energy levels; isoelectronic sequence; *15990.*

Protection; protective equipment; energy absorption; impact test; *NBS-GCR-74-24.*

Protection; reliable software; reliability; security; small protection domains; types; capability; capability-based addressing; computer security; extended-type objects; operating system structures; *TN919.*

Protective clothing; smoke inhalation; standards; breathing apparatus; closed loop breathing apparatus; equipment design; fire fighters; fire fighting; fire fighting equipment; fire gases; open loop breathing apparatus; *NBS-GCR-73-10.*

Protective coatings; shock tube; tape; thermal radiant-energy response; thermal transient response; transducers; zero shift; coatings; dynamic; dynamic response; pressure transducer; *NBSIR 76-1144.*

Protective coatings; thermal radiant-energy response; thermal transient response; transducer; coatings; photoflash bulb; pressure transducer; *NBSIR 76-1060.*

Protective equipment; energy absorption; impact test; protection; *NBS-GCR-74-24.*

Protective films; moisture resistance; sodium chloride; arsenic trisulphide; ion planing; *SP435,* pp. 14-19 (Apr. 1976).

Protective headgear; safety; test methods; head injury; helmets; math model; *NBSIR 76-1107.*

Protein adsorption; conformation adsorbed proteins; ellipsometry; infrared bound fraction; *16427.*

Protein adsorption; protein conformation; blood proteins; infrared bound fraction; *15707.*

Protein adsorption; synthetic implants; adsorption; blood protein; bound fraction; ellipsometry; implants; polymer adsorption; *NBSIR 75-667.*

Protein adsorption; synthetic implants; adsorption; blood protein; bound fraction; ellipsometry; implants; polymer adsorption; *NBSIR 76-1017.*

Protein conformation; blood proteins; infrared bound fraction; protein adsorption; *15707.*

Proteins; solid standards; antibodies; antigens; biological polymers; immunochemical analysis; light scattering; polymers; *J. Res.* **80A** No. 4, 605-608 (1976).

Protocol; standards; computer networks; data communications; data networks; networks; packet switching; *16576.*

Protocols; automated reading technology; circuitry; computer applications; computer engineering; distributed systems; interface standards; memory technology; *16553.*

Protocols; teleprocessing; access procedures; command language; computer networks; job control language; macros; minicomputers; *TN917.*

Proton affinity; proton transfer; basicity; bibliography, appearance potential; heat of formation; ion-molecule equilibrium; *NBSIR 76-1061.*

Proton affinity; proton transfer; rate coefficients; CCl_2, CF_2; CCl_2H^+, CF_2H^+; displacement reactions; four-center reactions; ion molecule reactions; *16598.*

Proton transfer; basicity; bibliography, appearance potential; heat of formation; ion-molecule equilibrium; proton affinity; *NBSIR 76-1061.*

Proton transfer; radiation chemistry; hydride transfer; ion clustering; ion-molecule reactions; *15816.*

Proton transfer; rate coefficients; CCl_2, CF_2; CCl_2H^+, CF_2H^+; displacement reactions; four-center reactions; ion molecule reactions; proton affinity; *16598.*

Pseudogout; solubility; solubility product; synovial fluid; calcium diphosphate; calcium pyrophosphate; chondrocalcinosis; *16230.*

Pseudointersection graph; set covering; clique; clique graph; intersection graph; *J. Res.* **80B** No. 4, 441-445 (1976).

Pseudopentagonal; stacking fault; twin; wedge; crystal; disclination; dislocation; *15767.*

Pseudopotentials; molecular structure; *15815.*

Pseudopotentials; self-consistent field; valence electrons; basis functions; configuration mixing; dipole moments; electronic structure of molecules; Hartree-Fock; integrals, evaluation of; molecular structure; orbitals; potential energy curves; *16611.*

Psychological deterrence; security systems; sensory processes; threat analysis; behavioral impact; cognitive processes; nuclear weapon theft; perceptual processes; *NBSIR 76-1007.*

Psychomotor; safety; glare; lighting; perceptual/motor; *NBS-GCR-75-45.*

Psychopathic personality; arson; firesetting; *15837.*

*p*th roots; symplectic matrices; generalized permutations; *15790.*

Public concern; executive programs; information management; information processing; legislative programs; national policies; *16245.*

Public Law 93-380; Public Law 94-168; anthropomorphic units; bicentennial; history of measurement; metric conversion; metric roll call; metrology; *16195.*

Public Law 94-168; anthropomorphic units; bicentennial; history of measurement; metric conversion; metric roll call; metrology; Public Law 93-380; *16195.*

Public safety; safety responsibility; construction safety; construction surety; degradation of safety with age and use; maintenance of safety; *SP423,* pp. 165-170 (Apr. 1976).

Public services; security; standards; user groups; computers; data base management; governments; management information systems; *15923.*

Public services; social impact of automation; automation technology; economic impact of automation; productivity improvement; *SP448.*

Publications; abstracts; Center for Building Technology; key words; *SP457.*

Publications; abstracts; NBS publications; key words; *SP305. Supplement 7.*

Publications; reference data; journal; professional societies; *15734.*

Puerto Rico; replicates; sediments; standard; trace elements; accuracy; Atomic Absorption Spectrometry; Caribbean; precision; *SP422,* pp. 1089-1102 (Aug. 1976).

Pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; *SP400-18.*

Pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; *SP400-18.*

Pull test; resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; shear test; sheet resistors; silicon; silicon on sapphire; *SP400-19.*

Pull test; resistivity; scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; silicon on sapphire; spreading resistance; *SP400-25.*

Pull-out strength; splitting tensile strength; compressive strength; concrete; maturity; mechanical properties; nondestructive evaluation; *TN932.*

Pullout tests; bond strength; coated reinforcing bars; evaluation; organic coatings; *15782.*

Pulse; rise time; sampling oscilloscope; spectrum amplitude; time domain; transient; automated measurement; *16477.*

229-317 O - 77 -

Pulse discharge; collision model; early afterglow; electron temperature; helium metastables; helium plasma; *15958.*

Pulse echo; steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; ASTM-type reference standards; calibration; fabrication variables; immersion testing; interim reference standard; longitudinal waves; *NBSIR 76-984.*

Pulse generator; step waveform; tunnel diode; directional coupler; fast risetime; flat pulse baseline/topline; *U.S. Patent 3,967,140.*

Pulse laser power; electrically calibrated pyroelectric detector; gold-black; piezoelectric; *16135.*

Pulse measurement; automation; electrical measurements; electrooptics; high voltage measurement; Kerr effect; optical coupling; *15718.*

Pulse measurement; spectrum; spectrum amplitude; calibration; Fourier transform; impulse generator; *16463.*

Pulse measurements; sampling; laser; optical pulse; oscilloscope; photoconductor; *16193.*

Pulse modulated carrier systems; rf peak pulse power; notch wattmeter; pulse-CW equalization; *TN682.*

Pulse polarography; trace analysis; background correction; differential pulse polarography; dropping mercury electrode; electroanalysis; *SP422*, pp. 871-879 (Aug. 1976).

Pulse shape discrimination; tropospheric mixing; Ar-37; atmospheric radioactivity; cosmic-ray reactions; exponential distribution; low-level counting; noble gas separation; on-line computer; *15744.*

Pulse-CW equalization; pulse modulated carrier systems; rf peak pulse power; notch wattmeter; *TN682.*

Pulsed CO_2 laser damage; surface damage; 10.6 μm absorption; 10.6 μm optical components; dielectric coatings; infrared laser windows; laser heating of metal surfaces; laser mirrors; *SP462*, pp. 181-188 (Dec. 1976).

Pulsed CO_2 TEA laser damage; transmitted pulse; waveform distortion; ZnSe; KCl; NaCl; *SP435*, pp. 107-117 (Apr. 1976).

Pulsed DF laser damage; sapphire; scattering; waveform distortion; alkali-halides; alkaline-earth fluorides; bulk damage; focal spot diameter; inclusion damage; interference ripples; *SP462*, pp. 136-144 (Dec. 1976).

Pulsed laser; thermal distortion; laser windows and mirrors; optical figure; *SP462*, pp. 11-24 (Dec. 1976).

Pulsed laser damage; rare earth fluorides; zinc selenide coatings; laser antireflective coatings; materials purification requirements; *SP462*, pp. 271-278 (Dec. 1976).

Pulsed laser damage; thermal model; angle of incidence; polarization; *SP435*, pp. 41-48 (Apr. 1976).

Pulsed laser holograms; stress corrosion cracking; ultrasonic inspection; aircraft component failure; continuous wave holograms; crack detection; holographic techniques; *SP423*, pp. 93-103 (Apr. 1976).

Pulsed lasers; window damage; mirror damage; *SP435*, pp. 202-206 (Apr. 1976).

Pulsed NMR; spin lattice relaxation; Knight shift; magnetism; nickel; *16357.*

Pulsed x rays; radiographic imaging; steady-state x rays; detector calibrations; fluorescence x-ray sources; K x-ray sources; *SP456*, pp. 41-45 (Nov. 1976).

Pulsed 10.6 μm laser damage; RAP materials; transmitted pulse cutoff; variable pulse duration; alkali halides; bulk damage; longitudinal mode control; *SP435*, pp. 118-125 (Apr. 1976).

Pulse-echo; ultrasonics; aluminum ultrasonic reference standards; ASTM-type reference standards; calibration; interim reference standard; longitudinal beam; measurement system; nondestructive evaluation; *TN924.*

Pulse-echo method; resonance method; shear modulus; sound velocity; Young's modulus; bulk modulus; compressibility; copper; copper alloys; elastic constants; Poisson ratio; *16505.*

Pulses; radiation; safety; x-ray generators; x rays; calibration; electrical measurements; electro-optics; frequency response; high voltage; Kerr effect; operational amplifier; *NBSIR 75-775.*

Pultruded rods; rods, insulator; breakdown, electrical; failure analysis; fiberglass-reinforced plastics; flammability; guy insulators; high-voltage tests; insulators, tower guy; Loran C; *NBSIR 76-1136.*

Pultrusions; stress-rupture testing; sunlight; ultraviolet radiation; weatherability; antenna-support materials; environmental degradation; guys, nonmetallic; marine atmospheres; plastics, fiber-reinforced; *NBSIR 76-1069.*

Pure reference materials; reference methods; routine methods; secondary reference materials; Standard Reference Materials; definitive method; matrix reference materials; *16104.*

Purification; space processing; convection; crystal growth; crystal perfection; microgravity; *NBSIR 76-980.*

Purification (evaporative); solutal-capillary; thermal capillary convection; vacuum vaporization; Al_2O_3; complex equilibria; convective diffusion; evaporative rate; *15968.*

Purity; reagents; accuracy; analysts; apparatus; blank; contamination; environment; *SP422*, pp. 509-539 (Aug. 1976).

Purity definition; reagent contamination; ultrapurification; analytical blanks; analytical reagents; contamination control; high-purity reagents; membrane filtration; mercury cathode electrolysis; prepurification; *SP422*, pp. 363-375 (Aug. 1976).

PVT; density; ethane; vapor pressure; *J. Res.* **80A** No. 1, 35-39 (1976).

Pyroelectric; dipoles; electret; glass; piezoelectric; polarization; polyvinyl chloride; *16277.*

Pyroelectric; radiometry; detector; *TN678.*

Pyroelectric; spectral response; detector; infrared; *16472.*

Pyroelectricity; electret; piezoelectricity; polarization electrostriction; polymer; *16284.*

Pyroelectrics; radiometers; optical radiation; *15830.*

Pyroelectrics; radiometry; infrared detectors; polymers; *16471.*

Pyrolysis; aircraft fires; fire hazard; flash fire; polyurethane; *NBSIR 75-757.*

Pyrolysis; combustion; data base; energy conservation; estimation schemes; kinetics; modeling; oxidation; *NBSIR 75-910.*

Pyrolysis; pyrophosphate; stoichiometry; whitlockite; β-tricalcium; calcification; calcium; dicalcium phosphate; octacalcium phosphate; *15996.*

Pyrolysis; radiant heat; thermal inertia; ASTM Standard E119; building construction; charring; combustion; fire endurance; fire test; flame emissivity; heat transfer; *NBS-GCR-75-50.*

Pyrolysis; radiant heat; thermal sensitivity index; calorimeter; combustion; fire test; heat release; limiting thermal index; *NBS-GCR-76-54.*

Pyrolysis; ramie; rayon; sulfur; cellulosic fibers; combustion; cotton fibers; flame retardant treatments; phosphorous acids; *NBS-GCR-73-4.*

Pyrolysis; reactive gas generator; sulfur dioxide; acetaldehyde; acrolein; formaldehyde; gas chromatography; hydrogen chloride; hydrogen cyanide; pollution; *NBSIR 76-1000.*

Pyrolysis; silicon difluoride; base catalyzed decomposition; fluorodisilane; pentafluorodisilane; physical properties; *16014.*

Pyrolysis; SO_2; trimethylene sulfone; 3-methyl sulfolane; *15952.*

Pyrometry; radiance temperature; hafnium; high-speed measurement; high temperature; melting point; *J. Res.* **80A** No. 4, 659-662 (1976).

Pyrometry; radiance temperature; tantalum; emittance; high-speed measurements; high temperature; melting point; *16426.*

Pyrophosphate; stoichiometry; whitlockite; β-tricalcium; calcification; calcium; dicalcium phosphate; octacalcium phosphate; pyrolysis; *15996.*

Pyrophosphate; Temkin; wax-bound electrode; amperometry; cyclic voltammetry; electrosorption; Langmuir; lead dioxide; *SP455*, pp. 183-189 (Nov. 1976).
PZT 65/35; thallium chloride; very low temperatures; barium titanate; dielectric properties; ferroelectrics; KDP; *16491*.

Q

Q cavity; two-ports; automatic network analyzer; *15867*.
Quadratic form; random variable; singular value decomposition; eigenvalues; independence; *J. Res.* **80B** No. 3, 333-335 (1976).
Quadratic irrational; continued cotangent; continued fraction; *J. Res.* **80B** No. 2, 285-290 (1976).
Quadrature; computer program; Fourier transform NMR; homonuclear lock; phase adjustment; phase correction algorithm; *15970*.
Quadrupole hyperfine interactions; saturated absorption spectroscopy; high resolution spectroscopy; methyl halides; optical heterodyne spectroscopy; *16407*.
Quadrupole phonons; vibrational nuclei; anharmonicities; branching ratio; charge distribution; electron scattering; *16507*.
Qualified products lists; testing; acceptance testing; compliance testing; laboratory evaluation; performance testing; *NBSIR 75-719*.
Qualitative accuracy; quality control; quantitative accuracy; reference materials; sampling; concentration; detectors; extraction; gas chromatography; isolation and clean-up; mass spectrometry; organic trace analysis; *SP422*, pp. 9-34 (Aug. 1976).
Quality and compatible part material; quality diamond tools; controlled environment; diamond machining; machined optics; nondistortion part support; position errors; *SP435*, pp. 75-89 (Apr. 1976).
Quality assurance; calibration; megavoltage radiotherapy; *SP456*, pp. 351-358 (Nov. 1976).
Quality assurance; quality control; radioactivity; reference methods; calibration; intercomparison studies; *SP456*, pp. 263-265 (Nov. 1976).
Quality assurance; radioactive effluents; radioanalytical data; regulations; environmental samples, laboratories; *SP456*, pp. 249-261 (Nov. 1976).
Quality assurance; radiopharmaceuticals; ^{99m}Technetium; gamma camera; nuclear medicine; *SP456*, pp. 131-138 (Nov. 1976).
Quality assurance; reactor systems and components; safety standards; failure prevention; mechanical failure; mechanical malfunction; *SP423*, pp. 143-151 (Apr. 1976).
Quality assurance measurements; x-ray quality control; diagnostic radiology; pass-fail tests; *SP456*, pp. 119-130 (Nov. 1976).
Quality control; medical physicist; radiation measurement; radiation therapy; tumor dose; *SP456*, pp. 111-118 (Nov. 1976).
Quality control; quantitative accuracy; reference materials; sampling; concentration; detectors; extraction; gas chromatography; isolation and clean-up; mass spectrometry; organic trace analysis; qualitative accuracy; *SP422*, pp. 9-34 (Aug. 1976).
Quality control; radiation measurement; radiation processing; radiation sterilization; radiochromic dyes; Red Perspex; sterility control; dosimetry; electron beams; gamma rays; physical measurements; *16648*.
Quality control; radioactivity; reference methods; calibration; intercomparison studies; quality assurance; *SP456*, pp. 263-265 (Nov. 1976).
Quality control; safety; testing; engineering, instrumentation and techniques; fluids; force; hydraulic equipment; mechanical power; noise; pressure; *16452*.
Quality control; safety standards; economic cost of failure prevention; frequency of failure; government action; life-cycle costing; marginal analysis; *SP423*, pp. 107-116 (Apr. 1976).
Quality control; standardization; testing facilities; Bolivia; measurements; *NBSIR 76-1099*.
Quality control; standards; air pollution; calibration; evaluation; inter-calibration; *15978*.
Quality control; surrogate specimens; trace elements; accuracy and precision; clinical chemistry; *SP422*, pp. 35-40 (Aug. 1976).
Quality control; systematic error; Youden plot; analytical performance; between-run; calibration; precision; *SP422*, pp. 141-150 (Aug. 1976).
Quality diamond tools; controlled environment; diamond machining; machined optics; nondistortion part support; position errors; quality and compatible part material; *SP435*, pp. 75-89 (Apr. 1976).
Quantitation; gas chromatography; liquid chromatography; oil spill; petroleum; *16423*.
Quantitative accuracy; reference materials; sampling; concentration; detectors; extraction; gas chromatography; isolation and clean-up; mass spectrometry; organic trace analysis; qualitative accuracy; quality control; *SP422*, pp. 9-34 (Aug. 1976).
Quantitative analysis; electron spectroscopy for chemical analysis; mean free path; *16079*.
Quantitative analysis; secondary ion mass spectrometry; surface analysis; CARISMA program; ion microprobe mass analysis; local thermodynamic equilibrium model; *15862*.
Quantitative analysis; thin films; x rays; electron probe microanalysis; Monte Carlo calculations; particulates; *16410*.
Quantitative detection; infrared detection; laser magnetic resonance; modulated absorption; nitrogen dioxide; NO_x detection; *16623*.
Quantitative electron probe analysis; x-ray absorption factor; absorption correction; primary emission; *15722*.
Quantitative numerical data; industrial process data; project summaries; *NBSIR 76-1002*.
Quantitative phase analysis; quantitative powder diffraction; reference intensity ratios; systematic errors in powder diffraction; calculated powder patterns; I/I_c; microabsorption effects; *15929*.
Quantitative powder diffraction; reference intensity ratios; systematic errors in powder diffraction; calculated powder patterns; I/I_c; microabsorption effects; quantitative phase analysis; *15929*.
Quantitative x-ray microanalysis; thin films; x-ray emission; electron trajectories; magnetic effects; Monte Carlo calculations; multiple scattering x-ray generation; particle analysis; *SP460*, pp. 105-128 (Dec. 1976).
Quantum chemistry; transition metal complexes; catalysis; chemisorption theory; metal clusters; molecular orbitals; *SP455*, pp. 67-86 (Nov. 1976).
Quantum counters; rhodamine B chloride; spectrofluorimetry; total internal reflection; emission anisotropy; fluorescence; photodetectors; polarization; *16430*.
Quantum efficiencies; radiant efficiencies; UV excitation; x-ray excitation; cathode-ray excitation; luminescence; luminescence standards; phosphors; *J. Res.* **80A** No. 3, 401-407 (1976).
Quantum efficiency; solar energy; energy levels; photocatalytic electrodes; photoelectrolytic cells; photogalvanic cells; *SP455*, pp. 221-227 (Nov. 1976).
Quantum electrodynamics; data analysis; fundamental constants; least-squares adjustments; *15947*.
Quantum mechanics; atomic and molecular processes; comets; line formation; polarization; *15746*.

Quantum mechanics; rate coefficients; recombinations; scattering theory; chemical reactions; collision theory; cross sections; dissociation; hot atoms; isotope effects; kinetics; molecular beams; *16591.*

Quantum mechanics; scattering theory; semiclassical approximation; electron exchange; electron scattering; hydrogen atoms; indistinguishable particles; phase shifts; *16122.*

Quantum mechanics; spectroscopy; transition probabilities; wave functions; ions; oscillator strengths; *16209.*

Quantum yield; absolute yield; chemical actinometry; correction factors; luminescence; quantum-flat actinometer; *J. Res.* **80A** No. 3, 409-412 (1976).

Quantum yield; rate constant; atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; *16067.*

Quantum yields; water; absorption; carcinogenic; fluorescence; polycyclic aromatic hydrocarbons; *15831.*

Quantum-flat actinometer; quantum yield; absolute yield; chemical actinometry; correction factors; luminescence; *J. Res.* **80A** No. 3, 409-412 (1976).

Quark models; symmetries; ψ particles; χ particles; angular distributions; gamma-gamma correlations; *15962.*

Quartz; shaping; closed die; forging; isostatic; polishing; *SP462*, pp. 95-99 (Dec. 1976).

Quasifree electrons; solvated electrons; conduction band; drift mobility; energy levels; excess electrons; hydrocarbons; ion mobility; liquids; mobility; *NSRDS-NBS58.*

Quasi-static theory; strain gage measurements; drop-ball test; impact; lens; ophthalmic lens; *16310.*

Quaternization; alkyl halides; antimony; arsenic; environment; kinetics; methylation; nucleophilic reactivity; onium salts; polar solvents; pollutants; *16628A.*

Quenching; sulfur dioxide; emission gas; exhaust; fluorescence; nitric oxide; *16444.*

Quenching; xanthene dyes; aminocoumarins; carbazine dyes; deuterium effect; fluorescence quantum yield; laser dyes; molecular structure; oxazine dyes; *J. Res.* **80A** No. 3, 421-428 (1976).

R

R & D incentives; tissue characterization; tissue signature; ultrasonic diagnosis; ultrasound; applied research; imaging; instrumentation technology; medical ultrasonics; NSF; RANN; *SP453*, pp. 7-10 (Oct. 1976).

Racking; test method; vertical loads; wall panels; walls; lateral loads; loading rate; *BSS91.*

Radiance temperature; hafnium; high-speed measurement; high temperature; melting point; pyrometry; *J. Res.* **80A** No. 4, 659-662 (1976).

Radiance temperature; tantalum; emittance; high-speed measurements; high temperature; melting point; pyrometry; *16426.*

Radiant efficiencies; UV excitation; x-ray excitation; cathode-ray excitation; luminescence; luminescence standards; phosphors; quantum efficiencies; *J. Res.* **80A** No. 3, 401-407 (1976).

Radiant flux; α-cellulose; flame spread; instability; *16107.*

Radiant flux; reflectance standards; standards calibration; barium sulfate; diffuse reflectance spectra; magnesium oxide; opal glass; *J. Res.* **80A** No. 4, 585-595 (1976).

Radiant heat; thermal inertia; ASTM Standard E119; building construction; charring; combustion; fire endurance; fire test; flame emissivity; heat transfer; pyrolysis; *NBS-GCR-75-50.*

Radiant heat; thermal sensitivity index; calorimeter; combustion; fire test; heat release; limiting thermal index; pyrolysis; *NBS-GCR-76-54.*

Radiant heat flux; carpets; floor coverings; horizontal; ignition; ignition time; pilot ignition; *NBSIR 75-967.*

Radiant panel; fire hazard; fire safety; flooring test; *16233.*

Radiant panel; fire hazard; fire safety; flooring test; *NBSIR 75-950.*

Radiant panel; smoke density; time to ignition; fire performance tests; flame spread; heat input; heat release rate; limiting oxygen index; *16136.*

Radiant panel test method; floor covering; heat flux; *NBSIR 75-706.*

Radiated emission; radiation resistance; TEM cells; measurements; *16469.*

Radiation; activation analysis; crystal structure; diffraction; isotopes; molecular dynamics; neutron; nuclear reactor; *TN896.*

Radiation; nonionizing fields; probes; *16534.*

Radiation; radiochromic dyes; spectrophotometry; colour dosimeters; dosimetry; dyes; glass; plastics; *15960.*

Radiation; regulations; states; abstract; compromise; ineffectiveness; measurements; *SP456*, pp. 31-36 (Nov. 1976).

Radiation; safety; x-ray generators; x rays; calibration; electrical measurements; electro-optics; frequency response; high voltage; Kerr effect; operational amplifier; pulses; *NBSIR 75-775.*

Radiation; sound studies; engineering; environmental; interference abatement; laboratory environments; *16009.*

Radiation; standards; calibrations; environment; measurements; medical; *SP456.*

Radiation; supervoltage; therapy; dosimetry; intercomparisons; *SP456*, pp. 359-363 (Nov. 1976).

Radiation; thalium; molecules; *16094.*

Radiation calibrations; radiation control; radiation measurement assurance; radiation standards; mobile laboratory; *SP456*, pp. 47-51 (Nov. 1976).

Radiation chemistry; hydride transfer; ion clustering; ion-molecule reactions; proton transfer; *15816.*

Radiation chemistry; radiation physics; electrons; free ions; ion yields; liquid; nonpolar systems; *NSRDS-NBS57.*

Radiation control; radiation measurement assurance; radiation standards; mobile laboratory; radiation calibrations; *SP456*, pp. 47-51 (Nov. 1976).

Radiation converter; ultraviolet averaging sphere; ultraviolet to visible converter; averaging sphere; averaging ultraviolet and visible light; *U.S. Patent 3,968,363.*

Radiation damage; radiation effects; digital bipolar circuits; integrated injection logic; *16180.*

Radiation detectors; superconductors; cryogenics; infrared; Josephson junctions; lasers; *16458.*

Radiation effects; digital bipolar circuits; integrated injection logic; radiation damage; *16180.*

Radiation effects; radiation hardening; test patterns; test structures; hardened integrated circuits; integrated circuits; *NBSIR 76-1093.*

Radiation exposure; radiation measurement; radiation protection; *SP456*, pp. 5-11 (Nov. 1976).

Radiation grafting; antimony oxide; bromine; bromine flame retardants; calorimetry; cotton; cotton/polyester; ETIP; fabric flammability; flame retardant mechanisms; flame retardant monomers; flame retardants; hand modifiers; *NBS-GCR-ETIP 76-22.*

Radiation grafting; research consortia; cotton polyester blends; ETIP; flame retardants; flammability; R&D contracting; *NBS-GCR-ETIP 75-01.*

Radiation hardening; test patterns; test structures; hardened integrated circuits; integrated circuits; radiation effects; *NBSIR 76-1093.*

Radiation hardness; receivers; Schottky-barrier diodes; semiconductors; solid-state devices; x-band measurements; diodes; gamma rays; hardness assurance; microwave mixer diodes; mixers; neutrons; *SP400-7.*

Radiation heating; vapor pressures; AlO_2; Al_2O_3; emissivity; evaporation coefficient; Langmuir vaporization; optical pyrometry; *16540.*

Radiation instruments; calibration; manganous sulfate; neutron source; *SP456*, pp. 87-89 (Nov. 1976).

Radiation measurement; radiation processing; radiation sterilization; radiochromic dyes; Red Perspex; sterility control; dosimetry; electron beams; gamma rays; physical measurements; quality control; *16648.*

Radiation measurement; radiation protection; radiation exposure; *SP456*, pp. 5-11 (Nov. 1976).

Radiation measurement; radiation therapy; tumor dose; quality control; medical physicist; *SP456*, pp. 111-118 (Nov. 1976).

Radiation measurement assurance; radiation standards; mobile laboratory; radiation calibrations; radiation control; *SP456*, pp. 47-51 (Nov. 1976).

Radiation measurements; federal regulating agency; Food and Drug Administration; *SP456*, pp. 25-29 (Nov. 1976).

Radiation pattern; reflector; Yagi; antenna; director; driven element; gain; *TN688.*

Radiation physics; electrons; free ions; ion yields; liquid; nonpolar systems; radiation chemistry; *NSRDS-NBS57.*

Radiation processing; radiation sterilization; radiochromic dyes; Red Perspex; sterility control; dosimetry; electron beams; gamma rays; physical measurements; quality control; radiation measurement; *16648.*

Radiation protection; radiation exposure; radiation measurement; *SP456*, pp. 5-11 (Nov. 1976).

Radiation quality; secondary particle spectra; theoretical dosimetry; energy deposition spectra; microdosimetry; neutron interactions with tissue; neutrons; *16182.*

Radiation resistance; rectangular coax; shielded strip line; TEM cell; EMC measurements; *NBSIR 75-829.*

Radiation resistance; TEM cells; measurements; radiated emission; *16469.*

Radiation safety; radiation therapy (ultrasonic); ultrasonics; electroacoustics; medical diagnostics; *NBSIR 75-937.*

Radiation safety; standards laboratory; synchrotron; building collapse; corrosion; energy; environmental; frequency standards; hearing aids; high-rise buildings; metals; *DIM/NBS* **60,** No. 5, 1-24 (1976).

Radiation source; radioactive; radioluminous products; self-luminous sources; test procedures; classification; containment; designation; light sources; national standard; *H116.*

Radiation standards; mobile laboratory; radiation calibrations; radiation control; radiation measurement assurance; *SP456*, pp. 47-51 (Nov. 1976).

Radiation sterilization; radiochromic dyes; Red Perspex; sterility control: dosimetry; electron beams; gamma rays; physical measurements; quality control; radiation measurement; radiation processing; *16648.*

Radiation therapy; service; dosimetry; electrons; impact; improvement; performance; *SP456*, pp. 365-370 (Nov. 1976).

Radiation therapy; tumor dose; quality control; medical physicist; radiation measurement; *SP456*, pp. 111-118 (Nov. 1976).

Radiation therapy (ultrasonic); ultrasonics; electroacoustics; medical diagnostics; radiation safety; *NBSIR 75-937.*

Radiation trapping; airglow; atomic oxygen; cascade radiation; emission cross section; *15927.*

Radiation users; standards; ionizing radiation; measurement assurance; *SP456*, pp. 403-416 (Nov. 1976).

Radiative; transition probability; CO^+; CO_2^+; coincidence; electron impact; ions; lifetime; molecule; N_2^+; *15912.*

Radiative and nonradiative transition probabilities; real fluorescence parameters; fluorescence lifetime; fluorescence quantum efficiency; fluorescence quantum yields; fluorescence spectrum; fluorescence standards; *J. Res.* **80A** No. 3, 389-399 (1976).

Radiative cooling; roofing; solar heating; surface temperature; built-up roofing; insulation; performance; *NBSIR 76-987.*

Radiative recombination; $^5\Sigma_g^+$; electronic structure; energy curve; N_2; predissociation; *16442.*

Radiative transfer; atmospheres, stellar; atomic and molecular processes; line formation; *15723.*

Radiative transfer; reflectance spectra; scattering coefficients; statistical models; absolute absorptivities; continuum models; diffuse reflectance; *J. Res.* **80A** No. 4, 567-583 (1976).

Radiative transfer; relativistic effects; spectral line formation; stellar atmospheres; *16272.*

Radiative transfer; solar chromosphere; solar photosphere; solar ultraviolet spectrum; *16257.*

Radiative transfer; solar chromosphere; spectral line formation; helium; *16609.*

Radiative transfer; spectral line profiles; diffusion; excitation exchange; *15714.*

Radiative transfer; stars: chromospheres; line formation; *16052.*

Radiative transfer—stars; winds; *15824.*

Radio astronomy; emission line; interstellar medium; laboratory measurement; methyl alcohol; population inversion; *15994.*

Radio astronomy; isocyanic acid; interstellar molecules; microwave spectra; molecular parameters; rotational transitions; *JPCRD* **5,** No. 1, 79-102 (1976).

Radio astronomy; rotational spectrum; formyl ion; interstellar molecules; microwave emission; molecular structure; *16560.*

Radio astronomy; rotational transitions; acetaldehyde; internal rotation; interstellar molecules; microwave spectrum; *JPCRD* **5,** No. 1, 53-78 (1976).

Radio astronomy; rotational transitions; silicon sulfide; spectra; interstellar molecules; microwave spectra; *JPCRD* **5,** No. 4, 1147-1156 (1976).

Radio astronomy; short-lived molecules; chemical monitoring and analysis; double resonance; microwave instrumentation; microwave spectroscopy; *16400.*

Radio astronomy; sulfur dioxide; interstellar; microwave spectra; molecules; Orion; *16434.*

Radio frequency; voltage measurements; electrical measurements; *16519.*

Radio frequency carrier; transmitter; audiofrequency modulation; communications; electromagnetic compatibility; law enforcement; personal transmitter; portable transmitter; *16285.*

Radio frequency heating; temperature measurements; thermistor probe; high-resistance leads; *15803.*

Radio navigation; VOR; aircraft navigation systems; digital frequency synthesis; national standards; precision audiofrequency signal generation; precision FM signal generation; precision phase angle generation; *16530.*

Radio star; accuracy; antenna; calibration; Cassiopeia A; error analysis; flux density; G/T (system gain/system noise temperature); ground station; *16499.*

Radio star; satellite communications; error analysis; G/T; precision measurements; *NBSIR 76-842.*

Radioactive; radioluminous products; self-luminous sources; test procedures; classification; containment; designation; light sources; national standard; radiation source; *H116.*

Radioactive effluents; radioanalytical data; regulations; environmental samples, laboratories; quality assurance; *SP456*, pp. 249-261 (Nov. 1976).

Radioactive rare gases; reduced activity; argon-37; atmospheric mixing; blank corrections; cosmic ray reactions; effectively zero background; environmental radioactivity; low-level counting statistics; *16345.*

Radioactive tracers; neutron activation analysis; neutron gaging; neutron radiography; nondestructive evaluation; nuclear; *15956.*

Radioactivity; radiopharmaceutical; standards; traceability; assurance; measurement; *SP456*, pp. 71-76 (Nov. 1976).
Radioactivity; reference methods; calibration; intercomparison studies; quality assurance; quality control; *SP456*, pp. 263-265 (Nov. 1976).
Radioactivity; sediment; standard; x ray; alpha particle; beta particle; gamma-ray; *15933*.
Radioactivity; selenium-75; standardization; coincidence counting; gamma rays; ground state decay; *15846*.
Radioactivity; standardization; ^{129}I; beta; coincidence counting; gamma; *16259*.
Radioactivity; standards; environment; gamma-ray measurements; Ge(Li) detectors; *SP456*, pp. 173-179 (Nov. 1976).
Radioactivity detection systems; radiochemical separations; sampling and sample handling; accuracy and precision; activation analysis; analytical design; irradiation procedures; *SP422*, pp. 1143-1155 (Aug. 1976).
Radioactivity standardization; xenon-133, 131m; argon-37; direct standardization; environmental radioactivity; internal gas counters; isotope separator; krypton-85; proportional counters; *15948*.
Radioanalytical data; regulations; environmental samples, laboratories; quality assurance; radioactive effluents; *SP456*, pp. 249-261 (Nov. 1976).
Radiochemical analyses; ashing (wet and dry); chemical errors; contamination; dissolution techniques; fusion dissolution; *SP422*, pp. 463-490 (Aug. 1976).
Radiochemical separation; trace elements; biological material; biological standards; data evaluation; distillation; food composition; gamma spectrometry; inorganic separators; isotopic exchange; multielement determination; neutron activation; *SP422*, pp. 1173-1180 (Aug. 1976).
Radiochemical separations; sampling and sample handling; accuracy and precision; activation analysis; analytical design; irradiation procedures; radioactivity detection systems; *SP422*, pp. 1143-1155 (Aug. 1976).
Radiochemical separations; silver; accuracy; activation analysis; copper; gold; hafnium; palladium; platinum; precision; *SP422*, pp. 1157-1164 (Aug. 1976).
Radiochromic dyes; Red Perspex; sterility control; dosimetry; electron beams; gamma rays; physical measurements; quality control; radiation measurement; radiation processing; radiation sterilization; *16648*.
Radiochromic dyes; spectrophotometry; colour dosimeters; dosimetry; dyes; glass; plastics; radiation; *15960*.
Radiofrequency; RF exposure; spectrum analyzer; antenna; microwave; minicomputer; *SP456*, pp. 203-213 (Nov. 1976).
Radiographic examination; x-ray tube potential; attenuation; exposure; phantoms; phototiming; *SP456*, pp. 381-388 (Nov. 1976).
Radiographic imaging; steady-state x rays; detector calibrations; fluorescence x-ray sources; K x-ray sources; pulsed x rays; *SP456*, pp. 41-45 (Nov. 1976).
Radiographic inspection; thermal neutrons; three-dimensional; complex object; laminagraphy; multiple-film; *16371*.
Radiography; welding; fracture control; fracture mechanics; mechanical properties; nondestructive evaluation (NDE); *NBSIR 76-1154, Vol. 1*.
Radiography; welding; fracture control; fracture mechanics; mechanical properties; nondestructive evaluation (NDE); *NBSIR 76-1154, Vol. 2*.
Radioisotopes; radiopharmaceuticals; reference sources; standards; SRM's; biomedical; clinical; measurements system; *16151*.
Radioluminous products; self-luminous sources; test procedures; classification; containment; designation; light sources; national standard; radiation source; radioactive; *H116*.
Radiometers; optical radiation; pyroelectrics; *15830*.
Radiometric measurements; CIE photometric model; photometry, heterochromic; *16002*.
Radiometry; calibrations; calorimeters; detectors; lasers; *SP456*, pp. 215-221 (Nov. 1976).
Radiometry; detector; pyroelectric; *TN678*.
Radiometry; infrared detectors; polymers; pyroelectrics; *16471*.
Radiometry; reflectance; reflectometry; photometry; *15863*.
Radiometry; reflectances; black coatings; detectors; *16102*.
Radiometry; remote sensing; solar monitoring; source standards; blackbodies; lamp standards; *16619*.
Radiometry; solar energy conversion; effective irradiance; *15711*.
Radiometry; sources; standards; survey; ultraviolet; detectors; NBS; *SP456*, pp. 107-110 (Nov. 1976).
Radiometry; spectrometry; spectroradiometry; analytical chemistry; nomenclature; photochemistry; photometry; physical optics; *16331*.
Radiometry; spectrophotometry; sphere coatings; averaging sphere; efficiency; *15896*.
Radiometry; spectroradiometry; optical radiation measurement; photometry; *TN910-1*.
Radiometry; systematic errors; uncertainties; accuracy; optical radiation measurement; *16583*.
Radionuclide; radiopharmaceutical; absorbed dose; calculation; dosimetry; nuclear medicine; *15977*.
Radionuclide calorimetry; radionuclide decay power; standards; Bunsen ice calorimeter; calorimetric standards; calorimetry; heat standards; phase-change calorimeter; plutonium dioxide; plutonium isotopes; *16443*.
Radionuclide decay power; standards; Bunsen ice calorimeter; calorimetric standards; calorimetry; heat standards; phase-change calorimeter; plutonium dioxide; plutonium isotopes; radionuclide calorimetry; *16443*.
Radionuclides; sample handling; sampling; trace elements; chemical analysis; environmental samples; long-term storage; microbiologicals; organics; pesticides; *TN929*.
Radionuclides; substoichiometry; absorption isotherm; environmental samples; fluorine; isotope dilution; *SP422*, pp. 961-982 (Aug. 1976).
Radiopacity; reinforcements; wear; composite resins; composites; dental materials; fillers; porous glass; *16586*.
Radiopacity; reinforcements; wear; composite resins; composites; dental materials; fillers; porous glass; *16587*.
Radiopharmaceutical; absorbed dose; calculation; dosimetry; nuclear medicine; radionuclide; *15977*.
Radiopharmaceutical; standards; traceability; assurance; measurement; radioactivity; *SP456*, pp. 71-76 (Nov. 1976).
Radiopharmaceuticals; reference sources; standards; SRM's; biomedical; clinical; measurements system; radioisotopes; *16151*.
Radiopharmaceuticals; ^{99m}Technetium; gamma camera; nuclear medicine; quality assurance; *SP456*, pp. 131-138 (Nov. 1976).
Radiotracer measurements; rates of adsorption; surfaces; adsorption; adsorption on mercury; desorption; polymers; polystyrene; *15853*.
Railroad freight movements; short-line miling system; waybills; *16241*.
Rainwater analysis; reference materials; chemical analysis; *NBSIR 75-958*.
Rainwater analysis; sample stability; surface water analysis; filtration losses; metallic ions; pollution monitoring; *SP422*, pp. 633-648 (Aug. 1976).
Raman scattering; sample characterization; semiconductor; cuprous oxide; implantation; ion; nondestructive testing; *15915*.
Raman spectroscopy; alkanes; longitudinal acoustical mode; methyl group branches; polyethylene; *16279*.

Raman spectroscopy; CARS; diphenyloctatetraene (dilute solution); four-wave numbering; HORSES; nonlinear optics; *15716.*

Raman spectroscopy; chemical analysis; fluid interactions; geology; minerals; *15930.*

Raman spectroscopy; rotatory lattice modes; *n*-alkanes; polyethylene; *16218.*

Raman-active longitudinal acoustic mode; localized defects; *n*-alkanes; polyethylene; *16219.*

Ramie; rayon; sulfur; cellulosic fibers; combustion; cotton fibers; flame retardant treatments; phosphorous acids; pyrolysis; *NBS-GCR-73-4.*

Random error; skewness; surface microtopography; surface roughness; surface texture; systematic error; amplitude density function; arithmetic average; autocorrelation function; average wavelength; kurtosis; minicomputer software; *TN902.*

Random faults; reliability; test patterns; TTL; vendor qualification; circuit procurement; component screening; custom circuits; LSI; microelectronics; parameter control; process uniformity; *16620.*

Random process; safety; statistical analysis; structural engineering; failure; probability theory; *SP444,* pp. IV-1 – IV-15 (Apr. 1976).

Random process; spectral analysis; vibration; analysis; experimental; floor systems; human response; *TN904.*

Random process; spectral analysis; vibration; analysis; experimental; floor systems; human response; *NBSIR 75-951.*

Random sampling; x-ray fluorescence; lead paint; lead paint detection; lead paint programs; lead poisoning; portable x-ray fluorescence; *TN921.*

Random surfaces; reflectance; reflectance of coherent radiation; scattering; scattering theory; surface roughness; transmittance; bibliography; emittance; heat transfer; measurement techniques; periodic surfaces; polarization; *J. Res.* **80A** No. 2, 207-220 (1976).

Random variable; singular value decomposition; eigenvalues; independence; quadratic form; *J. Res.* **80B** No. 3, 333-335 (1976).

Random walks; stable distributions; Abelian summation; ordered spans; *16011.*

Random-access-memory (RAM); silicon; cells; charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); *16647.*

Randomization, constrained; ruggedness test; statistical techniques; Youden plot; Youden squares; Youden, W. J; calibration designs; chain blocks; collaborative tests; diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; *16115.*

Raney-iron-activation; catalysis; Mössbauer effect; *16273.*

Ranges; self-absorption; uranium oxide; alpha particles; backscattering; disintegration rate; *15808.*

RANN; R & D incentives; tissue characterization; tissue signature; ultrasonic diagnosis; ultrasound; applied research; imaging; instrumentation technology; medical ultrasonics; NSF; *SP453,* pp. 7-10 (Oct. 1976).

RANN; sponsorship; structural engineering; earthquake engineering; grant; *SP444,* pp. V-66 – V-79 (Apr. 1976).

RAP grown materials; alkali halide crystals; laser induced damage; *SP462,* pp. 346-349 (Dec. 1976).

RAP materials; transmitted pulse cutoff; variable pulse duration; alkali halides; bulk damage; longitudinal mode control; pulsed 10.6 μm laser damage; *SP435,* pp. 118-125 (Apr. 1976).

Rare earth; sliding spark discharge lamp; spectrum; uranium; actinide; atomic energy levels; isoelectronic sequence; protactinium; *15990.*

Rare earth alloys; amorphous magnetism; direct current sputtering; inelastic neutron scattering; magnetic structures; magnetism; neutron diffraction; *16555.*

Rare earth elements; trace element models; volcanic rocks; analytical techniques; fractional crystallization; geochemistry; isotope dilution; partial melting; *SP422,* pp. 937-949 (Aug. 1976).

Rare earth fluorides; zinc selenide coatings; laser antireflective coatings; materials purification requirements; pulsed laser damage; *SP462,* pp. 271-278 (Dec. 1976).

Rare earth metals; 4*f* electron excitations; photoelectron spectroscopy; *15841.*

Rare earths; spectroscopy; atoms; classification; energy levels; ions; *16022.*

Rare earths, as an internal reference; rare earths, determination of trace amounts; fluorescence method analysis; *SP422,* pp. 1103-1107 (Aug. 1976).

Rare earths; determination of trace amounts; fluorescence method analysis; rare earths, as an internal reference; *SP422,* pp. 1103-1107 (Aug. 1976).

Rare gas; shift; core level; implant; noble metals; *16080.*

Rare-gas ions; uranium; alkali ions; calcium; charge exchange; charge transfer; cross section calculations; ion-atom collisions; *16126.*

Rare-gas oxide excimers; ab initio potentials; argon oxide; collision-induced emission; *15868.*

Rate coefficient; carbon dioxide; cross section; electrons; excitation; infrared; *16256.*

Rate coefficients; CCl_2, CF_2; CCl_2H^+ CF_2H^+; displacement reactions; four-center reactions; ion molecule reactions; proton affinity; proton transfer; *16598.*

Rate coefficients; charge transfer; H-atom transfer reactions; hydrogen halides; ion molecule reactions; ion cyclotron spectrometry; *16362.*

Rate coefficients; chemical kinetics; data evaluation; gas phase; hydrocarbons; ion-molecule reactions; mass spectrometry; *JPCRD* **5,** No. 4, 1123-1146 (1976).

Rate coefficients; recombinations; scattering theory; chemical reactions; collision theory; cross sections; dissociation; hot atoms; isotope effects; kinetics; molecular beams; quantum mechanics; *16591.*

Rate coefficients; scattering theory; trajectories; transition-state theory; chemical reactions; chlorine molecules; classical scattering matrix theory; collision theory; cross sections; hydrogen atoms; *16627.*

Rate coefficients; transition-state theory; chemical reactions; collision theory; hydrogen atoms; hydrogen molecules; indistinguishable particles; nuclear spin; *16214.*

Rate constant; atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; quantum yield; *16067.*

Rate constants; alkane ions; alkanes; charge transfer; ion-cyclotron resonance; ion-molecule reactions; ionization potentials; *16506.*

Rate constants; collision processes; halocarbon ions; hydrocarbons; ion-molecule reactions; kinetics; *15811.*

Rate constants; gas phase; hydrocarbons; kinetics; mass spectrometry; photoionization; *15850.*

Rates of adsorption; surfaces; adsorption; adsorption on mercury; desorption; polymers; polystyrene; radiotracer measurements; *15853.*

Rating scheme; sound; standards organization; acoustics; noise; *SP386, 1976 Edition.*

Ratio; synchronization; time; broadcast; communication; frequency; *16496.*

Rats; blood; carbon dioxide; carbon monoxide; cyanide; fire; hydrogen chloride; hydrogen cyanide; oxygen; *NBSIR 75-966.*

Rayleigh scattering; aerosols; dusts; light-scattering; Mie theory; particles; *NBSIR 76-1031.*

Rayleigh scattering; collisions; laser-excited fluorescence; *15910.*

Rayleigh waves; surface waves; glass; glass strengthening; ion exchange; *16282.*

Rayon; smoke; smoldering; upholstery fabric; cotton; cushioning; fire retardant; furniture; glowing; inhibitor; oxidative pyrolysis; oxygen index; *16224.*

Rayon; sulfur; cellulosic fibers; combustion; cotton fibers; flame retardant treatments; phosphorous acids; pyrolysis; ramie; *NBS-GCR-73-4.*

Rayon; treatments; cotton; fabrics; flame retardants; flammability; phosphorus; polyester; *NBS-GCR-73-16.*

RbCl; $SrCl_2$; double-doped KCl laser windows; grain boundary stability; hot forging; KCl; mechanical strength; microstructure; optical absorption; *SP462*, pp. 82-86 (Dec. 1976).

RbN_3 structure; thermal motion; TlN_3 structure; ionic crystal; KN_3 structure; low temperature study; monovalent metal azides; NaN_3 structure; neutron diffraction; *15973.*

R&D; small business; Small Business Administration; technological change; Experimental Technology Incentives Program; federal policies; innovation loans; *NBS-GCR-ETIP 76-11.*

R&D; technological change; decisionmaking; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; policies; private sector; *NBS-GCR-ETIP 76-03.*

R&D; technological change; decisionmaking; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; policies; private sector; *NBS-GCR-ETIP 76-04.*

R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; policies; *NBS-GCR-ETIP 76-05.*

R&D; technological change; technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; policies; *NBS-GCR-ETIP 76-06.*

R&D contracting; radiation grafting; research consortia; cotton polyester blends; ETIP; flame retardants; flammability; *NBS-GCR-ETIP 75-01.*

Reaction mechanism; anodic films; dual barrier, electrocatalysis; oxygen evolution; platinum anodes; *SP455*, pp. 259-266 (Nov. 1976).

Reaction mechanisms; ring-disk electrodes; electrocatalysis; electronic structure; hydrogen peroxide; iron phthalocyanines; Mössbauer; optical spectra; oxygen; *SP455*, pp. 241-251 (Nov. 1976).

Reaction rate constants; fluorocarbons; hydroxyl radical; *16202.*

Reactive gas generator; sulfur dioxide; acetaldehyde; acrolein; formaldehyde; gas chromatography; hydrogen chloride; hydrogen cyanide; pollution; pyrolysis; *NBSIR 76-1000.*

Reactor; dosimetry; gamma; intercomparison; neutron; personnel; *SP456*, pp. 225-232 (Nov. 1976).

Reactor systems and components; safety standards; failure prevention; mechanical failure; mechanical malfunction; quality assurance; *SP423*, pp. 143-151 (Apr. 1976).

Reactors; resonant scatterer; monoenergetic neutrons; neutron beams; neutron filters; neutrons; *SP456*, pp. 83-85 (Nov. 1976).

Reagent; review; active; manganese dioxide; organic chemistry; oxidation; *15880.*

Reagent contamination; ultrapurification; analytical blanks; analytical reagents; contamination control; high-purity reagents; membrane filtration; mercury cathode electrolysis; prepurification; purity definition; *SP422*, pp. 363-375 (Aug. 1976).

Reagents; accuracy; analysts; apparatus; blank; contamination; environment; purity; *SP422*, pp. 509-539 (Aug. 1976).

Real fluorescence parameters; fluorescence lifetime; fluorescence quantum efficiency; fluorescence quantum yields; fluorescence spectrum; fluorescence standards; molecular fluorescence parameters; *J. Res.* **80A** No. 3, 389-399 (1976).

Real function; Hadamard product; positive semidefinite; *15876.*

Realms; building fires; case studies; critical events; decisions; episodes; fires; home for the aged; hospital fires; human behavior; institutions; mapping; models; nursing homes; *NBS-GCR-76-73.*

Real-time display; interferometer, fringe counting; *16380.*

Real-time imaging; thermoluminescence; track-etch; films; images; neutron radiography; nondestructive tests; *15796.*

Receiver; tape recorder; telephone; transmitter; wiretapping; body worn antenna; bugging; eavesdropping; electronic surveillance; microphones; *16237.*

Receiver bandwidth calibration; rf burst generator; spectral intensity; broadband signal generator; impulse bandwidth; *NBSIR 74-371.*

Receiver definitions; receiver measurement techniques; FM receivers; law enforcement equipment; minimum performance requirements; NILECJ Standard; *16293.*

Receiver definitions; receiver measurement techniques; FM receivers; law enforcement equipment; minimum performance requirements; NILECJ Standard; *16297.*

Receiver definitions; receiver measurement techniques; FM receivers; law enforcement equipment; minimum performance requirements; NILECJ Standard; *16303.*

Receiver measurement techniques; FM receivers; law enforcement equipment; minimum performance requirements; NILECJ Standard; receiver definitions; *16293.*

Receiver measurement techniques; FM receivers; law enforcement equipment; minimum performance requirements; NILECJ Standard; receiver definitions; *16297.*

Receiver measurement techniques; FM receivers; law enforcement equipment; minimum performance requirements; NILECJ Standard; receiver definitions; *16303.*

Receivers; Schottky-barrier diodes; semiconductors; solid-state devices; x-band measurements; diodes; gamma rays; hardness assurance; microwave mixer diodes; mixers; neutrons; radiation hardness; *SP400-7.*

Recent advances; tables; theory; chemical applications; instrumentation; Mössbauer spectrometry; nuclear parameters; *16332.*

Reciprocity; sensitivity; temperature; calibration; ceramic; condenser; electret; humidity; microphones; *NBSIR 76-1090*

Recoil; surface effect; accuracy; activation analysis; charged particle irradiation; diffusion; etching; metals; neutron irradiation; *SP422*, pp. 1165-1171 (Aug. 1976).

Recoil effect; relativity; CH_4 hyperfine structure; high resolution spectroscopy; laser spectroscopy; line shape; optical frequency standards; *16603.*

Recombination; cross-section measurements; electrons; H_3O^+; ion trap; *15859.*

Recombinations; scattering theory; chemical reactions; collision theory; cross sections; dissociation; hot atoms; isotope effects; kinetics; molecular beams; quantum mechanics; rate coefficients; *16591.*

Reconstruction; refractive index; synthetic focus; tissues; ultrasound; acoustic attenuation; acoustic velocity; breast tumor; computerized tomography; heart; *SP453*, pp. 109-119 (Oct. 1976).

Reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy;

ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; *SP453*.

Record identification; risk analysis; security; data confidentiality; data integrity; encryption; personal identification; privacy; *16390*.

Recordkeeping; x ray; automation; calibration; computer; *SP456*, pp. 53-57 (Nov. 1976).

Recordkeeping practices; security; citizen rights; computers; confidentiality; data systems; health records; information policy; management principles; medical records; privacy; *Monogr. 157*.

Recrystallization temperature; veiling; annealing; fracture energy (γ_c); isostatic forging; kinking; microstructures; *SP462*, pp. 87-94 (Dec. 1976).

Rectangular coax; shielded strip line; TEM cell; EMC measurements; radiation resistance; *NBSIR 75-829*.

Recurrence relations; continued fraction; cosine integral; exponential integral; FORTRAN program; hyperbolic sine and cosine integrals; key values; *J. Res.* **80B** No. 2, 291-313 (1976).

Red Perspex; sterility control; dosimetry; electron beams; gamma rays; physical measurements; quality control; radiation measurement; radiation processing; radiation sterilization; radiochromic dyes; *16648*.

Redistribution; strontium; collisions; near-resonant scattering; *16261*.

Reduced activity; argon-37; atmospheric mixing; blank corrections; cosmic ray reactions; effectively zero background; environmental radioactivity; low-level counting statistics; radioactive rare gases; *16345*.

Reduced scale modeling; room corner tests; smoke; buildings; fire growth; flame spread; heat release; interior finish; *16183*.

Reduced scale models; room fires; fire tests; flame spread; heat release rate; ignition; *NBSIR 76-1052*.

Reference data; journal; professional societies; publications; *15734*.

Reference intensities; standard; x-ray diffraction; crystal structure; integrated intensities; lattice constants; peak intensities; powder patterns; *Monogr. 25, Section 13*.

Reference intensity ratios; systematic errors in powder diffraction; calculated powder patterns; I/I_c; microabsorption effects; quantitative phase analysis; quantitative powder diffraction; *15929*.

Reference materials; calibration reference materials; calibrators; clinical control materials; clinical standards; consensus standards; *16358*.

Reference materials; chemical analysis; rainwater analysis; *NBSIR 75-958*.

Reference materials; sampling; concentration; detectors; extraction; gas chromatography; isolation and clean-up; mass spectrometry; organic trace analysis; qualitative accuracy; quality control; quantitative accuracy; *SP422*, pp. 9-34 (Aug. 1976).

Reference materials; standard reference materials; Standard Reference Materials program; accuracy; measurement; measurement compatibility; National Bureau of Standards; *16549*.

Reference materials; *15823*.

Reference methods; calibration; intercomparison studies; quality assurance; quality control; radioactivity; *SP456*, pp. 263-265 (Nov. 1976).

Reference methods; routine methods; secondary reference materials; Standard Reference Materials; definitive method; matrix reference materials; pure reference materials; *16104*.

Reference methods; standard reference material; systematic errors; accuracy; accurate measurement system; precision; *SP422*, pp. 41-63 (Aug. 1976).

Reference point; stirred liquid comparison bath; temperature scale; calibration; emergent stem; liquid-in-glass thermometer; *Monogr. 150*.

Reference sample; x-ray analysis; calibration; filters; orchard leaves; *15984*.

Reference samples; silicate analysis; accuracy; analytical bias; *SP422*, pp. 79-89 (Aug. 1976).

Reference sources; standards; SRM's; biomedical; clinical; measurements system; radioisotopes; radiopharmaceuticals; *16151*.

Reference spectrophotometer; ultraviolet; wavelength calibration; averaging spheres; high accuracy transmittance; light averaging devices; linearity; photometric precision; *TN913*.

Reference system; structure factor; limit of stability; mean field theory; metastability; perturbation scheme; *16595*.

Referral centers; sources of data; data centers; data tabulations; evaluated data; material properties; *16007*.

Reflectance; absorptance; CO laser calorimetry; CO laser mirrors; dielectric-enhanced mirrors; infrared laser mirrors; metal mirrors; *SP462*, pp. 189-194 (Dec. 1976).

Reflectance; reflectance of coherent radiation; scattering; scattering theory; surface roughness; transmittance; bibliography; emittance; heat transfer; measurement techniques; periodic surfaces; polarization; random surfaces; *J. Res.* **80A** No. 2, 207-220 (1976).

Reflectance; reflectance standards; thin layer chromatography; chromatography; color matching; color measurement; diffuse reflectance; Kubelka-Munk function; *J. Res.* **80A** No. 4, 551-565 (1976).

Reflectance; reflectometer; sodium chloride; barium sulphate; bidirectional reflectance; bidirectional reflectometer; black coating; gonioreflectometer; magnesium oxide; mu sulphur; *J. Res.* **80A** No. 2, 189-205 (1976).

Reflectance; reflectometry; photometry; radiometry; *15863*.

Reflectance; scattering; spectrophotometry; translucency; transmittance; Vitrolite glass; blurring effect; edge loss; error analysis; flux loss; plastics; *TN594-12*.

Reflectance; scattering; temperature dependence; wavelength dependence; multilayer dielectric mirror; optical absorptance; *SP435*, pp. 230-235 (Apr. 1976).

Reflectance; silver; sputter deposition; aluminum; copper; flash desorption spectroscopy; gold; *SP462*, pp. 195-202 (Dec. 1976).

Reflectance; spectrophotometry; bidirectional reflectance factor; diffuse reflectance; diffuse transmittance; *TN594-11*.

Reflectance of coherent radiation; scattering; scattering theory; surface roughness; transmittance; bibliography; emittance; heat transfer; measurement techniques; periodic surfaces; polarization; random surfaces; reflectance; *J. Res.* **80A** No. 2, 207-220 (1976).

Reflectance spectra; scattering coefficients; statistical models; absolute absorptivities; continuum models; diffuse reflectance; radiative transfer; *J. Res.* **80A** No. 4, 567-583 (1976).

Reflectance standards; scattering surfaces; bidirectional radiometry; canopies; diffuse reflectance; diffuse transmission; *J. Res.* **80A** No. 4, 597-603 (1976).

Reflectance standards; standards calibration; barium sulfate; diffuse reflectance spectra; magnesium oxide; opal glass; radiant flux; *J. Res.* **80A** No. 4, 585-595 (1976).

Reflectance standards; thin layer chromatography; chromatography; color matching; color measurement; diffuse reflectance; Kubelka-Munk function; reflectance; *J. Res.* **80A** No. 4, 551-565 (1976).

Reflectances; black coatings; detectors; radiometry; *16102*.

Reflecting optics; laser damage; laser fusion; metal mirrors; *SP462*, pp. 331-337 (Dec. 1976).

Reflection; Albedo; angular distribution; backscatter; charged particles; Monte Carlo; *16097*.

Reflection; refraction; standard deviation; uncertainty; autocollimator; calibration; constant deviation prism; geometrical model; optical square; pentaprism; *NBSIR 76-993*.

Reflection and interference of sound; room acoustics theory; sound fields; acoustical energy density; acoustics; diffuse sound fields; *16318*.

Reflection coefficient; attenuation; automated; bolometer mount efficiency; measurements; network analyzer; phase; *16509*.

Reflection coefficient; six-port; voltage; admittance; current; impedance; phase angles; power; *15800*.

Reflection coefficient magnitude; repeatability; coaxial connectors; insertion loss; microwave; *16495*.

Reflection techniques; ultrasound; velocity; attenuation; breast; *SP453*, pp. 135-139 (Oct. 1976).

Reflectometer; sodium chloride; barium sulphate; bidirectional reflectance; bidirectional reflectometer; black coating; gonioreflectometer; magnesium oxide; mu sulphur; reflectance; *J. Res.* **80A** No. 2, 189-205 (1976).

Reflectometers; power equation concepts; *16552*.

Reflectometers; rotating probe devices; slotted lines; survey of automatic techniques; swept frequency measurements; Wheatstone Bridge; automatic network analyzers; computer-controlled measurement; magic tee; microwave measurement methods; multiple probe devices; *Monogr. 151*.

Reflectometry; photometry; radiometry; reflectance; *15863*.

Reflector; Yagi; antenna; director; driven element; gain; radiation pattern; *TN688*.

Reflectors; skylights; windows; daylight gathering; daylighting of buildings; energy conservation; lenses; light conduits; light control; *NBSIR 76-1098*.

Reflectors; ThF_4; thin film; ZnSe; 10.6 μm; absorbing inclusions; damage statistics; laser damage; *SP435*, pp. 216-229 (Apr. 1976).

Refraction; standard deviation; uncertainty; autocollimator; calibration; constant deviation prism; geometrical model; optical square; pentaprism; reflection; *NBSIR 76-993*.

Refractive index; atomic spectroscopy; dispersion; photoabsorption; *16379*.

Refractive index; elasto-optical constants; infrared materials; KCl; laser windows; photoelasticity; piezo-optical constants; *15937*.

Refractive index; single crystal; stress optic constants; birefringence; germanium; KCl; *SP435*, pp. 164-169 (Apr. 1976).

Refractive index; stress-optic constants; temperature coefficient of index; thermal expansion; ZnSe; chemical vapor deposited ZnSe; elastic compliance; elastic constants; polycrystalline ZnSe; *15938*.

Refractive index; stress-optical constants; thermal coefficient of refractive index; birefringence; elastooptic constants; infrared-laser window materials; interferometry; KCl; photoelasticity; piezo-optic constants; *NBSIR 76-1010*.

Refractive index; surface damage; surface roughness; thin films; damage thresholds; laser damage; *SP435*, pp. 289-295 (Apr. 1976).

Refractive index; synthetic focus; tissues; ultrasound; acoustic attenuation; acoustic velocity; breast tumor; computerized tomography; heart; reconstruction; *SP453*, pp. 109-119 (Oct. 1976).

Refractive index; temperature coefficient of refractive index; alkali halides; optical constants; *JPCRD* **5**, No. 2, 329-528 (1976).

Refractive index; temperature coefficient of refractive index; zinc selenide; *SP435*, pp. 170-174 (Apr. 1976).

Refractive index; temperature coefficient of refractive index; calcium fluoride; *SP462*, pp. 64-68 (Dec. 1976).

Refractive index; thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; interferometry; photoelasticity; piezo-optic constants; *NBSIR 76-1115*.

Refractive index variation; damage electron density; electron density transient; free electron absorption; laser induced surface damage; optical probe technique; *SP435*, pp. 356-361 (Apr. 1976).

Refractory hard metal; solid electrolytes; cerium dioxide; degradation; electrocatalysis; fuel cells; *NBSIR 76-1091*.

Refractory metals; sheathed thermocouples; tantalum; temperature measurements; thermal emf drift; tungsten-rhenium alloys; beryllium oxide; *15797*.

Refractory oxides; standing-wave fields; thin films; two-photon absorption; damage thresholds; electron avalanche; picosecond pulses; *SP462*, pp. 292-300 (Dec. 1976).

Refrigeration; demagnetization; dilution refrigerator; helium 3; helium 4; liquid helium; mixtures; *16655*.

Refrigeration; superconducting transmission lines; Brayton cycle; cryogenic refrigeration; *16633*.

Refrigeration; superconductivity; cryogenic; helium; meeting summary; *15832*.

Refrigeration safety standards; safety of appliances; standards for safety; Government participation; *15890*.

Refrigerator standards; risk measurement; safety standard; unreasonable hazards; consumer products; product safety; *16131*.

Refrigerator-freezers; energy-efficient products; Experimental Technology Incentives Program; life-cycle costing; procurement experiments; *NBSIR 75-954*.

Refrigerators; energy efficient products; Experimental Technology Incentives Program; life cycle costing; procurement experiments; *NBS-GCR-ETIP 76-10*.

Regulation; regulatory agency; accuracy; drugs; foods; *SP422*, pp. 3-8 (Aug. 1976).

Regulation; strategy; theory of games; inspection; mathematical model; *J. Res.* **80B** No. 2, 189-236 (1976).

Regulations; environmental samples, laboratories; quality assurance; radioactive effluents; radioanalytical data; *SP456*, pp. 249-261 (Nov. 1976).

Regulations; safety; structural testing; bicycle; consumer safety; *NBSIR 75-913*.

Regulations; smoke detectors; United States standards; fire detection; *16187*.

Regulations; state; authority; building; energy; legislation; *NBSIR 76-986*.

Regulations; states; abstract; compromise; ineffectiveness; measurements; radiation; *SP456*, pp. 31-36 (Nov. 1976).

Regulatory; standards; energy; legal; *SP403*, pp. 225-235 (June 1976).

Regulatory; therapy; traceability; diagnosis; measurement accuracy; medical facilities; *SP456*, pp. 139-146 (Nov. 1976).

Regulatory agency; accuracy; drugs; foods; regulation; *SP422*, pp. 3-8 (Aug. 1976).

Regulatory process; abnormal loading; building regulations; design process; European; progressive collapse; *NBS-GCR-75-48*.

Regulatory process; standards; computer techniques; construction; enforcement process; housing; hurricane Agnes; mobile home parks; mobile homes; performance data; *NBSIR 76-1058*.

Regulatory tests; simulation tests; fire tests; *16113*.

Rehabilitation, conservation; housing; housing demand, supply, needs; housing rehabilitation; land economics; market adjustments; optimization and feasibility; *NBSIR 76-1043*.

Reinforced aluminum; reinforced plastics; structural composites; tensile moduli; tensile strength; thermal conductivity; thermal contraction; boron; cryogenics; glass; graphite; literature review; PRD-49; *15745*.

Reinforced concrete; sensitivity analysis; steel; structural mechanics; uncertainty; creep; fire endurance; fire tests; *BSS76*.

Reinforced concrete; shear tests; structural engineering; web reinforcement; column; ductility; earthquake; *SP444*, pp. IV-16—IV-36 (Apr. 1976).

Reinforced concrete; slenderness ratio; strength; structural analysis; structural design; ultimate strength; bending moments; building codes; column (supports); frames; long columns; *16412*.

Reinforced plastic; small furnace test; smoke; aluminum bulkhead; combustion gases; fire endurance; insulation; intumescent paint; potential heat; *NBSIR 76-1012*.

Reinforced plastics; structural composites; tensile moduli; tensile strength; thermal conductivity; thermal contraction; boron; cryogenics; glass; graphite; literature review; PRD-49; reinforced aluminum; *15745*.

Reinforcements; wear; composite resins; composites; dental materials; fillers; porous glass; radiopacity; *16586*.

Reinforcements; wear; composite resins; composites; dental materials; fillers; porous glass; radiopacity; *16587*.

Relative; rocks; rubidium; soils; absolute; Apollo; composition; isotopic; lithium; potassium; *15869*.

Relative humidity; temperature; bone; dispersion phenomena; Maxwell-Wagner polarization; piezoelectric *d* constant; piezoelectricity; *16314*.

Relative incapacitation index; relative stopping power; bullets; cartridges; handgun ammunition; law enforcement; *16305*.

Relative intensities; H_2CO; inelastic electron scattering; infrared transitions; N_2O; *16578*.

Relative signs; silicon; coupling constants; fluorine; fluoroalkylsilanes; NMR; *16432*.

Relative stopping power; bullets; cartridges; handgun ammunition; law enforcement; relative incapacitation index; *16305*.

Relativistic effects; spectral series; systematic trends; continuum; discrete spectrum; *f*-sum rule; *f*-values; lithium sequence; oscillator strength distribution; oscillator strengths; *15817*.

Relativistic effects; spectral line formation; stellar atmospheres; radiative transfer; *16272*.

Relativistic effects; spectral series; systematic trends; *f*-values; isoelectronic sequence; lithium sequence; oscillator strengths; *JPCRD* **5**, No. 3, 537-570 (1976).

Relativistic electrons, excitation; energy transfer, electronic; fluorescence; molecular dissociation; *16615*.

Relativistic fields; wave equations; causality; high spin fields; inhomogeneous Lorentz group; *Monogr. 154*.

Relativity; CH_4 hyperfine structure; high resolution spectroscopy; laser spectroscopy; line shape; optical frequency standards; recoil effect; *16603*.

Relaxation; chemical shift; fluoroalkanes; molecular dynamics; NMR; *16327*.

Relaxation energy; adsorption; electron gas; photoemission; *16421*.

Relaxation energy; screening energy; molecular hydrogen; photoelectron spectroscopy; polarization energy; *15749*.

Relaxation energy; surface plasmons; chemisorption; photoemission; *15857*.

Relaxation energy; surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; *16419*.

Relaxation methods; thermogravimetry; weight-loss; degradation; kinetics; oxidation; parameter jump method; polystyrene; *15858*.

Relaxation phenomena; vibrational populations; floquet theory; laser-induced reactions; multiphoton processes; numerical calculations; *16242*.

Relaxation time; transport coefficients; Zwanzig-Mori formalism; hydrodynamic regime; ideal gas memory function; limit of stability; metastable fluid states; nonhydrodynamic regime; *16601*.

Relaxation times; rotational diffusion; ^{13}C magnetic resonance; collagen; conformation; correlation times; cyanogen bromide peptides; polypeptides; *16211*.

Reliability; reproducibility; safety; accuracy; conservation; measurements; nondestructive evaluation; productivity; *16301*.

Reliability; risk; statistical analysis; storms; structural engineering; wind pressure; wind speed; buildings (codes); hurricanes; probability distribution functions; *16545*.

Reliability; safe operating area limits; second breakdown; semiconductor devices; thermal resistance; transistor, power; current crowding; hot spots; *16328*.

Reliability; safety; design; engineering education; failure analysis; failure analysis case histories; failure prevention; *SP433*.

Reliability; sandwich panel; shelter; durability; field inspection; foam and beam; honeycomb; impact; lightweight structures; military; *NBSIR 76-1025*.

Reliability; schools; smoke detectors; atriums; fire detection; flame detectors; heat detectors; hospitals; hotels; maintenance; nursing homes; *16179*.

Reliability; security; small protection domains; types; capability; capability-based addressing; computer security; extended-type objects; operating system structures; protection; reliable software; *TN919*.

Reliability; semiconductor; automation; integrated circuits; measurements; microelectronics; process control; *16116*.

Reliability; semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; process control; *SP400-28*.

Reliability; semiconductors; silicon; test patterns; data acquisition; data display; integrated circuits; measurement technology; microelectronics; process control; *SP 400-15*.

Reliability; structural engineering; wind (meteorology); wind pressure; buildings (codes); failure; probability distribution functions; *16544*.

Reliability; test patterns; TTL; vendor qualification; circuit procurement; component screening; custom circuits; LSI; microelectronics; parameter control; process uniformity; random faults; *16620*.

Reliability; transistors; failure analysis; hot spots; integrated circuits; laser scanner; measurement method; nondestructive test; nonlinear operation; optical scanner; *SP400-27*.

Reliable software; reliability; security; small protection domains; types; capability; capability-based addressing; computer security; extended-type objects; operating system structures; protection; *TN919*.

Remanance; susceptibility; alloy; copper; cryogenic; iron; oxide; resistivity; *16632*.

Remanent; strontium titanate; dielectric relaxation; electret state; impurity; ordering transition; polarization; *16639*.

Remote control systems; systems engineering; state-of-the-art reviews; acceptability; coding; costs; data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; *NBS-GCR-74-29*.

Remote sensing; solar monitoring; source standards; blackbodies; lamp standards; radiometry; *16619*.

Removable disk packs; computer disk controllers; computer disk drives; computer disk interface; disk controllers; disk drive characteristics; disk pack interchangeability; disk track format; interface electrical characteristics; interface functional characteristics; *NBS-GCR-76-63*.

Reorientation effect; admixture; anharmonicities; branching ratios; electron scattering; phonons; *16508*.

Repassivation kinetics; stress corrosion; chemical breakdown of

passivity; chloride; crevice corrosion; ellipsometry; iron; molybdenum; *NBSIR 75-916.*

Repeatability; coaxial connectors; insertion loss; microwave; reflection coefficient magnitude; *16495.*

Repeatability; reproducibility; test methods; transformations; weighting; interlaboratory comparisons; invariance; models; precision; precision of measurement; *15909.*

Repetitive wavelength scanning; wavelength modulation; graphite furnace atomic emission spectrometry; *15954.*

Replacement; specifications; standards; engine pumper; fire vehicle; ladder truck; maintenance; *TN891.*

Replicates; sediments; standard; trace elements; accuracy; Atomic Absorption Spectrometry; Caribbean; precision; Puerto Rico; *SP422,* pp. 1089-1102 (Aug. 1976).

Reprint collection; history; photonuclear experiments; photonuclear interaction; photonuclear reactions; photonuclear theory; *16270.*

Reproducibility; safety; accuracy; conservation; measurements; nondestructive evaluation; productivity; reliability; *16301.*

Reproducibility; test methods; transformations; weighting; interlaboratory comparisons; invariance; models; precision; precision of measurement; repeatability; *15909.*

Reprography developments; bibliographic data files; communications technology developments; computer developments; COM systems extension; copyright protection; facsimile transmission extension; photocopying; *16040.*

Research accidents; safety; accidents; buildings; construction; maintenance; *16315.*

Research administration; software exchange; software summary; software survey; space management software; university systems; directory; equipment management software; fiscal administration software; grant/contract software; personnel management software; *TN916.*

Research assistants; test device evaluation; criteria; decision making; human systems; measuring instruments; *16091.*

Research associate program; sampling test; drop ball test; impact resistance; ophthalmic lens; proof testing; *NBSIR 76-996.*

Research associate program; school systems; smoke detectors; teaching metric; cryogenic fluid; door locks; energy; EPIC supplement; high winds; home security; nondestructive evaluation; *DIM/NBS* **60,** No. 4, 1-24 (1976).

Research at NBS; optics; *16658.*

Research consortia; cotton polyester blends; ETIP; flame retardants; flammability; R&D contracting; radiation grafting; *NBS-GCR-ETIP 75-01.*

Research programs; sponsorship; wind engineering; *SP444,* pp. V-80—V-82 (Apr. 1976).

Research summaries; fluid mechanics; hydraulic engineering; hydraulic research; hydraulics; hydrodynamics; model studies; *SP443.*

Reshoring; safety; shoring; standards; building; codes; concrete; construction; falsework; formwork; loads; *BSS80.*

Residence-related products; residential safety modification; safety implementation approaches; architectural glass products; Consumer Product Safety Act; *16006.*

Residence-related products; residential safety modification; safety implementation approaches; architectural glass products; Consumer Product Safety Act; *NBSIR 75-791.*

Residential dwelling; building codes; construction practices; damage; earthquake; houses; *SP444,* pp. V-63—V-65 (Apr. 1976).

Residential fires; smoke detectors; detector sensitivity; detector siting; escape time; fire tests; heat detectors; *NBSIR 76-1126.*

Residential fires; smoke detectors; tenability levels; detector sensitivity; detector siting; heat detectors; ionization smoke detectors; photoelectric smoke detectors; *NBS-GCR-75-51.*

Residential safety modification; safety implementation approaches; architectural glass products; Consumer Product Safety Act; residence-related products; *16006.*

Residential safety modification; safety implementation approaches; architectural glass products; Consumer Product Safety Act; residence-related products; *NBSIR 75-791.*

Residential sprinkler protection; sprinkler operation; automatic sprinklers; bedroom fires; droplet size; heat absorption; pool fires; *NBS-GCR-76-58.*

Residual strain; acoustic emission; macrocracking; porcelain insulators; proof testing; *16069.*

Residual stress; dislocation theory; imperfect continua; internal stress; nondestructive evaluation; *16411.*

Residual stress; stress analysis; brittle solids; chipping; fracture; indentation; *16306.*

Residuals; statistics; uncertainties; crystallographic data; errors; probability plots; *NBSIR 76-1102.*

Residues, dissipation of; residues, in potatoes; residues, metabolic; residues, total; residues, volatilization; storage effects; 2,4-dichlorophenol; 2,4-dichlorophenoxyacetic acid; gas chromatography; potatoes; *SP422,* pp. 737-745 (Aug. 1976).

Residues, in potatoes; residues, metabolic; residues, total; residues, volatilization; storage effects; 2,4-dichlorophenol; 2,4-dichlorophenoxyacetic acid; gas chromatography; potatoes; residues, dissipation of; *SP422,* pp. 737-745 (Aug. 1976).

Residues, metabolic; residues, total; residues, volatilization; storage effects; 2,4-dichlorophenol; 2,4-dichlorophenoxyacetic acid; gas chromatography; potatoes; residues, dissipation of; residues, in potatoes; *SP422,* pp. 737-745 (Aug. 1976).

Residues, total; residues, volatilization; storage effects; 2,4-dichlorophenol; 2,4-dichlorophenoxyacetic acid; gas chromatography; potatoes; residues, dissipation of; residues, in potatoes; residues, metabolic; *SP422,* pp. 737-745 (Aug. 1976).

Residues, volatilization; storage effects; 2,4-dichlorophenol; 2,4-dichlorophenoxyacetic acid; gas chromatography; potatoes; residues, dissipation of; residues, in potatoes; residues, metabolic; residues, total; *SP422,* pp. 737-745 (Aug. 1976).

Resin; wear; adhesion; adsorption; alloys; composites; dental; grafting; investments; polymer; *NBSIR 76-1095.*

Resistance; resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; *TN894.*

Resistance measurements; thermometry; two-stage transformers; ac bridges; bridges; platinum thermometers; *16404.*

Resistance thermometer; test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; *TN894.*

Resistivity; remanance; susceptibility; alloy; copper; cryogenic; iron; oxide; *16632.*

Resistivity; Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; shear test; sheet resistors; silicon; silicon on sapphire; spreading resistance; *SP400-19.*

Resistivity; scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; silicon on sapphire; spreading resistance; test patterns; *SP400-25.*

Resistivity; semiconductor characterization; semiconductor device; silicon; square array; bulk resistivity; collector resistivity; four-probe; planar test structure; *16424.*

Resistivity; semiconductor electronics; sheet resistors; silicon; test pattern; test structures; dopant density; microelectronics; MOS capacitors; *n-p-n* transistor fabrication; *p-n* junctions; *SP400-22.*

Resistivity of silicon; semiconductor devices; semiconductor process control; sheet resistors; test patterns; thermally stimulated currents; MOS capacitors; *p-n* junctions; *SP400-21.*

Resolution charts; veiling glare; blooming; contrast transfer function; distortion; flare; image quality; light induced background; limiting resolution; night vision devices; optical transfer function; *16599.*

Resolution-of-forces; semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; *SP400-18.*

Resonance; rotating disks; singular perturbations; turning-point; viscous flow; Weber's equation; boundary-value problem; eigenvalues; parabolic cylinder functions; *16459.*

Resonance; scattering; tissue characterization; tissue parameters; tumor detection; ultrasound; diagnosis; Doppler effect; optimization; *SP453,* pp. 11-17 (Oct. 1976).

Resonance fluorescence; sodium trace detection; dye laser use for resonance fluorescence; furnace atmosphere sodium contamination; furnace qualification; *16574.*

Resonance fluorescence; stratosphere; chlorine atoms; kinetics; ozone; *15949.*

Resonance method; shear modulus; sound velocity; Young's modulus; bulk modulus; compressibility; copper; copper alloys; elastic constants; Poisson ratio; pulse-echo method; *16505.*

Resonance radiation; transition probability; U I; uranium; atomic beam; delayed coincidence; imprisonment; lifetime; mean life; *16322.*

Resonance spectrum; rotational frequency; laser line; laser magnetic resonance spectrum; magnetic resonance spectrum; *15988.*

Resonance trapping; lifetime measurement; low pressure; *15885.*

Resonant; spin exchange; adiabatic collisions; charge transfer; nonresonant; potential curves; *15875.*

Resonant scatterer; monoenergetic neutrons; neutron beams; neutron filters; neutrons; reactors; *SP456,* pp. 83-85 (Nov. 1976).

Resource allocation; simulator; strategies; workload; FORTRAN IV; operating system; overhead; *16062.*

Resource conservation; utilities; utility services; water reuse; community services; cooling; electric power; energy conservation; heating; incineration; integrated utility systems; *16153.*

Resource sharing; bibliography; computer network; data communications; *SP384.*

Resource sharing; scheduling; computer networking; load leveling; *16570.*

Resources; risk; costs; energy; financial; *SP403,* pp. 237-241 (June 1976).

Resources; security; shoplifting; theft; burglary; consultants; crimes of opportunity; directory, (security); investigations; law enforcement; *16369.*

Resources; standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; *SP403.*

Response; scintillation detector; background; gamma-ray astronomy; induced radioactivity; Monte Carlo calculation; *16431.*

Response; service; computer; interactive; measurement; procurement; *16247.*

Response; thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; photoflash bulb; pressure; pressure measurement; pressure transducer; pressure transducer response; *NBSIR 76-1038.*

Response factor; algorithm; ASHRAE; buildings; computer; energy calculation; heat transfer; heating and cooling loads; *16630.*

Response time; response time predictions; computer networks; minicomputers; Network Access Machine; network services; *16326.*

Response time predictions; computer networks; minicomputers; Network Access Machine; network services; response time; *16326.*

Results; therapy departments; thermoluminescence dosimeters; uncertainty; water phantom; absorbed dose; cobalt-60 gamma radiation; computation check; dose interpretation; mailings; *J. Res.* **80A** No. 4, 663-668 (1976).

Retention system strength; riot; visual clearance; helmets; impact attenuation; penetration; *16265.*

Retention system strength; visual clearance; crash; helmet; impact attenuation; penetration; *16287.*

Retrofitting; soil-structure interaction; structural engineering; design; earthquakes; highway bridges; *SP444,* pp. V-1—V-24 (Apr. 1976).

Retrofitting existing buildings; energy consumption in NYC schools; energy-saving opportunities; incentives—educational, persuasive, financial, regulatory; modular boiler study; NBS-campus energy retrofit; *15882.*

Retroreflective sign materials; colorimetry; highway signs; photoelectric tristimus colorimeters; photometry of retroreflective materials; *NBSIR 74-518.*

Reverberation rooms; room acoustics; sound power; acoustic modelling; acoustics; impact noise; noise; *16433.*

Reverberation rooms; sound measurement; sound power; sound power levels; measurement technology; *NBS-GCR-76-59.*

Review; active; manganese dioxide; organic chemistry; oxidation; reagent; *15880.*

Review; electron-impact; ionization; ionization mechanisms; ions; *15942.*

Review; scattering; spin-polarization; electron; experiment; LEED; multi-photon; photoionization; *15900.*

Review; scattering; theory; atom; collisions; electron; low energy; *15883.*

Review; shift; Stark broadening; width; experimental; neutral atom; *JPCRD* **5**, No. 2, 209-258 (1976).

Review articles; water pollution; aqueous systems; bibliography; biochemical systems; enthalpy data; entropy data; equilibrium data; Gibbs energy data; heat capacity data; partial molal properties; thermochemistry; thermodynamics; *SP454.*

Review, thermal properties; cryogenics; materials; mechanical properties; *15838.*

Reynolds number; angular insensitivity; fluidic device; hot wire anemometer; ion deflection device; laser Doppler anemometer; *16108.*

RF and microwave measurements; standards; calibrations; laser calorimeters; measurement assurance programs; non-ionizing EM radiation hazards; *SP456,* pp. 417-425 (Nov. 1976).

Rf biological hazards; electromagnetic field hazards; electromagnetic field synthesizer; electromagnetic radiation-exposure testing (nonionizing); near-fields; *TN687.*

Rf burst generator; spectral intensity; broadband signal generator; impulse bandwidth; receiver bandwidth calibration; *NBSIR 74-371.*

RF connectors; SMA connectors; coaxial connectors; connectors; *16476.*

RF exposure; spectrum analyzer; antenna; microwave; minicomputer; radiofrequency; *SP456,* pp. 203-213 (Nov. 1976).

RF interferometer; agriculture; computer control; position sensors; *16143.*

Rf peak pulse power; notch wattmeter; pulse-CW equalization; pulse modulated carrier systems; *TN682.*

RF power meter; utilities system; batteries; dental materials; industry; integrated utilities system; mass spectrometry; motorized criminal; ozone puzzle; portable transceiver batteries; *DIM/NBS* **60,** No. 3, 1-24 (1976)

RF radiation; antenna specifications; mobile telecommunication transmitters; *SP456,* pp. 199-202 (Nov. 1976).

Rf spectroscopy; rubidium; Zeeman effect; atomic beam; autoionization; differential metastability; fine structure; inner shell excitation; *16098.*

Rf sputtering; damage threshold; dielectric films; heat conduction; laser damage; multiphoton absorption; *SP435,* pp. 272-283 (Apr. 1976).

Rf sputtering; standing-wave patterns; damage thresholds; dielectric thin films; electric fields; electron-gun evaporation; picosecond pulses; *SP435,* pp. 254-271 (Apr. 1976).

Rhenium; tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; *16420.*

Rheological unites; row nucleus; shishkebab; sonicated solution; spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; *16274.*

Rhodamine B chloride; spectrofluorimetry; total internal reflection; emission anisotropy; fluorescence; photodetectors; polarization; quantum counters; *16430.*

Rhodium; ruthenium; thermomigration; alloys; cobalt; copper; diffusion; electromigration; iron; nickel; palladium; platinum; *JPCRD* **5,** No. 1, 103-200 (1976).

Ring conformation; substituent effects; amides; carbon-13 magnetic resonance; chemical shifts; cis and trans isomers; peptides; proline; *16235.*

Ring-disk electrodes; electrocatalysis; electronic structure; hydrogen peroxide; iron phthalocyanines; Mössbauer; optical spectra; oxygen; reaction mechanisms; *SP455,* pp. 241-251 (Nov. 1976).

Riot; visual clearance; helmets; impact attenuation; penetration; retention system strength; *16265.*

Ripples, sand; sand motion under waves; beach accretion; coastal processes; offshore zone; oscillatory water tunnel; permeability effect on sand transport; *15793.*

Rise time; sampling oscilloscope; spectrum amplitude; time domain; transient; automated measurement; pulse; *16477.*

Risk; costs; energy; financial; resources; *SP403,* pp. 237-241 (June 1976).

Risk; statistical analysis; storms; structural engineering; wind pressure; wind speed; buildings (codes); hurricanes; probability distribution functions; reliability; *16545.*

Risk analysis; security; data confidentiality; data integrity; encryption; personal identification; privacy; record identification; *16390.*

Risk measurement; safety standard; unreasonable hazards; consumer products; product safety; refrigerator standards; *16131.*

Risk-benefit; consumer product hazard; *16248.*

Risk-benefit; consumer product hazard; *16250.*

River water; sampling water for trace elements; suspended particulates in water; Teflon water sampler; trace elements; trace elements in water; water; filtering water; *SP422,* pp. 439-455 (Aug. 1976).

Robot systems; artificial intelligence; automation; computer control; manipulators; robots; *16047.*

Robots; automatic control; automation; *16036.*

Robots; robot systems; artificial intelligence; automation; computer control; manipulators; *16047.*

Rock-forming minerals; specimen preparation; electron microscopy; *in situ* experiments; ionic bombardment; microscope stages; *15895.*

Rocking curve; angular divergence; asymmetric diffraction; diffraction topography; dynamical diffraction; *16055.*

Rocks; rubidium; soils; absolute; Apollo; composition; isotopic; lithium; potassium; relative; *15869.*

Rocks and minerals; sample preparation; sampling; trace analysis; water sampling; contamination; geological sample; *SP422,* pp. 285-297 (Aug. 1976).

Rocks and ores; sample preparation; trace element analysis; accuracy and precision; comparison of trace analytical methods; contamination; *SP422,* pp. 773-790 (Aug. 1976).

Rods, insulator; breakdown, electrical; failure analysis; fiberglass-reinforced plastics; flammability; guy insulators; high-voltage tests; insulators, tower guy; Loran C; pultruded rods; *NBSIR 76-1136.*

Roentgen; standard; γ radiation; γ response; calibration; exposure rate; geometry; instrument; ion chamber; *SP456,* pp. 59-63 (Nov. 1976).

Role of metal and ligand; thermal stability; coordination polymers; *16308.*

Rolling; ships; steel; welding; alloying; inclusions; low temperature; *16145.*

Roofing; solar heating; surface temperature; built-up roofing; insulation; performance; radiative cooling; *NBSIR 76-987.*

Roofing membranes; viscosity; application temperature; asphalt; built-up roofing; interply thickness; *BSS92.*

Roofs; siding; structural engineering; wind; wind damage; wind engineering; building codes; design standards; masonry construction; *TN909.*

Room acoustics; sound power; acoustic modelling; acoustics; impact noise; noise; reverberation rooms; *16433.*

Room acoustics theory; sound fields; acoustical energy density; acoustics; diffuse sound fields; reflection and interference of sound; *16318.*

Room air conditioners; energy efficient products; Experimental Technology Incentives Program; life cycle costing; procurement experiments; *NBS-GCR-ETIP 76-13.*

Room air conditioners; water heaters; combination refrigerator-freezers; consumer information; efficiency; energy labeling; *15888.*

Room corner tests; smoke; buildings; fire growth; flame spread; heat release; interior finish; reduced scale modeling; *16183.*

Room fires; carpet systems; carpets; fire safety; flame spread; floor coverings; flooring radiant panel test; ignition sources; pill test; *NBSIR 76-1013.*

Room fires; fire; fire plume gas flow; *16112.*

Room fires; fire tests; flame spread; heat release rate; ignition; reduced scale models; *NBSIR 76-1052.*

Room furnishings; smoke production; smoke tests; building materials; fires; optical density; *16557.*

Roots of unity; algebraic numbers; conjugates; *J. Res.* **80B** No. 1, 1-4 (1976).

Roots of unity; Schur matrix; compounds; induced matrices; Kronecker powers; *15955.*

Rope, aramid-fiber; slings, cargo; terminations, rope; weathering, simulated; aramid fiber rope; breaking load, rope; cable, aramid-fiber; end fittings, rope; fatigue damage; *NBSIR 76-1159.*

Rotating disks; singular perturbations; turning-point; viscous flow; Weber's equation; boundary-value problem; eigenvalues; parabolic cylinder functions; resonance; *16459.*

Rotating electrode voltammetry; semiconductor electrode; flat band potential; hydrogen evolution; oxide electrode; perovskite surface composition; *SP455,* pp. 229-240 (Nov. 1976).

Rotating fluids; stratified fluids; waves in fluids; buoyant flows; geophysical fluid flows; inertial waves; internal waves; *J. Res.* **80B** No. 3, 353-402 (1976).

Rotating probe devices; slotted lines; survey of automatic techniques; swept frequency measurements; Wheatstone Bridge; automatic network analyzers; computer-controlled

measurement; magic tee; microwave measurement methods; multiple probe devices; reflectometers; *Monogr. 151.*

Rotating reference frame; acceleration measurement: fundamental constant; gravitational attraction; gravitational constant; *16222.*

Rotational assignment; spin-rotation splittings; band center; intensities; laser magnetic resonance; nitrogen dioxide; *15788.*

Rotational constants; atomic energy levels; atomic line shapes; atomic spectra; atomic transition probabilities; bands, molecular; energy levels, atomic; line shapes, atomic; molecular bands; molecular spectra; *15901.*

Rotational constants; spectroscopic constants; spin-rotation constants; infrared spectrum; nitrogen dioxide, ν_3 band; nitrogen dioxide, $\nu_3+\nu_2-\nu_2$ band; *15753.*

Rotational constants; stratospheric chemistry; atmospheric pollution; chlorine nitrate; dipole moment; microwave spectrum; ozone depletion; *16584.*

Rotational diffusion; ^{13}C magnetic resonance; collagen; conformation; correlation times; cyanogen bromide peptides; polypeptides; relaxation times; *16211.*

Rotational energy; enthalpy of formation; ketene; methane; methyl; methylene; photoionization; *16060.*

Rotational excitation; scattering theory; sudden approximation; differential cross sections; elastic scattering; electron scattering; hydrogen molecules; momentum transfer; *15761.*

Rotational excitation; scattering theory; sudden approximation; close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; *15951.*

Rotational excitation; scattering theory; close-coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); *16532.*

Rotational excitation; scattering theory; close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; *16618.*

Rotational frequency; laser line; laser magnetic resonance spectrum; magnetic resonance spectrum; resonance spectrum; *15988.*

Rotational spectrum; formyl ion; interstellar molecules; microwave emission; molecular structure; radio astronomy; *16560.*

Rotational transitions; acetaldehyde; internal rotation; interstellar molecules; microwave spectrum; radio astronomy; *JPCRD* **5,** No. 1, 53-78 (1976).

Rotational transitions; radio astronomy; isocyanic acid; interstellar molecules; microwave spectra; molecular parameters; *JPCRD* **5,** No. 1, 79-102 (1976).

Rotational transitions; silicon sulfide; spectra; interstellar molecules; microwave spectra; radio astronomy; *JPCRD* **5,** No. 4, 1147-1156 (1976).

Rotation-vibration spectra; semiclassical *S*-matrix; spectral line broadening; *ab initio* potentials; atom-molecule interactions; curved classical trajectories; HCl, CO, CO_2 with He, Ar; *16528.*

Rotatory lattice modes; *n*-alkanes; polyethylene; Raman spectroscopy; *16218.*

Roughness; surface damage; thin films; threshold; damage threshold; etching; flame polishing; fused silica; hydroxyl; ion polishing; polishing; *SP462,* pp. 310-314 (Dec. 1976).

Round robin; x-ray fluorescence; accuracy; anodic stripping voltammetry; arc emission spectroscopy; atomic absorption; environmental analyses; interlaboratory tests; neutron activation analysis; plasma emission; *SP422,* pp. 199-210 (Aug. 1976).

Round robin tests; seacoast atmosphere; standard; stress-corrosion; 3.5 percent NaCl; 7XXX aluminum alloys; Aluminum Association; ASTM; industrial atmosphere; *16656.*

Round-robin experiments; trace element analysis; accuracy; activation analysis; air filter analysis; analytical quality control; atomic absorption spectrometry; environmental analysis; fresh water analysis; intercomparisons; precision; *SP422,* pp. 189-197 (Aug. 1976).

Routine methods; secondary reference materials; Standard Reference Materials; definitive method; matrix reference materials; pure reference materials; reference methods; *16104.*

Row nucleus; shishkebab; sonicated solution; spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; rheological unites; *16274.*

RRKM; thermal decomposition; alcohols; chemical activation; nonequilibrium; oxygen atoms; *15881.*

Rubber elasticity; statistical theory of rubber elasticity; swelling of rubber network; cross-linking of rubber; dicumyl peroxide; elasticity theory of rubber; entanglements in rubber; gel point; modulus of rubber; *J. Res.* **80A** No. 3, 451-463 (1976).

Rubbers, viscoelasticity; anisotropy; chemorheology; degradation; elasticity; finite deformation; incompressible materials; permanent set; polymers; *16339.*

Rubidium; soils; absolute; Apollo; composition; isotopic; lithium; potassium; relative; rocks; *15869.*

Rubidium; strontium; trace analyses; cadmium; environmental Standard Reference Materials; isotope dilution; lead; molybdenum; *16221.*

Rubidium; Zeeman effect; atomic beam; autoionization; differential metastability; fine structure; inner shell excitation; rf spectroscopy; *16098.*

Rubidium compounds; sodium compounds; standard reference data; thermochemical tables; enthalpy; entropy; Gibbs energy; heat capacity; potassium compounds; *NBSIR 76-1034.*

Rubidium frequency standard; time comparison; atomic clocks; frequency stability; portable clocks; *16489.*

Rubidium standards; saturated absorption; time standards; application of standards; basic standards; cesium standards; frequency accuracy; frequency stability; frequency standards; hydrogen standards; ion storage; laser stabilization; *15736.*

Ruggedness test; statistical techniques; Youden plot; Youden squares; Youden, W. J; calibration designs; chain blocks; collaborative tests; diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; interlaboratory tests; *16115.*

Rust inhibited perfluoro greases; surface chemistry lubrication; chemisorption; corrosion preventives; inhibitor additives; LOX compatible greases; nonreactive lubricants; *SP452,* pp. 106-119 (Sept. 1976).

Ruthenium; ellipsometry; optical constants; *16467.*

Ruthenium; thermomigration; alloys; cobalt; copper; diffusion; electromigration; iron; nickel; palladium; platinum; rhodium; *JPCRD* **5,** No. 1, 103-200 (1976).

Ruthenium; ultraviolet photoelectron spectroscopy; x-ray photoelectron spectroscopy; adsorbate; chemisorption; *15814.*

Ruthenium dioxide/titanium dioxide; spinel; electrocatalysis; nickel-cobalt oxide; nickel oxide; oxide electrodes; oxygen electrode reaction; *SP455,* pp. 289-296 (Nov. 1976).

Rutherford backscattering; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; shear test; sheet resistors; silicon; silicon on sapphire; spreading resistance; test patterns; *SP400-19.*

Rutherford backscattering; SCANIIR; secondary ion mass spectroscopy; semiconductor devices; silicon; surface analy-

sis; x-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; insulator films; *SP400-23*.

Rutherford backscattering; secondary ion mass spectroscopy; silicon; silicon dioxide; surface analysis; x-ray photoelectron spectroscopy; Auger electron spectroscopy; depth impurity profiling; ion implantation; ion sputtering; microelectronic materials; *15739*.

Rutile; electrocatalyst; hydrogen evolution; lanthanum titanate; oxygen electrode; photo-assisted electrolysis; *SP455*, pp. 313-321 (Nov. 1976).

Rydberg series; absorption spectrum; identification atlas; nitric oxide; *JPCRD* **5**, No. 2, 309-318 (1976).

Rydberg states; ammonia; appearance potential; autoionization; deuterated species; enthalpy of formation; ionization potential; NH_2^+; OH^+; photoionization; predissociation; *16539*.

S

σ vs. τ, 19 kHz pilot; frequency modulation; modulation index; multipath; path delay; phase vs. time; *16492*.

Saddle points; special functions; turning points; Whittaker functions; asymptotic analysis; Darboux's method; definite integrals; hypergeometric functions; incomplete gamma function; Legendre functions; ordinary differential equations; *15818*.

Safe operating area; second breakdown; thermal instability; base widening; current crowding; hot spots; power transistors; *16451*.

Safe operating area limits; second breakdown; semiconductor devices; thermal resistance; transistor, power; current crowding; hot spots; reliability; *16328*.

Safeguards; analysis; diversion of nuclear materials; diversion path analysis; internal control system characterization; nuclear material safeguards; *16536*.

Safeguards; decision makers; decision structure; information flows; nuclear material information systems; nuclear materials safeguards; *16526*.

Safeguards; safeguards information system; decision structure; information system; nuclear material diversion; nuclear materials; *16525*.

Safeguards; standards; fuel; materials accountability; measurements; nuclear; *16481*.

Safeguards; traceability; calibration; measurement; nondestructive assay; nuclear; *16414*..

Safeguards evaluation; safeguards system design; societal risk; nuclear materials safeguards; *16514*.

Safeguards for security and privacy; technology for security and privacy; computer security; information handling; privacy; *16439*.

Safeguards information system; decision structure; information system; nuclear material diversion; nuclear materials; safeguards; *16525*.

Safeguards system design; societal risk; nuclear materials safeguards; safeguards evaluation; *16514*.

Safety; accident research; countermeasures; epidimiology; laboratory research; methodology; naturalistic studies; *NBS-GCR-76-75*.

Safety; accidents; accident research; consumer accidents; epidimiology hazards; home safety; methodology; *NBS-GCR-76-76*.

Safety; accidents; buildings; construction; maintenance; research accidents; *16315*.

Safety; accuracy; conservation; measurements; nondestructive evaluation; productivity; reliability; reproducibility; *16301*.

Safety; design; engineering education; failure analysis; failure analysis case histories; failure prevention; reliability; *SP433*.

Safety; explosion; fire; fuel; gasoline; hydrogen; methane; *TN690*.

Safety; glare; lighting; perceptual/motor; psychomotor; *NBS-GCR-75-45*.

Safety; safety research; appliances; behavioral science; human factors; product safety; *16215*.

Safety; separation; vertical separation; aircraft; air transportation; air traffic control models; altimetry; altitude; aviation; collision risk; error analysis; mathematical models; *NBSIR 76-1067*.

Safety; shoring; standards; building; codes; concrete; construction; falsework; formwork; loads; reshoring; *BSS80*.

Safety; slush hydrogen; superconducting; a.c. power; cryoresistive; energy transmission economics; helium; hydrogen energy; liquid hydrogen; liquid nitrogen; power transmission cables; *16629*.

Safety; statistical analysis; structural engineering; failure; probability theory; random process; *SP444*, pp. IV-1—IV-15 (Apr. 1976).

Safety; structural testing; bicycle; consumer safety; regulations; *NBSIR 75-913*.

Safety; surveys; buildings; fires; loads; *16087*.

Safety; technical analysis; temperature; air flow rate; electrical, mechanical and thermal hazards; hair dryer/stylers; heat flux; *NBSIR 76-1112*.

Safety; test methods; head injury; helmets; math model; protective headgear; *NBSIR 76-1107*.

Safety; testing; bicycles; braking; consumer safety; handbrake; *NBSIR 75-755*.

Safety; testing; engineering, instrumentation and techniques; fluids; force; hydraulic equipment; mechanical power; noise; pressure; quality control; *16452*.

Safety; vents; automobile; detection; dispersion; explosion; fire; hydrogen; leakage; methane; *16634*.

Safety; WWV/WWVH; computer; energy measurement; EPIC; FIPS; kitchen ranges; mercury; metal fires; metric; *DIM/NBS* **60**, No. 1, 1-24 (1976).

Safety; x-ray generators; x rays; calibration; electrical measurements; electro-optics; frequency response; high voltage; Kerr effect; operational amplifier; pulses; radiation; *NBSIR 75-775*.

Safety glazing; standards; state law; architectural glazing; codes; Consumer Product Safety Committee; Consumer Safety Glazing Committee; glazing; impact tests; *NBSIR 76-1109*.

Safety implementation approaches; architectural glass products; Consumer Product Safety Act; residence-related products; residential safety modification; *16006*.

Safety implementation approaches; architectural glass products; Consumer Product Safety Act; residence-related products; residential safety modification; *NBSIR 75-791*.

Safety of appliances; standards for safety; Government participation; refrigeration safety standards; *15890*.

Safety of home playground equipment; slides, safety of; swing sets, safety of; home playground equipment, safety of; jungle gyms, safety of; playground equipment, safety of; *PS66-75*.

Safety research; appliances; behavioral science; human factors; product safety; safety; *16215*.

Safety responsibility; construction safety; construction surety; degradation of safety with age and use; maintenance of safety; public safety; *SP423*, pp. 165-170 (Apr. 1976).

Safety standard; thrown objects tests; dispersion tests; lawn mowers; penetration tests; power lawn mowers; *NBSIR 76-1022*.

Safety standard; unreasonable hazards; consumer products; product safety; refrigerator standards; risk measurement; *16131*.

Safety standards; conservation of material resources; failure prevention; government action; mechanical failure; mechanical reliability; *SP423*, pp. 221-225 (Apr. 1976).

Safety standards; consumer product safety; failure prevention; government action; government responsibility; mechanical failure; *SP423*, pp. 215-219 (Apr. 1976).
Safety standards; economic cost of failure prevention; frequency of failure; government action; life-cycle costing; marginal analysis; quality control; *SP423*, pp. 107-116 (Apr. 1976).
Safety standards; failure prevention; mechanical failure; mechanical malfunction; quality assurance; reactor systems and components; *SP423*, pp. 143-151 (Apr. 1976).
Safety standards; transportation safety; effects of mechanical failure on environment; failure prevention; government action; mechanical failure; *SP423*, pp. 153-163 (Apr. 1976).
Safety wheels; bike regulations; bomb disarmament; computer auditing; energy options; explosive vapor detectors; firebug; impulse generators; MHD electrode materials; optical standards; *DIM/NBS* **60**, No. 7, 1-24 (1976).
Salt water; solid lubrication; abrasion; corrosion protection; friction; marine environment; powder coating; *SP452*, pp. 25-30 (Sept. 1976).
Salt-spray; corrosion; electrochemical; lubricants; *SP452*, pp. 97-105 (Sept. 1976).
Sample; software management; survey; ADP; COBOL; Federal ADP installations; Federal Standard COBOL; impact evaluation; *NBSIR 76-1100*.
Sample characteristics; straylight; wavelength accuracy; bandwidth; calibration; errors in spectrophotometry; interferences; multiple reflections; photometric linearity; polarization; *J. Res.* **80A** No. 4, 609-624 (1976).
Sample characterization; semiconductor; cuprous oxide; implantation; ion; nondestructive testing; Raman scattering; *15915*.
Sample handling; sampling; trace analysis; accuracy; analysis; analytical chemistry; *SP422. Volume I and II*.
Sample handling; sampling; trace elements; chemical analysis; environmental samples; long-term storage; microbiologicals; organics; pesticides; radionuclides; *TN929*.
Sample handling; shipboard atmospheric sampling; analytical blanks; atmospheric sampling; coastal sampling; contamination of atmospheric particulate samples; *SP422*, pp. 377-388 (Aug. 1976).
Sample homogeneity; detector techniques; nuclear track analysis; *SP422*, pp. 457-459 (Aug. 1976).
Sample preparation; biological materials; homogenization; lyophilization; noncontaminating; *SP422*, pp. 721-726 (Aug. 1976).
Sample preparation; sampling; trace analysis; water sampling; contamination; geological sample; rocks and minerals; *SP422*, pp. 285-297 (Aug. 1976).
Sample preparation; standard materials; trace element analysis; errors of analysis; homogenization; neutron activation analysis; *SP422*, pp. 1293-1304 (Aug. 1976).
Sample preparation; toxic metals; trace determination; aquatic insects; atomic absorption; clean room; fish; mini-computer; *SP422*, pp. 627-632 (Aug. 1976).
Sample preparation; trace element analysis; accuracy and precision; comparison of trace analytical methods; contamination; rocks and ores; *SP422*, pp. 773-790 (Aug. 1976).
Sample size variations; trace analysis; trace metals; atomic absorption spectroscopy; fish analysis; *SP422*, pp. 163-172 (Aug. 1976).
Sample stability; surface water analysis; filtration losses; metallic ions; pollution monitoring;rainwater analysis; *SP422*, pp. 633-648 (Aug. 1976).
Sample storage; sampling; accuracy; analytical chemistry; contamination; errors; natural water; *SP422*, pp. 805-836 (Aug. 1976).
Sampling; accuracy; analytical chemistry; contamination; errors; natural water; sample storage; *SP422*, pp. 805-836 (Aug. 1976).
Sampling; concentration; detectors; extraction; gas chromatography; isolation and clean-up; mass spectrometry; organic trace analysis; qualitative accuracy; quality control; quantitative accuracy; reference materials; *SP422*, pp. 9-34 (Aug. 1976).
Sampling; laser; optical pulse; oscilloscope; photoconductor; pulse measurements; *16193*.
Sampling; sampling oscilloscope; strobe; GaAs; laser; optical; oscilloscope; photoconductor; picosecond; *15835*.
Sampling; serum; biological materials; chromium; cobalt; contamination; manganese; *SP422*, pp. 299-310 (Aug. 1976).
Sampling; species; trace element concentrations; neutron activation analysis; particulates; *15783*.
Sampling; surface contamination; high purity metals; inhomogeneity; microsegregation; *SP422*, pp. 747-755 (Aug. 1976).
Sampling; trace analysis; accuracy; analysis; analytical chemistry; sample handling; *SP422. Volume I and II*.
Sampling; trace analysis; water sampling; contamination; geological sample; rocks and minerals; sample preparation; *SP422*, pp. 285-297 (Aug. 1976).
Sampling; trace elements; chemical analysis; environmental samples; long-term storage; microbiologicals; organics; pesticides; radionuclides; sample handling; *TN929*.
Sampling; water; analysis; carbon; crud; filtration; pressurized water reactors; primary coolant; *SP422*, pp. 429-438 (Aug. 1976).
Sampling; x-ray fluorescence; ion exchange; *SP422*, pp. 649-658 (Aug. 1976).
Sampling a biotite; sampling constants; standard biotite; biotite stoichiometry; geochemical standards; geochronological standards; K-Ar dating; *SP422*, pp. 401-419 (Aug. 1976).
Sampling air; accuracy and precision; air; air particulates; air pollution; analysis of air; atmosphere; gaseous pollutants; *SP422*, pp. 311-320 (Aug. 1976).
Sampling and sample handling; accuracy and precision; activation analysis; analytical design; irradiation procedures; radioactivity detection systems; radiochemical separations; *SP422*, pp. 1143-1155 (Aug. 1976).
Sampling constants; standard biotite; biotite stoichiometry; geochemical standards; geochronological standards; K-Ar dating; sampling a biotite; *SP422*, pp. 401-419 (Aug. 1976).
Sampling error; analytical data; analytical work; critical evaluation of an analytical procedure; industrial chemical analysis; interlaboratory comparisons; *16001*.
Sampling errors; trace analysis; analytical error; geochemical variance; particle size distribution; particle size errors; *SP422*, pp. 421-427 (Aug. 1976).
Sampling function; Whittaker's cardinal function; Laguerre transform; *J. Res.* **80B** No. 3, 415-418 (1976).
Sampling methods; X-ray fluorescence; atmospheric particulates; direct analysis techniques; emission spectroscopy; particulate analysis; particulate characterization; *SP422*, pp. 791-803 (Aug. 1976).
Sampling oscilloscope; spectrum amplitude; time domain; transient; automated measurement; pulse; rise time; *16477*.
Sampling oscilloscope; strobe; GaAs; laser; optical; oscilloscope; photoconductor; picosecond; sampling; *15835*.
Sampling problems; trace elements; high-temperature alloys; intergranular segregation; macro-segregation; *SP422*, pp. 1017-1022 (Aug. 1976).
Sampling techniques; trace analysis of lead; waters, lead in; accuracy of atomic absorption analytical techniques; accuracy of isotope dilution analytical techniques; errors in lead analyses; lead; lead contamination evaluation and control; *SP422*, pp. 321-351 (Aug. 1976).
Sampling test; drop ball test; impact resistance; ophthalmic lens; proof testing; research associate program; *NBSIR 76-996*.

229-317 O - 77 - 42

Sampling water for trace elements; suspended particulates in water; Teflon water sampler; trace elements; trace elements in water; water; filtering water; river water; *SP422*, pp. 439-455 (Aug. 1976).

Sand motion under waves; beach accretion; coastal processes; offshore zone; oscillatory water tunnel; permeability effect on sand transport; ripples, sand; *15793*.

Sand transport; sewage sand; sewer self-cleansing; grit; *16374*.

Sandwich panel; shelter; durability; field inspection; foam and beam; honeycomb; impact; lightweight structures; military; reliability; *NBSIR 76-1025*.

Sandwiched polymeric films; vibration transducer; dynamic pressure transducer; polymeric film transducer; *U.S. Patent 3,970,862*.

Sapphire; scattering; waveform distortion; alkali-halides; alkaline-earth fluorides; bulk damage; focal spot diameter; inclusion damage; interference ripples; pulsed DF laser damage; *SP462*, pp. 136-144 (Dec. 1976).

Sapphire surfaces; silicon films; specular reflection; differential reflection; epitaxial semiconductor devices; Kramers-Kronig relation; multiple reflection; *NBS-GCR-76-61*.

SASO; Saudi Arabia; standardization; tentative standards; building codes; industrialization; less-developed country; *NBSIR 75-976*.

Satellite; scintillation; spread-F; topside; absorption; high latitude; ionosphere; ionospheric scattering; irregularity; *16641*.

Satellite; time; time code; clock; microprocessor; *TN681*.

Satellite communications; error analysis; G/T; precision measurements; radio star; *NBSIR 76-842*.

Satellite geodesy; crustal moments; earth rotation; geodynamics; lunar distance; microwave interferometry; plate tectonics; *15799*.

Satellite time and frequency dissemination services; communication satellite; communication system; hf time dissemination services; navigation system; *16644*.

Satellites; spinodal decomposition; superlattice reflections; transmission electron microscopy; δ'; Ll_2; metastable phase; ordering reaction; *15840*.

Saturated absorption; accelerated atom beam; experimental relativity; laser spectroscopy; laser stabilization; *15905*.

Saturated absorption; lasers; nonlinear spectroscopy; *16093*.

Saturated absorption; time standards; application of standards; basic standards; cesium standards; frequency accuracy; frequency stability; frequency standards; hydrogen standards; ion storage; laser stabilization; rubidium standards; *15736*.

Saturated absorption spectroscopy; high resolution spectroscopy; methyl halides; optical heterodyne spectroscopy; quadrupole hyperfine interactions; *16407*.

Saturated absorption spectroscopy; lineshape theory; optical frequency standards; *16610*.

Saturated air; enhancement factor; moist air; *J. Res.* **80A** No. 1, 41-44 (1976).

Saturated liquid; specific heat; vapor; constant volume; ethane; heat capacity; liquid; *J. Res.* **80A** Nos. 5 and 6, 739-759 (1976).

Saturated liquid; table; density; experimental; magnetic suspension densimeter; normal butane; *16646*.

Saturated liquid; tables; apparatus; density; experimental; magnetic suspension; methane; nitrogen; *16645*.

Saturation vapor pressure over water; steam; vapor pressure; vapor pressure of water; virial coefficients; Clapeyron equation; *J. Res.* **80A** Nos. 5 and 6, 775-785 (1976).

Saudi Arabia; standardization; tentative standards; building codes; industrialization; less-developed country; SASO; *NBSIR 75-976*.

Sawing; silicon; standard; weighing; density; etching; grinding; *NBSIR 76-1019*.

SBIC's; securities and tax regulation; small firm finances; technological change; technology subsidies; venture capital; capital market imperfections; federal technology policy; *NBS-GCR-ETIP 76-08*.

SBIC's; securities and tax regulation; small firm finances; technological change; technology subsidies; venture capital; capital market imperfections; federal technology policy; *NBS-GCR-ETIP 76-12*.

Scaled equation; steam; critical density; critical exponents; critical pressure; critical region; critical temperature; equation of state; linear model; *15730*.

Scaling; steam; universality; critical exponents; critical region; homogeneity; polar fluids; *15733*.

Scaling law; simple materials assumption; elasticity; finite torsion; natural rubber; *16278*.

Scaling laws; statistical analysis; steam; universality; air constituents; critical region parameters; ethylene; heavy noble gases; helium; linear model; methane; NBS equation; *JPCRD* **5**, No. 1, 1-52 (1976).

SCANIIR; secondary ion mass spectroscopy; semiconductor devices; silicon; surface analysis; x-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; insulator films; interface characteristics; internal photoemission; *SP400-23*.

Scanner; classification; computer; fingerprint; identification; pattern recognition; *16030*.

Scanning acoustic microscope; scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; silicon on sapphire; spreading resistance; test patterns; *SP400-25*.

Scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; shear test; sheet resistors; silicon; silicon on sapphire; spreading resistance; test patterns; thermal resistance; *SP400-19*.

Scanning electron microscope; scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; silicon on sapphire; spreading resistance; test patterns; thermally stimulated current; *SP400-25*.

Scanning electron microscope; iron-silicon transformer steel; magnetic contrast; magnetic domain images; magnetic domains; Monte Carlo electron trajectory calculations; *SP460*, pp. 151-164 (Dec. 1976).

Scanning electron microscope; surface effects; electron beam damage; electron beam energy deposition; integrated circuits; ionizing radiation effects; *15786*.

Scanning electron microscope; dimensional metrology; integrated circuits; line-width measurements; microelectronics; optical microscope; photomasks; *15864*.

Scanning electron microscope; silicon steel; transformer steel; backscattered electrons; domain walls; magnetic domains; *15921*.

Scanning electron microscope; aluminum wire; nondispersive x-ray analysis; overheated receptacle; *16317*.

Scanning electron microscopy; thin film x-ray analysis; x-ray continuum radiation; elemental distribution; energy dispersive x-ray analysis; light element analysis; *15771*.

Scanning electron microscopy; electron beam damage; electron beam energy deposition; ionizing radiation; microelectronic devices; *15963*.

Scanning electron microscopy; semiconductor devices; device inspection; electron-beam-induced current; microelectronics; *p-n* junctions; *16449*.

Scanning electron microscopy; thin film analysis; electron probe microanalysis; electron-solid interactions, magnetic domains;

Monte Carlo electron trajectory calculations; particle analysis; *SP460*.

Scanning electron microscopy; x-ray microanalysis; electron probe microanalysis; electron scattering; electron-specimen interactions; Monte Carlo electron trajectory calculations; *SP460*, pp. 5-14 (Dec. 1976).

Scanning electron microscopy; secondary electrons; x rays; backscattered electrons; electron probe microanalysis; Monte Carlo electron trajectory simulation; *SP460*, pp. 15-44 (Dec. 1976).

Scanning electron microscopy; x-ray generation; electron microscopy; electron probe microanalysis; electron-specimen interactions; Monte Carlo electron trajectory simulation; *SP460*, pp. 45-60 (Dec. 1976).

Scanning electron microscopy; x-ray microanalysis; electron energy loss; Landau electron deceleration theory; microanalysis; Monte Carlo electron trajectory calculations; *SP460*, pp. 61-96 (Dec. 1976).

Scanning electron microscopy; thin films; x-ray analysis; electron probe microanalysis; Monte Carlo electron trajectory calculations; nuclear backscattering analysis; *SP460*, pp. 129-138 (Dec. 1976).

Scanning electron microscopy; contrast calculations; energy filtering; low-loss electron image; magnetic contrast; Monte Carlo electron trajectory calculations; *SP460*, pp. 139-150 (Dec. 1976).

Scanning electron microscopy; cement; compressive strength; flexural strength; fracture mechanics; polymer impregnated cement; polymer impregnated mortar; porosity; *BSS83*.

Scanning interferometer; cw dye laser; frequency control; laser wavelength determination; *16649*.

Scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; shear test; sheet resistors; silicon; silicon on sapphire; spreading resistance; test patterns; thermal sistance; thermal response; transistors; *SP400-19*.

Scanning low energy electron probe; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; silicon on sapphire; spreading resistance; test patterns; thermally stimulated current; thermal resistance; ultrasonic wire bonding; *SP400-25*.

S-carboxymethyl-L-cysteine sulfone; x-ray, zwitterion; hydrogen bonding; single crystal; structure determination; *16565*.

Scatter; absorption; dielectric layers; irregularities; metallic thin films; microirregularities; overcoating; plasmons; *J. Res.* **80A** No. 4, 643-658 (1976).

Scattered light; diamond turning; laser damage; metal mirrors; micromachining; optical figure; *SP435*, pp. 49-56 (Apr. 1976).

Scattered light; smoke detectors; test methods; aerosols; ionization chambers; light attenuation; *NBSIR 76-1037*.

Scattered light; surface absorption; alkali-halide; KCl; laser windows; optical figure; polishing; *SP435*, pp. 20-28 (Apr. 1976).

Scattered light; surface figure; blur circle; circular diffraction grating; diamond-turned mirrors; diffraction pattern; machine cusp; *SP435*, pp. 57-65 (Apr. 1976).

Scattering; albedo; collimation; dosimetry; ion chambers; n-γ dosimetry; neutrons; *SP456*, pp. 335-341 (Nov. 1976).

Scattering; scattering theory; surface roughness; transmittance; bibliography; emittance; heat transfer; measurement techniques; periodic surfaces; polarization; random surfaces; reflectance; reflectance of coherent radiation; *J. Res.* **80A** No. 2, 207-220 (1976).

Scattering; spectrophotometry; translucency; transmittance; Vitrolite glass; blurring effect; edge loss; error analysis; flux loss; plastics; reflectance; *TN594-12*.

Scattering; spin-polarization; electron; experiment; LEED; multi-photon; photoionization; review; *15900*.

Scattering; standardization; tissue characterization; ultrasound; blood; cross-section; diagnosis; *SP453*, pp. 29-47 (Oct. 1976).

Scattering; static potential; vibrational excitation; close-coupling calculations; crossed beams; cross sections; differential cross sections; electron scattering; inelastic scattering; nitrogen molecules; polarization potential; *16533*.

Scattering; surface scattering; tissue characterization; ultrasonic spectroscopy; ultrasound diagnosis; acoustic impedance; Bragg diffraction; computer processing; frequency-dependent attenuation; internal scattering; myocardial infarction; *SP453*, pp. 167-196 (Oct. 1976).

Scattering; temperature dependence; wavelength dependence; multilayer dielectric mirror; optical absorptance; reflectance; *SP435*, pp. 230-235 (Apr. 1976).

Scattering; theory; atom; collisions; electron; low energy; review; *15883*.

Scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; *SP453*.

Scattering; tissue characterization; tissue parameters; tumor detection; ultrasound; diagnosis; Doppler effect; optimization; resonance; *SP453*, pp. 11-17 (Oct. 1976).

Scattering; tissue characterization; ultrasound; Bragg diffraction; diagnosis; frequency dependence; orientation dependence; *SP453*, pp. 197-206 (Oct. 1976).

Scattering; tissue characterization; ultrasound; diffraction; Fourier transform; *SP453*, pp. 213-228 (Oct. 1976).

Scattering; ultrasound; angular dependence; blood; compressibility; density; distribution function; erythrocytes; hematocrit; *SP453*, pp. 207-212 (Oct. 1976).

Scattering; vacancies; absorption; electrotransport; ionic segregation; laser; momentum transfer; phototransport; *SP462*, pp. 365-370 (Dec. 1976).

Scattering; waveform distortion; alkali-halides; alkaline-earth fluorides; bulk damage; focal spot diameter; inclusion damage; interference ripples; pulsed DF laser damage; sapphire; *SP462*, pp. 136-144 (Dec. 1976).

Scattering coefficients; statistical models; absolute absorptivities; continuum models; diffuse reflectance; radiative transfer; reflectance spectra; *J. Res.* **80A** No. 4, 567-583 (1976).

Scattering matrix theory; dynamical diffraction equation; imperfect crystals; *15779*.

Scattering surfaces; bidirectional radiometry; canopies; diffuse reflectance; diffuse transmission; reflectance standards; *J. Res.* **80A** No. 4, 597-603 (1976).

Scattering theory; chemical reactions; collision theory; cross sections; dissociation; hot atoms; isotope effects; kinetics; molecular beams; quantum mechanics; rate coefficients; recombinations; *16591*.

Scattering theory; close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; *16618*.

Scattering theory; close-coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; exchange (of electrons); hydrogen molecules; inelastic scattering; momentum transfer; polarization (of charge clouds); rotational excitation; *16532*.

Scattering theory; semiclassical approximation; electron exchange; electron scattering; hydrogen atoms; indistinguishable particles; phase shifts; quantum mechanics; *16122*.

Scattering theory; sudden approximation; differential cross sections; elastic scattering; electron scattering; hydrogen molecules; momentum transfer; rotational excitation; *15761*.

Scattering theory; sudden approximation; close coupling calculations; cross sections; differential cross sections; elastic scat-

tering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; *15951*.

Scattering theory; surface roughness; transmittance; bibliography; emittance; heat transfer; measurement techniques; periodic surfaces; polarization; random surfaces; reflectance; reflectance of coherent radiation; scattering; *J. Res.* **80A** No. 2, 207-220 (1976).

Scattering theory; trajectories; uniform approximation; chemical reactions; classical scattering matrix theory; collision theory; hydrogen atoms; hydrogen molecules; *16054*.

Scattering theory; trajectories; classical scattering matrix theory; collision theory; *16593*.

Scattering theory; trajectories; vibrational energy; chemical reactions; classical probability matrix theory; classical scattering matrix theory; collision theory; energy transfer in collisions; hydrogen molecules; information theory; *16607*.

Scattering theory; trajectories; transition-state theory; chemical reactions; chlorine molecules; classical scattering matrix theory; collision theory; cross sections; hydrogen atoms; rate coefficients; *16627*.

Scattering-matrix theory of antennas; antenna-antenna interactions; antenna measurements; antenna theory; *J. Res.* **80B** No. 1, 5-51 (1976).

Scheduling; computer networking; load leveling; resource sharing; *16570*.

School paste; paste, water-based, semi-liquid; *PS64-75*.

School systems; smoke detectors; teaching metric; cryogenic fluid; door locks; energy; EPIC supplement; high winds; home security; nondestructive evaluation; research associate program; *DIM/NBS* **60,** No. 4, 1-24 (1976).

Schools; smoke detectors; atriums; fire detection; flame detectors; heat detectors; hospitals; hotels; maintenance; nursing homes; reliability; *16179*.

Schools, paints and inks; art education; inks for art education; paints and inks; *PS65-75*.

Schottky-barrier diodes; semiconductors; solid-state devices; x-band measurements; diodes; gamma rays; hardness assurance; microwave mixer diodes; mixers; neutrons; radiation hardness; receivers; *SP400-7*.

Schumann-Runge bands; spin-orbit mixing; molecular oxygen; predissociation; *16596*.

Schur matrix; compounds; induced matrices; Kronecker powers; roots of unity; *15955*.

Science; air conditioners; attic fans; basic research; chemical thermodynamics; door security; Elliot Richardson; energy conservation; engineering; fashion; flammability; laser measurement; *DIM/NBS* **60,** No. 6, 1-24 (1976).

Science and technology; sea of data; standard reference data system; computer age; data system; materials research; measurement challenge; *DIM/NBS* **60/Suppl.,** Anniversary Issue, 1-32 (1976).

Scientific and technical resources, converting; social opportunity; economic challenge; *NBS-GCR-73-3*.

Scientific ills; society and science; technology and civilization; preventive technology; *16300*.

Scintillation; spread-F; topside; absorption; high latitude; ionosphere; ionospheric scattering; irregularity; satellite; *16641*.

Scintillation detector; background; gamma-ray astronomy; induced radioactivity; Monte Carlo calculation; response; *16431*.

Screening energy; molecular hydrogen; photoelectron spectroscopy; polarization energy; relaxation energy; *15749*.

Scuffing; wear; contact lubrication; elastohydrodynamic contacts; fatigue; lubricant film thickness; *SP423*, pp. 41-54 (Apr. 1976).

Sea of data; standard reference data system; computer age; data system; materials research; measurement challenge; science and technology; *DIM/NBS* **60/Suppl.,** Anniversary Issue, 1-32 (1976).

Sea water; solubility; dimethylmercury; partition coefficient; *15944*.

Seacoast atmosphere; standard; stress-corrosion; 3.5 percent NaCl; 7XXX aluminum alloys; Aluminum Association; ASTM; industrial atmosphere; round robin tests; *16656*.

Seasonal efficiency; boiler oversizing; efficiency vs. heating load; modular boilers; modular concept; *15712*.

Seasonal efficiency; boilers; computer simulation; DEPAB (DEsign and Performance Analysis of Boilers); energy saving measures; performance at part load; *16347*.

Seawater analysis; adsorption; copper; cupric ion; flow cell; ion-selective electrode; *SP422*, pp. 899-915 (Aug. 1976).

Seawater analysis; speciation; stability of water samples; zinc; Adriatic Sea; cadmium; copper; electrochemical analysis; heavy metals; lead; *SP422*, pp. 917-928 (Aug. 1976).

Sebacates; triglycerides; correlation; esters; heat capacity; oligomers; *16275*.

Second breakdown; semiconductor devices; thermal resistance; transistor, power; current crowding; hot spots; reliability; safe operating area limits; *16328*.

Second breakdown; thermal instability; base widening; current crowding; hot spots; power transistors; safe operating area; *16451*.

Second sound; shock wave; stress wave; temperature wave; thermal diffusivity; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; interatomic potential; molecular dynamics; *16138*.

Second sound; stress pulse; temperature wave; thermal diffusivity; thermal equilibrium; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; molecular dynamics; *16589*.

Secondary battery; transceiver; battery performance standard; law enforcement communications, Law Enforcement Standards Laboratory; personal/portable transceivers; primary battery; *16296*.

Secondary electrons; x rays; backscattered electrons; electron probe microanalysis; Monte Carlo electron trajectory simulation; scanning electron microscopy; *SP460*, pp. 15-44 (Dec. 1976).

Secondary ion mass spectrometry; surface analysis; CARISMA program; ion microprobe mass analysis; local thermodynamic equilibrium model; quantitative analysis; *15862*.

Secondary ion mass spectrometry; surface analysis; Auger spectrometry; electron microprobe analysis; ESCA; ion scattering; *SP422*, pp. 541-573 (Aug. 1976).

Secondary ion mass spectroscopy; semiconductor devices; silicon; surface analysis; x-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; insulator films; interface characteristics; internal photoemission; *SP400-23*.

Secondary ion mass spectroscopy; silicon; silicon dioxide; surface analysis; x-ray photoelectron spectroscopy; Auger electron spectroscopy; depth impurity profiling; ion implantation; ion sputtering; microelectronic materials; Rutherford backscattering; *15739*.

Secondary neutrons; sodium iodide detector; Apollo 17; background; cosmic-ray proton; induced radioactivity; *15727*.

Secondary particle spectra; theoretical dosimetry; energy deposition spectra; microdosimetry; neutron interactions with tissue; neutrons; radiation quality; *16182*.

Secondary reference materials; Standard Reference Materials; definitive method; matrix reference materials; pure reference materials; reference methods; routine methods; *16104*.

Secondary standardization; calibration; dosimetry; ionization chamber; *SP456*, pp. 65-69 (Nov. 1976).

Second-order Doppler shift; speed of light; frequency multiplication; fundamental constants; laser stability; metrology; *15980.*
Securities and tax regulation; small firm finances; technological change; technology subsidies; venture capital; capital market imperfections; federal technology policy; SBIC's; *NBS-GCR-ETIP 76-08.*
Securities and tax regulation; small firm finances; technological change; technology subsidies; venture capital; capital market imperfections; federal technology policy; SBIC's; *NBS-GCR-ETIP 76-12.*
Security; citizen rights; computers; confidentiality; data systems; health records; information policy; management principles; medical records; privacy; recordkeeping practices; *Monogr. 157.*
Security; data confidentiality; data integrity; encryption; personal identification; privacy; record identification; risk analysis; *16390.*
Security; shoplifting; theft; burglary; consultants; crimes of opportunity; directory, (security); investigations; law enforcement; resources; *16369.*
Security; small protection domains; types; capability; capability-based addressing; computer security; extended-type objects; operating system structures; protection; reliable software; reliability; *TN919.*
Security; standards; technology assessment; user experience; auditing; cost/benefit analysis; data base; data base management; DBMS; government regulation; management objectives; privacy; *SP451.*
Security; standards; user groups; computers; data base management; governments; management information systems; public services; *15923.*
Security; terminals; *16048.*
Security; terms; vocabulary; computer; data processing; definitions; Federal Information Processing Standards Publication; information processing; privacy; *FIPS PUB 39.*
Security costs; computer model; computer security; confidentiality; cost model; data security costs; PL-93-579; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; *NBSIR 76-985.*
Security costs; computer security; confidentiality; cost model; data security costs; PL 93-597; privacy; Privacy Act of 1974; privacy compliance techniques; privacy costs; privacy model; *TN906.*
Security flaws; software security; taxonomy of integrity flaws; UNIVAC 1100 Series OS; BBN-TENEX; IBM OS/360; operating system security; *NBSIR 76-1041.*
Security, software; software engineering; software systems; *16099.*
Security systems; sensory processes; threat analysis; behavioral impact; cognitive processes; nuclear weapon theft; perceptual processes; psychological deterrence; *NBSIR 76-1007.*
Sediment; standard; x ray; alpha particle; beta particle; gamma-ray; radioactivity; *15933.*
Sediment; trace elements; water; wet chemical analysis; atomic absorption analysis; Californium-252; Mahoning River; neutron activation analysis; pollution; *SP422,* pp. 225-230 (Aug. 1976).
Sedimentation coefficient; translational diffusion coefficient; Zimm theory; bead-spring model; block copolymers; dilute polymer solutions; limiting viscosity number; Mandelkern-Flory-Scheraga equation; molecular weight determination; *16026.*
Sediments; standard; trace elements; accuracy; Atomic Absorption Spectrometry; Caribbean; precision; Puerto Rico; replicates; *SP422,* pp. 1089-1102 (Aug. 1976).
Sediments; total mercury; water; Chesapeake Bay; elemental sulfur; flameless atomic absorption; petroleum; plankton; *15874.*
Seismic design; seismic response; spherical tanks; structural design; dynamic analysis; earthquake; *SP444,* pp. V-50—V-62 (Apr. 1976).
Seismic response; spherical tanks; structural design; dynamic analysis; earthquake; seismic design; *SP444,* pp. V-50—V-62 (Apr. 1976).
Seismic response; structural engineering; analytical model; dynamic analysis; dynamic loading; earthquake; energy dissipation; finite element; *SP444,* pp. IV-70—IV-89 (Apr. 1976).
Seismic system; seismometer; accelerometer; calibration; electromechanical transducer; galvanometer; galvanometer amplifier; *NBSIR 76-1089.*
Seismic waves; seismometer; soil-structure interaction; earthquake; field data; ground response; *SP444,* pp. III-13—III-23 (Apr. 1976).
Seismometer; accelerometer; calibration; electromechanical transducer; galvanometer; galvanometer amplifier; seismic system; *NBSIR 76-1089.*
Seismometer; soil-structure interaction; earthquake; field data; ground response; seismic waves; *SP444,* pp. III-13—III-23 (Apr. 1976).
Selected thermodynamic values; thermodynamic properties; CODATA compatible values; enthalpies of formation; entropy; Gibbs energy of formation; *NBSIR 75-968.*
Selection rules; symmetry species; tetrahedral; energy levels; hyperfine interactions; methane; *16376.*
Selenium-75; standardization; coincidence counting; gamma rays; ground state decay; radioactivity; *15846.*
Self absorption; uranium-oxide; alpha particles; backscattering; gadolinium-148; polonium-210; *15807.*
Self heating; building materials; calorimetry; combustibility; flammability; heat release rate; potential heat; *16111.*
Self-absorption; uranium oxide; alpha particles; backscattering; disintegration rate; ranges; *15808.*
Self-assembly; structural transformations; surface adsorption; biopolymers; helix-coil transition; phase transitions in biopolymers; *15721.*
Self-balancing potentiometers; thermometry; automatic potentiometry; automation; calorimetry; Diesselhorst ring; potentiometer; programmable potentiometer; *J. Res.* **80A** No. 4, 669-675 (July-Aug. 1976).
Self-calibration; directional coupler; measurement standards; *15828.*
Self-calibration; seven-port junction; vector voltmeter; amplitude; computer controlled; diode detectors; microwave measurements; phase angle; *NBSIR 76-844.*
Self-consistent field; valence electrons; basis functions; configuration mixing; dipole moments; electronic structure of molecules; Hartree-Fock; integrals, evaluation of; molecular structure; orbitals; potential energy curves; pseudopotentials; *16611.*
Self-diffusion; continuous interface profile; diffusion equation; hypergeometric differential equation; interfacial force; liquid-vapor interface; Markov Stochastic model; *15726.*
Self-focusing; thin films; avalanche ionization; IR windows and mirrors; laser damage; laser materials; multiphoton processes; *SP435.*
Self-luminous sources; test procedures; classification; containment; designation; light sources; national standard; radiation source; radioactive; radioluminous products; *H116.*
Semiclassical approximation; electron exchange; electron scattering; hydrogen atoms; indistinguishable particles; phase shifts; quantum mechanics; scattering theory; *16122.*
Semiclassical *S*-matrix; spectral line broadening; *ab initio* potentials; atom-molecule interactions; curved classical trajectories; HCl, CO, CO_2 with He, Ar; rotation-vibration spectra; *16528.*

Semiconducting oxides; spinels; teflon bonded electrodes; nickel cobalt oxides; oxygen evolution, Pourbaix diagram; *SP455*, pp. 281-288 (Nov. 1976).

Semiconductor; automation; integrated circuits; measurements; microelectronics; process control; reliability; *16116*.

Semiconductor; cuprous oxide; implantation; ion; nondestructive testing; Raman scattering; sample characterization; *15915*.

Semiconductor; silicon; titanium dioxide; acetonitrile; cyclic voltammetry; electrochemistry; nonaqueous; *SP455*, pp. 149-152 (Nov. 1976).

Semiconductor; traps; zinc oxide; dislocation; electrochemical; exchange current; *SP455*, pp. 139-148 (Nov. 1976).

Semiconductor characterization; semiconductor device; silicon; square array; bulk resistivity; collector resistivity; four-probe; planar test structure; resistivity; *16424*.

Semiconductor defects; silicon; thermally stimulated capacitance; thermally stimulated current; gold-doped silicon; measurement methods; MOS capacitor; *p-n* junction; *16363*.

Semiconductor device; silicon; square array; bulk resistivity; collector resistivity; four-probe; planar test structure; resistivity; semiconductor characterization; *16424*.

Semiconductor devices; device inspection; electron-beam-induced current; microelectronics; *p-n* junctions; scanning electron microscopy; *16449*.

Semiconductor devices; semiconductor materials; semiconductor process control; shear test; sheet resistors; silicon; silicon on sapphire; spreading resistance; test patterns; thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; *SP400-19*.

Semiconductor devices; semiconductor process control; sheet resistors; test patterns; thermally stimulated currents; MOS capacitors; *p-n* junctions; resistivity of silicon; *SP400-21*.

Semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; silicon on sapphire; spreading resistance; test patterns; thermally stimulated current; thermal resistance; ultrasonic wire bonding; voltage contrast mode; *SP400-25*.

Semiconductor devices; semiconductor process control; silicon; automation; electronics; integrated circuits; measurement technology; *NBS-GCR-76-64*.

Semiconductor devices; silicon; surface analysis; x-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; insulator films; interface characteristics; internal photoemission; ion scattering spectroscopy; *SP400-23*.

Semiconductor devices; surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; process control; reliability; *SP400-28*.

Semiconductor devices; thermal resistance; transistor, power; current crowding; hot spots; reliability; safe operating area limits; second breakdown; *16328*.

Semiconductor devices; UHF transistor measurements; device nonlinearity measurements; hot spots; transistor; laser scanning; nondestructive tests; *16571*.

Semiconductor devices; ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; *SP400-18*.

Semiconductor electrode; flat band potential; hydrogen evolution; oxide electrode; perovskite surface composition; rotating electrode voltammetry; *SP455*, pp. 229-240 (Nov. 1976).

Semiconductor electrode; tin oxide electrode; transparent electrode; adsorption; anodic oxidation; electrocatalysis; *SP455*, pp. 175-181 (Nov. 1976).

Semiconductor electrodes; carbon; electrocatalysis; nickel oxide; oxide electrodes; oxygen electrochemistry; *SP455*, pp. 203-219 (Nov. 1976).

Semiconductor electrodes; stability, surface layers; surface reactions; anodic decomposition; cathodic decomposition; electrochemistry; inorganic bronze electrodes; metal electrodes; *SP455*, pp. 267-280 (Nov. 1976).

Semiconductor electronics; sheet resistors; silicon; test pattern; test structures; dopant density; microelectronics; MOS capacitors; *n-p-n* transistor fabrication; *p-n* junctions; resistivity; *SP400-22*.

Semiconductor grade silicon; trichlorosilane; boron measurements; mass spectrometry; *SP422*, pp. 709-714 (Aug. 1976).

Semiconductor materials; semiconductor process control; shear test; sheet resistors; silicon; silicon on sapphire; spreading resistance; test patterns; thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; *SP400-19*.

Semiconductor materials; semiconductor process control; silicon; silicon dioxide; silicon on sapphire; spreading resistance; test patterns; thermally stimulated current; thermal resistance; ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; *SP400-25*.

Semiconductor materials; thin films; x-ray fluorescence; x-ray microanalysis; distribution functions; electron probe microanalysis; *15967*.

Semiconductor optical properties; two-photon absorption coefficients; multiphoton processes; nonlinear absorption; nonlinear optical properties; *SP435*, pp. 369-388 (Apr. 1976).

Semiconductor process control; shear test; sheet resistors; silicon; silicon on sapphire; spreading resistance; test patterns; thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; *SP400-19*.

Semiconductor process control; sheet resistors; test patterns; thermally stimulated currents; MOS capacitors; *p-n* junctions; resistivity of silicon; semiconductor devices; *SP400-21*.

Semiconductor process control; silicon; silicon dioxide; silicon on sapphire; spreading resistance; test patterns; thermally stimulated current; thermal resistance; ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; acoustic emission; *SP400-25*.

Semiconductor process control; silicon; automation; electronics; integrated circuits; measurement technology; semiconductor devices; *NBS-GCR-76-64*.

Semiconductor surface states; chemisorption; electrocatalysis; electron transfer theory; multistep redox reactions; *SP455*, pp. 1-19 (Nov. 1976).

Semiconductors; conductivity; electric field effects; insulating films; insulators; metal oxidation; metals; MOM devices; oxidation; oxidation theory; parabolic law for metal oxidation; *16260*.

Semiconductors; silicon; test patterns; data acquisition; data display; integrated circuits; measurement technology; microelectronics; process control; reliability; *SP 400-15*.

Semiconductors; silicon; thermally stimulated capacitance; thermally stimulated current; cryostat; defects; gold-doped silicon; measurement methods; microelectronics; MOS capacitor; *p-n* junctions; *SP400-26*.

Semiconductors; solid-state devices; x-band measurements; diodes; gamma rays; hardness assurance; microwave mixer diodes; mixers; neutrons; radiation hardness; receivers; Schottky-barrier diodes; *SP400-7*.

Semiconductors; thermoelectric power; band structure; properties of semiconductors; *16161*.

Semiconductors; transport theory; magnetophonon effect; *16643*.

Seminar; South Asia trade; testing; certification; developing countries; exports; industrializing countries; labeling; *SP438*.
Sensitive isotropic probe; broadband antenna; electromagnetic compatibility; fiber optics; field strength measurement; isolated EMC antenna; *16210*.
Sensitive isotropic probe; electromagnetic compatibility; fiber optics; field strength measurement; isolated EMC antenna; *NBSIR 75-819*.
Sensitivity; spectrophotometry; statistical methods; zinc; atomic absorption; cadmium; copper; lead; manganese; *SP422*, pp. 1023-1033 (Aug. 1976).
Sensitivity; temperature; calibration; ceramic; condenser; electret; humidity; microphones; reciprocity; *NBSIR 76-1090*.
Sensitivity analysis; steel; structural mechanics; uncertainty; creep; fire endurance; fire tests; reinforced concrete; *BSS76*.
Sensitivity *vs.* precision and accuracy; Standard Reference Materials; atomic absorption spectrometry; nonflame graphite furnace; *SP422*, pp. 1045-1051 (Aug. 1976).
Sensor; waveguide-below-cutoff; absolute (unambiguous) readout; piston; precision attenuator; *NBSIR 76-833*.
Sensory processes; threat analysis; behavioral impact; cognitive processes; nuclear weapon theft; perceptual processes; psychological deterrence; security systems; *NBSIR 76-1007*.
Separation; vertical separation; aircraft; air transportation; air traffic control models; altimetry; altitude; aviation; collision risk; error analysis; mathematical models; safety; *NBSIR 76-1067*.
Separation of variables; spectral measure; tensor products; convolution; Hilbert space; *J. Res.* **80B** No. 3, 347-351 (1976).
Serum; accurate; blood; concentrations; determination; dilution; electrolyte; isotope; mass spectrometry; *SP422*, pp. 951-960 (Aug. 1976).
Serum; biological materials; chromium; cobalt; contamination; manganese; sampling; *SP422*, pp. 299-310 (Aug. 1976).
Serum glucose; clinical reference method; definitive glucose method; glucose in serum; isotope dilution-mass spectrometry; *16343*.
Serum minerals; serum storage effects; sodium; temperature effects; trace elements; zinc; atomic absorption spectrophotometry; calcium; container effects; copper; magnesium; potassium; *SP422*, pp. 575-591 (Aug. 1976).
Serum storage effects; sodium; temperature effects; trace elements; zinc; atomic absorption spectrophotometry; calcium; container effects; copper; magnesium; potassium; serum minerals; *SP422*, pp. 575-591 (Aug. 1976).
Service; computer; interactive; measurement; procurement; response; *16247*.
Service; computer networks; data analysis; interactive; network service; performance evaluation; performance measurement; *TN897*.
Service; dosimetry; electrons; impact; improvement; performance; radiation therapy; *SP456*, pp. 365-370 (Nov. 1976).
Service bureaus; synthetic benchmarking; workload characterization; benchmarking; charging algorithms; *16624*.
Service bureaus; synthetic benchmarking; workload characterization; benchmarking; charging algorithms; *TN920*.
Service sector; automation; consumers; innovation; institutional barriers; productivity; *16319*.
Serviceability; static; vibration; deflection; dynamic; floor systems; human responses; performance criteria; *TN900*.
Services—state/local government; automation; computer utilization; dedicated computers; EDP expenditure; employment; finance; productivity; *16075*.
Servo-hydraulic system; viscoelasticity; yield point; biaxial; fatigue; fracture; laboratory automation; mechanical testing; plasticity; polyvinyl chloride; *16626*.
Sessile dislocations; x-ray dynamical diffraction; x-ray topography; contrast conditions; dynamical images; immobile dislocations; Lomer locks; *16373*.
Set covering; clique; clique graph; intersection graph; pseudointersection graph; *J. Res.* **80B** No. 4, 441-445 (1976).
Seven-port junction; vector voltmeter; amplitude; computer controlled; diode detectors; microwave measurements; phase angle; self-calibration; *NBSIR 76-844*.
Sewage flow measurement; flow measurement, water; flumes, measuring; open channel flow measurement; Palmer-Bowlus flumes; *15738*.
Sewage sand; sewer self-cleansing; grit; sand transport; *16374*.
Sewer self-cleansing; grit; sand transport; sewage sand; *16374*.
SFRL frequency measurement; spin flip Raman laser; frequency measurements on tunable lasers; IFS with a tunable laser; infrared frequency synthesis; *TN680*.
SF_6; Xe; CO_2; critical exponents; critical point; equation of state; *16081*.
Shake table; structural engineering; tests; dynamic tests; earthquake simulator; *SP444*, pp. V-25—V-34 (Apr. 1976).
Shape; drop-ball test; edge; fracture; impact; ophthalmic lenses; *16311*.
Shaping; closed die; forging; isostatic; polishing; quartz; *SP462*, pp. 95-99 (Dec. 1976).
Shear modulus; soil; tests; torsional excitation; damping; damping coefficients; *SP444*, pp. III-72—III-83 (Apr. 1976).
Shear modulus; sound velocity; Young's modulus; bulk modulus; compressibility; copper; copper alloys; elastic constants; Poisson ratio; pulse-echo method; resonance method; *16505*.
Shear modulus; sound velocity; Young modulus; bulk modulus; compressibility; Debye temperature; elastic constants; plutonium; plutonium alloy; Poisson ratio; *16635*.
Shear modulus; Young's modulus; bulk modulus; composite materials; elastic constants; filled polymers; mechanical properties; particulate composites; Poisson's ratio; *16264*.
Shear test; sheet resistors; silicon; silicon on sapphire; spreading resistance; test patterns; thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; *SP400-19*.
Shear tests; structural engineering; web reinforcement; column; ductility; earthquake; reinforced concrete; *SP444*, pp. IV-16—IV-36 (Apr. 1976).
Shear wave; elastic medium; engineering seismology; ground layer; numerical solution; *SP444*, pp. III-1—III-12 (Apr. 1976).
Sheathed thermocouples; tantalum; temperature measurements; thermal emf drift; tungsten-rhenium alloys; beryllium oxide; refractory metals; *15797*.
Sheet resistors; silicon; silicon on sapphire; spreading resistance; test patterns; thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; *SP400-19*.
Sheet resistors; silicon; test pattern; test structures; dopant density; microelectronics; MOS capacitors; *n-p-n* transistor fabrication; *p-n* junctions; resistivity; semiconductor electronics; *SP400-22*.
Sheet resistors; test patterns; thermally stimulated currents; MOS capacitors; *p-n* junctions; resistivity of silicon; semiconductor devices; semiconductor process control; *SP400-21*.
Shelter; durability; field inspection; foam and beam; honeycomb; impact; lightweight structures; military; reliability; sandwich panel; *NBSIR 76-1025*.
Shielded strip line; TEM cell; EMC measurements; radiation resistance; rectangular coax; *NBSIR 75-829*.
Shielded strip line; TEM cell; *NBSIR 76-841*.

Shift; core level; implant; noble metals; rare gas; *16080.*

Shift; Stark broadening; width; experimental; neutral atom; review; *JPCRD* 5, No. 2, 209-258 (1976).

Shipboard atmospheric sampling; analytical blanks; atmospheric sampling; coastal sampling; contamination of atmospheric particulate samples; sample handling; *SP422,* pp. 377-388 (Aug. 1976).

Shipping; stability; standard reference materials; accelerated testing; clinical; hazards; legal problem packaging; *16110.*

Shipping and boating industries; Standards laboratories; telephone industry and specialized carriers; time and frequency; time scales; users of NBS radio broadcasts; atomic frequency standards; aviation industry; electric power industry; *SP445-1.*

Ships; steel; welding; alloying; inclusions; low temperature; rolling; *16145.*

Shishkebab; sonicated solution; spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; *16274.*

Shock generator; accelerometer; calibration; FFT; Fourier transform; Fourier transform frequency; mechanical shock; *16128.*

Shock tube; tape; thermal radiant-energy response; thermal transient response; transducers; zero shift; coatings; dynamic; dynamic response; pressure transducer; protective coatings; *NBSIR 76-1144.*

Shock tube; thermal decomposition; 2,3-dimethylbutanol-2; 3,3-dimethylbutanol-2; alcohols; heats of formation; hydroxyalkyl radicals; *15904.*

Shock wave; stress wave; temperature wave; thermal diffusivity; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; interatomic potential; molecular dynamics; second sound; *16138.*

Shoplifting; theft; burglary; consultants; crimes of opportunity; directory, (security); investigations; law enforcement; resources; security; *16369.*

Shoreline management; shoreline protection; beach erosion control; Corps of Engineers; cost sharing; efficiency; hurricane protection; *16059.*

Shoreline protection; beach erosion control; Corps of Engineers; cost sharing; efficiency; hurricane protection; shoreline management; *16059.*

Shoring; standards; building; codes; concrete; construction; falsework; formwork; loads; reshoring; safety; *BSS80.*

Short circuit; standards; automatic; broad frequency; equations; network analyzers; open circuit reflection coefficient; *16510.*

Short line mileage; waybill file; programmer's documentation; *16241.*

Short-chain branching; branching; limiting viscosity numbers; long-chain branching; nuclear magnetic resonance; polyethylene; *16244.*

Shortest paths; iterative methods; k best paths; linear equations; network algorithms; networks; *16389.*

Short-line miling system; waybills; railroad freight movements; *16241.*

Short-lived molecules; chemical monitoring and analysis; double resonance; microwave instrumentation; microwave spectroscopy; radio astronomy; *16400.*

Shrinkage; theorem; asymptotics; elastic; oscillations; Pomeranchuk; *16249.*

SI; timetable for metrication; conversion to metric; government metrication; metrication; metric system; *16231.*

SI basic unit; candela; lumen; luminous flux; luminous intensity; photometry; *16397.*

Si IV; spectra; stellar; ultraviolet; absorption; B-stars; C IV; O-stars; *16271.*

SI symbols; SI units; metric; *16172.*

SI units; gyromagnetic ratio; measurement units; physical constants; *16395.*

SI units; metric; SI symbols; *16172.*

Sidearm power detector; directional coupler; power detectors; *16567.*

Siding; structural engineering; wind; wind damage; wind engineering; building codes; design standards; masonry construction; roofs; *TN909.*

Signal processing; spectral resolution; statistics; analytical chemistry; curve fitting; data reduction; feature selection; multivariate analysis; optimization techniques; pattern recognition; *15964.*

Signal processing; standards; teletypewriters; coding; interfaces; modems; *NBS-GCR-74-30.*

Signature analysis; unbalance; vibration; diesel-electric sets; gears; looseness; *NBS-GCR-74-22.*

Silacyclopentane; small-ring molecule; Stark effect; dipole moment; microwave spectrum; molecular structure; *16046.*

Silicate analysis; accuracy; analytical bias; reference samples; *SP422,* pp. 79-89 (Aug. 1976).

Silicate cement; turbine handpiece; amalgam; composite materials; dental gold alloys; dental research; panoramic x ray; *16212.*

Silicon; automation; electronics; integrated circuits; measurement technology; semiconductor devices; semiconductor process control; *NBS-GCR-76-64.*

Silicon; cells; charge-coupled device (CCD); chevron; garnet; large-scale-integration (LSI); line width; lithography; magnetic bubble device (MB); memory storage density; N-channel metal-oxide-semiconductor (N-MOS); random-access-memory (RAM); *16647.*

Silicon; coupling constants; fluorine; fluoroalkylsilanes; NMR; relative signs; *16432.*

Silicon; density standard; phase shift; *NBSIR 75-768.*

Silicon; silicon dioxide; silicon on sapphire; spreading resistance; test patterns; thermally stimulated current; thermal resistance; ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; acoustic emission; Auger electron spectroscopy; *SP400-25.*

Silicon; silicon dioxide; surface analysis; x-ray photoelectron spectroscopy; Auger electron spectroscopy; depth impurity profiling; ion implantation; ion sputtering; microelectronic materials; Rutherford backscattering; secondary ion mass spectroscopy; *15739.*

Silicon; silicon on sapphire; spreading resistance; test patterns; thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; *SP400-19.*

Silicon; square array; bulk resistivity; collector resistivity; four-probe; planar test structure; resistivity; semiconductor characterization; semiconductor device; *16424.*

Silicon; standard; weighing; density; etching; grinding; sawing; *NBSIR 76-1019.*

Silicon; surface analysis; x-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; insulator films; interface characteristics; internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; *SP400-23.*

Silicon; test pattern; test structures; dopant density; microelectronics; MOS capacitors; *n-p-n* transistor fabrication; *p-n* junctions; resistivity; semiconductor electronics; sheet resistors; *SP400-22.*

Silicon; test patterns; data acquisition; data display; integrated circuits; measurement technology; microelectronics; process control; reliability; semiconductors; *SP 400-15.*

Silicon; thermally stimulated capacitance; thermally stimulated

current; gold-doped silicon; measurement methods; MOS capacitor; *p-n* junction; semiconductor defects; *16363*.
Silicon; thermally stimulated capacitance; thermally stimulated current; cryostat; defects; gold-doped silicon; measurement methods; microelectronics; MOS capacitor; *p-n* junctions; semiconductors; *SP400-26*.
Silicon; titanium dioxide; acetonitrile; cyclic voltammetry; electrochemistry; nonaqueous; semiconductor; *SP455*, pp. 149-152 (Nov. 1976).
Silicon; ultraviolet; uniformity of response; detector; photodiode; *16413*.
Silicon avalanche diode; solid state noise source; stability; *16500*.
Silicon difluoride; base catalyzed decomposition; fluorodisilane; pentafluorodisilane; physical properties; pyrolysis; *16014*.
Silicon dioxide; silicon on sapphire; spreading resistance; test patterns; thermally stimulated current; thermal resistance; ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; acoustic emission; Auger electron spectroscopy; beam-lead bonds; *SP400-25*.
Silicon dioxide; surface analysis; x-ray photoelectron spectroscopy; Auger electron spectroscopy; depth impurity profiling; ion implantation; ion sputtering; microelectronic materials; Rutherford backscattering; secondary ion mass spectroscopy; silicon; *15739*.
Silicon films; specular reflection; differential reflection; epitaxial semiconductor devices; Kramers-Kronig relation; multiple reflection; sapphire surfaces; *NBS-GCR-76-61*.
Silicon nitride; slow crack growth; acoustic emission; crack propagation; cyclic conditions; failure times; high temperatures; *16064*.
Silicon nitride; slow crack growth enstatite; cristobalite; deformation; electron microscopy; microstructure; oxidation; *NBSIR 76-1153*.
Silicon on sapphire; spreading resistance; test patterns; thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; *SP400-19*.
Silicon on sapphire; spreading resistance; test patterns; thermally stimulated current; thermal resistance; ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; acoustic emission; Auger electron spectroscopy; beam-lead bonds; *SP400-25*.
Silicon optical absorption coefficient; temperature mapping; active devices; hot-spot behavior; laser scanning; nondestructive testing; *16577*.
Silicon steel; transformer steel; backscattered electrons; domain walls; magnetic domains; scanning electron microscope; *15921*.
Silicon sulfide; spectra; interstellar molecules; microwave spectra; radio astronomy; rotational transitions; *JPCRD* **5**, No. 4, 1147-1156 (1976).
Silicone resin; solid lubricants; titanium; wear; curing agent; fretting; *SP452*, pp. 124-131 (Sept. 1976).
Silver; accuracy; activation analysis; copper; gold; hafnium; palladium; platinum; precision; radiochemical separations; *SP422*, pp. 1157-1164 (Aug. 1976).
Silver; coulometry; electrochemical equivalent; electrochemical equivalent of silver; Faraday; *15922*.
Silver; sputter deposition; aluminum; copper; flash desorption spectroscopy; gold; reflectance; *SP462*, pp. 195-202 (Dec. 1976).
Silver-aluminum; thermomigration; vacancies; alloys; aluminum; copper-aluminum; nonisothermal diffusion; *15774*.
Simple materials assumption; elasticity; finite torsion; natural rubber; scaling law; *16278*.
Simulation; skin; apparel fabrics; fire hazard; flammability testing; heat conductivity; *NBS-GCR-73-14*.
Simulation; skin; thermal burns; apparel fabrics; fabrics; fire hazard; flammability testing; *NBS-GCR-73-13*.
Simulation; time scale simulation; frequency stability; international atomic time; models; *TN689*.
Simulation tests; fire tests; regulatory tests; *16113*.
Simulator; strategies; workload; FORTRAN IV; operating system; overhead; resource allocation; *16062*.
Single crystal; stress optic constants; birefringence; germanium; KCl; refractive index; *SP435*, pp. 164-169 (Apr. 1976).
Single crystal; structure determination; *S*-carboxymethyl-L-cysteine sulfone; x-ray, zwitterion; hydrogen bonding; *16565*.
Single crystal; tungsten; ultraviolet photoelectron spectroscopy; virgin CO; adsorption; carbon monoxide; chemisorption; desorption; photoelectron spectroscopy; photoemission; *15851*.
Single crystals; tungsten; electron polarization; electron scattering; low energy; nickel; *15747*.
Single electron; Hartree-Fock methods; oscillator strength; photoionization; *16378*.
Single layer coatings; spark detection; thin films immersed in liquids; high power ruby laser damage; multilayer reflectors; *SP462*, pp. 315-330 (Dec. 1976).
Single-crystal; triazine; x ray; diffractometer; direct methods; explosives; *15735*.
Single-crystal aluminum; slip bands; vaporization; laser-induced stress; plastic deformation; *SP462*, pp. 165-180 (Dec. 1976).
Single-lap joint analysis; single-lap-joint bending; spotwelded joints; weldbonded joints; adhesive-bonded joints; bonded joints; double-lap joint analysis; finite element analysis; joining; joints; *NBSIR 75-957*.
Single-lap-joint bending; spotwelded joints; weldbonded joints; bonded joints; computer simulation; cyclic loading; debond analysis; finite element analysis; joints; nonlinear analysis; *16147*.
Single-lap-joint bending; spotwelded joints; weldbonded joints; adhesive-bonded joints; bonded joints; double-lap joint analysis; finite element analysis; joining; joints; single-lap joint analysis; *NBSIR 75-957*.
Singular integral equation; wave-guide boundary problem; analytic function; Cauchy principle value; Hilbert problem for two unknowns; *J. Res.* **80B** No. 3, 403-414 (1976).
Singular perturbations; turning-point; viscous flow; Weber's equation; boundary-value problem; eigenvalues; parabolic cylinder functions; resonance; rotating disks; *16459*.
Singular value decomposition; eigenvalues; independence; quadratic form; random variable; *J. Res.* **80B** No. 3, 333-335 (1976).
Sinusoidal; space shuttle; transducer; bias pressure; calibration; dynamic calibration; dynamic pressure; high pressure; liquid medium; pogo pressure; pressure source; pressure transducer; *TN927*.
Sinusoidal pressure; transducer; calibration; dynamic; dynamic calibration; dynamic pressure; dynamic pressure source; liquid column; pressure; pressure source; pressure transducer; *TN914*.
Sirens; speech recognition; traffic noise; alarm signals; hearing; loudness functions; masking; *16573*.
Site model; calculations; hydrocarbon crystals; internal friction; molecular defects; pair potentials; *16074*.
Six-port; automatic network analyzer; microwave; microwave measurement; *16475*.
Six-port; circuit parameters; networks; *16575*.
Six-port; voltage; admittance; current; impedance; phase angles; power; reflection coefficient; *15800*.
Six-port junction; application of six-port junction concept; automated measurements; broadband measurements; microwave

measurements; microwave power measurements; one-port parameters; *16501*.
Skewness; surface microtopography; surface roughness; surface texture; systematic error; amplitude density function; arithmetic average; autocorrelation function; average wavelength; kurtosis; minicomputer software; random error; *TN902*.
Skewsymmetry; combinatorial equivalence; linear inequalities; linear programs; pivot operations; *16127*.
Skin; apparel fabrics; fire hazard; flammability testing; heat conductivity; simulation; *NBS-GCR-73-14*.
Skin; thermal burns; apparel fabrics; fabrics; fire hazard; flammability testing; simulation; *NBS-GCR-73-13*.
Skin; thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazards; flammability testing; ignition; *NBS-GCR-73-6*.
Skin; thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazard; flammability testing; *NBS-GCR-73-9*.
Skylights; windows; daylight gathering; daylighting of buildings; energy conservation; lenses; light conduits; light control; reflectors; *NBSIR 76-1098*.
Slenderness ratio; standards; stiffness; structural stability; walls; brick; buckling; composite walls; compressive strength; concrete block; constitutive relations; flexural strength; masonry; masonry walls; mortar; *BSS73*.
Slenderness ratio; strength; structural analysis; structural design; ultimate strength; bending moments; building codes; column (supports); frames; long columns; reinforced concrete; *16412*.
Slides; avalanches; earthquakes; falls; flows; landslides; mechanisms; *SP444*, pp. III-52—III-71 (Apr. 1976).
Slides, safety of; swing sets, safety of; home playground equipment, safety of; jungle gyms, safety of; playground equipment, safety of; safety of home playground equipment; *PS66-75*.
Sliding spark discharge lamp; spectrum; uranium; actinide; atomic energy levels; isoelectronic sequence; protactinium; rare earth; *15990*.
Sliding wear; coatings, metallic; metallic coatings; *SP452*, pp. 84-93 (Sept. 1976).
Slings, cargo; terminations, rope; weathering, simulated; aramid fiber rope; breaking load, rope; cable, aramid-fiber; end fittings, rope; fatigue damage; rope, aramid-fiber; *NBSIR 76-1159*.
Slip; transmission electron microscopy; twinning; aluminum oxide; microhardness; plastic deformation; *15825*.
Slip bands; vaporization; laser-induced stress; plastic deformation; single-crystal aluminum; *SP462*, pp. 165-180 (Dec. 1976).
Slipperiness tester; static coefficient of friction measurement; floor slipperiness; *U.S. Patent 3,975,940*.
Slip-resistance; slip-resistance testers; walking friction; building safety; floor surface friction; occupancy safety; *TN895*.
Slip-resistance testers; walking friction; building safety; floor surface friction; occupancy safety; slip-resistance; *TN895*.
Slit width; spectral transmission; spectrophotometer standards; stray light; wavelength scale; errors in spectrophotometry; photometric scale; *J. Res.* **80A** No. 4, 625-630 (1976).
Slotted lines; survey of automatic techniques; swept frequency measurements; Wheatstone Bridge; automatic network analyzers; computer-controlled measurement; magic tee; microwave measurement methods; multiple probe devices; reflectometers; rotating probe devices; *Monogr. 151*.
Slow crack growth; acoustic emission; crack propagation; cyclic conditions; failure times; high temperatures; silicon nitride; *16064*.
Slow crack growth; acoustical emission; fracture mechanics; mortars; polymer impregnated mortars; *16360*.
Slow crack growth; analytical predictions; constant stress rate; empirical measurements; fracture stress; *16034*.
Slow crack growth; unloading; failure probabilities; lifetime assurance; proof testing; *16039*.
Slow crack growth enstatite; cristobalite; deformation; electron microscopy; microstructure; oxidation; silicon nitride; *NBSIR 76-1153*.
Slow-crack growth; stress corrosion; fracture; lattice trapping; *16155*.
Slowing-down spectra; energy deposition spectra; fast neutrons; initial spectra; microdosimetric parameters; nuclear data; *15950*.
Slush hydrogen; superconducting; a.c. power; cryoresistive; energy transmission economics; helium; hydrogen energy; liquid hydrogen; liquid nitrogen; power transmission cables; safety; *16629*.
SMA connectors; coaxial connectors; connectors; RF connectors; *16476*.
Small business; Small Business Administration; technological change; Experimental Technology Incentives Program; federal policies; innovation loans; R&D; *NBS-GCR-ETIP 76-11*.
Small Business Administration; technological change; Experimental Technology Incentives Program; federal policies; innovation loans; R&D; small business; *NBS-GCR-ETIP 76-11*.
Small firm finances; technological change; technology subsidies; venture capital; capital market imperfections; federal technology policy; SBIC's; securities and tax regulation; *NBS-GCR-ETIP 76-08*.
Small firm finances; technological change; technology subsidies; venture capital; capital market imperfections; federal technology policy; SBIC's; securities and tax regulation; *NBS-GCR-ETIP 76-12*.
Small furnace test; smoke; aluminum bulkhead; combustion gases; fire endurance; insulation; intumescent paint; potential heat; reinforced plastic; *NBSIR 76-1012*.
Small protection domains; types; capability; capability-based addressing; computer security; extended-type objects; operating system structures; protection; reliable software; reliability; security; *TN919*.
Small-ring molecule; Stark effect; dipole moment; microwave spectrum; molecular structure; silacyclopentane; *16046*.
Smectic polypropylene; spherulitic polypropylene; crazing; cryogenic temperatures; crystalline polymers; environmental effects on crazing; fractional free volume; glass transition temperature; *15772*.
Smith normal form; determinantal divisors; equivalence; matric equation; partitioned matrix; *J. Res.* **80B** No. 1, 89-98 (1976).
Smith-Palmer equation; thermal conductivity; copper-base alloy properties; electrical resistivity; *NBSIR 76-1003*.
Smoke; aluminum bulkhead; combustion gases; fire endurance; insulation; intumescent paint; potential heat; reinforced plastic; small furnace test; *NBSIR 76-1012*.
Smoke; building; estimating; fire; furniture; hazard; interior finish; *16123*.
Smoke; buildings; fire growth; flame spread; heat release; interior finish; reduced scale modeling; room corner tests; *16183*.
Smoke; smoke density chamber; smoke suppressants; fire performance; horizontal and vertical smoke measurements; *16178*.
Smoke; smoldering; upholstery fabric; cotton; cushioning; fire retardant; furniture; glowing; inhibitor; oxidative pyrolysis; oxygen index; rayon; *16224*.
Smoke; temperature; toxicity; upholstery; bedding; beds; carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; furniture; life hazard; oxygen; *NBS-GCR-73-1*.
Smoke; transportation; urethane; flame spread; flammability;

full-scale fire tests; laboratory fire tests; Metrorail cars; neoprene; *NBSIR 75-971.*
Smoke abatement; sprinkler system; construction; corridor test; fire endurance furnace; fire growth; heat release; *16150.*
Smoke density; time to ignition; fire performance tests; flame spread; heat input; heat release rate; limiting oxygen index; radiant panel; *16136.*
Smoke density chamber; smoke suppressants; fire performance; horizontal and vertical smoke measurements; smoke; *16178.*
Smoke density chamber; smoke tests; test comparison; UK; USA; fire propagation test; fire tests; *16125.*
Smoke detection; automatic sprinklers; carbon dioxide; fire detection; fire extinguishment; flame detection; heat detection; *NBSIR 76-1028.*
Smoke detector; surface flame spread; corridor fire test; interior finish material; intumescent coating; life safety; mobile home; *NBSIR 76-1021.*
Smoke detector installation; smoke detector placement; smoke detectors; detector sensitivity; fire detectors; mobile homes; photoelectric smoke detectors; *NBSIR 76-1016.*
Smoke detector placement; smoke detectors; detector sensitivity; fire detectors; mobile homes; photoelectric smoke detectors; smoke detector installation; *NBSIR 76-1016.*
Smoke detectors; atriums; fire detection; flame detectors; heat detectors; hospitals; hotels; maintenance; nursing homes; reliability; schools; *16179.*
Smoke detectors; detector sensitivity; fire detectors; mobile homes; photoelectric smoke detectors; smoke detector installation; smoke detector placement; *NBSIR 76-1016.*
Smoke detectors; detector sensitivity; detector siting; escape time; fire tests; heat detectors; residential fires; *NBSIR 76-1126.*
Smoke detectors; fire detection; light extinction; light scatter; light-scatter measurements; photoelectric smoke detectors; *NBSIR 76-1087.*
Smoke detectors; Taguchi gas sensors; detectors; fire detectors; gas detectors; *NBSIR 76-990.*
Smoke detectors; teaching metric; cryogenic fluid; door locks; energy; EPIC supplement; high winds; home security; nondestructive evaluation; research associate program; school systems; *DIM/NBS* **60,** No. 4, 1-24 (1976).
Smoke detectors; tenability levels; detector sensitivity; detector siting; heat detectors; ionization smoke detectors; photoelectric smoke detectors; residential fires; *NBS-GCR-75-51.*
Smoke detectors; test methods; aerosols; ionization chambers; light attenuation; scattered light; *NBSIR 76-1037.*
Smoke detectors; testing; ultraviolet detectors; detection; fire detectors; flame detectors; heat detectors; infrared detectors; *NBSIR 76-1040.*
Smoke detectors; United States standards; fire detection; regulations; *16187.*
Smoke inhalation; standards; breathing apparatus; closed loop breathing apparatus; equipment design; fire fighters; fire fighting; fire fighting equipment; fire gases; open loop breathing apparatus; protective clothing; *NBS-GCR-73-10.*
Smoke production; smoke tests; building materials; fires; optical density; room furnishings; *16557.*
Smoke suppressants; fire performance; horizontal and vertical smoke measurements; smoke; smoke density chamber; *16178.*
Smoke tests; building materials; fires; optical density; room furnishings; smoke production; *16557.*
Smoke tests; test comparison; UK; USA; fire propagation test; fire tests; smoke density chamber; *16125.*
Smoldering; upholstery fabric; cotton; cushioning; fire retardant; furniture; glowing; inhibitor; oxidative pyrolysis; oxygen index; rayon; smoke; *16224.*
Smoldering fabrics; fabric flammability; flammability testing; heat transfer; *NBS-GCR-73-2.*
Social impact of automation; automation technology; economic impact of automation; productivity improvement; public services; *SP448.*
Social opportunity; economic challenge; scientific and technical resources, converting; *NBS-GCR-73-3.*
Social purposes, civilian; technological innovation; civilian, technological innovation; *NBS-GCR-75-42.*
Social sciences, services to; statistical education in the United States; statistical tolerance limits; U.S. Army programs in statistics; U.S. Government, services to; Wilks award; Wilks, S. S; *Annals of Mathematical Statistics;* bibliography; *16114.*
Societal risk; nuclear materials safeguards; safeguards evaluation; safeguards system design; *16514.*
Society and science; technology and civilization; preventive technology; scientific ills; *16300.*

Soil; stainless steel; stress; stress-corrosion; underground; corrosion; galvanic; hydrogen embrittlement; *16354.*
Soil; tests; torsional excitation; damping; damping coefficients; shear modulus; *SP444,* pp. III-72—III-83 (Apr. 1976).
Soil corrosion; stainless steel; underground corrosion; copper; corrosion; galvanic corrosion; *16355.*
Soil corrosion, telephone cable shields; underground corrosion; metal and plastic composites; metal composites, metals; *16351.*
Soil density; stability; earthfill dams; earthquakes; ground shaking; liquefaction; *SP444,* pp. III-24—III-37 (Apr. 1976).
Soil environment; stainless steels; stress-corrosion behavior; coatings; corrosion behavior; field tests; galvanic couples; *NBSIR 76-1081.*
Soil pollution; solar spectrum; water pollution; adsorption; nonbiological transformation; nonbiological transport; pollutant photochemistry; pollutants; *NBSIR 76-1130.*
Soils; absolute; Apollo; composition; isotopic; lithium; potassium; relative; rocks; rubidium; *15869.*
Soils; structural response; volcanoes; wind; bridges; buildings; codes; disaster; dynamic analysis; earthquakes; modeling; *SP444.*
Soils; telephone cables; underground; alloys; corrosion; metallurgically-bonded; metals; plastic-bonded; *16352.*
Soil-structure interaction; earthquake; field data; ground response; seismic waves; seismometer; *SP444,* pp. III-13—III-23 (Apr. 1976).
Soil-structure interaction; structural engineering; design; earthquakes; highway bridges; retrofitting; *SP444,* pp. V-1—V-24 (Apr. 1976).
Solar; State; architecture; buildings; design; energy; legislation; *NBSIR 76-1082.*
Solar buildings; solar collectors; solar domestic hot water systems; solar heating; standards; thermal storage; *NBSIR 76-1059.*
Solar chromosphere; solar photosphere; solar ultraviolet spectrum; radiative transfer; *16257.*
Solar chromosphere; spectral line formation; helium; radiative transfer; *16609.*
Solar collector; solar energy; solar radiation; standard; standard test; thermal performance; thermal storage; *TN899.*
Solar collector; solar heating and cooling; thermal storage; energy conservation; GSA/Manchester building; *NBSIR 76-1056.*
Solar collectors; solar domestic hot water systems; solar heating; standards; thermal storage; solar buildings; *NBSIR 76-1059.*
Solar corona; vacuum ultraviolet emission spectra; vacuum ultraviolet lasers; electron-promotion model; ion-atom collisions; *16621.*
Solar domestic hot water systems; solar heating; standards; thermal storage; solar buildings; solar collectors; *NBSIR 76-1059.*
Solar energy; energy levels; photocatalytic electrodes; photoelectrolytic cells; photogalvanic cells; quantum efficiency; *SP455,* pp. 221-227 (Nov. 1976).
Solar energy; solar radiation; standard; standard test; thermal performance; thermal storage; solar collector; *TN899.*
Solar energy; SRM's; computer systems; environmental; fire; glass door; lead nitrate; mercury thermometers; metric; nuclear power; police radars; *DIM/NBS* **60,** No. 2, 1-25 (1976).
Solar energy; standards; buildings; *NBSIR 76-1143.*
Solar energy; standards; buildings; cooling; heating; hot water; performance criteria; *NBSIR 76-1187.*
Solar energy conversion; effective irradiance; radiometry; *15711.*
Solar energy systems evaluation; thermal performance; data requirements; measurement uncertainty; *NBSIR 76-1137.*
Solar heating; standards; thermal storage; solar buildings; solar collectors; solar domestic hot water systems; *NBSIR 76-1059.*
Solar heating; surface temperature; built-up roofing; insulation; performance; radiative cooling; roofing; *NBSIR 76-987.*
Solar heating and cooling; thermal storage; energy conservation; GSA/Manchester building; solar collector; *NBSIR 76-1056.*
Solar monitoring; source standards; blackbodies; lamp standards; radiometry; remote sensing; *16619.*
Solar photosphere; solar ultraviolet spectrum; radiative transfer; solar chromosphere; *16257.*
Solar radiation; standard; standard test; thermal performance; thermal storage; solar collector; solar energy; *TN899.*
Solar spectrum; water pollution; adsorption; nonbiological transformation; nonbiological transport; pollutant photochemistry; pollutants; soil pollution; *NBSIR 76-1130.*
Solar ultraviolet spectrum; radiative transfer; solar chromosphere; solar photosphere; *16257.*
Solder plate; tin-nickel alloy; tin plate; underplatings for gold;

wear of gold; contact lubrication; corrosion inhibitors; electrical contacts; gold plate; palladium; polymer in gold; porosity in gold; *SP452*, pp. 64-71 (Sept. 1976).
Solid dielectric track recorders; ^{239}Pu track; alpha particle tracks; fission radiography; *SP422*, pp. 1132-1142 (Aug. 1976).
Solid electrolyte; charge transfer processes; conduction mechanisms; interfacial phenomena; *SP455*, pp. 323-340 (Nov. 1976).
Solid electrolyte; electrode polarization; impedance measurements; interfaces; ionic conductivity; overpotential; *15819*.
Solid electrolyte; water; beta alumina; blocking electrode; interface; *SP455*, pp. 341-349 (Nov. 1976).
Solid electrolytes; cerium dioxide; degradation; electrocatalysis; fuel cells; refractory hard metal; *NBSIR 76-1091*.
Solid electrolytes; surfaces; catalysis; characterization; chemisorption; electrocatalysis; electrochemistry; electrode processes; nonmetals; photoelectrolysis; *SP455*.
Solid ethane; solid phase transition; ethane; melting line; melting pressures; *15805*.
Solid film lubricants; sputtered coatings; wear; barrier film; chemical coatings; failure prevention; mechanical failure; metal coatings; plated coatings; polymer coatings; *SP452*.
Solid fuels; surface tension; combustion models; flame spread; fluid flow; laser doppler velocimetry; liquid fuels; *NBS-GCR-76-79*.
Solid lubricants; compatibility; electropolated soft metal film coatings; metallurgical; metals; soft metals; *SP452*, pp. 72-83 (Sept. 1976).
Solid lubricants; titanium; wear; curing agent; fretting; silicone resin; *SP452*, pp. 124-131 (Sept. 1976).
Solid lubricants; wear; fluoride films; gears; molybdenum disulfide; *SP452*, pp. 132-148 (Sept. 1976).
Solid lubrication; abrasion; corrosion protection; friction; marine environment; powder coating; salt water; *SP452*, pp. 25-30 (Sept. 1976).
Solid phase transition; ethane; melting line; melting pressures; solid ethane; *15805*.
Solid standards; antibodies; antigens; biological polymers; immunochemical analysis; light scattering; polymers; proteins; *J. Res.* **80A** No. 4, 605-608 (1976).
Solid state noise source; stability; silicon avalanche diode; *16500*.
Solidification; stability; alloy; boundary layer; fluid flow; interface; *15766*.
Solidification; stability; grain boundary; morphology; *15844*.
Solidification; stability; surface tension; alloys; anisotropy; interface kinetics; *16213*.
Solid-state devices; x-band measurements; diodes; gamma rays; hardness assurance; microwave mixer diodes; mixers; neutrons; radiation hardness; receivers; Schottky-barrier diodes; semiconductors; *SP400-7*.
Solid-state overcurrent protection circuit; transformer; transformer overcurrent protection; high voltage transformer protection; overcurrent; overcurrent protection; *16381*.
Solubility; dimethylmercury; partition coefficient; sea water; *15944*.
Solubility; solubility product; synovial fluid; calcium diphosphate; calcium pyrophosphate; chondrocalcinosis; pseudogout; *16230*.
Solubility; surface; amorphous calcium phosphate; bone mineral; fluorapatite; hydroxyapatite; morphology; nonstoichiometry; octacalcium phosphate; *16307*.
Solubility product; synovial fluid; calcium diphosphate; calcium pyrophosphate; chondrocalcinosis; pseudogout; solubility; *16230*.
Solutal-capillary; thermal capillary convection; vacuum vaporization; Al_2O_3; complex equilibria; convective diffusion; evaporative rate; purification (evaporative); *15968*.
Solution; calcium hydroxide; crystal growth; crystals, electrochemical; electrolysis; *16302*.
Solvated electrons; conduction band; drift mobility; energy levels; excess electrons; hydrocarbons; ion mobility; liquids; mobility; quasifree electrons; *NSRDS-NBS58*.
Solvatochromic relationship; ultraviolet and visible spectroscopy; aromatic amine; benzene derivative; charge-transfer complex; dental materials; electron affinity; electron spin resonance spectroscopy; *J. Res.* **80A** No. 2, 173-187 (1976).
Solvent extraction; environmental matrices; extraction yields; mercury; neutron activation analysis; organomercury; *SP422*, pp. 1233-1240 (Aug. 1976).
Sonic boom; vehicular collision; bombs; building codes; design criteria; explosions; gas; hazardous materials; loads; progressive collapse; *BSS89*.
Sonicated solution; spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; shishkebab; *16274*.
Sorber; work atmosphere; air analysis; air sampling; gas analysis; industrial hygiene; phosphine; *NBSIR 75-977*.
Sound; acoustic properties of liquids; acoustics; Knester liquids; normal liquids; *16170*.
Sound; standards organization; acoustics; noise; rating scheme; *SP386, 1976 Edition*.
Sound absorption; argon; bulk viscosity; density expansion; methane; modified Enskog theory; molecular correlations; nitrogen; *16483*.
Sound fields; acoustical energy density; acoustics; diffuse sound fields; reflection and interference of sound; room acoustics theory; *16318*.
Sound level meters; statistical control processes; temperature; acoustic calibrators; A-weighting; barometric pressure; crest factor; ground cover; humidity; instrumentation; microphones; *TN931*.
Sound measurement; sound power; sound power levels; measurement technology; reverberation rooms; *NBS-GCR-76-59*.
Sound power; acoustic modelling; acoustics; impact noise; noise; reverberation rooms; room acoustics; *16433*.
Sound power; sound power levels; measurement technology; reverberation rooms; sound measurement; *NBS-GCR-76-59*.
Sound power levels; measurement technology; reverberation rooms; sound measurement; sound power; *NBS-GCR-76-59*.
Sound reduction index; sound transmission loss; transmission loss; airborne sound transmission; architectural acoustics; building acoustics; *15708*.
Sound sensing; standard; alarm; audio alarm; burglar alarm; intrusion alarm; intrusion detector; *16367*.
Sound studies; engineering; environmental; interference abatement; laboratory environments; radiation; *16009*.
Sound transmission loss; transmission loss; airborne sound transmission; architectural acoustics; building acoustics; sound reduction index; *15708*.
Sound velocity; Young modulus; bulk modulus; compressibility; Debye temperature; elastic constants; plutonium; plutonium alloy; Poisson ratio; shear modulus; *16635*.
Sound velocity; Young's modulus; bulk modulus; compressibility; copper; copper alloys; elastic constants; Poisson ratio; pulse-echo method; resonance method; shear modulus; *16505*.
Source code instrumenting; static analysis; transforms; execution; execution monitoring; FORTRAN analysis; *15918*.
Source distributions; calibration; environmental gamma-rays; field testing; instruments; *SP456*, pp. 233-248 (Nov. 1976).
Source standards; blackbodies; lamp standards; radiometry; remote sensing; solar monitoring; *16619*.

Sources; standards; survey; ultraviolet; detectors; NBS; radiometry; *SP456*, pp. 107-110 (Nov. 1976).
Sources of data; data centers; data tabulations; evaluated data; material properties; referral centers; *16007*.
South Asia trade; testing; certification; developing countries; exports; industrializing countries; labeling; seminar; *SP438*.
Soviet Union; submillimeter waves; high resolution molecular spectroscopy; lasers; meeting report; Novosibirsk; pressure-broadened line shapes; *16010*.
SO_2; trimethylene sulfone; 3-methyl sulfolane; pyrolysis; *15952*.
Space charge; Aroclor; chlorinated biphenyl; chlorinated naphthalene; electric field measurement; electro-optic; high voltage measurement; Kerr coefficients; Kerr effect; *16384*.
Space heaters; burns; fabric fires; FFACTS; garments; ignition sources; *NBSIR 76-1014*.
Space management software; university systems; directory; equipment management software; fiscal administration software; grant/contract software; personnel management software; proposal/award software; research administration; software exchange; software summary; *TN916*.
Space processing; convection; crystal growth; crystal perfection; microgravity; purification; *NBSIR 76-980*.
Space shuttle; transducer; bias pressure; calibration; dynamic calibration; dynamic pressure; high pressure; liquid medium; pogo pressure; pressure source; pressure transducer; sinusoidal; *TN927*.
Spark detection; thin films immersed in liquids; high power ruby laser damage; multilayer reflectors; single layer coatings; *SP462*, pp. 315-330 (Dec. 1976).
Spark source mass spectrometry; atomic absorption spectrometry; isotope dilution analysis; mercury in water, trace analysis; mercury in water, stabilization of; neutron activation analysis; *SP422*, pp. 267-273 (Aug. 1976).
Spark source mass spectrometry; steel; trace elements; isotope dilution; NBS Standard Reference Material; preconcentration; *15889*.
Sparse matrix; tree; block Gaussian elimination; graph; inversion; partitioning; *J. Res.* **80B** No. 2, 245-257 (1976).
Spatial response; temporal development; laser power and energy measurements; *16561*.
Special foreign currency programs; building research; cooperative programs; information exchange; international building research; international organization memberships; *NBSIR 76-1162*.
Special functions; complete elliptic integral; cubic lattice; definite integral; *J. Res.* **80B** No. 2, 313-323 (1976).
Special functions; turning points; Whittaker functions; asymptotic analysis; Darboux's method; definite integrals; hypergeometric functions; incomplete gamma function; Legendre functions; ordinary differential equations; saddle points; *15818*.
Speciation; stability of water samples; zinc; Adriatic Sea; cadmium; copper; electrochemical analysis; heavy metals; lead; seawater analysis; *SP422*, pp. 917-928 (Aug. 1976).
Speciation; volatile metal compounds; detection; flameless atomic spectrophotometry; gas chromatography; graphite furnace; methylation of metals; microbial transformation; *16409*.
Species; trace element concentrations; neutron activation analysis; particulates; sampling; *15783*.
Specific heat; strain energy; supercooled liquid; thermal relaxation; glassy state; glass transition; heat capacity; polymer; *16309*.
Specific heat; thermodynamic properties; beryllium aluminate; chrysoberyl; drop calorimetry; enthalpy measurements; high temperature calorimetry; *J. Res.* **80A** No. 1, 65-73 (1976).
Specific heat; vapor; constant volume; ethane; heat capacity; liquid; saturated liquid; *J. Res.* **80A** Nos. 5 and 6, 739-759 (1976).
Specific heats; speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; *TN684*.
Specific resistance; abnormal loading; alternate path; annotated bibliography; bibliography; building code; building regulations; collapse; failures; progressive collapse; *BSS67*.
Specification; unitary heat pump; heating and cooling; military family housing; *NBSIR 76-1029*.
Specifications; guidelines; industrial robots; manipulator; performance evaluation; programmable robots; *SP459*.
Specifications; standards; engine pumper; fire vehicle; ladder truck; maintenance; replacement; *TN891*.
Specifications; standards; standards organization; test methods; plastics standardization; *16106*.
Specifications; standards; system engineering; building codes; computer model; decision theory; networks; *NBS-GCR-76-55*.
Specifications; standards; systems engineering; building codes; computer program; decision theory; networks; *NBS-GCR-76-56*.
Specifications; standards; systems engineering; building codes; computer program; decision theory; FORTRAN; logic design; networks; *NBS-GCR-76-57*.
Specifications; state governments; systems analysis; design criteria; fire hazards; fire losses; fire reporting; fire safety; information systems; National Fire Data System; *NBS-GCR-73-5*.
Specifications; structure; theory; wind; bridge; design; field data; gust response; model; *SP444*, pp. I-1—I-20 (Apr. 1976).
Specifications; unsolicited proposals; VA; certification programs; ETIP; incentives; innovation; life cycle costing; medical products and standards; procurement policies; product testing; *NBSIR 76-997*.
Specifications; value; Experimental Technology Incentives Program (ETIP); Federal Supply Service; life cycle costing; procurement policy; *NBS-GCR-ETIP 76-18*.
Specifications; value incentives; computer air conditioning units; Experimental Technology Incentives Program (ETIP); Federal Supply Service; life cycle costing; procurement policy; *NBS-GCR-ETIP 76-23*.
Specimen collection; specimen handling; accuracy, precision and specificity of analytical methods; biological and genetic variability; clinical laboratory data; *SP422*, pp. 109-122 (Aug. 1976).
Specimen decomposition; specimen evaporation; plasma spectrometry; preliminary analysis; *SP422*, pp. 621-625 (Aug. 1976).
Specimen evaporation; plasma spectrometry; preliminary analysis; specimen decomposition; *SP422*, pp. 621-625 (Aug. 1976).
Specimen handling; accuracy, precision and specificity of analytical methods; biological and genetic variability; clinical laboratory data; specimen collection; *SP422*, pp. 109-122 (Aug. 1976).
Specimen preparation; electron microscopy; *in situ* experiments; ionic bombardment; microscope stages; rock-forming minerals; *15895*.
Spectra; cesium; energy levels; *15798*.
Spectra; interstellar molecules; microwave spectra; radio astronomy; rotational transitions; silicon sulfide; *JPCRD* **5**, No. 4, 1147-1156 (1976).
Spectra; spectroscopy; Stark effect; carbonyl sulfide; dipole moments; infrared; lasers; *16181*.
Spectra; stellar; ultraviolet; absorption; B-stars; C IV; O-stars; Si IV; *16271*.
Spectra; temperature effects; absorption: extinction coefficients; N_2O_4; NO_2; *J. Res.* **80A** No. 2, 143-166 (1976).

Spectra; ultraviolet; wavelengths; yttrium; *15725*.

Spectra; ultraviolet; wavelengths; barium; cesium; lanthanum; *16035*.

Spectra; ultraviolet; wavelengths; iron; *16133*.

Spectra; ultraviolet; wavelengths; yttrium; zirconium; *16134*.

Spectra; ultraviolet; wavelength; zirconium; molybdenum; niobium; *16425*.

Spectral analysis; acoustic emission; dislocations; nondestructive evaluation; *16602*.

Spectral analysis; tissue structure; ultrasound; color-coded B-scan; Fourier transform; *SP453*, pp. 97-107 (Oct. 1976).

Spectral analysis; vibration; analysis; experimental; floor systems; human response; random process; *TN904*.

Spectral analysis; vibration; analysis; experimental; floor systems; human response; random process; *NBSIR 75-951*.

Spectral densities; electron scattering; moment theory; photoabsorption/ionization; *16359*.

Spectral density; spectrum analysis; fractional frequency fluctuations; frequency stability; phase fluctuations; power law noise processes; *TN679*.

Spectral density of phase; Global Positioning System; phase-locked loop; phase noise measurement system; *NBSIR 76-846*.

Spectral emittance; cryogenically cooled; *SP435*, pp. 149-156 (Apr. 1976).

Spectral intensity; broadband signal generator; impulse bandwidth; receiver bandwidth calibration; rf burst generator; *NBSIR 74-371*.

Spectral irradiance; calibration; light emitting diode; *16437*.

Spectral line broadening; *ab initio* potentials; atom-molecule interactions; curved classical trajectories; HCl, CO, CO_2 with He, Ar; rotation-vibration spectra; semiclassical *S*-matrix; *16528*.

Spectral line formation; helium; radiative transfer; solar chromosphere; *16609*.

Spectral line formation; stellar atmospheres; radiative transfer; relativistic effects; *16272*.

Spectral line profiles; diffusion; excitation exchange; radiative transfer; *15714*.

Spectral lines; Stark broadening; Stark shifts; Stark widths; nitrogen; plasma line broadening; *16406*.

Spectral measure; tensor products; convolution; Hilbert space; separation of variables; *J. Res.* **80B** No. 3, 347-351 (1976).

Spectral resolution; statistics; analytical chemistry; curve fitting; data reduction; feature selection; multivariate analysis; optimization techniques; pattern recognition; signal processing; *15964*.

Spectral response; detector; infrared; pyroelectric; *16472*.

Spectral series; systematic trends; continuum; discrete spectrum; *f*-sum rule; *f*-values; lithium sequence; oscillator strength distribution; oscillator strengths; relativistic effects; *15817*.

Spectral series; systematic trends; *f*-values; isoelectronic sequence; lithium sequence; oscillator strengths; relativistic effects; *JPCRD* **5**, No. 3, 537-570 (1976).

Spectral transmission; spectrophotometer standards; stray light; wavelength scale; errors in spectrophotometry; photometric scale; slit width; *J. Res.* **80A** No. 4, 625-630 (1976).

Spectral-line formation; stellar atmospheres; early-type stars; electron scattering; *16613*.

Spectrofluorimetry; total internal reflection; emission anisotropy; fluorescence; photodetectors; polarization; quantum counters; rhodamine B chloride; *16430*.

Spectrofluorimetry; viewing angle; emission anisotropy; fluorescence; fluorescence decay; fluorescence quantum yields; polarization; *15754*.

Spectrofluorimetry; water; carcinogenic compounds; partition coefficient; photon counting; polycyclic aromatics; *15839*.

Spectrofluorimetry; 1,6-diphenyl-1,3,5-hexatriene; fluorescence; linear dichroism; liquid crystals; polarization; *J. Res.* **80A** No. 1, 15-33 (1976).

Spectrograph; chip detectors; ferrograph; lube oil analysis; magnetic drain plugs; oil filters; oil monitors; particle detectors; *NBS-GCR-74-23*.

Spectrometry; spectroradiometry; analytical chemistry; nomenclature; photochemistry; photometry; physical optics; radiometry; *16331*.

Spectrophotometer standards; stray light; wavelength scale; errors in spectrophotometry; photometric scale; slit width; spectral transmission; *J. Res.* **80A** No. 4, 625-630 (1976).

Spectrophotometric properties of pure NADH; ADP; ADP-ribose; chromatography; impurities in NADH preparations; NADH stability; preparative chromatography on DEAE-cellulose; *16316*.

Spectrophotometry; atomic absorption; background correction; Delves Cup; lead; *SP422*, pp. 1035-1043 (Aug. 1976).

Spectrophotometry; bidirectional reflectance factor; diffuse reflectance; diffuse transmittance; reflectance; *TN594-11*.

Spectrophotometry; colour dosimeters; dosimetry; dyes; glass; plastics; radiation; radiochromic dyes; *15960*.

Spectrophotometry; sphere coatings; averaging sphere; efficiency; radiometry; *15896*.

Spectrophotometry; statistical methods; zinc; atomic absorption; cadmium; copper; lead; manganese; sensitivity; *SP422*, pp. 1023-1033 (Aug. 1976).

Spectrophotometry; translucency; transmittance; Vitrolite glass; blurring effect; edge loss; error analysis; flux loss; plastics; reflectance; scattering; *TN594-12*.

Spectrophotometry; ultraviolet; visible; averaging sphere; diffusing effectiveness; efficiency; fluorescent wavelength converter; photometry; *16333*.

Spectrophotometry; x-ray fluorescence spectroscopy; atomic absorption spectrophotometry; emission spectroscopy; nickel; nickel-base alloys; polarography; *SP422*, pp. 1005-1016 (Aug. 1976).

Spectroradiometry; analytical chemistry; nomenclature; photochemistry; photometry; physical optics; radiometry; spectrometry; *16331*.

Spectroradiometry; optical radiation measurement; photometry; radiometry; *TN910-1*.

Spectroscopic; absorption; antireflection coatings; attenuated total reflection; laser windows; *SP462*, pp. 246-252 (Dec. 1976).

Spectroscopic constants; spin-rotation constants; infrared spectrum; nitrogen dioxide, ν_3 band; nitrogen dioxide, $\nu_3+\nu_2-\nu_2$ band; rotational constants; *15753*.

Spectroscopy; atoms; classification; energy levels; ions; rare earths; *16022*.

Spectroscopy; bibliography; data; infrared; inorganic; minerals; ores; organic; polymers; *SP428. Parts 1, 2, and 3*.

Spectroscopy; electron beam excitation; heat pipe oven; lasers; metal vapors; noble gas; *16234*.

Spectroscopy; ellipsometry; iron; kinetics; optical constants; passive; pitting; *16216*.

Spectroscopy; Stark effect; carbonyl sulfide; dipole moments; infrared; lasers; spectra; *16181*.

Spectroscopy; trace detection; tunable lasers; discharge; discharge tubes; hollow cathode; *16604*.

Spectroscopy; transition probabilities; wave functions; ions; oscillator strengths; quantum mechanics; *16209*.

Spectroscopy; vacuum ultraviolet; 4*d* photoabsorption; atomic structure; barium; N_{IV} edges; *15845*.

Spectroscopy; vibrational fundamentals; hydrogen cyanide; infrared; molecular spectroscopy; *15925*.

Spectroscopy; x-ray diffraction; diamond cell; electrical re-

sistance; high pressure; nuclear decay; pressure calibrations; *16375*.

Spectroscopy facilities; accelerators; acoustic facilities; calorimeters; electrical measurements facilities; high pressure facilities; high temperature facilities; *SP413, 1976 Edition*.

Spectrum; eigenvector; normal matrix; numerical range; orthogonal; *16348*.

Spectrum; graph isomorphism; labels; modified adjacency matrix; *J. Res.* **80B** No. 4, 447-483 (1976).

Spectrum; spectrum amplitude; calibration; Fourier transform; impulse generator; pulse measurement; *16463*.

Spectrum; terbium; energy levels; ionization energy; *15924*.

Spectrum; uranium; actinide; atomic energy levels; isoelectronic sequence; protactinium; rare earth; sliding spark discharge lamp; *15990*.

Spectrum; wavelengths; ytterbium; energy levels; *15920*.

Spectrum amplitude; calibration; Fourier transform; impulse generator; pulse measurement; spectrum; *16463*.

Spectrum amplitude; time domain; transient; automated measurement; pulse; rise time; sampling oscilloscope; *16477*.

Spectrum analysis; fractional frequency fluctuations; frequency stability; phase fluctuations; power law noise processes; spectral density; *TN679*.

Spectrum analyzer; antenna; microwave; minicomputer; radiofrequency; RF exposure; *SP456*, pp. 203-213 (Nov. 1976).

Spectrum, Hf I; Zeeman effect, Hf I; analysis, Hf I spectrum; hafnium, analysis of first spectrum; *Monogr. 153*.

Spectrum O I; wavelengths, O I; atomic energy levels, O I; atomic spectra, O I; multiplet table, O I; oxygen, first spectrum; *NSRDS-NBS3, Section 7*.

Spectrum of a square complex matrix; *D*-stable matrix; field of values; Gersgorin's theorem; nonnegative matrix; Perron-Frobenius eigenvalue; *15770*.

Specular reflection; differential reflection; epitaxial semiconductor devices; Kramers-Kronig relation; multiple reflection; sapphire surfaces; silicon films; *NBS-GCR-76-61*.

Speech recognition; traffic noise; alarm signals; hearing; loudness functions; masking; sirens; *16573*.

Speech spectrogram; ultrasound; analog-digital converter; A-scan; digitization; pattern recognition; *SP453*, pp. 51-59 (Oct. 1976).

Speed of light; c; laser; laser frequency measurement; length standard saturated absorption stabilization; *15898*.

Speed of light; frequency multiplication; fundamental constants; laser stability; metrology; second-order Doppler shift; *15980*.

Speeds of sound; vapor pressure; densities; enthalpies; entropies; equation of state; ethane; internal energies; isobars; isochores; isotherms; Joule-Thomson inversion; latent heats of vaporization; melting line; orthobaric densities; specific heats; *TN684*.

Sphere; vertical cylinder; cryogenics; heat transfer; hemisphere; horizontal cylinder; liquid deuterium, liquid hydrogen, liquid nitrogen; natural convection; *16207*.

Sphere coatings; averaging sphere; efficiency; radiometry; spectrophotometry; *15896*.

Spherical tanks; structural design; dynamic analysis; earthquake; seismic design; seismic response; *SP444*, pp. V-50—V-62 (Apr. 1976).

Spherulitic polypropylene; crazing; cryogenic temperatures; crystalline polymers; environmental effects on crazing; fractional free volume; glass transition temperature; smectic polypropylene; *15772*.

"spillover" effect; transition metal carbides; transition metal oxides; tungsten bronze; tungsten carbide; electrocatalysis; heteropolyanions; phosphotungstate complex ions; *SP455*, pp 167-174 (Nov. 1976).

Spin axis gas bearings; sputtered coatings; surface characterization; wear life; antimony trioxide; friction; molybdenum disulfide; *SP452*, pp. 177-186 (Sept. 1976).

Spin exchange; adiabatic collisions; charge transfer; nonresonant; potential curves; resonant; *15875*.

Spin flip laser; tunable IR laser; air quality measurements; improved resolution spectroscopy; infrared frequency measurements; infrared spectrometer; *TN670*.

Spin flip Raman laser; frequency measurements on tunable lasers; IFS with a tunable laser; infrared frequency synthesis; SFRL frequency measurement; *TN680*.

Spin lattice relaxation; Knight shift; magnetism; nickel; pulsed NMR; *16357*.

Spin system; triangular lattice; conditional probability; Ising spin; Monte Carlo method; *15865*.

Spinel; electrocatalysis; nickel-cobalt oxide; nickel oxide; oxide electrodes; oxygen electrode reaction; ruthenium dioxide/titanium dioxide; *SP455*, pp. 289-296 (Nov. 1976).

Spinel structure; durability; electrical conductivity; high temperature; MHD-power generation; *15943*.

Spinels; teflon bonded electrodes; nickel cobalt oxides; oxygen evolution, Pourbaix diagram; semiconducting oxides; *SP455*, pp. 281-288 (Nov. 1976).

Spin-flop; antiferromagnetic transition; antiferromagnetism; dipolar interactions; $ErPO_4$; magnetic phase diagram; Néel temperature; *16436*.

Spin-lattice relaxation; spin-spin relaxation; cancer; mice; NMR; *J. Res.* **80A** No. 3, 439-450 (1976).

Spinning; stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; *16274*.

Spinodal decomposition; superlattice reflections; transmission electron microscopy; δ'; Ll_2; metastable phase; ordering reaction; satellites; *15840*.

Spin-orbit coupling; transition probability; comet; electric-dipole transition; excited states; NH; *16502*.

Spin-orbit mixing; molecular oxygen; predissociation; Schumann-Runge bands; *16596*.

Spin-polarization; electron; experiment; LEED; multi-photon; photoionization; review; scattering; *15900*.

Spin-rotation constants; infrared spectrum; nitrogen dioxide, ν_3 band; nitrogen dioxide, $\nu_3+\nu_2-\nu_2$ band; rotational constants; spectroscopic constants; *15753*.

Spin-rotation splittings; band center; intensities; laser magnetic resonance; nitrogen dioxide; rotational assignment; *15788*.

Spin-spin relaxation; cancer; mice; NMR; spin-lattice relaxation; *J. Res.* **80A** No. 3, 439-450 (1976).

Spleen; splenomegaly; A-scan analysis; digital; grey-scale ultrasound; *SP453*, pp. 71-78 (Oct. 1976).

Splenomegaly; A-scan analysis; digital; grey-scale ultrasound; spleen; *SP453*, pp. 71-78 (Oct. 1976).

Splices; terminals; aluminum wire; *NBSIR 76-1039*.

Splitting tensile strength; compressive strength; concrete; maturity; mechanical properties; nondestructive evaluation; pull-out strength; *TN932*.

Sponsorship; structural engineering; earthquake engineering; grant; RANN; *SP444*, pp. V-66—V-79 (Apr. 1976).

Sponsorship; wind engineering; research programs; *SP444*, pp. V-80—V-82 (Apr. 1976).

Spontaneous Raman scattering in free atoms; atomic beams; multiphoton ionization; sodium; *16572*.

Spot size dependence; time dependence; frequency dependence; laser damage; *SP462*, pp. 338-345 (Dec. 1976).

Spotwelded joints; weldbonded joints; bonded joints; computer simulation; cyclic loading; debond analysis; finite element analysis; joints; nonlinear analysis; single-lap-joint bending; *16147*.

Spotwelded joints; weldbonded joints; adhesive-bonded joints; bonded joints; double-lap joint analysis; finite element analysis; joining; joints; single-lap joint analysis; single-lap-joint bending; *NBSIR 75-957.*

Spray distribution; water distribution; water spray; automatic sprinkler; corridor sprinkler systems; discharge patterns; *NBSIR 75-920.*

Spray nozzles; spray patterns; test methods; water distribution; water spray; automatic sprinklers; bibliography; droplet size; fire suppression; *NBS-GCR-76-72.*

Spray patterns; test methods; water distribution; water spray; automatic sprinklers; bibliography; droplet size; fire suppression; spray nozzles; *NBS-GCR-76-72.*

Spread-F; topside; absorption; high latitude; ionosphere; ionospheric scattering; irregularity; satellite; scintillation; *16641.*

Spreading prevention; barrier films; bearings; fluorinated polymers; lubricant migration; lubricants; *SP452*, pp. 170-176 (Sept. 1976).

Spreading resistance; test patterns; thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; *SP400-19.*

Spreading resistance; test patterns; thermally stimulated current; thermal resistance; ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; acoustic emission; Auger electron spectroscopy; beam-lead bonds; bias-temperature stress test; *SP400-25.*

Sprinkler operation; automatic sprinklers; bedroom fires; droplet size; heat absorption; pool fires; residential sprinkler protection; *NBS-GCR-76-58.*

Sprinkler system; construction; corridor test; fire endurance furnace; fire growth; heat release; smoke abatement; *16150.*

Sputter deposition; aluminum; copper; flash desorption spectroscopy; gold; reflectance; silver; *SP462*, pp. 195-202 (Dec. 1976).

Sputtered; absorption damage levels; coatings; CVD; hot pressed; *SP462*, pp. 253-263 (Dec. 1976).

Sputtered coatings; surface characterization; wear life; antimony trioxide; friction; molybdenum disulfide; spin axis gas bearings; *SP452*, pp. 177-186 (Sept. 1976).

Sputtered coatings; wear; barrier film; chemical coatings; failure prevention; mechanical failure; metal coatings; plated coatings; polymer coatings; solid film lubricants; *SP452.*

Sputtering; visible; charge transfer; lasers; *16497.*

Square array; bulk resistivity; collector resistivity; four-probe; planar test structure; resistivity; semiconductor characterization; semiconductor device; silicon; *16424.*

Square-law; detectors; diodes; linearity; *16490.*

$SrCl_2$; double-doped KCl laser windows; grain boundary stability; hot forging; KCl; mechanical strength; microstructure; optical absorption; RbCl; *SP462*, pp. 82-86 (Dec. 1976).

SRM; surgical implants; testing; thermal transients; architectural heritage; fire; guardrail; high-capacity; mathematics; mercury; performance standard; pressure transducers; *DIM/NBS* **60,** No. 8, 1-24 (1976).

SRM's; biomedical; clinical; measurements system; radioisotopes; radiopharmaceuticals; reference sources; standards; *16151.*

SRM's; computer systems; environmental; fire; glass door; lead nitrate; mercury thermometers; metric; nuclear power; police radars; solar energy; *DIM/NBS* **60,** No. 2, 1-25 (1976).

Stability; alloy; boundary layer; fluid flow; interface; solidification; *15766.*

Stability; averaging; differential equations; domains of stability; integral manifold; Liapunov functions; *15940.*

Stability; earthfill dams; earthquakes; ground shaking; liquefaction; soil density; *SP444*, pp. III-24—III-37 (Apr. 1976).

Stability; grain boundary; morphology; solidification; *15844.*

Stability; silicon avalanche diode; solid state noise source; *16500.*

Stability; standard reference materials; accelerated testing; clinical; hazards; legal problem packaging; shipping; *16110.*

Stability; storage containers; adsorption losses; biological systems; chromium; *SP422*, pp. 611-619 (Aug. 1976).

Stability; surface tension; alloys; anisotropy; interface kinetics; solidification; *16213.*

Stability; survey of clocks; accuracy; atomic clocks; clocks; crystal oscillator; frequency standards; *15719.*

Stability of water samples; zinc; Adriatic Sea; cadmium; copper; electrochemical analysis; heavy metals; lead; seawater analysis; speciation; *SP422*, pp. 917-928 (Aug. 1976).

Stability, surface layers; surface reactions; anodic decomposition; cathodic decomposition; electrochemistry; inorganic bronze electrodes; metal electrodes; semiconductor electrodes; *SP455*, pp. 267-280 (Nov. 1976).

Stable distributions; Abelian summation; ordered spans; random walks; *16011.*

Stable matrix; cone; Lyapunov's theorem; *15763.*

Stack emissions; ambient air; automotive emissions; laser magnetic resonance technique; *16109.*

Stacking fault; twin; wedge; crystal; disclination; dislocation; pseudopentagonal; *15767.*

Stacking fault energy; x-ray diffraction; invar; iron alloys; nickel alloys; *16191.*

Stainless steel; stress; stress-corrosion; underground; corrosion; galvanic; hydrogen embrittlement; soil; *16354.*

Stainless steel; stress relaxation; thermodynamics; viscoelasticity; creep; dissipation; elevated temperature; energy; hold-time; hysteresis; low-cycle fatigue; plasticity; *16004.*

Stainless steel; underground corrosion; copper; corrosion; galvanic corrosion; soil corrosion; *16355.*

Stainless steel; x-ray analysis; electron microscopy; Fe-Cr alloys; passive films; pitting corrosion; *16024.*

Stainless steels; stress-corrosion behavior; coatings; corrosion behavior; field tests; galvanic couples; soil environment; *NBSIR 76-1081.*

Stainless steels; superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; *NBSIR 76-848.*

Stair safety research; architectural psychology; architectural research; building research; building safety; perception; *NBSIR 76-1046.*

Standard; alarm; audio alarm; burglar alarm; intrusion alarm; intrusion detector; sound sensing; *16367.*

Standard; detectors; germanium; ion chamber; liquid scintillation; sodium iodide; *SP456*, pp. 77-82 (Nov. 1976).

Standard; dimensional; gage; instrument; laser; length; machine; measurements; *NBSIR 75-926.*

Standard; γ radiation; γ response; calibration; exposure rate; geometry; instrument; ion chamber; roentgen; *SP456*, pp. 59-63 (Nov. 1976).

Standard; standard test; thermal performance; thermal storage; solar collector; solar energy; solar radiation; *TN899.*

Standard; stress-corrosion; 3.5 percent NaCl; 7XXX aluminum alloys; Aluminum Association; ASTM; industrial atmosphere; round robin tests; seacoast atmosphere; *16656.*

Standard; trace elements; accuracy; Atomic Absorption Spectrometry; Caribbean; precision; Puerto Rico; replicates; sediments; *SP422*, pp. 1089-1102 (Aug. 1976).

Standard; weighing; density; etching; grinding; sawing; silicon; *NBSIR 76-1019.*

Standard; x ray; alpha particle; beta particle; gamma-ray; radioactivity; sediment; *15933.*

229-317 O - 77 - 43

Standard; x-ray diffraction; crystal structure; integrated intensities; lattice constants; peak intensities; powder patterns; reference intensities; *Monogr. 25, Section 13.*
Standard materials; trace element analysis; errors of analysis; homogenization; neutron activation analysis; sample preparation; *SP422*, pp. 1293-1304 (Aug. 1976).
Standard biotite; biotite stoichiometry; geochemical standards; geochronological standards; K-Ar dating; sampling a biotite; sampling constants; *SP422*, pp. 401-419 (Aug. 1976).
Standard cell; voltage reference; cryogenic; Josephson junction; *16377.*
Standard cell comparator; automated; calculator; calibration; crossbar switch; low-level voltage measurements; MIDAS; programmable desk calculator; *15906.*
Standard cells; U.S. legal volt; volt; voltage measurement; electrical standards; *16268.*
Standard deviation; subdivision; variance-covariance matrix; angle standard; autocollimator; calibration; complete closure design; indexing table; least squares estimation; partial closure design; *NBSIR 75-750.*
Standard deviation; uncertainty; calibration; diameter; gravitational bending; interferometry; least squares line; linear model; optical flat; profile; *NBSIR 75-975.*
Standard deviation; uncertainty; autocollimator; calibration; constant deviation prism; geometrical model; optical square; pentaprism; reflection; refraction; *NBSIR 76-993.*
Standard enthalpy of formation; vibrational fundamentals; chlorofluorpmethanes; ideal gas thermodynamic functions; principal moments of inertia; *JPCRD* **5,** No. 3, 571-580 (1976).
Standard frequencies; television color subcarrier; time calibration; time signals; broadcast of standard frequencies; frequency calibration; high frequency; low frequency; *SP432.*
Standard materials; trace elements; accuracy; biological materials; data interpretation; *SP422*, pp. 65-77 (Aug. 1976).
Standard reference data; thermochemical tables; enthalpy; entropy; Gibbs energy; heat capacity; potassium compounds; rubidium compounds; sodium compounds; *NBSIR 76-1034.*
Standard reference data system; computer age; data system; materials research; measurement challenge; science and technology; sea of data; *DIM/NBS* **60/Suppl.,** Anniversary Issue, 1-32 (1976).
Standard reference material; steel; alpha particles; boron; ion microprobe mass analyzer; nuclear track technique; *15789.*
Standard reference material; systematic errors; accuracy; accurate measurement system; precision; reference methods; *SP422*, pp. 41-63 (Aug. 1976).
Standard reference material; statistics; syndrome; accuracy; analytical chemistry; *SP422*, pp. 123-126 (Aug. 1976).
Standard reference materials; transmittance characteristics; ultraviolet-visible filters; evaporated metal-on-quartz; filters, transmittance; neutral filters; *J. Res.* **80A** No. 4, 637-641 (1976).
Standard reference materials; thermophysical properties symposium; waste heat; computer; consumer; drugs; electrical pulses; environmental standards; friction measurement; lead poisoning; LNG data; optical; *DIM/NBS* **60,** No. 9, 1-24 (1976).
Standard reference materials; trace elements; analytical methods; coal; environmental samples; environmental standards; fly ash; instrumental neutron activation analysis (INAA); instrumental photon activation analysis (IPAA); *SP422*, pp. 211-223 (Aug. 1976).
Standard Reference Materials; atomic absorption spectrometry; nonflame graphite furnace; sensitivity *vs.* precision and accuracy; *SP422*, pp. 1045-1051 (Aug. 1976).
Standard reference materials; coal; energy; fuel; graphite; hydrocarbons; metering; methane; natural gas; petroleum; physical properties; *SP434.*
Standard reference materials; x-ray fluorescence; corrections; matrix effects; *15983.*
Standard Reference Materials; definitive method; matrix reference materials; pure reference materials; reference methods; routine methods; secondary reference materials; *16104.*
Standard reference materials; accelerated testing; clinical; hazards; legal problem packaging; shipping; stability; *16110.*
Standard reference materials; air and water quality; energy; pollutants; *16157.*
Standard reference materials; argon; calibration; detector, radioactive argon; ionization chamber; sodium-22; *16325.*
Standard reference materials; fine particle standards; particle concentration; particle counting; particle size; particulates; *16337.*
Standard reference materials; thermal conductivity; austenitic stainless steel; electrical resistivity; high temperature; low temperature; *16494.*
Standard reference materials; Standard Reference Materials program; accuracy; measurement; measurement compatibility; National Bureau of Standards; reference materials; *16549.*
Standard Reference Materials program; accuracy; measurement; measurement compatibility; National Bureau of Standards; reference materials; standard reference materials; *16549.*
Standard reference sample; x-ray analysis; calibration; filters; orchard leaves; *16065.*
Standard test; thermal performance; thermal storage; solar collector; solar energy; solar radiation; standard; *TN899.*
Standard test methods; aging test; building elements and materials; degradation factors; durability; property measurement test; *NBSIR 75-955.*
Standardization; coincidence counting; gamma rays; ground state decay; radioactivity; selenium-75; *15846.*
Standardization; tentative standards; building codes; industrialization; less-developed country; SASO; Saudi Arabia; *NBSIR 75-976.*
Standardization; testing facilities; building technology; information handling; measurement services; Philippines; *NBSIR 76-1083.*
Standardization; testing facilities; Bolivia; measurements; quality control; *NBSIR 76-1099.*
Standardization; tissue characterization; ultrasound; blood; cross-section; diagnosis; scattering; *SP453*, pp. 29-47 (Oct. 1976).
Standardization; ^{129}I; beta; coincidence counting; gamma; radioactivity; *16259.*
Standards; air pollution; analyzing; gas analysis; gases; emission; monitors; *15982.*
Standards; air pollution; calibration; evaluation; inter-calibration; quality control; *15978.*
Standards; apparel; burn injury; ease of ignition; fabrics; fire; flammability tests; garments; heat transfer; *NBSIR 76-1072.*
Standards; automatic; broad frequency; equations; network analyzers; open circuit reflection coefficient; short circuit; *16510.*
Standards; automation; computer aided manufacturing systems; computer integrated manufacturing systems; interfaces; motivation for standardization; *16350.*
Standards; breathing apparatus; closed loop breathing apparatus; equipment design; fire fighters; fire fighting; fire fighting equipment; fire gases; open loop breathing apparatus; protective clothing; smoke inhalation; *NBS-GCR-73-10.*
Standards; building; codes; concrete; construction; falsework; formwork; loads; reshoring; safety; shoring; *BSS80.*

Standards; building codes; building regulations; building regulatory system; *NBSIR 76-1140.*
Standards; building codes; door assemblies; performance requirements; physical security; *16142.*
Standards; building research; criteria; energy; engineering; industry construction; measurement techniques; *SP439.*
Standards; buildings; cooling; heating; hot water; performance criteria; solar energy; *NBSIR 76-1187.*
Standards; buildings; solar energy; *NBSIR 76-1143.*
Standards; buildings (codes); excavation; foundations; geotechnical engineering; *16535.*
Standards; Bunsen ice calorimeter; calorimetric standards; calorimetry; heat standards; phase-change calorimeter; plutonium dioxide; plutonium isotopes; radionuclide calorimetry; radionuclide decay power; *16443.*
Standards; business forms; computers; data entry systems; information processing systems; information processing standards; OCR; OCR forms; optical character recognition; *FIPS PUB 40.*
Standards; calibrations; environment; measurements; medical; radiation; *SP456.*
Standards; calibrations; laser calorimeters; measurement assurance programs; non-ionizing EM radiation hazards; RF and microwave measurements; *SP456,* pp. 417-425 (Nov. 1976).
Standards; computer networks; data communications; networks; packet-switching; *16025.*
Standards; computer networks; data communications; data networks; networks; packet switching; protocol; *16576.*
Standards; computer techniques; construction; enforcement process; housing; hurricane Agnes; mobile home parks; mobile homes; performance data; regulatory process; *NBSIR 76-1058.*
Standards; dynamic force; economic; force; metrication; national measurement system; *NBSIR 75-929.*
Standards; energy; legal; regulatory; *SP403,* pp. 225-235 (June 1976).
Standards; engine pumper; fire vehicle; ladder truck; maintenance; replacement; specifications; *TN891.*
Standards; environment; gamma-ray measurements; Ge(Li) detectors; radioactivity; *SP456,* pp. 173-179 (Nov. 1976).
Standards; fuel; materials accountability; measurements; nuclear; safeguards; *16481.*
Standards; human factors ergonomics; product performance; product safety; *16089.*
Standards; ionizing radiation; measurement assurance; radiation users; *SP456,* pp. 403-416 (Nov. 1976).
Standards; SRM's; biomedical; clinical; measurements system; radioisotopes; radiopharmaceuticals; reference sources; *16151.*
Standards; standards organization; test methods; plastics standardization; specifications; *16106.*
Standards; state law; architectural glazing; codes; Consumer Product Safety Committee; Consumer Safety Glazing Committee; glazing; impact tests; safety glazing; *NBSIR 76-1109.*
Standards; state regulation; building codes; certification; compliance assurance; evaluation; inspection; manufactured building; model documents; NCSBCS; *BSS87.*
Standards; state-local relationship; state regulations; building codes; factory-built housing; industrialized building; inspection; manufactured building; model codes; model documents; NCSBCS; on-site construction; prefabricated construction; *NBS-GCR-74-27.*
Standards; steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; *SP403.*
Standards; steel; titanium; transducer calibration; ultrasonic reference blocks; acoustic emission; aluminum; fatigue cracks; flat bottomed holes; *16252.*
Standards; stiffness; structural stability; walls; brick; buckling; composite walls; compressive strength; concrete block; constitutive relations; flexural strength; masonry; masonry walls; mortar; slenderness ratio; *BSS73.*
Standards; structural design; earthquake; housing; performance specification; prefabricated dwelling; *SP444,* pp. IV-55—IV-69 (Apr. 1976).
Standards; sulfur dioxide; carbon monoxide; hydrocarbons; measurement; nitrogen dioxide; particulate matter; photochemical oxidants; *16121.*
Standards; supermarket automation; weights and measures; calibration; communication; consumers; grain moisture measurement; laws and regulations; measurement; metric; packaging and labeling; police radar equipment; *SP442.*
Standards; survey; ultraviolet; detectors; NBS; radiometry; sources; *SP456,* pp. 107-110 (Nov. 1976).
Standards; system engineering; building codes; computer model; decision theory; networks; specifications; *NBS-GCR-76-55.*
Standards; systems engineering; building codes; computer program; decision theory; networks; specifications; *NBS-GCR-76-56.*
Standards; systems engineering; building codes; computer program; decision theory; FORTRAN; logic design; networks; specifications; *NBS-GCR-76-57.*
Standards; technical bases; building research; building technology; codes; criteria; project summaries; *SP446.*
Standards; technology assessment; user experience; auditing; cost/benefit analysis; data base; data base management; DBMS; government regulation; management objectives; privacy; security; *SP451.*
Standards; teletypewriters; coding; interfaces; modems; signal processing; *NBS-GCR-74-30.*
Standards; tents; tests; uniforms; upholstered furniture; apparel; burn injury; carpets; draperies; fabrics; flammability; heat flux; *16144.*
Standards; test methods; watthour meters; code; definitions; demand meters; electricity metering; performance requirements; *15829.*
Standards; thermal storage; solar buildings; solar collectors; solar domestic hot water systems; solar heating; *NBSIR 76-1059.*
Standards; thermometry; data; International Practical Temperature Scale; measurements; National Measurement System; *NBSIR 75-932.*
Standards; traceability; assurance; measurement; radioactivity; radiopharmaceutical; *SP456,* pp. 71-76 (Nov. 1976).
Standards; units of measurement; weights; history of measurement standards; measures; metric system; *SP447.*
Standards; user groups; computers; data base management; governments; management information systems; public services; security; *15923.*
Standards, bicycle safety; test method, bicycle; bicycle brakes; brakes, bicycle; dynamics, bicycle; error analysis; friction, tire/pavement; kinetics, bicycle; measurements, bicycle braking; pitchover; *NBSIR 75-786.*
Standards calibration; barium sulfate; diffuse reflectance spectra; magnesium oxide; opal glass; radiant flux; reflectance standards; *J. Res.* **80A** No. 4, 585-595 (1976).
Standards conformance; COBOL; COBOL coding form; Federal Information Processing Standard; Federal Standard COBOL; software; *FIPS PUB 44.*
Standards development; technological change; administrative experiment; American National Standards Institute; Experimental Technology Incentives Program; Nuclear Regulatory Commission; *NBS-GCR-ETIP 76-16.*

Standards for safety; Government participation; refrigeration safety standards; safety of appliances; *15890.*

Standards laboratories; telephone industry and specialized carriers; time and frequency; time scales; users of NBS radio broadcasts; atomic frequency standards; aviation industry; electric power industry; National Measurement System, position location; *SP445-1.*

Standards laboratory; synchrotron; building collapse; corrosion; energy; environmental; frequency standards; hearing aids; high-rise buildings; metals; radiation safety; *DIM/NBS* **60,** No. 5, 1-24 (1976).

Standards organization; acoustics; noise; rating scheme; sound; *SP386, 1976 Edition.*

Standards organization; test methods; plastics standardization; specifications; standards; *16106.*

Standards, uses of radiation; ionizing radiation; measurements; *SP456,* pp. 13-24 (Nov. 1976).

Standing waves; electric fields; laser damage; oblique incidence; *SP462,* pp. 25-28 (Dec. 1976).

Standing-wave fields; thin films; two-photon absorption; damage thresholds; electron avalanche; picosecond pulses; refractory oxides; *SP462,* pp. 292-300 (Dec. 1976).

Standing-wave patterns; damage thresholds; dielectric thin films; electric fields; electron-gun evaporation; picosecond pulses; rf sputtering; *SP435,* pp. 254-271 (Apr. 1976).

Standing-waves; dielectric films; electric fields; laser damage; optical coatings; *SP462,* pp. 301-309 (Dec. 1976).

Stark broadening; Stark shifts; Stark widths; nitrogen; plasma line broadening; spectral lines; *16406.*

Stark broadening; width; experimental; neutral atom; review; shift; *JPCRD* **5,** No. 2, 209-258 (1976).

Stark broadening parameters; Stark shifts; Stark widths; critically evaluated data; experimental; ionized spectra; *JPCRD* **5,** No. 2, 259-308 (1976).

Stark effect; atomic hydrogen; Balmer alpha; beam foil; crossed beams; electrons; excitation; optical spectroscopy; *15891.*

Stark effect; carbonyl sulfide; dipole moments; infrared; lasers; spectra; spectroscopy; *16181.*

Stark effect; dipole moment; microwave spectrum; molecular structure; silacyclopentane; small-ring molecule; *16046.*

Stark shifts; Stark widths; critically evaluated data; experimental; ionized spectra; Stark broadening parameters; *JPCRD* **5,** No. 2, 259-308 (1976).

Stark shifts; Stark widths; nitrogen; plasma line broadening; spectral lines; Stark broadening; *16406.*

Stark spectrum; surface excitons; bulk excitons; electron loss spectroscopy; ionic crystals; Madelung potential; Mg^{+}; Mg^{2+}; MgO; *SP455,* pp. 59-65 (Nov. 1976).

Stark widths; critically evaluated data; experimental; ionized spectra; Stark broadening parameters; Stark shifts; *JPCRD* **5,** No. 2, 259-308 (1976).

Stark widths; nitrogen; plasma line broadening; spectral lines; Stark broadening; Stark shifts; *16406.*

Stars: chromospheres; line formation; radiative transfer; *16052.*

Stars, chromospheres; stars, late type; ultraviolet, spectra; *16031.*

Stars, late type; interstellar matter; line profiles; *15911.*

Stars, late type; ultraviolet, spectra; stars, chromospheres; *16031.*

State; architecture; buildings; design; energy; legislation; solar; *NBSIR 76-1082.*

State; authority; building; energy; legislation; regulations; *NBSIR 76-986.*

State energy regulations; energy conservation; energy standards for mechanical systems; heating and air-conditioning systems; *15713.*

State government; bid evaluation; Experimental Technology Incentives Program (ETIP); innovation; life cycle costing; local government; procurement policy; *NBS-GCR-ETIP 76-17.*

State governments; systems analysis; design criteria; fire hazards; fire losses; fire reporting; fire safety; information systems; National Fire Data System; specifications; *NBS-GCR-73-5.*

State law; architectural glazing; codes; Consumer Product Safety Committee; Consumer Safety Glazing Committee; glazing; impact tests; safety glazing; standards; *NBSIR 76-1109.*

State of the art survey; functional requirements; patrol cars; performance of patrol cars; police patrol cars; problems with patrol cars; *15826.*

State of the art survey; functional requirements; patrol cars; performance of patrol cars; police patrol cars; problems with patrol cars; *NBSIR 75-960.*

State regulation; building codes; certification; compliance assurance; evaluation; inspection; manufactured building; model documents; NCSBCS; standards; *BSS87.*

State regulations; building codes; factory-built housing; industrialized building; inspection; manufactured building; model codes; model documents; NCSBCS; on-site construction; prefabricated construction; standards; state-local relationship; *NBS-GCR-74-27.*

State-local relationship; state regulations; building codes; factory-built housing; industrialized building; inspection; manufactured building; model codes; model documents; NCSBCS; on-site construction; prefabricated construction; standards; *NBS-GCR-74-27.*

State-of-the-art reviews; acceptability; coding; costs; data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; systems engineering; *NBS-GCR-74-29.*

State-of-the-art study; automatic data processing; building codes; building regulations; computer applications; computers; enforcement; evaluation; information systems; microfilm; microform; *NBS-GCR-74-26.*

States; abstract; compromise; ineffectiveness; measurements; radiation; regulations; *SP456,* pp. 31-36 (Nov. 1976).

States; building codes; cities; health and safety; historic preservation; *TN918.*

Static; vibration; deflection; dynamic; floor systems; human responses; performance criteria; serviceability; *TN900.*

Static analysis; transforms; execution; execution monitoring; FORTRAN analysis; source code instrumenting; *15918.*

Static coefficient of friction measurement; floor slipperiness; slipperiness tester; *U.S. Patent 3,975,940.*

Static fatigue; strength; crack growth; fracture; fracture mechanics; glass; *15821.*

Static loads; stiffness; structural safety; design; dynamic loads; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; *NBSIR 76-1131.*

Static potential; vibrational excitation; close-coupling calculations; crossed beams; cross sections; differential cross sections; electron scattering; inelastic scattering; nitrogen molecules; polarization potential; scattering; *16533.*

Static pressure; weatherproof pressure probe; wind field pressure measurements; ambient pressure probe; omnidirectional pressure probe; pressure probe shroud; *U.S. Patent 3,950,995.*

Stationary models; flicker noise; frequency; frequency stability; oscillators; phase noise; *TN683.*

Statistical; background; critical level; detection limit; determination limit; less-than level; minimum detectable activity; *SP456,* pp. 169-172 (Nov. 1976).

Statistical analysis; steam; universality; air constituents; critical

region parameters; ethylene; heavy noble gases; helium; linear model; methane; NBS equation; scaling laws; *JPCRD* **5**, No. 1, 1-52 (1976).
Statistical analysis; storms; structural engineering; wind pressure; wind speed; buildings (codes); hurricanes; probability distribution functions; reliability; risk; *16545*.
Statistical analysis; structural engineering; failure; probability theory; random process; safety; *SP444*, pp. IV-1—IV-15 (Apr. 1976).
Statistical control processes; temperature; acoustic calibrators; A-weighting; barometric pressure; crest factor; ground cover; humidity; instrumentation; microphones; sound level meters; *TN931*.
Statistical education in the United States; statistical tolerance limits; U.S. Army programs in statistics; U.S. Government, services to; Wilks award; Wilks, S. S; *Annals of Mathematical Statistics;* bibliography; distribution-free methods; *16114*.
Statistical methods; zinc; atomic absorption; cadmium; copper; lead; manganese; sensitivity; spectrophotometry; *SP422*, pp. 1023-1033 (Aug. 1976).
Statistical models; absolute absorptivities; continuum models; diffuse reflectance; radiative transfer; reflectance spectra; scattering coefficients; *J. Res.* **80A** No. 4, 567-583 (1976).
Statistical techniques; Youden plot; Youden squares; Youden, W. J; calibration designs; chain blocks; collaborative tests; diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; interlaboratory tests; randomization, constrained; *16115*.
Statistical theory of rubber elasticity; swelling of rubber network; cross-linking of rubber; dicumyl peroxide; elasticity theory of rubber; entanglements in rubber; gel point; modulus of rubber; *J. Res.* **80A** No. 3, 451-463 (1976).
Statistical tolerance limits; U.S. Army programs in statistics; U.S. Government, services to; Wilks award; Wilks, S. S; *Annals of Mathematical Statistics;* bibliography; distribution-free methods; educational testing; mathematical statistics; *16114*.
Statistics; analytical chemistry; curve fitting; data reduction; feature selection; multivariate analysis; optimization techniques; pattern recognition; signal processing; spectral resolution; *15964*.
Statistics; analytical chemistry; data analysis; design of experiments; *16652*.
Statistics; strength; crack propagation; error analysis; failure prediction; failure prevention; fracture; *16617*.
Statistics; strength; crack propagation; error analysis; failure prediction; failure prevention; fracture; *NBSIR 75-952*.
Statistics; syndrome; accuracy; analytical chemistry; standard reference material; *SP422*, pp. 123-126 (Aug. 1976).
Statistics; tolerance limits; noncentral *t*-distribution; normal distribution; *J. Res.* **80B** No. 3, 343-346 (1976).
Statistics; uncertainties; crystallographic data; errors; probability plots; residuals; *NBSIR 76-1102*.
Steady-state overvoltages; copper electrodes; interfacial resistance; metal-metal oxide electrodes; oxygen transport; *SP455*, pp. 351-358 (Nov. 1976).
Steady-state x rays; detector calibrations; fluorescence x-ray sources; K x-ray sources; pulsed x rays; radiographic imaging; *SP456*, pp. 41-45 (Nov. 1976).
Steam; critical density; critical exponents; critical pressure; critical region; critical temperature; equation of state; linear model; scaled equation; *15730*.
Steam; universality; air constituents; critical region parameters; ethylene; heavy noble gases; helium; linear model; methane; NBS equation; scaling laws; statistical analysis; *JPCRD* **5**, No. 1, 1-52 (1976).
Steam; universality; critical exponents; critical region; homogeneity; polar fluids; scaling; *15733*.
Steam; vapor pressure; vapor pressure of water; virial coefficients; Clapeyron equation; saturation vapor pressure over water; *J. Res.* **80A** Nos. 5 and 6, 775-785 (1976).
Steel; alpha particles; boron; ion microprobe mass analyzer; nuclear track technique; standard reference material; *15789*.
Steel; energy; forecast; industry; iron; *SP403*, pp. 121-152 (June 1976).
Steel; structural mechanics; uncertainty; creep; fire endurance; fire tests; reinforced concrete; sensitivity analysis; *BSS76*.
Steel; thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; *SP403*.
Steel; titanium; transducer calibration; ultrasonic reference blocks; acoustic emission; aluminum; fatigue cracks; flat bottomed holes; standards; *16252*.
Steel; trace elements; isotope dilution; NBS Standard Reference Material; preconcentration; spark source mass spectrometry; *15889*.
Steel; welding; alloying; inclusions; low temperature; rolling; ships; *16145*.
Steel reinforcing bars; bridge decks; chloride ions; corrosion; deicing salts; epoxy coatings; organic coatings; *16189*.
Steel ultrasonic standards; titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; ASTM-type reference standards; calibration; fabrication variables; immersion testing; interim reference standard; longitudinal waves; metallurgical variables; *NBSIR 76-984*.
Stellar; ultraviolet; absorption; B-stars; C IV; O-stars; Si IV; spectra; *16271*.
Stellar atmospheres; early-type stars; electron scattering; spectral-line formation; *16613*.
Stellar atmospheres; radiative transfer; relativistic effects; spectral line formation; *16272*.
Stellar structure; A-type stars; convection theory; convection zones; metallic-line stars; *16606*.
Stellar structures; convection theory; convection zones; *16605*.
Step height; interferometer; polarization; *16382*.
Step waveform; tunnel diode; directional coupler; fast risetime; flat pulse baseline/topline; pulse generator; *U.S. Patent 3,967,140*.
Stepping; digital; drive; electronic; generator; motor; *16399*.
Stereology; stereometry; stereoscopy; stochastic models; structures; three-dimensional reconstruction; *SP431*.
Stereology; toy safety; x-ray units; computer power; computer standard; corrosion; environment; health care; housing production; I-R 100 awards; NIKE missile; papers available; *DIM/NBS* **60**, No. 11, 1-24 (1976).
Stereometry; stereoscopy; stochastic models; structures; three-dimensional reconstruction; stereology; *SP431*.
Stereoscopy; stochastic models; structures; three-dimensional reconstruction; stereology; stereometry; *SP431*.
Sterility control; dosimetry; electron beams; gamma rays; physical measurements; quality control; radiation measurement; radiation processing; radiation sterilization; radiochromic dyes; Red Perspex; *16648*.
Stibinic acid; trimethylarsine; trimethylstibine; antimony; antimony oxide; arsenic; arsenic acid; biomethylation; cacodylic acid; diffusion; flame retardant; oxidation rate; *16628*.
Stiffness; structural safety; design; dynamic loads; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; static loads; *NBSIR 76-1131*.
Stiffness; structural stability; walls; brick; buckling; composite walls; compressive strength; concrete block; constitutive relations; flexural strength; masonry; masonry walls; mortar; slenderness ratio; standards; *BSS73*.
Stirling numbers; bell numbers; branching theorem; Clebsch-

Gordon series; irreducible character; matrix functions; multiple transitivity; permutation group; *J. Res.* **80B** No. 2, 265-268 (1976).

Stirling numbers; binomial coefficients; modular computation; *J. Res.* **80B** No. 1, 99-171 (1976).

Stirred liquid comparison bath; temperature scale; calibration; emergent stem; liquid-in-glass thermometer; reference point; *Monogr. 150.*

Stirred solution; crystallization; cylindrite; drawing of swollen polymer solid; epitaxial overgrowth; extrusion; hard elastomer; nucleation; oriented melt; rheological unites; row nucleus; shishkebab; sonicated solution; spinning; *16274.*

Stochastic models; structures; three-dimensional reconstruction; stereology; stereometry; stereoscopy; *SP431.*

Stochastic Weber problem; always convergent algorithms; exponentially distributed points; facility location; location theory; normally distributed points; numerical analysis; optimization; *J. Res.* **80B** No. 1, 53-73 (1976).

Stoichiometry; transmission electron microscopy; vapor deposition; cadmium telluride; growth kinetics; mechanical properties; microstructure; *SP462*, pp. 100-118 (Dec. 1976).

Stoichiometry; whitlockite; β-tricalcium; calcification; calcium; dicalcium phosphate; octacalcium phosphate; pyrolysis; pyrophosphate; *15996.*

Stopping-power ratios; calorimeter; dose/ionization conversion; dosimetry; electrons; ionization chamber; *SP456*, pp. 307-312 (Nov. 1976).

Storage containers; adsorption losses; biological systems; chromium; stability; *SP422*, pp. 611-619 (Aug. 1976).

Storage effects; 2,4-dichlorophenol; 2,4-dichlorophenoxyacetic acid; gas chromatography; potatoes; residues, dissipation of; residues, in potatoes; residues, metabolic; residues, total; residues, volatilization; *SP422*, pp. 737-745 (Aug. 1976).

Storage of clinical samples; accuracy and precision; analysis of body fluids; clinical analysis; clinical chemistry; clinical sampling; enzyme analysis; *SP422*, pp. 353-361 (Aug. 1976).

Storm; structural engineering; technological aid; earthquake; Japan; natural disaster; *SP444*, pp. VI-25—VI-31 (Apr. 1976).

Storms; structural engineering; wind pressure; wind speed; buildings (codes); hurricanes; probability distribution functions; reliability; risk; statistical analysis; *16545.*

Strain; stress; superconducting magnets; critical currents; magnets; magnet wire; Nb_3Sn; Nb_3Sn magnets; Nb_3Sn multifilamentary wires; *16474.*

Strain energy; supercooled liquid; thermal relaxation; glassy state; glass transition; heat capacity; polymer; specific heat; *16309.*

Strain gage measurements; drop-ball test; impact; lens; ophthalmic lens; quasi-static theory; *16310.*

Strategies; workload; FORTRAN IV; operating system; overhead; resource allocation; simulator; *16062.*

Strategy; theory of games; inspection; mathematical model; regulation; *J. Res.* **80B** No. 2, 189-236 (1976).

Stratified flow, internal waves, buoyant flows; fluid dynamics; fundamental solution, intitial value problem; partial differential equations; *J. Res.* **80B** No. 1, 79-88 (1976).

Stratified fluids; waves in fluids; buoyant flows; geophysical fluid flows; inertial waves; internal waves; rotating fluids; *J. Res.* **80B** No. 3, 353-402 (1976).

Stratosphere; chemical kinetics; free radicals; measurement; *16130.*

Stratosphere; chlorine atoms; kinetics; ozone; resonance fluorescence; *15949.*

Stratospheric chemistry; atmospheric pollution; chlorine nitrate; dipole moment; microwave spectrum; ozone depletion; rotational constants; *16584.*

Stratospheric chemistry; chemical kinetics; data center operation; information analysis center; photochemistry; *16364.*

Stray light; wavelength scale; errors in spectrophotometry; photometric scale; slit width; spectral transmission; spectrophotometer standards; *J. Res.* **80A** No. 4, 625-630 (1976).

Stray light; xenon-mercury, arc lamp; arsenic; atomic absorption; atomic spectrometry; background, correction; nonflame, atomization; *15894.*

Straylight; wavelength accuracy; bandwidth; calibration; errors in spectrophotometry; interferences; multiple reflections; photometric linearity; polarization; sample characteristics; *J. Res.* **80A** No. 4, 609-624 (1976).

Strength; brittle solids; ceramic surfaces; crack; degradation; fracture; Hertzian; indentation; *15856.*

Strength; crack growth; fracture; fracture mechanics; glass; static fatigue; *15821.*

Strength; crack propagation; error analysis; failure prediction; failure prevention; fracture; statistics; *16617.*

Strength; crack propagation; error analysis; failure prediction; failure prevention; fracture; statistics; *NBSIR 75-952.*

Strength; structural analysis; structural design; ultimate strength; bending moments; building codes; column (supports); frames; long columns; reinforced concrete; slenderness ratio; *16412.*

Stress; stress intensity; cracks; experimental mechanics; fracture; fracture toughness; interferometry; model experiments; *15742.*

Stress; stress-corrosion; underground; corrosion; galvanic; hydrogen embrittlement; soil; stainless steel; *16354.*

Stress; superconducting magnets; critical currents; magnets; magnet wire; Nb_3Sn; Nb_3Sn magnets; Nb_3Sn multifilamentary wires; strain; *16474.*

Stress; tensile strength; wear; corrosion; crack-free chromium; electroplating; fast plating; fatigue strength; grinding; hardness; *SP452*, pp. 56-63 (Sept. 1976).

Stress analysis; brittle solids; chipping; fracture; indentation; residual stress; *16306.*

Stress analysis; superconducting coil composite; superconducting wire; thermal properties; fiberglass cloth; mechanical properties; *NBSIR 76-837.*

Stress analysis; thermal analysis; zinc selenide window; computer analysis; laser induced stresses; *SP462*, pp. 29-35 (Dec. 1976).

Stress birefringence; thermal distortion; windows; infrared lasers; interferometry; *SP435*, pp. 126-141 (Apr. 1976).

Stress corrosion; chemical breakdown of passivity; chloride; crevice corrosion; ellipsometry; iron; molybdenum; repassivation kinetics; *NBSIR 75-916.*

Stress corrosion; fracture; lattice trapping; slow-crack growth; *16155.*

Stress corrosion cracking; brittle fracture; economics of failure prevention; fatigue failure; mechanical failure; mechanical reliability; *SP423.*

Stress corrosion cracking; brittle fracture; gas main pipe; impact; low carbon steel; *NBSIR 74-625.*

Stress corrosion cracking; stress-sorption; corrosion; failure prediction; film rupture-metal dissolution; hydrogen embrittlement; *SP423*, pp. 27-40 (Apr. 1976).

Stress corrosion cracking; ultrasonic inspection; aircraft component failure; continuous wave holograms; crack detection; holographic techniques; pulsed laser holograms; *SP423*, pp. 93-103 (Apr. 1976).

Stress distributions; fracture; glass; impact; ophthalmic lenses; *15769.*

Stress effects; superconductors; symposium; critical current; mechanical properties; *16636.*

Stress excess tensor; two-dimensional flow; flow with longitudinal gradient; flow with transverse gradient; optical anemometry; optical birefringence; optical excess tensor; optical mapping of flow; *15775*.
Stress gages; transducers; piezoelectric; polymeric transducer; polymers; polyvinyl fluoride; polyvinylidene fluoride; *16141*.
Stress intensity; cracks; experimental mechanics; fracture; fracture toughness; interferometry; model experiments; stress; *15742*.
Stress optic constants; birefringence; germanium; KCl; refractive index; single crystal; *SP435*, pp. 164-169 (Apr. 1976).
Stress optical constants; elastic constants; elasto-optic; photoelasticity; polycrystalline ZnSe; *15931*.
Stress pulse; temperature wave; thermal diffusivity; thermal equilibrium; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; molecular dynamics; second sound; *16589*.
Stress relaxation; thermodynamics; viscoelasticity; creep; dissipation; elevated temperature; energy; hold-time; hysteresis; low-cycle fatigue; plasticity; stainless steel; *16004*.
Stress relief; adherence; diamond machining; dielectric mirror; electroplating; laser damage resistance; *SP435*, pp. 66-74 (Apr. 1976).
Stress rupture; testing machine; creep; instrumentation; *NBSIR 76-1074*.
Stress wave; temperature wave; thermal diffusivity; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; interatomic potential; molecular dynamics; second sound; shock wave; *16138*.
Stress wave interactions; substrates; tearing; vibratory apparatus; adhesion; cavitation; coatings; design charts; elastomers; erosion; Hopkinson pressure bar apparatus; impedances; mismatching; *SP452*, pp. 120-123 (Sept. 1976).
Stress-corrosion; underground; corrosion; galvanic; hydrogen embrittlement; soil; stainless steel; stress; *16354*.
Stress-corrosion; 3.5 percent NaCl; 7XXX aluminum alloys; Aluminum Association; ASTM; industrial atmosphere; round robin tests; seacoast atmosphere; standard; *16656*.
Stress-corrosion behavior; coatings; corrosion behavior; field tests; galvanic couples; soil environment; stainless steels; *NBSIR 76-1081*.
Stresses; tension tests; alignment; *16324*.
Stressing apparatus; photoelasticity; *15928*.
Stress-optic constants; temperature coefficient of index; thermal expansion; ZnSe; chemical vapor deposited ZnSe; elastic compliance; elastic constants; polycrystalline ZnSe; refractive index; *15938*.
Stress-optical constants; stress-optical effect; electrostriction; electrostrictive coefficients; free energy; *15710*.
Stress-optical constants; thermal coefficient of refractive index; birefringence; elastooptic constants; infrared-laser window materials; interferometry; KCl; photoelasticity; piezo-optic constants; refractive index; *NBSIR 76-1010*.
Stress-optical effect; electrostriction; electrostrictive coefficients; free energy; stress-optical constants; *15710*.
Stress-rupture testing; sunlight; ultraviolet radiation; weatherability; antenna-support materials; environmental degradation; guys, nonmetallic; marine atmospheres; plastics, fiber-reinforced; pultrusions; *NBSIR 76-1069*.
Stress-sorption; corrosion; failure prediction; film rupture-metal dissolution; hydrogen embrittlement; stress corrosion cracking; *SP423*, pp. 27-40 (Apr. 1976).
Strobe; GaAs; laser; optical; oscilloscope; photoconductor; picosecond; sampling; sampling oscilloscope; *15835*.
Strong electron-phonon coupling; superconductivity; electron tunneling; electronic devices; far infrared; Josephson effect; *16478*.
Strong electron-phonon coupling; superconductivity; electronic devices; electron tunneling; Josephson effect; *16486*.
Strontium; collisions; near-resonant scattering; redistribution; *16261*.
Strontium; electron impact; *15860*.
Strontium; trace analyses; cadmium; environmental Standard Reference Materials; isotope dilution; lead; molybdenum; rubidium; *16221*.
Strontium titanate; dielectric relaxation; electret state; impurity; ordering transition; polarization; remanent; *16639*.
Strontium titanate; transition metal; zero phonon line; charge transfer, color centers; crystal field; d^4 ions; EPR; iron 4+; optical absorption; perovskite; *16201*.
Structural analysis; structural design; ultimate strength; bending moments; building codes; column (supports); frames; long columns; reinforced concrete; slenderness ratio; strength; *16412*.
Structural analysis; structural engineering; vibration analysis; wind load; finite element; guyed tower; *SP444*, pp. IV-37—IV-54 (Apr. 1976).
Structural and mechanical components; components, structural; dry powder painting; mechanical and structural components; polymer processed mechanical and structural components; *SP452*, pp. 14-24 (Sept. 1976).
Structural composites; tensile moduli; tensile strength; thermal conductivity; thermal contraction; boron; cryogenics; glass; graphite; literature review; PRD-49; reinforced aluminum; reinforced plastics; *15745*.
Structural connections; typhoons; wind loads; buildings; codes and standards; housing; hurricanes; low-rise buildings; natural disaster; *NBSIR 75-790*.
Structural design; dynamic analysis; earthquake; seismic design; seismic response; spherical tanks; *SP444*, pp. V-50—V-62 (Apr. 1976).
Structural design; earthquake; housing; performance specification; prefabricated dwelling; standards; *SP444*, pp. IV-55—IV-69 (Apr. 1976).
Structural design; ultimate strength; bending moments; building codes; column (supports); frames; long columns; reinforced concrete; slenderness ratio; strength; structural analysis; *16412*.
Structural engineering; analytical model; dynamic analysis; dynamic loading; earthquake; energy dissipation; finite element; seismic response; *SP444*, pp. IV-70—IV-89 (Apr. 1976).
Structural engineering; building codes; buildings; design; earthquakes; *SP444*, pp. IV-113—IV-126 (Apr. 1976).
Structural engineering; buildings; fire loads; load surveys; occupancy live loads; *16072*.
Structural engineering; buildings; fire loads; load surveys; occupancy live loads; *BSS85*.
Structural engineering; design; earthquake; highway bridges; lateral loads; pile head; piles; *SP444*, pp. IV-90—IV-112 (Apr. 1976).
Structural engineering; design; earthquakes; highway bridges; retrofitting; soil-structure interaction; *SP444*, pp. V-1—V-24 (Apr. 1976).
Structural engineering; earthquake engineering; grant; RANN; sponsorship; *SP444*, pp. V-66—V-79 (Apr. 1976).
Structural engineering; failure; probability theory; random process; safety; statistical analysis; *SP444*, pp. IV-1—IV-15 (Apr. 1976).
Structural engineering; technological aid; earthquake; Japan; natural disaster; storm; *SP444*, pp. VI-25—VI-31 (Apr. 1976).
Structural engineering; tests; dynamic tests; earthquake simulator; shake table; *SP444*, pp. V-25—V-34 (Apr. 1976).

Structural engineering; tides; wind; buildings; cyclones; disasters; *BSS86*.

Structural engineering; tornadoes, wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; *SP444*, pp. V-35—V-49 (Apr. 1976).

Structural engineering; tornadoes; wind; missiles; nuclear engineering; *NBSIR 76-1050*.

Structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; *NBS-GCR-75-36*.

Structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; *NBS-GCR-75-37*.

Structural engineering; tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; *NBS-GCR-75-38*.

Structural engineering; vibration analysis; wind load; finite element; guyed tower; structural analysis; *SP444*, pp. IV-37—IV-54 (Apr. 1976).

Structural engineering; web reinforcement; column; ductility; earthquake; reinforced concrete; shear tests; *SP444*, pp. IV-16—IV-36 (Apr. 1976).

Structural engineering; wind; wind damage; wind engineering; building codes; design standards; masonry construction; roofs; siding; *TN909*.

Structural engineering; wind engineering; wind loads; accelerations; building codes; buildings; deflections; dynamic response; gust factors; *15871*.

Structural engineering; wind loads; building codes; buildings; deflections; dynamic response; gust factors; *SP444*, pp. IV-127—IV-144 (Apr. 1976).

Structural engineering; wind (meteorology); wind pressure; buildings (codes); failure; probability distribution functions; reliability; *16544*.

Structural engineering; wind pressure; wind speed; buildings (codes); hurricanes; probability distribution functions; reliability; risk; statistical analysis; storms; *16545*.

Structural guys; end fittings; GFRP rod and rope; *15993*.

Structural mechanics; uncertainty; creep; fire endurance; fire tests; reinforced concrete; sensitivity analysis; steel; *BSS76*.

Structural response; volcanoes; wind; bridges; buildings; codes; disaster; dynamic analysis; earthquakes; modeling; soils; *SP444*.

Structural safety; anthropometric measurements; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; *NBSIR 76-1132*.

Structural safety; design; dynamic loads; guardrails; industrial accidents; nonstructural safety; occupational hazards; performance standard; personnel railings; personnel safety; static loads; stiffness; *NBSIR 76-1131*.

Structural stability; walls; brick; buckling; composite walls; compressive strength; concrete block; constitutive relations; flexural strength; masonry; masonry walls; mortar; slenderness ratio; standards; stiffness; *BSS73*.

Structural testing; bicycle; consumer safety; regulations; safety; *NBSIR 75-913*.

Structural transformations; surface adsorption; biopolymers; helix-coil transition; phase transitions in biopolymers; self-assembly; *15721*.

Structural vibration; acoustics; building acoustics; impact noise; noise; *NBS-GCR-75-33*.

Structure; density; energy gap; inorganic compounds; melting point; *16163*.

Structure; theory; wind; bridge; design; field data; gust response; model; specifications; *SP444*, pp. I-1—I-20 (Apr. 1976).

Structure determination; *S*-carboxymethyl-L-cysteine sulfone; x-ray, zwitterion; hydrogen bonding; single crystal; *16565*.

Structure factor; limit of stability; mean field theory; metastability; perturbation scheme; reference system; *16595*.

Structures; three-dimensional reconstruction; stereology; stereometry; stereoscopy; stochastic models; *SP431*.

Subcritical; supercritical; transition; turbulent flow; buoyancy; channels; film boiling; forced convection; helium I; helium II; mixed convection; nucleate boiling; *TN675*.

Subcritical region; viscosity; correlation length; Ginzburg-Landau theory; glass; inhomogeneous system; *16258*.

Subdivision; variance-covariance matrix; angle standard; autocollimator; calibration; complete closure design; indexing table; least squares estimation; partial closure design; standard deviation; *NBSIR 75-750*.

Subgrains; CaF_2; crack coalescence; flaw detection; flaw distribution; forging; grain boundary mobility; *SP462*, pp. 69-81 (Dec. 1976).

Submillimeter waves; high resolution molecular spectroscopy; lasers; meeting report; Novosibirsk; pressure-broadened line shapes; Soviet Union; *16010*.

Subshell structure; angular distribution; photoabsorption; soft x rays; *16386*.

Subsidized costs; blood banking; cost analysis; economics; indirect costs; *16070*.

Substituent effects; amides; carbon-13 magnetic resonance; chemical shifts; cis and trans isomers; peptides; proline; ring conformation; *16235*.

Substoichiometry; absorption isotherm; environmental samples; fluorine; isotope dilution; radionuclides; *SP422*, pp. 961-982 (Aug. 1976).

Substrates; tearing; vibratory apparatus; adhesion; cavitation; coatings; design charts; elastomers; erosion; Hopkinson pressure bar apparatus; impedances; mismatching; stress wave interactions; *SP452*, pp. 120-123 (Sept. 1976).

Subsurface structure; ultrasonic cleaning; laser damage; metal mirrors; *SP435*, pp. 90-97 (Apr. 1976).

Sudden approximation; close coupling calculations; cross sections; differential cross sections; elastic scattering; electron scattering; momentum transfer; nitrogen molecules; rotational excitation; scattering theory; *15951*.

Sudden approximation; differential cross sections; elastic scattering; electron scattering; hydrogen molecules; momentum transfer; rotational excitation; scattering theory; *15761*.

Sulfate; sulfur dioxide; sulfur trioxide; sulfur trioxide condensation; automobile exhaust; catalytic oxidation converter; dilution tunnel; isopropanol; particulate filtration; *SP422*, pp. 389-400 (Aug. 1976).

Sulfides; tungsten; x-ray crystallography; clusters; metal-metal bonding; metal sulfides; *16071*.

Sulfur; cellulosic fibers; combustion; cotton fibers; flame retardant treatments; phosphorous acids; pyrolysis; ramie; rayon; *NBS-GCR-73-4*.

Sulfur dioxide; acetaldehyde; acrolein; formaldehyde; gas chromatography; hydrogen chloride; hydrogen cyanide; pollution; pyrolysis; reactive gas generator; *NBSIR 76-1000*.

Sulfur dioxide; air pollution; carbon monoxide; gas analysis; gas standards; nitric oxide; nitrogen dioxide; *15972*.

Sulfur dioxide; carbon monoxide; hydrocarbons; measurement; nitrogen dioxide; particulate matter; photochemical oxidants; standards; *16121*.

Sulfur dioxide; emission gas; exhaust; fluorescence; nitric oxide; quenching; *16444*.

Sulfur dioxide; interstellar; microwave spectra; molecules; Orion; radio astronomy; *16434*.

Sulfur dioxide; sulfur trioxide; sulfur trioxide condensation; automobile exhaust; catalytic oxidation converter; dilution tunnel; isopropanol; particulate filtration; sulfate; *SP422*, pp. 389-400 (Aug. 1976).

Sulfur hexafluoride; Clausius-Mossotti equation; critical phenomena; dielectric constant; *16542*.

Sulfur hexafluoride tracer; air infiltration instrumentation; air infiltration measurement; building ventilation rates; *TN898*.
Sulfur hexafluoride tracer measurement; air infiltration measurement; air leakage measurement; mobile home tightness; *NBSIR 76-1063*.
Sulfur nitride; tetracyanoquinodimethane; tetrasulfur tetranitride; tetrathiafulvalene; vaporization; chemical ionization mass spectrometry; mass spectrometry; *16422*.
Sulfur trioxide; sulfur trioxide condensation; automobile exhaust; catalytic oxidation converter; dilution tunnel; isopropanol; particulate filtration; sulfate; sulfur dioxide; *SP422*, pp. 389-400 (Aug. 1976).
Sulfur trioxide condensation; automobile exhaust; catalytic oxidation converter; dilution tunnel; isopropanol; particulate filtration; sulfate; sulfur dioxide; sulfur trioxide; *SP422*, pp. 389-400 (Aug. 1976).
Sulfur-impregnated concrete; concrete; concrete-polymer systems; polymers; polymer-impregnated concrete; *16349*.
Sun, corona; sun, flares; sun, prominences; sun, spectra; ultraviolet, spectra; atomic processes; *15987*.
Sun, flares; sun, prominences; sun, spectra; ultraviolet, spectra; atomic processes; sun, corona; *15987*.
Sun, prominences; sun, spectra; ultraviolet, spectra; atomic processes; sun, corona; sun, flares; *15987*.
Sun, spectra; ultraviolet, spectra; atomic processes; sun, corona; sun, flares; sun, prominences; *15987*.
Sunlight; ultraviolet radiation; weatherability; antenna-support materials; environmental degradation; guys, nonmetallic; marine atmospheres; plastics, fiber-reinforced; pultrusions; stress-rupture testing; *NBSIR 76-1069*.
Superconducting; a.c. power; cryoresistive; energy transmission economics; helium; hydrogen energy; liquid hydrogen; liquid nitrogen; power transmission cables; safety; slush hydrogen; *16629*.
Superconducting coil composite; superconducting wire; thermal properties; fiberglass cloth; mechanical properties; stress analysis; *NBSIR 76-837*.
Superconducting devices; superconductivity; tunneling; electronics devices; high speed devices; Josephson effect; *16485*.
Superconducting machinery; thermal conductivity; composites; copper alloys; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; *NBSIR 75-828*.
Superconducting machinery; thermal conductivity; aluminum alloys; composites; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; *NBSIR 76-839*.
Superconducting machinery; thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; *NBSIR 76-848*.
Superconducting magnets; critical currents; magnets; magnet wire; Nb_3Sn; Nb_3Sn magnets; Nb_3Sn multifilamentary wires; strain; stress; *16474*.
Superconducting transmission lines; Brayton cycle; cryogenic refrigeration; refrigeration; *16633*.
Superconducting tunnel junctions; voltage standard; ac Josephson effect; low-temperature voltage divider; *16251*.
Superconducting wire; thermal properties; fiberglass cloth; mechanical properties; stress analysis; superconducting coil composite; *NBSIR 76-837*.
Superconducting-normal transition; superconductor; surface energy type I superconductors; cadmium; condensation energy; demagnetization coefficient; fluctuations; inhomogeneous superconductor; intermediate state; *16450*.
Superconductive materials; superconductivity; bibliography; composition; critical fields; critical temperature; crystallographic data; low temperature; *JPCRD* **5**, No. 3, 581-822 (1976).
Superconductivity; bibliography; composition; critical fields; critical temperature; crystallographic data; low temperature; superconductive materials; *JPCRD* **5**, No. 3, 581-822 (1976).
Superconductivity; cryogenic; helium; meeting summary; refrigeration;
Superconductivity; cryogenics; electronic tunneling; Josephson effect; *16200*.
Superconductivity; cryogenics; CTR; electric power energy storage; generators; instrumentation; MHD; *16465*.
Superconductivity; electron tunneling; electronic devices; far infrared; Josephson effect; strong electron-phonon coupling; *16478*.
Superconductivity; electronic devices; electron tunneling; Josephson effect; strong electron-phonon coupling; *16486*.
Superconductivity; high frequency; infrared; Josephson effect; measurements; *16498*.
Superconductivity; tunneling; electronics devices; high speed devices; Josephson effect; superconducting devices; *16485*.
Superconductor; surface energy type I superconductors; cadmium; condensation energy; demagnetization coefficient; fluctuations; inhomogeneous superconductor; intermediate state; superconducting-normal transition; *16450*.
Superconductor; susceptibility; diamagnetism; light scattering; molecular diffusion; organic molecule; *16529*.
Superconductors; cryogenics; infrared; Josephson junctions; lasers; radiation detectors; *16458*.
Superconductors; symposium; critical current; mechanical properties; stress effects; *16636*.
Superconductors; theory; computations; cooling system; cryogenics; electric power transmission; flow stability; helium; oscillations; *15809*.
Supercooled liquid; thermal relaxation; glassy state; glass transition; heat capacity; polymer; specific heat; strain energy; *16309*.
Supercooling; glassy state; Lennard-Jones system; Monte Carlo simulation; nucleation; overcompression; *J. Res.* **80A** No. 1, 59-64 (1976).
Supercritical; transition; turbulent flow; buoyancy; channels; film boiling; forced convection; helium I; helium II; mixed convection; nucleate boiling; subcritical; *TN675*.
Supercritical helium; flow resistance; helium; Ledinegg instability; negative flow resistance; *16232*.
Superfluid helium; two phase flow; compressibility flow; cryogenics; fluid dynamics; pressure drop; *16642*.
Superlattice reflections; transmission electron microscopy; δ'; Ll_2; metastable phase; ordering reaction; satellites; spinodal decomposition; *15840*.
Supermarket automation; weights and measures; calibration; communication; consumers; grain moisture measurement; laws and regulations; measurement; metric; packaging and labeling; police radar equipment; standards; *SP442*.
Supervoltage; therapy; dosimetry; intercomparisons; radiation; *SP456*, pp. 359-363 (Nov. 1976).
Suprathreshold visibility; visibility; vision; gratings; illuminating engineering; lighting; modulation transfer function; *16008*.
Suprathreshold visibility; visibility; vision; gratings; illuminating engineering; lighting; modulation transfer function; *BSS82*.
Surface; adatom; binding energy; field ion microscope; *16543*.
Surface; amorphous calcium phosphate; bone mineral; fluorapatite; hydroxyapatite; morphology; nonstoichiometry; octacalcium phosphate; solubility; *16307*.
Surface; surface finish; surface roughness measurement; *16140*.
Surface; surface finish; surface roughness; technology assessment; economic factors; measurement; *NBSIR 75-927*.
Surface water analysis; filtration losses; metallic ions; pollution monitoring; rainwater analysis; sample stability; *SP422*, pp. 633-648 (Aug. 1976).

Surface absorption; acoustic probe techniques; infrared window laser absorption; KCl absorption; laser induced damage; *SP435*, pp. 157-163 (Apr. 1976).

Surface absorption; alkali-halide; KCl; laser windows; optical figure; polishing; scattered light; *SP435*, pp. 20-28 (Apr. 1976).

Surface absorption; bulk absorption; CO laser; HF laser; infrared laser window materials; multiphonon absorption; *SP462*, pp. 50-57 (Dec. 1976).

Surface absorption coefficients; transparent materials; bulk absorption coefficients; Fourier amplitudes; gas pressure; heat transfer; phase shifts; photoacoustic; *16558*.

Surface adsorption; biopolymers; helix-coil transition; phase transitions in biopolymers; self-assembly; structural transformations; *15721*.

Surface analysis; Auger spectrometry; electron microprobe analysis; ESCA; ion scattering; secondary ion mass spectrometry; *SP422*, pp. 541-573 (Aug. 1976).

Surface analysis; CARISMA program; ion microprobe mass analysis; local thermodynamic equilibrium model; quantitative analysis; secondary ion mass spectrometry; *15862*.

Surface analysis; x-ray photoelectron spectroscopy; Auger electron spectroscopy; depth impurity profiling; ion implantation; ion sputtering; microelectronic materials; Rutherford backscattering; secondary ion mass spectroscopy; silicon; silicon dioxide; *15739*.

Surface analysis; x-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; insulator films; interface characteristics; internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; *SP400-23*.

Surface characterization; surface temperature; Al mirrors; Auger spectroscopy; damage morphology; electron emission; electron imaging; ion emission; laser-induced damage; *SP435*, pp. 207-215 (Apr. 1976).

Surface characterization; wear life; antimony trioxide; friction; molybdenum disulfide; spin axis gas bearings; sputtered coatings; *SP452*, pp. 177-186 (Sept. 1976).

Surface chemistry; tungsten; x-ray photoelectron spectroscopy; carbon dioxide; carbon monoxide; chemisorption; formaldehyde; oxygen; physisorption; *16085*.

Surface chemistry lubrication; chemisorption; corrosion preventives; inhibitor additives; LOX compatible greases; nonreactive lubricants; rust inhibited perfluoro greases; *SP452*, pp. 106-119 (Sept. 1976).

Surface composition; 10.6 μm; As_2S_3; coating deposition; index of refraction; laser windows; *SP435*, pp. 244-247 (Apr. 1976).

Surface contamination; high purity metals; inhomogeneity; microsegregation; sampling; *SP422*, pp. 747-755 (Aug. 1976).

Surface coordinative unsaturation; catalytic hydrogenation; catalytic oxidation; chemisorption; cus; heterogeneous catalysis; *SP455*, pp. 155-166 (Nov. 1976).

Surface damage; surface roughness; thin films; damage thresholds; laser damage; refractive index; *SP435*, pp. 289-295 (Apr. 1976).

Surface damage; surface roughness; surface structure; thin films; ultrasonic cleaning; damage thresholds; fused silica; ion polishing; *SP435*, pp. 305-320 (Apr. 1976).

Surface damage; thin films; threshold; damage threshold; etching; flame polishing; fused silica; hydroxyl; ion polishing; polishing; roughness; *SP462*, pp. 310-314 (Dec. 1976).

Surface damage; 10.6 μm absorption; 10.6 μm optical components; dielectric coatings; infrared laser windows; laser heating of metal surfaces; laser mirrors; pulsed CO_2 laser damage; *SP462*, pp. 181-188 (Dec. 1976).

Surface density of states; transfer Hamiltonian; field emission; *16418*.

Surface density of states; tungsten; field ion energy distribution; field ionization; *15752*.

Surface effect; accuracy; activation analysis; charged particle irradiation; diffusion; etching; metals; neutron irradiation; recoil; *SP422*, pp. 1165-1171 (Aug. 1976).

Surface effects; electron beam damage; electron beam energy deposition; integrated circuits; ionizing radiation effects; scanning electron microscope; *15786*.

Surface energy type I superconductors; cadmium; condensation energy; demagnetization coefficient; fluctuations; inhomogeneous superconductor; intermediate state; superconducting-normal transition; superconductor; *16450*.

Surface excitons; bulk excitons; electron loss spectroscopy; ionic crystals; Madelung potential; Mg^+; Mg^{2+}; MgO; Stark spectrum; *SP455*, pp. 59-65 (Nov. 1976).

Surface excitons; surface states; transition-metal oxides; adsorption; electron spectroscopy; ligand-field splitting; *SP455*, pp. 133-138 (Nov. 1976).

Surface figure; blur circle; circular diffraction grating; diamond-turned mirrors; diffraction pattern; machine cusp; scattered light; *SP435*, pp. 57-65 (Apr. 1976).

Surface finish; surface roughness; technology assessment; economic factors; measurement; surface; *NBSIR 75-927*.

Surface finish; surface roughness measurement; surface; *16140*.

Surface flame spread; corridor fire test; interior finish material; intumescent coating; life safety; mobile home; smoke detector; *NBSIR 76-1021*.

Surface microtopography; surface roughness; surface texture; systematic error; amplitude density function; arithmetic average; autocorrelation function; average wavelength; kurtosis; minicomputer software; random error; skewness; *TN902*.

Surface physics and chemistry; catalysis; electrocatalysis; electrochemistry; electrodes; fuel cells; *NBSIR 76-1049*.

Surface pitting; abrasive wear; adhesive wear; gear failure; machine component failure; mechanical failure; *SP423*, pp. 55-66 (Apr. 1976).

Surface plasmons; chemisorption; photoemission; relaxation energy; *15857*.

Surface potential; blood protein adsorption; conformation adsorbed proteins; ellipsometry; *16396*.

Surface processes; atomic layers; chemisorption; cyclic-voltammetry; electrochemical adsorption; monolayers; *SP455*, pp. 107-124 (Nov. 1976).

Surface properties; thermal quantities; time and frequency; acoustics; atomic properties; economics; electrical quantities; ionizing radiation; mechanical quantities; national measurement system; optical quantities; *NBSIR 75-947*.

Surface reactions; anodic decomposition; cathodic decomposition; electrochemistry; inorganic bronze electrodes; metal electrodes; semiconductor electrodes; stability, surface layers; *SP455*, pp. 267-280 (Nov. 1976).

Surface reflection topography; transmission topography; x-ray diffraction topography; crystal perfection; Czochralski growth; domain walls; magnetic domains; nickel single crystals; *16503*.

Surface roughness; Auger analysis; diamond-turned metal mirrors; laser damage; light scattering; optical absorption; *SP462*, pp. 158-164 (Dec. 1976).

Surface roughness; surface structure; thin films; ultrasonic cleaning; damage thresholds; fused silica; ion polishing; surface damage; *SP435*, pp. 305-320 (Apr. 1976).

Surface roughness; surface texture; systematic error; amplitude density function; arithmetic average; autocorrelation function; average wavelength; kurtosis; minicomputer software; random error; skewness; surface microtopography; *TN902*.

Surface roughness; technology assessment; economic factors; measurement; surface; surface finish; *NBSIR 75-927*.

Surface roughness; thin films; damage thresholds; laser damage; refractive index; surface damage; *SP435*, pp. 289-295 (Apr. 1976).

Surface roughness; transmittance; bibliography; emittance; heat transfer; measurement techniques; periodic surfaces; polarization; random surfaces; reflectance; reflectance of coherent radiation; scattering; scattering theory; *J. Res.* **80A** No. 2, 207-220 (1976).

Surface roughness measurement; surface; surface finish; *16140.*

Surface scattering; tissue characterization; ultrasonic spectroscopy; ultrasound diagnosis; acoustic impedance; Bragg diffraction; computer processing; frequency-dependent attenuation; internal scattering; myocardial infarction; scattering; *SP453*, pp. 167-196 (Oct. 1976).

Surface states; titanium dioxide; transition-metal oxides; defect states; *d*-electrons; electrolyte electroreflectance; *SP455*, pp. 125-131 (Nov. 1976).

Surface states; transition metal oxides; catalysis; chemisorption; cluster states; electronic structure; energy bands; perovskites; *SP455*, pp. 21-52 (Nov. 1976).

Surface states; transition metal carbide; adsorption; catalysis; electronic structure; *SP455*, pp. 87-92 (Nov. 1976).

Surface states; transition-metal oxides; adsorption; electron spectroscopy; ligand-field splitting; surface excitons; *SP455*, pp. 133-138 (Nov. 1976).

Surface structure; thin films; ultrasonic cleaning; damage thresholds; fused silica; ion polishing; surface damage; surface roughness; *SP435*, pp. 305-320 (Apr. 1976).

Surface temperature; Al mirrors; Auger spectroscopy; damage morphology; electron emission; electron imaging; ion emission; laser-induced damage; surface characterization; *SP435*, pp. 207-215 (Apr. 1976).

Surface temperature; built-up roofing; insulation; performance; radiative cooling; roofing; solar heating; *NBSIR 76-987.*

Surface tension; alloys; anisotropy; interface kinetics; solidification; stability; *16213.*

Surface tension; combustion models; flame spread; fluid flow; laser doppler velocimetry; liquid fuels; solid fuels; *NBS-GCR-76-79.*

Surface tension; thermocapillarity; convection; drops; Marangoni effect; *16341.*

Surface tension; Van der Waals collection; Verschaffelt; coexistence curves; critical exponents; fluid critical point; history; Kamerlingh Onnes collection; *16372.*

Surface texture; systematic error; amplitude density function; arithmetic average; autocorrelation function; average wavelength; kurtosis; minicomputer software; random error; skewness; surface microtopography; surface roughness; *TN902.*

Surface texture measurement; amplitude density function; arithmetic average; autocorrelation function; linear least-squares fit; machine language; minicomputer software; *NBSIR 75-924.*

Surface waves; glass; glass strengthening; ion exchange; Rayleigh waves; *16282.*

Surfaces; adsorption; adsorption on mercury; desorption; polymers; polystyrene; radiotracer measurements; rates of adsorption; *15853.*

Surfaces; adsorption; chemisorption; electronic properties of solids; molecules; *15758.*

Surfaces; catalysis; characterization; chemisorption; electrocatalysis; electrochemistry; electrode processes; nonmetals; photoelectrolysis; solid electrolytes; *SP455.*

Surfaces; textiles; edges; fabric construction; fabric flammability; fire spread; flame spread; flame spread rate; *NBS-GCR-75-34.*

Surfaces; tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; *16419.*

Surfaces; wear; electron channeling; iron; metals; plastic deformation; *16523.*

Surfaces; wear; electron channeling; iron; metals; plastic deformation; *NBSIR 76-992.*

Surfaces; wear; wear debris; x-ray analysis; copper; electron channeling; electron microscope; metals; particle analysis; plastic deformation; *NBSIR 76-1141.*

Surfaces; x-ray photoemission; chemisorption; ESCA; field emission; photoemission; *16454.*

Surfaces; zinc selenide; copper; molybdenum; optician; polishing; *SP435*, pp. 10-13 (Apr. 1976).

Surgical implants; cardiac pacemaker; data banks; failure analysis; failure modes; hermeticity; hybrid devices; leak testing; measurement technology; microelectronics; MOS devices; process control; reliability; semiconductor devices; *SP400-28.*

Surgical implants; testing; thermal transients; architectural heritage; fire; guardrail; high-capacity; mathematics; mercury; performance standard; pressure transducers; SRM; *DIM/NBS* **60**, No. 8, 1-24 (1976).

Surrogate specimens; trace elements; accuracy and precision; clinical chemistry; quality control; *SP422*, pp. 35-40 (Aug. 1976).

Survey; ADP; COBOL; Federal ADP installations; Federal Standard COBOL; impact evaluation; sample; software management; *NBSIR 76-1100.*

Survey; ultraviolet; detectors; NBS; radiometry; sources; standards; *SP456*, pp. 107-110 (Nov. 1976).

Survey; water hardness; corrosion; corrosion control; metallic piping; nondestructive evaluation; *NBSIR 75-923.*

Survey of automatic techniques; swept frequency measurements; Wheatstone Bridge; automatic network analyzers; computer-controlled measurement; magic tee; microwave measurement methods; multiple probe devices; reflectometers; rotating probe devices; slotted lines; *Monogr. 151.*

Survey of clocks; accuracy; atomic clocks; clocks; crystal oscillator; frequency standards; stability; *15719.*

Survey report; federal libraries; library automation; *16076.*

Surveys; blood; blood lead; children; housing; lead paint; lead poisoning; *NBSIR 76-1024.*

Surveys; buildings; fires; loads; safety; *16087.*

Susceptibility; alloy; copper; cryogenic; iron; oxide; resistivity; remanance; *16632.*

Susceptibility; antiferromagnetism; critical temperature; dipole-dipole interaction; erbium phosphate ground state; heat capacity; lattice sums; magnetic; *15866.*

Susceptibility; diamagnetism; light scattering; molecular diffusion; organic molecule; superconductor; *16529.*

Suspended particulates in water; Teflon water sampler; trace elements; trace elements in water; water; filtering water; river water; sampling water for trace elements; *SP422*, pp. 439-455 (Aug. 1976).

Suspension; acidity; contact; decantate; electrode; error; extract; paper; pH; *NBSIR 75-915.*

Swelling of rubber network; cross-linking of rubber; dicumyl peroxide; elasticity theory of rubber; entanglements in rubber; gel point; modulus of rubber; molecular interpretation of rubber elasticity; rubber elasticity; *J. Res.* **80A** No. 3, 451-463 (1976).

Swept frequency; time delay spectrometry; tissue; transmission; velocity; attenuation; phase; *SP453*, pp. 81-95 (Oct. 1976).

Swept frequency measurements; Wheatstone Bridge; automatic network analyzers; computer-controlled measurement; magic tee; microwave measurement methods; multiple probe devices; reflectometers; rotating probe devices; slotted lines; survey of automatic techniques; *Monogr. 151.*

Swing sets, safety of; home playground equipment, safety of; jungle gyms, safety of; playground equipment, safety of; safety of home playground equipment; slides, safety of; *PS66-75.*

Symbolic program evaluation; automatic testing; computer program testing; FORTRAN programs; program analysis; software correctness; software verification; *NBS-GCR-76-69.*

Symmetries; ψ particles; χ particles; angular distributions; gamma-gamma correlations; quark models; *15962.*

Symmetry; transition metal ions; chromium 3+; crystal vacancies; cubic crystals; depolarization; impurity compensation; luminescence; magnesium oxide; MgO; optical properties; polarized luminescence; *16521.*

Symmetry species; tetrahedral; energy levels; hyperfine interactions; methane; selection rules; *16376.*

Symplectic matrices; generalized permutations; *p*th roots; *15790.*

Symposium; critical current; mechanical properties; stress effects; superconductors; *16636.*

Synchronization; time; broadcast; communication; frequency; ratio; *16496.*

Synchrotron; building collapse; corrosion; energy; environmental; frequency standards; hearing aids; high-rise buildings; metals; radiation safety; standards laboratory; *DIM/NBS* **60,** No. 5, 1-24 (1976).

Synchrotron radiation; vacuum ultraviolet; atomic physics; *15795.*

Syndrome; accuracy; analytical chemistry; standard reference material; statistics; *SP422,* pp. 123-126 (Aug. 1976).

Synovial fluid; calcium diphosphate; calcium pyrophosphate; chondrocalcinosis; pseudogout; solubility; solubility product; *16230.*

Synthetic benchmarking; workload characterization; benchmarking; charging algorithms; service bureaus; *16624.*

Synthetic benchmarking; workload characterization; benchmarking; charging algorithms; service bureaus; *TN920.*

Synthetic coal slags; system K_2O-CaO-Al_2O_3-SiO_2; vaporization; crystallization; magnetohydrodynamics; potassium activity; *16457.*

Synthetic focus; tissues; ultrasound; acoustic attenuation; acoustic velocity; breast tumor; computerized tomography; heart; reconstruction; refractive index; *SP453,* pp. 109-119 (Oct. 1976).

Synthetic implants; adsorption; blood protein; bound fraction; ellipsometry; implants; polymer adsorption; protein adsorption; *NBSIR 75-667.*

Synthetic implants; adsorption; blood protein; bound fraction; ellipsometry; implants; polymer adsorption; protein adsorption; *NBSIR 76-1017.*

System; test method; ASTM; classification; fire hazard; participation; property; *16124.*

System engineering; building codes; computer model; decision theory; networks; specifications; standards; *NBS-GCR-76-55.*

System K_2O-CaO-Al_2O_3-SiO_2; vaporization; crystallization; magnetohydrodynamics; potassium activity; synthetic coal slags; *16457.*

System K_2O-ZrO_2-cerium oxide; thermal microbalance; x-ray diffraction; cerium oxide; magnetohydrodynamics; *16440.*

Systematic error; amplitude density function; arithmetic average; autocorrelation function; average wavelength; kurtosis; minicomputer software; random error; skewness; surface microtopography; surface roughness; surface texture; *TN902.*

Systematic error; Youden plot; analytical performance; between-run; calibration; precision; quality control; *SP422,* pp. 141-150 (Aug. 1976).

Systematic errors; accuracy; accurate measurement system; precision; reference methods; standard reference material; *SP422,* pp. 41-63 (Aug. 1976).

Systematic errors; trace analysis; accuracy; activation analysis; analytical chemistry; charged particle activation analysis; cross sections; excitation functions; fast neutron activation analysis; fast particle activation analysis; *SP422,* pp. 1189-1214 (Aug. 1976).

Systematic errors; uncertainties; accuracy; optical radiation measurement; radiometry; *16583.*

Systematic errors in powder diffraction; calculated powder patterns; I/I_c; microabsorption effects; quantitative phase analysis; quantitative powder diffraction; reference intensity ratios; *15929.*

Systematic trends; continuum; discrete spectrum; *f*-sum rule; *f*-values; lithium sequence; oscillator strength distribution; oscillator strengths; relativistic effects; spectral series; *15817.*

Systematic trends; *f*-values; isoelectronic sequence; lithium sequence; oscillator strengths; relativistic effects; spectral series; *JPCRD* **5,** No. 3, 537-570 (1976).

Systems; attitudes; conservation; energy; industrial; *SP403,* pp. 113-117 (June 1976).

Systems analysis; design criteria; fire hazards; fire losses; fire reporting; fire safety; information systems; National Fire Data System; specifications; state governments; *NBS-GCR-73-5.*

Systems analysis; urban problems; operations research; *16119.*

Systems engineering; building codes; computer program; decision theory; networks; specifications; standards; *NBS-GCR-76-56.*

Systems engineering; building codes; computer program; decision theory; FORTRAN; logic design; networks; specifications; standards; *NBS-GCR-76-57.*

Systems engineering; state-of-the-art reviews; acceptability; coding; costs; data transmission systems; decisionmaking; economics; errors; information theory; input-output devices; interfaces; malfunctions; man-machine systems; remote control systems; *NBS-GCR-74-29.*

T

Table; density; experimental; magnetic suspension densimeter; normal butane; saturated liquid; *16646.*

Tables; apparatus; density; experimental; magnetic suspension; methane; nitrogen; saturated liquid; *16645.*

Tables; theory; chemical applications; instrumentation; Mössbauer spectrometry; nuclear parameters; recent advances; *16332.*

Tafel plots; tungsten bronzes; Auger electron spectroscopy; electrocatalyst; oxygen reduction; sodium depletion; *SP455,* pp. 297-303 (Nov. 1976).

Taguchi gas sensors; detectors; fire detectors; gas detectors; smoke detectors; *NBSIR 76-990.*

Tall buildings; wind profiles; boundary layer; hurricanes; loads (forces); natural analysis; *15899.*

Tank circuit; FET; pi network; *16580.*

Tantalum; emittance; high-speed measurements; high temperature; melting point; pyrometry; radiance temperature; *16426.*

Tantalum; temperature measurements; thermal emf drift; tungsten-rhenium alloys; beryllium oxide; refractory metals; sheathed thermocouples; *15797.*

Tantalum; thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; *16420.*

Tape; thermal radiant-energy response; thermal transient response; transducers; zero shift; coatings; dynamic; dynamic response; pressure transducer; protective coatings; shock tube; *NBSIR 76-1144.*

Tape recorder; telephone; transmitter; wiretapping; body worn antenna; bugging; eavesdropping; electronic surveillance; microphones; receiver; *16237.*

TAST; thermal effects; tissue; tumor; ultrasonic; velocity; absorption; attenuation; brain; neoplasm; *SP453,* pp. 153-163 (Oct. 1976).

Taxonomy of integrity flaws; UNIVAC 1100 Series OS; BBN-TENEX; IBM OS/360; operating system security; security flaws; software security; *NBSIR 76-1041.*

Teaching method; architectural-design teaching; assemblage; design critiques; feedback; *16020.*

Teaching metric; cryogenic fluid; door locks; energy; EPIC supplement; high winds; home security; nondestructive evaluation; research associate program; school systems; smoke detectors; *DIM/NBS* **60,** No. 4, 1-24 (1976).

Tearing; vibratory apparatus; adhesion; cavitation; coatings; design charts; elastomers; erosion; Hopkinson pressure bar apparatus; impedances; mismatching; stress wave interactions; substrates; *SP452,* pp. 120-123 (Sept. 1976).

Technical aid; adobe; cane; earthquake; housing; Peru; *SP444,* pp. VI-16—VI-24 (Apr. 1976).

Technical aid; volcanoes; field observation; Indonesia; Japan; *SP444,* pp. VI-1—VI-15 (Apr. 1976).

Technical analysis; temperature; air flow rate; electrical, mechanical and thermal hazards; hair dryer/stylers; heat flux; safety; *NBSIR 76-1112.*

Technical bases; building research; building technology; codes; criteria; project summaries; standards; *SP446.*

Technical strategy; design; development; fabrication; life cycle costing; materials policy; nondestructive evaluation; performance; processing; *15873.*

Technological aid; earthquake; Japan; natural disaster; storm; structural engineering; *SP444,* pp. VI-25—VI-31 (Apr. 1976).

Technological innovation; bibliography, technological innovation; innovation, technological; *NBS-GCR-ETIP 73-03.*

Technological innovation; civilian, technological innovation; social purposes, civilian; *NBS-GCR-75-42.*

Technologist; x-ray departments; x-ray trends; diagnostic; nationwide evaluation; physician; *SP456,* pp. 147-152 (Nov. 1976).

Technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; policies; R&D; technological change; *NBS-GCR-ETIP 76-05.*

Technology; demonstration projects; Experimental Technology Incentives Program; federal funding of civilian R&D; federal policies; guidelines; policies; R&D; technological change; *NBS-GCR-ETIP 76-06.*

Technology; terminology; data base; data integration; implementation; modelling; *16329.*

Technology and civilization; preventive technology; scientific ills; society and science; *16300.*

Technology assessment; economic factors; measurement; surface; surface finish; surface roughness; *NBSIR 75-927.*

Technology assessment; imaging optics; lens testing; microcopy resolution charts; National Measurement System; photographic density; *NBSIR 75-942.*

Technology assessment; user experience; auditing; cost/benefit analysis; data base; data base management; DBMS; government regulation; management objectives; privacy; security; standards; *SP451.*

Technology for security and privacy; computer security; information handling; privacy; safeguards for security and privacy; *16439.*

Technology incentives; energy conservation; ETIP; government procurement policy; noise reduction; performance specification; *NBS-GCR-ETIP 73-05.*

Technology incentives; energy conservation; ETIP; government procurement policy; *NBS-GCR-ETIP 73-06.*

Technology incentives; ETIP; government procurement; performance specifications; procurement mechanisms; *NBS-GCR-ETIP 73-02.*

Technology incentives; ETIP; government procurement policy; noise reduction; performance specification; *NBS-GCR-ETIP 73-04.*

Technology incentives; ETIP; government-owned patents; patent screening; *NBS-GCR-ETIP 73-07, Vol. 1.*

Technology incentives; ETIP; government-owned patents; patent screening; *NBS-GCR-ETIP 73-07, Vol. 2.*

Technology subsidies; venture capital; capital market imperfections; federal technology policy; SBIC's; securities and tax regulation; small firm finances; technological change; *NBS-GCR-ETIP 76-08.*

Technology subsidies; venture capital; capital market imperfections; federal technology policy; SBIC's; securities and tax regulation; small firm finances; technological change; *NBS-GCR-ETIP 76-12.*

Technology transfer; terminals; acceptance tests; AID; Bolivia; CENACO; computing using Spanish; foreign relations; international agreement; lectures; OMNITAB II computing system; *NBSIR 76-1176.*

Technology transfer; U.S. foreign assistance; computer education and training; computer technology; less-developed countries; *NBSIR 73-423.*

Tectonics; acoustics; coal; earthquakes; geologic faults; mining; *NBS-GCR-73-18.*

Tectonics; geodesy; geodynamics; lasers; metrology; moon; *15794.*

Tectonics; VLBI; coordinate systems; geodesy; geodynamics; lasers; *15801.*

Tectonics; VLBI; coordinate systems; geodesy; geodynamics; lasers; *15806.*

Teflon bonded electrodes; nickel cobalt oxides; oxygen evolution, Pourbaix diagram; semiconducting oxides; spinels; *SP455,* pp. 281-288 (Nov. 1976).

Teflon water sampler; trace elements; trace elements in water; water; filtering water; river water; sampling water for trace elements; suspended particulates in water; *SP422,* pp. 439-455 (Aug. 1976).

Telecommunication; common carriers; computer networks; interfaces; modems; *NBS-GCR-74-31.*

Telecommunications; computer communications; computer networking; data communications; networks; performance requirements; *16551.*

Telephone; transmitter; wiretapping; body worn antenna; bugging; eavesdropping; electronic surveillance; microphones; receiver; tape recorder; *16237.*

Telephone cables; underground; alloys; corrosion; metallurgically-bonded; metals; plastic-bonded; soils; *16352.*

Telephone industry and specialized carriers; time and frequency; time scales; users of NBS radio broadcasts; atomic frequency standards; aviation industry; electric power industry; National Measurement System, position location; shipping and boating industries; *SP445-1.*

Teleprocessing; access procedures; command language; computer networks; job control language; macros; minicomputers; protocols; *TN917.*

Teletypewriters; coding; interfaces; modems; signal processing; standards; *NBS-GCR-74-30.*

Television color subcarrier; time calibration; time signals; broadcast of standard frequencies; frequency calibration; high frequency; low frequency; standard frequencies; *SP432.*

Television receiver; color subcarrier; frequency calibration; frequency comparator; frequency measurements; oscillator calibration; phase comparison; *U.S. Patent 3,958,269.*

TEM cell; EMC measurements; radiation resistance; rectangular coax; shielded strip line; *NBSIR 75-829.*

TEM cell; shielded strip line; *NBSIR 76-841.*

TEM cells; measurements; radiated emission; radiation resistance; *16469.*

Temkin; wax-bound electrode; amperometry; cyclic voltammetry; electrosorption; Langmuir; lead dioxide; pyrophosphate; *SP455,* pp. 183-189 (Nov. 1976).

Temperature; acoustic calibrators; A-weighting; barometric pressure; crest factor; ground cover; humidity; instrumentation; microphones; sound level meters; statistical control processes; *TN931.*

Temperature; air flow rate; electrical, mechanical and thermal hazards; hair dryer/stylers; heat flux; safety; technical analysis; *NBSIR 76-1112.*

Temperature; bone; dispersion phenomena; Maxwell-Wagner polarization; piezoelectric *d* constant; piezoelectricity; relative humidity; *16314.*

Temperature; calibration; ceramic; condenser; electret; humidity; microphones; reciprocity; sensitivity; *NBSIR 76-1090.*

Temperature; toxicity; upholstery; bedding; beds; carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; furniture; life hazard; oxygen; smoke; *NBS-GCR-73-1.*

Temperature coefficient of index; thermal expansion; ZnSe; chemical vapor deposited ZnSe; elastic compliance; elastic constants; polycrystalline ZnSe; refractive index; stress-optic constants; *15938.*

Temperature coefficient of refractive index; alkali halides; optical constants; refractive index; *JPCRD* **5,** No. 2, 329-528 (1976).

Temperature coefficient of refractive index; zinc selenide; refractive index; *SP435,* pp. 170-174 (Apr. 1976).

Temperature coefficient of refractive index; calcium fluoride; refractive index; *SP462,* pp. 64-68 (Dec. 1976).

Temperature dependence; wavelength dependence; multilayer dielectric mirror; optical absorptance; reflectance; scattering; *SP435,* pp. 230-235 (Apr. 1976).

Temperature drift; thermodynamic properties; glass transition; heat capacity; high molecular weight linear polyethylene; polyethylene; *J. Res.* **80A** No. 1, 51-57 (1976).

Temperature effects; absorption: extinction coefficients; N_2O_4; NO_2; spectra; *J. Res.* **80A** No. 2, 143-166 (1976).

Temperature effects; trace elements; zinc; atomic absorption spectrophotometry; calcium; container effects; copper; magnesium; potassium; serum minerals; serum storage effects; sodium; *SP422,* pp. 575-591 (Aug. 1976).

Temperature gradient; thermal gradient; thermocouple; thermoelectric stability; aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; *16158.*

Temperature mapping; active devices; hot-spot behavior; laser scanning; nondestructive testing; silicon optical absorption coefficient; *16577.*

Temperature measurement; measurement temperature; medicine temperature; microwave diathermy fields; *16441.*

Temperature measurements; clinical instruments; instruments, clinical; *16021.*

Temperature measurements; thermal emf drift; tungsten-rhenium alloys; beryllium oxide; refractory metals; sheathed thermocouples; tantalum; *15797.*

Temperature measurements; thermistor probe; high-resistance leads; radio frequency heating; *15803.*

Temperature scale; calibration; emergent stem; liquid-in-glass thermometer; reference point; stirred liquid comparison bath; *Monogr. 150.*

Temperature scale differences; thermodynamic temperatures; gas thermometry; International Practical Temperature Scale of 1968; *J. Res.* **80A** Nos. 5 and 6, 703-738 (1976).

Temperature standard; tin point; triple point of water; zinc point; comparator; International Practical Temperature Scale of 1968; IPTS-68; oxygen point; platinum resistance thermometer; *J. Res.* **80A** No. 3, 477-504 (1976).

Temperature wave; thermal diffusivity; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; interatomic potential; molecular dynamics; second sound; shock wave; stress wave; *16138.*

Temperature wave; thermal diffusivity; thermal equilibrium; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; molecular dynamics; second sound; stress pulse; *16589.*

Temporal development; laser power and energy measurements; spatial response; *16561.*

Tenability levels; detector sensitivity; detector siting; heat detectors; ionization smoke detectors; photoelectric smoke detectors; residential fires; smoke detectors; *NBS-GCR-75-51.*

Tensile moduli; tensile strength; thermal conductivity; thermal contraction; boron; cryogenics; glass; graphite; literature review; PRD-49; reinforced aluminum; reinforced plastics; structural composites; *15745.*

Tensile strength; thermal conductivity; thermal contraction; boron; cryogenics; glass; graphite; literature review; PRD-49; reinforced aluminum; reinforced plastics; structural composites; tensile moduli; *15745.*

Tensile strength; wear; corrosion; crack-free chromium; electroplating; fast plating; fatigue strength; grinding; hardness; stress; *SP452,* pp. 56-63 (Sept. 1976).

Tensile stress; cadmium telluride; elastic compliance tensor; elastic moduli; extrinsic damage thresholds; high-power lasers; infrared materials; *SP462,* pp. 119-125 (Dec. 1976).

Tension; vibrating membranes; air impedance; compliant surface; drag reduction; membranes; *16625.*

Tension tests; alignment; stresses; *16324.*

Tensor products; convolution; Hilbert space; separation of variables; spectral measure; *J. Res.* **80B** No. 3, 347-351 (1976).

Tentative standards; building codes; industrialization; less-developed country; SASO; Saudi Arabia; standardization; *NBSIR 75-976.*

Tents; tests; uniforms; upholstered furniture; apparel; burn injury; carpets; draperies; fabrics; flammability; heat flux; standards; *16144*.
Terbium; energy levels; ionization energy; spectrum; *15924*.
Terminals; acceptance tests; AID; Bolivia; CENACO; computing using Spanish; foreign relations; international agreement; lectures; OMNITAB II computing system; technology transfer; *NBSIR 76-1176*.
Terminals; aluminum wire; splices; *NBSIR 76-1039*.
Terminals; security; *16048*.
Terminals; verification; ADP security; computer networks; controlled accessibility; encryption; evaluation criteria; key; password; personal identification; *16013*.
Terminations, rope; weathering, simulated; aramid fiber rope; breaking load, rope; cable, aramid-fiber; end fittings, rope; fatigue damage; rope, aramid-fiber; slings, cargo; *NBSIR 76-1159*.
Terminology; data base; data integration; implementation; modelling; technology; *16329*.
Terms; vocabulary; computer; data processing; definitions; Federal Information Processing Standards Publication; information processing; privacy; security; *FIPS PUB 39*.
Ternary metal-sulfur arrays; transition elements; triphenylphosphine; tungsten bronze; electrocatalysis; fuel cells; mixed oxides; oxygen reduction; phosphoric acid; *NBSIR 75-742*.
Test; thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; resistance; *TN894*.
Test comparison; UK; USA; fire propagation test; fire tests; smoke density chamber; smoke tests; *16125*.
Test device evaluation; criteria; decision making; human systems; measuring instruments; research assistants; *16091*.
Test method; ASTM; classification; fire hazard; participation; property; system; *16124*.
Test method; vertical loads; wall panels; walls; lateral loads; loading rate; racking; *BSS91*.
Test method; wall panels; walls; compression; eccentric loading; flat-end; kern; loading rate; pin-end; *NBSIR 75-779*.
Test method, bicycle; bicycle brakes; brakes, bicycle; dynamics, bicycle; error analysis; friction, tire/pavement; kinetics, bicycle; measurements, bicycle braking; pitchover; standards, bicycle safety; *NBSIR 75-786*.
Test methods; aerosols; ionization chambers; light attenuation; scattered light; smoke detectors; *NBSIR 76-1037*.
Test methods; fire detector; *NBSIR 76-1172*.
Test methods; head injury; helmets; math model; protective headgear; safety; *NBSIR 76-1107*.
Test methods; nonpolymeric constituents in plastics; plastics testing; polymer analysis; properties; *16225*.
Test methods; plastics standardization; specifications; standards; standards organization; *16106*.
Test methods; transformations; weighting; interlaboratory comparisons; invariance; models; precision; precision of measurement; repeatability; reproducibility; *15909*.
Test methods; water distribution; water spray; automatic sprinklers; bibliography; droplet size; fire suppression; spray nozzles; spray patterns; *NBS-GCR-76-72*.
Test methods; watthour meters; code; definitions; demand meters; electricity metering; performance requirements; standards; *15829*.
Test pattern; test structures; dopant density; microelectronics; MOS capacitors; *n-p-n* transistor fabrication; *p-n* junctions; resistivity; semiconductor electronics; sheet resistors; silicon; *SP400-22*.
Test patterns; data acquisition; data display; integrated circuits; measurement technology; microelectronics; process control; reliability; semiconductors; silicon; *SP 400-15*.
Test patterns; test structures; hardened integrated circuits; integrated circuits; radiation effects; radiation hardening; *NBSIR 76-1093*.
Test patterns; thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; *SP400-19*.
Test patterns; thermally stimulated currents; MOS capacitors; *p-n* junctions; resistivity of silicon; semiconductor devices; semiconductor process control; sheet resistors; *SP400-21*.
Test patterns; thermally stimulated current; thermal resistance; ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; acoustic emission; Auger electron spectroscopy; beam-lead bonds; bias-temperature stress test; boron redistribution; *SP400-25*.
Test patterns; TTL; vendor qualification; circuit procurement; component screening; custom circuits; LSI; microelectronics; parameter control; process uniformity; random faults; reliability; *16620*.
Test procedures; classification; containment; designation; light sources; national standard; radiation source; radioactive; radioluminous products; self-luminous sources; *H116*.
Test procedures; high temperatures; materials evaluation, MHD-materials; *16174*.
Test structures; dopant density; microelectronics; MOS capacitors; *n-p-n* transistor fabrication; *p-n* junctions; resistivity; semiconductor electronics; sheet resistors; silicon; test pattern; *SP400-22*.
Test structures; hardened integrated circuits; integrated circuits; radiation effects; radiation hardening; test patterns; *NBSIR 76-1093*.
Testing; acceptance testing; compliance testing; laboratory evaluation; performance testing; qualified products lists; *NBSIR 75-719*.
Testing; bicycles; braking; consumer safety; handbrake; safety; *NBSIR 75-755*.
Testing; bicycles; braking; consumer safety; handbrakes; *NBSIR 75-953*.
Testing; certification; developing countries; exports; industrializing countries; labeling; seminar; South Asia trade; *SP438*.
Testing; engineering, instrumentation and techniques; fluids; force; hydraulic equipment; mechanical power; noise; pressure; quality control; safety; *16452*.
Testing; thermal transients; architectural heritage; fire; guardrail; high-capacity; mathematics; mercury; performance standard; pressure transducers; SRM; surgical implants; *DIM/NBS* **60**, No. 8, 1-24 (1976).
Testing; ultraviolet detectors; detection; fire detectors; flame detectors; heat detectors; infrared detectors; smoke detectors; *NBSIR 76-1040*.
Testing; walls; lime (dolomitic); masonry; mortars (materials); portland cement; *15992*.
Testing facilities; Bolivia; measurements; quality control; standardization; *NBSIR 76-1099*.
Testing facilities; building technology; information handling; measurement services; Philippines; standardization; *NBSIR 76-1083*.
Testing machine; creep; instrumentation; stress rupture; *NBSIR 76-1074*.
Tests; dynamic tests; earthquake simulator; shake table; structural engineering; *SP444*, pp. V-25—V-34 (Apr. 1976).
Tests; fabric flammability; fabrics; ignition; heat energy; *NBS-GCR-76-70*.

Tests; torsional excitation; damping; damping coefficients; shear modulus; soil; *SP444*, pp. III-72 – III-83 (Apr. 1976).
Tests; uniforms; upholstered furniture; apparel; burn injury; carpets; draperies; fabrics; flammability; heat flux; standards; tents; *16144*.
Tetracyanoquinodimethane; tetrasulfur tetranitride; tetrathiafulvalene; vaporization; chemical ionization mass spectrometry; mass spectrometry; sulfur nitride; *16422*.
Tetracyanotetrathiafulvalene; tetracyanotetrathiafulvalene·triphenylphosphine; $\Delta^{2,2'}$-bis-14.5-dicyano-1,3-dithiodene; 1,3-dithiolenes; ^{31}P NMR; 4,5-dicyano-1,3-dithiolene-2-thione; aryl phosphines; cyclic voltammetry; desulfurization; *15991*.
Tetracyanotetrathiafulvalene·triphenylphosphine; $\Delta^{2,2'}$-bis-14.5-dicyano-1,3-dithiodene; 1,3-dithiolenes; ^{31}P NMR; 4,5-dicyano-1,3-dithiolene-2-thione; aryl phosphines; cyclic voltammetry; desulfurization; phosphines; *15991*.
Tetrafluoroethylene; transverse excitation laser; 2-methyl propene; carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; isotope ratio; nitric oxide; oxygen; *16657*.
Tetrahedral; energy levels; hyperfine interactions; methane; selection rules; symmetry species; *16376*.
Tetranonacontane; chain folds; differential scanning calorimetry; linear polyethylene fractions; low angle x ray; mechanical relaxation; *16289*.
Tetrasulfur tetranitride; tetrathiafulvalene; vaporization; chemical ionization mass spectrometry; mass spectrometry; sulfur nitride; tetracyanoquinodimethane; *16422*.
Tetrathiafulvalene; vaporization; chemical ionization mass spectrometry; mass spectrometry; sulfur nitride; tetracyanoquinodimethane; tetrasulfur tetranitride; *16422*.
Tetrathiafulvalenium-tetracyanoquinodimethanide; TTF-TCNQ; electrical conductivity; organic conductors; *16061*.
Tetrathiofulvalinium-tetracyano-quinodimethane; TTF-TCNQ; eddy currents; electron paramagnetic resonance; microwave conductivity; *15917*.
Textiles; edges; fabric construction; fabric flammability; fire spread; flame spread; flame spread rate; surfaces; *NBS-GCR-75-34*.
Th I; wavelengths; Zeeman-effect of Th I; energy levels; thorium; *J. Res.* **80A** No. 2, 221-358 (1976).
Thalium; molecules; radiation; *16094*.
Thallium; tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; *16420*.
Thallium chloride; very low temperatures; barium titanate; dielectric properties; ferroelectrics; KDP; PZT 65/35; *16491*.
Theft; burglary; consultants; crimes of opportunity; directory, (security); investigations; law enforcement; resources; security; shoplifting; *16369*.
Theorem; asymptotics; elastic; oscillations; Pomeranchuk; shrinkage; *16249*.
Theoretical; collisions; electron; excitation; hydrogen; ionization; *15893*.
Theoretical dosimetry; energy deposition spectra; microdosimetry; neutron interactions with tissue; neutrons; radiation quality; secondary particle spectra; *16182*.
Theory; atom; collisions; electron; low energy; review; scattering; *15883*.
Theory; chemical applications; instrumentation; Mössbauer spectrometry; nuclear parameters; recent advances; tables; *16332*.
Theory; computations; cooling system; cryogenics; electric power transmission; flow stability; helium; oscillations; superconductors; *15809*.
Theory; wind; bridge; design; field data; gust response; model; specifications; structure; *SP444*, pp. I-1 – I-20 (Apr. 1976).
Theory of chromatography; column materials; detectors; gas chromatography; *15926*.
Theory of diffusion; vacancy diffusion; computer simulation; correlation factor for diffusion; diffusion; matrix calculation; Monte Carlo calculation; *16073*.
Theory of games; inspection; mathematical model; regulation; strategy; *J. Res.* **80B** No. 2, 189-236 (1976).
Therapeutic beam; dose profiles; electron dosimetry; pencil beam; *SP456*, pp. 313-326 (Nov. 1976).
Therapy; dosimetry; intercomparisons; radiation; supervoltage; *SP456*, pp. 359-363 (Nov. 1976).
Therapy; TLD; dosimetry; ion chamber; patient; precision; *SP456*, pp. 343-350 (Nov. 1976).
Therapy; traceability; diagnosis; measurement accuracy; medical facilities; regulatory; *SP456*, pp. 139-146 (Nov. 1976).
Therapy departments; thermoluminescence dosimeters; uncertainty; water phantom; absorbed dose; cobalt-60 gamma radiation; computation check; dose interpretation; mailings; results; *J. Res.* **80A** No. 4, 663-668 (1976).
Thermal; conservation; costs; economics; energy; *SP403*, pp. 95-101 (June 1976).
Thermal; thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; *SP403*.
Thermal; volume; compressibility; configuration; entropy; heat capacity; holes; polymer; poly(vinyl acetate); pressure; *16077*.
Thermal analysis; transient heat flows; building heat transfer; computer programs; dynamic thermal performance; heat flow analysis; heating and cooling loads; *15762*.
Thermal analysis; zinc selenide window; computer analysis; laser induced stresses; stress analysis; *SP462*, pp. 29-35 (Dec. 1976).
Thermal burn hazards; burn hazards, household appliances; fault-tree diagrams; generic safety standards; household appliances; operations research; *NBSIR 76-1097*.
Thermal burns; apparel fabrics; fabrics; fire hazard; flammability testing; ignition; *NBS-GCR-73-7*.
Thermal burns; apparel fabrics; fabrics; fire hazard; flammability testing; simulation; skin; *NBS-GCR-73-13*.
Thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazards; flammability testing; ignition; skin; *NBS-GCR-73-6*.
Thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazard; flammability testing; skin; *NBS-GCR-73-9*.
Thermal burns; thermal measurements; apparel fabrics; fabrics; fire hazards; flammability testing; ignition; *NBS-GCR-73-12*.
Thermal capillary convection; vacuum vaporization; Al_2O_3; complex equilibria; convective diffusion; evaporative rate; purification (evaporative); solutal-capillary; *15968*.
Thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; interferometry; photoelasticity; piezo-optic constants; *SP462*, pp. 58-63 (Dec. 1976).
Thermal coefficient of refractive index; birefringence; elastooptic constants; infrared-laser window materials; interferometry; KCl; photoelasticity; piezo-optic constants; refractive index; stress-optical constants; *NBSIR 76-1010*.
Thermal coefficient of refractive index; thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; interferometry; photoelasticity; piezo-optic constants; refractive index; *NBSIR 76-1115*.
Thermal comforts; weights and measures; building industry; calibration system; centigrade/celsius; computer; electrical industries; environments; glass standards; government intervention; heating/cooling; lead-paint; metric; *DIM/NBS* **60**, No. 10, 1-24 (1976).

Thermal conduction; absorption coefficients; barothermal gas cell; gas pressure; highly transparent solids; *15914*.
Thermal conductivity; aluminum alloys; composites; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; *NBSIR 76-839*.
Thermal conductivity; ambient temperature index; edge-heat-loss; errors; guarded-hot-plate apparatus; line-heat-source; *16084*.
Thermal conductivity; austenitic steel; cryogenics; electrical resistivity; electrolytic iron; Lorenz ratio; *16206*.
Thermal conductivity; austenitic stainless steel; electrical resistivity; high temperature; low temperature; standard reference materials; *16494*.
Thermal conductivity; composites; copper alloys; cryogenic temperatures; elastic properties; engineering materials; fatigue; fracture; iron alloys; mechanical properties; nickel alloys; superconducting machinery; *NBSIR 75-828*.
Thermal conductivity; conductivity; electrical; heat conductivity; heat transfer; Lorenz function; *15986*.
Thermal conductivity; conductivity; *16169*.
Thermal conductivity; copper-base alloy properties; electrical resistivity; Smith-Palmer equation; *NBSIR 76-1003*.
Thermal conductivity; correlation length; critical point; gas-liquid; nonspherical molecules; Ornstein-Zernike theory; *16484*.
Thermal conductivity; thermal diffusivity; thermal properties; transient techniques; heat capacity; high pressures; *15709*.
Thermal conductivity; thermal contraction; boron; cryogenics; glass; graphite; literature review; PRD-49; reinforced aluminum; reinforced plastics; structural composites; tensile moduli; tensile strength; *15745*.
Thermal conductivity; thermal insulation; conduction; energy conservation; heat transfer; insulation; *15756*.
Thermal conductivity; thermal diffusivity; thermo-elastic coupling; continuum theory of diffusion; density; kinetic temperature; molecular dynamics; numerical error; perfect lattice; *16281*.
Thermal conductivity; titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; *NBSIR 76-848*.
Thermal contraction; boron; cryogenics; glass; graphite; literature review; PRD-49; reinforced aluminum; reinforced plastics; structural composites; tensile moduli; tensile strength; thermal conductivity; *15745*.
Thermal decomposition; alcohols; chemical activation; nonequilibrium; oxygen atoms; RRKM; *15881*.
Thermal decomposition; 2,3-dimethylbutanol-2; 3,3-dimethylbutanol-2; alcohols; heats of formation; hydroxy-alkyl radicals; shock tube; *15904*.
Thermal diffusivity; cadmium telluride; gallium arsenide; germanium; laser flash method; laser windows; *SP435*, pp. 98-106 (Apr. 1976).
Thermal diffusivity; thermal equilibrium; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; molecular dynamics; second sound; stress pulse; temperature wave; *16589*.
Thermal diffusivity; thermal properties; transient techniques; heat capacity; high pressures; thermal conductivity; *15709*.
Thermal diffusivity; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; interatomic potential; molecular dynamics; second sound; shock wave; stress wave; temperature wave; *16138*.
Thermal diffusivity; thermo-elastic coupling; continuum theory of diffusion; density; kinetic temperature; molecular dynamics; numerical error; perfect lattice; thermal conductivity; *16281*.
Thermal distortion; interferometry; laser windows; optical materials; *SP462*, pp. 36-44 (Dec. 1976).
Thermal distortion; laser windows and mirrors; optical figure; pulsed laser; *SP462*, pp. 11-24 (Dec. 1976).
Thermal distortion; thermal lensing; ZnSe; far field intensity; laser windows; *SP435*, pp. 142-147 (Apr. 1976).
Thermal distortion; windows; infrared lasers; interferometry; stress birefringence; *SP435*, pp. 126-141 (Apr. 1976).
Thermal effects; tissue; tumor; ultrasonic; velocity; absorption; attenuation; brain; neoplasm; TAST; *SP453*, pp. 153-163 (Oct. 1976).
Thermal emf drift; tungsten-rhenium alloys; beryllium oxide; refractory metals; sheathed thermocouples; tantalum; temperature measurements; *15797*.
Thermal equilibrium; thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; molecular dynamics; second sound; stress pulse; temperature wave; thermal diffusivity; *16589*.
Thermal expansion; alloys; coefficients of thermal expansion; compilation; critical evaluation; elements; *16005*.
Thermal expansion; barium ferrite; low temperature; *16196*.
Thermal expansion; TTF–TCNQ; d.c. conductivity; microwave conductivity; organic conductors; *16050*.
Thermal expansion; ZnSe; chemical vapor deposited ZnSe; elastic compliance; elastic constants; polycrystalline ZnSe; refractive index; stress-optic constants; temperature coefficient of index; *15938*.
Thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; interferometry; photoelasticity; piezo-optic constants; thermal coefficient of refractive index; *SP462*, pp. 58-63 (Dec. 1976).
Thermal expansion coefficient; ZnSe; BaF_2; CaF_2; fused silica; interferometry; photoelasticity; piezo-optic constants; refractive index; thermal coefficient of refractive index; *NBSIR 76-1115*.
Thermal fracture; two-photon absorption; nonlinear index of refraction; optical distortion; *SP435*, pp. 395-405 (Apr. 1976).
Thermal gradient; thermocouple; thermoelectric stability; aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; *16158*.
Thermal inertia; ASTM Standard E119; building construction; charring; combustion; fire endurance; fire test; flame emissivity; heat transfer; pyrolysis; radiant heat; *NBS-GCR-75-50*.
Thermal instability; base widening; current crowding; hot spots; power transistors; safe operating area; second breakdown; *16451*.
Thermal insulation; conduction; energy conservation; heat transfer; insulation; thermal conductivity; *15756*.
Thermal lensing; ZnSe; far field intensity; laser windows; thermal distortion; *SP435*, pp. 142-147 (Apr. 1976).
Thermal measurements; apparel fabrics; fabrics; fire hazards; flammability testing; ignition; skin; thermal burns; *NBS-GCR-73-6*.
Thermal measurements; apparel fabrics; fabrics; fire hazard; flammability testing; skin; thermal burns; *NBS-GCR-73-9*.
Thermal measurements; apparel fabrics; fabrics; fire hazards; flammability testing; ignition; thermal burns; *NBS-GCR-73-12*.
Thermal measurements; thermodynamic properties; apparel fabric; fabric; fire hazard; flammability testing; *NBS-GCR-73-8*.
Thermal microbalance; x-ray diffraction; cerium oxide; magnetohydrodynamics; system K_2O-ZrO_2-cerium oxide; *16440*.
Thermal model; angle of incidence; polarization; pulsed laser damage; *SP435*, pp. 41-48 (Apr. 1976).

229-317 O - 77 - 44

Thermal motion; TlN_3 structure; ionic crystal; KN_3 structure; low temperature study; monovalent metal azides; NaN_3 structure; neutron diffraction; RbN_3 structure; *15973.*

Thermal neutrons; three-dimensional; complex object; laminagraphy; multiple-film; radiographic inspection; *16371.*

Thermal performance; data requirements; measurement uncertainty; solar energy systems evaluation; *NBSIR 76-1137.*

Thermal performance; thermal storage; solar collector; solar energy; solar radiation; standard; standard test; *TN899.*

Thermal performance; ventilation; water heating; air leakage; building design; energy conservation; fenestration; HVAC systems; illumination; insulation; lighting; performance standard; *NBSIR 74-452.*

Thermal properties; fiberglass cloth; mechanical properties; stress analysis; superconducting coil composite; superconducting wire; *NBSIR 76-837.*

Thermal properties; transient techniques; heat capacity; high pressures; thermal conductivity; thermal diffusivity; *15709.*

Thermal quantities; time and frequency; acoustic quantities; electrical quantities; electromagnetic quantities; end-use measurements; ionizing radiation; measurement activities; measurement institutions; mechanical quantities; National Measurement System; *NBSIR 75-943.*

Thermal quantities; time and frequency; acoustics; atomic properties; economics; electrical quantities; ionizing radiation; mechanical quantities; national measurement system; optical quantities; surface properties; *NBSIR 75-947.*

Thermal radiant-energy response; thermal transient response; transducer; coatings; photoflash bulb; pressure transducer; protective coatings; *NBSIR 76-1060.*

Thermal radiant-energy response; thermal transient response; transducers; zero shift; coatings; dynamic; dynamic response; pressure transducer; protective coatings; shock tube; tape; *NBSIR 76-1144.*

Thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; interatomic potential; molecular dynamics; second sound; shock wave; stress wave; temperature wave; thermal diffusivity; *16138.*

Thermal relaxation; anharmonic crystal; computer simulation; energy transport; heat pulse; molecular dynamics; second sound; stress pulse; temperature wave; thermal diffusivity; thermal equilibrium; *16589.*

Thermal relaxation; glassy state; glass transition; heat capacity; polymer; specific heat; strain energy; supercooled liquid; *16309.*

Thermal resistance; thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; charge-coupled device structures; *SP400-19.*

Thermal resistance; transistor, power; current crowding; hot spots; reliability; safe operating area limits; second breakdown; semiconductor devices; *16328.*

Thermal resistance; ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; acoustic emission; Auger electron spectroscopy; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; dopant profiles; *SP400-25.*

Thermal response; transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; charge-coupled device structures; Darlington pairs; *SP400-19.*

Thermal response factors; on-line simulation of temperature controls; *16220.*

Thermal sensitivity index; calorimeter; combustion; fire test; heat release; limiting thermal index; pyrolysis; radiant heat; *NBS-GCR-76-54.*

Thermal stability; coordination polymers; role of metal and ligand; *16308.*

Thermal storage; energy conservation; GSA/Manchester building; solar collector; solar heating and cooling; *NBSIR 76-1056.*

Thermal storage; solar buildings; solar collectors; solar domestic hot water systems; solar heating; standards; *NBSIR 76-1059.*

Thermal storage; solar collector; solar energy; solar radiation; standard; standard test; thermal performance; *TN899.*

Thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; photographic flashbulb; pressure; pressure measurement; pressure transducer; *TN905.*

Thermal transient; transducer; zero shift; calibration; dynamic; electronic flash; photoflash bulb; pressure; pressure measurement; pressure transducer; pressure transducer response; response; *NBSIR 76-1038.*

Thermal transient response; transducer; coatings; photoflash bulb; pressure transducer; protective coatings; thermal radiant-energy response; *NBSIR 76-1060.*

Thermal transient response; transducers; zero shift; coatings; dynamic; dynamic response; pressure transducer; protective coatings; shock tube; tape; thermal radiant-energy response; *NBSIR 76-1144.*

Thermal transients; architectural heritage; fire; guardrail; high-capacity; mathematics; mercury; performance standard; pressure transducers; SRM; surgical implants; testing; *DIM/NBS* **60,** No. 8, 1-24 (1976).

Thermally stimulated capacitance; thermally stimulated current; gold-doped silicon; measurement methods; MOS capacitor; *p-n* junction; semiconductor defects; silicon; *16363.*

Thermally stimulated capacitance; thermally stimulated current; cryostat; defects; gold-doped silicon; measurement methods; microelectronics; MOS capacitor; *p-n* junctions; semiconductors; silicon; *SP400-26.*

Thermally stimulated current; gold-doped silicon; measurement methods; MOS capacitor; *p-n* junction; semiconductor defects; silicon; thermally stimulated capacitance; *16363.*

Thermally stimulated current; thermal resistance; ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; acoustic emission; Auger electron spectroscopy; beam-lead bonds; bias-temperature stress test; boron redistribution; *SP400-25.*

Thermally stimulated current; cryostat; defects; gold-doped silicon; measurement methods; microelectronics; MOS capacitor; *p-n* junctions; semiconductors; silicon; thermally stimulated capacitance; *SP400-26.*

Thermally stimulated currents; MOS capacitors; *p-n* junctions; resistivity of silicon; semiconductor devices; semiconductor process control; sheet resistors; test patterns; *SP400-21.*

Thermistor probe; high-resistance leads; radio frequency heating; temperature measurements; *15803.*

Thermocapillarity; convection; drops; Marangoni effect; surface tension; *16341.*

Thermochemical tables; enthalpy; entropy; Gibbs energy; heat capacity; potassium compounds; rubidium compounds; sodium compounds; standard reference data; *NBSIR 76-1034.*

Thermochemistry; thermodynamics; adenosine 5′-triphosphate; biochemistry; coupled equilibrium; enzyme catalyzed reactions; glucose; heat measurement; hexokinase; magnesium; metabolic processes; microcalorimetry; *16385.*

Thermochemistry; thermodynamics; review articles; water pollution; aqueous systems; bibliography; biochemical systems; enthalpy data; entropy data; equilibrium data; Gibbs energy data; heat capacity data; partial molal properties; *SP454.*

Thermochemistry; thermodynamic data networks; computerized data analysis; data evaluation; least squares (L2); least sums (L1); *NBSIR 76-1147.*

Thermocouple; thermoelectric stability; aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; *16158*.

Thermodynamic; density; dielectric constant; electromagnetic properties; equation of state; ethane; hydrocarbon; liquefied natural gas; measurements; methane; mixtures; *16631*.

Thermodynamic data; waste disposal; combustion thermodynamics; enthalpies of formation; incinerators, industrial; *16032*.

Thermodynamic data networks; computerized data analysis; data evaluation; least squares (L2); least sums (L1); thermochemistry; *NBSIR 76-1147*.

Thermodynamic properties; air; argon; hydrogen; ionized gases; nitrogen; oxygen; *16167*.

Thermodynamic properties; air; gases; high density; mixtures; *16455*.

Thermodynamic properties; apparel fabric; fabric; fire hazard; flammability testing; thermal measurements; *NBS-GCR-73-8*.

Thermodynamic properties; beryllium aluminate; chrysoberyl; drop calorimetry; enthalpy measurements; high temperature calorimetry; specific heat; *J. Res.* **80A** No. 1, 65-73 (1976).

Thermodynamic properties; CODATA compatible values; enthalpies of formation; entropy; Gibbs energy of formation; selected thermodynamic values; *NBSIR 75-968*.

Thermodynamic properties; glass transition; heat capacity; high molecular weight linear polyethylene; polyethylene; temperature drift; *J. Res.* **80A** No. 1, 51-57 (1976).

Thermodynamic properties; transport properties; correlation; equation of state; excess function; hydrogen; interpolation methods; least squares; methane; *15731*.

Thermodynamic properties; vapor pressure; activity coefficients; aqueous; computer programs; data evaluation; electrolytes; electromotive force; isopiestic method; osmotic coefficients; nonlinear least squares; *TN928*.

Thermodynamic temperatures; gas thermometry; International Practical Temperature Scale of 1968; temperature scale differences; *J. Res.* **80A** Nos. 5 and 6, 703-738 (1976).

Thermodynamics; adenosine 5′-triphosphate; biochemistry; coupled equilibrium; enzyme catalyzed reactions; glucose; heat measurement; hexokinase; magnesium; metabolic processes; microcalorimetry; thermochemistry; *16385*.

Thermodynamics; automobile; break-even analysis; conservation; cooling; economics; energy; environment; fuel; heating; imports; industry; management; manufacturing; paper; petroleum; resources; standards; steel; thermal; *SP403*.

Thermodynamics; chemical kinetics; diffusion flames; flame extinction; flame temperature; flame velocity; flammability; flammability limits; oxygen index test; *NBSIR 76-1076*.

Thermodynamics; energy; heating systems; model; *SP403*, pp. 57-64 (June 1976).

Thermodynamics; review articles; water pollution; aqueous systems; bibliography; biochemical systems; enthalpy data; entropy data; equilibrium data; Gibbs energy data; heat capacity data; partial molal properties; thermochemistry; *SP454*.

Thermodynamics; viscoelasticity; creep; dissipation; elevated temperature; energy; hold-time; hysteresis; low-cycle fatigue; plasticity; stainless steel; stress relaxation; *16004*.

Thermo-elastic coupling; continuum theory of diffusion; density; kinetic temperature; molecular dynamics; numerical error; perfect lattice; thermal conductivity; thermal diffusivity; *16281*.

Thermoelectric power; band structure; properties of semiconductors; semiconductors; *16161*.

Thermoelectric stability; aging; calibration change; gradient; high temperature (700 to 2000 °C); iridium; iridium-rhodium alloy; noble-metal thermocouple; oxidation; platinum; platinum-rhodium alloy; preferential oxidation; temperature gradient; thermal gradient; *16158*.

Thermographic surveys; thermography; energy conservation; energy surveys; infrared; nondestructive evaluation; *TN923*.

Thermography; energy conservation; energy surveys; infrared; nondestructive evaluation; thermographic surveys; *TN923*.

Thermogravimetry; weight-loss; degradation; kinetics; oxidation; parameter jump method; polystyrene; relaxation methods; *15858*.

Thermoluminescence; track-etch; films; images; neutron radiography; nondestructive tests; real-time imaging; *15796*.

Thermoluminescence dosimeters; uncertainty; water phantom; absorbed dose; cobalt-60 gamma radiation; computation check; dose interpretation; mailings; results; therapy departments; *J. Res.* **80A** No. 4, 663-668 (1976).

Thermometer; thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; *TN894*.

Thermometer leads; thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; test; *TN894*.

Thermometry; automatic potentiometry; automation; calorimetry; Diesselhorst ring; potentiometer; programmable potentiometer; self-balancing potentiometers; *J. Res.* **80A** No. 4, 669-675 (July-Aug. 1976).

Thermometry; data; International Practical Temperature Scale; measurements; National Measurement System; standards; *NBSIR 75-932*.

Thermometry; two-stage transformers; ac bridges; bridges; platinum thermometers; resistance measurements; *16404*.

Thermomigration; alloys; cobalt; copper; diffusion; electromigration; iron; nickel; palladium; platinum; rhodium; ruthenium; *JPCRD* **5**, No. 1, 103-200 (1976).

Thermomigration; diffusion; dilute alloys; interstitial solute vacancy pairs; kinetic theory; pair association method; *15847*.

Thermomigration; vacancies; alloys; aluminum; copper-aluminum; nonisothermal diffusion; silver-aluminum; *15774*.

Thermophysical measurements; chemiluminescent; diatomic molecules; dissociation energies; high temperature; PbO; *NBSIR 75-751*.

Thermophysical properties symposium; waste heat; computer; consumer; drugs; electrical pulses; environmental standards; friction measurement; lead poisoning; LNG data; optical; standard reference materials; *DIM/NBS* **60**, No. 9, 1-24 (1976).

Thermostated bath; vacuum; water tight; bridge; deep-sea thermometer; high pressure; oceanographic thermometer; platinum resistance thermometer; pressure; pressure intensifier; pressure seal; pressure vessel; resistance; resistance thermometer; test; thermometer; *TN894*.

ThF_4; thin film; ZnSe; 10.6 μm; absorbing inclusions; damage statistics; laser damage; reflectors; *SP435*, pp. 216-229 (Apr. 1976).

Thickness of coal layer; automation; coal; coal mine safety; dielectric constant; energy; microwave measurement; nondestructive testing; *NBSIR 76-840*.

Thin film; time resolved damage; adhesion effect; laser induced damage; optical probe technique; *SP435*, pp. 284-288 (Apr. 1976).

Thin film; ZnSe; 10.6 μm; absorbing inclusions; damage statistics; laser damage; reflectors; ThF_4; *SP435*, pp. 216-229 (Apr. 1976).

Thin film analysis; electron probe microanalysis; electron-solid

interactions, magnetic domains; Monte Carlo electron trajectory calculations; particle analysis; scanning electron microscopy; *SP460*.

Thin film x-ray analysis; x-ray continuum radiation; elemental distribution; energy dispersive x-ray analysis; light element analysis; scanning electron microscopy; *15771*.

Thin films; attenuated total reflection spectroscopy; dielectric coatings; infrared lasers; laser damage; *SP462*, pp. 203-213 (Dec. 1976).

Thin films; avalanche ionization; IR windows and mirrors; laser damage; laser materials; multiphoton processes; self-focusing; *SP435*.

Thin films; avalanche ionization; infrared windows; laser damage; metal mirrors; optical fabrication; optical materials; *SP462*.

Thin films; damage threshold; optical coatings; *SP435*, pp. 248-253 (Apr. 1976).

Thin films; damage thresholds; laser damage; refractive index; surface damage; surface roughness; *SP435*, pp. 289-295 (Apr. 1976).

Thin films; threshold; damage threshold; etching; flame polishing; fused silica; hydroxyl; ion polishing; polishing; roughness; surface damage; *SP462*, pp. 310-314 (Dec. 1976).

Thin films; two-photon absorption; damage thresholds; electron avalanche; picosecond pulses; refractory oxides; standing-wave fields; *SP462*, pp. 292-300 (Dec. 1976).

Thin films; ultrasonic cleaning; damage thresholds; fused silica; ion polishing; surface damage; surface roughness; surface structure; *SP435*, pp. 305-320 (Apr. 1976).

Thin films; x rays; electron probe microanalysis; Monte Carlo calculations; particulates; quantitative analysis; *16410*.

Thin films; x-ray analysis; electron probe microanalysis; Monte Carlo electron trajectory calculations; nuclear backscattering analysis; scanning electron microscopy; *SP460*, pp. 129-138 (Dec. 1976).

Thin films; x-ray emission; electron trajectories; magnetic effects; Monte Carlo calculations; multiple scattering x-ray generation; particle analysis; quantitative x-ray microanalysis; *SP460*, pp. 105-128 (Dec. 1976).

Thin films; x-ray fluorescence; x-ray microanalysis; distribution functions; electron probe microanalysis; semiconductor materials; *15967*.

Thin films immersed in liquids; high power ruby laser damage; multilayer reflectors; single layer coatings; spark detection; *SP462*, pp. 315-330 (Dec. 1976).

Thin layer electrochemistry; vanadium; automatic titrations; coulometric titrations; current integration; digital timing; epinephrine; linear sweep voltammetry; manganese; micrometer cell; *SP422*, pp. 861-869 (Aug. 1976).

Thin layer chromatography; chromatography; color matching; color measurement; diffuse reflectance; Kubelka-Munk function; reflectance; reflectance standards; *J. Res.* **80A** No. 4, 551-565 (1976).

Thin-film coating; alkali halides; antireflectance coating; chalcogenide glasses; infrared optical properties; laser damage; optical absorption; optical scattering; *SP462*, pp. 214-220 (Dec. 1976).

Thiocarbonyl; 1,3-dithiolane-2-thione; 1,3-dithiolene-2-thione; carbon-13 NMR; coordination compounds; metal carbonyl; *16585*.

Thiophosgene; chlorine isotope; isotope separation; laser-induced reaction; laser irradiation; photochemical reaction; *15959*.

Thorium; Th I; wavelengths; Zeeman-effect of Th I; energy levels; *J. Res.* **80A** No. 2, 221-358 (1976).

Threat analysis; behavioral impact; cognitive processes; nuclear weapon theft; perceptual processes; psychological deterrence; security systems; sensory processes; *NBSIR 76-1007*.

Three-color superposition; color superposition photography; field-ion microscopy; image analysis; *16228*.

Three-dimensional; complex object; laminagraphy; multiple-film; radiographic inspection; thermal neutrons; *16371*.

Three-dimensional reconstruction; stereology; stereometry; stereoscopy; stochastic models; structures; *SP431*.

Threshold; atom; collision; Coulomb-interaction; electron; energy exchange; ionization; *15884*.

Threshold; damage threshold; etching; flame polishing; fused silica; hydroxyl; ion polishing; polishing; roughness; surface damage; thin films; *SP462*, pp. 310-314 (Dec. 1976).

Threshold photoelectron spectroscopy; coincidence; mass spectrometry; photoionization; propane; propane-d_2; propane-d_6; propane-d_8; *16590*.

Thrown objects tests; dispersion tests; lawn mowers; penetration tests; power lawn mowers; safety standard; *NBSIR 76-1022*.

Thyroid monitoring; bioassay; I-125 uptake; *SP456*, pp. 371-379 (Nov. 1976).

Tides; wind; buildings; cyclones; disasters; structural engineering; *BSS86*.

$TiFeH_x$ alloys; volume effects; charge flow; isomer; Mössbauer; phase diagram; *16597*.

Time; broadcast; communication; frequency; ratio; synchronization; *16496*.

Time; time code; clock; microprocessor; satellite; *TN681*.

Time and frequency; acoustic quantities; electrical quantities; electromagnetic quantities; end-use measurements; ionizing radiation; measurement activities; measurement institutions; mechanical quantities; National Measurement System; optical quantities; *NBSIR 75-943*.

Time and frequency; acoustics; atomic properties; economics; electrical quantities; ionizing radiation; mechanical quantities; national measurement system; optical quantities; surface properties; thermal quantities; *NBSIR 75-947*.

Time and frequency; clocks; frequency and time; measurement of time and frequency; *16569*.

Time and frequency; time scales; users of NBS radio broadcasts; atomic frequency standards; aviation industry; electric power industry; National Measurement System, position location; shipping and boating industries; Standards laboratories; *SP445-1*.

Time calibration; time signals; broadcast of standard frequencies; frequency calibration; high frequency; low frequency; standard frequencies; television color subcarrier; *SP432*.

Time code; clock; microprocessor; satellite; time; *TN681*.

Time comparison; atomic clocks; frequency stability; portable clocks; rubidium frequency standard; *16489*.

Time delay spectrometry; tissue; transmission; velocity; attenuation; phase; swept frequency; *SP453*, pp. 81-95 (Oct. 1976).

Time dependence; frequency dependence; laser damage; spot size dependence; *SP462*, pp. 338-345 (Dec. 1976).

Time difference measurements; time-domain frequency stability; time interval; frequency measurement; frequency mixing; global positioning system; isolation amplifiers; low-noise amplifiers; precision frequency measurements; precision time measurements; *NBSIR 75-827*.

Time domain; transient; automated measurement; pulse; rise time; sampling oscilloscope; spectrum amplitude; *16477*.

Time domain measurements; time domain reflectometry; homomorphic deconvolution; *16518*.

Time domain reflectometry; homomorphic deconvolution; time domain measurements; *16518*.

Time interval; frequency measurement; frequency mixing; global positioning system; isolation amplifiers; low-noise amplifiers; precision frequency measurements; precision time

measurements; time difference measurements; time-domain frequency stability; *NBSIR 75-827.*

Time measurement; chronograph; frequency-stability measurement; instrumentation; laboratory technique; *TN691.*

Time of analysis in NAA and AAS; trace element content in liver biopsies; trace element content in tumor bearing animals; Wilson's disease; atomic absorption spectroscopy (AAS); comparison between NAA and AAS; *SP422,* pp. 231-238 (Aug. 1976).

Time resolution; aerosol; California aerosol monitoring program; elemental analysis; ion beam analysis; monitoring; particle sizing; *SP422,* pp. 1119-1136 (Aug. 1976).

Time resolved damage; adhesion effect; laser induced damage; optical probe technique; thin film; *SP435,* pp. 284-288 (Apr. 1976).

Time scale; time standards; clocks; frequency accuracy; frequency stability; frequency standards; infrared frequency multiplication; noise; *16488.*

Time scale simulation; frequency stability; international atomic time; models; simulation; *TN689.*

Time scales; users of NBS radio broadcasts; atomic frequency standards; aviation industry; electric power industry; National Measurement System, position location; shipping and boating industries; Standards laboratories; telephone industry and specialized carriers; *SP445-1.*

Time signals; broadcast of standard frequencies; frequency calibration; high frequency; low frequency; standard frequencies; television color subcarrier; time calibration; *SP432.*

Time standards; application of standards; basic standards; cesium standards; frequency accuracy; frequency stability; frequency standards; hydrogen standards; ion storage; laser stabilization; rubidium standards; saturated absorption; *15736.*

Time standards; clocks; frequency accuracy; frequency stability; frequency standards; infrared frequency multiplication; noise; time scale; *16488.*

Time to ignition; fire performance tests; flame spread; heat input; heat release rate; limiting oxygen index; radiant panel; smoke density; *16136.*

Time-domain deconvolution; deconvolution; impedance profiling; impediography; impulse response; *SP453,* pp. 253-258 (Oct. 1976).

Time-domain frequency stability; time interval; frequency measurement; frequency mixing; global positioning system; isolation amplifiers; low-noise amplifiers; precision frequency measurements; precision time measurements; time difference measurements; *NBSIR 75-827.*

Timetable for metrication; conversion to metric; government metrication; metrication; metric system; SI; *16231.*

Tin; binding energy shifts; core level shifts; *16015.*

Tin oxide electrode; transparent electrode; adsorption; anodic oxidation; electrocatalysis; semiconductor electrode; *SP455,* pp. 175-181 (Nov. 1976).

Tin plate; underplatings for gold; wear of gold; contact lubrication; corrosion inhibitors; electrical contacts; gold plate; palladium; polymer in gold; porosity in gold; solder plate; tin-nickel alloy; *SP452,* pp. 64-71 (Sept. 1976).

Tin point; triple point of water; zinc point; comparator; International Practical Temperature Scale of 1968; IPTS-68; oxygen point; platinum resistance thermometer; temperature standard; *J. Res.* **80A** No. 3, 477-504 (1976).

Tin-nickel alloy; tin plate; underplatings for gold; wear of gold; contact lubrication; corrosion inhibitors; electrical contacts; gold plate; palladium; polymer in gold; porosity in gold; solder plate; *SP452,* pp. 64-71 (Sept. 1976).

Tire noise; transportation noise; truck; acoustics; noise measurement; noise (sound); *15792.*

Tire noise; transportation noise; truck; acoustics; noise measurement; noise (sound); *16370.*

Tire pressure; air; building codes; computer tapes; energy; fire; helmets; mobile homes; phase diagrams; *DIM/NBS* **60,** No. 12, 1-24 (1976).

Tire-pavement interface forces; wet pavement; accident reduction, skidding; correlation, skid resistance; highway safety; measurement, skid resistance; pavement, skid resistance; pavement wetting system; *NBSIR 76-1133.*

Tires; noise; pavement macrotexture; profile tracer; *NBS-GCR-75-35.*

Tishomingo; alloy; austenite; electron microscopy; iron-nickel; martensite; meteorite; *15764.*

Tissue; trace element analysis; water pollution; atomic absorption; bluegills; cadmium; fish; heavy metal; *SP422,* pp. 1063-1072 (Aug. 1976).

Tissue; transmission; velocity; attenuation; phase; swept frequency; time delay spectrometry; *SP453,* pp. 81-95 (Oct. 1976).

Tissue; tumor; ultrasonic; velocity; absorption; attenuation; brain; neoplasm; TAST; thermal effects; *SP453,* pp. 153-163 (Oct. 1976).

Tissue; ultrasound; velocity; acoustic imaging; acoustic microscopy; attenuation; frequency dependence; impedance; microstructural analysis; *SP453,* pp. 261-267 (Oct. 1976).

Tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; *SP453.*

Tissue characterization; tissue signature; ultrasonic diagnosis; ultrasound; applied research; imaging; instrumentation technology; medical ultrasonics; NSF; RANN; R & D incentives; *SP453,* pp. 7-10 (Oct. 1976).

Tissue characterization; tissue parameters; tumor detection; ultrasound; diagnosis; Doppler effect; optimization; resonance; scattering; *SP453,* pp. 11-17 (Oct. 1976).

Tissue characterization; ultrasound; blood; cross-section; diagnosis; scattering; standardization; *SP453,* pp. 29-47 (Oct. 1976).

Tissue characterization; ultrasonic spectroscopy; ultrasound diagnosis; acoustic impedance; Bragg diffraction; computer processing; frequency-dependent attenuation; internal scattering; myocardial infarction; scattering; surface scattering; *SP453,* pp. 167-196 (Oct. 1976).

Tissue characterization; ultrasound; Bragg diffraction; diagnosis; frequency dependence; orientation dependence; scattering; *SP453,* pp. 197-206 (Oct. 1976).

Tissue characterization; ultrasound; diffraction; Fourier transform; scattering; *SP453,* pp. 213-228 (Oct. 1976).

Tissue equivalent; calorimeter; dosimetry; fast neutron; *SP456,* pp. 327-333 (Nov. 1976).

Tissue parameters; tumor detection; ultrasound; diagnosis; Doppler effect; optimization; resonance; scattering; tissue characterization; *SP453,* pp. 11-17 (Oct. 1976).

Tissue parameters; ultrasound; velocity; absorption; attenuation; mammalian tissues; *SP453,* pp. 21-28 (Oct. 1976).

Tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; *SP453.*

Tissue signature; ultrasonic diagnosis; ultrasound; applied research; imaging; instrumentation technology; medical ultrasonics; NSF; RANN; R & D incentives; tissue characterization; *SP453,* pp. 7-10 (Oct. 1976).

Tissue structure; ultrasound; color-coded B-scan; Fourier transform; spectral analysis; *SP453*, pp. 97-107 (Oct. 1976).

Tissues; ultrasound; acoustic attenuation; acoustic velocity; breast tumor; computerized tomography; heart; reconstruction; refractive index; synthetic focus; *SP453*, pp. 109-119 (Oct. 1976).

Titanium; corrosion; microstructures; *15765*.

Titanium; field-ion microscopy; hydrogen; *15773*.

Titanium; transducer calibration; ultrasonic reference blocks; acoustic emission; aluminum; fatigue cracks; flat bottomed holes; standards; steel; *16252*.

Titanium; transmission electron microscopy; microstructures; *15777*.

Titanium; wear; curing agent; fretting; silicone resin; solid lubricants; *SP452*, pp. 124-131 (Sept. 1976).

Titanium alloy; electron beam welding; fatigue; fracture toughness; low temperature tests; mechanical properties; *NBSIR 76-836*.

Titanium alloys; aluminum alloys; composites; elastic properties; engineering materials; fatigue; fracture; iron alloys; cryogenic temperatures; maraging steels; mechanical properties; nickel alloys; phenolformaldehyde; stainless steels; superconducting machinery; *NBSIR 76-848*.

Titanium alloys; crack propagation; cryostats; fracture tests; low temperature tests; mechanical tests; *16640*.

Titanium alloys; fatigue crack propagation; fracture toughness; J-integral; low temperature tests; *16531*.

Titanium dioxide; acetonitrile; cyclic voltammetry; electrochemistry; nonaqueous; semiconductor; silicon; *SP455*, pp. 149-152 (Nov. 1976).

Titanium dioxide; transition-metal oxides; defect states; *d*-electrons; electrolyte electroreflectance; surface states; *SP455*, pp. 125-131 (Nov. 1976).

Titanium ultrasonic standards; ultrasonics; aluminum ultrasonic standards; ASTM-type reference standards; calibration; fabrication variables; immersion testing; interim reference standard; longitudinal waves; metallurgical variables; nondestructive evaluation; *NBSIR 76-984*.

TlBr; isoelectronic systems; *16393*.

TLD; dosimetry; ion chamber; patient; precision; therapy; *SP456*, pp. 343-350 (Nov. 1976).

TLD; environmental radiation measurements; error; integrating detectors; *SP456*, pp. 187-198 (Nov. 1976).

TLD reliability; TLD systems; decentralized TLD; dosimeters; *SP456*, pp. 181-185 (Nov. 1976).

TLD systems; decentralized TLD; dosimeters; TLD reliability; *SP456*, pp. 181-185 (Nov. 1976).

TlN_3 structure; ionic crystal; KN_3 structure; low temperature study; monovalent metal azides; NaN_3 structure; neutron diffraction; RbN_3 structure; thermal motion; *15973*.

Toeplitz matrix; Hankel matrix; *J. Res.* **80B** No. 2, 269-272 (1976).

Tokamak plasmas; atomic oscillator strengths; beam-foil spectroscopy; fusion plasma research; plasma radiative losses; sodium isoelectronic sequence; *16320*.

Tolerance limits; noncentral *t*-distribution; normal distribution; statistics; *J. Res.* **80B** No. 3, 343-346 (1976).

Tool, market; aggregation, market; market aggregation; *NBS-GCR-ETIP-73-01*.

Topographical model; wind load; wind profile; wind tunnel; bridge; gust; meteorological data; *SP444*, pp. II-1—II-20 (Apr. 1976).

Topography; x ray; asymmetric; diffraction; intensifier; *16356*.

Topside; absorption; high latitude; ionosphere; ionospheric scattering; irregularity; satellite; scintillation; spread-F; *16641*.

Tornado; wind loads; building code; damage classification; extreme wind; *SP444*, pp. I-34—I-39 (Apr. 1976).

Tornadoes; wind; missiles; nuclear engineering; structural engineering; *NBSIR 76-1050*.

Tornadoes, wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; *SP444*, pp. V-35—V-49 (Apr. 1976).

Tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; *NBS-GCR-75-36*.

Tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; *NBS-GCR-75-37*.

Tornados; wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; *NBS-GCR-75-38*.

Torque; magnet; magnetization; *16546*.

Torsional excitation; damping; damping coefficients; shear modulus; soil; tests; *SP444*, pp. III-72—III-83 (Apr. 1976).

Torsional frequencies; 2-butanone (methyl ethyl ketone); enthalpy; entropy; equilibrium constant of formation; Gibbs energy of formation; heat capacity; ideal gas thermodynamic properties; internal rotational barrier height; *JPCRD* **5**, No. 2, 319-328 (1976).

Torsional oscillation; λ-point; barrier to rotation; crystal; crystal structure; hexamethylbenzene; hindered rotation; phase transition; *16137*.

Total internal reflection; emission anisotropy; fluorescence; photodetectors; polarization; quantum counters; rhodamine B chloride; spectrofluorimetry; *16430*.

Total mercury; water; Chesapeake Bay; elemental sulfur; flameless atomic absorption; petroleum; plankton; sediments; *15874*.

Toxic metals; trace determination; aquatic insects; atomic absorption; clean room; fish; mini-computer; sample preparation; *SP422*, pp. 627-632 (Aug. 1976).

Toxicity; bibliographies; building fires; construction materials; fire departments; fire detection system; fire tests; flame detectors; flammability tests; hazard analysis; interior furnishings; *NBSIR 76-1120*.

Toxicity; bioassay; combustion products; fire; hazard assessment; *16204*.

Toxicity; upholstery; bedding; beds; carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; furniture; life hazard; oxygen; smoke; temperature; *NBS-GCR-73-1*.

Toy safety; x-ray units; computer power; computer standard; corrosion; environment; health care; housing production; I-R 100 awards; NIKE missile; papers available; stereology; *DIM/NBS* **60**, No. 11, 1-24 (1976).

T(p,n)^{3}He reaction; associated particle technique; neutron detector; neturon flux monitor; neutron standards; neutrons; *16159*.

Trace determination; aquatic insects; atomic absorption; clean room; fish; mini-computer; sample preparation; toxic metals; *SP422*, pp. 627-632 (Aug. 1976).

Trace analyses; cadmium; environmental Standard Reference Materials; isotope dilution; lead; molybdenum; rubidium; strontium; *16221*.

Trace analysis; accuracy; activation analysis; analytical chemistry; charged particle activation analysis; cross sections; excitation functions; fast neutron activation analysis; fast particle activation analysis; interferences; *SP422*, pp. 1189-1214 (Aug. 1976).

Trace analysis; accuracy; analysis; analytical chemistry; sample handling; sampling; *SP422. Volume I and II.*

Trace analysis; analytical error; geochemical variance; particle size distribution; particle size errors; sampling errors; *SP422*, pp. 421-427 (Aug. 1976).

Trace analysis; background correction; differential pulse polarography; dropping mercury electrode; electroanalysis; pulse polarography; *SP422*, pp. 871-879 (Aug. 1976).

Trace analysis; baseline studies; gas chromatography; gas chromatography-mass spectrometry; hydrocarbons; liquid chromatography; petroleum analysis; *TN889*.

Trace analysis; carcinogens; food; nitrosamines; *SP422*, pp. 727-736 (Aug. 1976).

Trace analysis; trace metals; atomic absorption spectroscopy; fish analysis; sample size variations; *SP422*, pp. 163-172 (Aug. 1976).

Trace analysis; triclosan; 2-hydroxy-2′,4′,4-trichlorodiphenyl ether; bacteriostats; blood analysis; gas chromatography; *SP422*, pp. 851-859 (Aug. 1976).

Trace analysis; water sampling; contamination; geological sample; rocks and minerals; sample preparation; sampling; *SP422*, pp. 285-297 (Aug. 1976).

Trace analysis; x-ray fluorescence; mineral analysis; *SP422*, pp. 1109-1118 (Aug. 1976).

Trace analysis of lead; waters, lead in; accuracy of atomic absorption analytical techniques; accuracy of isotope dilution analytical techniques; errors in lead analyses; lead; lead contamination evaluation and control; *SP422*, pp. 321-351 (Aug. 1976).

Trace detection; tunable lasers; discharge; discharge tubes; hollow cathode; spectroscopy; *16604*.

Trace element analysis; x-ray fluorescence; accuracy; activation analysis; airborne particulates; air filter analysis; atomic absorption; emission spectroscopy; environmental pollutants; intercomparisons; multi-element analysis; *SP422*, pp. 173-188 (Aug. 1976).

Trace element analyses; accuracy; blood lead analyses; clinical chemistry; industrial lead hygiene; interlaboratory correlations; lead hygiene control; occupational exposure standard criteria; occupational health control; precision; *SP422*, pp. 275-282 (Aug. 1976).

Trace element analyses; atomic absorption spectrometry; blood analyses; contaminations; flameless methods; lead; lead blood analyses; methodology; *SP422*, pp. 715-719 (Aug. 1976).

Trace element analysis; accuracy; activation analysis; air filter analysis; analytical quality control; atomic absorption spectrometry; environmental analysis; fresh water analysis; intercomparisons; precision; round-robin experiments; *SP422*, pp. 189-197 (Aug. 1976).

Trace element analysis; accuracy and precision; comparison of trace analytical methods; contamination; rocks and ores; sample preparation; *SP422*, pp. 773-790 (Aug. 1976).

Trace element analysis; errors of analysis; homogenization; neutron activation analysis; sample preparation; standard materials; *SP422*, pp. 1293-1304 (Aug. 1976).

Trace element analysis; water pollution; atomic absorption; bluegills; cadmium; fish; heavy metal; tissue; *SP422*, pp. 1063-1072 (Aug. 1976).

Trace element analysis; wet ashing; ashing techniques; dissolution; dry ashing; organic materials analysis; *SP422*, pp. 491-507 (Aug. 1976).

Trace element concentrations; neutron activation analysis; particulates; sampling; species; *15783*.

Trace element content in liver biopsies; trace element content in tumor bearing animals; Wilson's disease; atomic absorption spectroscopy (AAS); comparison between NAA and AAS; neutron activation analysis (NAA); *SP422*, pp. 231-238 (Aug. 1976).

Trace element content in tumor bearing animals; Wilson's disease; atomic absorption spectroscopy (AAS); comparison between NAA and AAS; neutron activation analysis (NAA); time of analysis in NAA and AAS; *SP422*, pp. 231-238 (Aug. 1976).

Trace element models; volcanic rocks; analytical techniques; fractional crystallization; geochemistry; isotope dilution; partial melting; rare earth elements; *SP422*, pp. 937-949 (Aug. 1976).

Trace element water analysis; water filtration; water sampling apparatus; anodic stripping voltammetry; flameless atomic absorption; interstitial water; Lake Superior chemical analysis; *SP422*, pp. 1073-1088 (Aug. 1976).

Trace elements; accuracy; Atomic Absorption Spectrometry; Caribbean; precision; Puerto Rico; replicates; sediments; standard; *SP422*, pp. 1089-1102 (Aug. 1976).

Trace elements; accuracy; biological materials; data interpretation; standard materials; *SP422*, pp. 65-77 (Aug. 1976).

Trace elements; accuracy and precision; clinical chemistry; quality control; surrogate specimens; *SP422*, pp. 35-40 (Aug. 1976).

Trace elements; activation analysis; adsorption isotherm; environmental samples; mercury; preconcentration; *SP422*, pp. 669-699 (Aug. 1976).

Trace elements; air particulates; blood; chemistry; computer graphics; geochemistry; medicine; pattern recognition; *SP422*, pp. 151-162 (Aug. 1976).

Trace elements; air sampling; atomic absorption spectrophotometry; high temperature ashing; *SP422*, pp. 1053-1061 (Aug. 1976).

Trace elements; analytical methods; coal; environmental samples; environmental standards; fly ash; instrumental neutron activation analysis (INAA); instrumental photon activation analysis (IPAA); natural radioactivity; *SP422*, pp. 211-223 (Aug. 1976).

Trace elements; biological material; biological standards; data evaluation; distillation; food composition; gamma spectrometry; inorganic separators; isotopic exchange; multielement determination; neutron activation; radiochemical separation; *SP422*, pp. 1173-1180 (Aug. 1976).

Trace elements; chemical analysis; environmental samples; long-term storage; microbiologicals; organics; pesticides; radionuclides; sample handling; sampling; *TN929*.

Trace elements; high-temperature alloys; intergranular segregation; macro-segregation; sampling problems; *SP422*, pp. 1017-1022 (Aug. 1976).

Trace elements; isotope dilution; NBS Standard Reference Material; preconcentration; spark source mass spectrometry; steel; *15889*.

Trace elements; trace elements in water; water; filtering water; river water; sampling water for trace elements; suspended particulates in water; Teflon water sampler; *SP422*, pp. 439-455 (Aug. 1976).

Trace elements; water; wet chemical analysis; atomic absorption analysis; Californium-252; Mahoning River; neutron activation analysis; pollution; sediment; *SP422*, pp. 225-230 (Aug. 1976).

Trace elements; zinc; atomic absorption spectrophotometry; calcium; container effects; copper; magnesium; potassium; serum minerals; serum storage effects; sodium; temperature effects; *SP422*, pp. 575-591 (Aug. 1976).

Trace elements in polyethylene powder; gamma counting efficiency; germanium detectors; instrumental neutron activation analysis; particulate sample geometry; *SP422*, pp. 1275-1281 (Aug. 1976).

Trace elements in water; water; filtering water; river water; sampling water for trace elements; suspended particulates in water; Teflon water sampler; trace elements; *SP422*, pp. 439-455 (Aug. 1976).

Trace metal; analysis; ashing; blood lead; contamination; dairy products; digestion; interferences; losses; mercury; *SP422*, pp. 661-668 (Aug. 1976).

Trace metal analysis; accuracy; flameless atomic absorption; freshwater; interlaboratory comparison; method evaluation; *SP422*, pp. 247-265 (Aug. 1976).

Trace metals; atomic absorption spectroscopy; fish analysis; sample size variations; trace analysis; *SP422*, pp. 163-172 (Aug. 1976).

Traceability; assurance; measurement; radioactivity; radiopharmaceutical; standards; *SP456*, pp. 71-76 (Nov. 1976).

Traceability; calibration; measurement; nondestructive assay; nuclear; safeguards; *16414*..

Traceability; diagnosis; measurement accuracy; medical facilities; regulatory; therapy; *SP456*, pp. 139-146 (Nov. 1976).

Traceability; uncertainty; measurement; *15975*.

Track-etch; films; images; neutron radiography; nondestructive tests; real-time imaging; thermoluminescence; *15796*.

Traffic noise; airborne and structure-borne sounds; aircraft noise intrusion; annoyance; appliance noise; health and hearing hazards; household noise; legal and community action; loudness; noise control and abatement; *H119*.

Traffic noise; alarm signals; hearing; loudness functions; masking; sirens; speech recognition; *16573*.

Training; Treaty of the Meter; education; International System of Units; metrication; metric education; metric system; *SP441*.

Trajectories; classical scattering matrix theory; collision theory; scattering theory; *16593*.

Trajectories; transition-state theory; chemical reactions; chlorine molecules; classical scattering matrix theory; collision theory; cross sections; hydrogen atoms; rate coefficients; scattering theory; *16627*.

Trajectories; uniform approximation; chemical reactions; classical scattering matrix theory; collision theory; hydrogen atoms; hydrogen molecules; scattering theory; *16054*.

Trajectories; vibrational energy; chemical reactions; classical probability matrix theory; classical scattering matrix theory; collision theory; energy transfer in collisions; hydrogen molecules; information theory; scattering theory; *16607*.

Trajectory control; computer control of automation systems; computer interface; computer software for robot control; hierarchical control of manipulators; position servos; *NBSIR 75-973*.

Transceiver; battery performance standard; law enforcement communications, Law Enforcement Standards Laboratory; personal/portable transceivers; primary battery; secondary battery; *16296*.

Transducer; bias pressure; calibration; dynamic calibration; dynamic pressure; high pressure; liquid medium; pogo pressure; pressure source; pressure transducer; sinusoidal; space shuttle; *TN927*.

Transducer; calibration; dynamic; dynamic calibration; dynamic pressure; dynamic pressure source; liquid column; pressure; pressure source; pressure transducer; sinusoidal pressure; *TN914*.

Transducer; coatings; photoflash bulb; pressure transducer; protective coatings; thermal radiant-energy response; thermal transient response; *NBSIR 76-1060*.

Transducer; electroacoustic; integration; *15804*.

Transducer; ultrasonics; electromagnetic transducer; EMAT; *16616*.

Transducer; zero shift; calibration; dynamic; electronic flash; photographic flashbulb; pressure; pressure measurement; pressure transducer; thermal transient; *TN905*.

Transducer; zero shift; calibration; dynamic; electronic flash; photoflash bulb; pressure; pressure measurement; pressure transducer; pressure transducer response; response; thermal transient; *NBSIR 76-1038*.

Transducer calibration; ultrasonic reference blocks; acoustic emission; aluminum; fatigue cracks; flat bottomed holes; standards; steel; titanium; *16252*.

Transducers; piezoelectric; polymeric transducer; polymers; polyvinyl fluoride; polyvinylidene fluoride; stress gages; *16141*.

Transducers; triplet formation; absolute quantum efficiency; absolute quantum yield; calorimetry; luminescence; photoacoustic spectrometer; piezocalorimeter; *J. Res.* **80A** No. 3, 413-419 (1976).

Transducers; zero shift; coatings; dynamic; dynamic response; pressure transducer; protective coatings; shock tube; tape; thermal radiant-energy response; thermal transient response; *NBSIR 76-1144*.

Transfer; benefits, industry-society; materials research; measurements-standards; NBS-industry; *16280*.

Transfer Hamiltonian; field emission; surface density of states; *16418*.

Transfer standards; ultraviolet absorbance standards; absorbance linearity; accuracy; acidic potassium dichromate solutions; calibration of ultraviolet spectrophotometers; liquid filters; *J. Res.* **80A** No. 4, 631-636 (1976).

Transform analysis; automobile; economic; energy; model; *SP403*, pp. 65-74 (June 1976).

Transformations; weighting; interlaboratory comparisons; invariance; models; precision; precision of measurement; repeatability; reproducibility; test methods; *15909*.

Transformer; transformer overcurrent protection; high voltage transformer protection; overcurrent; overcurrent protection; solid-state overcurrent protection circuit; *16381*.

Transformer overcurrent protection; high voltage transformer protection; overcurrent; overcurrent protection; solid-state overcurrent protection circuit; transformer; *16381*.

Transformer steel; backscattered electrons; domain walls; magnetic domains; scanning electron microscope; silicon steel; *15921*.

Transformers; askarel; capacitors; insulating fluids; liquid insulators; polychlorinated biphenyls; *NBSIR 76-1054*.

Transforms; execution; execution monitoring; FORTRAN analysis; source code instrumenting; static analysis; *15918*.

Transient; automated measurement; pulse; rise time; sampling oscilloscope; spectrum amplitude; time domain; *16477*.

Transient heat flows; building heat transfer; computer programs; dynamic thermal performance; heat flow analysis; heating and cooling loads; thermal analysis; *15762*.

Transient techniques; heat capacity; high pressures; thermal conductivity; thermal diffusivity; thermal properties; *15709*.

Transient thermal gradients; ultrasonics; velocity; absorption; attenuation; impedance gradient; *SP453*, pp. 143-151 (Oct. 1976).

Transistor, power; current crowding; hot spots; reliability; safe operating area limits; second breakdown; semiconductor devices; thermal resistance; *16328*.

Transistors; failure analysis; hot spots; integrated circuits; laser scanner; measurement method; nondestructive test; nonlinear operation; optical scanner; reliability; *SP400-27*.

Transistors; ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; charge-coupled device structures; Darlington pairs; deep depletion; *SP400-19*.

Transition; turbulent flow; buoyancy; channels; film boiling; forced convection; helium I; helium II; mixed convection; nucleate boiling; subcritical; supercritical; *TN675*.

Transition elements; triphenylphosphine; tungsten bronze; electrocatalysis; fuel cells; mixed oxides; oxygen reduction; phosphoric acid; ternary metal-sulfur arrays; *NBSIR 75-742*.

Transition metal; zero phonon line; charge transfer, color cen-

ters; crystal field; d^4 ions; EPR; iron 4+; optical absorption; perovskite; strontium titanate; *16201*.

Transition metal carbide; adsorption; catalysis; electronic structure; surface states; *SP455*, pp. 87-92 (Nov. 1976).

Transition metal carbides; transition metal oxides; tungsten bronze; tungsten carbide; electrocatalysis; heteropolyanions; phosphotungstate complex ions; "spillover" effect; *SP455*, pp. 167-174 (Nov. 1976).

Transition metal complexes; catalysis; chemisorption theory; metal clusters; molecular orbitals; quantum chemistry; *SP455*, pp. 67-86 (Nov. 1976).

Transition metal ions; chromium 3+; crystal vacancies; cubic crystals; depolarization; impurity compensation; luminescence; magnesium oxide; MgO; optical properties; polarized luminescence; symmetry; *16521*.

Transition metal oxides; catalysis; chemisorption; cluster states; electronic structure; energy bands; perovskites; surface states; *SP455*, pp. 21-52 (Nov. 1976).

Transition metal oxides; tungsten bronze; tungsten carbide; electrocatalysis; heteropolyanions; phosphotungstate complex ions; "spillover" effect; transition metal carbides; *SP455*, pp. 167-174 (Nov. 1976).

Transition metals; Co; Cr; *d*-band widths; electronic structure; Fe; ferromagnetism; soft x-ray emission; soft x-ray spectra; *15780*.

Transition moment; ab initio calculation; O_2 absorption; oscillator strength; *15872*.

Transition probabilities; energy loss; O_2; oscillator strengths; oxygen; *15999*.

Transition probabilities; wave functions; ions; oscillator strengths; quantum mechanics; spectroscopy; *16209*.

Transition probabilities for U I; uranium spectrum; lifetimes in U I; oscillator strengths for U I; *J. Res.* **80A** No. 1, 1-7 (1976).

Transition probabilities for U II; uranium spectrum; oscillator strengths for U II; *J. Res.* **80A** No. 3, 429-438 (1976).

Transition probability; CO^+; CO_2^+; coincidence; electron impact; ions; lifetime; molecule; N_2^+; radiative; *15912*.

Transition probability; comet; electric-dipole transition; excited states; NH; spin-orbit coupling; *16502*.

Transition probability; U I; uranium; atomic beam; delayed coincidence; imprisonment; lifetime; mean life; resonance radiation; *16322*.

Transition radiation; electron optics; *15760*.

Transition region-sun; ultraviolet spectrum-sun; chromosphere-sun; coronal holes; diffusion; *15717*.

Transition temperature; triple point; ethane; heat capacity; heat of fusion; heat of transition; *16522*.

Transition-metal oxides; adsorption; electron spectroscopy; ligand-field splitting; surface excitons; surface states; *SP455*, pp. 133-138 (Nov. 1976).

Transition-metal oxides; defect states; *d*-electrons; electrolyte electroreflectance; surface states; titanium dioxide; *SP455*, pp. 125-131 (Nov. 1976).

Transition-state theory; chemical reactions; collision theory; hydrogen atoms; hydrogen molecules; indistinguishable particles; nuclear spin; rate coefficients; *16214*.

Transition-state theory; chemical reactions; chlorine molecules; classical scattering matrix theory; collision theory; cross sections; hydrogen atoms; rate coefficients; scattering theory; trajectories; *16627*.

Translation vectors; cerous magnesium nitrate; crystal structure; *g*-factors; ground state energy; Luttinger-Tisza method; *16512*.

Translational diffusion coefficient; Zimm theory; bead-spring model; block copolymers; dilute polymer solutions; limiting viscosity number; Mandelkern-Flory-Scheraga equation; molecular weight determination; sedimentation coefficient; *16026*.

Translucency; transmittance; Vitrolite glass; blurring effect; edge loss; error analysis; flux loss; plastics; reflectance; scattering; spectrophotometry; *TN594-12*.

Transmission; cable assembly; coaxial cable; insertion loss; mobile antenna; mobile transceiver; *16294*.

Transmission; ultrasound; velocity; attenuation; breast tissue; broadband; high resolution; imaging; large aperture; pathology; pellicle; phase-contrast; *SP453*, pp. 121-133 (Oct. 1976).

Transmission; velocity; attenuation; phase; swept frequency; time delay spectrometry; tissue; *SP453*, pp. 81-95 (Oct. 1976).

Transmission electron microscopy; microstructures; titanium; *15777*.

Transmission electron microscopy; twinning; aluminum oxide; microhardness; plastic deformation; slip; *15825*.

Transmission electron microscopy; δ'; Ll_2; metastable phase; ordering reaction; satellites; spinodal decomposition; superlattice reflections; *15840*.

Transmission electron microscopy; vapor deposition; cadmium telluride; growth kinetics; mechanical properties; microstructure; stoichiometry; *SP462*, pp. 100-118 (Dec. 1976).

Transmission loss; airborne sound transmission; architectural acoustics; building acoustics; sound reduction index; sound transmission loss; *15708*.

Transmission topography; x-ray diffraction topography; crystal perfection; Czochralski growth; domain walls; magnetic domains; nickel single crystals; surface reflection topography; *16503*.

Transmittance; bibliography; emittance; heat transfer; measurement techniques; periodic surfaces; polarization; random surfaces; reflectance; reflectance of coherent radiation; scattering; scattering theory; surface roughness; *J. Res.* **80A** No. 2, 207-220 (1976).

Transmittance; Vitrolite glass; blurring effect; edge loss; error analysis; flux loss; plastics; reflectance; scattering; spectrophotometry; translucency; *TN594-12*.

Transmittance characteristics; ultraviolet-visible filters; evaporated metal-on-quartz; filters, transmittance; neutral filters; standard reference materials; *J. Res.* **80A** No. 4, 637-641 (1976).

Transmitted pulse; waveform distortion; ZnSe; KCl; NaCl; pulsed CO_2 TEA laser damage; *SP435*, pp. 107-117 (Apr. 1976).

Transmitted pulse cutoff; variable pulse duration; alkali halides; bulk damage; longitudinal mode control; pulsed 10.6 μm laser damage; RAP materials; *SP435*, pp. 118-125 (Apr. 1976).

Transmitter; audiofrequency modulation; communications; electromagnetic compatibility; law enforcement; personal transmitter; portable transmitter; radio frequency carrier; *16285*.

Transmitter; base station transmitter; communications; fixed transmitter; FM transmitter; law enforcement; *16286*.

Transmitter; wiretapping; body worn antenna; bugging; eavesdropping; electronic surveillance; microphones; receiver; tape recorder; telephone; *16237*.

Transparent electrode; adsorption; anodic oxidation; electrocatalysis; semiconductor electrode; tin oxide electrode; *SP455*, pp. 175-181 (Nov. 1976).

Transparent electrophotographic material; add-on films; information storage; microforms; *NBSIR 76-991*.

Transparent materials; absorption coefficients; cylindrical configurations; gas pressure; heat transfer; photoacoustic; *15936*.

Transparent materials; barothermal; gas pressure; heat diffusion; heat transfer; optical absorption coefficients; *15916*.

Transparent materials; bulk absorption coefficients; Fourier amplitudes; gas pressure; heat transfer; phase shifts; photoacoustic; surface absorption coefficients; *16558*.

Transpiration; vapor density; glass; incongruent vaporization; *16524*.

Transport coefficients; Zwanzig-Mori formalism; hydrodynamic regime; ideal gas memory function; limit of stability; metastable fluid states; nonhydrodynamic regime; relaxation time; *16601.*

Transport properties; correlation; equation of state; excess function; hydrogen; interpolation methods; least squares; methane; thermodynamic properties; *15731.*

Transport properties; vaporization; viscosity; diffusion; electrical conductivity; magnetohydrodynamics (MHD); phase equilibria; *16321.*

Transport standard; watthour meter; electric energy; electricity; electric power; measurement assurance; *TN930.*

Transport theory; magnetophonon effect; semiconductors; *16643.*

Transportation; urethane; flame spread; flammability; full-scale fire tests; laboratory fire tests; Metrorail cars; neoprene; smoke; *NBSIR 75-971.*

Transportation noise; truck; acoustics; noise measurement; noise (sound); tire noise; *15792.*

Transportation noise; truck; acoustics; noise measurement; noise (sound); tire noise; *16370.*

Transportation noise; truck; acoustics; environmental conditions; noise measurement; noise (sound); *NBSIR 76-1138.*

Transportation problem; average distance; distance; multiple integrals; *16088.*

Transportation safety; effects of mechanical failure on environment; failure prevention; government action; mechanical failure; safety standards; *SP423,* pp. 153-163 (Apr. 1976).

Transverse excitation laser; 2-methyl propene; carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; isotope ratio; nitric oxide; oxygen; tetrafluoroethylene; *16657.*

Trans-1,3-butadiene; electronic structure; multiphoton ionization; *15981.*

Traps; zinc oxide; dislocation; electrochemical; exchange current; semiconductor; *SP455,* pp. 139-148 (Nov. 1976).

Treatments; cotton; fabrics; flame retardants; flammability; phosphorus; polyester; rayon; *NBS-GCR-73-16.*

Treaty of the Meter; education; International System of Units; metrication; metric education; metric system; training; *SP441.*

Tree; block Gaussian elimination; graph; inversion; partitioning; sparse matrix; *J. Res.* **80B** No. 2, 245-257 (1976).

Tree; 2-connected; block-cutpoint tree; graph; *16154.*

Trial proceedings; videotape recording; closed circuit television; court proceedings; court security; *16185.*

Trial proceedings; videotape recording; closed circuit television; court proceedings; court security; *16186.*

Triangular lattice; conditional probability; Ising spin; Monte Carlo method; spin system; *15865.*

Triazine; x ray; diffractometer; direct methods; explosives; single-crystal; *15735.*

Tribology; wear; economic savings of failure prevention; friction; lubrication; mechanical failure; *SP423,* pp. 117-139 (Apr. 1976).

Trichlorosilane; boron measurements; mass spectrometry; semiconductor grade silicon; *SP422,* pp. 709-714 (Aug. 1976).

Triclosan; 2-hydroxy-2′,4′,4-trichlorodiphenyl ether; bacteriostats; blood analysis; gas chromatography; trace analysis; *SP422,* pp. 851-859 (Aug. 1976).

Triglycerides; correlation; esters; heat capacity; oligomers; sebacates; *16275.*

Trimethylarsine; trimethylstibine; antimony; antimony oxide; arsenic; arsenic acid; biomethylation; cacodylic acid; diffusion; flame retardant; oxidation rate; stibinic acid; *16628.*

Trimethylene sulfone; 3-methyl sulfolane; pyrolysis; SO_2; *15952.*

Trimethylstibine; antimony; antimony oxide; arsenic; arsenic acid; biomethylation; cacodylic acid; diffusion; flame retardant; oxidation rate; stibinic acid; trimethylarsine; *16628.*

Trinitrotoluene; vapors; calibration device; dinitrotoluene; ethylene glycol dinitrate; explosives; generator; *16402.*

Triphenylphosphine; tungsten bronze; electrocatalysis; fuel cells; mixed oxides; oxygen reduction; phosphoric acid; ternary metal-sulfur arrays; transition elements; *NBSIR 75-742.*

Triple point; ethane; heat capacity; heat of fusion; heat of transition; transition temperature; *16522.*

Triple point of water; vapor pressure; mercury manometer; *15732.*

Triple point of water; vapor pressure of water; precision mercury manometer; *16096.*

Triple point of water; vapor pressure of water; precision mercury manometer; *J. Res.* **80A** No. 3, 505-521 (1976).

Triple point of water; zinc point; comparator; International Practical Temperature Scale of 1968; IPTS-68; oxygen point; platinum resistance thermometer; temperature standard; tin point; *J. Res.* **80A** No. 3, 477-504 (1976).

Triplet formation; absolute quantum efficiency; absolute quantum yield; calorimetry; luminescence; photoacoustic spectrometer; piezocalorimeter; transducers; *J. Res.* **80A** No. 3, 413-419 (1976).

Triplet states; electron energy loss; forbidden transitions; ozone; *15750.*

Tropospheric mixing; Ar-37; atmospheric radioactivity; cosmic-ray reactions; exponential distribution; low-level counting; noble gas separation; on-line computer; pulse shape discrimination; *15744.*

Truck; acoustics; environmental conditions; noise measurement; noise (sound); transportation noise; *NBSIR 76-1138.*

Truck; acoustics; noise measurement; noise (sound); tire noise; transportation noise; *15792.*

Truck; acoustics; noise measurement; noise (sound); tire noise; transportation noise; *16370.*

TTF-TCNQ; eddy currents; electron paramagnetic resonance; microwave conductivity; tetrathiofulvalinium-tetracyanoquinodimethane; *15917.*

TTF-TCNQ; electrical conductivity; organic conductors; tetrathiafulvalenium-tetracyanoquinodimethanide; *16061.*

TTF—TCNQ; d.c. conductivity; microwave conductivity; organic conductors; thermal expansion; *16050.*

TTL; vendor qualification; circuit procurement; component screening; custom circuits; LSI; microelectronics; parameter control; process uniformity; random faults; reliability; test patterns; *16620.*

Tumor; ultrasonic; velocity; absorption; attenuation; brain; neoplasm; TAST; thermal effects; tissue; *SP453,* pp. 153-163 (Oct. 1976).

Tumor; ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; *SP453.*

Tumor detection; ultrasound; diagnosis; Doppler effect; optimization; resonance; scattering; tissue characterization; tissue parameters; *SP453,* pp. 11-17 (Oct. 1976).

Tumor dose; quality control; medical physicist; radiation measurement; radiation therapy; *SP456,* pp. 111-118 (Nov. 1976).

Tunable IR laser; air quality measurements; improved resolution spectroscopy; infrared frequency measurements; infrared spectrometer; spin flip laser; *TN670.*

Tunable lasers; discharge; discharge tubes; hollow cathode; spectroscopy; trace detection; *16604.*

Tungsten; carbon monoxide; chemisorption; electron stimulated desorption; ion angular distribution; oxygen; *16398.*

Tungsten; electron polarization; electron scattering; low energy; nickel; single crystals; *15747.*

Tungsten; field ion energy distribution; field ionization; surface density of states; *15752*.

Tungsten; ultraviolet photoelectron spectroscopy; virgin CO; adsorption; carbon monoxide; chemisorption; desorption; photoelectron spectroscopy; photoemission; single crystal; *15851*.

Tungsten; ultraviolet photoemission; adsorption; chemisorption; CO; cyclotron resonance; electron cyclotron resonance; magnetic field; microwave discharge; photoemission; *16016*.

Tungsten; ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; *16419*.

Tungsten; wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; *16420*.

Tungsten; work function; adsorption; nitrogen; physical adsorption; *16460*.

Tungsten; xenon; XPS; carbon monoxide; chemisorption; ESCA; extra-atomic relaxation; formaldehyde; oxygen; photoelectron spectroscopy; physisorption; *16023*.

Tungsten; x-ray crystallography; clusters; metal-metal bonding; metal sulfides; sulfides; *16071*.

Tungsten; x-ray photoelectron spectroscopy; carbon dioxide; carbon monoxide; chemisorption; formaldehyde; oxygen; physisorption; surface chemistry; *16085*.

Tungsten bronze; electrocatalysis; fuel cells; mixed oxides; oxygen reduction; phosphoric acid; ternary metal-sulfur arrays; transition elements; triphenylphosphine; *NBSIR 75-742*.

Tungsten bronze; tungsten carbide; electrocatalysis; heteropolyanions; phosphotungstate complex ions; "spillover" effect; transition metal carbides; transition metal oxides; *SP455*, pp. 167-174 (Nov. 1976).

Tungsten bronzes; Auger electron spectroscopy; electrocatalyst; oxygen reduction; sodium depletion; Tafel plots; *SP455*, pp. 297-303 (Nov. 1976).

Tungsten carbide; electrocatalysis; heteropolyanions; phosphotungstate complex ions; "spillover" effect; transition metal carbides; transition metal oxides; tungsten bronze; *SP455*, pp. 167-174 (Nov. 1976).

Tungsten (100); xenon; crystal field; photoemission; physisorption; *15813*.

Tungsten-rhenium alloys; beryllium oxide; refractory metals; sheathed thermocouples; tantalum; temperature measurements; thermal emf drift; *15797*.

Tunnel diode; directional coupler; fast risetime; flat pulse baseline/topline; pulse generator; step waveform; *U.S. Patent 3,967,140*.

Tunneling; electronics devices; high speed devices; Josephson effect; superconducting devices; superconductivity; *16485*.

Turbine handpiece; amalgam; composite materials; dental gold alloys; dental research; panoramic x ray; silicate cement; *16212*.

Turbulent flow; buoyancy; channels; film boiling; forced convection; helium I; helium II; mixed convection; nucleate boiling; subcritical; supercritical; transition; *TN675*.

Turning points; uniform asymptotic approximations; Weber's equation; error bounds; parabolic cylinder functions; *J. Res.* **80B** No. 4, 437-440 (1976).

Turning points; Whittaker functions; asymptotic analysis; Darboux's method; definite integrals; hypergeometric functions; incomplete gamma function; Legendre functions; ordinary differential equations; saddle points; special functions; *15818*.

Turning-point; viscous flow; Weber's equation; boundary-value problem; eigenvalues; parabolic cylinder functions; resonance; rotating disks; singular perturbations; *16459*.

Twin; wedge; crystal; disclination; dislocation; pseudopentagonal; stacking fault; *15767*.

Twin electrode balancing; anodic stripping voltammetry; background current compensation; differential anodic stripping voltammetry; electrochemical analysis; *SP422*, pp. 881-897 (Aug. 1976).

Twinning; aluminum oxide; microhardness; plastic deformation; slip; transmission electron microscopy; *15825*.

Twinning; computer calculations; crystal structure; epitaxy; lattice misfit; pattern recognition; *TN893*.

Two phase flow; compressibility flow; cryogenics; fluid dynamics; pressure drop; superfluid helium; *16642*.

Two-dimensional flow; flow with longitudinal gradient; flow with transverse gradient; optical anemometry; optical birefringence; optical excess tensor; optical mapping of flow; stress excess tensor; *15775*.

Two-photon absorption; damage thresholds; electron avalanche; picosecond pulses; refractory oxides; standing-wave fields; thin films; *SP462*, pp. 292-300 (Dec. 1976).

Two-photon absorption; nonlinear index of refraction; optical distortion; thermal fracture; *SP435*, pp. 395-405 (Apr. 1976).

Two-photon absorption coefficients; multiphoton processes; nonlinear absorption; nonlinear optical properties; semiconductor optical properties; *SP435*, pp. 369-388 (Apr. 1976).

Two-ports; automatic network analyzer; Q cavity; *15867*.

Two-stage transformers; ac bridges; bridges; platinum thermometers; resistance measurements; thermometry; *16404*.

Two-way television; wired city; wired nation; broadband interactive terminals; cable television uses; checkless society; computer/communications networks; computer/communications services; computer/communications standards; interactive cable television: *NBS-GCR-75-44*.

Type; abstract data types; class; cluster; data abstraction; data type; module; programming methods; program modifications; *16246*.

Type fonts; typesetting; vectorized characters; alphabets; COM; computerized typesetting; digital plotting; graphics; Hershey character set; plotting; *SP424*.

Type II diamond windows; diamond absorption coefficient; laser window heating; laser window testing; *SP435*, pp. 175-188 (Apr. 1976).

Types; capability; capability-based addressing; computer security; extended-type objects; operating system structures; protection; reliable software; reliability; security; small protection domains; *TN919*.

Typesetting; vectorized characters; alphabets; COM; computerized typesetting; digital plotting; graphics; Hershey character set; plotting; type fonts; *SP424*.

Typhoon; wind; wind intensities; cloud seeding; frequency distribution; hurricanes; *SP444*, pp. I-21—I-33 (Apr. 1976).

Typhoons; construction; design; developing countries; earthquakes; low-cost housing; natural disasters; Philippines; socioeconomic aspects; *NBS-GCR-73-21*.

Typhoons; wind loads; buildings; codes and standards; housing; hurricanes; low-rise buildings; natural disaster; structural connections; *NBSIR 75-790*.

U

U; 5f electron; actinium; excitation energy; *16581*.

U I; uranium; atomic beam; delayed coincidence; imprisonment; lifetime; mean life; resonance radiation; transition probability; *16322*.

UHF transistor measurement; active devices; hot spots; laser scanning; logic flow observation; LSI testing; nondestructive test; nonlinearity measurement; *15781*.

UHF transistor measurements; device nonlinearity measurements; hot spots, transistor; laser scanning; nondestructive tests; semiconductor devices; *16571*.

UK; USA; fire propagation test; fire tests; smoke density chamber; smoke tests; test comparison; *16125*.

Ultimate strength; bending moments; building codes; column (supports); frames; long columns; reinforced concrete; slenderness ratio; strength; structural analysis; structural design; *16412*.

Ultrapurification; analytical blanks; analytical reagents; contamination control; high-purity reagents; membrane filtration; mercury cathode electrolysis; prepurification; purity definition; reagent contamination; *SP422*, pp. 363-375 (Aug. 1976).

Ultrasonic; velocity; absorption; attenuation; brain; neoplasm; TAST; thermal effects; tissue; tumor; *SP453*, pp. 153-163 (Oct. 1976).

Ultrasonic bonding; wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; *SP400-18*.

Ultrasonic bonding; wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; charge-coupled device structures; Darlington pairs; deep depletion; dopant profiles; *SP400-19*.

Ultrasonic calorimeter; ultrasonic power measurements; calorimeter; *TN686*.

Ultrasonic cleaning; damage thresholds; fused silica; ion polishing; surface damage; surface roughness; surface structure; thin films; *SP435*, pp. 305-320 (Apr. 1976).

Ultrasonic cleaning; laser damage; metal mirrors; subsurface structure; *SP435*, pp. 90-97 (Apr. 1976).

Ultrasonic diagnosis; ultrasound; applied research; imaging; instrumentation technology; medical ultrasonics; NSF; RANN; R & D incentives; tissue characterization; tissue signature; *SP453*, pp. 7-10 (Oct. 1976).

Ultrasonic inspection; aircraft component failure; continuous wave holograms; crack detection; holographic techniques; pulsed laser holograms; stress corrosion cracking; *SP423*, pp. 93-103 (Apr. 1976).

Ultrasonic measurements; ultrasonic techniques; calibration; diagnostic ultrasound; *SP456*, pp. 91-97 (Nov. 1976).

Ultrasonic medicine; ultrasonic radiation; optical interferometric measurements; *SP456*, pp. 285-297 (Nov. 1976).

Ultrasonic power measurements; calorimeter; ultrasonic calorimeter; *TN686*.

Ultrasonic radiation; optical interferometric measurements; ultrasonic medicine; *SP456*, pp. 285-297 (Nov. 1976).

Ultrasonic reference blocks; acoustic emission; aluminum; fatigue cracks; flat bottomed holes; standards; steel; titanium; transducer calibration; *16252*.

Ultrasonic spectroscopy; ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; *SP453*.

Ultrasonic spectroscopy; ultrasound diagnosis; acoustic impedance; Bragg diffraction; computer processing; frequency-dependent attenuation; internal scattering; myocardial infarction; scattering; surface scattering; tissue characterization; *SP453*, pp. 167-196 (Oct. 1976).

Ultrasonic techniques; calibration; diagnostic ultrasound; ultrasonic measurements; *SP456*, pp. 91-97 (Nov. 1976).

Ultrasonic wire bonding; voltage contrast mode; x-ray photoelectron spectroscopy; acoustic emission; Auger electron spectroscopy; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; dopant profiles; electrical properties; *SP400-25*.

Ultrasonics; aluminum ultrasonic reference standards; ASTM-type reference standards; calibration; interim reference standard; longitudinal beam; measurement system; nondestructive evaluation; pulse-echo; *TN924*.

Ultrasonics; aluminum ultrasonic standards; ASTM-type reference standards; calibration; fabrication variables; immersion testing; interim reference standard; longitudinal waves; metallurgical variables; nondestructive evaluation; pulse echo; steel ultrasonic standards; *NBSIR 76-984*.

Ultrasonics; A-scan; attenuation; computer analysis; impedance; liver cirrhosis; *SP453*, pp. 61-70 (Oct. 1976).

Ultrasonics; bulk modulus; equation of state; high pressure; phase transitions; potassium chloride; *16029*.

Ultrasonics; electroacoustics; medical diagnostics; radiation safety; radiation therapy (ultrasonic); *NBSIR 75-937*.

Ultrasonics; electromagnetic transducer; EMAT; transducer; *16616*.

Ultrasonics; velocity; absorption; attenuation; impedance gradient; transient thermal gradients; *SP453*, pp. 143-151 (Oct. 1976).

Ultrasonics; x-radiography; end fitting; glass-reinforced-plastic rod end fitting; nondestructive examination; neutron radiography; *NBSIR 76-1084*.

Ultrasound; acoustic attenuation; acoustic velocity; breast tumor; computerized tomography; heart; reconstruction; refractive index; synthetic focus; tissues; *SP453*, pp. 109-119 (Oct. 1976).

Ultrasound; analog-digital converter; A-scan; digitization; pattern recognition; speech spectrogram; *SP453*, pp. 51-59 (Oct. 1976).

Ultrasound; angular dependence; blood; compressibility; density; distribution function; erythrocytes; hematocrit; scattering; *SP453*, pp. 207-212 (Oct. 1976).

Ultrasound; applied research; imaging; instrumentation technology; medical ultrasonics; NSF; RANN; R & D incentives; tissue characterization; tissue signature; ultrasonic diagnosis; *SP453*, pp. 7-10 (Oct. 1976).

Ultrasound; attenuation; computer; deconvolution; impedance; impulse response; layer model; lucite; *SP453*, pp. 231-251 (Oct. 1976).

Ultrasound; blood; cross-section; diagnosis; scattering; standardization; tissue characterization; *SP453*, pp. 29-47 (Oct. 1976).

Ultrasound; Bragg diffraction; diagnosis; frequency dependence; orientation dependence; scattering; tissue characterization; *SP453*, pp. 197-206 (Oct. 1976).

Ultrasound; color-coded B-scan; Fourier transform; spectral analysis; tissue structure; *SP453*, pp. 97-107 (Oct. 1976).

Ultrasound; diagnosis; Doppler effect; optimization; resonance; scattering; tissue characterization; tissue parameters; tumor detection; *SP453*, pp. 11-17 (Oct. 1976).

Ultrasound; diffraction; Fourier transform; scattering; tissue characterization; *SP453*, pp. 213-228 (Oct. 1976).

Ultrasound; velocity; absorption; acoustic; A-scan; attenuation; B-scan; frequency; image; impedance; medical diagnosis; microscopy; pattern recognition; reconstruction; scattering; tissue characterization; tissue parameters, tissue signature; tumor; ultrasonic spectroscopy; *SP453*.

Ultrasound; velocity; absorption; attenuation; mammalian tissues; tissue parameters; *SP453*, pp. 21-28 (Oct. 1976).

Ultrasound; velocity; acoustic imaging; acoustic microscopy; attenuation; frequency dependence; impedance; microstructural analysis; tissue; *SP453*, pp. 261-267 (Oct. 1976).

Ultrasound; velocity; attenuation; breast tissue; broadband; high resolution; imaging; large aperture; pathology; pellicle; phase-contrast; transmission; *SP453*, pp. 121-133 (Oct. 1976).

Ultrasound; velocity; attenuation; breast; reflection techniques; *SP453*, pp. 135-139 (Oct. 1976).

Ultrasound diagnosis; acoustic impedance; Bragg diffraction; computer processing; frequency-dependent attenuation; internal scattering; myocardial infarction; scattering; surface scattering; tissue characterization; ultrasonic spectroscopy; *SP453*, pp. 167-196 (Oct. 1976).

Ultratrace level; accuracy; analysis of precision; *a priori* error; *a priori* precision; *a posteriori* precision; chi-square test; precision; precision of analytical method; *SP422*, pp. 127-139 (Aug. 1976).

Ultraviolet; absorption; B-stars; C IV; O-stars; Si IV; spectra; stellar; *16271*.

Ultraviolet; detectors; NBS; radiometry; sources; standards; survey; *SP456*, pp. 107-110 (Nov. 1976).

Ultraviolet; uniformity of response; detector; photodiode; silicon; *16413*.

Ultraviolet; visible; averaging sphere; diffusing effectiveness; efficiency; fluorescent wavelength converter; photometry; spectrophotometry; *16333*.

Ultraviolet; wavelength; zirconium; molybdenum; niobium; spectra; *16425*.

Ultraviolet; wavelength calibration; averaging spheres; high accuracy transmittance; light averaging devices; linearity; photometric precision; reference spectrophotometer; *TN913*.

Ultraviolet; wavelengths; barium; cesium; lanthanum; spectra; *16035*.

Ultraviolet; wavelengths; iron; spectra; *16133*.

Ultraviolet; wavelengths; yttrium; spectra; *15725*.

Ultraviolet; wavelengths; yttrium; zirconium; spectra; *16134*.

Ultraviolet absorbance standards; absorbance linearity; accuracy; acidic potassium dichromate solutions; calibration of ultraviolet spectrophotometers; liquid filters; transfer standards; *J. Res.* **80A** No. 4, 631-636 (1976).

Ultraviolet and visible spectroscopy; aromatic amine; benzene derivative; charge-transfer complex; dental materials; electron affinity; electron spin resonance spectroscopy; extrathermodynamic relationships; ionization potential; *J. Res.* **80A** No. 2, 173-187 (1976).

Ultraviolet averaging sphere; ultraviolet to visible converter; averaging sphere; averaging ultraviolet and visible light; radiation converter; *U.S. Patent 3,968,363*.

Ultraviolet detectors; detection; fire detectors; flame detectors; heat detectors; infrared detectors; smoke detectors; testing; *NBSIR 76-1040*.

Ultraviolet laser action; He-Ag and Ne-Ag mixtures; laser action; *16511*.

Ultraviolet laser, 250.0 nm; Cu II spectrum; *16192*.

Ultraviolet photoelectron spectroscopy; x-ray photoelectron spectroscopy; adsorbate; chemisorption; ruthenium; *15814*.

Ultraviolet photoelectron spectroscopy; virgin CO; adsorption; carbon monoxide; chemisorption; desorption; photoelectron spectroscopy; photoemission; single crystal; tungsten; *15851*.

Ultraviolet photoelectron spectroscopy (UPS); angle and energy distributions; charged particle spectroscopy; electron-stimulated desorption of ions (ESDIAD); field-ion microscopy (FIM); low energy electron diffraction (LEED); *16078*.

Ultraviolet photoemission; adsorption; chemisorption; CO; cyclotron resonance; electron cyclotron resonance; magnetic field; microwave discharge; photoemission; tungsten; *16016*.

Ultraviolet photoemission; valence band; virgin states; α states; β states; adsorption; carbon; carbon monoxide; chemical bonding; chemisorption; density dependent transitions; desorption; dissociative adsorption; electronic states; hydrogen; monolayers; nitrogen; *16419*.

Ultraviolet radiation; weatherability; antenna-support materials; environmental degradation; guys, nonmetallic; marine atmospheres; plastics, fiber-reinforced; pultrusions; stress-rupture testing; sunlight; *NBSIR 76-1069*.

Ultraviolet, spectra; atomic processes; sun, corona; sun, flares; sun, prominences; sun, spectra; *15987*.

Ultraviolet, spectra; stars, chromospheres; stars, late type; *16031*.

Ultraviolet spectrum; Ar metastable interactions; $ClHCl^-$; emission spectrum; HAr_n^+; $HCCl_2^+$; $HCCl_2^-$; $HCCl_3$; infrared spectrum; matrix isolation; molecular rotation in solid Ar; photoinduced proton transfer; *15757*.

Ultraviolet spectrum-sun; chromosphere-sun; coronal holes; diffusion; transition region-sun; *15717*.

Ultraviolet stellar spectra; Wilson-Bappu effect; chromospheres, stellar; *Copernicus* observations; *15784*.

Ultraviolet to visible converter; averaging sphere; averaging ultraviolet and visible light; radiation converter; ultraviolet averaging sphere; *U.S. Patent 3,968,363*.

Ultraviolet-visible filters; evaporated metal-on-quartz; filters, transmittance; neutral filters; standard reference materials; transmittance characteristics; *J. Res.* **80A** No. 4, 637-641 (1976).

Unbalance; vibration; diesel-electric sets; gears; looseness; signature analysis; *NBS-GCR-74-22*.

Uncertainties; accuracy; optical radiation measurement; radiometry; systematic errors; *16583*.

Uncertainties; crystallographic data; errors; probability plots; residuals; statistics; *NBSIR 76-1102*.

Uncertainty; autocollimator; calibration; constant deviation prism; geometrical model; optical square; pentaprism; reflection; refraction; standard deviation; *NBSIR 76-993*.

Uncertainty; calibration; diameter; gravitational bending; interferometry; least squares line; linear model; optical flat; profile; standard deviation; *NBSIR 75-975*.

Uncertainty; creep; fire endurance; fire tests; reinforced concrete; sensitivity analysis; steel; structural mechanics; *BSS76*.

Uncertainty; measurement; measurement assurance; *15976*.

Uncertainty; measurement; traceability; *15975*.

Uncertainty; water phantom; absorbed dose; cobalt-60 gamma radiation; computation check; dose interpretation; mailings; results; therapy departments; thermoluminescence dosimeters; *J. Res.* **80A** No. 4, 663-668 (1976).

Underground; alloys; corrosion; metallurgically-bonded; metals; plastic-bonded; soils; telephone cables; *16352*.

Underground; corrosion; galvanic; hydrogen embrittlement; soil; stainless steel; stress; stress-corrosion; *16354*.

Underground corrosion; copper; corrosion; galvanic corrosion; soil corrosion; stainless steel; *16355*.

Underground corrosion; metal and plastic composites; metal composites, metals; soil corrosion, telephone cable shields; *16351*.

Underlayments; carpets; fire; flammability; floor coverings; pad; *NBSIR 76-1018*.

Underplatings for gold; wear of gold; contact lubrication; corrosion inhibitors; electrical contacts; gold plate; palladium; polymer in gold; porosity in gold; solder plate; tin-nickel alloy; tin plate; *SP452*, pp. 64-71 (Sept. 1976).

Underpotential deposition; electrocatalysis; foreign metal monolayers; Fe^{2+}/Fe^{3+} reaction; formic acid oxidation; oxygen reduction; *SP455*, pp. 191-200 (Nov. 1976).

Uniform approximation; chemical reactions; classical scattering matrix theory; collision theory; hydrogen atoms; hydrogen molecules; scattering theory; trajectories; *16054*.

Uniform asymptotic approximations; Weber's equation; error bounds; parabolic cylinder functions; turning points; *J. Res.* **80B** No. 4, 437-440 (1976).

Uniformity of response; detector; photodiode; silicon; ultraviolet; *16413*.

Uniforms; upholstered furniture; apparel; burn injury; carpets; draperies; fabrics; flammability; heat flux; standards; tents; tests; *16144.*
Unitary heat pump; heating and cooling; military family housing; specification; *NBSIR 76-1029.*
United States standards; fire detection; regulations; smoke detectors; *16187.*
Units; magnetism; *16240.*
Units of measurement; weights; history of measurement standards; measures; metric system; standards; *SP447.*
UNIVAC 1100 Series OS; BBN-TENEX; IBM OS/360; operating system security; security flaws; software security; taxonomy of integrity flaws; *NBSIR 76-1041.*
Universal symbol diagram approach; automotive repair; automotive repair effectiveness; automotive service; customer-mechanic relationship; human factor considerations; *SP423*, pp. 171-178 (Apr. 1976).
Universality; air constituents; critical region parameters; ethylene; heavy noble gases; helium; linear model; methane; NBS equation; scaling laws; statistical analysis; steam; *JPCRD* **5**, No. 1, 1-52 (1976).
Universality; critical exponents; critical region; homogeneity; polar fluids; scaling; steam; *15733.*
University systems; directory; equipment management software; fiscal administration software; grant/contract software; personnel management software; proposal/award software; research administration; software exchange; software summary; software survey; *TN916.*
Unloading; failure probabilities; lifetime assurance; proof testing; slow crack growth; *16039.*
Unreasonable hazards; consumer products; product safety; refrigerator standards; risk measurement; safety standard; *16131.*
Unsaturated monomers; block copolymers; homogeneous anionic polymerization; monodisperse polymers; *16057.*
Unsolicited proposals; VA; certification programs; ETIP; incentives; innovation; life cycle costing; medical products and standards; procurement policies; product testing; specifications; *NBSIR 76-997.*
Upholstered furniture; apparel; burn injury; carpets; draperies; fabrics; flammability; heat flux; standards; tents; tests; uniforms; *16144.*
Upholstery; bedding; beds; carbon dioxide; carbon monoxide; combustion products; fire gases; fire hazards; furniture; life hazard; oxygen; smoke; temperature; toxicity; *NBS-GCR-73-1.*
Upholstery fabric; cotton; cushioning; fire retardant; furniture; glowing; inhibitor; oxidative pyrolysis; oxygen index; rayon; smoke; smoldering; *16224.*
Uranium; actinide; atomic energy levels; isoelectronic sequence; protactinium; rare earth; sliding spark discharge lamp; spectrum; *15990.*
Uranium; alkali ions; calcium; charge exchange; charge transfer; cross section calculations; ion-atom collisions; rare-gas ions; *16126.*
Uranium; atomic beam; delayed coincidence; imprisonment; lifetime; mean life; resonance radiation; transition probability; U I; *16322.*
Uranium oxide; alpha particles; backscattering; disintegration rate; ranges; self-absorption; *15808.*
Uranium spectrum; lifetimes in U I; oscillator strengths for U I; transition probabilities for U I; *J. Res.* **80A** No. 1, 1-7 (1976).
Uranium spectrum; oscillator strengths for U II; transition probabilities for U II; *J. Res.* **80A** No. 3, 429-438 (1976).
Uranium-oxide; alpha particles; backscattering; gadolinium-148; polonium-210; self absorption; *15807.*
Urban problems; operations research; systems analysis; *16119.*
Urethane; flame spread; flammability; full-scale fire tests; laboratory fire tests; Metrorail cars; neoprene; smoke; transportation; *NBSIR 75-971.*
U.S. Army programs in statistics; U.S. Government, services to; Wilks award; Wilks, S. S; *Annals of Mathematical Statistics;* bibliography; distribution-free methods; educational testing; mathematical statistics; multivariate analysis; *16114.*
U.S. foreign assistance; computer education and training; computer technology; less-developed countries; technology transfer; *NBSIR 73-423.*
U.S. Government; American National Standards; computers; data; data elements; data processing; information; information processing; International Standards; *FIPS PUB 45.*
U.S. Government, services to; Wilks award; Wilks, S. S; *Annals of Mathematical Statistics;* bibliography; distribution-free methods; educational testing; mathematical statistics; multivariate analysis; order statistics; social sciences, services to; *16114.*
U.S. legal volt; volt; voltage measurement; electrical standards; standard cells; *16268.*
USA; fire propagation test; fire tests; smoke density chamber; smoke tests; test comparison; UK; *16125.*
Usability; communications networks; computer networks; cost; interactive service; measurement; measures; performance; *TN908.*
Use type tests for comfort and effectiveness; clothing; firemen's turnout coats; *NBS-GCR-74-25.*
User experience; auditing; cost/benefit analysis; data base; data base management; DBMS; government regulation; management objectives; privacy; security; standards; technology assessment; *SP451.*
User fees; wastewater; water pollution; water resources; cost sharing; economic efficiency; environment; equity; financing; grants; pollution abatement; *16564.*

Wavelength; zirconium; molybdenum; niobium; spectra; ultraviolet; *16425.*

Wavelength accuracy; bandwidth; calibration; errors in spectrophotometry; interferences; multiple reflections; photometric linearity; polarization; sample characteristics; straylight; *J. Res.* **80A** No. 4, 609-624 (1976).

Wavelength calibration; averaging spheres; high accuracy transmittance; light averaging devices; linearity; photometric precision; reference spectrophotometer; ultraviolet; *TN913.*

Wavelength comparison; interferometer; laser; optical frequency; optical heterodyne; *15887.*

Wavelength dependence; multilayer dielectric mirror; optical absorptance; reflectance; scattering; temperature dependence; *SP435,* pp. 230-235 (Apr. 1976).

Wavelength modulation; graphite furnace atomic emission spectrometry; repetitive wavelength scanning; *15954.*

Wavelength scale; errors in spectrophotometry; photometric scale; slit width; spectral transmission; spectrophotometer standards; stray light; *J. Res.* **80A** No. 4, 625-630 (1976).

Wavelengths; barium; cesium; lanthanum; spectra; ultraviolet; *16035.*

Wavelengths; iron; spectra; ultraviolet; *16133.*

Wavelengths; ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; *16420.*

Wavelengths; ytterbium; energy levels; spectrum; *15920.*

Wavelengths; yttrium; spectra; ultraviolet; *15725.*

Wavelengths; yttrium; zirconium; spectra; ultraviolet; *16134.*

Wavelengths; Zeeman-effect of Th I; energy levels; thorium; Th I; *J. Res.* **80A** No. 2, 221-358 (1976).

Wavelengths, O I; atomic energy levels, O I; atomic spectra, O I; multiplet table, O I; oxygen, first spectrum; spectrum O I; *NSRDS-NBS3, Section 7.*

Waves in fluids; buoyant flows; geophysical fluid flows; inertial waves; internal waves; rotating fluids; stratified fluids; *J. Res.* **80B** No. 3, 353-402 (1976).

Wax-bound electrode; amperometry; cyclic voltammetry; electrosorption; Langmuir; lead dioxide; pyrophosphate; Temkin; *SP455,* pp. 183-189 (Nov. 1976).

Waybill file; programmer's documentation; short line mileage; *16241.*

Waybills; railroad freight movements; short-line miling system; *16241.*

Wear; adhesion; adsorption; alloys; composites; dental; grafting; investments; polymer; resin; *NBSIR 76-1095.*

Wear; adhesion; coatings; friction; metal; polymers; *SP452,* pp. 3-13 (Sept. 1976).

Wear; barrier film; chemical coatings; failure prevention; mechanical failure; metal coatings; plated coatings; polymer coatings; solid film lubricants; sputtered coatings; *SP452.*

Wear; castable refractories; coal gasification; deformation; erosion; fracture; *16600.*

Wear; chemical; coating; deposition; vapor; *SP452,* pp. 151-169 (Sept. 1976).

Wear; composite resins; composites; dental materials; fillers; porous glass; radiopacity; reinforcements; *16586.*

Wear; composite resins; composites; dental materials; fillers; porous glass; radiopacity; reinforcements; *16587.*

Wear; contact lubrication; elastohydrodynamic contacts; fatigue; lubricant film thickness; scuffing; *SP423,* pp. 41-54 (Apr. 1976).

Wear; corrosion; crack-free chromium; electroplating; fast plating; fatigue strength; grinding; hardness; stress; tensile strength; *SP452,* pp. 56-63 (Sept. 1976).

Wear; curing agent; fretting; silicone resin; solid lubricants; titanium; *SP452,* pp. 124-131 (Sept. 1976).

Wear; economic savings of failure prevention; friction; lubrication; mechanical failure; tribology; *SP423,* pp. 117-139 (Apr. 1976).

Wear; electron channeling; iron; metals; plastic deformation; surfaces; *16523.*

Wear; electron channeling; iron; metals; plastic deformation; surfaces; *NBSIR 76-992.*

Wear; fluoride films; gears; molybdenum disulfide; solid lubricants; *SP452,* pp. 132-148 (Sept. 1976).

Wear; wear debris; x-ray analysis; copper; electron channeling; electron microscope; metals; particle analysis; plastic deformation; surfaces; *NBSIR 76-1141.*

Wear; wear testing; erosive wear; particle impingement; particle velocity measurement; *15778.*

Wear debris; x-ray analysis; copper; electron channeling; electron microscope; metals; particle analysis; plastic deformation; surfaces; wear; *NBSIR 76-1141.*

Wear life; antimony trioxide; friction; molybdenum disulfide; spin axis gas bearings; sputtered coatings; surface characterization; *SP452,* pp. 177-186 (Sept. 1976).

Wear of gold; contact lubrication; corrosion inhibitors; electrical contacts; gold plate; palladium; polymer in gold; porosity in gold; solder plate; tin-nickel alloy; tin plate; underplatings for gold; *SP452,* pp. 64-71 (Sept. 1976).

Wear rate; abrasion; brittle surfaces; chipping fracture; hardness; *16335.*

Wear resistant alloy; auto-catalytic nickel; auto-catalytic nickel, hardness of; auto-catalytic nickel, wear of; electroless nickel; electroless nickel, hardness of; electroless nickel, wear of; nickel, auto-catalytic; nickel, electroless; *SP452,* pp. 45-55 (Sept. 1976).

Wear testing; erosive wear; particle impingement; particle velocity measurement; wear; *15778.*

Weather building human systems; air conditioning criteria; human comfort; physiological indices; predicted indoor habitability index (PIHI); *16152.*

Weatherability; antenna-support materials; environmental degradation; guys, nonmetallic; marine atmospheres; plastics, fiber-reinforced; pultrusions; stress-rupture testing; sunlight; ultraviolet radiation; *NBSIR 76-1069.*

Weathering, simulated; aramid fiber rope; breaking load, rope; cable, aramid-fiber; end fittings, rope; fatigue damage; rope, aramid-fiber; slings, cargo; terminations, rope; *NBSIR 76-1159.*

Weatherproof pressure probe; wind field pressure measurements; ambient pressure probe; omnidirectional pressure probe; pressure probe shroud; static pressure; *U.S. Patent 3,950,995.*

Web reinforcement; column; ductility; earthquake; reinforced concrete; shear tests; structural engineering; *SP444,* pp. IV-16—IV-36 (Apr. 1976).

Weber's equation; boundary-value problem; eigenvalues; parabolic cylinder functions; resonance; rotating disks; singular perturbations; turning-point; viscous flow; *16459.*

Weber's equation; error bounds; parabolic cylinder functions; turning points; uniform asymptotic approximations; *J. Res.* **80B** No. 4, 437-440 (1976).

Wedge; crystal; disclination; dislocation; pseudopentagonal; stacking fault; twin; *15767.*

Weighing; density; etching; grinding; sawing; silicon; standard; *NBSIR 76-1019.*

Weight; force; kilogram; mass; pound; *16394.*

Weighting; interlaboratory comparisons; invariance; models; precision; precision of measurement; repeatability; reproducibility; test methods; transformations; *15909.*

Weight-loss; degradation; kinetics; oxidation; parameter jump method; polystyrene; relaxation methods; thermogravimetry; *15858.*

Weights; history of measurement standards; measures; metric system; standards; units of measurement; *SP447.*

Weights and measures; building industry; calibration system; centigrade/celsius; computer; electrical industries; environments; glass standards; government intervention; heating/cooling; lead-paint; metric; pressure transducers; *DIM/NBS* **60,** No. 10, 1-24 (1976).

Weights and measures; calibration; communication; consumers; grain moisture measurement; laws and regulations; measurement; metric; packaging and labeling; police radar equipment; standards; supermarket automation; *SP442.*

Weldbonded joints; adhesive-bonded joints; bonded joints; double-lap joint analysis; finite element analysis; joining; joints; single-lap joint analysis; single-lap-joint bending; spotwelded joints; *NBSIR 75-957.*

Weldbonded joints; bonded joints; computer simulation; cyclic loading; debond analysis; finite element analysis; joints; nonlinear analysis; single-lap-joint bending; spotwelded joints; *16147.*

Welded steel pipe; brittle fracture; gas main pipe; *NBSIR 73-299.*

Welding; alloying; inclusions; low temperature; rolling; ships; steel; *16145.*

Welding; fracture control; fracture mechanics; mechanical properties; nondestructive evaluation (NDE); radiography; *NBSIR 76-1154, Vol. 1.*

Welding; fracture control; fracture mechanics; mechanical properties; nondestructive evaluation (NDE); radiography; *NBSIR 76-1154, Vol. 2.*

Wet ashing; ashing techniques; dissolution; dry ashing; organic materials analysis; trace element analysis; *SP422,* pp. 491-507 (Aug. 1976).

Wet chemical analysis; atomic absorption analysis; Californium-252; Mahoning River; neutron activation analysis; pollution; sediment; trace elements; water; *SP422,* pp. 225-230 (Aug. 1976).

Wet pavement; accident reduction, skidding; correlation, skid resistance; highway safety; pavement, skid resistance; pavement wetting system, tire-pavement interface forces; *NBSIR 75-972.*

Wet pavement; accident reduction, skidding; correlation, skid resistance; highway safety; measurement, skid resistance; pavement, skid resistance; pavement wetting system; tire-pavement interface forces; *NBSIR 76-1133.*

Wet-ashing blank; biological analysis; container blank; neutron activation analysis; *SP422,* pp. 593-604 (Aug. 1976).

Wheatstone Bridge; automatic network analyzers; computer-controlled measurement; magic tee; microwave measurement methods; multiple probe devices; reflectometers; rotating probe devices; slotted lines; survey of automatic techniques; swept frequency measurements; *Monogr. 151.*

Whitlockite; β-tricalcium; calcification; calcium; dicalcium phosphate; octacalcium phosphate; pyrolysis; pyrophosphate; stoichiometry; *15996.*

Whittaker functions; asymptotic analysis; Darboux's method; definite integrals; hypergeometric functions; incomplete gamma function; Legendre functions; ordinary differential equations; saddle points; special functions; turning points; *15818.*

Whittaker's cardinal function; Laguerre transform; sampling function; *J. Res.* **80B** No. 3, 415-418 (1976).

Width; experimental; neutral atom; review; shift; Stark broadening; *JPCRD* **5,** No. 2, 209-258 (1976).

Wilks award; Wilks, S. S; *Annals of Mathematical Statistics;* bibliography; distribution-free methods; educational testing; mathematical statistics; multivariate analysis; order statistics; social sciences, services to; *16114.*

Wilks, S. S; *Annals of Mathematical Statistics;* bibliography; distribution-free methods; educational testing; mathematical statistics; multivariate analysis; order statistics; social sciences, services to; statistical education in the United States; *16114.*

Wilson-Bappu effect; chromospheres, stellar; *Copernicus* observations; ultraviolet stellar spectra; *15784.*

Wilson's disease; atomic absorption spectroscopy (AAS); comparison between NAA and AAS; neutron activation analysis (NAA); time of analysis in NAA and AAS; trace element content in liver biopsies; *SP422,* pp. 231-238 (Aug. 1976).

Wind; Bangladesh; housing; low-cost housing; low-rise buildings; *NBS-GCR-76-74.*

Wind; bridge; design; field data; gust response; model; specifications; structure; theory; *SP444,* pp. I-1—I-20 (Apr. 1976).

Wind; bridges; buildings; codes; disaster; dynamic analysis; earthquakes; modeling; soils; structural response; volcanoes; *SP444.*

Wind; buildings; cyclones; disasters; structural engineering; tides; *BSS86.*

Wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; *NBS-GCR-75-36.*

Wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; *NBS-GCR-75-37.*

Wind; buildings; damage; disaster; dynamic analysis; earthquakes; hurricanes; natural hazards; structural engineering; tornados; *NBS-GCR-75-38.*

Wind; missiles; nuclear engineering; structural engineering; tornadoes; *NBSIR 76-1050.*

Wind; wind damage; wind engineering; building codes; design standards; masonry construction; roofs; siding; structural engineering; *TN909.*

Wind; wind intensities; cloud seeding; frequency distribution; hurricanes; typhoon; *SP444,* pp. I-21—I-33 (Apr. 1976).

Wind damage; wind engineering; building codes; design standards; masonry construction; roofs; siding; structural engineering; wind; *TN909.*

Wind engineering; building codes; design standards; masonry construction; roofs; siding; structural engineering; wind; wind damage; *TN909.*

Wind engineering; research programs; sponsorship; *SP444,* pp. V-80—V-82 (Apr. 1976).

Wind engineering; wind loads; accelerations; building codes; buildings; deflections; dynamic response; gust factors; structural engineering; *15871.*

Wind field pressure measurements; ambient pressure probe; omnidirectional pressure probe; pressure probe shroud; static pressure; weatherproof pressure probe; *U.S. Patent 3,950,995.*

Wind intensities; cloud seeding; frequency distribution; hurricanes; typhoon; wind; *SP444*, pp. I-21—I-33 (Apr. 1976).
Wind load; finite element; guyed tower; structural analysis; structural engineering; vibration analysis; *SP444*, pp. IV-37—IV-54 (Apr. 1976).
Wind load; wind profile; wind tunnel; bridge; gust; meteorological data; topographical model; *SP444*, pp. II-1—II-20 (Apr. 1976).
Wind loads; accelerations; building codes; buildings; deflections; dynamic response; gust factors; structural engineering; wind engineering; *15871*.
Wind loads; building code; damage classification; extreme wind; tornado; *SP444*, pp. I-34—I-39 (Apr. 1976).
Wind loads; building codes; buildings; deflections; dynamic response; gust factors; structural engineering; *SP444*, pp. IV-127—IV-144 (Apr. 1976).
Wind loads; buildings; codes and standards; housing; hurricanes; low-rise buildings; natural disaster; structural connections; typhoons; *NBSIR 75-790*.
Wind loads; wind tunnels; aerodynamics; boundary layers; buildings; codes and standards; *SP444*, pp. II-21—II-51 (Apr. 1976)
Wind (meteorology); wind pressure; buildings (codes); failure; probability distribution functions; reliability; structural engineering; *16544*.
Wind pressure; buildings (codes); failure; probability distribution functions; reliability; structural engineering; wind (meteorology); *16544*.
Wind pressure; wind speed; buildings (codes); hurricanes; probability distribution functions; reliability; risk; statistical analysis; storms; structural engineering; *16545*.
Wind profile; wind tunnel; bridge; gust; meteorological data; topographical model; wind load; *SP444*, pp. II-1—II-20 (Apr. 1976).
Wind profiles; boundary layer; hurricanes; loads (forces); natural analysis; tall buildings; *15899*.
Wind speed; buildings (codes); hurricanes; probability distribution functions; reliability; risk; statistical analysis; storms; structural engineering; wind pressure; *16545*.
Wind tunnel; bridge; gust; meteorological data; topographical model; wind load; wind profile; *SP444*, pp. II-1—II-20 (Apr. 1976).
Wind tunnels; aerodynamics; boundary layers; buildings; codes and standards; wind loads; *SP444*, pp. II-21—II-51 (Apr. 1976)
Window; ZnSe; CO_2 laser radiation; Cu; CW laser damage; grating; infrared windows; KCl; mirror; Mo; NaCl; *SP435*, pp. 189-201 (Apr. 1976).
Window air conditioners; energy efficient products; Experimental Technology Incentives Program; life cycle costing; procurement experiments; *NBS-GCR-ETIP 76-19*.
Window damage; mirror damage; pulsed lasers; *SP435*, pp. 202-206 (Apr. 1976).
Windows; daylight gathering; daylighting of buildings; energy conservation; lenses; light conduits; light control; reflectors; skylights; *NBSIR 76-1098*.
Windows; infrared lasers; interferometry; stress birefringence; thermal distortion; *SP435*, pp. 126-141 (Apr. 1976).
Winds; radiative transfer—stars; *15824*.
Wire bond; bond angle; bonding; bond pull test; bond-to-bond spacing; large wire; loop height; microelectronics; nondestructive bond pull test; position of hook; pull rate; pull strength; resolution-of-forces; semiconductor devices; ultrasonic bonding; *SP400-18*.
Wire bonds; x-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; charge-coupled device structures; Darlington pairs; deep depletion; dopant profiles; electrical properties; *SP400-19*.
Wire loop; atomic absorption; determination; lead; paint; *16334*.
Wired city; wired nation; broadband interactive terminals; cable television uses; checkless society; computer/communications networks; computer/communications services; computer/communications standards; interactive cable television; nonentertainment television; *NBS-GCR-75-44*.
Wired nation; broadband interactive terminals; cable television uses; checkless society; computer/communications networks; computer/communications services; computer/communications standards; interactive cable television; nonentertainment television; *NBS-GCR-75-44*.
Wiretapping; body worn antenna; bugging; eavesdropping; electronic surveillance; microphones; receiver; tape recorder; telephone; transmitter; *16237*.
Wodginite; crystal structure; lithium tantalate; *M*-$LiTa_3O_8$; *15974*.
Wool; cotton; cotton/polyester; extinguishment; fabric flammability; fabrics; fibers; finishes; flame retardant treatments; nylon; *NBS-GCR-76-71*.
Work atmosphere; air analysis; air sampling; gas analysis; industrial hygiene; phosphine; sorber; *NBSIR 75-977*.
Work atmosphere; air analysis; air sampling; gas analysis; hydrogen cyanide; industrial hygiene; ion selective electrode; sodium hydroxide; *NBSIR 76-998*.
Work function; adsorption; nitrogen; physical adsorption; tungsten; *16460*.
Workload; FORTRAN IV; operating system; overhead; resource allocation; simulator; strategies; *16062*.
Workload characterization; benchmarking; charging algorithms; service bureaus; synthetic benchmarking; *16624*.
Workload characterization; benchmarking; charging algorithms; service bureaus; synthetic benchmarking; *TN920*.
WWV/WWVH; computer; energy measurement; EPIC; FIPS; kitchen ranges; mercury; metal fires; metric; safety; *DIM/NBS* **60**, No. 1, 1-24 (1976).

X

X band; cavity stabilization; frequency multiplication; frequency stability; frequency synthesis; Gunn oscillator; infrared; injection stabilization; klystron; *16520*.
χ particles; angular distributions; gamma-gamma correlations; quark models; symmetries; ψ particles; *15962*.
X ray; alpha particle; beta particle; gamma-ray; radioactivity; sediment; standard; *15933*.
X ray; asymmetric; diffraction; intensifier; topography; *16356*.
X ray; attenuation coefficient; cross section; dosimetry; energy-absorption coefficient; gamma-ray; photon; *SP456*, pp. 299-306 (Nov. 1976).
X ray; automation; calibration; computer; recordkeeping; *SP456*, pp. 53-57 (Nov. 1976).
X ray; Avogadro; crystal; physical constant; *16223*.
X ray; dental; kVp; *SP456*, pp. 395-401 (Nov. 1976).
X ray; diffractometer; direct methods; explosives; single-crystal; triazine; *15735*.
X rays; attenuation coefficients; cross sections; gamma rays; photoelectric effect; photons; *TN901*.
X rays; backscattered electrons; electron probe microanalysis; Monte Carlo electron trajectory simulation; scanning electron microscopy; secondary electrons; *SP460*, pp. 15-44 (Dec. 1976).
X rays; betas; calibrations; dosimetry; gammas; neutrons; plutonium; *SP456*, pp. 267-276 (Nov. 1976).
X rays; calibration; electrical measurements; electro-optics; frequency response; high voltage; Kerr effect; operational am-

plifier; pulses; radiation; safety; x-ray generators; *NBSIR 75-775.*

X rays; electron probe microanalysis; Monte Carlo calculations; particulates; quantitative analysis; thin films; *16410.*

Xanthene dyes; aminocoumarins; carbazine dyes; deuterium effect; fluorescence quantum yield; laser dyes; molecular structure; oxazine dyes; quenching; *J. Res.* **80A** No. 3, 421-428 (1976).

X-band measurements; diodes; gamma rays; hardness assurance; microwave mixer diodes; mixers; neutrons; radiation hardness; receivers; Schottky-barrier diodes; semiconductors; solid-state devices; *SP400-7.*

Xe; CO_2; critical exponents; critical point; equation of state; SF_6; *16081.*

Xenon; cross section; inner-shell excitation; krypton; photoionization; vacuum ultraviolet; *16541.*

Xenon; crystal field; photoemission; physisorption; tungsten (100); *15813.*

Xenon; XPS; carbon monoxide; chemisorption; ESCA; extra-atomic relaxation; formaldehyde; oxygen; photoelectron spectroscopy; physisorption; tungsten; *16023.*

Xenon-mercury, arc lamp; arsenic; atomic absorption; atomic spectrometry; background, correction; nonflame, atomization; stray light; *15894.*

Xenon-133, 131m; argon-37; direct standardization; environmental radioactivity; internal gas counters; isotope separator; krypton-85; proportional counters; radioactivity standardization; *15948.*

XPS; carbon monoxide; chemisorption; ESCA; extra-atomic relaxation; formaldehyde; oxygen; photoelectron spectroscopy; physisorption; tungsten; xenon; *16023.*

X-radiography; end fitting; glass-reinforced-plastic rod end fitting; nondestructive examination; neutron radiography; ultrasonics; *NBSIR 76-1084.*

X-ray absorption factor; absorption correction; primary emission; quantitative electron probe analysis; *15722.*

X-ray analysis; calibration; filters; orchard leaves; reference sample; *15984.*

X-ray analysis; calibration; filters; orchard leaves; standard reference sample; *16065.*

X-ray analysis; color composite technique; counting statistics; electron beam scanning; electron probe microanalysis; *15787.*

X-ray analysis; copper; electron channeling; electron microscope; metals; particle analysis; plastic deformation; surfaces; wear; wear debris; *NBSIR 76-1141.*

X-ray analysis; electron microscopy; Fe-Cr alloys; passive films; pitting corrosion; stainless steel; *16024.*

X-ray analysis; electron probe microanalysis; Monte Carlo electron trajectory calculations; nuclear backscattering analysis; scanning electron microscopy; thin films; *SP460,* pp. 129-138 (Dec. 1976).

X-ray continuum radiation; elemental distribution; energy dispersive x-ray analysis; light element analysis; scanning electron microscopy; thin film x-ray analysis; *15771.*

X-ray crystallography; clusters; metal-metal bonding; metal sulfides; sulfides; tungsten; *16071.*

X-ray departments; x-ray trends; diagnostic; nationwide evaluation; physician; technologist; *SP456,* pp. 147-152 (Nov. 1976).

X-ray diffraction; cerium oxide; magnetohydrodynamics; system K_2O-ZrO_2-cerium oxide; thermal microbalance; *16440.*

X-ray diffraction; crystal structure; integrated intensities; lattice constants; peak intensities; powder patterns; reference intensities; standard; *Monogr. 25, Section 13.*

X-ray diffraction; diamond cell; electrical resistance; high pressure; nuclear decay; pressure calibrations; spectroscopy; *16375.*

X-ray diffraction; invar; iron alloys; nickel alloys; stacking fault energy; *16191.*

X-ray diffraction examination of single crystal lattice damage; (100) surface of copper; heat transfer to helium II; interfacial thermal resistance; Kapitza conductance; Kapitza conductance of copper; *15737.*

X-ray diffraction topography; crystal perfection; Czochralski growth; domain walls; magnetic domains; nickel single crystals; surface reflection topography; transmission topography; *16503.*

X-ray dynamical diffraction; x-ray topography; contrast conditions; dynamical images; immobile dislocations; Lomer locks; sessile dislocations; *16373.*

X-ray emission; electron trajectories; magnetic effects; Monte Carlo calculations; multiple scattering x-ray generation; particle analysis; quantitative x-ray microanalysis; thin films; *SP460,* pp. 105-128 (Dec. 1976).

X-ray equipment; performance standard, EOD; bomb disarmament; explosive; *16346.*

X-ray excitation; cathode-ray excitation; luminescence; luminescence standards; phosphors; quantum efficiencies; radiant efficiencies; UV excitation; *J. Res.* **80A** No. 3, 401-407 (1976).

X-ray fluorescence; accuracy; activation analysis; airborne particulates; air filter analysis; atomic absorption; emission spectroscopy; environmental pollutants; intercomparisons; multielement analysis; trace element analysis; *SP422,* pp. 173-188 (Aug. 1976).

X-ray fluorescence; accuracy; anodic stripping voltammetry; arc emission spectroscopy; atomic absorption; environmental analyses; interlaboratory tests; neutron activation analysis; plasma emission; round robin; *SP422,* pp. 199-210 (Aug. 1976).

X-ray fluorescence; accuracy; atomic absorption; environment; neutron activation analysis; precision; *SP422,* pp. 239-245 (Aug. 1976).

X-ray fluorescence; atmospheric particulates; direct analysis techniques; emission spectroscopy; particulate analysis; particulate characterization; sampling methods; *SP422,* pp. 791-803 (Aug. 1976).

X-ray fluorescence; corrections; matrix effects; standard reference materials; *15983.*

X-ray fluorescence; ion exchange; sampling; *SP422,* pp. 649-658 (Aug. 1976).

X-ray fluorescence; lead paint; lead paint detection; lead paint programs; lead poisoning; portable x-ray fluorescence; random sampling; *TN921.*

X-ray fluorescence; mineral analysis; trace analysis; *SP422,* pp. 1109-1118 (Aug. 1976).

X-ray fluorescence; x-ray microanalysis; distribution functions; electron probe microanalysis; semiconductor materials; thin films; *15967.*

X-ray fluorescence spectroscopy; atomic absorption spectrophotometry; emission spectroscopy; nickel; nickel-base alloys; polarography; spectrophotometry; *SP422,* pp. 1005-1016 (Aug. 1976).

X-ray generation; electron microscopy; electron probe microanalysis; electron-specimen interactions; Monte Carlo electron trajectory simulation; scanning electron microscopy; *SP460,* pp. 45-60 (Dec. 1976).

X-ray generators; x rays; calibration; electrical measurements; electro-optics; frequency response; high voltage; Kerr effect; operational amplifier; pulses; radiation; safety; *NBSIR 75-775.*

X-ray interferometry; crystal diffraction; gamma-ray wavelength; gold 198; goniometer; *16227.*

X-ray leakage; electron microscopes; health hazards; high voltage electron microscopes; *SP456,* pp. 223-224 (Nov. 1976).

X-ray microanalysis; distribution functions; electron probe microanalysis; semiconductor materials; thin films; x-ray fluorescence; *15967*.

X-ray microanalysis; electron energy loss; Landau electron deceleration theory; microanalysis; Monte Carlo electron trajectory calculations; scanning electron microscopy; *SP460*, pp. 61-96 (Dec. 1976).

X-ray microanalysis; electron probe microanalysis; electron scattering; electron-specimen interactions; Monte Carlo electron trajectory calculations; scanning electron microscopy; *SP460*, pp. 5-14 (Dec. 1976).

X-ray photoelectron spectroscopy; acoustic emission; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; charge-coupled device structures; Darlington pairs; deep depletion; dopant profiles; electrical properties; *SP400-19*.

X-ray photoelectron spectroscopy; Auger electron spectroscopy; depth impurity profiling; ion implantation; ion sputtering; microelectronic materials; Rutherford backscattering; secondary ion mass spectroscopy; silicon; silicon dioxide; surface analysis; *15739*.

X-ray photoelectron spectroscopy; adsorbate; chemisorption; ruthenium; ultraviolet photoelectron spectroscopy; *15814*.

X-ray photoelectron spectroscopy; Auger spectroscopy; depth profiles; electron beam induced imaging; ESCA; insulator films; interface characteristics; internal photoemission; ion scattering spectroscopy; nuclear resonance profiling; photodepopulation; *SP400-23*.

X-ray photoelectron spectroscopy; acoustic emission; Auger electron spectroscopy; beam-lead bonds; bias-temperature stress test; boron redistribution; capacitance-voltage methods; dopant profiles; electrical properties; electronics; four-probe method; hermeticity; *SP400-25*.

X-ray photoelectron spectroscopy; carbon dioxide; carbon monoxide; chemisorption; formaldehyde; oxygen; physisorption; surface chemistry; tungsten; *16085*.

X-ray photoemission; alloys; copper; electronic density of states; lanthanum; nickel; nuclear magnetic resonance; platinum; *15768*.

X-ray photoemission; chemisorption; ESCA; field emission; photoemission; surfaces; *16454*.

X-ray quality control; diagnostic radiology; pass-fail tests; quality assurance measurements; *SP456*, pp. 119-130 (Nov. 1976).

X-ray topography; contrast conditions; dynamical images; immobile dislocations; Lomer locks; sessile dislocations; x-ray dynamical diffraction; *16373*.

X-ray trends; diagnostic; nationwide evaluation; physician; technologist; x-ray departments; *SP456*, pp. 147-152 (Nov. 1976).

X-ray tube potential; attenuation; exposure; phantoms; phototiming; radiographic examination; *SP456*, pp. 381-388 (Nov. 1976).

X-ray units; computer power; computer standard; corrosion; environment; health care; housing production; I-R 100 awards; NIKE missile; papers available; stereology; toy safety; *DIM/NBS* **60**, No. 11, 1-24 (1976).

X-ray, zwitterion; hydrogen bonding; single crystal; structure determination; *S*-carboxymethyl-L-cysteine sulfone; *16565*.

Y

Yagi; antenna; director; driven element; gain; radiation pattern; reflector; *TN688*.

Yield point; biaxial; fatigue; fracture; laboratory automation; mechanical testing; plasticity; polyvinyl chloride; servohydraulic system; viscoelasticity; *16626*.

Youden plot; analytical performance; between-run; calibration; precision; quality control; systematic error; *SP422*, pp. 141-150 (Aug. 1976).

Youden plot; Youden squares; Youden, W. J; calibration designs; chain blocks; collaborative tests; diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; interlaboratory tests; randomization, constrained; ruggedness test; *16115*.

Youden squares; Youden, W. J; calibration designs; chain blocks; collaborative tests; diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; interlaboratory tests; randomization, constrained; ruggedness test; statistical techniques; *16115*.

Youden, W. J; calibration designs; chain blocks; collaborative tests; diagnostic tests, index for rating; experiment design, statistical; graphical diagnosis; interlaboratory tests; randomization, constrained; ruggedness test; statistical techniques; Youden plot; *16115*.

Young modulus; bulk modulus; compressibility; Debye temperature; elastic constants; plutonium; plutonium alloy; Poisson ratio; shear modulus; sound velocity; *16635*.

Young's modulus; bulk modulus; composite materials; elastic constants; filled polymers; mechanical properties; particulate composites; Poisson's ratio; shear modulus; *16264*.

Young's modulus; bulk modulus; compressibility; copper; copper alloys; elastic constants; Poisson ratio; pulse-echo method; resonance method; shear modulus; sound velocity; *16505*.

Young's modulus; composite materials; elastic constants; filled polymers; mechanical properties; particulate composites; Poisson's ratio; *J. Res.* **80A** No. 1, 45-49 (1976).

Ytterbium; bismuth; gold; hafnium; ionization energies; iridium; lead; lutetium; mercury; osmium; platinum; rhenium; tantalum; thallium; tungsten; wavelengths; *16420*.

Ytterbium; energy levels; spectrum; wavelengths; *15920*.

Yttrium; spectra; ultraviolet; wavelengths; *15725*.

Yttrium; zirconium; spectra; ultraviolet; wavelengths; *16134*.

Z

Zeeman effect; atomic beam; autoionization; differential metastability; fine structure; inner shell excitation; rf spectroscopy; rubidium; *16098*.

Zeeman effect, Hf I; analysis, Hf I spectrum; hafnium, analysis of first spectrum; spectrum, Hf I; *Monogr. 153*.

Zeeman-effect of Th I; energy levels; thorium; Th I; wavelengths; *J. Res.* **80A** No. 2, 221-358 (1976).

Zero phonon line; charge transfer, color centers; crystal field; d^4 ions; EPR; iron 4+; optical absorption; perovskite; strontium titanate; transition metal; *16201*.

Zero shift; calibration; dynamic; electronic flash; photographic flashbulb; pressure; pressure measurement; pressure transducer; thermal transient; transducer; *TN905*.

Zero shift; calibration; dynamic; electronic flash; photoflash bulb; pressure; pressure measurement; pressure transducer; pressure transducer response; response; thermal transient; transducer; *NBSIR 76-1038*.

Zero shift; coatings; dynamic; dynamic response; pressure transducer; protective coatings; shock tube; tape; thermal radiant-energy response; thermal transient response; transducers; *NBSIR 76-1144*.

Zimm theory; bead-spring model; block copolymers; dilute polymer solutions; limiting viscosity number; Mandelkern-Flory-Scheraga equation; molecular weight determination; sedimentation coefficient; translational diffusion coefficient; *16026*.

Zinc; Adriatic Sea; cadmium; copper; electrochemical analysis; heavy metals; lead; seawater analysis; speciation; stability of water samples; *SP422*, pp. 917-928 (Aug. 1976).

Zinc; alloys; aluminum; catalysis; hydrogenation; iron; Mössbauer spectra; *16537*.

Zinc; atomic absorption; cadmium; copper; lead; manganese; sensitivity; spectrophotometry; statistical methods; *SP422*, pp. 1023-1033 (Aug. 1976).

Zinc; atomic absorption spectrophotometry; calcium; container effects; copper; magnesium; potassium; serum minerals; serum storage effects; sodium; temperature effects; trace elements; *SP422*, pp. 575-591 (Aug. 1976).

Zinc oxide; dislocation; electrochemical; exchange current; semiconductor; traps; *SP455*, pp. 139-148 (Nov. 1976).

Zinc point; comparator; International Practical Temperature Scale of 1968; IPTS-68; oxygen point; platinum resistance thermometer; temperature standard; tin point; triple point of water; *J. Res.* **80A** No. 3, 477-504 (1976).

Zinc selenide; copper; molybdenum; optician; polishing; surfaces; *SP435*, pp. 10-13 (Apr. 1976).

Zinc selenide; refractive index; temperature coefficient of refractive index; *SP435*, pp. 170-174 (Apr. 1976).

Zinc selenide coatings; laser antireflective coatings; materials purification requirements; pulsed laser damage; rare earth fluorides; *SP462*, pp. 271-278 (Dec. 1976).

Zinc selenide window; computer analysis; laser induced stresses; stress analysis; thermal analysis; *SP462*, pp. 29-35 (Dec. 1976).

Zirconium; field-ion microscopy; *16466*.

Zirconium; molybdenum; niobium; spectra; ultraviolet; wavelength; *16425*.

Zirconium; spectra; ultraviolet; wavelengths; yttrium; *16134*.

ZnS; CeF_3; CO_2 pulsed laser damage; coating topography; KCl; laser window coatings; *SP435*, pp. 236-243 (Apr. 1976).

ZnSe; BaF_2; CaF_2; fused silica; interferometry; photoelasticity; piezo-optic constants; thermal coefficient of refractive index; thermal expansion coefficient; *SP462*, pp. 58-63 (Dec. 1976).

ZnSe; BaF_2; CaF_2; fused silica; interferometry; photoelasticity; piezo-optic constants; refractive index; thermal coefficient of refractive index; thermal expansion coefficient; *NBSIR 76-1115*.

ZnSe; chemical vapor deposited ZnSe; elastic compliance; elastic constants; polycrystalline ZnSe; refractive index; stress-optic constants; temperature coefficient of index; thermal expansion; *15938*.

ZnSe; CO_2 laser radiation; Cu; CW laser damage; grating; infrared windows; KCl; mirror; Mo; NaCl; window; *SP435*, pp. 189-201 (Apr. 1976).

ZnSe; far field intensity; laser windows; thermal distortion; thermal lensing; *SP435*, pp. 142-147 (Apr. 1976).

ZnSe; KCl; NaCl; pulsed CO_2 TEA laser damage; transmitted pulse; waveform distortion; *SP435*, pp. 107-117 (Apr. 1976).

ZnSe; 10.6 μm; absorbing inclusions; damage statistics; laser damage; reflectors; ThF_4; thin film; *SP435*, pp. 216-229 (Apr. 1976).

Zoning; building codes; building laws and regulations; building materials—testing and evaluation; building systems; industrialized housing; mobile homes; modular construction; prefabrication; *NBS-GCR-73-19*.

Zwanzig-Mori formalism; hydrodynamic regime; ideal gas memory function; limit of stability; metastable fluid states; nonhydrodynamic regime; relaxation time; transport coefficients; *16601*.

1^{--} states; e^+e^- annihilation; exotic mesons; meson classification; ψ and χ particles; *15961*.

(100) surface of copper; heat transfer to helium II; interfacial thermal resistance; Kapitza conductance; Kapitza conductance of copper; x-ray diffraction examination of single crystal lattice damage; *15737*.

10^{-3} to 10^{-4} torr range; pressure generation; *16028*.

10.6 μm; absorbing inclusions; damage statistics; laser damage; reflectors; ThF_4; thin film; ZnSe; *SP435*, pp. 216-229 (Apr. 1976).

10.6 μm; As_2S_3; coating deposition; index of refraction; laser windows; surface composition; *SP435*, pp. 244-247 (Apr. 1976).

10.6 μm absorption; 10.6 μm optical components; dielectric coatings; infrared laser windows; laser heating of metal surfaces; laser mirrors; pulsed CO_2 laser damage; surface damage; *SP462*, pp. 181-188 (Dec. 1976).

10.6 μm laser; damage theory; laser damage; *SP462*, pp. 371-378 (Dec. 1976).

10.6 μm laser; diamond turning; KCl laser windows; laser damage; *SP462*, pp. 149-157 (Dec. 1976).

10.6 μm lasers; coatings; laser damage; laser windows; *SP462*, pp. 264-278 (Dec. 1976).

10.6 μm optical components; dielectric coatings; infrared laser windows; laser heating of metal surfaces; laser mirrors; pulsed CO_2 laser damage; surface damage; 10.6 μm absorption; *SP462*, pp. 181-188 (Dec. 1976).

1.06 μm polishing; copper mirror; damage threshold; dark field photography; diamond turned optics; *SP435*, pp. 29-40 (Apr. 1976).

^{129}I; beta; coincidence counting; gamma; radioactivity; standardization; *16259*.

^{13}C; alkane; chemical shift tensor; methylene; NMR; *16041*.

^{13}C magnetic resonance; collagen; conformation; correlation times; cyanogen bromide peptides; polypeptides; relaxation times; rotational diffusion; *16211*.

1,3-dithiolane-2-thione; 1,3-dithiolene-2-thione; carbon-13 NMR; coordination compounds; metal carbonyl; thiocarbonyl; *16585*.

1,3-dithiolenes; ^{31}P NMR; 4,5-dicyano-1,3-dithiolene-2-thione; aryl phosphines; cyclic voltammetry; desulfurization; phosphines; tetracyanotetrathiafulvalene; tetracyanotetrathiafulvalene·triphenylphosphine; *15991*.

1,3-dithiolene-2-thione; carbon-13 NMR; coordination compounds; metal carbonyl; thiocarbonyl; 1,3-dithiolane-2-thione; *16585*.

1,3-dithiolene-2-thione; chromium carbonyl; infrared spectroscopy; metal carbonyl; molybdenum carbonyl; NMR spectroscopy; *15985*.

1,6-diphenyl-1,3,5-hexatriene; fluorescence; linear dichroism; liquid crystals; polarization; spectrofluorimetry; *J. Res.* **80A** No. 1, 15-33 (1976).

^{161}Dy; amorphous; magnetization; metal; Mössbauer; ^{57}Fe; *16403*.

^{186}, ^{187}Os(n,γ); $E_n = 25$ keV; measured cross-section ratio; nuclear reactions; *16579*.

2-butanone (methyl ethyl ketone); enthalpy; entropy; equilibrium constant of formation; Gibbs energy of formation; heat capacity; ideal gas thermodynamic properties; internal rotational barrier height; propanone (acetone); *JPCRD* **5**, No. 2, 319-328 (1976).

2-connected; block-cutpoint tree; graph; tree; *16154*.

2-hydroxy-2′,4′,4-trichlorodiphenyl ether; bacteriostats; blood analysis; gas chromatography; trace analysis; triclosan; *SP422*, pp. 851-859 (Aug. 1976).

2-methyl propene; carbon isotopes; carbonyl fluoride; CO_2 laser photolysis; difluorocarbene; difluorodichloromethane; isotope ratio; nitric oxide; oxygen; tetrafluoroethylene; transverse excitation laser; *16657*.

2,3-dimethylbutanol-2; 3,3-dimethylbutanol-2; alcohols; heats of formation; hydroxy-alkyl radicals; shock tube; thermal decomposition; *15904*.

^{239}Pu track; alpha particle tracks; fission radiography; solid dielectric track recorders; *SP422*, pp. 1132-1142 (Aug. 1976).
2,4-dichlorophenol; 2,4-dichlorophenoxyacetic acid; gas chromatography; potatoes; residues, dissipation of; residues, in potatoes; residues, metabolic; residues, total; residues, volatilization; storage effects; *SP422*, pp. 737-745 (Aug. 1976).
2,4-dichlorophenoxyacetic acid; gas chromatography; potatoes; residues, dissipation of; residues, in potatoes; residues, metabolic; residues, total; residues, volatilization; storage effects; 2,4-dichlorophenol; *SP422*, pp. 737-745 (Aug. 1976).
285-nm radiation; 480-nm radiation; absolute cross sections; electron impact; mercury ions; *16588*.
3-methyl sulfolane; pyrolysis; SO_2; trimethylene sulfone; *15952*.
^{31}P NMR; 4,5-dicyano-1,3-dithiolene-2-thione; aryl phosphines; cyclic voltammetry; desulfurization; phosphines; tetracyanotetrathiafulvalene; tetracyanotetrathiafulvalene·triphenylphosphine; $\Delta^{2,2'}$-bis-14.5-dicyano-1,3-dithiodene; *15991*.
3,3-dimethylbutanol-2; alcohols; heats of formation; hydroxyalkyl radicals; shock tube; thermal decomposition; 2,3-dimethylbutanol-2; *15904*.
3.5 percent NaCl; 7XXX aluminum alloys; Aluminum Association; ASTM; industrial atmosphere; round robin tests; seacoast atmosphere; standard; stress-corrosion; *16656*.
^{37}Ar; atmospheric mixing; atmospheric radioactivity; cosmic ray reactions; isotopic enrichment; *16388*.
4*d* photoabsorption; atomic structure; barium; N_{IV} edges; spectroscopy; vacuum ultraviolet; *15845*.
4*f* electron excitations; photoelectron spectroscopy; rare earth metals; *15841*.
4,5-dicyano-1,3-dithiolene-2-thione; aryl phosphines; cyclic voltammetry; desulfurization; phosphines; tetracyanotetrathiafulvalene; tetracyanotetrathiafulvalene·triphenylphosphine; $\Delta^{2,2'}$-bis-14.5-dicyano-1,3-dithiodene; 1,3-dithiolenes; *15991*.
480-nm radiation; absolute cross sections; electron impact; mercury ions; 285-nm radiation; *16588*.
5*f* electron; actinium; excitation energy; *U; 16581*.
$^{5}\Sigma_g^{+}$; electronic structure; energy curve; N_2; predissociation; radiative recombination; *16442*.
^{57}Fe; ^{161}Dy; amorphous; magnetization; metal; Mössbauer; *16403*.
6-port junction; power meter; *16568*.
7XXX aluminum alloys; Aluminum Association; ASTM; industrial atmosphere; round robin tests; seacoast atmosphere; standard; stress-corrosion; 3.5 percent NaCl; *16656*.

229-317 O - 77 - 45

APPENDIX A. LIST OF DEPOSITORY LIBRARIES IN THE UNITED STATES

ALABAMA

Alexander City: Alexander City State Junior College, Thomas D. Russell Library (1967).
Auburn: Auburn University, Ralph Brown Draughon Library (1907).
Birmingham:
- Birmingham Public Library (1895).
- Birmingham-Southern College Library (1932).
- Jefferson State Junior College, James B. Allen Library (1970).
- Samford University, Harwell G. Davis Library (1884).

Enterprise: Enterprise State Junior College Library (1967).
Florence: University of North Alabama, Collier Library (1932).
Gadsden: Gadsden Public Library (1963).
Huntsville: University of Alabama, Huntsville Campus Library (1964).
Jacksonville: Jacksonville State University, Ramona Wood Library (1929).
Maxwell A.F. Base: Air University Library (1963).
Mobile:
- Mobile Public Library (1963).
- Spring Hill College, Thomas Byrne Memorial Library (1937).
- University of South Alabama Library (1968).

Montgomery:
- Alabama State Department of Archives and History Library (1884).
- Alabama Supreme Court Library (1884).
- Auburn University at Montgomery Library (1971)—REGIONAL.

Normal: Alabama Agricultural and Mechanical College, Drake Memorial Library (1963).
St. Bernard: St. Bernard College Library (1962).
Troy: Troy State University, Lurleen B. Wallace Educational Resources Center (1963).
Tuskegee Institute: Tuskegee Institute, Hollis Burke Frissell Library (1907).
University:
- University of Alabama, School of Law Library (1967).
- **University of Alabama Library (1860)—REGIONAL.**

ALASKA

Anchorage:
- Anchorage Higher Education Consortium Library (1961).
- Supreme Court of Alaska Library (1973).

College: University of Alaska, Elmer E. Rasmuson Library (1922).
Juneau: Alaska State Library (1964).
Ketchikan: Ketchikan Community College Library (1970).

ARIZONA

Coolidge: Central Arizona College, Instructional Materials Center (1973).
Flagstaff: Northern Arizona University Library (1937).
Phoenix:
- Department of Library and Archives (unknown)—REGIONAL.
- Phoenix Public Library (1917).

Prescott: Yavapai College Library (1976).
Tempe: Arizona State University, Matthews Library (1944).
Thatcher: Eastern Arizona Junior College Library (1963).
Tucson:
- Tucson Public Library (1970).
- University of Arizona Library (1907)—REGIONAL.

Yuma: Yuma City-County Library (1963).

ARKANSAS

Arkadelphia: Ouachita Baptist University, Riley Library (1963).
Batesville: Arkansas College Library (1963).
Clarksville: College of the Ozarks Library (1925).
Conway: Hendrix College, O. C. Bailey Library (1903).
Fayetteville: University of Arkansas Library (1907).
Little Rock:
- Arkansas Supreme Court Library (1962).
- Little Rock Public Library (1953).
- University of Arkansas at Little Rock Library (1973).

Magnolia: Southern Arkansas University, Mogale Library (1956).
Monticello: University of Arkansas at Monticello Library (1956).
Pine Bluff: University of Arkansas, Watson Memorial Library (1976).
Russellville: Arkansas Tech University, Tomlinson Library (1925).
Searcy: Harding College, Beaumont Memorial Library (1963).
State College: Arkansas State University, Dean B. Ellis Library (1913).
Walnut Ridge: Southern Baptist College, Felix Goodson Library (1967).

CALIFORNIA

Anaheim: Anaheim Public Library (1963).
Arcadia: Arcadia Public Library (1975).
Arcata: Humboldt State College Library (1963).
Bakersfield:
- California State College, Bakersfield Library (1974).
- Kern County Library System (1943).

Berkeley:
- University of California, General Library (1907).
- University of California, Law Library, Earl Warren Legal Center (1963).

Carson: Carson Regional Library (1973).
Chico: Chico State University Library (1962).
Claremont: Pomona College Documents Collection, Honnold Library (1913).
Compton: Compton Library (1972).
Culver City: Culver City Library (1966).
Davis:
- University of California at Davis Library (1953).

University of California at Davis, School of Law Library (1972).
Dominguez Hills: California State College, Dominguez Hills, Educational Resources Center (1973).
Downey: Downey City Library (1963).
Fresno:
Fresno County Free Library (1920).
California State University Library (1962).
Fullerton: California State University at Fullerton Library (1963).
Garden Grove: Garden Grove Regional Library (1963).
Gardena: Gardena Public Library (1966).
Hayward: California State College at Hayward Library (1963).
Huntington Park: Huntington Park Library, San Antonio Region (1970).
Inglewood: Inglewood Public Library (1963).
Irvine: University of California at Irvine Library (1963).
La Jolla: University of California, San Diego, University Library (1963).
Lakewood: Angelo Iacoboni Public Library (1970).
Lancaster: Lancaster Regional Library (1967).
Long Beach:
California State College at Long Beach Library (1962).
Long Beach Public Library (1933).
Los Angeles:
California State College at Los Angeles, John F. Kennedy Memorial Library (1956).
Los Angeles County Law Library (1963).
Los Angeles Public Library (1891).
Loyola University of Los Angeles Library (1933).
Occidental College, Mary Norton Clapp Library (1941).
Pepperdine University Library (1963).
Southwestern University, School of Law Library (1975).
University of California at Los Angeles Library (1932).
University of California at Los Angeles, Law Library (1958).
University of Southern California Library (1933).
Menlo Park: Department of the Interior, Geological Survey Library (1962).
Montebello: Montebello Library (1966).
Monterey: Naval Postgraduate School Library (1963).
Monterey Park: Bruggemeyer Memorial Library (1964).
Northridge: California State University at Northridge Library (1958).
Norwalk: Los Cerritos Regional Library (1973).
Oakland:
Mills College Library (1966).
Oakland Public Library (1923).
Ontario: Ontario City Library (1974).
Pasadena:
California Institute of Technology, Millikan Memorial Library (1933).
Pasadena Public Library (1963).
Pleasant Hill: Contra Costa County Library (1964).
Redding: Shasta County Library (1956).
Redlands: University of Redlands, Armacost Library (1933).
Redwood City: Redwood City Public Library (1966).
Reseda: West Valley Regional Branch Library (1966).
Richmond: Richmond Public Library (1943).
Riverside:
Riverside Public Library (1947).
University of California at Riverside Library (1963).
Sacramento:
California State Library (1895)—REGIONAL.
Sacramento City-County Library (1880).
Sacramento County Law Library (1963).
Sacramento State College Library (1963).
San Bernardino: San Bernardino County Free Library (1964).
San Diego:
San Diego State University, Love Library (1962).
San Diego County Law Library (1973).
San Diego County Library (1966).
San Diego Public Library (1895).
University of San Diego Law Library (1967).
San Francisco:
Mechanics' Institute Library (1889).
San Francisco Public Library (1889).
San Francisco State College, Social Science and Business Library (1955).
Supreme Court of California Library (1972).
U.S. Court of Appeals for Ninth Circuit Library (1971).
University of San Francisco, Richard A. Gleeson Library (1963).
San Jose: San Jose State College Library (1962).
San Leandro: San Leandro Community Library Center (1961).
San Luis Obispo: California Polytechnic State University Library (1969).
San Rafael: Marin County Free Library (1975).
Santa Ana:
Orange County Law Library (1975).
Santa Ana Public Library (1959).
Santa Barbara: University of California at Santa Barbara Library (1960).
Santa Clara: University of Santa Clara, Orradre Library (1963).
Santa Cruz: University of California at Santa Cruz Library (1963).
Santa Rosa: Santa Rosa-Sonoma County Public Library (1896).
Stanford: Stanford University Libraries (1895).
Stockton: Public Library of Stockton and San Joaquin County (1884).
Thousand Oaks: California Lutheran College Library (1964).
Torrance: Torrance Civic Center Library (1969).
Turlock: Stanislaus State College Library (1964).
Valencia: Valencia Regional Library (1972).
Van Nuys: Los Angeles Valley College Library (1970).
Ventura: Ventura County Library Services Agency (1975).
Visalia: Tulare County Free Library (1967).
Walnut: Mount San Antonio College Library (1966).
West Covina: West Covina Library (1966).
Whittier: Whittier College, Wardman Library (1963).

CANAL ZONE

Balboa Heights: Canal Zone Library-Museum (1963).

COLORADO

Alamosa: Adams State College Learning Resources Center (1963).
Boulder: University of Colorado Libraries (1879)—REGIONAL.
Colorado Springs:
Colorado College, Charles Leaming Tutt Library (1880).
University of Colorado, Colorado Springs Library (1974).
Denver:
Colorado State Library (unknown).
Denver Public Library (1884)—REGIONAL.
Department of Interior, Bureau of Reclamation Library (1962).
Regis College, Dayton Memorial Library (1915).
University of Denver, Penrose Library (1909).
U.S. Court of Appeals for Tenth Circuit Library (1973).
Fort Collins: Colorado State University Library (1907).
Golden: Colorado School of Mines, Arthur Lakes Library (1939).
Greeley: University of Northern Colorado Library (1966).
Gunnison: Western State College, Leslie J. Savage Library (1932).
La Junta: Otero Junior College, Wheeler Library (1963).
Lakewood: Jefferson County Public Library, Lakewood Regional Library (1968).

Pueblo:
Pueblo Regional Library (1893).
University Southern Colorado Library (1965).
U.S. Air Force Academy: Academy Library (1956).

CONNECTICUT

Bridgeport: Bridgeport Public Library (1884).
Danbury: Western Connecticut State College, Ruth A. Haas Library (1967).
Danielson: Quinebaug Valley Community College (1975).
Enfield: Enfield Public Library (1967).
Hartford:
Connecticut State Library (unknown)—REGIONAL.
Hartford Public Library (1945).
Trinity College Library (1895).
Middletown: Wesleyan University Library (1906).
Mystic: Marine Historical Association, Inc., G. W. Blunt White Library (1964).
New Britain: Central Connecticut State College, Elihu Burritt Library (1973).
New Haven:
Southern Connecticut State College Library (1968).
Yale University Library (1859).
New London:
Connecticut College Library (1926).
U.S. Coast Guard Academy Library (1939).
Stamford: Stamford Public Library (1973).
Storrs: University of Connecticut, Wilbur Cross Library (1907).
Waterbury: Silas Bronson Library (1869).
West Haven: University of New Haven Library (1971).

DELAWARE

Dover:
Delaware State College, William C. Jason Library (1962).
State Department of Community Affairs and Economic Development, Division of Libraries (1972).
State Law Library in Kent County (unknown).
Georgetown:
Delaware Technical and Community College, Southern Branch Library (1968).
Sussex County Law Library (1976).
Newark:
University of Delaware, Morris Library (1907).
Delaware Law School Library (1976).
Wilmington:
New Castle County Law Library (1974).
Wilmington Institute and New Castle County Library (1861).

DISTRICT OF COLUMBIA

Washington:
Advisory Commission on Intergovernmental Relations Library.
Civil Aeronautics Board Library (1975).
Civil Service Commission Library (1963).
Department of Commerce Library (1955).
Department of Health, Education, and Welfare Library (1954).
Department of Housing and Urban Development Library (1969).
Department of the Interior Central Library (1895).
Department of Justice Main Library (1895).
Department of Labor Library (1976).
Department of State Library (1895).
Department of State, Office of Legal Advisor, Law Library (1966).
Department of Transportation, National Highway Traffic Safety Administration Library (1968).
District of Columbia Public Library (1943).
Federal City College Library (1970).
Federal Deposit Insurance Corporation Library (1972).
Federal Election Commission Library (1975).
Federal Reserve System Law Library (1976).
General Accounting Office Library (1975).
General Services Administration Library (1975).
Georgetown University Library (1969).
Indian Claims Commission Library (1968).
National War College Library (1895).
Navy Department Library (1895).
Navy Department, Office of Judge Advocate General Library (1963).
Office of Management and Budget Library (1965).
Office of The Adjutant General, Department of Army Library (1969).
Postal Service Library (1895).
Treasury Department Library (1895).
U.S. Court of Appeals, Judge's Library (1975).
Veterans' Administration, Central Office Library (1967).

FLORIDA

Boca Raton: Florida Atlantic University Library (1963).
Clearwater: Clearwater Public Library (1972).
Coral Gables: University of Miami Library (1939).
Daytona Beach: Volusia County Public Libraries (1963).
DeLand: Stetson University, duPont-Ball Library (1887).
Fort Lauderdale:
Broward County Library (1967).
Nova University Library (1967).
Gainesville: University of Florida Libraries (1907)—REGIONAL.
Jacksonville:
Haydon Burns Library (1914).
Jacksonville University, Swisher Library (1962).
University of North Florida Library (1972).
Lakeland: Lakeland Public Library (1928).
Leesburg: Lake-Sumter Community College Library (1963).
Melbourne: Florida Institute of Technology Library (1963).
Miami:
Florida International University Library (1970).
Miami Public Library (1952).
Opa Locka: Biscayne College Library (1966).
Orlando: Florida Technological University Library (1966).
Palatka: St. Johns River Junior College Library (1963).
Pensacola: University of West Florida, John C. Pace Library (1966).
Port Charlotte: Charlotte County Library System (1973).
St. Petersburg:
St. Petersburg Public Library (1965).
Stetson University College Law Library (1975).
Sarasota: Sarasota Public Library (1970).
Tallahassee:

15. SUPPLEMENTARY NOTES

16. ABSTRACT *(A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.)*

This supplement to Special Publication 305 supplements 1 through 7 of the National Bureau of Standards lists the publications of the Bureau issued between January 1, 1976 and December 31, 1976. It includes an abstract of each publication (plus some earlier papers omitted from Special Publication 305 Supplement 7), key-word and author indexes; and general information and instructions about NBS publications.

Miscellaneous Publication 240 (covering the period July 1, 1957 through June 30, 1960) and its supplement (covering the period July 1, 1960 through June 30, 1966), Special Publication 305 (covering the period July 1966 through December 1967), and Special Publication 305 Supplement 1 (covering the period 1968-1969), Special Publication 305 Supplement 2 (covering the period 1970), Special Publication 305 Supplement 3 (covering the period 1971), Special Publication 305 Supplement 4 (covering the period 1972), Special Publication 305 Supplement 5 (covering the period 1973), Special Publication 305 Supplement 6 (covering the period 1974), Special Publication 305 Supplement 7 (covering the period 1975), remain in effect. Two earlier lists, Circular 460 (Publications of the National Bureau of Standards, 1901 to June 1947) and its supplement (Supplementary List of Publications of the National Bureau of Standards, July 1, 1947 to June 30, 1957) are also still in effect.

17. KEY WORDS *(six to twelve entries; alphabetical order; capitalize only the first letter of the first key word unless a proper name; separated by semicolons)*

Abstracts, NBS publications; key words; publications.
